**Foreign Ownership** The National Policy of 1879 did encourage INDUSTRIALIZATION, but of a peculiar nature. The policy was designed to force foreign (particularly US) industrialists to build factories in Canada if they wished to reach the Canadian market. The tariff brought direct (or equity) investment, which resulted in a branch-plant economy of unique proportions. For example, Canada's dependence on US direct investment in 1970 was some 10 times higher than the average of a group of 13 of the most industrialized countries belonging to the Organization for Economic Co-operation and Development. Some 60% of manufacturing industries have come to be foreign owned through equity investment; these industries are largely in central Canada. In some sectors (eg, oil and gas), foreign ownership is even higher (72% in 1980). The issues related to foreign-owned firms are now well known. They include truncated operations, ie, establishments which do not possess all the functions that are normally part of a business (eg, management, INDUSTRIAL RESEARCH AND DEVELOPMENT); production of a broad range of products mimicking those of their parent company, with very limited product and production specialization; a tendency to be import intensive; a tendency not to export because they are geared to serve the Canadian market; limited linkages with Canadian suppliers, since the parent company tends to provide the components for assembly.

This type of industrialization has resulted in ever-growing BALANCE OF PAYMENTS deficits in manufactured finished goods (\$21 billion in 1981). Our overall merchandise trade balance is thus dragged down and it becomes increasingly difficult to balance our international accounts because of the growing deficits in service transactions (largely caused by massive interest and dividend payments on foreign borrowings and investment, and payments for foreign-management services). By the end of the 1970s the situation had reached the stage where the federal government felt that it had to establish policies favouring development of Canadian-owned industries. The most striking example was the National Energy Program of 1980, which aimed at increasing Canadian ownership

of Canada's PETROLEUM INDUSTRIES to 50% by 1990, up from 28% in 1980. Under this policy, Canadian ownership had increased to 34.7% by 1982.

Since foreign direct investment resulted in an unacceptable industrial structure, the federal government established a mechanism, similar to that in other countries, to control it. The FOREIGN INVESTMENT REVIEW AGENCY (now Investment Canada) was created to evaluate the intentions of foreign investors and to try to extract maximum benefits for Canada. Both federal and provincial governments try to redress unacceptable situations with policies (eg, on procurement) that favour Canadian industrial development.

**Research and Development** Expenditures on R&D, as a proportion of Gross Domestic Product, have come to be taken as a barometer of industrial health and sophistication within OECD countries. Canada, with an R&D expenditure level of about 1% of GDP, is in the company of the smaller industrialized countries. Since more than 50% of R&D is performed in government institutions, many technological innovations emerge from these laboratories, eg, the TELIDON interactive videotex system and communications SATELLITES. In fact, federal government laboratories in the Ottawa area are credited with being instrumental in the development of the HIGH-TECHNOLOGY industrial community that has established itself in the area since the 1960s.

Both the federal and provincial governments

have played key roles in developing scientific and technological capabilities. Governments have not only provided public funds to support the private sector, but have become directly involved when the private sector considered the risks too great (eg, Panarctic Oil Ltd), where the private sector failed (eg, Canadair), or where the market system was deemed not to act in the national or provincial interest (eg, PETRO-CANADA; ONTARIO HYDRO; HYDRO QUÉBEC; ALBERTA OIL SANDS TECHNOLOGY AND RESEARCH AUTHORITY). Eight provinces have their own provincial research organizations. The involvement of governments in economic development has resulted in a large amount of R&D being sponsored by and performed within government agencies. However, the share of industry-funded R&D is increasing and Canadian expenditures on R&D are expected to reach 1.5% of GDP in the 1980s.

#### Canadian and US Industrial Structures

Because of close economic ties with the US, Canadians tend to believe that they have a similar economy and industrial structure. If the industrial structures of both countries were approximately the same, there would be little difference proportionally in the output of their various industrial groups. However, Canada's greatest relative strength is in the primary manufacturing industries, which are linked to resource development; its greatest weakness is in higher technology manufacturing areas. In fact the structure of Canadian industry complements

that of the US; we export relatively unsophisticated products to the US, while it ships finished goods to us. While the US has a trade surplus in manufactured goods and a deficit in the rest of merchandise trade (particularly ENERGY), Canada has a large trade deficit in manufactured goods and a surplus in raw and semiprocessed goods. This long-standing relationship reflects Canada's historical role as a resource hinterland, first to France, then to Britain, now to the US (see ECONOMIC NATIONALISM).

Canada is now in search of a new national policy to restructure its industry around areas of strength to compete in a new international marketplace. Other industrialized countries are assisting industries to move into new technological domains, while newly industrializing countries (eg, Korea, Taiwan, Mexico, Brazil) are moving into our traditional manufacturing industries. Any new national policy cannot be built around tariffs, as in 1879, since these barriers to trade are being eliminated by international agreement. Moreover the issues of foreign ownership, quasi-independent regional economies, and dependence on the US market must be addressed. See ECONOMIC HISTORY; REGIONALISM; REGIONAL ECONOMICS; TECHNOLOGY. R.D. VOYER

**Inflation** popularly means rising general prices, most frequently calculated by the CONSUMER PRICE INDEX (CPI) — a measure of the cost of a basket of commodities purchased by a typical family. The rate of inflation refers to the percentage increase in the price level and is usually expressed as an annual rate; if the CPI rose from 100 to 132 over 2 years, then the price level rose by 32%; that is, the rate of inflation was about 16% annually. Most of the sharp inflation of the 19th and 20th centuries has been associated with major wars, and since WWII prices have generally risen.

The average annual rate of inflation in consumer prices from 1970 to 1975 was 6.5% in the US, 7% in Canada, 6% in West Germany, 12% in the UK, 18% in Yugoslavia, 50% in Argentina and 112% in Chile. In 1981 Canadian inflation reached an annual rate of 12.5%. In an inflationary period, distinctions must be made between money income (measured in dollars) and real income measured in purchasing power. If money income rises by the same percentage as prices of goods, then real income is unchanged. For real income to increase, money income must rise more than prices. Inflation does not necessarily harm everyone; its main consequence is the redistribution of real income. If prices are stable (the rate of inflation is zero) and A borrows \$100 from B at a 2% interest rate, in 1 year B expects to receive \$102 in real income. However, if prices rise by 5%, then \$102 will not buy what \$100 would have bought a year ago; B's real income will be reduced and A's real income will be higher. Unexpected inflation therefore redistributes real income from lenders to borrowers. Pensioners who contributed to PENSION funds when inflation rates were low and are now being repaid with dollars that are worth much less than anticipated are among those harmed by inflation.

The relationship among prices, employment, wages and profits is complex. Inflation can be halted by decreasing aggregate demand (total spending), achieved with FISCAL POLICY by reducing government expenditure or raising taxes, and with monetary policy by restricting the growth in the supply of money in the economy, thereby raising interest rates and reducing credit. However, much of the initial impact of the reduced aggregate demand is reflected in lower output and employment rather than in prices (even in the 19th century falling prices were generally associated with fairly high levels of unemployment), so governments have chosen alternatives such as wage and price controls, although these alone will not lastingly affect in-

flation. However, if controls are used in conjunction with appropriate monetary and fiscal policies, they may help reduce inflation, with fewer harmful side effects. Economists generally agree that inflation will not continue unless the money supply is allowed to increase; monetarists tend to emphasize control of the money supply, while Keynesians favour other tools such as wage and price controls. *See also* STAGFLATION; RECESSION.

W.C. RIDDELL

**Influence d'un livre, L'** (1837) by Philippe AUBERT DE GASPÉ, Jr, regarded as the first French Canadian novel, offers a subtle satire of spiritual poverty in Québec through an account of Charles Amand's quest for gold. Amand's alchemical misadventures, influenced by a treatise on magic, alternate with the courtship of his daughter Amélie by a young medical student, and take him from the countryside near St-Jean-Port-Joli to Québec and to Ile d'Anticosti. Written probably in collaboration with Aubert de Gaspé's father, author of *Les Anciens Canadiens* (1863), the novel is remembered for its documentary and folkloric elements, incorporating into its plot the legend of Rose Latulipe and the murder of the peddler Guilmette as well as superstitious beliefs and customs. *Le Chercheur de trésors* (1864), a bowdlerized edition by Abbé H.R. CASGRAIN, was replaced in 1968 by Léopold Leblanc's edition, appending 4 of many excised passages; by 1984 neither a facsimile nor a translation had appeared.

MICHELLE LACOMBE

**Influenza**, an acute infectious epidemic disease caused by a filterable virus. There are 4 main types of the virus — A, B, C and D — and many strains. The virus enters the body through the respiratory tract, but soon spreads to cause symptoms that include fever, chills, headache, sore throat, cough, gastrointestinal disturbances, muscular pain and neuralgia. An attack provides temporary immunity, but only to the particular strain involved. Outbreaks of the disease typically demonstrate high morbidity but low mortality rates, usually killing only the very old and the very young (deaths in these cases are usually related to the complications such as bacterial pneumonia). There is no cure for influenza. The best treatment is a combination of bed rest and increased fluid intake. Neither is there a sure means of prevention. Vaccines are available but they do not provide complete immunity from all viruses.

It was only with the eradication, through advances in PUBLIC HEALTH and medicine, of more major infectious diseases, that influenza was recognized as a serious threat. In Canada, influenza appeared in EPIDEMIC proportions on at least 7 occasions during the 19th century. The effects of the epidemic of 1832 were masked by cholera and those of the epidemic of 1847-48 by typhus, but the eradication of other diseases was not the only reason influenza grew in importance by the end of the 1800s. The epidemic of 1889-90 was particularly virulent, affecting 40% of the world's population.

The most damaging epidemic of influenza — for Canada and the world — appeared after WWI. The Spanish Flu of 1918-19 killed some 21 million people, including about 50 000 Canadians. It demonstrated a perverse tendency to kill the young and hearty. A long-term consequence for some victims was the development of a Parkinsonian syndrome, including a marked tremor. The Spanish Flu was brought into Canada by returning troops and made its way into even the remotest communities. In Labrador and Québec, which were the hardest hit, some villages were exterminated by the disease. Some areas unsuccessfully tried quarantine. All medical facilities and personnel were soon overtaxed and volunteers organized infirmaries in schools and hotels.

The epidemic brought not only death, but so-

cial and economic disruption as well. Children were left parentless and many families found themselves without the chief wage earner. Armies on both sides were temporarily debilitated. Businesses lost profits because of lack of demand for their products or because they were unable — as a result of a reduced work force — to meet the demand. Municipal governments, in an attempt to halt the spread of the disease, closed all except necessary services, and provinces enacted laws regarding quarantine and enforced the wearing of masks in public. Although the Canadian population unhappily accepted these restrictions, it defied the federal government's request that WWI victory celebrations be postponed until Dec 1. The influenza strain, although decreasingly virulent, remained active in Canada until the mid-1920s. The establishment of the federal Department of Health in 1919 was a direct result of the epidemic.

Although influenza is a yearly affliction, it is unlikely that another epidemic of such magnitude could occur today. Pneumonia contracted by a sufferer weakened by influenza rather than influenza itself was the major cause of death, and pneumonia lost its impact with the discovery of penicillin, which Canada began to manufacture during WWII. Health facilities are also much improved, the population generally is in a better state of health, and the virus itself is better understood.

JANICE DICKIN MCGINNIS

**Information Society** The role of information in the economies of Canada and other technologically advanced countries is becoming more significant. The first half of the 20th century was characterized by a shift in the dominant economic activity from agricultural to industrial production. The second half is characterized by a shift toward the production, processing, storage, retrieval and consumption of information: not only the familiar press, radio, television, film and library information, but also specialized computer banks of data (ie, information) that are sold to subscribers over TELECOMMUNICATIONS lines. This development is made possible by major technological improvements in microelectronics, computers and telecommunications that have continually reduced the costs of processing and transmitting information.

The Canadian government has adopted a policy of promoting rapid adjustment to the information society, with its potential improvements in economic efficiency. This policy is not without problems. Information technologies often promote centralization, and since much Canadian information is already stored outside Canada, the Canadian economy could become even more dependent on the US and multinational corporations. Personal privacy will be more difficult to protect. Employment opportunities in Canada may be reduced. Information that used to be generally available, eg, in libraries, may have to be purchased from a databank. With information treated as a primary marketable commodity in the information society, unless social policies are adjusted accordingly, the wealthy may improve their position to the detriment of the poor. *See* COMMUNICATIONS TECHNOLOGY; COMPUTER COMMUNICATIONS; SATELLITE COMMUNICATIONS.

**Ingersoll**, Ont, Town, pop 8494 (1981c), inc 1865, situated on the Thames R, 36 km E of London. Founded as Oxford Village in 1818 by Charles Ingersoll, it was renamed Ingersoll for

his father, Thomas, and incorporated as a village 1852. Following the opening of the Great Western Ry 1853, its population grew rapidly to about 4000 by 1871, and increased gradually thereafter. Its economy, based initially on the export of wheat and hardwood lumber, shifted to the production of cheese and agricultural implements in the mid-1860s. Ingersoll was the commercial centre for Canada's first cheese export trade and the Canadian Dairyman's Assn was founded there (1867). In 1866 the town sent a 3300 kg "Mammoth Cheese" — celebrated in verse by James McIntyre, the "cheese poet" — to exhibits in NY state and England. Now a manufacturing and residential centre, Ingersoll celebrates its past with an annual cheese and wine festival.

GEORGE EMERY

**Inglis, Charles**, Anglican bishop (b at Glen-columbkille, Ire 1734; d at Aylesford, NS 24 Feb 1816). Having gained influence and preferment as a Tory cleric and pamphleteer in New York C during the American Revolution, he was named to NS as the Church of England's first colonial bishop in 1787. Historians long exaggerated the importance of his bishopric, citing his sympathetic relations with the clergy and his fostering of higher education. Although he used patience and discretion to overcome early antipathy on the part of his clerics, his minimal interference in parish affairs and reluctance to travel within his huge diocese exacerbated local weaknesses. Moreover, the establishment of King's College in 1788, largely to train a native clergy, perpetuated a reactionary Church of England ascendancy in the colony. Viewing his appointment as just reward for his loyalty, he went into semiretirement in 1795, though he retained the office for life.

**Injunction** is an equitable judicial remedy issued at the court's discretion. It usually takes the form of an order preventing or restraining a person from performing an act. The order may also take a mandatory form by compelling someone to do something. It may be sought as a final remedy or at a preliminary stage before trial (the interlocutory injunction). The injunction is designed to provide more effective and appropriate relief than an ordinary common-law award of damages. In many circumstances applicants prefer to have an act prevented or performed rather than to receive compensation after the fact.

J. BARNES

**Injury and Prevention** Some 3000 Canadians between the ages of one and 19 are killed each year because of injury, and over 100 000 are hospitalized. With the control of infectious diseases, injury has become the leading cause of death and disability in Canadian children and youth. The most frequent causes of fatal injury are traffic related, drowning, burns, suffocation, falls and poisoning. The vast majority of childhood injuries (95%) are the result of impact by moving objects, such as motor vehicles and hockey sticks; or from impact of the victim against stationary surfaces, such as car windshields. Burns account for 3% of all injuries; electrification, poisoning and radiation, 2%. The head and face are the parts of the body most commonly injured in motor vehicle crashes, in falls, and in other home injuries. Because of the incidence of brain injury and the significant level of neurologic impairment resulting from moderate or severe levels of head injury, and the evidence that mild injury may have significant unfavourable consequences, these injuries are a significant public-health problem.

Under a medicare system, the treatment costs from injuries to a family are minimal and are measured mainly in days lost from school or work. However, the costs to the community for the care of victims of injury are staggering. In Canada, it is estimated that \$12.7 billion is spent each year on the treatment of injuries.

**Injury and Child Development** Many injuries are distinctly age related and developmentally determined. Infants, for example, are very susceptible to falls; and about 85% of injuries from birth to one year are due to falls, with baby boys being at greatest risk and head injury being the most frequent result. Scalds from hot bath water or spilled hot beverage account for 10% of injuries to infants, poisoning for 5%. The average infant travels some 8000 km annually in cars. If not protected by car safety seats or air bags, the threat of serious injury or death is significant. Regulations relating to size of soothers and toy objects have decreased choking deaths.

Children who have learned to walk and are able to explore their environment are at especially high risk to injury. In fact this is the most vulnerable stage for injury to girls. Overall, one in 10 toddlers is treated in a hospital emergency room each year for trauma or poisoning; the latter accounts for 12% of injury. Burns and scalds are common, but injury due to falls still predominates. Pedestrian and motor vehicle occupant injuries are the leading cause of death in this age group and the death rate from drowning is higher at this stage than at any other.

From 3 to 6 years of age, the child's environment extends from the home to the neighbourhood. Pedestrian injuries are the most common cause of death and serious injury at this age. The use of tricycles and bicycles also leads to more injuries than the use of any other product. During the ages 7 to 18, the child enters the world of sports, recreation and traffic; 98% of injuries result from mechanical objects, particularly, until the teenage years, from playground hazards and bicycles. The Canadian Institute of Child Health is currently developing safety standards for playgrounds in Canada. A gradually increasing ability on the part of children to recognize hazards and to protect themselves accounts for the low death rates around age 10 from almost all injuries.

Comprehensive data on sports injuries are lacking in Canada. The reduction in eye injuries since the compulsory use of hockey face masks is a notable Canadian accomplishment. Release bindings have reduced the incidence of leg fractures to skiers. A national study of the occurrence and circumstances surrounding spinal cord injury due to diving is currently under way.

During the teenage years, the rate of traffic injury reaches epidemic proportions. Over 50% of all deaths and serious injuries in this age group are traffic related, mainly to youths as drivers or passengers of motor vehicles. Transport injuries are the leading cause of brain injury (48%) and as a result produce more new quadriplegics and paraplegics each year than all other causes combined. Injuries to the brain are also the leading cause of epilepsy and of handicapping conditions in people between one and 19 years of age.

**Injury Prevention** has received relatively little scientific attention. It is commonly believed that bad luck and chance are the cause of "accidents" and fate is the main predisposing factor. The first step in influencing public policy would be a general realization that injuries are rarely accidental and most are preventable, and that the medical, social and human toll of injuries warrants a major investment in prevention. Some preventive measures require the co-operation of relatively few individuals but can influence the lives of many (eg, reduction of crib slat spacing resulting in the eradication of crib strangulation deaths of infants). Preventive measures directed at changing human behaviour, on the other hand, require the co-operation of many individuals (eg, car seats that require parents to buckle up their child with each ride).

Preventive strategies (eg, preventing the creation of the hazard in the first place, separating the hazard by time or space or physical barriers, and countering damage already done) are an important conceptual contribution to the field of injury control. If implemented, as interrelated approaches applicable to all types of injury, they could reduce drastically the incidence of injury in Canada.

**Occupational Fatalities and Injuries** In 1981 there were 967 fatalities, 1.21 million work injuries (48% of which were disabling) and 15.8 million workdays lost due to work injuries, including OCCUPATIONAL DISEASE. Injuries occur most frequently among young adult men, and by industry most frequently among workers in fishing, hunting, trapping, forestry, mining, construction and transport (fatalities in these areas per 100 000 workers were, respectively, 158, 120, 84, 32 and 20). The number of injuries from 1972 to 1981 rose by 37.2%, while employment increased by 31%. Expressed in injuries per 100 workers, the incidence rate rose from 12.39% to 12.93%. In Québec the incidence rate increased by 39% (which may have resulted from broadening of compensation coverage); in Alberta by about 24%; in BC by 16.4%; in Manitoba by 6.2%; and in Saskatchewan by 8.2%. The increase in the West may have resulted from increased industrial activity and employment.

The most frequent types of occupational injury are strains or sprains, bruises, cuts or lacerations and fractures or dislocations. The body parts most frequently affected are the back, hands, feet and eyes. Occupational injuries may result from unsafe acts, such as operating equipment without authority at an unsafe speed or in such a way that safety devices are rendered inoperative; or unsafe conditions, such as improperly designed or inadequately guarded machinery. Occupational safety measures include designing safe equipment, machine guarding, maintenance of equipment, and the proper use of personal protective equipment, such as hard hats, safety shoes and eye protectors. Human factors to be considered and controlled in an occupational injury prevention program include fatigue, alcohol and drug use, carelessness and inexperience. Safety information and educational programs are available through provincial and federal government agencies responsible for occupational health and safety, eg, Labour Canada, the Canadian Centre for Occupational Health and Safety, and national and provincial safety associations.

The ECONOMIC COUNCIL OF CANADA has suggested that indirect costs of employment injuries and illnesses, eg, failure to meet customer demands, decreased efficiency and lowered employee morale, could range from 2 to 10 times that of direct costs (ie, medical aid, compensation and administration of claims). In this case the total cost of employment injuries and illnesses in Canada (1981) would be \$5.7-\$20.9 billion.

JOHN H. READ AND ROBERT ORFORD

**Innis, Harold Adams**, political economist, and pioneer in communication studies (b at Otterville, Ont 5 Nov 1894; d at Toronto 8 Nov 1952). Innis's earlier writings in economics and economic history gave rise to a distinctively Canadian approach to these subjects, and his later attempts to analyse the crisis in Western civilization led the way to a new emphasis on the importance of different modes of COMMUNICATIONS for understanding the nature and development of a society.

A veteran of WWI, Innis studied at McMaster and U of Chicago. His choice of a Canadian thesis topic, a history of the CANADIAN PACIFIC RAILWAY, was his first step towards a reorientation of many fields of study relating to Canada, especially in the social sciences. In 1920 Innis joined U of T's political economy department where he remained until his death. During the 1920s he became increasingly dissatisfied because he believed that the American- and British-trained scholars who predominated in Canadian universities were applying inappropriate models to their analysis of Canada's economy. Innis's first major work, *The Fur Trade in Canada* (1930), established his reputation and introduced the STAPLE THESIS of economic development. Innis also opposed the continentalist school and argued that Canada's political boundaries were the logical outcome of Canada's economic history — contrary to the tenets of CONTINENTALISM. Appointed head of U of T's political economy department in 1937, Innis continued to work on his second major study, *The Cod Fisheries* (1940). Although he had trouble finding a suitable publisher because of his cumbersome writing style, this work established him in the forefront of the world's economic historians. Whereas *The Fur Trade* had set Canada off from the US, *The Cod Fisheries* underscored Canada's European roots.

Harold Innis, brilliant political economist and pioneer in communications studies (courtesy Public Archives of Canada/C-19694).

During the 1930s and WWII, Innis rose to the challenge of defending the integrity of the universities and of scholarship which he saw as imperilled by the general atmosphere of crisis. He was active in establishing societies, such as Canadian Political Science Assn and the American Economic History Assn, and he used his connections and prestige to secure funding for Canadian research. More controversially, he vigorously opposed the efforts of fellow academics such as F.W. UNDERHILL who were involved in the LEAGUE FOR SOCIAL RECONSTRUCTION. To a considerable extent, the detachment of our contemporary Canadian academic community from political involvement derives from his attitudes and efforts.

Innis's scholarly reputation led to an invitation to visit the Soviet Union in 1945. His posthumously published *Russian Diary* shows his deep concern with the problems of Western civilization. In drawing attention to the impact of the media of communications on the extent and duration of a civilization, Innis's communications researches culminated his lifelong attempt to explain the interpenetration between Canada and Western civilization. He expressed these concerns in his 1947 presidential address to the Royal Soc of Canada, titled "Minerva's Owl," although his arguments were little understood at the time. He contended that Western Europe and N America were in a state of profound crisis. This crisis was rendered more severe because the dominant media of communication fostered an obsessive preoccupation with the present with the consequence that politicians and scholars were neither able to understand their circumstances nor to devise an appropriate remedy for their problems. Innis continued his researches amidst increasingly heavy administrative responsibilities. In 1947 he became dean of U of T's graduate school, and in 1948 he visited England to deliver the Beit lectures, material which he later included in *Empire and Communications* (1950). This synoptic study of ancient Egypt to the present explores the theme of the interconnection between the vitality and durability of countries and empires and the modes of communication that dominated in them. Innis was still working on these ideas at the time of his death.

Innis had few followers during his life, though after his death he has secured admirers from several different academic disciplines, ranging from Marshall McLuhan in communications to Canadian Marxists interested in his study of the interrelations between economics, politics and society. However, few of Innis's disciples have had the courage and the genius to follow him in the breadth of his reading and theorizing.

WILLIAM CHRISTIAN

**Innu**, see MONTAGNAIS-NASKAPI.

**Innuition Region** is a physiographic subdivision of the great arc of younger, mainly stratified sedimentary rocks that surround the stable, ancient SHIELD core of Canada. It comprises a triangle-shaped area of 540 000 km<sup>2</sup> between the Shield and the Arctic Ocean, most commonly referred to as the QUEEN ELIZABETH IS. Its geological history and present form are best understood by visualizing it as the uplifted, drowned edge of the continent. In Cambrian and Upper Devonian times, an ocean-covered area of subsidence and sedimentation, known as the Franklinian geosyncline, bordered the Shield landmass. Deformation occurred in the Middle Devonian, thrusting up a belt of mountains that today stretch in an arc from the rugged peaks of NE ELLESMERE I. 2000 m high, and the highlands of AXEL HEIBERG, before the ranges progressively broaden and flatten into the plateaus of the western PARRY IS. About 330 million years ago, the Sverdrup Basin developed as a regional depression in which successive formations were

built up over 270 million years to thicknesses as great as 12 250 m. During the opening up of the Arctic Basin these rocks were subjected to enormous forces, being pushed towards the unyielding Shield and folded and buckled into a chain of mountains running 2250 km from the Grantland, British Empire and United States ranges of NW Ellesmere, through the mountains of central and western Axel Heiberg. Less disturbed Sverdrup sedimentary rocks now form shale and sandstone lowland areas of rolling topography, though intrusion and piercement by evaporite domes has occurred. A narrow strip of thin, unconsolidated sand and gravel deposits is found along the Arctic Ocean coast.

DOUG FINLAYSON

**Inquiry Into Certain Activities of the Royal Canadian Mounted Police, Royal Commission of** (McDonald Commission), was a federal commission, est 1977, following allegations of crimes by the RCMP Security Service. Matters referred to the commission included a break-in at a data-processing company and the theft of a PARTI QUÉBÉCOIS membership list; 400 break-ins without warrants, mainly in BC (since 1970); electronic surveillance of at least one member of Parliament; unauthorized mail openings; the burning of a barn in Québec; widespread monitoring of election candidates; theft of dynamite;

and use of forged documents. Former RCMP Commissioner William Higgitt and former Security Service Director General John Starnes testified that they knew subordinates occasionally broke laws in performance of duties. RCMP officers also claimed that they had informed their ministers of various activities, but PM Pierre Trudeau and other ministers testified that they had received no such information. The commission recommended, among other things, that police comply strictly with the law; that the RCMP be permitted to open mail with judicial authorization; and that a civilian security agency, divorced from the RCMP, be created. This new civilian agency, the Canadian Security Intelligence Service, came into existence in July 1984 and was given broad powers. For example, under judicial warrants, CSIS has the power to open mail. See also INTELLIGENCE GATHERING.

JEFF SALLOT

**Insect**, small ANIMAL (more than 75% of known species are less than 6 mm long) with 3 pairs of legs, 1 or 2 pairs of wings, and a segmented body. Wings did not evolve in some primitive insects (Apterygota) and have been secondarily lost in some advanced groups (eg, fleas and lice). Although a few species occur in fresh water, in the intertidal zone of the seashore, or on the ocean surface, the vast majority are terrestrial.

(artwork by Shirley Stacey)

## INSECT DEVELOPMENT AND LIFE HISTORY

They are especially abundant in the tropics but may be found in all except the most extreme latitudes and altitudes. For example, about 300 species (mostly flies) live N of the 75th parallel, on Canadian arctic islands. A few species even occur in Antarctica, as parasites of birds or seals.

The diversity of insects is staggering: the 750 000 recorded species are estimated to represent only 10-50% of the world total. In Canada, about 55 000 species have been described. Insects owe their success to their adaptability and to their long and varied evolution; they were among the first terrestrial animals. As Arthropoda, insects possessed a light, strong, waterproof cuticular external skeleton (exoskeleton), which was critical in the evolution of the group. Their small size enables insects to hide easily from predators and to feed on scarce materials. Smallness, together with flight, facilitates dispersal by wind into new habitats, leading to geographic isolation of populations and, ultimately, to evolution of new species. Reproductive capacity and life history have also been important. Production of large numbers of eggs, combined with short generation time, has enabled insects to adapt rapidly to changing environments. The evolution of a pupal stage, between larva and adult, has permitted specialization of the life history such that the primary function of the larva is accumulation of food reserves; those of the adult are reproduction and dispersal. For many insects, the pupa has developed into a highly weather-resistant stage, which, together with the restriction of feeding activity to the larva, has enabled these insects to colonize habitats in which conditions are suitable for development only at limited times of year.

Insects inhabiting regions (including most parts of Canada) where adverse conditions (eg, lack of food, and temperatures unsuitable for growth and reproduction) regularly occur survive by becoming dormant. Dormancy may occur at any stage in the life history, the stage varying with species. Thus, many grasshoppers overwinter in the egg stage; some damselflies survive as larvae frozen in ice; many butterflies and moths overwinter as pupae; and some mosquitoes survive as adults. Usually the over-

wintering stage is laid in or seeks out locations where conditions may not be so extreme, eg, under leaf litter or bark, in soil or in holes in the ground. In addition, some species develop antifreeze molecules that prevent frost damage. An alternative strategy is migration; using wind currents, some insects may migrate several thousand kilometres to more suitable conditions. For example, monarch butterflies, which spend early summer in southern Canada, move S in Aug-Oct to overwintering sites in southern US, returning the following spring. CEDRIC GILLOTT

**Insect, Beneficial** Most insects are beneficial; less than 1% are pests. The largest group of insects, the parasitic wasps (about 200 000 species), attack other, often harmful, insects. Insects play a major ecological role and many systems would fail without them: they are the principal food of many ANIMALS and the survival of insect-pollinated PLANTS depends on them. Bees are not the only important pollinators; in northern Canada POLLINATION is largely by flies and butterflies. Plant-feeding insects also function in maintaining plant diversity; if they are removed, a few plant species tend to displace the others. Similarly, if plants or plant-feeding insects are introduced without their natural enemies, they often become pests. The solution, called biological control, involves introducing enemy species. Before 1930, the European spruce sawfly was spreading across eastern Canadian spruce forests. The introduction of parasitic wasps and a virus disease reduced the sawfly from a major threat to an economically unimportant insect. Biological control is also used against WEEDS, particularly introduced species causing problems in permanent pasture and wild areas. In the interior of BC in 1950, St John's-wort (an introduced European weed) was excluding native forage. A specialized European beetle was introduced which, in most areas, reduced the weed to scattered plants, without damaging other vegetation. This approach is often the cheapest solution and avoids possible side effects from herbicides but may take 20 years. There are currently projects to control leafy spurge and diffuse knapweed in western Canada using European insects. Insects can also

feature in biological control of wastes, as in Australia, where beetles were introduced to control the accumulation of cow dung in pastures and an associated fly problem.

In some parts of the world, insects are used directly as food (eg, grasshoppers). There is a Canadian account, in Samuel HEARNE's diary for 1771, of eating warble-fly grubs, which were said to taste like gooseberries. The most widely used insect product is honey (see BEEKEEPING); others include silk from the cocoon of the silkworm moth; shellac from the secretions of a scale insect on fig trees in Asia; red dye from the cochineal insect on cactus. Cochineal is now returning as a red food colouring because the coal-tar dyes that displaced it have been implicated as carcinogens. Insects are important tools for GENETICS and population-dynamics research. Last but not least, butterflies, dragonflies and beetles have been an inspiration for art, literature and music. PETER HARRIS

**Insect Classification** A classification system acts as an efficient storage mechanism for information about each taxon or group. A natural classification also attempts to present the genealogical (historical, phylogenetic) relationships known or hypothesized to exist among them. Necessarily, such a classification is closely linked to and dependent on an understanding of the group's EVOLUTION. In the case of insects, different entomologists have different viewpoints on evolutionary history, and are likely to propose quite different classification schemes. Insects are classified primarily on the basis of wing structure, mouthpart structure and type of metamorphosis. It is estimated that about 55 000 insect species occur in Canada, categorized in 569 families, belonging to 32 orders. This number includes all Arthropods (segmented, jointed-limbed animals) which have a body divided into head, thorax and abdomen, and 3 pairs of thoracic legs. The class Insecta, as so defined, includes 3 taxa (Protura, Collembola and Diplura) that some workers would exclude from a strict definition of an insect. All 3 groups have mouthparts withdrawn into pouches in the head, and are sometimes considered to constitute a natural group, the Entognatha [Gk, "internal jaw"]. While all 3 are primitively wingless, they are very different morphologically. Protura (telsontails) lack antennae and have a twelve-segmented abdomen with the female genital opening behind segment 11; 8 species are estimated to occur in Canada. Collembola (springtails and snowfleas) have muscled antennal segments and a six-segmented abdomen; 520 species are estimated to occur in Canada. Diplura (no common name) have 3-4 spiracles (tracheal openings) on the thorax and a specialized method of leg suspension; 5 species are estimated to occur in Canada.

Insects, defined in a restricted sense, have nonmuscled terminal antennal segments; 6 legs, each having 2 points of articulation with the thorax; and an eleven-segmented abdomen. Two apterygote (wingless) orders have protruding (ectognathous) mouthparts: the Microcoryphia (bristletails, 13 species estimated in Canada), which have mandibles with a single point of attachment to the head capsule; and the Thysanura (firebrats and silverfish, 12 species estimated in Canada), which have mandibles with a double point of attachment to the head capsule. Within the subclass Pterygota (winged insects), the infraclass Paleopterygota contains insects unable to fold the wings back and down onto the abdomen. Two very different and rather unrelated orders are represented in the living paleopterygotes, the Ephemeroptera (mayflies, 411 species estimated in Canada) and the Odonata (dragonflies and damselflies, 197 species estimated in Canada). In the infraclass Neoptera, all adults are able to fold the wings

over the body and flat down onto the abdomen. The group originally had chewing mouthparts, but members of several descendant groups have departed widely from this condition.

Three subdivisions (cohorts) are recognized within the Neoptera, each representing an independent evolutionary line. The Polyneoptera are generally characterized by chewing mouthparts, a distinct anal lobe to the hind wing, abdomen with cerci (appendages), numerous Malpighian tubules (long vessels functioning primarily in excretion), and an incomplete metamorphosis. In incomplete metamorphosis, juveniles in later instars (periods between molts) closely resemble adults and have the same feeding habits, habitat and type of mouthparts. Eight orders of Polyneoptera can be recognized in the Canadian fauna: Plecoptera (stoneflies, 310 species estimated in Canada); Dictyoptera (cockroaches and mantids, 16 species estimated in Canada); Isoptera (termites, 3 species native to Canada); Notoptera (grylloblattids, 5 species estimated in Canada); Dermaptera (earwigs, 5 species estimated in Canada); Grylloptera (long-horned grasshoppers and crickets, 96 species estimated in Canada), which are often grouped in the next order; Orthoptera (short-horned grasshoppers, 140 species estimated in Canada); and Cheleutoptera (stick insects, 2 species estimated in Canada). Orthoptera are the most common worldwide. Notoptera is a very interesting group of secondarily wingless, predaceous insects living in the western mountains, often associated with ice and snow fields. Since they have a rather primitive morphology, they are regarded by some entomologists as living fossils.

The second cohort of the Neoptera, the Paraneoptera, usually have piercing and sucking mouthparts, a hindwing with a very small or no anal lobe, abdomen without cerci, 4 or fewer Malpighian tubules and an incomplete metamorphosis. Four orders can be recognized in the Canadian fauna: Psocoptera (bark and book lice, 103 species estimated in Canada); Phthiraptera (bird and mammal lice, 775 species estimated in Canada); Hemiptera (true bugs, 4226 species estimated in Canada) and Thysanoptera (thrips, 246 species estimated in Canada). Hemiptera are the most abundant worldwide.

The third cohort, the Oligoneoptera, characteristically have a complete metamorphosis, with distinct egg, larval, pupal and adult stages. Such a life cycle permits larvae and adults to diverge in form and habits. The generalized mouthparts are of the chewing type; however, the 10 orders represented in the Canadian fauna have very different ways of feeding. The commonest order worldwide, the beetles (Coleoptera, 9116 species estimated in Canada), are distinguished by chewing mouthparts and forewings modified as stiff, hard, protective elytra. Next most common are the true flies (Diptera, 14 464 species estimated in Canada), distinguished by having only one pair of wings, the forewings. The most familiar group is probably the Hymenoptera (bees, wasps and ants, 16 665 species estimated in Canada), with constricted waists allowing stinging movements. The remaining orders of Oligoneoptera are, in order of Canadian representatives: Lepidoptera, butterflies and moths, with 6734 species estimated in Canada; Trichoptera, caddisflies, 746; Siphonaptera, fleas, 190; Neuroptera, lacewings, etc, 87; Mecoptera, scorpionflies, 32; Megaloptera, dobsonflies and alderflies, 20; and Raphidioptera, snakeflies, 7. See individual species entries.

G. G. E. SCUDDER

**Insect Pests** Insects and humans cohabit the Earth and have developed complex relationships. Insect pests (less than 1% of all species) are those insects that feed on, compete for food with or transmit diseases to humans and livestock. With recent increases in human population and

in areas of the earth exploited for resource extraction, the potential for interaction between insects and humans has increased. Indeed, many insects are forced to adapt to human-dominated ecosystems, and thus may become pests, or become extinct.

#### Injury to Humans and Animals

**Effects on Humans** The human body provides food and shelter for the crab louse and 2 forms of human louse (head and pubic lice). Fleas and bedbugs obtain food from human bodies and inhabit human dwellings between blood meals. Out of doors, humans are attacked by blood-sucking flies (mosquitoes, black, horse and stable flies), which torment victims and may cause toxic or allergic reactions. In Canada, human dwellings, barns and other buildings are essential for the survival of insects from warmer climes (eg, cockroaches, clothes moths, carpet beetles, silverfish and some species of ants).

Many blood-sucking insects are vectors of human diseases, picking up the disease organism while feeding on an infected host (human or animal) and infecting subsequent victims. Human lice are important vectors of trench fever, relapsing fever and epidemic typhus; fleas can transmit plague bacilli from rodents to humans; and different species of mosquitoes transmit malaria and encephalitis. In these diseases, the insect is an essential part of the chain of development of the disease organism, but other diseases are transmitted mechanically. The house fly, which occurs almost worldwide, breeds on organic wastes and can carry disease organisms to food.

**Attacks on Livestock** Livestock are attacked by the same types of insects as humans. Each type of livestock is attacked by one or more species of lice, which causes lack of vigour and stunted growth. Blood-sucking flies (eg, the introduced stable fly, face fly and horn fly) feed on and pester cattle, reducing growth and milk production. In some areas, mosquitoes or black flies may be so abundant that they reduce cattle feeding and may cause stampedes. Native black flies can cause severe anemia and even death. Cattle raised in black-fly areas are somewhat resistant to attack, but animals brought in for herd improvement lack resistance and suffer severely or die.

#### Injury to Plants and Plant Products

In Canada, short growing seasons and cold winters restrict most insects to one generation annually. This reduces the number of pest species and the amount of injury they cause, in comparison with the impact of pest species in warmer parts of the world. Nevertheless, insects cause significant losses, and their control adds to the cost of many agricultural and forestry products.

**Cultivated Crops** Intensive agriculture encourages the development of insect pests by concentrating food items (crop plants and stored food) on which insects can feed. Food-plant

Pesticides have been used since 1950 against such tree pests as tent caterpillars to maintain sustained tree harvesting programs (photo by Norman Lightfoot).

concentrations, often in monoculture, also may reduce the effectiveness of natural enemies attacking pest species in natural environments. Insects may attack any part of the plant, at any stage of development. Seed grains and potatoes are attacked by wireworms; newly germinated seedlings of almost all crops are attacked by cutworms, while flea beetles are a major pest of newly germinated rape and other cruciferous crops; the growing plant is fed on by climbing cutworms, armyworms, aphids, Colorado potato beetles, etc; corn ears are fed on by corn borers and grain ears by several species of aphids. Several species of beetles and moths may infest stored grain, and other species of these groups feed on flour and processed foods.

Losses, caused by insect attack, and costs of control are difficult to determine and little information on this subject is available. Yield losses of up to 5% per year and maximum losses of 25% are estimated to occur on CEREAL grains in western Canada. The production of canola was estimated to have been reduced, in 1979, by 10% by flea beetles, despite expenditure of about \$12 million for insecticides.

**Transmission of Plant Diseases** Sucking insects that transmit infections from diseased to healthy plants seriously affect several crop plants in Canada. Serious damage can be caused by very few infected insects. Aphids are the only vectors of barley yellow-dwarf virus of cereals, which drastically reduces grain yields. Leafhoppers transmit aster yellows, which affects not only asters but also lettuce, celery, carrots and potatoes. Aphids also transmit virus diseases of potatoes, a continuing threat to production in eastern Canada. In BC, cherries and peaches may be infested by the little cherry virus disease carried by leafhoppers.

**Damage to Forest Trees and Wood Products** Canadian forests are composed mainly of a few tree species, and these stands were normally subject to attack by insects, especially when they reached maturity. Insects (eg, spruce budworm, hemlock looper and various species of bark beetles) killed old trees to make way for regeneration. They now compete with man for forest resources. In Ontario, Québec and the Atlantic provinces, outbreaks of spruce budworm have occurred periodically for many centuries. Since 1950, PESTICIDES have been used to prevent tree death and maintain sustained tree-harvesting programs. Unfortunately, spraying has prolonged the outbreaks so that some parts of these forests must be sprayed yearly. Bark beetles occupy a similar position in western forests, normally attacking over-aged or weakened trees. They not only compete with man for wood but also are pests in PARKS, where over-aged stands are maintained for aesthetic reasons.

The interior of lumber, poles and wooden portions of buildings may be hollowed out to form nests of black carpenter ants. In addition to serious structural damage, these large ants can be household pests, feeding on moist foodstuffs and sometimes damaging fabrics and paper products. Termites can cause serious structural damage to buildings. In Canada they occur only in southern BC and southern Ontario. See individual species entries.

W. J. TURNOCK

**Insolences du Frère Untel, Les** (1960), by Jean-Paul Desbiens (published anonymously), is an eloquent plea for educational reform couched in a whimsical, occasionally irreverent but always incisive style. Anticipating the formation of Québec's ministry of education in 1964, the essays attack the cultural and linguistic poverty which the author, a teaching friar, attributed in part to the inadequacies of an antiquated and repressive parochial education. Reproducing controversial letters between André Laurendeau, Desbiens and others which had been published in the newspaper *Le Devoir*, the

introductory essay analyses the prevalent, exclusive use of JOURNAL by secondary-school students as reflecting an insular, anti-intellectual form of discourse. Desbiens addresses the real fears dictating self-censorship; he also discusses inadequate teacher training, the need for religious, social and economic reform, and related topics, presenting his arguments in a nationalist text which became one of the classics of the QUIET REVOLUTION. Often reprinted, it was translated by Miriam Chapin as *The Impertinences of Brother Anonymous* (1962). MICHÈLE LACOMBE

**Institut Armand-Frappier** In 1938 the Institut de Microbiologie et d'Hygiène de Montréal was established as an autonomous, nonprofit organization. In 1972 it was integrated into Université du Québec and, in 1975, became the Institut Armand-Frappier (IAF), after its founding director Armand FRAPPIER. Four complementary objectives make IAF unique in Québec and Canada: research in microbiology and related sciences, with applications for preventive MEDICINE and industry and other nonmedical aspects; graduate and technical teaching; services to public-health authorities, hospitals, universities, industry and the community (including viral and immunological diagnosis, epidemiological investigations, vaccinations and consultation); and the manufacture of BIOLOGICAL PRODUCTS (vaccines, serums, etc), diagnostic products and biological reagents. This work is done in 6 centres specializing in bacteriology, epidemiology and preventive medicine, IMMUNOLOGY, VETERINARY MEDICINE, food sciences and virology. Practical, production-related activities include commercial production and quality control. The Institut, located in Laval, employs 450 people, including 70 scientists and professionals, 90 graduate technicians, and receives over 50 graduate students and other research trainees. Recent concerns include BIOTECHNOLOGY, particularly GENETIC ENGINEERING and modern fermentation techniques.

**Institut canadien**, fd 17 Dec 1844 in Montréal by a group of young French Canadian intellectuals who wished to establish a centre of patriotism and culture. The Institut quickly became a political and cultural force in francophone society, and similar organizations were established in about 60 other centres. At first politically neutral, it fell under the spell of Louis-Joseph PAPINEAU and developed leftist leanings in harmony with *L'Avenir*, a newspaper fd July 1847, to which a number of institut members contributed articles. In 1854, 11 members were elected to Parliament. But their radical nature, which earned them the nickname "rouges" (see PARTI ROUGE), and their stand favouring annexation to the US caused the Liberal-Conservative Party and the clergy to join forces against them. In 1858 the opposition of the bishop of Montréal, Mgr Ignace BOURGET, led to the resignation of 138 members, to Rome's condemning the institut and placing its 1868 yearbook on the Index of forbidden books, and to the GUIBORD AFFAIR. Conservative public opinion turned against the institut, beginning a decline virtually completed by 1885. The Institut canadien had sponsored the most liberal and innovative discussions of the period, and its library was a collection of major scientific, legal and literary works. An ultraconservative political, social and religious climate ruined the hopes raised by its foundation. PHILIPPE SYLVAIN

**Institut québécois du cinéma** (IQC) was created 19 June 1975 by the adoption of the Loi sur le cinéma to meet long-standing demands from Québec cinematic groups. Its mandate was to promote and support the creation, production, distribution and showing of high-quality films in Québec. The law also established certain requirements in dubbing, subtitling, children's films and film research that were designed to

strengthen the Québécois presence in the industry. The 7 members of the IQC represent all sectors of the industry and its clientele. Its aid programs cover all aspects of film and include investments, loans, grants and advances for distribution. The annual budget since 1977 has been around \$4 million. In June 1981, the IQC published new policies for medium-term assistance and a 5-year plan to revive the Québec film industry. Unlike the CANADIAN FILM DEVELOPMENT CORPORATION, the IQC invests in short- and medium-length films, in TV series and in animation. It has made possible many works which otherwise would not have been made. PIERRE VÉRONNEAU

**Insulin** is a peptide hormone secreted by cells in the pancreas. It has a molecular weight of 5800 and is composed of 51 amino acids. The molecule is composed of an A and B chain connected by 2 disulfide bridges. One milligram equals 24 international units. When synthetic insulin is released into the blood, the liver retains 20-60% of it. The liver is also the major site for insulin degradation. The synthesis and release of insulin is regulated by a moment-to-moment relationship to concentrations of substances affecting receptors on beta cells such as glucose, amino acids and other hormones, as well as to activities of the sympathetic nervous system. Among the former substances, glucose is the principal stimulant and among the latter activities alpha-adrenergic action of epinephrine is the principal inhibitor.

Insulin is the most potent hormone of fuel storage, affecting carbohydrate, fat and protein throughout the body. Acting through binding to receptors on cell membranes, the principal targets of insulin are in liver, fat and muscle. Concentrations of glucose, free fatty acids and amino acids decrease in the circulation as a result of augmented insulin action, and fuels are thus stored. Their breakdown (catabolism) and release are inhibited and growth is facilitated.

During exercise, when there is need for fuel mobilization for the requirements of contracting muscles, there is co-ordinated inhibition of insulin release in association with the release of counter-regulatory hormones such as epinephrine, glucagon, cortisol and growth hormone.

Insulin has been made available for treatment of DIABETES MELLITUS by extraction from beef and pork pancreatic islets since the discoveries of F.G. BANTING, C.H. BEST, J.B. COLLIP and J.J.R. MACLEOD in 1922. Recently, through GENETIC ENGINEERING, biosynthetic human insulin is becoming available. G.D. MOLNAR

**Insurance** can be defined as an agreement under which some or all economic losses are transferred to an insurer who, for a premium, promises to compensate the insured for the losses resulting from specified risks (see INJURY AND PREVENTION) during the term of the agreement.

The modern world is full of hazards. While the perils — accident, fire, sickness or death — may result in financial losses, it is the hazards that create the potential for losses. "Risk," a term used to reflect the likelihood of a loss, is faced continually by individuals, organizations and society as a whole. The need for safety and security is deeply entrenched in human nature, and most people fear the threat of loss posed by risk. It is therefore not surprising that attempts to cope with risk have been developed since early in man's history.

The idea of pooling risks originated in ancient civilizations. Chinese merchants divided their cargo among several ships during dangerous trips in China's waterways. Through such pooling, no single merchant would suffer a total loss as a result of a shipping disaster. Various forms of risk sharing were practised in ancient Greece and Rome and by the trading nations of the Middle Ages. The concept of transferring the

economic consequences of risk, ie, the purchasing of insurance protection, is an important constituent of risk management.

Although a number of parish and municipal fire-insurance companies operated in the mid-1830s in Lower and Upper Canada, the first Canadian life-insurance company was founded in 1847 in Hamilton, Ont. The formation of major insurance companies (Mutual Life, Sun Life, Confederation Life and London Life) in the 1870s was prompted by the passing of the first Canadian insurance law in 1868. With INDUSTRIALIZATION and the introduction of new technologies, the insurance industry developed rapidly.

**Underlying Principle of Insurance** Insurance involves an agreement between the insured, who pays a premium, and the insurer, who promises to reimburse the insured for financial losses incurred from specified risks. For an insurer to enter such an agreement with an individual or an organization, a large enough number of agreements covering similar risk characteristics are required. By combining many risk exposures, it is possible to predict the collective losses quite accurately. The underlying principle is the law of large numbers which — in the context of insurance — states that with an increasing number of risk exposures the actual losses approach their expected value quite closely. The expected collective loss is then shared proportionally by all the insured in the form of premiums. With insurance, individuals or organizations exchange the risk of uncertain but potential losses.

**Operation of Insurance** An insurance agreement is a contract between the insurer and the insured defining the risk to be covered, specifying the conditions under which the contract applies, and outlining the procedure for settlement. Insurers are either privately owned corporations or government-operated agencies. Most private insurers are stock and mutual companies. Stock companies are profit oriented and owned by shareholders; mutual companies are owned by the insurer and any excess of income over claim settlements and expenses are returned to the insured in the form of dividends or reduced premiums. An association of individuals can also act as insurers. In such an arrangement the individual insurers characteristically assume the risks personally and are therefore liable for loss settlement with their personal assets. The best known of such associations is Lloyd's of London, which operates worldwide and insures large risks that other insurers may have rejected.

Government-operated agencies also provide protection, typically mandatory, against certain risks. Such programs are termed social insurance (see SOCIAL SECURITY) and include WORKERS' COMPENSATION plans, automobile insurance in certain jurisdictions, and some pension plans. Such programs do not necessarily operate on the implicit assumption that sufficient funds are accumulated in advance for the payment of losses; payments are made from general tax revenues.

**Supervision and Regulation** The insurance industry is regulated for a number of reasons, eg, because premiums are paid in advance and benefits may be paid in the (far distant) future to the insured or others with little or no power to protect their interests; to protect consumers from unfair practices; and because unreasonably low or high premiums can lead to insolvency or to unwarranted profits. In addition to self-regulation through industry associations, the responsibility for supervision of insurance in Canada is shared by the federal and provincial governments. The federal Department of Insurance is responsible for the registration and licensing of federally registered companies and is concerned with their ability to meet obligations to policyholders. This is accomplished by re-

quiring insurance companies to submit financial statements to establish that they have sufficient financial resources (through solvency tests) and by restricting the investment of the funds of insurance companies. The provincial superintendents of insurance prescribe statutory contract conditions, regulate the licensing of agents, brokers and adjusters, and regulate (in several provinces) the rates for automobile insurance. Nevertheless, insurance companies can and do go bankrupt (although this is quite rare), leaving the insured — particularly after a loss — in a difficult position, because little if any compensation for their losses can be expected.

**Insurance "Products"** A large variety of different forms of insurance protection are available, eg, life insurance, which provides financial resources to support the survivors of the insured or to pay for the obligations (credit insurance) in case of the death of the breadwinner. While term life insurance protects against the risk of (premature) death during a specified term, whole life insurance pays the face value of the policy whenever the insured dies. Under an endowment life contract the face value of the policy is payable upon death or at maturity of the policy; thus it carries the added function of capital accumulation. Life insurance is sold not only to individuals but also to industrial and professional groups.

Disability insurance, which protects the insured against the loss of income due to disability, is similar to life insurance.

The other major category of insurance protection in this area is health insurance. Sickness or accidents may lead not only to considerable loss of income but also to substantial medical expenses. Life-insurance companies therefore offer health insurance (as do other types of insurance companies). Health insurance offered by government-operated agencies is now mandatory in Canada (see HEALTH POLICY).

Another major form of insurance is the protection against liability claims resulting from wrongdoings by individuals or organizations. The legal basis for liability exposures are TORTS and contracts (see CONTRACT LAW). While liability claims from contracts arise from violation of contract obligations, tort claims arise from wrongdoings occurred by intentional interference (eg, trespass, defamation) or by negligence. If a wrongful act leads to losses to others, the wrongdoer is liable for the financial consequences. To meet these obligations to others (third parties), liability insurance in our litigious society has become essential. Under a liability coverage, payment of damage or losses only arises if the insured is legally liable. Liability insurance is offered to individuals to cover losses arising from bodily injury or property damage or both; it is offered to businesses (product liability is an important form) and more recently to professionals (eg, to protect medical doctors from MALPRACTICE claims).

Automobile insurance is probably the most widely held insurance coverage. Auto insurance policies providing protection against liability claims are typically mandatory and a prerequisite for licensing a vehicle. Both fault and no-fault automobile insurance plans exist. In no-fault plans there is no determination of blame, in the courts, for an automobile accident before payments for bodily harm and perhaps property damages are made by insurance companies. The elimination of fault must be approved by provincial legislation. Saskatchewan introduced the world's first no-fault system of automobile insurance in 1946; Québec introduced a similar plan in 1978. Policies providing protection against physical damage to the automobile from collision and other risks such as theft, storm and fire are voluntary.

Fire insurance indemnifies the insured in the event of damage or destruction of property by

fire. Over the years standard forms of fire policies have been developed. Fire insurance is typically part of the homeowner's policy, which includes, in addition, protection against break-ins, theft, water damage and personal liability. In fact the homeowner policy is a so-called "multiline" contract which provides convenience and cost advantages to the insured.

Many other forms of property insurance exist, including marine and aviation insurance, hail, windstorm and earthquake insurance, insurance against fraudulent computer use, and even insurance against a rained-out vacation. Ransom and kidnapping as well as skyjacking insurance can now be purchased.

**Future Issues** Insurers attempt to reduce costs of premiums by mass marketing; group insurance is part of this development. A major concern is the increase in fraud, arson and crime and its implications for insurance. Another important trend is the increasing internationalization of economies, which has sparked further need for insurance of export credit risk. Not only has the insurance volume increased worldwide — domestic and foreign insurers compete in the same market — but the need for reinsurance (ie, the assumption of part of the risk insured by one insurance company, by a second insurance company, to reduce the risk) has also grown. International aspects of insurance significantly affect the national BALANCE OF PAYMENTS (ie, the export and import accounting).

The question of HUMAN RIGHTS may also affect future trends in the insurance industry. The principle of insurance (ie, that insurance companies come together to share their risks in a class or group) is in many respects opposed to the principle of human rights (ie, that no individual should be assigned or characterized by the characteristics of a group). Various segments of the Canadian population, eg, women and the handicapped, have expressed their concern over what they believe are discriminatory insurance rates.

From a regulatory point of view, it is necessary to guarantee that the insurance industry is viable and financially solvent, and that insurance is available to so-called substandard risks. Continued supervision, the possibility of establishing a scheme that protects the insured in case of BANKRUPTCY, and the creation of "pools" may contribute to these goals. With the increasing potential for catastrophic losses (eg, super-tankers) and the shifting relationships in the socioeconomic system, the insurance business faces considerable challenges in the future.

C. HAEHLING VON LANZENAUER  
Reading: D. Bickelhaupt, *General Insurance* (1979); R. Mehr and E. Cammack, *Principles of Insurance* (1976).

**Intellectual History** is a record of the thought of groups and individuals who may or may not be academics or "intellectuals." The study of intellectual history often includes the treatment of sensibilities, emotions and ideological or cultural preoccupations as well as systematic thought, and touches on the concerns of historians in areas such as SCIENCE, POLITICS, SOCIETY, EDUCATION, ART, ECONOMICS, PHILOSOPHY, RELIGION, LITERATURE and JOURNALISM.

#### French Canada

Intellectual history in Québec, somewhat unfocused before 1760, became more distinctive after the CONQUEST. Its development was marked by the establishment of printing (1764) and was strongly affected by local political events (establishment of a house of assembly) and international ones (American Revolution, 1775-83, and French Revolution, 1789). Intellectual debate focused on civic or political issues; the press — *The Québec Mercury* (1805), *Québec's Le Canadien* (1806), *Montréal's La Minerve* (1826) — was the most important medium of expression of the new liberalism. After about 1820 schooling led

to increasingly polarized ideological stands, with a rising bourgeoisie in the liberal professions pitted against a still somewhat disorganized Catholic church preoccupied by its educational responsibility. At the time of the Lower Canada REBELLIONS OF 1837, a time of economic crises and parliamentary impasses, anglophone cultural institutions were particularly active.

During the Union period (1841-67) the gazettes were intellectually lively, and cultural institutions were increasingly polarized between an ULTRAMONTANE Catholic Church consolidating its position and a bourgeoisie weakened by the rebellion. The long search for a "national" literature began in the 1840s, and gained momentum with the publication of *Histoire du Canada* (1845-48) by François-Xavier GARNEAU. New papers kept appearing. There was a proliferation of voluntary associations, such as the liberal INSTITUT CANADIEN, where members could read local and foreign newspapers, borrow library books or take part in rhetoric-laden discussions. The generation of 1845 had access to a much larger network of schools under the new Surintendant de l'instruction publique (1841), to classical colleges and to UNIVERSITÉ LAVAL (fd 1852).

The entire 19th century was marked by the ideology of a church inclined toward Rome, supporting the priority of church over state, justifying thereby its intervention in intellectual, academic and social domains. Post-1870 liberal thinkers failed to implant the values of the bourgeois revolutions: respect for the freedoms of conscience, opinion, speech and association, and the idea of the separation of church and state. Wilfrid LAURIER was the first (in 1877) to attempt a courageous public distinction between political liberalism — that of the Liberal Party — and Catholic liberalism, condemned by a church closely linked with the Conservative Party.

After 1867 political life and especially partisan politics dominated. The public torpor was shaken by the 1885 hanging of Louis RIEL, the defeat of French minorities on the school question in Manitoba, New Brunswick, Keewatin and Ontario, and the sharp awareness that the French language — and "race" — were threatened, even in Québec. Henri BOURASSA clashed with Laurier over IMPERIALISM and NATIONALISM. Bourassa became the rallying point for a new nonpartisan political awareness. With Olivar Asselin, founder of *Le Nationaliste* (1904), and Jules Fournier, Bourassa founded *Le Devoir* (1910), the first exception to the rule of a partisan and "servile" press. A new linguistic awareness set the tone for the establishment (1902) of the Société du parler français, the first Congrès de la langue française (1912) and the creation of the Ligue des droits du français (1913). A new religious awareness among young people led to CATHOLIC ACTION, realized in the nationalistic Association catholique de la jeunesse canadienne-française (1903-04).

The great intellectual movement 1917-29 was ACTION FRANÇAISE, which, according to its guiding light, Abbé Lionel GROULX, was to synthesize the scattered ideas of nationalist thinkers. This "intellectual action" was also the uneasy response to transformations in Québec society caused by urbanization, INDUSTRIALIZATION, AMERICANIZATION and CONSCRIPTION. These social phenomena had preoccupied Action française and concerned workers' unions and then legislators before the church finally put together a Catholic SOCIAL DOCTRINE. The church's hesitant involvement in social issues is the key to intellectual history after the GREAT DEPRESSION. It brought the church closer to working-class circles and provided training for young lay people to learn the elements of political action. But until the mid-1930s, all these "actions" — Catholic, intellectual, social or national — were ideologically continuous with the 19th century,

when the church had dominated the educational and social fields.

Evidence of a growing state role in cultural life was the new dynamism of the provincial secretariat, where Athanase David directed, 1919-36, an "intellectual action." In this context discussions took place about the existence of a unique French Canadian literature. Modern social patterns received little examination but nevertheless were felt in a life-style whose pace was set by movies, automobiles and new household technologies. Modernism was already present in painting in 1928, the year painter Paul-Émile BORDUAS left to study in France.

The Depression deeply disturbed the generation then coming of age, whose search for a program of social, economic and spiritual recovery was taken up by the new ACTION LIBÉRALE NATIONALE (1933) and in movements and journals (JEUNE-CANADA, *L'Action nationale*, *La relève*). This generation was the last to believe in "the primacy of the spiritual." The social situation finally undermined the ultramontanist of a church increasingly mocked by the Depression. All who participated from the early 1940s in the lay action movements — Catholic, student, worker or rural — lived through the near paralysis of spiritual values as those values were overwhelmed by temporal and material life. The "social" church cracked during the ASBESTOS STRIKE (1949) and finally broke at the end of the 1950s. The shock of the Depression also served to root the UNIVERSITY in reality as its faculties of applied sciences multiplied and the social sciences started to develop.

The Depression also created an uneasiness about the future, which led intellectuals toward a new subjectivity expressed by the poets, eg, Hector de Saint-Denis GARNEAU and Alain GRANDBOIS, at the time of the war. In painting, the move from figurative to abstract around the end of the 1930s, eg, by Borduas and Alfred PELLAN, was as radical an intellectual break as was the social challenge of the REFUS GLOBAL manifesto published in Aug 1948.

The intellectual and cultural landscape of Québec at the start of the 1950s was radically altered by postwar prosperity and consumption, movies, radio, the automobile and the arrival of television in Sept 1952 — the later QUIET REVOLUTION would reveal a monument already virtually in place. The first writings seriously examining the intellectual history of Québec had appeared at the end of WWII. In 1945, amid works by Benjamin Sulte, Claude de Bonnauld, Robert de Roquebrune, Séraphin Marion and Auguste Viatte, Marcel Trudel published *L'Influence de Voltaire au Canada*. The writers of intellectual history began to focus on precise topics: the cultural significance of the Conquest (Claude Galarneau); the reverberations of the French Revolution in Québec and the state of subsequent cultural relations with France (Mason Wade, Michel Brunet, Gustave Lanctôt and, after 1960, Jean-Pierre Wallot, John Hare and Philippe Sylvain); the start of a printing industry and the beginning of NEWSPAPERS (Wade, Brunet and Lanctôt); and, in the 1970s and 1980s, liberalism and ultramontanist (Sylvain, Pierre Savard, Jean-Paul Bernard, Nadia Eid, Yvan Lamonde and Marcel Lajeunesse). A passion to defend the liberals of 1837 and thereafter coincided with the beginnings of the Quiet Revolution, that great "collective undertaking" that was to inspire new research into ideologies; this trend, publicized in *Recherches sociographiques*, first peaked in 1969 with a special issue, "Idéologies au Canada français 1850-1900." Other publications about the ideologies of the 19th and 20th centuries followed. This research, based on accounts of major figures, groups and movements, soon revealed its limitation: a privileged position for the written word. Intellectual history thus found itself challenged to include

those who had no voice. In the early 1980s Québec's intellectual history was at this point in the debate: Is there a satisfactory intellectual or cultural history which is not first of all a SOCIAL HISTORY?

YVAN LAMONDE

#### English Canada

Much of Anglo-Canadian thought in the first century after the Conquest in 1760 attempted to preserve British and Christian values in a colonial environment, or to establish some acceptable middle ground between a European heritage and an American geographical circumstance. Some of the first such exercises were in the form of humorous social satires (see HUMOROUS WRITING), such as Thomas MCCULLOCH's "Letters of Mephobosheth Stepsure" (1821-23) and Thomas Chandler HALIBURTON's *The Clockmaker* (1835). McCulloch helped initiate a tradition of moralistic social criticism present in English-Canadian intellectual history since 1820.

McCulloch was a Presbyterian minister and, as founder of Pictou Academy and first principal of DALHOUSIE UNIVERSITY, a major Canadian educator. Elsewhere in English Canada, serious intellectual effort also arose at the pulpit and the lectern. Between 1850 and 1900 many intellectuals were preoccupied with the apparent conflict between science and religion, especially with regard to the implications of evolutionary theory (see EVOLUTION; SOCIAL DARWINISM) and higher criticism. Clerics and professors sought to defend social and religious orthodoxy against an increasingly materialistic science by upholding the premises and conclusions of the Scottish "common sense" school of philosophy, the anti-speculative Baconian method in science and an evangelical pietism in religion.

From 1870 to WWI there appeared accommodation to the philosophy of evolution, most noticeably through a Hegelian idealism professed by philosophers such as George Paxton YOUNG and John WATSON. This idealism dominated academic thought and writing in English Canada into the 20th century, for it appeared to reconcile religious and scientific claims by subsuming the latter within the former. The ROYAL SOCIETY OF CANADA facilitated the development of a national academic community. New publishing ventures, most notably the *Canadian Monthly and National Review* (1872), *The Week* (1883) and QUEEN'S QUARTERLY (1907), provided creative outlets for social critics, including William Dawson LESUEUR, Goldwin SMITH, Agnes Maule Machar and Andrew MACPAIL. While differing in emphasis and audience, these magazines reflected a consensus of values marked by a broadly conservative social philosophy set within an acceptance (sometimes an uneasy one) of the workings of a capitalist market economy.

These years also saw the emergence of a preoccupation by English Canadians with the nature and implications of nationalism. By the turn of the century this took the form of an intense debate between those such as George Parkin and G.M. GRANT who placed Canadian nationalism within the context of the British Empire, and those such as Goldwin Smith and John S. EWART who insisted that nationalism was hollow unless it pointed towards constitutional autonomy and away from colonial status. For the half century following WWI, English Canadian thought was thus beset with competing forms of nationalism, one based on sentiment and the other on rationalism. In this respect, historians Harold INNIS and Donald CREIGHTON may be seen as intellectual heirs of Parkin and Grant, just as F.H. UNDERHILL and Ramsay Cook follow Smith and Ewart.

The emergence of the professional writing of history was testimony to the increasing importance of the university in shaping the direction of English Canadian thought (see HISTORIOGRAPHY). By the 1920s, U of T had begun to dominate academic affairs, particularly in the

humanities and social sciences; MCGILL UNIVERSITY maintained its high status in medical and scientific research; and Queen's U established a tradition — largely inspired by the example of Adam Shortt and O.D. SKELTON, but derived from the idealist heritage — of commitment by intellectuals to public service in government agencies. This latter trend was paralleled in religious affairs by the Protestant SOCIAL GOSPEL movement, which held an organic view of society, a belief in the immanence of God and a desire to achieve the Kingdom of God on Earth. One result was a further erosion of traditional denominational commitment and the creation in 1925 of the UNITED CHURCH OF CANADA, which committed itself to Christian engagement in the activities of secular social agencies. Implicit in the Social Gospel was a criticism of Canadian society, a criticism that took the form of a Christian socialism typified in the careers of J.S. WOODSWORTH and Salem BLAND.

Between the wars, research in the emerging SOCIAL SCIENCES, particularly political economy and history, became more empirical — if not materialistic — in causal inference. Writing in the humanities tended to bear witness to the continued importance of idealism. But some intellectuals became actively engaged in public social issues, particularly during the Great Depression of the 1930s. By the mid-30s the LEAGUE FOR SOCIAL RECONSTRUCTION, consisting largely of progressive university academics such as Eugene FORSEY and F.R. SCOTT, had in the collectively written *Social Planning for Canada* formulated a major critique of Canadian society and public affairs. Such social concern, together with the considerable intellectual effort that undergirded the federal Royal Commission on DOMINION-PROVINCIAL RELATIONS (1940), pointed toward a major redirection of social assumption and constitutional arrangement after 1945.

Directions in English Canadian intellectual life after WWII were largely derived from a recognition of the American domination of world affairs. The Royal Commission on NATIONAL DEVELOPMENT IN THE ARTS, LETTERS AND SCIENCES (the "Massey Commission," 1951) warned of the threat to Canadian cultural life by American-dominated mass media. Throughout the 1950s, as a result, a vigorous cultural nationalism was given forceful expression by a number of social commentators, especially Hilda Neatby, historian and member of the Massey Commission, who in *So Little for the Mind* (1953) criticized the Canadian educational system for accepting the American values implicit in the "progressive education" movement. The creation of the CANADA COUNCIL in 1957 reflected this enlarged concern for the future of Canadian cultural traditions. But by 1957 nationalist thought was beginning to shift from cultural to economic matters. Walter GORDON's Royal Commission on Canada's economic prospects (1958) was a strong statement of the need for ECONOMIC NATIONALISM. Throughout the 1960s a lively and productive debate took place on the merits of national industrial policy and on the problems — political, sociological and philosophical — inherent in a technology of mass communications dominated by the US. Was it possible to maintain real autonomy in the era of the "universal and homogeneous State"? This question was posed in different forms by philosopher and critic George P. GRANT, most forcefully in *Lament for a Nation* (1965). Economic, political and historical writing during these years by Mel Watkins, Abraham Rotstein, Donald Creighton, W.L. MORTON, Ramsay Cook and others provided abundant fuel for animated debate both in the academic community and before the public.

The intellectual efflorescence of the 1960s, coupled with a vast expansion of the country's university system, bore much fruit in the 1970s. The work of Marshall McLuhan, himself in-

spired by Harold Innis, helped assure that Canadians would pay attention to the theory and technology of communication; that of Northrop FRYE nourished a self-confident generation of novelists, poets and critics whose work fused intellect and imagination. The greater division of labour afforded by larger university faculties vastly increased the quality and quantity of scholarly "production." With this specialization, however, also came a more tentative approach to large-scale generalization in all academic fields. In that of history, for example, the older theme of "nation-building" as fundamental to the thematic ordering of scholarship broke down in the face of intensive research based on newly discovered regional, thematic and ideological "realities." In the 1970s Canadian scholarship entered an age of analysis rather than synthesis. Still concerned with questions of nationalism, English Canadians also sought to establish degrees of limitation in social identity and to articulate the cultural differences imposed on the nation by region and ethnicity. This more cautious approach to reflections on national life held true in the realms of the intellect, the imagination and public affairs.

A.B. McKillop

**Intelligence Gathering**, broadly defined, is the collection of information by a government agency from all available sources for the purpose of analysis. Intelligence data are used by the federal government to assist international diplomacy and to protect national security, and by federal and provincial governments for law enforcement purposes.

The Department of NATIONAL DEFENCE (DND) has specialized military and intelligence units, but with one major exception these are analysis units and are generally not engaged in intelligence gathering. Canada obtains much of its foreign intelligence, both diplomatic and military, from its allies, particularly the US, and the UK and other Commonwealth countries. The one major intelligence-gathering unit within DND is the top secret Communications Branch, which is responsible for protecting Canadian diplomatic and military communications networks from electronic eavesdropping; the branch also intercepts foreign electronic communications and, it is believed, maintains listening posts of its own to monitor the diplomatic radio and microwave transmissions from foreign embassies in Ottawa and to pick up Soviet aircraft and naval transmissions in the Arctic.

Law-enforcement intelligence gathering is carried out for the federal government by a variety of specialized units within the ROYAL CANADIAN MOUNTED POLICE, eg, the ORGANIZED CRIME and narcotics squads. Revenue Canada gathers intelligence about possible large-scale smuggling operations and major tax frauds. The Department of EXTERNAL AFFAIRS collects so-called "open-source" foreign intelligence from diplomatic posts abroad, but the Canadian government does not have a foreign intelligence service for the covert gathering of information in foreign countries.

Intelligence is gathered within Canada to counter threats to national security, eg, terrorism, espionage and so-called subversive activities. This function has been carried out traditionally by the security service of the RCMP, which on occasion has broken the law in its efforts (see INQUIRY INTO CERTAIN ACTIVITIES OF THE RCMP). The RCMP security service has gathered information and compiled files on some 800 000 individuals in Canada and on many organizations. In the early 1980s, in response to RCMP abuses, the Liberal government made several

legislative attempts to create a civilian intelligence service. The Canadian Security Intelligence Service came into existence 16 July 1984.

Intelligence-gathering techniques include open-source collection of published material and interviews. Covert intelligence-gathering techniques include physical surveillance (eg, "tailing" an individual), wiretaps, electronic surveillance with hidden microphones and cameras, surreptitious entries into private premises, mail opening, and examination of personal information files and records compiled by other government agencies or by private institutions. Many of these techniques are illegal or can only be lawfully authorized by a judge or the federal solicitor general.

One of the most effective techniques for gathering intelligence is the use of informants. The informant may be an employee of the intelligence agency who assumes an undercover identity to infiltrate an organization, or may be someone recruited by the intelligence service from within the ranks of the organization under investigation. Defectors are sometimes persuaded to continue as "agents in place" to provide valuable intelligence about enemy espionage operations.

The intelligence-gathering capability of governments is greatly enhanced by the ability of computers to store information and to retrieve it quickly from a variety of sources and compile a single dossier (see COMPUTERS AND SOCIETY). However, civil libertarians charge that these computer data-bank links also threaten privacy.

JEFF SALLOT

**Intendant** of NEW FRANCE, office created in 1663 when Louis XIV established a system of colonial government, including a GOUVERNEUR and SOVEREIGN COUNCIL. Second in rank to the governor, the intendant controlled the colony's entire civil administration. He gave particular attention to settlement and economic development, and to the administration of justice. Because he also managed financial matters, he had the most sweeping powers in the colony's government. Appointed by a royal commission and subject to recall at will, the intendant reported to the minister of marine (see MINISTÈRE DE LA MARINE). He ensured that the king's decisions were implemented, appealed to the minister over difficulties with new policies and presented a detailed annual report on the colony. He acted either by direct order or by decree of the Sovereign Council, which he chaired. Intendants were usually chosen from influential circles outside the nobility and were noted for the competence and care with which they performed their duties. New France's best-known intendants were Jean TALON, Gilles HOCQUART and François BIGOT.

JACQUES MATHIEU

**Intercolonial Railway** Construction of a railway linking the Maritime colonies and the PROVINCE OF CANADA was proposed as early as the 1840s. Surveys were carried out and deputations were sent to England to solicit financial support. A line was opened between Halifax and Truro, NS, in 1858 and from Saint John to Shediac, NB, in 1860. In 1865 Sandford FLEMING presented a report recommending a route along the Baie de Chaleur, through the Matapedia Valley and along the St Lawrence because it was far from the American border and passed through rich timber country. Completion of the railway was made a condition of CONFEDERATION, in 1867, and construction began shortly after. Fleming was appointed engineer in chief and was involved in many heated controversies with officials who controlled finances.

The first section between Truro and Amherst,

NS, was opened on 9 Nov 1872, and that between Rivière-du-Loup and Ste-Flavie [Mont Joli], Qué, in Aug 1874. The link between Campbellton and Moncton, NB, was completed 1875 and the gap between Campbellton and Ste-Flavie was closed 1876. Fleming declared the railway (some 1100 km long) ready for traffic on 1 July of that year. Construction of the railway did not require spectacular engineering feats, but presented numerous difficult challenges and was built to high standards. At Fleming's insistence, all but 3 of the BRIDGES were built of iron.

The Intercolonial acquired the GRAND TRUNK RAILWAY line from Rivière-du-Loup to Point Lévis, Qué, in 1879 and 10 years later gained running rights into Montréal from the GTR. It added the Cape Breton Railway in 1891, providing ferry service across the Strait of Canso. Built to fulfil the terms of Confederation, the Intercolonial was never a commercial success. Nevertheless, it provided employment, developed towns and villages along its route, and was a customer for Maritime coal. Up to 1918 it was administered by the Dominion government under the minister of railways and canals. Freight rates were kept low in order to promote trade, and deficits were met by the government. In 1918, with other elements of the CANADIAN GOVERNMENT RAILWAYS, it was placed under the control of the CANADIAN NORTHERN RAILWAY, and in 1919 became part of the CANADIAN NATIONAL RAILWAYS.

JAMES MARSH

**Interest** is the price paid by a borrower for the temporary use of someone else's money or, conversely, the price charged by a lender for the temporary use, by someone else, of his money. In ancient and medieval times, the difference between a moderate interest payment and a high rate of interest based on the desperation of the borrower wasn't clearly understood. All interest was called "usury," a term reserved now for exorbitantly high interest rates.

Interest is stated as a rate, ie, a percentage of the amount borrowed (principal) to be paid for an agreed period of time (usually a year) that the money is on loan. It has often been estimated that the basic rate of interest, the simple payment to the lender for waiting, is about 3% annually, but other factors add to this rate. First, there is a risk that the borrower cannot or will not repay the money. The risk of lending to the federal government is not large (although even countries, or "sovereign" borrowers as they are sometimes called, have defaulted on loans), but it rises somewhat on loans to provinces and even more on those to large companies. On loans to individuals, risk is often reduced by a mortgage on property or collateral, ie, something valuable, such as a bond deposited with the lender as security. The lender can then seize something valuable belonging to the borrower if the loan is not repaid. Unsecured consumer loans carry a high risk (see CONSUMER LAW), and therefore have high interest rates. Second, risk increases the longer the money is loaned. The borrower's ability to repay money may not change much in a month or a year, but over 10 or 20 years it may change radically, as may the need of the lender for the use of his own money. Third, INFLATION affects the buying power of the money when it is repaid to the lender. On a \$100 loan at 5% interest, the lender will lose money if inflation runs at 10%, because the \$105 paid in principal and interest at the end of a year will buy only what about \$95 would have bought when the loan was made. The inflation that must be taken into account, however, is not the inflation rate at the time the loan is made or over the year; it is the future rate, which can only be guessed by lender and borrower. If inflation is generally expected to drop, short-term loans may cost more in interest than long-term

loans, because the greater risk of default on the longer-term loan is more than balanced by the hope of lower inflation.

In the 1970s and early 1980s, economists found that uncertainty also affected interest rates. "Real" interest rates, ie, the stated rate minus the expected inflation rate (usually 3%), had risen to 7%, because in a time of economic instability, lenders had attempted to protect themselves from uncertainty.

There is always a range of interest rates, depending on the borrower and the risk of the loan. For example, in 1983, when the federal government was paying 10% to buyers of its bonds, large corporations were paying 11% as the "prime rate" for bank loans (the prime rate is the interest charged by banks to their best-secured corporate customers); companies were paying 12% on money borrowed by issuing bonds for longer periods than the shorter-term prime rate loans; mortgage loans were costing as much as 13% and consumer loans 14%. Interest rates on credit-card loans ranged from 18.6% to as high as 28.8%. This whole range of rates moves up and down, more or less together, as changes occur in the general level of interest rates (which in Canada is determined by the MONETARY POLICY OF THE BANK OF CANADA, the demand for loans, interest rates in the US and inflation rates).

The Bank of Canada fixes the BANK RATE, ie, the amount it charges for the relatively infrequent loans it makes to the commercial banks. More importantly, the bank rate signals the direction in which the Bank of Canada wants interest rates to move. In the 1970s the bank rate was fixed for months at a certain percentage rate and then changed by a Bank of Canada announcement, but in March 1980 the Bank of Canada shifted to a system under which the bank rate was changed each week in step with changes in the rate paid by the federal government to borrow money for 90 days by selling treasury bills.

Under this system the Bank of Canada could affect the bank rate directly by bidding at the auction held each Thursday when treasury bills are sold, mostly to the commercial banks. With the bank rate set at 0.25 of a percentage point above the average interest rate on 90-day treasury bills, the Bank of Canada could raise the rate by bidding up the treasury bill rate. Small changes in the bank rate may be ignored by other lenders, but when the bank rate rises significantly in a short period, the commercial banks raise their prime rates and other interest charges follow.

In 1975 the Bank of Canada began trying to cut inflation by raising interest rates. This move was based on the theory that with high interest rates, consumers are unwilling to borrow for goods such as houses and cars, and businesses are unwilling to invest; thus a rise in interest rates cuts down the demand for goods and services, which reduces the upward pressure on prices. This policy (use of interest rates to cut inflation) culminated in 1981 when the bank rate rose above 21% and the prime lending rate was 22.75%.

Canadian rates might not have reached such levels had it not been for the rise in rates in the US where a similar monetarist policy was in effect (see MONETARISM). When American rates rise and Canadian rates do not follow, money tends to flow to the US as lenders seek the higher return on their loans. This outflow pushes the value of the Canadian dollar down in terms of American funds. Imported goods then cost more in Canadian dollars, and this tends to raise the inflation rate in Canada. One way to break the close connection between Canadian and American interest rates is to control the flow of money in and out of Canada, as was done during WWII by a system of exchange controls.

The general level of interest rates is also affected by the demand for borrowed money, which tends to rise and fall with the economy. In times of RECESSION, businesses and consumers are less interested in borrowing, and this tends to reduce the general level of rates. But with economic recovery, businesses want to expand and consumers want to buy on credit, and this increases the demand for loans and pushes interest rates up. If the interest rates rise so high that consumers and business executives are discouraged, another recession will ensue. This swing of interest rates, from low in recession to high in recovery, is one reason for the pattern of ups and downs in the economy, a pattern no economic theory or policy has so far succeeded in fully explaining or controlling.

D. MCGILLIVRAY

**Intergovernmental Finance** In a federal state, to ensure that regional and cultural differences are respected while national interests and policies are pursued, responsibilities and corresponding powers are divided between 2 levels of government, each of which is autonomous within its own designated sphere of responsibility (see DISTRIBUTION OF POWERS). The CONSTITUTION ACT 1867 assigns to the federal government responsibilities for the regulation of trade and commerce, the postal service, money and banking, the criminal law and the PEACE, ORDER AND GOOD GOVERNMENT of Canada in relation to all matters not assigned exclusively to the provinces. The national government was authorized to legislate for the raising of money by any system of taxation, or "the borrowing of money on the public credit," but each province was assigned exclusive authority to legislate concerning management and sale of public lands and timber; prisons, hospitals and charitable institutions; municipal institutions; and local works and undertakings other than those involving transportation facilities extending beyond the limit of the province or those declared by Parliament to be "for the General Advantage of Canada or for the Advantage of Two or more of the Provinces." Provincial legislatures were also assigned responsibility for property and civil rights in the province, and all local or private matters. They were assigned the power to raise revenues through direct taxation both within the province and through the administration of the public lands. Agriculture and immigration fall concurrently under both federal and provincial jurisdictions, but provincial legislatures were assigned exclusive jurisdiction over education subject to provisions regarding rights of minority groups, in which area the federal government has the authority to pass remedial legislation. Local or municipal governments are generally responsible for fire and police protection, health and safety inspection, local works and land use, sanitation, etc. While many of these services are financed directly from property taxes or by transfers from the provincial or (to a much lesser extent) federal government, municipalities, as creatures of provincial governments, derive their responsibilities and taxing powers from provincial legislation.

It has been said that until 1937, in its judicial interpretation of the Constitution Act 1867, the JUDICIAL COMMITTEE OF THE PRIVY COUNCIL narrowly interpreted the residuary powers of the federal government associated with peace, order and good government and broadly interpreted the property and civil rights clause, but recent and explicit constitutional amendments may have extended the reach of federal powers. As circumstances change, however, the revenue sources or taxing powers assigned to different levels of government may become inadequate, in which case 4 solutions are possible. First, taxing powers (tax room) can be transferred by legislation. Second, transfer payments to other governments can be authorized as direct expen-

ditures. Third, a particular responsibility may effectively be assumed by another level of government, and finally, through regulation, expenditure obligations (or compliance costs) can be transferred to agents outside government.

**Revenue Sources** In a federal system, the powers to raise revenues must somehow be matched to the expenditure responsibilities of each level of government but must also somehow be co-ordinated, because the same taxpayers support both. The Constitution Act 1867 assigned customs duties, excise taxes and all indirect levies exclusively to the national government. The relatively unimportant (at that time) direct taxes on local inhabitants were assigned to provincial governments, whose responsibilities were not expected to grow, and small statutory subsidies were established for anticipated shortfalls in provincial revenues. The century of economic expansion and national development after Confederation, however, dramatically altered this calculated balance. The provinces, searching for new revenues, claimed increased subsidies and introduced a widening array of licences and taxes, succession duties, and, for the first time, income taxes. Federal income tax, purportedly temporary, was introduced to finance WWI. Industrialization and urbanization led to rapid increases in provincial expenditure responsibilities during the subsequent 15 years, until the GREAT DEPRESSION brought several provincial and municipal governments to the brink of bankruptcy and the nation to an unco-ordinated mesh of conflicting and overlapping direct TAXATION measures characterized as a "tax jungle."

By 1939 direct income taxes were a critical source of government revenue and until 1962, under tax rental agreements made at the time, the federal government collected personal and corporate income taxes on its own behalf and on behalf of all the provinces, returning an agreed portion of these revenues to provincial governments, although Québec had opted out in 1947 to establish its own corporate and personal income-tax collection system and Ontario its own corporate income-tax collection (both provinces continued to adhere voluntarily to the federal government's definitions of taxable income). In 1962, the tax-rental agreements were replaced by a tax-collection agreement, according to which the federal government collected income taxes levied by provincial governments under their own provincial legislation, and returned to the province the taxes collected in that province. After 10 years of bitter debate over the appropriate sharing of the available tax room and then over federal proposals for tax reform, in 1972 the agreements were changed again; provincial tax rates were defined as a percentage of basic federal tax and it was emphasized that provincial tax revenues resulted from provincial tax legislation and were not simply an agreed share of some total revenue pie. The principle of access or joint cultivation of tax fields implied in these arrangements reinforces the ability of provincial governments to raise additional revenues independently to finance their expenditure commitments. It is a transition from tax sharing to an attempt at co-ordinating simultaneous federal and provincial government exploitation of the common income-tax base. Unfortunately this co-ordination through tax collection agreements is threatened by the opting-out of Québec, Ontario and now Alberta (since 1981) from the corporate tax-collection agreements, and threats by Ontario, Alberta and BC to join Québec in adopting their own personal income-tax collection systems if the federal government proves unwilling to administer a sufficiently rich variety of special provincial tax provisions. Both this issue and the acute intergovernmental struggle for shares of revenues derived from the exploitation of natural resour-

ces are extremely sensitive areas of inter-governmental finance.

**Federal-Provincial Grants and Programs** Instead of transferring taxing powers or tax room, governments also transfer to each other direct annual payments (or cash transfer). Several different types of transfer exist, the most important distinction being between unconditional, or general purpose grants, and conditional, or specific purpose, grants. Unconditional grants require no particular commitment by the recipient government, but conditional grants must be spent for a specific purpose, for programs complying with conditions decided by the donor government. Examples include incentive grants (to stimulate expenditure by the recipient government on particular activities), matching or shared-cost programs, and closed- or open-ended grant schemes (the former being those in which payments will be made to designated limits, the latter involving a payment share of a specific fraction of approved expenditures for a designated purpose, without reference to the size of the expenditures). The most important category is the shared-cost program, an open-ended matching grant in which the donor is committed to meet an agreed fraction of approved program costs, in contrast to both block-funding arrangements in which, notwithstanding general conditions, the amounts transferred are determined by a formula independent of actual expenditures and to deficiency payments designed to make up an estimated shortfall of revenues below expenditure commitments. Unconditional payments reflect the federal government's responsibility enshrined in the Constitution Act, 1982 "to ensure that provincial governments have sufficient revenues to provide reasonably comparable levels of public services at reasonably comparable levels of taxation." (See EQUALIZATION PAYMENTS). This responsibility was implicit in the Constitution Act 1867, in the provision requiring the Dominion government to make unconditional per-capita payments to each of the federating provinces to enable them to meet their expenditure obligations with the revenue sources assigned to them. These statutory subsidies are now not as important as the equalization program. Estimated at \$4.5 billion for the 1982-83 fiscal year, these payments represent almost 1/3 of a total \$15.3 billion federal-provincial cash transfers for that year, and form as much as 25% of total revenues for some provincial governments.

A variety of other federal-provincial transfers designed to encourage provincial expenditures in particular areas, eg, health, education and social services, which are generally thought to fall within exclusive provincial jurisdiction, are controversial. The transfers include first, cash contributions (about \$5.9 billion for 1982-83) under the Federal-Provincial Fiscal Arrangements and Established Programs Financing Act of 1977, determined on the basis of block funding, to support provincial programs in hospital and medical insurance, extended health care and post-secondary education. The post-secondary education component is almost always unconditional; the health-care component is broadly conditional upon compliance with conditions legislated in the Hospital Insurance and Diagnostic Services Act of 1957 and the Medical Care Act of 1966, but not directly related to provincial expenditures; second, cost-shared programs or matching grants, eg, Canada Assistance Plan (CAP) in which the size of the federal transfer for provincially administered social services and social assistance (about \$2.6 billion for 1982-83) is directly determined by provincial expenditures on eligible services; third, special purpose grants, or grants-in-aid, eg, those for economic development (\$400 million) or bilingualism in education (\$200 million); and fourth, direct federal payments, eg,

those under the Canada Manpower Training Plan, for services rendered by provincially funded agencies.

Under the Established Programs Financing arrangements, (1977, amended 1982) hospital insurance, medical insurance, and post-secondary education were no longer funded under 3 separate cost-sharing arrangements, reflecting the view that these arrangements infringed too severely upon provincial discretion in setting priorities and provided inadequate incentive for control of costs. However, in 1982 the programs were again separated, reflecting both a concern that program objectives, including a national interest in universal access to an adequate level of services, were adversely affected by provincial efforts at expenditure restraint and the federal government's desire to reduce its own expenditure growth and to correct what it viewed as a critical imbalance in fiscal powers between it and the provincial governments. At one extreme in the controversy over conditional grants is the argument for complete federal control over the uses of federal revenues disbursed in the national interest even when the expenditures impinge on provincial jurisdictions; at the other extreme is the argument for complete discretion on the provincial governments' part in deciding the allocation of funds for programs for which they are responsible.

Shared-cost programs may distort provincial priorities, reduce the degree of control over costs and create forecasting problems for the federal government. Block-funding arrangements reduce the federal government's accountability for and influence on the allocation of resources to programs, while increasing the federal control over the level of payments. Of the choices, reassigning revenue sources until all provinces have sufficient revenues to meet their expenditure obligations, accepting continuing transfers of federal revenues to provincial governments to finance provincially administered programs, or transferring to the federal government responsibilities earlier assumed by provincial governments, neither the first nor the third are generally acceptable and an uneasy balance exists between the desires of the federal government to extend its control and of the provincial governments to increase their discretionary powers. Conditional grants are an attempt to reconcile powers assigned to the provinces in 1867 with the reality that the exercise of these powers is no longer of only local or particular interest.

**Intergovernmental Economic Issues** Tax transfers and cash transfers form only one part of an apparatus of government which also includes regulatory powers, direct services and a maze of production activities. The issue of power over the economy affects fiscal FEDERALISM first because the distribution of taxing and spending powers influences the ability of the federal government in particular to maintain appropriate levels of aggregate economic activity. Although recent studies conclude that the requirements of federal FISCAL POLICY need not preclude further transfer of tax points by the federal government, in recent years the budgets of provincial governments have sometimes run counter to federal STABILIZATION efforts, reducing the leverage of the federal government to influence the budget of the government sector as a whole. Economic federalism also affects interprovincial flows of goods, services and productive resources. When competition among provinces for productive activities intensifies, tax concessions — incentives to locate economic activity in one province rather than another — are commonly introduced. Such outright regulation can reduce the effectiveness or even threaten the existence of a Canadian common market. Federal-provincial tax collection agreements to ensure tax harmonization thus become essential to the preservation of a strong economic union. The

structure of intergovernmental financial flows also influences organization, eg, the extent of decentralized decision making. Measured by relative shares of total government revenue, or by relative expenditure after intergovernmental transfers, decentralization in Canada would appear to have diminished sharply from the late 1920s to the late 1940s and to have increased strongly from the late 1940s to the late 1970s, although after the mid-1970s the Liberal government declared as its objective the reversal of this trend and the establishment of greater national control of fiscal and economic matters. Balance between regions, or the degree of regional influence in national matters, is also affected by the devolution of authority to regional agencies of the federal government and by regional representation in national institutions. In neither respect, however, can it be argued that decentralization has been significant in recent years. Finally, intergovernmental finance will undoubtedly be affected by constitutional developments concerning the ownership, management and taxation of offshore resources; provision for the taxation of state enterprises, mobility rights and the flow of people or materials across provincial boundaries; and regional representation in national economic and financial institutions.

A.R. DOBELL

**Interior Design** is a process for solving the physical and aesthetic needs of people using interior spaces for living, working, personal care, worship or recreation. The interior designer deals with a variety of design problems in private residences, commercial businesses and corporations, and public and private institutions. The designer must identify and analyse the client's problems, creatively develop the best solution and supervise the installation of the project. The design solution will include such elements as furnishings, lighting, colour, interior architectural components, decorative accessories and art. These elements will be organized for the client according to function, architecture, climate and individual needs and preferences. Interior designers must be competent in design theory and aesthetics, history, analysis, space planning and programming, specifications and inspections, as well as related aspects of environmental design. Technical knowledge should include interior construction; building systems and related codes; equipment; business, graphic and written-communication skills.

The desire to create a suitable and pleasant interior environment has no beginning date in history. Interior decoration as a career began in the US late in the 19th century, receiving its initial impetus from Candace Wheeler, who published an article in 1890 entitled "Interior Decoration as a Profession for Women." Until 1950 the decorator was principally concerned with the selection and arrangement of interior furnishings for the affluent. After WWII the rapid expansion of industry, the extensive development in commercial and domestic building, and the increasing desire for better living and working conditions greatly stimulated the demand for qualified interior designers. Canadians who have distinguished themselves in the field since 1950 include Jacques Guillon in Montréal, Alison Hymas, Robert Meiklejohn and Murray Oliver in Toronto, Grant Marshall and Margaret Rose Stinson in Winnipeg, Arthur P. Fishman in Calgary and Robert Ledingham in Vancouver. Others work under company or team identification, or as in-house designers for corporations or government agencies.

In Canada there are a number of interior-design programs. Community colleges offer 2-year certificates and 3-year diploma courses in almost every province W of the Maritimes. There are only 2 degree-granting 4-year programs in Canada, at the University of Manitoba

and at Ryerson Polytechnical Institute in Toronto. Interior Designers of Canada (IDC) and Design Canada, both in Ottawa, and provincial organizations of interior designers provide assistance in educational planning. The Foundation for Interior Designers Education Research (FIDER), the accrediting body for interior-design programs in N America, publishes a directory of undergraduate and graduate interior-design programs, available through its New York office. The Interior Design Educators Council (IDEC) is a joint American and Canadian association. The future of interior design will be affected by technological advances as well as an increasing emphasis on professionalism. Designers must be prepared to accept greater responsibility and accountability for the environments they shape.

GEORGE R. FULLER

**International Boundary Commission**, comprising a Canadian and an American commissioner, is responsible for the maintenance and supervision of the boundary line between the US and Canada under the terms of the 1925 Boundary Demarcation Treaty. The Canadian section is empowered by the International Boundary Commission Act; it is administered by the Department of Energy, Mines and Resources but reports to the secretary of state for external affairs. The commissioners meet at least once a year, alternating between Ottawa and Washington. In a recent controversy (1983) the commission revealed that the US had been using chemicals Agent White or Agent Orange along the US-Canadian border in New Hampshire and Maine until one of the commissioners discovered its use.

**International Development Research Centre** est as a public corporation by Parliament in 1970 to support research designed to adapt science and technology to the specific needs of developing countries. The first chairman was Lester B. PEARSON. Headquartered in Ottawa, it has regional offices around the world. Five program divisions fund projects — agriculture, food and nutrition sciences; information sciences; health sciences; social sciences; and co-operative programs (the only division supporting co-operative research projects between Canadian and Third World institutions). Funded by the federal government, IDRC reports annually to Parliament through the minister for external affairs.

GREGORY WIRICK

**International Economics**, branch of economics concerned with international trade and investment, including the role of international economic institutions, the world monetary system, capital flows, commodity agreements and the international co-ordination of economic policy. Canada could undoubtedly survive in complete isolation from the rest of the world, producing sufficient food and other necessities to provide at least a subsistence level of income, but certain metals, eg, tin, would not be available and certain fruits and vegetables, eg, oranges and bananas, could only be produced at great cost. The main cost of such isolation, however, would be the loss of access to foreign markets for goods that can be produced more efficiently abroad and the loss of markets for Canadian products.

Just as it is to the advantage of individuals to specialize in specific tasks, so it is to the advantage of nations to specialize in producing specific commodities. Comparative advantages for production may derive from the possession of plentiful resources, from the development of technological skills or from economics associated with large-scale production. Canada benefits from importing commodities from countries most efficient at producing them and paying for these imports with exports in which Canada has a production advantage. Canada, for example, has enough arable land to produce more food

than Canadians could consume, while in many Asian countries, because of high population-to-land ratios and low wages, labour-intensive products (eg, clothing) can be produced at relatively low cost.

International markets do not operate on a barter system but through a complex international financial structure (see INTERNATIONAL TRADE). Before WWI, most international transactions used the GOLD STANDARD, but this system was abandoned when it proved unfeasible, partly because it imposed severe restraints on domestic policymakers. In recent history the \$US has served as the principal international medium of exchange and other currencies are usually quoted in \$US. For Canada the \$US is of particular importance because a large proportion of Canadian trade is with the US. Trade is facilitated through well-developed foreign-exchange markets where domestic currencies can be traded for one another.

The value of the \$Canadian against the \$US has traditionally been determined by market forces, that is, by the demand for and supply of \$Canadian, which is in turn determined partly by relative rates of INFLATION, the demand and supply of Canadian (and foreign) trade goods and expectations of future economic circumstances and events. The \$Canadian has, over the last few decades, ranged from over \$1.05 US in the 1960s to under 80¢ US in 1982, reflecting, it is generally believed by economists, government policy rather than any deficiency in foreign-exchange markets.

**Canada in the World Economy** A variety of international organizations have developed to facilitate the complex interactions among nations. Among the most important are the World Bank and the General Agreement on Tariffs and Trade (GATT). Canada belongs to both organizations. The World Bank was established to act as an international central bank to assist financial transactions among countries and to help developing countries obtain loans and credit. GATT was created to stabilize trading relations and provide uniform trading regulations for signatories; for example, the articles of GATT prohibit preferential treatment of individual countries so that a specific tariff rate available to one country must be made available to all. Exemptions for the formation of customs unions and free-trade areas have been granted and justified on the argument that they have advanced the cause of free trade.

Measures such as NATIONAL INCOME per capita vary widely among world nations. The World Bank publishes an annual *World Development Report* providing statistics on all countries of the world. Countries are categorized as low-income, middle-income, industrial-market and non-market-industrial; capital-surplus oil exporting countries have recently been added as a fifth group. In 1982 the low-income countries, eg, Bangladesh, India, China and Indonesia, had an average per capita income of \$280 (all figures are in \$US 1982), with a range of \$80 to \$410. Middle-income countries, eg, Egypt, Cuba, Mexico, Israel and Spain have average per capita incomes of \$1520, with a range of \$440 to \$6840. The 19 industrial-market economies have an average per capita income of \$11 070 US and a range of \$5150 (Ireland) to \$17 010 (Switzerland). Canada, with an average per capita income of \$11 320 is eighth from the top of this group, just below France, Germany and Denmark and just above Australia and The Netherlands. These comparative statistics, however, are very sensitive to currency values.

This subdivision of nations is somewhat arbitrary, but the relatively small group of industrial-market economies do share a number of characteristics apparently associated with high levels of development: high LITERACY rates, long life expectancies, well-developed capital mar-

kets, relatively stable governments and high industrial productivity. In all of them only a small percentage of the LABOUR FORCE is involved in agriculture (6% on average for industrial economies, 71% and 44% respectively for low- and middle-income countries) and large service sectors (56% of the labour force in the industrial countries compared to 15% and 34% for low- and middle-income countries). Among these countries the percentage of exports comprising primary commodities (including fuels and minerals) ranges from 78% (New Zealand) to 4% for Japan, with an average of 23%. The percentage in Canada, 46%, is well above that for industrial countries but well below the averages of 70% and 64% for low- and middle-income countries.

Canada participates in the world economy through trade and FOREIGN INVESTMENT. Both have been important in establishing Canada as a high-income industrialized nation, although the presence of foreign companies in Canada, despite the resulting benefits, has also inspired controversy. Canada also participates in the world economy through its banks, which invest in foreign countries (see BANKING).

JAMES MELVIN

Reading: W.T. Easterbrook and M.H. Watkins, eds, *Approaches to Canadian Economic History* (1967); W. Ethier, *Modern International Economics* (1983).

**International Hockey Hall of Fame and Museum**, located in Kingston, Ont, was founded in 1943. The present building was constructed in 1961-62 and opened in 1965. Originally sanctioned by the NATIONAL HOCKEY LEAGUE and the Canadian Amateur Hockey Assn, the hall is now independently and community operated. It has inducted, with one exception (Fred J. "Bun" Cook) the same players, builders and referees as the HOCKEY HALL OF FAME in Toronto. It stresses the international and historical aspects of amateur and professional hockey, and features an outstanding collection of early skates, sticks and memorabilia that trace ice hockey's evolution and rules. One room is dedicated to Capt James Thomas Sutherland (1870-1955), who devoted the last 13 years of his career to the establishment of the world's first recognized hockey hall of fame.

J.W. FITSELL

**International Joint Commission**, the oldest of Canadian-American intergovernmental organizations, est by the BOUNDARY WATERS TREATY of 1909 to deal mainly with the apportionment, conservation and development of water (including hydro power) resources along the international boundary. Since beginning its work in 1912 it has reported on over 50 issues affecting the US and Canada, produced decisions on even more applications for diversion of waters and supervised dozens of decisions for Canadian-American joint boards and committees. The IJC has a wide range of investigative, quasi-judicial, administrative and arbitral functions. It can also act as a final court of arbitration on any issue between Canada and the US, but has never been used thus. The IJC comprises 3 Canadian and 3 American commissioners and maintains offices in Ottawa and Washington. It has limited staff and budget, yet enjoys a great deal of independence. It has been highly successful, and suggestions have often been made that the IJC model, especially its fact-finding techniques, be applied to other problem areas. See JOINT COMMISSION.

N.F. DREISZIGER

**International Law** is the body of rules that governs the conduct of STATES and other international associations, such as the UN, although in the human rights area, international law, in some instances, may be directly applicable to individuals as well as to states. Modern international law has its origins in 16th- and 17th-century Europe. Created to regulate relations among a few states with common religious

background and common commercial interests, international law has developed from a system that sought merely to secure peaceful coexistence within the international community to a system that seeks to protect the common interests and achieve the common aims of states. Today, Canada is one of at least 160 countries that consider themselves bound by the principles, customs and standards of international law.

The peace settlement following World War I led to the creation of the LEAGUE OF NATIONS, the first attempt by the international society to promote international co-operation and to achieve international peace and security. An important feature of the League was its use of unanimity of decision. The League was unable to prevent World War II, but it provided a valuable precedent for an international organization after that war. The post-WWII period saw major developments in international law, including the establishment of the UNITED NATIONS, the successor to the League. Canada was a founding member of the UN. A number of former colonies that obtained independence after WWII joined the community of nations as full-fledged members. By 1939, when Canada declared war independently of Britain, it had already established a separate identity.

Today the scope of international law is very extensive, covering laws pertaining to war, recognition of governments and states, LAW OF THE SEA, AIR LAW AND SPACE LAW, international obligations, treaties (SEE TREATY-MAKING POWER), international economics, international political and economic institutions, HUMAN RIGHTS and dispute resolution. Since the inclusion in the international community of nations at varying stages of economic development, issues related to economic justice have begun to play a significant role in international law.

The UN serves not only as a forum for discussion and deliberation of international issues among the nations of the world, but through its organs is instrumental in multilateral PEACE-KEEPING, in the progressive development of international law, in dispute resolution and in the promotion and fostering of common economic, political and social goals. Canada has been active in the support and development of international law and has played a leading role in the areas of peacekeeping, human rights, the law of the sea and international economic law at the UN and other international forums.

**Sources of International Law** Canada's obligations, rights and responsibilities in international law may be found principally in treaties, in the conduct and practice of states, and to a lesser extent in general principles of law, in judicial decisions, in writings of highly respected scholars and in certain UN General Assembly resolutions. Treaties, which may be either bilateral or multilateral, are international agreements between states that are binding in international law. Treaties that reflect customary international law are binding even on non-signatories of the treaty. For instance, Canada regarded itself bound by many of the provisions of the Vienna Convention on the Law of Treaties, even before it became a signatory to the convention. Treaties concluded by Canada are published in the Canada Treaty Series and are registered with the UN. There are about 200 treaties between Canada and the US alone.

Canada, as all other states, is also bound by customary rules of international law. Custom is evidenced by the general practice of states acting upon a recognition that the practice is legally binding. Canadian courts have accepted the view that customary international law forms part of the law of Canada. However, most custom that formed a source of international law is now incorporated in multilateral conventions. The 1961 Vienna Convention on Diplomatic Relations, for example, codified

some rules of customary international law that were centuries old. Largely because of the heterogeneous nature of the community of nations, general principles of law recognized by nations, judicial decisions and writings of highly qualified publicists are treated as subsidiary sources of international law.

**Some Current Issues in International Law** Since the end of WWI the international community has been preoccupied with maintaining the peace. The UN Security Council, which consists of 5 permanent members and 10 rotating members, has the primary responsibility for maintaining international peace and security. Under the UN Charter, all members of the UN agree to accept and carry out the council's decisions. When a dispute leads to fighting, the Security Council attempts to bring an end to the hostilities and has on some occasions sent UN peacekeeping forces to the site of the troubled area. Canadian troops have sometimes been part of ad hoc UN peacekeeping forces.

Since its creation, the UN has given priority to the international protection of human rights. In 1948 the Universal Declaration of Human Rights, which set forth basic rights and fundamental freedoms to which all people are entitled, was adopted by the UN membership without a dissenting vote. It has been suggested that the resulting influence of the Declaration as well as repeated invocation of the Declaration has made it a part of customary international law. A Canadian, Professor John Humphrey, served as the first director of the UN Human Rights Division. In 1976 Canada acceded to an important multilateral human rights treaty, the International Covenant on Civil and Political Rights and its accompanying Optional Protocol. By signing these documents, Canada has bound itself to an international standard of human rights protection and opened the possibility for individual Canadians to submit to the UN Human Rights Committee complaints of human rights violations by the Canadian legal system.

One of the major post-WWII achievements of multilateral negotiations is the 1982 UN Convention of the Law of the Sea (UNCLOS). Canada's extensive coastline has given it a long-established interest in maritime issues and Canada played a leading role in UNCLOS negotiations. The convention, which was signed by Canada in 1982, sets out a comprehensive framework of laws to regulate the peaceful uses of the sea. Canada's main objectives during the UNCLOS negotiations were to a large extent satisfied by the provisions of the convention. Canada sought and obtained jurisdiction over fisheries within a 200-nautical-mile (370 km) limit of its coast and over all the resources of the continental shelf within and beyond the 200-mile limit. It obtained only limited powers to control pollution along its coastline but it ensured its ability to take antipollution measures in the Arctic. Canada also supported the innovative UNCLOS idea that the international seabed be reserved for peaceful purposes and that the area be designated the "common heritage of mankind."

The growing gap between rich and poor nations has led many of the latter to challenge the norms of international law and to charge that international institutions protect and maintain the economic interests of Western capitalist countries. In 1974 the majority of UN members voted in favour of the Declaration on the New International Economic Order, which called for a new set of rules to govern international economic relations. Canada abstained from voting on the Declaration and its complement, the Charter of Economic Rights and Duties of States. In practice, however, Canada has pursued a policy of supporting the efforts of economically less developed countries to increase their share of world trade and foreign investment. One illus-

tration of Canada's commitment to changing established patterns of trade is the General Preferential Tariffs legislation which grants preferential treatment to poorer countries.

**Dispute Resolution** The UN Charter clearly prohibits the use of force by states except in self-defence. Canada may settle a dispute with another state in any one of a number of ways: diplomatic negotiation, mediation, international arbitration or, as a final recourse, it may present its case to the 15-member International Court of Justice (ICJ), a UN organ. The ICJ may preside over disputes between states that agree to submit to its jurisdiction; a decision by the court is binding only upon those states that are party to the dispute in question. Canada and the US submitted their dispute over the maritime boundary in the Gulf of Maine area to a chamber of the ICJ. This was the first time a chamber was utilized instead of the full court. The decision came out in Oct 1984.

The responsibility for Canada's conduct in external relations is handled primarily by the Department of EXTERNAL AFFAIRS and its ministers. See also EXTERNAL RELATIONS. EMILY F. CARASCO

**International Monetary Fund (IMF)**, is the principal independent international financial agency concerned with the management of the international monetary system. It was formed in 1944 by 45 nations participating in a Monetary and Financial Conference called to seek international co-operation in avoiding the protectionist trade practices and competitive EXCHANGE RATE devaluations of the GREAT DEPRESSION. The UK was represented by renowned economist John Maynard Keynes. Until the early 1970s, the IMF was remarkably successful in providing a framework for managing stability and adjustments in the world monetary system, and more recently it has devised mechanisms to support countries with serious short-term BALANCE OF PAYMENTS difficulties. Headquartered in Washington, with a voluntary membership of 146 countries, the IMF is governed by an executive board of 20 members, each representing a group of countries. Each member nation contributes to the fund's reserves in amounts commensurate with its role in the world's economy, excluding the Soviet bloc; eg, the US contributes 21.5%, Canada 3.5%. The IMF employs a professional secretariat, surveys economic policy in each member country, holds annual conferences of ministers in conjunction with World Bank meetings and maintains a research and publications program. T.K. SHOYAMA

**International Trade** is the purchase and sale of goods or services between residents of different countries. The traders may be individuals, private businesses or government agencies. Canadian exports of merchandise and services amount to about 30% of the nation's total production, the merchandise accounting for 25% and services about 5%. Since 1960 (except 1975) Canada has exported more commodities than it has imported and has had a merchandise trade surplus. But the annual import of services has always greatly exceeded the export of services, so that a sizable deficit on trade in commodities and services combined has generally occurred.

**Merchandise Trade** The US, which purchases about 70% of Canadian merchandise exports and supplies over 70% of all merchandise imports, is Canada's most important trading partner. Reliance upon the US as a market for Canadian products has been growing for 100 years. Until WWII the US and the UK frequently exchanged positions as the first and second most important destinations for Canadian exports. The UK imports less than 5% of all Canadian shipments, and 3% of Canadian imports come from the UK.

Japan has supplanted the UK as Canada's second most important trading partner, although it

# Merchandise Trade Balance Between the U.S. and Canada

Annual (Millions of U.S. dollars)

Source: Statistics Canada, Daily Bulletin, Catalogue 11-001E.

is not nearly as important as the US. Almost all imports from Japan are highly manufactured commodities, eg, automobiles and electronic equipment, whereas exports to Japan are almost entirely raw materials, eg, lumber, metals, coal and farm products.

The relative significance of Canada's trade with European Economic Community countries (excepting the UK) has remained roughly constant since the mid-1960s, approximately 7.5% for exports and 5.5% for imports. Trade with other nations has been expanding slowly. The largest single import is crude oil from Saudia Arabia, Venezuela and Mexico, but other goods such as tropical products, labour-intensive goods (in which the developing countries have a comparative advantage) and highly manufactured goods come from developing countries and a few eastern European nations. Exports to other nations comprise about 16% of total Canadian sales abroad, including wheat, grains, agricultural products, lumber, newsprint, chemicals, metals, minerals, various types of industrial and transportation machinery and equipment.

Well over one-third of Canadian exports are automobiles and other highly manufactured goods; crude and semiprocessed materials from the farm, forest, mining and energy sectors make up the remainder. In contrast, about 55%

of Canadian imports are automobiles and other highly manufactured products; 45% are crude and semiprocessed goods. Consequently, Canada has a consistent surplus on commodity trade in raw and semiprocessed goods and a deficit on highly manufactured goods, an historical Canadian pattern. In its early development Canada depended upon its natural resources for its export base, relying first on fish, furs and lumber, then on farm products, especially grains; pulp and paper; and various metals and minerals. Since WWII petroleum and natural gas, uranium, iron ore, sulphur, potash, coal, electricity and canola have augmented the nation's raw material exports.

Today, relatively few products dominate export trade in each broad category. Wheat accounts for over 45% of all agricultural exports. Softwood lumber, wood pulp and newsprint comprise over 85% of forest-product foreign sales. Iron, copper, nickel and precious metal ores and concentrates, asbestos and sulphur total over 75% of crude mineral exports. Automobiles account for over 20% of total exports or over 55% of all highly manufactured commodities.

Highly manufactured goods are, in volume and value, the most rapidly growing segment of Canada's exports. They are also among the fastest-growing imports in volume, but because the value of such imports greatly exceeds the value of exports, the absolute dollar gap between these sophisticated imports and exports is still widening. Other rapidly growing imports of value are nondurable and semidurable manufactured goods and some mineral products.

Canada's particular mix of merchandise trade is attributed mainly to its generous endowments of both renewable and nonrenewable natural resources. They provide the foundation for comparative advantage in, and the massive shipments abroad of, crude and semiprocessed minerals as well as energy and agricultural and forestry products. Even highly processed exports from the chemical sector rely on natural gas and petroleum deposits. Some recent advances in exports of sophisticated manufactures may be related to increased production by firms under licence from foreign parents or holders of technology. In other instances, economies of scale have been achieved through domestic rationalization of industry, making domestic industries more competitive with those abroad. In still other cases new technological advances in Canada have been influential. However, Canadian research and development in the manufacturing sector has been meagre, and the adoption of foreign technology slow, leaving firms in Canada at a comparative disadvantage in technology-intensive products. Much reliance has been placed upon imports of these commodities; hence the large proportion of

highly processed manufactures imported. This proportion is also related to the high percentage of FOREIGN INVESTMENT and control of Canadian industry, because foreign firms import a larger share of their purchases than do domestic firms. The importation of new US-manufactured products to satisfy Canadian demand patterns influenced by those in the US has also grown. Organization of production and productivity of labour, which affect the long-run competitiveness of industry and Canada's comparative advantage, are also influenced by taxes, education, skill and aggressiveness of management, education and training of labour, and labour-management relations.

**Commercial Policy** Trade is also affected by Canada's commercial policy, especially import tariffs (which are decreasingly important) and import quotas. The former are taxes or duties levied, usually as a percentage of declared value, on imported merchandise; the latter are specific quantitative restrictions on imports of particular commodities.

In the early years of Confederation, tariff revenues comprised about 75% of total federal government revenues. Today they make up less than 8%. The NATIONAL POLICY of 1879 increased tariffs, providing a sheltered market in which domestic and foreign firms could establish manufacturing plants. They have also been used to bargain down other nations' tariffs. When the GREAT DEPRESSION began, rates were again raised dramatically. The hope has always been to increase domestic processing; therefore the tariff structure has tended to be graduated — lower rates on raw material imports and higher rates for processed products. A British Preferential System was initiated (1897) in an attempt to encourage trade with Britain and other members of the Empire but it had little noticeable effect and is now being phased out as it applies to the UK, Ireland and South Africa.

Canadian tariffs are now at their lowest level, amounting to less than 5% on average for all imports and 14% on dutiable imports. Non-dutiable imports account for over 65% of all purchases from abroad. Various bilateral and trilateral agreements before WWII and postwar multilateral negotiations under General Agreement on Tariffs and Trade (GATT) have reduced the Great Depression tariff rates. The Tokyo Round of multilateral negotiations, completed in 1979, entails additional progressive reductions over the years up to 1 Jan 1987, when Canadian duties on dutiable imports will be decreased to an all-time low of 9%.

<sup>1</sup> Excluding withholding taxes recorded under service payments as these go to the Canadian government

Under tariff protection more domestic and foreign-owned manufacturing plants have been established in Canada than have been needed to supply the market efficiently. Consequently, economists argue that plants have either been too small to achieve the lowest production costs or, more often, have produced too many product lines so that lengths of run have been shorter and therefore cost more than in foreign plants. As tariffs are lowered and firms attempt to increase their productivity, Canadian plants may become more competitive with those in foreign countries.

**Quotas** There are also quantitative restrictions on imported merchandise. Under the GATT Multi-Fibre Arrangement, Canada has negotiated bilateral agreements with over a dozen countries, limiting imports of textiles and clothing. Nonleather footwear imports are also restricted under GATT rules. Agricultural products, including eggs, chickens, turkeys, milk and other dairy products also face quantitative import restraints. These are used to support domestic supply management programs. Beef and veal too are on the regulated list of imports, even though there are no comprehensive domestic agricultural marketing programs or marketing boards for these products. Where international commodity agreements exist, Canada discriminates against nonmember countries in its imports of products such as sugar and coffee.

Quantitative restrictions on imports provide clearer limits than do tariffs and are therefore often preferred by those wishing to protect certain industries. Where labour costs and hence prices on foreign products are particularly low, as with clothing, textiles or footwear from developing countries, quotas preclude the need for high tariffs and have the same limiting effects on commodity inflows. As the GATT forces governments to lower tariffs, there may be more frequent recourse to the use of quotas or other nontariff barriers by the Canadian and other governments.

Tariffs, quotas, subsidies on domestic production and other methods to encourage domestic industry at the expense of industry abroad often mean higher prices for domestic consumers and inefficient use of domestic labour, capital and other resources. These economic costs must be weighed against the benefits of such industry-preservation programs.

**Services Trade** When Canada borrows funds, either by issuing bonds or other types of debt, or by welcoming foreign firms establishing subsidiaries in Canada, payment must be made for the use of the capital involved. This may take the form of interest, dividends or corporate undistributed earnings, which are reinvested to increase the foreign ownership of Canadian industry. Similarly, Canada receives payments from foreigners for the use of the capital her residents invest abroad. Canada has borrowed much more than she has lent abroad, however, especially since WWII, and now has a sizable deficit in service charges on capital — over \$9 billion in 1983. If the services from short-term and long-term investments as well as international banking and insurance activities are included, the deficit would be several billions more.

The net balance on other business service receipts and payments, eg, the use of patents and licences, consulting and management expertise, generates an additional deficit. Also, Canadians spend more on travel abroad each year than do foreigners coming to Canada. The only increase in net exports in recent years has been in freight and shipping services. See SERVICE INDUSTRIES.

**Internment**, detention or confinement of a person in time of war. In Canada such persons were denied certain legal rights, notably habeas corpus, though in certain cases they had the right to appeal their custody. Though not strictly PRISONERS OF WAR, civilian internees were generally treated according to international POW standards.

During WORLD WAR I enemy aliens (nationals of Germany and of the Austro-Hungarian and Turkish empires) were subject to internment, but only if there were "reasonable grounds" to believe they were engaged in espionage or otherwise acting illegally. Some municipalities "unloaded" indigents, many of them recent immigrants, on internment camps. In 1916-17, many Austrians were paroled to fill labour shortages. Of 8579 men at 24 camps across Canada, 5954 were Austro-Hungarians, 2009 Germans, 205 Turks and 99 Bulgarians; 81 women and 156 children, dependants of male internees, were voluntarily interned. Although responsibility shifted in 1915 from the Dept of Militia and Defence to the Dept of Justice, Maj-Gen Sir William OTTER remained officer commanding (later director of) internment operations.

In WORLD WAR II the minister of justice could detain anyone acting "in any manner prejudicial to the public safety or the safety of the state." Thus both enemy nationals and Canadian citizens were subject to internment. Precise statistics are not available but the number of internees was less than during the earlier war. Most of the Germans were members of German-sponsored organizations or leaders of the Nazi Party in Canada. After Italy entered the war, a number of prominent Italians and Canadian fascists, notably Adrien Arcand of Montréal, were interned. Immediately after Pearl Harbor the RCMP interned 38 Japanese nationals, and during the general evacuation from the Pacific coast in 1942, an additional 720 Japanese, mainly Canadian citizens and members of the Nisei Mass Evacuation Group who resisted separation from their families, were interned. Because citizens could be interned for belonging to such outlawed organizations as the Communist Party, some claimed internment was used as a weapon against labour leaders, eg, J.A. "Pat" Sullivan, president of the Canadian Seamen's Union, interned 1940. Along with about 90 other Communists, he was released in 1941 after the USSR joined the Allies. Most prominent, however, was Mayor Camillien HOUDÉ of Mont-

Japanese Canadians being relocated to internment camps in the BC interior during WWII (courtesy Public Archives of Canada/C-57253).

réal, interned 3 years for denouncing national registration in 1940 as a prelude to conscription.

Administration was divided between the army and the secretary of state. A total of 26 camps operated in Ontario, Québec, Alberta and New Brunswick, but only 2 held primarily Canadians. In WWI, Canada had accommodated 817 internees from Newfoundland and British Caribbean colonies; in WWII Canadian camps housed POWs and merchant seamen captured by the British, as well as some British civilians. At the peak in Oct 1944, Canada held 34 193 persons for the UK. Provision for internment continues. An emergency planning order approved May 1981 by Cabinet authorizes the solicitor general to establish civilian internment camps in wartime.

**Inuit** simply means "people." Inuit were earlier known by Europeans as "Eskimos" — a pejorative, roughly meaning "eaters of raw meat," applied to them by INDIAN groups. They are one of the original groups to inhabit the northern regions of Canada populating small, scattered communities and villages throughout the Arctic from Alaska to E Greenland. In 1981 Statistics Canada estimated that the Inuit population in Canada was 25 000. There are 8 main tribal groups: the LABRADOR, UNGAVA, BAFFIN ISLAND, IGLULIK, CARIBOU, NETSILIK, COPPER and Western Arctic Inuit (who replaced the MACKENZIE INUIT). They speak a common language known as Inuktitut, or Inuttituit, divided into 6 different dialects (see NATIVE PEOPLE, LANGUAGES). Traditionally, the Inuit were hunters and gatherers who moved seasonally from one camp to another. Large regional groupings were loosely separated into smaller seasonal groups: winter camps (called "bands") of around 100 people and summer hunting groups of fewer than a dozen. Each band was roughly identified with a locale and named accordingly, eg, the Arvituurmiut of Boothia Pen, "baleen whale-eating people."

During roughly 4000 years of human history in the Arctic, the appearance of new people has brought continual cultural change. The ances-

tors of the present-day Inuit, who are culturally related to Inupiat (N Alaska), Katladlit (Greenland) and Yuit (Siberia and W Alaska), arrived about 1050 AD. As early as the 11th century the NORSE exerted an undetermined influence on the Inuit. The subsequent arrival of explorers, whalers, traders, missionaries, scientists and others began irreversible cultural changes. The Inuit themselves participated actively in these developments as guides, traders and models of survival. Despite adjustments made by the Inuit over the past 3 centuries and the loss of some traditional features, Inuit culture persists — often with a greater reflective awareness. Inuit maintain a cultural identity through language, family and cultural laws, attitudes and behaviour, and their acclaimed INUIT ART.

The Inuit have never been subject to the INDIAN ACT and were largely ignored by government until 1939, when a Court decision ruled that they were a federal responsibility. Some Inuit still follow a nomadic way of life, but others are involved in the administration and development of northern Canada — in business, local and territorial politics, teaching, transportation, medicine, broadcasting and the civil service. See NATIVE PEOPLE: ARCTIC

MINNIE AODLA FREEMAN

**Inuit Art** The Eskimo word "Inuit" is a fairly recent Anglo-French Canadian term and will be used in this article only with reference to the historical and modern Canadian Eskimo. Greenlanders, who speak a dialect similar to the Canadian Inuktitut and whose art and artifacts are often almost identical to those found in the Canadian Arctic for the past 4000 years, call themselves Katladlit. Siberians (or Asiatic) Eskimos and Eskimos of W and SW Alaska call themselves Yuit. They speak a dialect called Yupik, and their art forms, except during Thule culture, bear few stylistic resemblances to those of the Canadian Arctic. Yet there exist strong iconographic (image) and thematic (content) relationships between the art forms, indicating a common ancestry or various cultural diffusions and interchanges, or both. Obviously, the words Inuit and Eskimo do not have identical meanings and, therefore, careful differentiations must be made.

**Culture Phases** The history of Eskimo cultures and the art of the various regions and times can only be understood if the myth of a homogeneous Eskimo culture is discarded

*Men Hunting Animals* by Alasi Aodla (courtesy La Fédération des co-opératives du Nouveau-Québec).

altogether. Though it has not been possible to determine the exact origin(s) of the Eskimo, nor of the various Eskimo cultures, 5 distinct cultures have been established in the Canadian area: PRE-DORSET, DORSET, THULE, Historic and Contemporary.

**Pre-Dorset Culture** developed out of the migrations of people coming from Siberia via the Bering Strait some 4000 years ago (see PREHISTORY). While few art objects of this period seem to have survived, the exquisitely shaped artifacts discovered — particularly the projectile points of harpoon heads and lances fashioned from carefully selected lithic material (stones) — are not merely functional but also of considerable aesthetic value. These objects can in fact be called art even though they lacked imagistic intentions. Through their simple splendour and intensive craftsmanship they exude intentions of magic that perpetuated themselves in the succeeding Dorset culture. Pre-Dorset culture lasted for over 1000 years, extending into the beginning of the first millennium BC.

**Dorset Culture** started to evolve between 600 and 500 BC, and can be called the first native Canadian Arctic culture. It spread from Coronation Gulf to the bottom tip of Newfoundland and to the entire west coast of Greenland. Several problems have arisen in dating Dorset art, particularly its origins. In the chronology established by Danish archaeologist Jørgen Meldgaard for the Igloodik area, with the highlights occurring between 500 and 1000 AD, art emerges only in the Middle Dorset period, 400-500. Yet the well-known Tyara maskette, made with the same perfectionist artistry that characterizes the best of Dorset art, has been dated to before 600 BC. The explanation may lie in faulty carbon dating, or in the possibility that the maskette is a work from the Pre-Dorset culture that somehow survived. Two Pre-Dorset maskettes from the Igloodik area exist which are similar in appearance. In Pre-Dorset culture imagistic supernatural objects may have been destroyed or discarded after use, as in other prehistoric and preliterate cultures, and the Tyara maskette could have been an incidental survivor, used or preserved in the later culture. Or perhaps the fine craftsmanship and aesthetic beauty of both the maskette and Pre-Dorset artifacts point to a magical concept in their creation: that form does not merely follow function but increases efficacy.

High Dorset art appears to be largely magico-religious in its purpose; this appears to be so in particular of the "excaved" (hollowed out and

perforated) Dorset bears and falcons relating in shape to harpoon heads. The points of the harpoon heads become the bear heads; the line-hole openings become the front legs attached to the body (or bent backwards in a swimming motion), and the basal spurs become the hind legs (more or less abstracted). The excavated falcons resemble the excavated forms of the harpoon heads and, at the same time, the skeletons of birds. The image of disembowelled creatures refers to a ritualistic technique used in shamanic initiations in many parts of the polar world from Siberia to Greenland: the SHAMAN had to think of himself as a durable skeleton, devoid of flesh and blood, so that the helping spirits might consider it worthwhile to come to him. The skeleton designs incised (not etched) into many of the animal carvings have a similar origin and hint at several supernatural meanings: the body as spirit or dematerialized essence, as a kind of ritual form, or as an instrument for magico-religious purposes.

Linear or incised signs on many of the carvings — joint marks and crosses — can also be found in other prehistoric and preliterate cultures. They too seem to have supernatural associations and reinforce the largely magico-religious content of Dorset art. Several other image types exist in Dorset culture, such as the antler or wooden "face clusters," wooden masks, maskettes, human figures, multiple animal images, various birds and land and sea mammals (some with and some without skeleton markings). While their purposes are largely unknown, they do have common characteristics: most are carved in ivory or to a lesser extent in bone, antler or wood; they are very small — anywhere from 1 to 10 centimetres; all are 3-dimensional, carved with strong or expressionistic features and with decisive strokes of the knife or graver. Except for the wood and antler carvings, they have a remarkably smooth finish despite their small size and expressionist form.

Petroglyphs have been cut in soapstone outcroppings near the sea at Wakeham Bay in Ungava (Nouveau Québec), faces or maskettes not unlike the previously mentioned face clusters (see PICTOGRAPHS AND PETROGLYPHS). The shapes themselves, however, are reminiscent of the Tyara maskette, which comes from nearby Sugluk I. While this similarity asserts a Dorset origin for the Tyara maskette, it brings the date of its origin further into question.

**Thule Culture** is much easier to define and to date, but again some anomalies exist. Thule culture migration from northern Alaska into the Canadian Arctic began after 1000 AD and reached eastern Greenland by 1200. Thule is the

Inuk sculptor Joseph Kaniak shows his carvings (photo by Lyn Hancock).

most uniform of the Eskimoan cultures, covering, as it did, the entire Arctic of the western hemisphere, including the eastern tip of Asiatic Siberia. That manifest uniformity was responsible for giving Eskimos the appearance of homogeneity, which is misleading except for Thule culture artifacts. Thule art across the Arctic was not as uniform as many social scientists once believed and, therefore, the less conspicuous art forms of the Thule people in comparison to powerful Dorset and Old Bering Sea art (of Alaska) have led to the revision by a new generation of archaeologists of many misjudgments.

The Thule people, whose pre-Thule ancestry can be traced to SW Alaska but who had evolved into their new culture type in N Alaska, were themselves the true ancestors of the contemporary Inuit. In Canada, however, the art forms of these 2 cultures reflect little of this relationship. This is in contrast to the Thule art tradition in Alaska, which continued well into the late 19th and early 20th centuries.

The most frequent types of Thule art in Canada are combs, needle cases, "swimming figurines" (birds, spirits and humans), as well as various kinds of female effigies and utensils. In contrast to Dorset art which had hardly any stylistic similarities to contemporaneous Alaskan art forms, Canadian Thule art is almost totally dependent on Alaskan prototypes of the same culture and period.

While Dorset art, in its stark and expressionist form and technique, has a definite masculine quality which in form and content relates to weapons and tools used by males, Thule art relates in almost every detail to female images, forms and uses. Utensils such as combs, thimble holders, needle cases, bodkins and pendants are obviously women's practical and decorative equipment; the "swimming figurines" too are either female representations or relate to them in their shape. They are identical in their basic structure, with only the upper parts of their bodies shown; the parts underneath the waterline, not being visible, are therefore not shown. These figurines obviously had a common origin, probably as amulets or for similar magico-religious purposes. It is therefore difficult to believe that these carvings were gambling pieces (*tingmiujang*), though they were the prototypes for the pieces used after the breakup of traditional Thule whaling culture in the 17th and 18th centuries.

Besides being small, elegantly shaped and often beautifully decorated, almost all female figurines and statuettes of Thule art are faceless, in contrast to the Dorset figures, with their strongly expressed male faces. The 2 notable Thule exceptions with beautifully carved (almost Dorset-like) faces are a comb from the Pelly Bay region and a marrow fork (or perhaps a bodkin for tents or *UMIAKS*) from Strathcona Sound. There are a few other carvings with vaguely incised faces and also a few stick figures on combs, as well as a unique bow drill from the Arctic Bay area.

**The Historical Period** begins with the demise of Thule culture, as the climate became colder and the whales disappeared, and the coinciding arrival of the white man in the Arctic in the 16th century. The unified art style also broke down, though some Thule effigies persisted into the 20th century, such as the swimming figurines that turned into gaming pieces and the female statuettes into dolls. Certain women's utensils also continued, but carved in much cruder and less stylish forms.

At the start of the 19th century the dolls, toys and animal carvings that were exchanged with whalers, sailors and explorers (who had then begun to visit on a more or less regular basis) gradually turned into trade and souvenir art, often quite exquisite. In fact, the trade carvings

*Worshipping the Rising Sun* by Agnes Nanogak (courtesy Holman Eskimo Co-operative, Holman Island, NWT).

display a much greater skill than carvings made by the Inuit for themselves. By 1920 trade art (which was largely made out of ivory or bone) had lost all of its indigenous magico-religious meanings, and many carvings became replicas of tools and weapons of both Inuit and white men. In several areas liturgical art (replicas of Roman Catholic figurines) were produced regularly, as were inlaid or incised cigarette boxes, match holders, cribbage boards and sailing vessels. Even though the Inuit had lived a largely traditional life-style before WWII, their art forms — but not the techniques or processes for making their objects (*pinguaq* or "toy-like representations") — became increasingly oriented to the white man's tastes and uses.

**The Contemporary Phase** was a logical outcome of the transitional and acculturated art forms of the historic period, and coincided with the gradual "opening up" of the North after WWII, with the launching of the DEW Line (Distant Early Warning system) and, most of all, with the emerging interest of Western nations in the art and culture of preliterate societies. Largely owing to the insights and promotional energy of James A. HOUSTON, a young artist from Toronto, "Eskimo art," or "Inuit art" as we know it today, came into existence in 1948-49. He encouraged the Inuit to use their "natural talents" in creating art objects to help solve their eco-

*The Enchanted Owl* by Kenojuak Ashevak (courtesy West Baffin Eskimo Co-operative, Cape Dorset, NWT).

nomic problems. In this regard they were assisted by the INUIT CO-OPERATIVES.

Soapstone and ivory carvings from Povungnituk and Port Harrison (Inukjuac) in Nouveau Québec were the first art forms to appear for sale in the south. Sugluk (Sagluoc), Cape Dorset and Repulse Bay followed, and soon the entire central Arctic was covered, from Coppermine to Arctic Bay, with other areas to join later in the 1960s and 1970s. The whole enterprise resulted largely from the support Houston and the Inuit received from the federal government, the former Canadian Handicrafts Guild and the Hudson's Bay Company. In 1957-58 Houston also introduced printmaking into Cape Dorset; in the next 20 years, this craft spread to Povungnituk, Holman I, Baker Lake, Pangnirtung and, to a lesser extent, into several other arctic communities. The role of economics in contemporary art production is of great importance.

In these new carving activities the emphasis is largely on soapstone and serpentine, which have become increasingly scarce, and stone is often imported from the south. Stone differs greatly from the organic materials used in prehistoric and historic times. Ivory is still used in several areas, especially at Pelly Bay and Repulse Bay, where miniature carvings predominate. Beached whale's bone was first used at Arctic Bay but had largely disappeared by the mid-1970s. Instead, large whale's bone fragments from prehistoric Thule culture sites became extremely popular in the late 1960s and early 1970s, especially at Pangnirtung and Spence Bay. By 1983, largely because of the US embargo on endangered species, the use of this material had steadily declined.

Though carving is still the largest art activity, printmaking has become the most steady and the one providing the greatest financial returns for southern collectors and "art investors." Drawings and paintings are also produced in quantity, but they have never enjoyed the popularity of the prints. Every printmaker draws, but only a few artists paint (notably PUDLO PUDLATT from Cape Dorset and Davie Atchealak from Pangnirtung). Wall hangings (embroidered, appliquéed or woven) are probably the most impressive of the new 2-dimensional art forms but, though highly valued by connoisseurs, they have not achieved the wide acceptance of the prints either.

These new art forms do not have the uniform style and content characteristics found in Dorset and Thule art, but rather exhibit local and individual characteristics. Inuit art is easily recog-

*Sliding in the Sun* by Peter Aliknak (courtesy Holman Eskimo Co-operative, Holman Island, NWT).

nizable as such, but only because of a predictable subject matter or a definite personal or local style. All Inuit art shares a predominantly narrative or illustrative content that depicts the traditional life-style and techniques of survival, the animals of the North, the spirits of those animals, or the shamans and mythologies which were the links to that spirit world. But here the similarity ends. In Baker Lake, for instance, MAKPAQ and Ekoota have initiated a style of massive stone carving, whereas Ikseetaryuk developed out of the antler characteristic images and compositions of his own which have no stylistic relationship to the stone carvings. Baker Lake printmakers and producers of wall hangings such as OONARK, Tulluq, ANGUHADLUQ, William Noah and Simon Tookoome also have their own individual styles, as have at least 10 others.

A similar situation exists at Cape Dorset, where all the well-known artists are highly individualistic, including carvers AQJANGAJUK SHAA, QAQAQ ASHOONA, KIUGAK ASHOONA, Kum-wartok, Latcholassie, OSUITOK IPEELEE and PAUTA SAILA, and printmakers PARR, PITSEOLAK and Pudlo. Collectively, however, they are typical of Cape Dorset art, and it is possible to speak of a Cape Dorset style with its definite and crisp shapes and often quite original ideas.

In Povungnituk, too, the principal artists all have their own style and subject matter. The stylistic individuality of artists such as DAVIDIALUK, Joe Talirunili and Josie Paperk is noticeable in both carvings and prints. These 3 artists were seldom imitated, and ideas of Charlie SIVUAPIK, Isapik and Eli Sallualuk were followed by many of the lesser artists. These multiple Povungnituk styles have one common feature — high finish and craftsmanship. This characteristic applies to both the highly representational and the fantastic art of Povungnituk, but not to the works of Davidialuk, Talirunili and Paperk, which, though also narrative, have retained a definite feeling of simple rawness and forceful expression.

Comparisons can be drawn between Pelly Bay, Repulse Bay and Eskimo Point, all of which have styles that could easily be related to FOLK ART, but here too there are many subtle and individual exceptions. In general, Eskimo Point carvings of stone and antler are carved more crudely than the stones and ivories of the other 2 communities, yet PANGNARK's abstract work from Eskimo Point is elegant and sophisticated. Artists using whale's bone, especially the vertebrae, which have naturally fantastic shapes, have a certain advantage, leading often to unusual sculptures. This applies particularly to Spence Bay artists such as KAROO ASHEVAK and Anaija, but interesting work has also been coming out of the eastern and northern regions of Baffin I.

The contemporary phase is rapidly evolving and changing. Collectors and museums are starting to pay extremely high prices for older

pieces or prints, and the production of new art has increased frighteningly, accompanied by a general decline in quality. Although a great deal of good art is still produced, the collective standard of quality can only be maintained if the creation of art is limited to those of real talent. The Inuit and their co-operatives are fully aware of this danger, but only they can remedy it.

GEORGE SWINTON

*Reading: The Eskimo World*, artscanada 27 (Dec 1971-Jan 1972); *The Beaver* (autumn 1967); *Eskimo Art Issue*; Canadian Eskimo Arts Council, *Sculpture/Inuit* (1971); S. Cole, ed., *We Don't Live in Snowhouses Now* (1976); H. Goetz, *The Inuit Print/L'Estampe inuit* (1977); George Swinton, *Sculpture of the Eskimo* (1972).

**Inuit Co-operatives** were initiated in the NORTH by the federal government as a way of introducing the Inuit of the eastern Arctic to a money economy. The first co-operative was established in 1959 at George River in Nouveau-Québec as a logging and fishing operation. Others followed rapidly, the best-known being the West Baffin Co-operative at Cape Dorset, which began as a PRINTMAKING organization and then became involved in Inuit carvings.

The first co-operatives were involved in the production of northern goods for local consumption or export; from this beginning it was a natural expansion to consumer co-operatives, importing goods from the south for retailing in the north. Many co-operatives have also undertaken various municipal services, and have operated fishing lodges and hotels. The first co-operative conference was held in Frobisher Bay in 1963 with 16 co-operatives represented, 11 from the NWT and 5 from northern Québec.

In 1966 representatives of 24 co-operatives met in Povungnituk and decided to form a federation to provide central services, information and advice. La Fédération des co-opératives du Nouveau-Québec was organized in 1967 by the co-operatives in northern Québec, but it was not until 1972 that the Canadian Arctic Co-operatives Federation was established in the NWT. In the meantime, Canadian Arctic Producers had been set up with government encouragement as a central marketing agency for INUIT art and crafts. In 1983 Canadian Arctic Producers merged with the Canadian Arctic Co-operatives Federation to form Arctic Co-operatives Ltd.

The CO-OPERATIVE MOVEMENT in the North, as might have been expected, has suffered from inexperienced management, both among the Inuit and the staff hired from southern Canada, and from being undercapitalized. It has known failures as well as successes. Government assistance has frequently been necessary, but co-operatives are, after governments themselves, the largest employers of native people in the North. They have been an important influence in education and commerce, as well as in increasing self-confidence. There were 46 co-operatives, 11 in the Fédération des co-opératives du Nouveau-Québec and 35 in the NWT in 1984 with a total gross business volume of \$35 million.

GEORGE SWINTON

**Inuit Myth and Legend** A myth is usually defined as a poetic attempt to explain some phenomenon of nature or ancient tradition that cannot be understood rationally. A legend is a story handed down by tradition but loosely based on history. Both these forms are widely used by preliterate societies. The INUIT were just such a society until the mid-20th century.

Inuit who make their homes across the vastness of Canada's Arctic belong to a much larger Eskimoid family that extends from the Bering Sea through Alaska and northern Canada to Greenland (see *ESKIMO*). These imaginative, hardy and resourceful people are linked not only linguistically but by a distinctly similar culture and way of life. Songs, dances, myths, legends and art forms all link these widely flung, seminomadic people (see *INUIT ART*). Their earliest myths and legends, along with their hunting techniques, must have travelled with them out of Asia (see *PREHISTORY*). Their songs and story forms of myths and legends, linguistically as well as stylistically, relate most closely to Siberian, Finno-Ugric and early Hungarian (Magyar) traditions. Language and legend may give clues to ancient routes of migration.

Inuit myths and legends perform a useful function by answering, at least in part, many puzzling questions. The Inuit designated the powers of good and evil to deities living in a spirit world (see *NATIVE PEOPLE, RELIGION*). For the Inuit that spirit world was closely entwined

*Keeviak's Sea Journey* by Nancy Pukingnak (courtesy Sanavik Co-operative, Baker Lake, NWT).

with the starkly beautiful northern world in which they lived.

The ancient Inuit oral traditions were employed as the most important method of conveying and preserving ideas, augmented sometimes by small carvings that may have served as illustrations for events. Songs and dances also enhanced the meanings of myths and legends which upheld the existing system, bolstered the traditional customs of Inuit society and verbalized a sense of right and wrong. These early tales may have preceded the priesthood that grew around them, developing into Siberian and Eskimo shamanism (see SHAMAN).

Inuit myths and legends are usually short dramatic forms dealing with the wonders of the world: the creation, the heavens, birth, love, hunting and sharing of food, respect for the aged, polygamy, murder, infanticide, incest, death and the mystery of an afterlife. Even in recent times Inuit storytellers will remodel old myths and create new legends, subtly disguising the true identities of the persons involved.

Inuit myths are rarely simple, usually abounding with curious behavioural codes that may only be fully understood by those living within that society. Inuit believe that they have a close relationship with all of nature and that animals have the magical power to hear and understand the human word. For this reason, hunters in their camps, when singing or speaking of walrus or seal, may carefully refer to them as maggots or lice, or call caribou lemmings, thus confusing the animals that are necessary for their survival.

Until modern times Inuit agreed that there were other worlds beneath the sea, inside the Earth, and in the sky where some gifted *angakoks* (shamans) had the power to journey in trances and in dreams, visiting places that ordinary mortals would only experience in some after-life.

Dreams have always played an important part in the lives of Inuit, perhaps serving as the basis for some myth forms. Dreams are interpreted with care. Dreams of white bears are said to have sexual overtones. Dreams of weasels suggest troubles. Bird dreams forewarn of blizzards.

Some Inuit myths are thought provoking in any language. Here is one extremely short example: Onto a boy's arm came a mosquito. "Don't hit! Don't hit!" it hummed, "Grandchildren have I to sing to." "Imagine," the boy said, "So small and yet a grandfather."

Among the most famous of the vast array of myths is the legend of the sea goddess who has various names (Sedna, Nuliyuk, Taluliyuk), the legend of Lumik (Lumak, Lumaag), the legend of Kiviok and the legend of Tiklaktik.

Once, on south Baffin Island, I saw a myth come alive. I witnessed some young children playing near a tidal ice barrier with many dangerous hidden cracks. Their grandmother crept with great care down among the ice hummocks and from a hidden position called out, "Oohh-wee, Oohhwee!" The children ran back onto the land and said the sea goddess Talulijuk had frightened them. Later, the grandmother said, "I told them about the woman who lives under the sea. Now she will keep them away from the dangerous places." The grandmother was referring to the powerful sea goddess in this central arctic song:

That woman down there beneath the sea,  
She wants to hide the seals from us.  
These hunters in the dance house,  
They cannot mend matters.  
They cannot mend matters.  
Into the spirit world  
Will go I,  
Where no humans dwell.  
Set matters right will I.  
Set matters right will I.

*The Woman that Lives in the Sun* by Kenojuak Ashevak (courtesy West Baffin Eskimo Co-operative, Cape Dorset).

The legend of the sea goddess, though known in various regions by different names, is one of the most widespread. One version is that some time ago, during a violent blizzard, a handsome young stranger entered a family igloo. He was wearing a necklace with 2 large canine teeth. He was welcomed into the bed and slept with the entire family. When they awoke next morning, the young man was gone. The father, seeing only animal tracks outside, said, "We were deceived. That must have been my lead dog disguised as a man." When his daughter became pregnant, the father was ashamed of what she might produce. He made his daughter lie on the back of his kayak while he paddled her out to a small island where he abandoned her. His lead dog secretly swam to the girl, leaving her tender pieces of meat. Thus she remained alive and gave birth to 6 young. Three of them were Inuit children, but the other 3 had bigger ears and snoutlike noses. The young mother did not know how to build a kayak. Instead, she sewed some sealskins into one large slipper, and placing the 3 strange children inside, she pushed them off toward the south, calling out, "*Sarutikapsinik sanavagumarkusi*" (You shall be good at making weapons). Some Inuit say that all white men and Indians are descended from those 3 dog children and only through them are they related to Inuit.

The second part of the story, usually told on the following night, tells of the father going in an UMIK, a large skin boat, and taking his daughter off the island. On their way home a storm rose and it was feared that the overloaded boat would capsize. The boatmen decided that to lighten the load they must throw the daughter overboard. When she tried to climb back into the boat, her father cut off her fingers. These became the seals in the sea. She tried again and he cut off her hands and they became the walruses. She made one last attempt and he cut off her forearms which became the whales of the oceans. After that she sank into the depths and became Sedna, or Taluliyuk, the woman who controls all the sea and became half woman and half fish. Many songs are sung to this powerful goddess. In new seasons, pieces of liver of the first killed sea mammal are returned to the waters, imploring Sedna to release her bounty to the hunters so that they might feed their families.

A number of anthropologists agree that although many ethnic societies wished to preserve their history, they preferred to record it in myths and legends. Perhaps this was because these were close societies where every man knew his neighbour well. Until recently Inuit had no need for last names. This also suggests that to repeat the tale of a wife-stealing or a feud leading to a massacre within a tribal group would be not only socially unacceptable but dangerous. But by transferring enemies into mythical beasts and family members into heroes, the story might travel safely down within the tribe through many centuries.

Ancient tools and art objects may lie preserved in the permafrost unharmed for countless centuries waiting to be discovered. But oral myths and legends, and songs and dances that are parts of Inuit culture, represent a valuable intellectual possession. Once lost, they have no way of returning. For this reason, every effort should be made to record the important Inuit myths and legends that are a part of the priceless heritage of Canada before they slip away. In the past, explorers and anthropologists performed this task, but in recent years Inuit have become concerned with preserving their traditions. JAMES HOUSTON  
Reading: Z. Nungak and E. Arima, *Eskimo Stories: Unik-kaatuat* (1969).

**Inuit Tapirisat of Canada** (ITC, formerly the Inuit Brotherhood) was founded in 1971, when an organizing committee of Inuit decided it was time to speak with a united voice on various issues concerning development of the Canadian north and preservation of Inuit culture. Headquarters were first established in Edmonton, but in 1972 the offices were moved to Ottawa, for closer access to the federal government. In 1983 ITC was a national organization representing over 25 000 Inuit in the NWT, northern Québec and Labrador, as well as 6 regional associations: the Committee for Original People's Entitlement (COPE) in the western Arctic, the Baffin Region Inuit Assn, the Kitikmeot Inuit Assn, the Keewatin Inuit Assn, the Makivik Corp in Québec and the Labrador Inuit Assn. The presidents of the regional associations constitute ITC's board of directors, along with 4 other members who are elected for 2-year terms at the annual general meetings. All Inuit over 18 years of age are now eligible to vote, though in the past elections were only open to those delegates attending the meeting.

The goals of ITC are to preserve Inuit language and culture; to promote a sense of dignity and pride in the Inuit heritage; to provide a focal point for determining the needs and wishes of all Inuit; to represent Inuit on matters affecting their well-being; to improve communications to and between Inuit communities; and to help Inuit achieve full participation in Canadian society. ITC is a nonprofit organization; its funding sources are mainly government agencies and private foundations in Canada.

MINNIE AODLA FREEMAN

**Inukpuk, Johnny**, sculptor (b at Inoucdjouac, Qué 1911). Anecdotal Inuit sculpture reflects an austere, sometimes violent way of life. By contrast, Inukpuk's balloon-breasted mothers nurse plump contented babies, assuring them and the viewer a life of love and abundance. An anachronistic flaw, a harelip, is invariably shared by both figures. His explanation, probably tongue-in-cheek, is that "white people think Eskimos look like that." MARY M. CRAIG

**Inuvik**, NWT, Town, pop 3147 (1981c), inc 1970, is located on the MACKENZIE R Delta, 97 km S of the BEAUFORT SEA and 1086 air km NW of YELLOWKNIFE. The name is from the Inuit and means "place of man." The community was constructed in the late 1950s and early 1960s to replace the existing settlement of AKLAVIK, which was threatened by floods and erosion. Inuvik is the administration, communications and fur-trading centre of the lower Mackenzie R

Inuvik, NWT, is the administrative and communications centre of the lower Mackenzie area and the largest community N of the Arctic Circle (photo by John deVisser).

area and is the largest community N of the ARCTIC CIRCLE. Much of its economy is centered on nearby oil and gas exploration. ANNELES POOL

**Invermere**, BC, Village, pop 1969 (1981c), inc 1951, is located on the NW shore of Windermere Lk in the ROCKY MOUNTAIN TRENCH, 130 km N of Cranbrook and 120 km SE of Golden. Prehistoric KOOTENAY located here to net and spear salmon. David THOMPSON built the first trading post in the Columbia Dist near here 1807. In 1862 the first placer-gold miners arrived, and mining continued with the Paradise and Mineral King mines. Invermere became a centre for mountaineers in the Purcell Mts 1900-30, after Conrad Kain, a prominent guide, made the area his home. Agriculture was established, along with beef production. Forestry is now the leading resource industry, but tourism also plays an important role, particularly at nearby Radium and Fairmont hot springs, and at Panorama Ski Resort. WILLIAM A. SLOAN

**Inverness**, NS, UP, pop 2013 (1981c), is located 150 km W of Sydney, Cape Breton I. Inverness was settled in 1803 by Scottish immigrants who landed at Pictou, NS, and later drifted east to Cape Breton I in search of unoccupied farmland. During the 1800s it grew as an agricultural settlement. After the discovery of coal in 1863, Inverness came to depend more and more on mining. American industrialist William Penn Hussey formed the Broad Cove Coal Co in 1894 and put his expertise into developing the Inverness mines. The mines were sold to Inverness Ry and Coal Co 1899, and the town, known as Broad Cove Mines, Broad Cove Shore, Lochleven and Broad Cove Shean, prospered. It was named Inverness in 1904 (pop 3000) for the Scottish home of many of its settlers. The mines reached peak production just after 1910, with an average annual output of almost 300 000 tonnes, but decreasing demand, rising costs and hazardous underground problems drove the company into receivership by 1915. The NS government attempted to revive the dying industry, which finally ceased operations in the 1950s; mining

was completely abandoned by 1965. Today, Inverness serves as a minor regional centre for rural western Cape Breton I. DEBRA McNABB

**Invertebrate**, ANIMAL without a vertebral column (backbone). As a group, invertebrates are extremely diverse, differing as much among themselves as they do from the VERTEBRATES, which they greatly outnumber. Some 95% of all animal species are invertebrates, 85% being arthropods. They populate all major environments: marine, freshwater and terrestrial; some are parasites in other animals. Invertebrates may be carnivores, herbivores or omnivores. Some even culture bacteria or plant cells in their tissues (in symbiosis), making use of the by-products. There are invertebrates that swim, float, fly, walk, crawl or burrow, and others that are fixed in one spot. Some of these sessile forms have no power of movement (eg, the glass SPONGES). Endless variations exist in the mechanisms whereby physiological functions (respiration, excretion, movement, co-ordination, etc) are carried out. Some groups (eg, INSECTS, NEMATODES) have developed extraordinarily successful designs. Other designs, though simple, have endured virtually unchanged for hundreds of millions of years (eg, BRACHIOPODS).

While invertebrates are certainly conspicuous on land, they are far more so in the sea. The most elaborate of all marine communities, the coral reef, is dominated by invertebrates. Marine PLANKTON includes representatives of all major invertebrate phyla. The copepod CRUSTACEANS, in both numbers of species (7500) and numbers of individuals, exceed all the rest of metazoan multicelled plankton combined. Some invertebrates, eg, crabs, shrimp, mussels, oysters and squid, are of economic importance. While shellfish cannot compete with fish in sheer volume caught, they are important in cash value. In eastern Canada in 1981 the landed value of lobsters and scallops combined was \$194 million — more than the combined value of the 2 major fish species, cod and haddock.

The origins of most invertebrate groups are

Phylum	Habitat	Examples
Cnidaria (9 000 species)	mainly marine	sea anemone, hydra coral, jellyfish
Ctenophora (50 species)	marine plankton	comb jelly, sea gooseberry
Platyhelminthes (12 700 species)	mainly parasitic	flatworm, fluke, tapeworm
Nemertea (600 species)	mainly marine	ribbon worm
Acanthocephala (500 species)	parasitic	spiny-headed worm
Rotifera (1 800 species)	marine and fresh water	wheel animal
Nematoda (10 000 species)	all habitats many parasitic	round worm
Brachiopoda (280 species)	marine benthos, and intertidal	lampshell
Bryozoa (4 000 species)	aquatic	moss animal
Pogonophora (80 species)	deep-sea benthos	beard worm
Mollusca (100 000 species)	all habitats	clam, snail, octopus, squid
Annelida (8 700 species)	aquatic or in damp soil	earthworm, leech, tube worm
Arthropoda (923 000 species)	all habitats	insect, spider, crustacean
Chaetognatha (50 species)	marine plankton	arrow worm
Echinodermata (6 000 species)	marine benthos and intertidal	sea urchin, starfish
Protochordates	marine	sea squirt

buried in early GEOLOGICAL HISTORY. Surprisingly advanced forms, including ANNELID worms and MOLLUSCS, have been found in rocks from the Canadian Arctic dating from the Precambrian period (620 million years ago). Many once-important groups have dwindled; others have become extinct as new forms emerged. Because of the patchiness of the FOSSIL record, it is often hard to decide on evolutionary relationships in different invertebrate groups, but comparison of structure and development of existing forms may give clues to their ancestry. Thus, the annelids and molluscs, though seemingly very different as adults, show remarkable similarities in their development; both are considered offshoots from the line of evolution leading to the arthropods. Specialists are fairly well agreed upon the broad outlines; however, classifications change continually as new facts come to light.

**Invertebrates in Canada** Canada's climatic and ecological diversity is matched by an equivalent diversity of invertebrate types. Scorpions and sun spiders live in the hot, dry country around Medicine Hat, ICE-WORMS in the Columbia Icefields; midges and mosquitoes plague the inhabitants of many regions; leeches and flatworm larvae bother bathers in prairie lakes ("swimmers itch"); starfish and sea anemones delight the eyes of wanderers along the seashore; and the invertebrate fossils of the BURGESS SHALE are famous throughout the world. In Canada research on invertebrates is largely concentrated on insects important to agriculture and forestry, eg, spruce budworm, parasites of fish and domestic animals; and on edible marine molluscs and crustaceans (shellfish), copepods and other marine planktonic invertebrates. However, specialists in most of the invertebrate groups are scattered across the country in government laboratories, research institutes and universities. Published works on invertebrate species in Canada are generally regional in nature and of interest primarily to specialists. Although the National Museum of Natural Sciences and the Department of Fisheries and Oceans have published material on specific groups, no general reference work on Canada's invertebrate fauna exists. Invertebrates are far less well known than are higher animals. Of the 2000-4000 new animal species discovered annually, most are invertebrates from remote places (eg, the Alpha Ridge of Canada's ARCTIC ARCHIPELAGO).

G.O. MACKIE

**Iranians** Iran, formerly known as Persia, is a predominantly Muslim country in southwestern Asia with a population of more than 42 million. About 90% of the population is Shi'ite Muslim; 8% Sunni Muslim; and 2% is made up of diverse religious groups including Zoroastrians (the most ancient of all Iranian minorities), Jews, Assyrians (eastern Christians), Armenians and Bahais.

There is no record of Iranian immigration to Canada prior to WWII. Between 1946 and 1965, less than 300 Iranians immigrated to Canada; many of them were students who remained in Canada after their studies. From 1966 to 1981, 6382 Iranian immigrants arrived, including 1730 in the 1966-75 period and 4652 in the 1976-81 period. Other Iranians came from the US and from Britain, Germany, France, Italy and Spain. Many factors have contributed to Iranian immigration, but the most significant are economic and educational opportunities in Canada and estrangement from the Islamic regime.

Like many immigrants from other parts of the world, Iranian immigrants to Canada are a youthful group, with a slight male majority. They have come as individuals or as individual family units. Most possess exceptionally high educational or occupational qualifications.

It is estimated that by 1983 the Iranian community in Canada numbered 10 000-12 000, the majority in urban centres in Ontario (50%), Québec (20%) and BC (20%). The majority of Iranian immigrants are Muslim, but the eastern Christians and Bahais are overrepresented proportional to their distribution in Iran. The Iranian Canadian community is one of the newest additions to Canada's ethnic mosaic, but it is in the process of development and will doubtless soon establish its own institutions and distinctive mode of adaptation to the new environment.

BAHA ABU-LABAN

**Irish** While it has been argued (with little supporting evidence) that Irish explorers such as Brendan the Bold preceded the Norse to Canada, such wishful thinking is not necessary to establish the significance of the Irish contribution to Canada. Since the 17th century, because of political and military links between France and southern Ireland, the Irish have lived in what is now Canada. The Irish may have constituted as much as 5% of the population of NEW FRANCE. Indeed, some "French Canadian" and "Acadian" surnames derive from a corruption of Irish names, eg, Riel (from Reilly) and Caissie (from Casey). There have also been Irish in NEWFOUNDLAND since the early 18th century, if not before. "Bristol" fishing vessels habitually stopped at Wexford and Waterford to take on provisions and an Irish crew and labourers for the Newfoundland fishery. There is some indication from New France and Newfoundland that among the Irish at this time there existed a measure of group consciousness, especially in Newfoundland where the Irish population continued to increase until the middle of the 19th century. During the 18th century, smaller groups of Irish began to arrive in the new British colonies. During the 1760s a group of Ulster Presbyterians settled at TRURO in Nova Scotia, and an undetermined number of Irish were part of the LOYALIST migration.

All of the above were precursors of the main waves of Irish immigrants that arrived during the first half of the 19th century. By the 1850s, over 500 000 Irish had immigrated to British N America, although many of them had moved on to the US (in NY and Boston there were 4 million Irish out of a total population of 24 million) or elsewhere. Today the descendants of these Irish immigrants comprise more than 10% of the Canadian population and have helped define the meaning of "Canadian." Because they spoke English, the Irish could participate more directly in Canadian society than many non-English-speaking immigrants, and they brought to bear on Canadian life many values that were Irish in origin. In particular, education, law and politics have felt the impact of the Irish mind. Well-known Irish in Canada have included Edward BLAKE, Edmund BURKE, Sir Guy CARLETON, Benjamin Cronyn, John Joseph LYNCH, D'Alton MCCARTHY, John O'Connor, Eugene O'KEEFE, Michael Sullivan, Thomas D'Arcy MCGEE, and Brian MULRONEY.

**Migration and Settlement** The migrations of the 17th and 18th centuries had little permanent impact on Canada, except in Newfoundland where many Irish worked as fishermen and lived in the kind of dire poverty they had hoped to escape by migration to the New World. Newfoundland had acquired a name in the Irish language — Talamh an Eisc — a singular distinction in the New World. In the 19th century, the growing population and deteriorating economy of Ireland forced a growing stream of Irish to emigrate, particularly after 1815. Simultaneously the economy of the mainland colonies of British N America expanded, offering better opportunities for immigrants. However, because they were relatively poor immigrants with little money for moving across Canada, the

Irish tended to settle in the Maritimes.

By the 1830s Nova Scotia, New Brunswick, PEI and Upper and Lower Canada had significant Irish populations. Some immigrants spread throughout the countryside, because land from recent timber operations was cheap, but generally the Irish tended, unlike the SCOTS or ENGLISH, to remain in the ports, such as Halifax, and Saint John, where they provided cheap IMMIGRANT LABOUR. Even in rural districts, many Irish preferred to seek employment instead of, or in addition to, setting up farms. By the 1830s Cumberland County in Nova Scotia; Kings, Queens, Carleton and Northumberland counties in New Brunswick; Queen's in PEI; and virtually the whole of Upper Canada E of Toronto and N of the older Loyalist settlements were notably Irish in character.

The Great Famine of the late 1840s drove 1 1/2 to 2 million destitute Irish out of Ireland, and hundreds of thousands came to British N America. This wave was so dramatic that most Canadians erroneously think of "1847" as the time "when the Irish came." The famine immigrants tended to remain in the towns and cities and by 1871 the Irish were the largest ethnic group in every large town and city of Canada, with the exceptions of Montréal and Québec City.

The "Famine Irish," who supplied a mass of cheap labour that helped fuel the economic expansion of the 1850s and 1860s, were not well received. They were poor and the dominant society resented them for the urban and rural squalor in which they were forced to live. But the Famine Irish had another characteristic: the propensity to emigrate to the US. Thousands had left for the US by the 1860s, establishing a tradition that remained unbroken well into the 20th century. As a result, in Canada today "Irish" districts and communities are generally those that were established before the famine. For example, in the Maritimes, only Saint John has a significant Famine Irish element. Today, Ontario has the largest population of Irish outside the Atlantic provinces. By the 20th century, there was a significant Irish community in Winnipeg and in a few rural districts of Manitoba, but the impact of the Irish in the West has not been as important as in the East.

**Social and Cultural Life** The most important single feature of the Irish, both in Ireland and in Canada, is that they have been divided into 2 different and mutually hostile groups. This division is so fundamental that the Irish might be considered 2 ethnic groups. Although it is common practice to refer to Irish people as either Catholic or Protestant, religion itself has never been much more than the easiest determinant of a group affiliation that consists of many factors. The Catholics perceive themselves to be the representatives of the original inhabitants of Ireland, while the Protestants represent the Scots and English colonists who arrived in Ireland when it was under British rule. Because the Catholics were socially and politically disadvantaged in Ireland, they arrived in Canada with few advantages other than a familiarity with the English language and British institutions. They lacked the means to establish themselves securely within the economy and had little impact on the business community. The Catholic Church, an important institution for the Catholic Irish in Ireland, was shared by the Irish in Canada with the Highland Scots and the French, and helped the Irish in the difficult process of integration into Canadian society.

The Protestant Irish, in contrast, generally had more money and found it significantly easier to re-establish themselves as farmers. They became one of the most agrarian of groups in 19th-century Canada. Because their religion made them more acceptable to the dominant society, they were able to move much more freely in Canadian society.

Both groups were rich in cultural traditions, but with significant differences. The Catholic Irish tended to keep alive traditions of being Irish whereas the Protestants tended to glory in their contributions to British civilization. Neither group has preserved much lore about the actual migrations, even the trauma of the famine, but both groups tend to be aware of the more recent experiences in Canada.

**Group Maintenance** The Protestant Irish tended to stress the importance of the British connection in order to distance themselves from their Catholic compatriots. The ORANGE ORDER, the original purpose of which in Ireland was to preserve British rule (at least in Ulster), was essential in Canada as a vehicle by which the Protestant Irish could gain acceptance from their Scots and English neighbours. Individual Orange Order lodges existed in New Brunswick and in Upper Canada from the early part of the 19th century, and the order was consolidated in 1829 as the Grand Lodge of British N America. Whenever British institutions in Canada seemed to be in peril, Orangemen were fond of bringing up the Protestant victory over the Catholics at the River Boyne in 1690, and the anniversary of that battle (12 July) remains the great Orange celebration. During the latter half of the 19th century, the lodge became increasingly nativist, and today it is difficult to detect a specific Protestant Irish tradition that is distinct from a broad British tradition.

Over the past 150 years, the term Irish has acquired a Catholic connotation. The Catholic Church, the institutional bedrock of the Catholic Irish community in Canada, laboured to gain acceptance for its people, which meant that Irish priests and bishops were often opposed to any manifestations of sympathy for nationalism in Ireland. For the Irish in the US, there was no such problem, because there it was possible to be a good Irishman, a good Catholic and a good American. But in Canada, where citizenship remained British for so long, it was extremely difficult to be Irish politically and a good citizen as well. It was also difficult at times to be Irish and a good Catholic. For example, the Fenian Brotherhood, whose aim was to free Ireland by force of arms, was very popular among the Irish in the US, but in Canada the Fenians (though few in number) were considered seditious by the government, considered dangerous by the Protestants, and were viewed as an embarrassment by the Catholic Church and by respectable Catholic Irish. FENIAN RAIDS from the US against British N America inspired hostility towards the Catholic Irish and provoked attestments of loyalty from the church and from respectable Catholic Irish. The later and more benign Ancient Order of Hibernians was also dedicated, if less violently, to the cause of Irish nationalism, but it too fell afoul of the Catholic Church.

As English-speaking Catholics, the Catholic Irish in Canada found themselves at odds with French-speaking Catholics as well as with the Protestant majority. Because of the sense of isolation among the Catholic Irish, a sense of identity was stronger among them than among the Protestant Irish.

The Protestant Irish have sustained a powerful belief in institutional strength, and have clung to structures tenaciously. Stability is seen to be their greatest virtue. By contrast, the Catholic Irish define power in personal terms to a degree which may seem anarchistic, but which represents a survival of the patron-client relationship, the basis of politics in rural Ireland. The talent of the Catholic Irish in Canada and elsewhere has been that they could translate this personal approach to politics and to power brokerage in the modern setting.

PETER TONER

Reading: C.J. Houston and W.J. Smyth, *The Sash Canada Wore* (1980); W.S. Neidhardt, *Fenianism in North America* (1975).

**Irish Moss** is the common name for a red ALGA (*Chondrus crispus*), but may also refer to 1 or 2 other red SEaweeds (*Gigartina stellata* and *Furcellaria lumbricalis*). *C. crispus*, the only species of the genus in the Atlantic Ocean, occurs from New Jersey to Labrador, and is most abundant in NS and the lower Gulf of St Lawrence. The plants are perennial, grow on rock in lower tidal and subtidal zones, and arise from disclike "holdfasts." Commonly, the fronds are up to 15 cm high, branched (usually in one plane only) and fan-shaped. The colour varies (dark red, purple, yellow-green), depending on physiological conditions. Dried plants are nearly black. A life cycle consisting of 2 independent and structurally similar phases (sexual and asexual) has been demonstrated in the laboratory. Irish moss is Canada's most valuable commercial seaweed. Originally used in blanchmanges and milk jellies, it is still available in "natural food" stores. The dried plants are used to clarify beers, wines, coffee and honey. Since WWII, major exploitation has been for extraction of hydrocolloids (substances yielding gel when water is added, eg, carrageenans) used in convenience foods. Carrageenan is not processed in Canada, and thousands of t of Irish moss are exported annually. AQUACULTURE trials, in tanks and pools, have been carried out in NS. J. McLACHLAN

**Iron and Steel Industry** includes establishments involved in smelting IRON ORE, in steel-making (ie, alloying iron and carbon) and in using these materials to fabricate a range of products essential to an industrialized society. Iron is the fourth most plentiful element in Earth's crust, after oxygen, silicon and aluminum. It occurs as iron-ore minerals, the most important, in order of iron content, being magnetite, hematite, goethite, pyrrhotite, siderite and pyrite. Steel is primarily an alloy of iron and carbon in which the carbon content varies from about 0.02% (eg, sheet metal, wire) to 1.5% (tool steels). Alloy steels contain additional elements (eg, manganese, nickel, chromium, vanadium, molybdenum) which give them greater strength and specific properties (eg, chromium makes steel stainless).

Canada is the world's sixth-largest producer and third-largest exporter of iron ore. In 1982 iron ore was produced by 10 companies, directly employing about 14 000 people and supporting 10 communities. In 1981 Canada shipped 49.8 million t of iron ore valued at \$1.9 billion, of which some 41.5 million t valued at \$1.4 billion were exported. Canada imports about 6 million t annually, mainly from the US, and consumes some 15 million t annually to produce iron and steel. The Québec-Labrador region accounts for most of Canada's total production; Ontario and BC produce the remainder.

During the period 1939 to 1970, annual Canadian steel production increased from just over one million to 11 million t. The Canadian steel industry is now made up of 5 major, fully integrated iron and steel producers and about 15 smaller steel producers. In 1980 these companies produced over 15 million t of raw steel, making Canada the world's ninth-largest steel producer. Most of Canada's steel output is concentrated in Ontario in the "Big 3" steel companies: Stelco, Dofasco and Algoma. These companies are recognized as among the most efficient and innovative steelmakers in the world.

In Canada iron was first made in 1733 at the FORGES ST-MAURICE, near Trois-Rivières, Qué, which produced iron from local bog iron ore and charcoal to supply settlers and the military (see BLACKSMITHING). The first ironworks in Upper Canada, the Marmora Ironworks, near Peterborough, Ont, began production in 1822. It consisted of 2 charcoal-fired blast furnaces, a forge with 2 sets of water-powered hammers and special hearths for the production of iron

Stove from the Forges Saint-Maurice at Trois-Rivières, Canada's first ironworks, which began production in the 1730s (courtesy National Museums of Canada/National Museum of Man).

bar. At the time it was the largest ironworks in Canada and probably the most advanced in N America. In the late 19th century both the Marmora and the St-Maurice ironworks were closed. They could no longer compete with more modern ironworks in Ontario and NS, which employed coke-fired blast furnaces.

Steel products were first manufactured in Canada in the 1880s. By the early 1900s steel-making centres had been established in HAMILTON and SAULT STE MARIE, Ont, and in SYDNEY, NS. These centres had easy access to iron-ore deposits recently discovered near Lk Superior and on Bell I, Nfld, and to coking coals from the Appalachians and Cape Breton. Iron and steel production grew slowly until WWII and the post-war economic boom created a tremendous demand for steel.

#### Processing

Iron and steel production first involves bringing together the required raw materials: iron ore, coal, limestone, and iron and steel scrap. The iron ore is then smelted to produce an impure metal called hot metal, if liquid, or pig iron, if solid. The hot metal is refined to remove impurities and to develop the required composition. The liquid steel is then cast in sand or ingot molds, or continuously cast into blooms, slabs or billets. Finally the ingots, blooms, slabs and billets are processed into the desired shapes in rolling mills or by forging.

Large integrated steel plants are located wherever it is convenient to bring together the large quantities of raw materials required. The big steel plants in Canada have been built at Sault Ste Marie (ALGOMA STEEL CORPORATION LTD) and Hamilton (STEEL COMPANY OF CANADA LTD, DOMINION FOUNDRIES & STEEL, LTD), Ont; Contrecoeur (SIDBEC-DOSCO LIMITÉE), Qué; and Sydney (SYDNEY STEEL CORPORATION), NS, ie, along the Great Lakes-ST LAWRENCE SEAWAY system and the Atlantic seaboard. These are areas to which iron ores from northern Ontario, Québec, Labrador, Minnesota, Wisconsin and Michigan, and coal from Pennsylvania, West Virginia and Kentucky can be transported most economically. Scrap iron and steel, which are collected for recycling, require adjustment of composition and casting before the finishing operations. Thus, many small steel plants, each making a few thousand tonnes of steel annually, have been built throughout the country where scrap is available and a ready market for the finished steel exists. Examples of such facilities include Western Canada Steel Ltd, Vancouver; Stelco, Edmonton; Western Canada Steel Ltd, Calgary; Interprovincial Steel and Pipe Corp Ltd, Regina; Manitoba Rolling Mills (Canada) Ltd, Selkirk, Man; Burlington Steel Division of Slater Steel Industries Ltd, Hamilton, Atlas Steels, a division of Rio Algom Ltd, Welland, Lake Ontario Steel Co Ltd, Whitby, and Ivaco Ltd, L'Orignal, Ont; and Atlas Steels, Tracy, Qué.

**Iron Making** Iron ores consist primarily of hematite or magnetite, associated with variable amounts of other unwanted minerals (eg, quartz), which are collectively known as gangue. An ore may be high- or low-grade, depending on the relative proportions of iron minerals and gangue. High-grade ores (in excess of 50% iron) may often be smelted in blast furnaces without preliminary preparation, other than crushing and sizing. Low-grade ores must be upgraded to remove excess gangue before smelting. This operation requires fine grinding of the ore to liberate the iron minerals from the gangue, followed by a concentrating process that separates out the iron minerals. Magnetite ores are particularly suitable for concentration because of their magnetic properties. Ground concentrates must be agglomerated into larger particles before smelting, either by rolling them into small pellets ("pelletizing") or by heating the fine particles until they stick together ("sintering"). Ores containing siderite (the iron carbonate mineral) are less often used because they must be heated by sintering before smelting in order to convert the iron carbonate to an iron oxide. Since 1939 Algoma Steel Corp Ltd has operated one siderite mine at Wawa, northern Ontario. Pyrite and pyrrhotite, although plentiful, are rarely used as iron ores because of the objectionable amounts of sulphur they contain (see ACID RAIN).

Following WWII, MINING and processing of iron ores expanded greatly in Canada. The Iron Ore Co of Canada now operates mines in Québec and at Carol Lk, Labrador, with concentrating and pelletizing plants at Labrador City and Sept Îles. In Labrador, Wabush Mines carries out mining and concentrating operations at Wabush Lk and pelletizing at Pointe Noire. Dofasco produces pellets at Adams Mine, Kirkland Lake, Ont, and Sherman Mine, Temagami, Ont. Stelco produces pellets at Griffith Mine, Red Lake, Ont. The Québec-Cartier Mining Co mines and concentrates at Lac Jeannine, Qué; Sidbec-Dosco Limitée has iron mines in the same area.

Blast furnaces are heated by burning high-quality coke, a substance high in carbon and low in ash and sulphur, which is distilled from coal. The future of the blast-furnace process is largely dependent on adequate resources of suitable coking coals. A blast furnace is a tall, cylindrical shaft furnace in which ore, coke and limestone are charged to the top and liquid iron and slag are tapped at regular intervals from the hearth at the bottom. The iron melts and dissolves carbon from the coke. The carbon content of the hot metal is about 4.5%. Limestone is added to the charge to provide basic lime, which reacts with the acidic gangue to form slag. Proper proportioning of the acidic and basic constituents forms a low-melting, free-running liquid slag that absorbs most of the sulphur in the charge. Liquid slag does not mix with liquid iron and is separated during furnace tapping.

In recent years, several solid-state reduction processes have been developed in which iron ore is converted to metallic iron without melting. There is no separation of iron from gangue and the use of high-grade ores or concentrates is essential. Many of these processes use natural gas, avoiding the use of expensive coke. Sidbec-Dosco operates such a process at Contrecoeur, Qué, and Stelco has a solid-state reduction plant at the Griffith Mine. Solid-state reduced ore and pellets are melted in electric furnaces and converted to steel in the same way as scrap metal. Separation of the gangue takes place at this stage. Reduced pellets are superior to scrap in purity and uniformity of composition but are not economically competitive with scrap.

**Steelmaking** Hot metal and pig iron contain silicon, phosphorus, sulphur and often other elements in addition to carbon. These must be removed during steelmaking and the carbon

level adjusted by oxidation. The Bessemer process, invented in England in 1856 and used extensively in Europe until the 1960s, was the first large-scale steelmaking process. This method was followed by the invention, a few years later, of the open-hearth process, which from about 1900 to the early 1960s accounted for most of the steel production in the Western world. The open-hearth process is now rapidly disappearing in favour of the basic oxygen process that originated in Austria, where the first plants were built in 1952-53, and was introduced to N America in 1954 by Dofasco in Hamilton, Ont. In this process oxygen gas is blown into a bath of hot metal. Lime is added to produce a slag with the oxidized silicon and phosphorus and to absorb the sulphur. Carbon burns to carbon monoxide. Scrap metal is added to control the temperature. When the carbon content reaches the desired level, alloying elements are added as required, and the liquid steel is cast into molds and solidified.

In the early 1960s, Guy Savard and Robert Lee of Canadian Liquid Air designed an injector that made it possible to introduce pure oxygen through the bottom of vessels normally used for the Bessemer process. This method was developed to industrial scale in West Germany. The first industrial plant was converted in 1968. The conversion of all remaining Bessemer plants in Europe was completed in the next 4 years. It thus became possible to make all grades of high-quality steel and to increase the scrap charge from 5% to 25%.

In 1981 a total of 449 million t of steel were produced in non-Communist countries: 301 million t (67%) by oxygen processes; 121 million t (27%) by the electric-furnace process; and 27 million t (6%) by the open-hearth process.

**Products** The greatest tonnage of liquid steel is formed into large ingots or continuously cast. Ingots are large, rectangular blocks of steel, most of which are shaped into finished products by rolling mills. The first finishing step is the hot rolling of ingots into blooms, slabs or billets. Continuous casting eliminates this stage: liquid steel is poured into the top of the mold and the bloom, slab or billet is discharged continuously from the bottom. The first successful continu-

ous casting machine for steel in N America was developed by Atlas Steels, Welland, Ont, in 1954. For the most part, blooms, slabs and billets are reduced in rolling mills to finished products such as sheet, plate, strip, rail, structural steel, bar, pipe and wire products. Most shapes are hot-rolled at temperatures above 800°C. Some steels (eg, sheet, strip) are finished by cold-rolling at room temperature to obtain close dimensional tolerances, high-quality surface finish and an exact degree of hardness. See MINERAL RESOURCES.

**Iron Ore**, is a MINERAL substance that yields metallic iron (Fe) when heated in the presence of a reducing agent such as COAL. Iron ore usually consists of iron oxides. Its most important mineral forms are magnetite ( $\text{Fe}_3\text{O}_4$ , 72.4% Fe), hematite ( $\text{Fe}_2\text{O}_3$ , 69.9% Fe) and goethite or limonite ( $\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$ , 62.9% Fe). When mined in its natural state, iron ore is called crude ore; when slightly processed by crushing and screening, it is called direct-shipping ore. Concentrates result from processing an ore to raise its iron content. Concentrates and finely divided ores must be agglomerated into pellets, sinter or briquettes before being reduced to iron in blast furnaces. Almost all iron ore mined in Canada must be concentrated to produce a commercial product, because Canadian crude ores are low-to-medium grade. The major steps in processing include crushing, screening and the use of gravitational, magnetic and flotation concentration methods. Concentration increases the iron content from an average of 36% to 63%. Iron was among the first ores mined in Canada (see FORGES ST-MAURICE). In 1981 Canada shipped 49.6 million t of iron ore valued at \$1.75 billion.

M. BOUCHER

**Iroquois** is a term which designates a confederacy of 5 tribes originally inhabiting the northern part of New York state, consisting of the SENECA, CAYUGA, ONEIDA, ONONDAGA and MOHAWK, also known as the League of the Five Nations or the League of the Iroquois. When the Tuscarora joined the confederacy early in the 18th century, it became known as the Six Nations. The 5 tribes of the Iroquois League occupied an area from the Genesee R on the W, through the Finger Lks regions, to the Hudson R on the E. They used the metaphor of the LONGHOUSE to describe their

The False Face Society was the best known of the Iroquois curing societies. The masks played an important role in curing ceremonies (courtesy National Museums of Canada/National Museum of Man/S75-641).

political alliance; hence the Seneca, as the most westerly, were known as "keepers of the western door," and the Mohawk have been called the "keepers of the eastern door." A very rough estimate of the Iroquois population at the time of European contact would be approximately 10 000-15 000 people.

The Iroquois were linguistically related to neighbouring tribes, such as the HURON, PETUN and NEUTRAL, and to more distant tribes including the Cherokee and Tuscarora. There are also suggestions of ancient relationships to the Siouan and Caddoan language families of the Great Plains.

The ancestors of the Iroquois can be traced backwards in New York state by archaeological evidence to at least 500 BC, and possibly as far back as 4000 BC. The distinctive Iroquois culture of the historic period seems to have developed by about 1000 AD. Archaeology suggests that during the 15th century individual villages joined together to form the 5 historic tribes, and that by the 16th century the continuation of this process had resulted in the formation of the League of the Iroquois. With the coming of the FUR TRADE in this historic period, the Five Nations embarked on successful campaigns to subjugate or disperse neighbouring groups. The Huron were forced to abandon their homeland after 2 villages were destroyed in 1649; the Petun, Neutral and Erie all succumbed to Iroquois arms in the next decade. Their military reputation was well respected in territory as distant as the Maritime provinces and the western Great Lakes.

The French maintained trading and military alliances with many of the enemies of the Iroquois, hence Iroquoia and NEW FRANCE were often at war (see IROQUOIS WARS). During periods of peace some Iroquois were converted to Catholicism and persuaded to settle on the St Lawrence. The Iroquois remained firmly tied to the Albany, NY, trade and rivalry between the French colony and the Dutch and English at Albany precluded a lasting peace between New France and the Iroquois. The Iroquois frequently raided French settlements on the St

To reach the iron ore beneath a lake at Steep Rock, Ont, the entire lake was drained. Here the successive levels of mining show on the face of the rock (photo by John deVisser).

Lawrence and, in 1660 at the Long Sault and in 1689 at Lachine, Qué, sent large armies to attack the colony. France successfully attacked Iroquois towns in 1666, 1687, 1693 and 1696.

Treaties with both the French and English in 1701 marked a shift in Iroquois policy toward neutrality with European powers in N America. At this time population losses for the league, owing to both disease and war, had been considerable, even though the Iroquois had absorbed large numbers of war captives and refugees and incorporated them into their society. Despite official neutrality, the Mohawk under the influence of Sir William JOHNSON did on occasion take the field as English allies, and the Seneca at times fought beside French armies, as at the defeat of General Braddock in 1755.

Except for the Oneida, who fought for the American cause, the Iroquois supported the LOYALISTS and British in the American Revolution, joining that conflict in 1777. The Mohawk lost their homes to neighbouring rebel settlers, and most Seneca, Onondaga and Cayuga towns were burned in 1779. In turn the Iroquois and their allies, under the leadership of Joseph BRANT and others, repeatedly attacked and burned rebel forts and settlements, driving the frontier E to Schenectady, NY. After the war, many Iroquois followed Brant to settle on a grant secured for them by Gov Frederick HALDIMAND on the Grand R and others settled on the Bay of Quinte.

Before the disruption of their culture by the events of the historic period, the Iroquois were horticulturalists, living year-round in stockaded villages of several hundred people. Social structure was based on matrilineal principles. The basic unit was the matrilineage, consisting of the descendants, through females, of a single woman. Female members lived together with their husbands (who belonged to other matrilineages) in a single longhouse; a village would contain anything from a few small longhouses to as many as 50. Several matrilineages formed the matrilineal clan which, besides being of symbolic and ceremonial importance, served to regulate marriage patterns. Marriage was forbidden between members of a clan. The Mohawk and Oneida had 3 such clans; the other Iroquois nations had from 8 to 10 clans. For the most part these clans bore animal names (eg, Bear, Wolf, Turtle, Hawk). The league was governed by a council of 50 sachems, with each of the 5 founding members of the confederacy represented by a delegation of 8-14 members. Each of these positions was hereditary within a matrilineage. The individual tribes and villages were governed by councils of their own sachems and chiefs.

Today, some 50 000 Iroquois are dispersed among several reserves in the US and Canada. Among the largest concentrations of Iroquois in Canada are the Six Nations Reserve near Brantford, Ont, the St Regis Reserve near Cornwall, Ont, and Caughnawaga outside Montréal. See also general articles under NATIVE PEOPLE.

PETER G. RAMSDEN

Reading: L.H. Morgan, *League of the Ho-dé-no-sau-nee or Iroquois* (1861, repr *League of the Iroquois*, 1962); A.A. Shimony, *Conservatism among the Iroquois at the Six Nations Reserve* (1961); B.G. Trigger, ed, *Handbook of North American Indians*, vol 15: Northeast (1978).

**Iroquois Falls**, Ont, Town, pop 6339 (1981c), inc 1915, is located NW of NORTH BAY. The town received not only its name but its *raison d'être* from its location at the falls on the Abitibi R, which supplies hydroelectrical power for the community's economic lifeline, the pulp and paper industry. Area timber rights were first granted to the Abitibi Power and Paper Co (today ABITIBI-PRICE INC) in 1912. Abitibi constructed a carefully planned, model COMPANY TOWN 1915-20, the first of its kind in northern Ontario. In the 1920s company president Frank Anson initiated a beautification program that

transformed Iroquois Falls into the "Garden Town of the North." The closed company-town phase ended in the 1950s. Historically paralleling the growth of Iroquois Falls was the development of the neighbouring noncompany communities of Ansonville and Montrock, and in 1971 these were amalgamated with Iroquois Falls.

MATT BRAY

**Iroquois Wars**, a series of 17th-century conflicts involving the Five Nations IROQUOIS confederacy (MOHAWK, ONEIDA, ONONDAGA, CAYUGA and SENECA), numerous other Iroquoian groups and the French. As the Iroquois grew dependent on European trade goods, pressure was exerted on the rich beaver producing areas S of the Canadian SHIELD. After Dutch traders on the Hudson R [NY] provided them with firearms, the Iroquois grew more militant. In 1628 they pushed the Mohicans E, and in the 1630s the Mohawk began to raid the ALGONQUINS in the Ottawa Valley. By the early 1640s the Mohawk and Oneida were attacking NEW FRANCE and raiding the colony's Algonquian and MONTAGNAIS allies throughout the St Lawrence Valley.

By 1642 the French had begun to halt these raids by building a chain of fortified settlements as far upriver as Montréal. The French tried to counter the Mohawk acquisition of muskets by giving muskets to their HURON and Algonquian allies, but the Jesuits persuaded officials to restrict their sale to reliable Christian converts. As a result, the Iroquois had a numerical and psychological advantage.

One of the profound effects of the Iroquois Wars was the dispersal of numerous native groups. The policy of the Seneca was to disperse the Huron, which would leave themselves free to raid the hunting peoples to the N. Their raids, beginning in 1642 with the more isolated Huron villages, culminated in 1649 with over 1000 Seneca and Mohawk attacking 2 main villages. Some Huron tried to hold out on a nearby island but were forced to disband; some fled to Québec and others joined the NEUTRAL. In the winter of 1649-50 the Iroquois attacked the Nipissing and the PETUN. The Neutral were decisively defeated in 1651. With the Huron nation destroyed and the Neutral crushed, the Iroquois increased their raids on the Mohican, Sokoki and ABENAKI, while in Québec they raided as far E as Tadoussac and N beyond Lac MISTASSINI. Faced with stiff resistance from the Susquehannock and the Erie, the Iroquois confederacy entered into peace with the French in 1653. After concentrated Iroquois attacks, the Erie were absorbed in 1657. Renewed hostilities in 1659-60 on a wide front greatly strained the confederacy, and the Iroquois again sought peace with the French. But a treaty embracing all groups was not arranged until 1667, after the CARIGNAN-SALIÈRES REGIMENT had burned Mohawk villages and food supplies. By 1675 the Susquehannock to the S had been absorbed and the Iroquois moved westward into the Ohio Valley, where they fought the Illinois and Miami nations.

The Iroquois succeeded in breaking every one of the groups that surrounded the confederacy. However, the victories did not bring them the prosperity they sought. The treaty of 1667 had allowed the French to extend their trade in the N and, with Louis JOLLIET, they advanced through the Great Lakes to the Mississippi R. In Sept 1680 a large Iroquois force attacked a small French party under Henri de TONY which was trading in an Illinois village; the Iroquois were persuaded to desist on condition that the French leave the Illinois country. As part of a broader conflict between French and English, the Iroquois attacked Lachine in force in 1689 (see LACHINE RAID). However, with the aid of some 1500 TROUPES DE LA MARINE, the defenders eventually forced the hard-pressed Iroquois to make peace. In a treaty ratified July 1701 at

Montréal they agreed to remain neutral in wars between the English and French.

**Irrigation** is warranted where the CLIMATE is essentially arid or semiarid and is characterized by low and unpredictable precipitation (see RAIN). In certain areas, such as the southern PRAIRIES, southern BC and SW Ontario, irrigation can be used to supplement limited rainfall to achieve desirable crop yields. In Canada irrigation is a relatively recent phenomenon. Before the 1890s, all irrigation was developed by private individuals. From 1898 to 1915, the major incentive was provided by private investment companies and corporations, including the CANADIAN PACIFIC RAILWAY. Since 1915 provincial governments have helped local communities organize irrigation developments, resulting in rapid increases in irrigated areas. In 1935, the federal government, through the PRAIRIE FARM REHABILITATION ADMINISTRATION, initiated a program to provide technical and financial assistance for the development of individual farm, community or large-scale WATER storage projects throughout the plains area.

About 596 392 ha (1.4%) of Canadian farmland was irrigated in 1981. Statistics Canada reports the total by region as follows: Atlantic provinces, 983 ha; Qué, 5989 ha; Ont, 32 127 ha; Prairie provinces, 456 818 ha; BC, 100 475 ha. The most intensive irrigation development has taken place in southern Alberta where, in 1968, the "cost sharing" phase of irrigation was introduced. The cost of rehabilitation of irrigation systems is now shared; 86% is a provincial responsibility and 14% that of irrigation districts. Other provinces have established different policies.

**Irvine, Acheson Gosford**, soldier, police officer, prison warden (b at Québec C 7 Dec 1837; d there 9 Jan 1916). The third commissioner of the NWMP, Irvine's reputation was ruined by the NORTH-WEST REBELLION. A businessman active in the militia, he served with the Québec Rifles on the WOLSELEY Expedition. He remained in Manitoba in command of the Provisional Battalion of Rifles until he joined the police in 1875. As assistant commissioner (1876-80) and commissioner (1880-86), he was responsible for policing the Indian tribes while they were settled on reserves. His warnings that the harsh Indian settlement policy could lead to rebellion were ignored. When rebellion broke out in 1885, he led a column of police to Prince Albert where he remained until the end of the fighting. His inaction was widely criticized and he resigned. Subsequently, he was warden of Stony Mountain Penitentiary (1892-1913) and Kingston Penitentiary (1913-14).

A.B. McCULLOUGH

**Irvine, William**, Unitarian minister, MP, journalist, political organizer (b at Gletness, Shetland, Scot 19 Apr 1885; d at Edmonton 27 Oct 1962). Irvine played a significant role in

Canadian politics for 50 years, 17 as an MP. He organized Alberta farmers and labour to enter the political arena, and in 1921 was first elected to public office as the federal labour representative from Calgary E. Along with his close friend J.S. WOODSWORTH, at that time the only other labour MP, Irvine conducted a vigorous campaign against the economic power of large corporations and financial institutions. Irvine, Woodsworth and others in the radical GINGER GROUP advocated a form of democratic socialism. Their efforts culminated in the founding of the CO-OPERATIVE COMMONWEALTH FEDERATION (1932). In his later years, Irvine worked tirelessly for world peace and urged the necessity of coexistence among world powers despite differences in ideology.

ANTHONY MARDIROS

Reading: Anthony Mardiros, *William Irvine* (1979).

**Irving, Kenneth Colin**, industrialist (b at Buctouche, NB 14 Mar 1899). Founder of an empire that ranges from pulp and paper and oil refining to publishing and broadcasting, he has been called New Brunswick's first modern entrepreneurial industrialist. He was born into a wealthy Scots Presbyterian family in Kent County, where his father ran a lumber business, and he attended Dalhousie and Acadia universities for short periods before going to England for service in the Royal Flying Corps. After WWI Irving took charge of a Ford motor agency and gas station, and in 1924, after a dispute with Imperial Oil, he borrowed enough money to establish the Irving Oil Co. He expanded rapidly into service stations and garages for storing and repairing cars, and in the 1930s took over bus and trucking companies that were heavily in debt to Irving Oil. By 1936, from his office in the Golden Ball Building in Saint John, he was directing the manufacture of buses and trucks and the purchase of ships and tanks for the transportation of his oil.

On the death of his father in 1933, Irving acquired J.D. Irving Ltd, the family lumber business, and in 1938 he bought Canada Veneers, which thrived on wartime sales to become the world's largest supplier of aircraft veneers. The growth of this company led to the acquisition of the New Brunswick Railway Co for its huge tracts of timberland. With the establishment in 1951 of Irving Pulp and Paper Ltd, Irving dominated the NB timber industry. By then, he also owned a number of Maritime newspapers.

Controversy surrounds the Irving empire. His decision to invest in NB industry has altered the

course of that province's development, but his critics claim that his interests have often been served at the expense of the taxpayers and the environment. Irving's domination of the NB media symbolizes for many the negative aspects of the power he wields. Although he settled in Bermuda in Dec 1971, many in the province would still agree with the statement that "K.C. Irving is New Brunswick."

MARY HALLORAN

**Irving Group**, controlled by the K.C. IRVING family, dominates 90% of English-language newspaper circulation in NB. The New Brunswick Publishing Co Ltd, led by K.C. Irving and sons Arthur and James, is the owner and publisher of the *Telegraph Journal* and the *Evening Times-Globe* in Saint John. Another son, John, controls the Moncton Publishing Co Ltd, publisher of the *Moncton Times-Transcript*, and University Press New Brunswick Ltd, publisher of the *Fredericton Gleaner*. The New Brunswick Publishing Co Ltd also owns and controls New Brunswick Broadcasting Co Ltd, which owns and operates CHSJ-TV in Saint John and, through rebroadcasters, provides CBC English-language television to almost all of NB.

This concentration of ownership has been the focus of court action and a CRTC investigation. In 1972, K.C. Irving, Ltd. and associated companies were convicted under the merger and monopoly provisions of the Combines Investigation Act after members of the Irving family had acquired controlling interest in all 5 of NB's English-language newspapers. An appeal in 1975 overturned the conviction and in 1978 the Supreme Court of Canada upheld the appeal decision. In 1983 the CRTC renewed CHSJ-TV and associated licences for only 27 months instead of the normal period of 5 years.

PETER S. ANDERSON

**Isaac Todd**, a 350-ton ship built in 1811 at Québec for John McTavish, a partner in the NORTH WEST COMPANY. This vessel's mission was to secure Astoria at the Columbia R mouth from the American PACIFIC FUR COMPANY, to annihilate American fur-trade competition on the NORTH-WEST COAST, and to initiate NWC trade with China. The *Isaac Todd* sailed 25 Mar 1813 from Portsmouth, Eng, escorted by Royal Navy ships which were assigned to protect her from US warships, since the WAR OF 1812 was in progress. But she was a slow sailer and fell behind her escort. Thus HMS RACON reasserted British control over Astoria on 30 Nov 1813, about 6 weeks after Nor'Westers approaching overland had purchased the fort from Pacific Fur Co traders. The *Isaac Todd* arrived 23 Apr 1814. She sailed for China Sept 26, initiating the first Anglo-Canadian transpacific trade with China, and she took tea back to England for the EAST INDIA COMPANY.

BARRY M. GOUGH

**Isbister, Alexander Kennedy**, schoolmaster, explorer, lawyer (b at Cumberland House, Rupert's Land [Sask] June 1822; d at London, Eng 28 May 1883). A Métis whose maternal grandmother was Indian, Isbister explored the Mackenzie R basin (1838-42) while employed by the HBC. He published a much-quoted treatise on the geology of portions of the Arctic and northwestern N America. This included the first chromolithograph map produced in England (1855). In 1842 Isbister left for Britain to become a schoolmaster and barrister championing the rights of Métis and country-born against the HBC monopoly. He willed a personal fortune and 5000 books to U of Manitoba. W.O. KUPCH

**Iseler, Elmer Walter**, choir conductor (b at Port Colborne, Ont 14 Oct 1927). Iseler is considered the foremost Canadian choir conductor of his time. His international reputation was earned as founding conductor (1954-78) of the FESTIVAL SINGERS, a highly versatile group noted for virtuoso technique and beautifully blended

voices, which in 1968 became Canada's first professional choir. Also conductor of the Toronto Mendelssohn Choir from 1964, Iseler has appeared widely in Canada and Europe with both ensembles, performing music of all periods and showing special dedication to the promotion of contemporary Canadian music. In 1978 he founded a new professional choir, the Elmer Iseler Singers.

BARCLAY McMILLAN

**Iskowitz, Gershon**, painter (b at Kielce, Poland 1921). A survivor of concentration camps at Auschwitz and Buchenwald, Iskowitz studied painting briefly with Oscar Kokoschka in Munich. In 1949 he emigrated to Canada. His first paintings after his arrival in Toronto were dark memories of his past, but gradually he began to paint landscapes, first around Toronto, then in the Parry Sound area. Though his works were at first representational, the landscapes that later developed were abstracted from nature. After a Canada Council grant in 1967 enabled him to take a helicopter ride over Churchill, Man, his abstract paintings became reminiscent of aerial views of the landscape. Building layer on layer of oil paint, Iskowitz delighted in the experience of making the paintings and the joy of the landscapes and the colours.

MARILYN BURNETT

Reading: D. Burnett, *Iskowitz* (1982).

**Islam**, one of the major religions of the world. Its adherents are estimated at over 900 million people concentrated in S and W Asia and N and E Africa. It is the fastest-growing religion, with believers found worldwide. The word "Islam" is derived from the Arabic *slim*, meaning submission, obedience, surrender and peace. Followers of Islam, called Muslims (Moslems), believe that Islam is the religion of God (Allah), which he ordained for the guidance and benefit of humanity. To accept Islam is to choose to live life according to the revealed will of God, to surrender the self to his mercy and strive to maintain righteousness in the world. Individual and communal obedience to the tenets of the faith, coupled with Islam's message that all men are equal, leads to the elimination of discord. The teachings of Islam are grounded in the Qur'an (Koran), the scripture Muslims believe to have been revealed by God through the angel Gabriel, in Arabic, to the Prophet Muhammad between 610 (when he was 40 years old) and 632 AD (the year of his death). These teachings distinguish between the practice and the beliefs of Islam. For although Islam has no clergy and no sacraments, it does require certain ritual practices in obedience to God's commandments. Often referred to as the "Pillars of Islam," there are 5 acts of worship incumbent on all believers at appropriate times. To avoid formalism, each is to be approached with a conscious purification of intent that recognizes God's lordship over the world.

All acts of worship are Islam. The *Shahadah* (affirmation of faith) is repeated daily: "I bear witness that there is no god but God and that Muhammad is the Messenger of God." It attests commitment to a radical monotheism, specifying that the revelation to Muhammad is the final truth. It is whispered in the ear of the newborn to remind him of a primordial covenant made by each individual with God and in the ear of the deceased in preparation for the questioning of the grave. *Salat* (ritual prayer) is prescribed for all believers 5 times a day (at dawn, noon, afternoon, at dusk and evening). Its performance stamps daily life with a steadfast devotion to God. It is to be preceded by ablutions requiring the washing of hands, mouth, nostrils, face, arms (up to the elbow), head, ears, neck and feet (up to the ankle). The believer must remove his shoes and be properly clad: women must cover the whole body except for face and hands, and men must cover at least

Kenneth Colin Irving, founder of an industrial empire that ranges from pulp and paper and oil refining to publishing and broadcasting (courtesy Canapress).

Islamic temple in London, Ont. In 1981 there were 98 000 Muslims in Canada, from over 60 countries (courtesy Canapress).

from the navel to the knees. The prayer involves standing, bowing, kneeling and prostration.

*Zakat* (the tithe) is perceived as an act of purification. The Qur'an teaches that prayer and tithing are irrevocably bound together. One's commitment to God is incomplete without the fulfilment of responsibility toward the community. The tithe is assessed at 2.5% of one's total assets and is to be given to the poor, orphans and widows. During *Sawm* (fasting the lunar month of Ramadan, 29-30 days) believers refrain from food, drink and sex from before dawn (when one cannot distinguish a white thread from a black thread) to dusk. Fasting is a time of repentance and discipline; it binds the community together in a shared experience of deprivation as well as gratitude and celebration at the end of the day. *Hajj* (pilgrimage to Mecca) is incumbent on believers who can afford it at least once in their lifetime. It commemorates Abraham's obedience to God and his willingness to sacrifice his son. The ceremony begins with repentance and the donning of 2 pieces of white cloth; it includes abstention from worldly pleasures, meditation at Mt Arafat, pelting the devil, offering a blood sacrifice, cutting the hair

and nails and circumambulation of the Kaaba, the central building of the mosque at Mecca.

The essential credal statement of Islam as it appears in the Qur'an specifies belief in God, his messengers, his books, the angels and the Last Day. God is the Lord of the world who reveals himself in nature and history. He has provided humanity with guidance through prophets and messengers beginning with Adam and ending with Muhammad. Each messenger was entrusted with a book (eg, Moses with the Torah, Jesus with the Gospel), all of which were falsified by their followers. The Qur'an, God's revelation to Muhammad, is preserved in perfect form; it stands in judgement of all previous scriptures.

The Qur'an teaches that God created the angels, his servants, out of light. Gabriel brings revelation, Izrail causes death, Munkar and Nakir question the dead, Michael blows the trumpet announcing Resurrection. Muslims believe that on the Day of Judgement all humans will give account for every intent, thought and act. The righteous will be rewarded in the Garden while the wrongdoers will be consigned to fire.

**Islam in Canada** The 1981 census shows over 98 000 Muslims in Canada, from over 60 countries, speaking a variety of languages and adhering to their respective ethnic cultures. This Islamic mosaic is the consequence of various factors, including changes in Canadian IMMIGRATION

policies as well as the economic and political upheavals affecting Muslims in their home countries. Over 60% of Muslims in Canada are foreign-born, having immigrated during the last 20 years. The 1871 census recorded only 13 Muslims. Their number had increased to 645 by 1931, mostly from Lebanon, Albania, Syria, Yugoslavia and Turkey. The influx of immigrants after WWII raised the number to 33370 by 1971. The majority of this wave were highly educated, westernized professionals who came to settle in Canada to share in its economic prosperity. They were mostly from Lebanon, Syria, Indonesia, Morocco, Palestine, Egypt, Iraq and the Indo-Pakistani region. In 1966-70 those of Indo-Pakistani background became the majority as thousands of unskilled labourers came to Canada to escape discrimination in East Africa and Britain. More recently arrived Muslims include unskilled workers from S Lebanon, fleeing their war-torn country, and political REFUGEES from Iran and Afghanistan. Early settlements were concentrated in Ontario and Alberta, with a shift towards Québec in the 1930s. Those arriving in Canada since the 1960s have settled in urban areas. Two-thirds of all Muslims now live in Ontario, with others dispersed throughout the nation.

The first Canadian mosque was built in Edmonton in 1938. Other mosques and centres were not organized until the 1950s, in major urban areas including Hamilton, Toronto, Calgary, London, Montréal, Windsor, Vancouver, Ottawa and Halifax. Additional Islamic centres followed in the 1970s in Winnipeg, Thunder Bay, Sudbury, Brantford, Cambridge, Regina, Saskatoon, Waterloo, Kingston, Wellington, Niagara Falls, Lac La Biche, Dartmouth, Sault Ste Marie, Saint John, Kitchener, Sarnia and Truro.

The majority of Muslims in Canada are Sunnis with a substantial number of Shia and adherents of other sects. The differences among the groups reflect early political divisions in Islamic history. Sunnis are those who live according to the guidance of the Qur'an and the teachings of Muhammad. The Shia believe that Ali (Muhammad's son-in-law) was designated as his successor, and that leadership of the community is restricted to his descendants. Both groups believe that the revelation through prophets has ceased, the Shia, however, accepting Imams as divinely ordained leaders providing a continuing source of Muslim doctrine. The majority of the Shia in Canada are Ismailis (estimated at 22 000), whose present leader is the Agha Khan. The Twelver Shias believe that with the disappearance of the Twelfth Imam in 878 AD the

Muslims in Ottawa bow in prayer at the festival of thanksgiving that ends the month-long fast of Ramadan (courtesy Canapress).

leadership of the community is in the hands of the religious leaders, the Mujtahids. Their opinion is currently sought from the centres in Iraq and Iran. Other Islamic groups in Canada include Sufis (followers of the mystic traditions) and sects that are deemed non-Islamic by the majority, such as the Druze, the Alawis and the Qadyanis.

For Sunni Muslims Canada offered a special challenge since they lacked designated leadership. Efforts at organization are principally at the local level. The Federation of Islamic Associations of the US and Canada was formed in the 1950s by second-generation Muslims of Arab background. With headquarters in Detroit, it has sought ways to help American-born Muslims maintain their Islam. In 1962, the Muslim Student Assn was formed to instill Islamic consciousness in Muslim students in N America. A number of its alumni have opted to remain in Canada, forming the independent Council of Muslim Communities in Canada in 1972. The Council's early leaders were Pakistani professionals, who attempted to integrate Muslims of other ethnic and linguistic groups. Its objectives have changed, from forming links between Canadian Muslims and other national and international groups to organizing youth camps, providing scholarships for Muslims and publishing school textbooks and books on Islam for use by parents. The Council of Muslim Communities of Canada (CMCC) joined the Council of Masajid (with headquarters in Saudi Arabia) in 1982.

Attempts by second- and third-generation Muslims to integrate into Canadian society are not welcomed by recent immigrants. Islamic law has provided over the years a description of what constitutes Islamic behaviour to the minutest detail. This the immigrant finds hard to implement because of the pressures of what some consider to be a "Christian" and others a "materialistic" environment in Canada. There are no public reminders for prayer 5 times a day, nor are allowances made by employers for fasting. Some Muslims question the need to pay the tithe since the Canadian government takes care of the poor and the widows through tax money. Islamic prohibition of usury raises the fear that paying interest on purchases is disobeying God. Islamic dietary restrictions against consumption of improperly slaughtered meat, of pork and pork by-products and of liquor cause concern since they impede social integration, perceived by Canadians as necessary for professional promotion. The area of greatest stress appears to be in male-female relations, since Islam teaches that there should be a segregation of the sexes and that Muslim women cannot marry non-Muslims. Islamic laws respecting personal status (marriage, divorce, inheritance) are not in complete harmony with Canadian laws, a circumstance which leads to numerous problems.

The Islamic organizations are attempting to deal with these problems. The CMCC has sought support from other Canadian organizations for the implementation of certain Islamic laws in the Canadian settings. Efforts are also made to establish good relations with other religious organizations through Christian-Muslim and Christian-Muslim-Jewish dialogue. Islam West Associates aims at promoting mutual understanding between Muslims in Canada and all other Canadians. Efforts also focus on sensitizing Canadian society to the prejudicial content of educational material in textbooks and SUNDAY-SCHOOL texts.

There have been efforts recently to acquaint Canadian society with the Islamic contribution to culture, science and art. Travelling exhibits as well as videotape presentations have been prepared and a speakers' bureau has been organized. While welcoming the opportunities that Canadian human rights provide for Mus-

lims, as well as the support of multiculturalism, Muslim leaders continue to voice concern over Canadian foreign policy in the Middle East and against prevailing social discrimination and underemployment of Muslims. YVONNE Y. HADDAD  
Reading: S.A. Nigolian, *Modes of Worship* (1981); E.H. Waugh, B. Abu-Laban and R.B. Qureshi, eds, *The Muslim Community in North America* (1983).

**Island**, a piece of LAND surrounded by WATER. By custom it is agreed that this definition does not apply to the 5 largest pieces of land that form the continents (see PLATE TECTONICS). The largest island in the world is Greenland (2 175 596 km<sup>2</sup>); the largest in Canada is Baffin I (507 451 km<sup>2</sup>). Seventeen other Canadian islands exceed 10 thousand km<sup>2</sup> in area. The islands lying N of the mainland in the District of Franklin, NWT, are generally referred to as the Canadian ARCTIC ARCHIPELAGO. They include the QUEEN ELIZABETH ISLANDS, those lying N of the strait (known successively from W to E as M'Clure Str, Viscount Melville Sound, Barrow Str and Lancaster Sound) that extends E-W approximately along 74° N lat. MANITOULIN ISLAND (2766 km<sup>2</sup>), the largest island in the world located in a freshwater lake (as distinct from a flowing river), itself contains 17 lakes containing islands.

The total number of islands in Canada has never been established, but it is very large. It is estimated that there are some 30 000 islands along the eastern shore of GEORGIAN BAY alone (the Thirty Thousand Is). The *Canadian Gazetteer Atlas* (1980) records the names of 1016 individual islands and 129 groups or archipelagoes. Of these islands, 259 were recorded as inhabited in the 1976 Census of Canada. At that time, Île de Montréal had the greatest population (1 869 641); the 1981 census lists the population as 1 760 122.

**Origin of Islands** Islands are formed through a variety of geomorphic processes. Canadian islands fall into 2 categories: those resulting from the action of running water on an upland that has recently undergone GLACIATION, and those formed by the rise in sea level that normally follows an ICE AGE. GLACIERS and ice sheets are able to scoop hollows out of hard rock. If an ice age is followed by a humid period, the hollows will be filled with lakes; if the surface is sufficiently irregular, islands will occur within the lakes. The islands of the GREAT LAKES belong to this class. When large RIVERS flow over an irregular, glaciated surface, their channels may divide to form islands (eg, those on which the cities of Montréal and Laval are found, and also the Île d'Orléans). Ice not only scoops out hollows by EROSION, it also deposits as till the material it has gathered up. The till can form natural dams impeding the flow of the rivers that drain a land surface where ice has melted. Irregularities left in glacial till may then form islands in the lakes

pounded behind such dams (eg, those in Rice Lk, 95 km NE of Toronto). The second major group of islands, those formed by the rise in sea level following an ice age, include the uncounted islands of Canada's Pacific, Arctic and Atlantic coasts. In most cases, the erosional action of ice causes the irregularities in the land surface that result in islands at the margins of a continent are flooded. Some islands, however, result from the deposition of till (eg, those near LUNenburg in Mahone Bay, NS).

Islands are also formed by the deposition of alluvium where the flow of water in a river is checked at or before the DELTA (eg, Lulu and Sea islands at the mouth of the Fraser R), and by the drifting of sand and gravel along seashores or lakeshores (eg, Toronto I). In some parts of the world, islands have been formed by the eruption of VOLCANOES and by the growth of CORAL. No examples of either type occur in Canada. Finally, islands can result from human action. One, René-Levasseur (20 km<sup>2</sup>), was formed when the waters of Lk Manicouagan, rising behind the Daniel Johnson Dam, surrounded Mt Babel (elev 952 m). Approximately three-quarters the size of Manitoulin, it is the largest island in Canada formed by human activity, and may be the largest such island in the world. See COASTAL LANDFORM; PHYSIOGRAPHIC REGIONS; RIVER LANDFORM. O.F.G. SITWELL

**Island Lake**, 1222 km<sup>2</sup>, elev 227 m, maximum length 97 km, is located in E-central Manitoba close to the Manitoba-Ontario border and about 200 km E of Lk WINNIPEG. Dotted with numerous small islands and having a heavily indented shoreline, it is fed by Bigstone and Cantin lakes and the Mainland, Isbister and Sagawitchewan rivers, and drains N, via Gods Lk and the Gods and HAYES rivers, into Hudson Bay at York Factory. The Hudson's Bay Co established a trading post on the lake as early as the 1820s. In the 1920s discoveries of gold-bearing ore were made in the lake's surrounding area. DAVID EVANS

**Italian Writing** From its beginning in the 1400s, Italian Canadian writing has existed in English, French and Italian. Mario Duliani's *La Ville sans femmes* (1945) appeared in both French and Italian. Gianni Grohovaz and Guglielmo Vangelisti, who published in the 1950s in Italian, were followed by authors who participated in both the growth of Canadian literature and the flowering of MULTICULTURALISM, thus making an impact on mainstream English and French Canadian writing. The bilingual tradition continued with Alexandre Amprimoz's *Selected Poems* (1979) and *Sur le damier des tombes* (1983), Filippo Salvatore's *Suns of Darkness* (1980), Romano Peticarini's *Quelli della fionda* (1981) and Maria Ardizzi's *Made in Italy* (1982). Poets, who outnumber novelists, have received awards and recognition through inclusion in major anthologies. Narrative verse in Pier Giorgio Di Cicco's *The Tough Romance* (1979), Mary Di Michele's *Mimosa and Other Poems* (1981) and George Amabile's *The Presence of Fire* (1982), and work by Len Gasparini and Antonio Corea show strong autobiographical elements.

In fiction the need to chronicle the immigrant experience is demonstrated; thus Frank Paci's *The Italians* (1978), *Black Madonna* (1982) and *The Father* (1984) are novels in the realist tradition. Caterina Edwards's *The Lion's Mouth* (1982) explores women's views on ethnic identity, whereas the anecdotal stories of C.D. Minni and Gianni Bartocci highlight the ironies and joys of life. Fiction is complemented by the historical studies of Robert Harney, Bruno Ramirez and Camillo Menchini.

Québec poets Fulvio Caccia, Mary Melfi, Antonio D'Alfonso and Tonino Caticchio focus on ethnic identity. Dominique De Pasquale's plays in French and Marco Micone's *Gens du silence*

(1982) explore linguistic and political relationships. The anthologies *Roman Candles* (1978, ed Di Cicco), *Quêtes* (1983, ed Caccia and D'Alfonso) and *Italian Canadian Voices* (1984, ed Di Giovanni) include many other Italian Canadian writers. See ETHNIC LITERATURE. JOSEPH PIVATO

**Italians** The earliest Italian contact with Canada dates from 1497, when Giovanni Caboto (John Cabot), an Italian navigator from Venice, explored and claimed for England the coasts of Newfoundland or Cape Breton I. In 1524 another Italian, Giovanni da Verrazzano, also explored part of Atlantic Canada for France. Under the French regime, the Italian Henri de Tonty acted as La Salle's lieutenant in the first expedition to reach the mouth of the Mississippi R in 1682. Italians served in the military of New France (eg, in the CARIGNAN-SALIÈRES REGIMENT), in which several distinguished themselves as officers. Some Italians also served with the DE MEURON and de Watteville Swiss mercenary regiments in the British army during the War of 1812. Following the example of Italian ex-soldiers in New France who settled on the land in the late 17th century, some 200 or more of the mercenaries took up lots granted by Britain.

By the late 18th century, a small number of Italians, many in the hotel trade, resided in Montréal. In the mid-19th century, Italian craftsmen, artists, musicians and teachers, primarily from northern Italy, immigrated to Canada. By the 1860s, Italian street musicians (hurdy-gurdy men, street singers) were seen in Canada.

In 1897 Mackenzie KING, then a journalist, described the first street entertainer who lived in Toronto in the 1880s. This early Italian immigrant, King wrote, had worn out 5 street pianos and earned an average of \$15 daily in his first years in Toronto. Some of the wandering street musicians eventually settled down to teach music or to organize bands and orchestras.

In the late 19th century, millions of peasants migrated to S America, the US and Canada. Professional recruiters and the example of successful migrants who returned to Italy encouraged Italians to set out for N America where work was available on the railways, in mining and in industry.

Although many Italians expected to achieve economic and social well-being by migrating to Canada, they were not always successful. In 1901 a series of articles appeared in a Milanese newspaper describing an unscrupulous system of recruitment from Chiasso on the Swiss-Italian border to Liverpool through Montréal to the Canadian North. Labourers were often misled through this system to permanent migration to labour camps in northern Ontario, or found themselves unemployed and destitute in Canada's major cities. In 1902 the General Commissariat for Emigration in Rome sent Egisto Rossi, a commissioner, to tour Canada and report on the situation of working Italians. Rossi documented even more common routes of recruitment through the US, especially New York, and confirmed that several powerful *padroni* (labour agents) in Montréal were in league with railway and steamship agents in Europe to recruit cheap labour for a quick cash return. Rossi concluded that the abuses suffered by Italians were grave enough that their migration should be suspended until the problem of exploitation was addressed.

**Origins** Over 75% of Italian immigrants to Canada have come from southern Italy, especially from the regions of Abruzzi-Molise and Calabria, and about 75% of these immigrants were small-scale farmers or peasants. Unlike northern Italy, which dominated the newly formed (1861-70) Italian state, and continued to industrialize, southern Italy remained rural and traditional. Overpopulation, the fragmentation

of peasant farms, poverty, poor health and poor educational conditions, heavy taxation, political dissatisfaction resulted in heavy emigration. After WWII the number of immigrants from the war-devastated northeastern part of Italy increased. By 1881 almost 2000 people of Italian origin lived in Canada, particularly in Montréal and Toronto. Large numbers of Italian labourers began arriving at the turn of the century.

**Early Migration and Settlement** Italian immigration to Canada occurred in 2 main waves, from 1900 to WWI and from 1950 to 1970. During the first phase, 119 770 Italians entered Canada (primarily from the US), the greatest number in 1913. About 80% of these people were young males. The 1911 census of Italian-born in Toronto listed 2200 males and 800 females, most of them resident in "Little Italy." Many labourers eventually decided to settle permanently in Canada and by WWI, Italians were to be found not only in major urban centres but in Sydney (NS), Welland, Sault Ste Marie and Copper Cliff (Ont) and Trail (BC).

Thousands of Italian labourers, however, settled in the growing cities of central Canada, working as construction and factory workers and building tradesmen, as food and fruit merchants or artisans. Out of modest beginnings, a few, eg, Onorato Catelli of Montréal in the food-processing industry and Vincent Franceschini of Toronto in road construction, were highly successful.

While the great majority of immigrants settled in urban centres, agricultural colonies were established at Lorette, Man, and Hylo, Alta. In the Niagara Peninsula and Okanagan Valley Italian proprietors of orchards, vineyards and vegetable farms prospered. Many Italian truck farmers on the cities' outskirts grew small crops for local consumption.

Despite tighter immigration restrictions following WWI, over 29 000 Italians entered Canada by 1930. Many of them were farm labourers or wives and children sponsored by breadwinners in Canada. This movement, however, virtually ended with the Great Depression.

Throughout the 1930s strong family networks and thrift helped Italian Canadians absorb some of the economic shock of unemployment and deprivation. Their problems were compounded after 1935 when Canadian hostility towards FASCISM was directed against Italian Canadians, many of whom were sympathetic towards Mussolini. As a consequence of Italy's alliance with Germany in WWII, Italian Canadians were designated "enemy aliens" and were the victims of widespread PREJUDICE AND DISCRIMINATION. Men lost their jobs, shops were vandalized, civil liberties were suspended under the War Measures Act, and hundreds were interned at Camp Petawawa in northern Ontario. While some of these men had been active fascists many were not, and they, as well as their families, who were denied relief, bore the brunt of hostilities. As a result, many Italians later anglicized their names and denied their Italian background.

After WWII the widespread shortage of labour caused by a booming economy, as well as Canada's new obligations within NATO, once again made the country receptive to Italian immigration. Postwar immigrants comprise almost 70% of the Italian Canadian group. Many Italians initially immigrated under the auspices of the Canadian government and private firms. The Welch Construction Co, for example, which was founded at the turn of the century by 2 former navvies, Vincenzo and Giovanni Veltri, specialized in railway maintenance. Men often arrived under one-year contracts to do hard physical labour similar to their earlier compatriots, though now the great majority came as permanent settlers, later sponsoring wives, children and other relatives. Family "chain migra-

tion" from Italy was so extensive that in 1958 Italy surpassed Britain as a source for immigrants. Starting in 1967, new immigration regulations based admissibility on universal criteria such as education; this "points system" restricted the sponsorship of relatives, so that Italian immigration dropped significantly.

**Settlement and Economic Life** In 1981, 65% of Italian Canadians lived in Ontario, 22% in Québec and 7% in BC. About 95% of Italian Canadians live in towns and cities. The most significant concentrations are in Toronto, where in 1981 Italian Canadians numbered 297 205 (10% of the population), and in Montréal, where they numbered 156 535 or almost 6% of the population. Other cities in which Italian Canadians numbered 10 000 or more were (in descending order) Hamilton, Vancouver, St Catharines, Windsor, Ottawa, Sault Ste Marie, Calgary and Edmonton.

In cities where Italians have settled in sufficient numbers they have tended to create ethnic neighbourhoods. These "Little Italies," with their distinctive shops, restaurants, clubs and churches are easily recognizable, but have rarely been ghettos segregated from the rest of society. Over the years, these immigrant areas have decreased significantly in size, though they have generally survived as viable socioeconomic centres. While the movement out of immigrant neighbourhoods to more prosperous residential areas has been significant, even in the suburbs it is still common to find small concentrations of Italian Canadians who have chosen to live near one another because of kinship or village ties.

Three-quarters of post-WWII immigrants were employed in low-income occupations, but this changed dramatically with the second and subsequent generations. The children of immigrants have achieved a higher level of education, reflected in their increasingly important positions in professional and semiprofessional occupations. Also, by 1971, 77% of Italian immigrants owned their homes.

**Community Life** Mutual-aid societies, many of which grew out of village organizations, were among the earliest institutions established by Italian immigrants. The Order of Italy (the first Canadian branch was established in Sault Ste Marie in 1913) was open to all of Italian heritage. In 1926 some Québec lodges, opposed to the order's profascist leanings, broke away to form a parallel structure which in 1926 became the Order of Italo-Canadians. Wartime hostilities inhibited the work of the societies, but their decline was really made inevitable by the growing influence of the WELFARE STATE and insurance companies.

After WWII, numerous new clubs and societies organized around regional, religious, social or sporting functions were established. In the early 1960s the Centre for Organizing Technical Courses for Italians (COSTI) was founded in Toronto to provide technical education and upgrading, as well as English courses and counselling. In the mid-1970s, it also established a special program to meet the needs of immigrant women.

In 1971 the Italian Canadian Benevolent Corporation (ICBC) was founded in Toronto. Undertaking what was the largest project of its kind in N America, the ICBC built a multifaceted complex with senior citizens' housing and a community centre offering recreational, cultural and social services.

The founding in Ottawa in 1974 of the National Congress of Italian Canadians was an attempt to bring national cohesion to the group and increase its political influence. The congress co-ordinated the raising of millions of dollars from across Canada to provide relief for the victims of earthquakes that devastated Friuli in 1976 and Campania a few years later. Notwithstanding recent success in forging community-

wide cohesion, however, Italian Canadians are divided by rival regional, political and even religious organizations, and along class lines. The Canadian Italian Business and Professional Men's Association and the Italian Chamber of Commerce represent the interests of employers and professionals, while working-class Italian Canadians have sought to protect their interests through the various organized labour movements. Comprising a conspicuously large proportion of the labour force in both the construction and textile industries, they have been especially prominent in the International Labourers Union and the Amalgamated Clothing Workers of America.

**Cultural Life** Like the major community organizations, the Italian Canadian press and media have also promoted cohesion and mediated between their constituency and the wider society. The first Italian newspaper in Canada was published in Montréal in the late 19th century; by 1914 several others had been founded from Toronto to Vancouver. After 1950, dozens of Italian newspapers and magazines, many aimed at particular regional, religious or political markets, proliferated across Canada. By the mid-1960s, Italian-language publications had a readership of 120 000. Currently the most influential of these are *Il Corriere Italiano* of Montréal and *Il Corriere Canadese* of Toronto.

Since WWII, Italian has become, after English and French, the most widespread language in Canadian broadcasting. The owner of *Il Corriere Canadese* has launched a multilingual television station in Ontario which transmits in Italian (as well as other languages) daily.

Italian Canadians have altered society's tastes in architecture, fashion and recreation, thus helping to bring a new cosmopolitanism to Canadian life. They have also made important contributions to the arts. Mario BERNARDI of Kirkland Lake, Ont, for example, was appointed the first conductor of Ottawa's National Arts Centre Orchestra in 1970 and helped guide it to international stature. The avant-garde paintings of Guido MOLINARI of Montréal now hang in leading galleries. At the more popular level, Bruno Gerussi, a former Shakespearean actor, has become a well-known radio and television personality (see also ITALIAN WRITING; ETHNIC LITERATURE).

**Education and Religious Life** Dante Alighieri societies throughout Canada offer films, lectures, Italian-language courses and other programs to foster knowledge of Italy. In 1976 the Canadian Centre for Italian Culture and Education (CENTRO) was founded in Toronto to design and institute Italian-language programs in schools. Also important are the cultural institutes run by the Italian government, the Italian-language holdings of public libraries, and the many Italian clubs in high schools and universities. By the mid-1970s, almost half of Canada's 45 universities taught Italian.

Over 90% of Italian Canadians are Roman Catholic, and the church has involved itself in immigrant aid, education and recreation. Since there have been many Italian-speaking priests, especially in the national parishes run by orders such as the Servite or Franciscan fathers, the church has also contributed toward the preservation of Italian Canadians' language and culture (see CATHOLICISM).

**Politics** In 1938 Hubert Badanai of Fort William (later called Thunder Bay) became the first mayor of Italian background and in the early postwar years was elected the first Italian federal member of Parliament. In 1952 Philip Gagliardi of Mission City, BC, appointed to the provincial Cabinet, was the first Italian Canadian to become a minister. In 1973 Laura Sabia, a former St Catharines alderwoman, became chairperson of the Ontario Status of Women Council and a leading activist in the women's movement. In 1981 Charles Caccia was appointed minister of labour, the first federal Italian Canadian minister. Italian Canadians have been most successful federally as candidates for the Liberal Party, and in Ontario as candidates for the New Democratic Party. In the 1984 federal election the Progressive Conservative Party made gains among the group, especially in Québec where 2 Montréal candidates of Italian background were elected.

**Group Maintenance** The most immediate and significant social institution among Italian Canadians has been the extended family. In the traditional family in Italy, the husband was considered family head and provider; the wife was expected to be a good homemaker and mother. Children were to show obedience and respect towards their parents. Each member was

to act for the betterment of the whole family rather than for his or her individual interest. Many Italian immigrants have attempted to maintain such family patterns. Because traditional ways differed markedly from what was expected in the wider Canadian society, the resulting conflict has often been at the root of many social problems. At times the children of immigrants have found that their aspirations for upward mobility and individual expression conflicted with the family's insistence on solidarity and the fulfilment of traditional roles. The second generation Italian Canadian family, however, has changed considerably. While usually maintaining an emphasis on family cohesion, respect and loyalty, it has increasingly moved toward a greater equalization of roles between husband and wife.

Prewar Italian Canadians, by 1941, had a higher rate of intermarriage (45%) than most other major ethnic groups. In the postwar group, by 1961, almost 24% of males and 18% of females were married outside the group. In Québec, Italian Canadians integrate more easily into the francophone society than do many other ethnic groups. Over 80% of Italian Canadians are able to speak French, giving them one of the highest levels of French-language facility of any ethnic group in the province. FRANC STURINO

Reading: R.F. Harney, *Italians in Canada* (1978); H. and J. V. Scarpaci, eds, *Little Italies in North America* (1981); A.V. Spada, *The Italians in Canada* (1969).

**Ittinuar, Peter Freuchen** (b at Chesterfield Inlet, NWT 19 Jan 1950). The first Inuk MP, Ittinuar is the grandson of Danish explorer Peter Freuchen. He has had a varied and colourful career as teacher of Inuktitut linguistics and Inuit culture at U of Q, executive director of the Inuit Tapirisat of Canada, CBC announcer, northern medical counsellor, pilot and hunter. After his election to the Commons in 1979 as the member for Nunatsiag and his re-election the following year, he became the northern development critic for the New Democratic Party. In 1982 he crossed the floor to join the Liberal Party, where he directed his attention to the establishment of Nunavut, one of the 2 territories to be created by the proposed division of the Northwest Territories. Ittinuar was defeated in the Sept 1984 federal election. JOHN BENNETT

**Jack, William Brydone**, mathematician, astronomer, educator (b at Trailflat, Scot 23 Nov 1817; d at Fredericton 23 Nov 1886). An outstanding natural scientist and educator, Jack built the first astronomical observatory in Canada on the campus at UNB, Fredericton, in 1851, now named the Brydone Jack Observatory. In 1854 at UNB (professor 1840-85, president 1861-85), Jack introduced an engineering course to train students in practical surveying. Two decades later he established the first "standards laboratory" in Canada for surveying instruments. He gave numerous public lectures on ASTRONOMY and related topics. Under his distinguished presidency, UNB became a centre of excellence and produced many outstanding Canadian scholars.

J.E. KENNEDY

**Jackman, Henry Newton Rowell**, financier (b at Toronto 10 June 1932). Educated at Upper Canada College, U of T and the London School of Economics, Jackman in 1984 was head of the family group of companies, assembled by his father, that includes E-L Financial Corp, Empire Life Insurance Co, National Victoria and Grey Trust, Dominion and Anglo Investment Corp, the Casualty Co of Canada and Dominion of Canada General Insurance. From 1978 to 1983 he was a VP, director and member of the executive committee of ARGUS CORP, the Toronto conglomerate which he and Conrad and Montagu BLACK took over. He is a director of Hiram Walker Resources, chairman of Algoma Central Ry and member of the board of several other corporations.

JORGE NIOSI

**Jackman, William**, sealing captain, sailing master (b at Renewes, Nfld 20 May 1837; d at St John's 25 Feb 1877). William, like his famous brother, Capt Arthur Jackman, was at an early age involved in the Labrador cod fishery and at the seal hunt. From 1867 to 1876 he was in charge of 2 Bowring Brothers sealing steamers. He is remembered for the dramatic sea rescue at Spotted Is, Labrador, on 9 Oct 1867, which is one of the greatest stories of heroism ever recorded. In harbour to ride out a storm, Jackman went ashore, where he saw a wooden fishing vessel, the *Sea Clipper*, being dashed to pieces on a reef some distance from shore. Jackman threw himself into the icy water and, though battered by the surf, was able to rescue 11 of the 27 aboard unassisted. Then, with a rope and the help of others, he swam out 16 more times to bring the remaining men and women ashore.

JOHN PARSONS

**Jackson, Alexander Young**, painter, writer (b at Montréal 3 Oct 1882; d at Kleinburg, Ont 5 Apr 1974). As a leading member of the GROUP OF SEVEN, Jackson helped to remake the visual image of Canada; as a sparkling storyteller, he ensured the Group's notoriety. His early art training was partly on the job (he worked at various lithography firms in Montréal 1895-1906 and Chicago 1906-07) and partly at night schools, including the Council of Arts and Manufacturers in Montréal 1896-99 under Edmond DYONNET. Anxious to become a painter rather than a commercial artist, Jackson saved assiduously and in Sept 1907 enrolled in the Académie Julian, in Paris, under Jean-Paul Laurens. He stayed in Europe until Dec 1909, studying, travelling and sketching.

Soon after his return to Montréal, Jackson painted *Edge of the Maple Wood*, a canvas that brought him in contact with his future friends in the Toronto-based Group of Seven. Fed up with advertising work and Montréal's indifference to his painting, Jackson moved to Toronto in the fall of 1913. Soon he was sharing his studio with a shy, uncertain painter, Tom THOMSON. The 2 quickly became firm friends, to their mutual advantage: Jackson taught Thomson aspects of technique, especially colour, while Thomson taught Jackson about the Canadian

wilderness. Anxious to experience Thomson's north country, Jackson went up to Canoe Lk in Algonquin Park in Feb 1914. Here he found not only excellent painting country, but also an image of Canada. After a trip to the Rockies, he was back in the park that fall with Thomson, Arthur LISMER and Fred VARLEY, and painted *The Red Maple*, a sketch in which art-nouveau composition is balanced by bold coloration.

In 1915 Jackson enlisted in the army and was sent to Europe. Two years later he was appointed an artist with the Canadian War Records and was immediately required to paint a portrait, despite his lack of experience with such themes. His subsequent works were more in keeping with his preference for landscape. Back in Canada in 1918, Jackson continued his perambulations, a tradition he maintained all his life. He spent the summer of 1919 painting in Georgian Bay, and in Sept joined Lawren HARRIS, J.E.H. MACDONALD and FRANZ JOHNSTON in a boxcar trip into Algoma. These and subsequent expeditions provided the material for the first Group of Seven exhibition held in Toronto in May 1920. Jackson's active participation in 7

other Group exhibitions and in many contemporary shows, including the controversial British Empire Exhibition in Wembley, Eng, 1924, ensured that his images of a rolling, unpopulated land became indelibly imprinted on the Canadian consciousness.

All his life Jackson remained a leading proponent of the Group's land-based nationalism. Once his painting style was established it shifted only to accommodate newly explored territory. Never abandoning his interest in landscape, he painted Canada's most distinct and identifiable climates, especially favouring winter, and sought remote regions, including the Arctic, which he visited in 1927 and 1930. But he frequently returned to the gentler regions of his youth, including Québec and Georgian Bay. In Québec in 1926, he painted *Barns*, a canvas that exemplifies his use of simple, curvaceous forms and temperate colour to present a powerful, enduring image. Jackson was also one of the Group's most effective propagandists. In numerous articles and in his engaging autobiography, *A Painter's Country* (new ed 1976), all written in appealingly colloquial language, Jackson gently presses home his nationalistic vision.

ANN DAVIS

**Jackson, Clarence Shirley**, trade union leader (b at Ft William [Thunder Bay], Ont 1906). Jackson worked first in the northern Ontario bush and later in Montréal and Toronto. His interest in left-wing politics brought him into organizing work for the fledgling Congress of Industrial Organizations. In 1937 he became a full-time organizer and later Canadian VP of the United Electrical Workers (UE), one of the most internally democratic of the new industrial unions in Canada. Despite his internment for his radical politics in 1941, he led left-wing opposition to the Canadian Congress of Labour (CCL) leadership in the 1940s, running several times for president. The CCL expelled his union in 1949, but Jackson and his fellow unionists held their membership together and by 1972 had reentered the mainstream by affiliating with the Canadian Labour Congress. For the 4 decades before his retirement in 1980, Jackson had been one of the most articulate, well-informed, though controversial, labour leaders in Canada.

CRAIG HERON

Some consider Donald Jackson to have been Canada's finest figure skater. He was known for his spectacular free-style skating and is shown here performing a triple salchow (courtesy Canada's Sports Hall of Fame).

**Jackson, Donald**, figure skater (b at Oshawa, Ont 2 Apr 1940). Winner of the Canadian senior men's FIGURE SKATING title 1959-62, Jackson won the bronze medal in the Olympic Games and placed 2nd in the world championships in 1960. His greatest achievement was in the 1962 world championships, when he moved from a distant 2nd place after compulsory figures to win the title with a spectacular performance in free skating. His winning routine included the 1st triple-lutz jump in competition. Jackson joined a professional ice show in 1962, and in 1970 won the world professional figure-skating championship. He became a coach in 1969. Some authorities consider him the finest skater Canada has ever produced.

BARBARA SCHRODT

**Jackson, Henry**, "Busher," hockey player (b at Toronto 19 Jan 1911; d there 6 June 1966). He joined TORONTO MAPLE LEAFS in 1929 and played left wing on the famous "Kid Line," with Joe Primeau and Charlie CONACHER. He led the NHL in scoring 1932-33 and compiled a record of 241 goals and 475 points, adding 18 goals in play-offs. He was long denied recognition of his fine career, even nomination to the HOCKEY HALL OF FAME, because of his alleged drinking problem. He gained entry in 1971, 5 years after his death.

JAMES MARSH

**Jackson, Russell Stanley**, Russ, football player (b at Hamilton, Ont 28 July 1936). Jackson was prominent in baseball, hockey, basketball and FOOTBALL as a youth. After graduation from McMaster he turned down a possible Rhodes scholarship to play football with OTTAWA ROUGH RIDERS as a defensive back and quarterback (1958), and became starting quarter-

Russ Jackson, quarterback for 12 years with the Ottawa Rough Riders, is rated by many the finest quarterback ever to have played in Canada (courtesy Canada's Sports Hall of Fame).

back after the 1962 season. A poised passer, strong runner and capable leader, Jackson finished his 12-year career with 1341 completed passes (53%) for 23 341 yds and 184 touchdowns; he also rushed for 5045 yds while scoring 55 touchdowns and 330 points. In his last season, 1969, he led Ottawa to a Grey Cup championship. He won numerous awards, including the Schenley as outstanding player (3 times), and was twice chosen Canada's male athlete of the year. A 1979 US survey of all professional football rated Jackson as the finest of all time. He always combined teaching with football, except for his term as head coach of the Toronto Argonauts (1975-76), and he went on to become a high-school principal.

FRANK COSENTINO

**Jackson, William Henry**, also known as Honoré Joseph Jaxon, Louis RIEL's secretary immediately before the NORTH-WEST REBELLION, labour leader (b in Toronto 13 May 1861; d in New York C, NY 10 Jan 1952). After his family moved from Ontario to Prince Albert, Sask, Will Jackson joined them, abandoning his classics course at U of T. Having completed 3 years there, he was one of the best educated men in the area. He became secretary of the local farmers' union, and in this capacity he met Riel in the summer of 1884. Sympathetic to the Métis cause, he went to live at Batoche, Sask, to serve as Riel's secretary, converted to Roman Catholicism and later accepted Riel's new religion. After the failure of the Rebellion, Jackson was tried and committed to the lunatic asylum at Ft Garry, Man. Escaping 2 months later, he walked to the American border and eventually settled in Chicago, Ill. As Honoré Joseph Jaxon he worked as a union organizer for over 2 decades. "Riel's Secretary" moved to New York after WWI, where he died.

DONALD B SMITH

**Jacobs, Jack**, "Indian Jack," football player (b at Holdenville, Okla 1920; d at N Greensboro, NC 12 Jan 1974). A Creek Indian, Jacobs joined the National Football League from the U of Oklahoma; playing mostly on defence, he was a sure-handed and solid tackler. He joined the CFL's WINNIPEG BLUE BOMBERS in 1950. Jacobs's fierce desire, competitiveness and brilliant quarterbacking helped popularize professional football in Winnipeg and Canada. Over his CFL career he passed for 11 094 yds and 104 touchdowns and punted for a 41-yd average. He coached London Lords (ORFU), and was an assistant coach with Hamilton, Montreal and Edmonton (CFL).

FRANK COSENTINO

**Jacobs, Peter**, or Pahtahsega, meaning "one who makes the world brighter," Methodist missionary (b near present-day Belleville, Ont c1807; d at Rama Reserve, Lk Simcoe, Ont 4 Sept 1890). An early Mississauga (Ojibwa) convert to Methodism, Jacobs served first as a prayer leader and interpreter, and later as an ordained minister in the Hudson Bay Territory at Lk of the Woods, and at Ft Alexander and Norway House. Twice he visited England on missionary tours (1842-43, 1850). His published journal of his return trip in 1852 from central Canada to York Factory on Hudson Bay provides a graphic account of the perils of such an overland journey. Expelled by the Methodists (1858) for soliciting funds in the US without the church's approval, he settled at Rama, where he worked as a schoolteacher, merchant and guide.

DONALD B SMITH

**Jaeger**, any of 3 species of rapacious, gull-like SEABIRDS of genus *Stercorarius*. With their close relatives the skuas (*Catharacta*), they are placed by some taxonomists in the GULL family (Laridae), or in a family of their own, Stercorariidae. Jaegers are hook-billed, long-winged, swift and predatory. They mercilessly harass other birds, forcing them to disgorge food which the jaeger then snaps up with a graceful swoop. They are

Will Jackson served as Riel's secretary in Batoche, and after the rebellion was tried and committed to a lunatic asylum (courtesy Cicely Plaxton).

polymorphic (ie, have light and dark colour phases) and adults have elongated central tail feathers. Breeding range is northern circumpolar. All 3 species, pomarine (*S. pomarinus*), parasitic (*S. parasiticus*) and long-tailed (*S. longicaudus*), nest widely on the arctic tundra where they feed on small mammals, birds, fishes and invertebrates. Because they winter on the open oceans, they are scarce in the southern interior of their breeding grounds at any time.

W EARL GODFREY

**Jalna**, novel by Mazo DE LA ROCHE (Toronto, Boston and London, 1927). The first of 16 books about the Whiteoak family, *Jalna* is the book which determined the course of de la Roche's career. *Jalna* shows de la Roche's genius for keeping her readers engaged in the improbably fascinating developments in her characters' lives. The novel has been described (and dismissed) as escape literature, as romance, as soap

Illustration from Peter Jacobs's journal showing mid-19th-century Indian fancy winter dress. An Ojibwa, Jacobs was an early convert to Methodism (from Peter Jacobs's *Journal*, 2nd ed 1858).

opera and as an "Upper Canadian dream," and there is some truth in all these epithets. The Whiteoaks are, indeed, an impossibly romantic and imperialist concoction; Jalna is too preposterously the British dream of a country estate, set down intact in Ontario; the intertwining affairs (and names) of Renny and Alayne, Eden and Pheasant do anticipate the TV melodrama of *As the World Turns*; and yet *Jalna* has proven magically readable for generations, not only in English, but in French, German, Swedish, Danish, Norwegian, Czech, Polish, Finnish and Portuguese.

NEIL BESNER

**James, Thomas**, explorer (b 1593; d 1635). He sailed from Bristol to Hudson Bay in 1631, 2 days before Luke Fox left on a rival voyage from London. The 2 met by chance at Cape Henrietta Maria (the name of James's ship). The only independent exploration made by James was of the W coast of the bay to which he gave his name. He beached his ship off Charlton I and spent a miserable winter — the first European to winter deliberately in the North. James's voyage was less productive than that of Fox, who was the superior navigator, but the harrowing tale so richly described in his masterly narrative discouraged further attempts to seek the passage for nearly 100 years. The circumstances of his death are unknown.

JAMES MARSH

**James Bay**, southern appendix of HUDSON BAY. It is about 160 km wide between Pointe Louis-XIV on the E coast and Cape Henrietta Marie on the W. The Québec-Ontario border is at the bottom of the bay, and its numerous islands are administered by the NWT. Akimiski is the largest island with an area of 3002 km<sup>2</sup>. The bay was discovered in 1610 by Henry HUDSON and named for Thomas JAMES who entered the bay in 1631 and spent a difficult winter on Charlton I. The bay was long a centre for trade as CREE brought furs down the many rivers draining the surrounding area. The major rivers, from E to W, are LA GRAND RIVIÈRE (formerly Ft-George R), EASTMAIN, RUPERT, Nottaway, Harricana, MOOSE, ALBANY and ATTAWAPISKAT. Ft Rupert, Moose Factory and Ft Albany — at the mouths of the rivers of the same names — were active HBC posts. MOOSONEE, Ont, the largest settlement in the area, is the northern terminus of the Ontario Northland Rwy. There are native settlements at Chisasibi (formerly Ft-George), Eastmain and Attawapiskat. Polar Bear Provincial Park borders on the NW coast. See JAMES BAY PROJECT.

JAMES MARSH

The massive underground powerhouse of LG2, blasted from solid bedrock, is the largest underground powerhouse in the world (courtesy National Film Board/Photothèque).

**James Bay Agreement** of 1975 is the first major agreement between the Crown and the native people in Canada since the numbered treaties of the 19th and early 20th centuries. This agreement was negotiated after 4 years of politics, court cases and bargaining following the 1971 announcement of plans to build a system of hydroelectric dams in northern Québec (see JAMES BAY PROJECT). The natives of the James Bay area insisted on and received a permanent right to control the hunting, fishing and trapping of all economically important species of game in northern Québec; a strong degree of self-government in their own communities; the relocation of the site of the first dam; the clearance of timber from reservoir basins before flooding, with the Cree given first refusal rights on clearing contracts; and \$225 million to be paid over a 25-year period.

The lands were divided into 3 categories: 14 007 km<sup>2</sup> in and around native communities to be controlled solely by residents; Cree to have 65 087 km<sup>2</sup> and the Inuit 90 650 km<sup>2</sup> of exclusive hunting, fishing and trapping territories; and in the remaining lands natives to have exclusive rights to 22 important species of game and freedom to cut timber for their own needs. In addition, provision was made for a minimum family-income plan for those in wildlife harvesting; native languages to be included as official languages of administration; and a James Bay Native Development Corporation to handle investments. Some problems related to the agreement affect the Inuit and Métis in Québec. Because they speak Inuktitut and English, the Inuit still protest the imposition of the French language in schools and administration. The Métis, and Indians who historically moved out of the agreement area into southern Québec or to Moose Factory, Ont, are now campaigning for some compensation for their exclusion from the agreement.

By 1983 the new or unplanned medical, housing, educational and other costs had brought the total cost of the agreement to more than \$500 million, or \$50 000 per native person living in the area.

JOHN A. PRICE

**Reading:** D. Francis and T. Morantz, *Partners in Furs: A History of the Fur Trade in Eastern James Bay 1600-1870* (1982); H. McCullum and K. McCullum, *This Land Is Not for Sale* (1975); John A. Price, *Native Studies: American and Canadian Indians* (1978); B. Richardson, *James Bay: The Plot To Drown the North Woods* (1972).

**James Bay Project**, a monumental hydroelectric-power development on the E coast of JAMES BAY. The \$15-billion project entailed massive diversions of water from the EASTMAIN, Opinaca and Caniapiscau (KOKSOAK) rivers to dammed reservoirs on LA GRANDE RIVIÈRE; the average flow of La Grande Rivière will be increased from 1700 to 3300 m<sup>3</sup>/s. A tiered spillway, 3 times the height of Niagara Falls, has been blasted from the bedrock, and LG2 — with the world's largest underground powerhouse — generates 5328 MW of electric power. Caniapiscau Reservoir, with waters diverted from the river of the same name, will become the largest lake in Québec. A second station is due to open in 1985, and Phase II of the project calls for 5 more powerhouses, with a total generating capacity of over 10 000 MW — about 20% of Canada's present hydroelectric generation. Five reservoirs will total 11 900 km<sup>2</sup> — half the size of Lk Ontario — and 8 dams and 198 dikes have been built.

The project has raised controversy for its effect on the native people and environment. Announced by Québec Premier Robert BOURASSA in 1971, it was contested by the Cree, who had not even been notified. In 1975 the Cree surrendered their LAND CLAIMS for \$225 million (see JAMES BAY AGREEMENT), retaining special hunting and fishing rights. The village of Ft-George (pop 2200) at the mouth of La Grande R was uprooted and relocated upstream. It is now called Chisasibi. The village of Eastmain (pop 350) now lies in a saltwater estuary, as the Eastmain R has been reduced to a trickle. Vast areas of wilderness have been inundated and whole forests incinerated in an attempt to clear debris.

JAMES MARSH

**James Norris Memorial Trophy** is awarded annually to the player selected by hockey writers as the best defenceman in the NATIONAL HOCKEY LEAGUE. It was first presented in 1953 by the children of James Norris, former owner of Detroit Red Wings. Bobby ORR won the trophy 8 times and Doug HARVEY 7 times.

JAMES MARSH

**Jameson, Anna Brownell**, née Murphy, writer, feminist, art historian (b at Dublin, Ire 17 May 1794; d at London, Eng 17 Mar 1860). Anna spent her early adulthood as a governess

in England, in 1825 publishing *A Lady's Diary* (later *Diary of an Ennuyée*), a fictionalized account of a European tour. She married lawyer Robert Symphon Jameson in 1825, but the couple were separated in 1829 when Jameson became a judge in Dominica, and later in Upper Canada. By 1836, when she joined her husband temporarily in Toronto, Anna Jameson was a well-known author. She chronicled her 8-month stay in Canada in the frank, informative *Winter Studies and Summer Rambles in Canada* (1838), its "Winter Studies" a lively but uncomplimentary portrait of Toronto, and its "Summer Rambles" an enthusiastic recounting of her journey through southwestern Ontario, up the lakes to Sault Ste Marie and back. On her return to England, legally separated from Jameson, she began a 6-volume compendium of Christian art, popularly known as *Sacred and Legendary Art*. In her later years she was the mentor of the young feminists who founded the *Englishwoman's Journal* and Girton College. CLARA THOMAS

Reading: Clara Thomas, *Love and Work Enough: The Life of Anna Jameson* (1967).

**Jamieson, Donald Campbell**, broadcaster, politician, diplomat (b at St John's 30 Apr 1921). He first achieved prominence as a broadcaster in the 1940s, in time becoming Newfoundland's most recognized radio and TV personality and cofounder of a communications empire. In the Confederation debate of the late 1940s, he advocated a Newfoundland-US economic union over union with Canada. Elected to the House of Commons as a Liberal in 1966, he served in the federal Cabinet 1968-79, most notably as minister of external affairs 1976-79. He became leader of the Newfoundland Liberal Party in May 1979, a month before the Liberals were defeated in a general election and resigned in 1980. Jamieson was appointed Canadian high commissioner to Great Britain in 1983. GEOFF BUDDEN

**Jamieson, Elmer**, educator (b on the Six Nations Indian Reserve, Ont 30 Aug 1891; d at Toronto 18 Apr 1972). He received his BA from McMaster in 1913. He enlisted in the army, and censorship of his letters led him to write home in Mohawk. When censors could not "crack his code," he was called in to reveal its secrets. With his fellow Mohawks he set up the first Amerindian communications network, an idea adopted by the American army in WWII. After the war he took an MA at McMaster in 1922, and then a doctorate in pedagogy at U of T in 1928. He was head of the chemistry and biology dept at North Toronto Collegiate 1922-57. ROY WRIGHT

**Jansenism**, a theological doctrine which urged greater personal holiness, espoused predestination and was linked to some extent with GALLICANISM. Supported by the writings of St Augustine, it was synthesized by Cornelius Jansen (1585-1638), Roman Catholic bishop of Ypres, in his posthumous *Augustinus* (1642). At odds with Rome and particularly critical of the Jesuits, Jansenism was, after 1650, the object of a series of condemnations which shook the church of France. It soon took on a moralistic tone and rigorously opposed all laxity; it also became the vehicle for opinion hostile to Roman centralism.

NEW FRANCE, firmly under Jesuit control, was little touched by doctrinal Jansenism, although there were a few enthusiasts. Nevertheless the moral rigour of Mgr de SAINT-VALLIER and his successors drew on Jansenist morality, for it was inspired by the same Augustinian source, though it had different theological bases; yet it was sometimes nourished by the reading of certain Jansenist texts. The ULTRAMONTANIST religious movement of the mid-19th century swept away the last traces of this indirect influence in Canada, without in the process eliminating the rigour itself. NIVE VOISINE

**Janvier, Alex Simeon**, painter (b at Le Goff, Alta 28 Feb 1935). A Chipewyan, he graduated from the Southern Alberta College of Art in 1964 and had his start painting a mural for the Indians of Canada Pavilion at EXPO 67. He returned to Alberta in 1968 to teach adult classes at the Saddle Lk Indian School, St Paul, and Alberta Newstart Inc, Fort Chipewyan. Late in 1971 he decided to paint full-time. In 1973 he was a founding member of the Professional Native Artists Inc (Winnipeg), a group of 7 Indian artists seeking to market their own work. Janvier's abstract work is characterized by pools of colour on negative space. In 1975 he painted a mural for the Muttart Conservatory (Edmonton) and for the County of Strathcona Building (Sherwood Park, Alta). Janvier was invited to Sweden 1977 to paint and exhibit. He did *The Seasons* for the National Museum of Man 1978-81 and a mural for the 1983 World University Games (Edmonton). GERALD R. McMASTER

**Japanese** The first known Japanese immigrant, Manzo Nagano, settled in Victoria, BC, in 1877. By 1914, there were 10 000 Japanese settled permanently in Canada. By 1981 there were some 40 995 Japanese Canadians in Canada. The 100 years separating these events were filled with racial discrimination, turmoil and success.

**Origins and Migration** Almost all Japanese migration to Canada occurred during the first decade of the century. At the beginning of the decade, almost all the migrants were young men. In 1907, at Canada's insistence, Japan agreed to limit the number of male migrants to Canada to 400 per year. Between the signing of this agreement, and another in 1928 which reduced the flow to 150 persons a year, most of the Japanese migrants were young women coming to join their husbands. These first Japanese Canadians, called *Issei* (Ee-say), formed the nucleus of the Japanese Canadian community. They were young, literate and the products of the overcrowded farming and fishing villages of Japan's southern islands of Kyushu and Honshu.

Community kitchen at a hastily built internment camp at Slocan City, BC, 1943, which received thousands of displaced Japanese Canadians during WWII (courtesy Public Archives of Canada/C-24452).

Most of the Issei, on their arrival in Canada, settled in Vancouver and Victoria and in the surrounding towns. Others settled on farms in the Fraser Valley and in the fishing villages and pulp towns scattered along the Pacific coast. Small groups also settled on farms near Lethbridge and at Redwater near Edmonton, Alta.

A strident anti-Asian element in BC society did its best to force the Issei to leave Canada. In 1895 Japanese were denied the vote. A white mob rampaged through the Chinese and Japanese sections of Vancouver, in 1907. Japanese were excluded by law from most professions, the civil service and teaching. Social convention prevented Caucasian employers from hiring Japanese workers or encouraged them to pay Japanese workers far less than their white counterparts, a practice sanctioned by BC's discriminatory minimum-wage laws.

During these early years, and for the next 4 decades, BC's municipal, provincial and federal politicians pandered to the white supremacists in the province. The only exceptions to this were CO-OPERATIVE COMMONWEALTH FEDERATION politicians who openly argued that Asians should be given the vote.

This exclusion from the broader social and economic life of BC and the natural tendency for immigrants to seek each other's company, led to the development of Japanese ghettos. The Powell Street area of Vancouver and the fishing village of Stevenston were 2 of the main centres of Japanese life in Canada. In these ghettos, the Issei raised their children, the *Nisei* (Nee-say), or second generation. The Nisei, while raised in the Japanese ghetto, were also attuned to life in the wider Canadian community.

Throughout the 1920s and 1930s, the Japanese Canadian community slowly established itself. During this time, however, the contact between Japanese Canadians and other Canadians remained very restricted. The Issei's contact with white society was primarily economic. In the ghetto a wide array of Japanese organizations and institutions developed to serve the Japanese Canadian community.

Japanese Canadian veterans who fought in the Canadian Army in WWI were still refused the franchise, and in the 1920s the federal gov-

ernment limited the number of fishing licences issued to Japanese Canadians, thus denying many Japanese Canadians their traditional livelihood. During the GREAT DEPRESSION, Japanese Canadians received only a fraction of the social assistance that white applicants received and medical facilities were segregated.

The Nisei, however, had learned how to function in the broader Canadian society. Encouraged by their parents, the Nisei were successful students. They were fluent in English, well educated and ready to leave the Japanese Canadian ghettos. Nevertheless, they found their way barred by the same prejudices that had blocked their parents. Young Nisei with degrees from UBC found themselves working as labourers in lumber mills or as clerks in ghetto stores. In 1935, their demand that Canadian-born Japanese be given the vote was denied because of opposition from BC politicians.

The reaction of the Canadian government to the attack by Japan on Pearl Harbor in Dec 1941 destroyed the modest economic and social gains made by the Issei and Nisei during the preceding 40 years. In Feb 1942, the Canadian Government ordered the removal of all Japanese Canadians from an area within 160 km of the Pacific coast, justifying its action on the grounds that the Japanese Canadians threatened Canada's security. The senior members of Canada's military and the RCMP opposed the action, however, arguing that the Japanese Canadians posed no threat to security. In fact, no Japanese Canadian was ever charged with being disloyal to Canada. Later, the government claimed that it removed the Japanese Canadians to protect them from mobs in BC, despite the fact that they had received only 150 letters and anti-Japanese resolutions.

The order to leave the coast was made under the authority of the WAR MEASURES ACT and affected over 20 000 Japanese Canadians. They were held first in the livestock barns of the Pacific National Exhibition grounds in Vancouver and then moved to hastily built camps in the BC interior. Towns like Slocan City, Kaslo and New Denver received thousands of the displaced men, women and children. The government then sold the farms, homes, businesses and personal property of the Japanese internees.

As WWII drew to a close, Japanese Canadians were made to choose between deportation to Japan, or being moved east to other parts of Canada. Many moved to the Prairie provinces, Ontario and Québec. The government's attempt to deport 10 000 Japanese Canadians was frustrated by massive public protest. In 1949, after the dispersal east was complete and the last of the wartime restrictions was removed, Japanese Canadians were granted the right to vote.

Japanese Canadians spent the 1950s rebuilding their lives. These years saw the birth of the *Sansei* (San-say), the third generation of Japanese Canadians. Unlike the Issei and most Nisei, the Sansei were raised fully within the wider Canadian community. They speak English and French but little or no Japanese. Most know little of their cultural heritage and their contact with other Japanese Canadians outside their immediate family is limited. As a group, Sansei are more highly educated than most other Canadians of the same age and disproportionately large numbers of Sansei work in academia, the professions and the arts. Also, in sharp contrast to the 2 previous generations, the rate of intermarriage among Sansei is extremely high. Studies conducted in the late 1970s indicate that over 75% of the Sansei marry outside the Japanese Canadian community. Well-known Japanese Canadians include Joy KOGAWA, David SUZUKI, Tom Shoyama, Raymond MORIYAMA, Yuki Yoshida, Mitch Kawasaki, Takeo Nakano and Zenkichi Shimbashi.

Changes in Canada's immigration laws in

Royal Canadian Navy officers question Japanese Canadian fisherman while confiscating his boat, Esquimalt, BC, Dec 1941. The government sold the farms, homes, businesses and property of the Japanese internees (courtesy Public Archives of Canada/PA-37468/RCN).

1967 permitted a small number of new immigrants to come from Japan. These migrants, called the *Shin Issei*, were the first new migrants in almost 50 years and they differed markedly from the immigrants who preceded them many years before. The *Shin Issei* came from Japan's urban middle class. Thus they carried with them a version of Japanese culture very different from the peasant culture brought by the Issei. Many of the traditional skills brought by the *Shin Issei*, eg, the tea ceremony, paper folding and flower arranging, added a new dimension to the Japanese Canadian community.

Today, Japanese Canadian society continues to evolve. The new immigrants have made it possible for young Japanese Canadians to learn the arts, crafts and language of their ancestral homeland. At the same time Japanese Canadians of all generations contribute to Canadian society at large in responsible occupations and as good citizens.

**Jasper, Alta, UP**, pop 3269 (1981c), is located at the junction of the Miette and Athabasca rivers, 362 km W of Edmonton. First called Fitzhugh, it was named after Jasper House, a nearby NWC post, and acted as a supply depot for the mountain trade across ATHABASCA PASS. Possibly established as early as 1801, it remained open with occasional interruption until 1884. Its modern development can be said to have started in Sept 1907, when the Jasper Park Reserve was established. The first major hotels, the Athabasca and Jasper Park Lodge, were started in 1915. The coming of the GRAND TRUNK PACIFIC and GREAT NORTHERN railways (1911-12) and construction of the all-weather road to Edmonton in 1927 spurred Jasper's growth, not only as a tourist town, but also (from 1912 to 1916 and again after consolidation of the 2 rail companies in the 1920s) as a railway divisional point.

FRITS PANNEKOEK

**Jasper National Park** (est 1907, 10 880 km<sup>2</sup>) rests amid the unforgettable splendour of the ROCKY MOUNTAINS. It is the most northerly of the 4 adjoining mountain parks (see BANFF, KOOTENAY, YOHO). The combined forces of wind, water and

glacial ice have carved Jasper's U-shaped valleys, which sweep upwards to mountain peaks as high as 3747 m. The resulting landscape supports a rich blend of alpine meadows, subalpine forests and montane vegetation. Wildlife is a main attraction in the PARK. Many species can be seen along park roads, including moose, elk, mule deer, black bear, coyote and bighorn sheep. Grizzly bears roam the back country. The highest ledges are inhabited by mountain goats, golden eagles, ptarmigan and ravens. The park's history is rich with the adventure of the FUR TRADE and of exploration for a route to the West Coast, including David THOMPSON's 1811 discovery of the ATHABASCA PASS and Jasper Hawes's establishment of a trading post near the present town of JASPER. The COLUMBIA ICEFIELDS Parkway provides direct access to outstanding scenery. Snow-capped peaks, mineral SPRINGS and glacier-fed lakes and rivers attract over 2 million visitors each year.

LILLIAN STEWART

**Jay**, medium-sized bird of the crow family (Corvidae). Most jays have crests and are brightly coloured. Thirty-seven species are recognized, with 3 occurring in Canada: blue jay (*Cyanocitta cristata*), gray jay (*Perisoreus canadensis*) and Steller's jay (*C. stelleri*). All are mainly permanent residents. Gray jays breed from the northern YT to Nfld, but are generally absent from SE Alta, southern Sask and SW Man. Blue jays breed in central Alta, Sask and Man and southward across Ont to Nfld. Steller's jay is restricted to western and southeastern BC and SW Alberta. Essentially, jays are woodland birds of coniferous and mixed forests. Blue jays are also very common in shade trees in urban areas. Jays tend to nest in conifers and lay clutches of 2-6 eggs. They are omnivorous, feeding on various fruits, insects and grains, and are noted for storing food in crevices in trees. Scientists speculate that this behaviour may be a means of ensuring a food reserve.

LORRAINE G. D'AGINCOURT

Blue jay (artwork by John Crosby).

**Jay's Treaty**, signed 19 Nov 1794 in London by the US and Britain and named for John Jay, US chief justice and a signatory. This primarily commercial agreement was intended to settle disputes which threatened war, such as British retention of frontier posts in American territory after the 1783 TREATY OF PARIS, American-Indian disputes over the Ohio Valley, and American anger over British seizure of shipping. The treaty stipulated that Britain would evacuate western posts by 1 June 1796, and that merchants of both countries would have free access to lands on either side of the border; that the Mississippi R would be open to both countries; that a commission to settle debts to Britain since the start of the AMERICAN REVOLUTION would be established; and that American shipping would not be hindered in trade with British possessions. The treaty marks the beginning of arbitration in international relations, since commissioners were appointed to settle outstanding boundary problems caused by the peace of 1783. See JOINT COMMISSION.

STUART R.J. SUTHERLAND

**Jazz**, improvised music of Afro-American origin, is a synthesis of elements from African folk music and European art music. The term jazz, covering a succession of styles historically, has been given various derivations but, like the music itself, its exact genesis is vague. Jazz emerged in New Orleans at the turn of the 20th century and was disseminated throughout the US by its proponents' northern migration to Chicago, New York and other cities and, after 1917, by recordings. Its evolution has been the result of both personal initiatives (Louis Armstrong, Charlie Parker, John Coltrane, etc) and popular movements, the latter eventually bringing jazz to Canada. Through the efforts of men like the cornetist Trump Davidson (b Sudbury 1908) and clarinetist Bert Niosi, jazz was woven loosely into the Canadian musical fabric by the late 1940s. Its styles, from traditional and the related dixieland, through swing and bebop to free and fusion, have each had adherents in Canada, bebop especially among musicians emerging in the 1950s and still dominant in the 1980s, and trad-dixie among European musicians immigrating during the 1960s. Most of Canada's jazz musicians have been white. Notable exceptions include pianists Oscar Peterson, the most significant Canadian in jazz, Wray Downes and Oliver Jones; and guitarists Sonny Greenwich and Nelson Symonds.

Characteristically an urban music, jazz has had centres of support in most major Canadian cities, where it has been played in nightclubs (eg, The Cellar, Vancouver; the Yardbird Suite, Edmonton); the Colonial and Town taverns, George's Spaghetti House and Bourbon Street in Toronto; the Café St-Michel, La Jazztek, Le Jazz Hot and Rockhead's Paradise in Montréal) and in concerts and festivals. Many musicians have gravitated to Toronto and Montréal and others to the US, eg, trumpeter and big-band leader Maynard Ferguson and pianist Paul Bley, or to Europe, eg, trumpeter and composer Kenny Wheeler.

Many of the country's best-known jazzmen are equally well known for their work in the Canadian pop music — studio world: flutist and saxophonist Moe Koffman, big-band leader (Boss Brass) and trombonist Rob McConnell (b London, Ont, 1935), flugelhornist Guido Basso, pianists Chris Gage, Vic Vogel and Tommy Banks, and saxophonists Fraser MacPherson and P.J. Perry. Some have established their reputations on their work in jazz alone: guitarists Ed Bickert and Sonny Greenwich, bassist and pianist Don Thompson, composer and big-band leader Phil Nimmons and saxophonist Jim Galloway. Jazz has had limited TV exposure, but many long-running radio programs indicate its popularity with Canadian audiences.

MARK MILLER

*Reading:* J. Litchfield, *The Canadian Jazz Discography 1916-1980* (1982); Mark Miller, *Jazz in Canada: Fourteen Lives* (1982).

**Jefferys, Charles William**, painter, illustrator, muralist, writer, teacher (b at Rochester, Eng 25 Aug 1869; d at Toronto 8 Oct 1951). Determined to explore both "the true nature of our landscape" and the historical (and prehistorical) background that shaped Canadian society, Jefferys was a strong advocate of artistic nationalism. Beginning work as a newspaper artist in 1889, Jefferys served as an illustrator on the *New York Herald* 1893-1901, and as art editor of the satirical periodical *The Moon* (1902-03). He was appointed chief illustrator of the *Toronto Star* (1905) and art director of *Toronto Star Weekly* (1910), before launching a freelance career. He also taught at the school of architecture, U of T, 1911-39. Jefferys is one of the most frequently reproduced of Canadian illustrators and is best known for his "visual reconstructions" of Canadian history.

*Reading:* W. Colgate, C.W. Jefferys (1945); C.W. Jefferys, *Dramatic Episodes in Canada's Story* (1930), *Canada's Past in Pictures* (1934) and *Picture Gallery of Canadian History*, 3 vols (1942-50) Robert Stacey, *Charles William Jefferys: 1869-1951* (1976).

**Jehin-Prume, Frantz**, violinist, composer, teacher (b Jehin at Spa, Belgium 18 Apr 1839; d at Montréal 29 May 1899). As the first foreign musician of international fame to settle in Canada, with his wife Rosita del Vecchio, he played an important role in the development of musical life in Montréal. He enjoyed a brilliant career in Europe, Russia and Mexico. He came on a fishing and hunting trip to Canada in 1865 at the invitation of violinist Jules Hone and in 1867 settled in Montréal. For performances of Gounod's *Jeanne d'Arc* (1877), he was choir-master and solo violinist under the direction of Calixa Lavallée, his friend and collaborator. He was president of the Académie de musique de Québec (1877-78) and founder of the Association artistique de Montréal (1891). After a final tour of France and Belgium (1885), he returned to Montréal where he devoted himself to teaching. Jehin-Prume composed numerous works, most of which have not survived.

HÉLÈNE PLOUFFE

**Jehovah's Witnesses**, religious denomination known internationally for tireless door-to-door evangelism, large conventions, and members' refusal to bear arms, salute flags or accept blood transfusions. Witnesses are thoroughgoing millenarians who believe that Christ came invisibly in 1914, and that through witnessing they are carrying out a "harvest work" by which mankind is separated into the saved and the damned. Accordingly the world will be destroyed at Armageddon, which will occur before the generation old enough to witness events in 1914 has all died. Witnesses deny the Trinity and hold to an Arian theology, which asserts that the Son of God is not coeternal with the Father and partakes of deity to a lesser degree. They teach that 144 000 will eventually dwell in heaven, but the rest of the saved will live eternally on a restored paradisaic earth. In 1981 only 9601 proclaimed a heavenly hope out of 2.4 million active members worldwide. The Witnesses are mortalists and believe that most humans will be resurrected physically during the millennium. They hold that other religions and the secular state are demonic.

Jehovah's Witnesses grew out of the Bible Student movement developed by Charles T. Russell in the 1870s at Pittsburgh, Pa. In 1876 he adopted the "biblical" chronology of Nelson H. Barbour, which has been basic to the date-setting apocalypticism of the Bible Students and Witnesses ever since. Russell founded the Watch Tower Society in 1881 to spread his views. In 1931, Russell's successor, Joseph F. Rutherford, gave the name Jehovah's Witnesses to those Bible Students loyal to the Watch Tower Society. He abandoned many of Russell's teachings, rearranged Barbour's chronology and established autocratic control over his followers. Nathan H. Knorr (1905-77) was largely responsible for their growth into a worldwide movement.

Bible Students appeared in Ontario about 1882 and soon spread throughout Canada. During both world wars they suffered much persecution. In 1918 their literature was banned, and they were outlawed 1941-43 under the War Measures Act. Their most serious problems occurred in Québec after WWII (see RONCARELLI v DUPLISSIS; SAUMUR v CITY OF QUÉBEC). Consequently, to obtain religious freedom they popularized the idea of a Canadian Bill of Rights and established numerous libertarian precedents before Canada's highest courts (see HUMAN RIGHTS). Paradoxically, they have recently come under severe public criticism for their illiberal treatment of dissenters within

their ranks. Some 143 000 Canadians claimed to be Jehovah's Witnesses in the federal census of 1981. Of these, there were 67 328 active Canadian Witness "publishers," or evangelists. See EVANGELISM.

M. JAMES PENTON  
*Reading:* M. James Penton, *Jehovah's Witnesses in Canada* (1976).

**Jellyfish**, common name for free-swimming medusae of INVERTEBRATES of phylum CNIDARIA. Jellyfish are characterized by an umbrella-shaped body containing a jellylike substance (mesoglea), between upper and lower surfaces, which acts as a buoyancy aid. Three types are recognized: true jellyfish (Scyphozoa), hydro-medusae (Hydrozoa) and colonial Siphonophora and Chondrophora. About 110 species are found in Canadian waters. They can occur in incredible densities; eg, moon jellies (*Aurelia aurita*) may clog boat cooling systems. Their effectiveness in capturing other planktonic animals makes jellyfish an integral part of oceanic food chains. Stinging cells (cnidoblasts) used to capture food have made some species notorious: sea wasp (*Chironex fleckeri*), off Australia's Queensland coast, can kill unwary bathers; the sting of the Portuguese man-of-war (*Physalia physalis*), however, is probably never fatal. Most Canadian species are harmless. Jellyfish buoy themselves by mesoglea or by gas-filled bladders. Siphonophores and chondrophores are supported by bladders and may be buoyant enough to float at the surface (eg, *Physalia* and *Veleva*). Sail-by-the-wind-sailor (*Veleva*) has a sail which usually keeps it away from shore by enabling it to tack across the wind. After periods of prevailing on-shore winds, these jellyfish may become stranded on the outer BC coast in such numbers that beaches turn violet. Jellyfish move by jet propulsion, using powerful muscles to squeeze water out of the cavity formed by the umbrella.

A. N. SPENCER

**Jenkins, Ferguson Arthur**, baseball player (b at Chatham, Ont 13 Dec 1943). The finest Canadian-born baseball player, Jenkins began his major-league career in Philadelphia before joining the Chicago Cubs in 1966. In 1967 he began a 6-year string of 20 or more pitching victories per season. A control pitcher, he rebounded from a disappointing 1973 season to win 25 games for the Texas Rangers in 1974. Released by the Chicago Cubs prior to the 1984 season, his pitching record includes 284 wins, 3192 strikeouts, a remarkable strikeout-to-walk ratio of 3.20 and the modern major league lifetime record of 363 putouts by a pitcher. He won the Cy Young Award for pitching excellence (1971), the Lou Marsh Trophy as Canada's outstanding athlete (1974) and was Canadian male athlete of the year 4 times.

WILLIAM HUMBER

**Jenness, Diamond**, anthropologist, arctic scholar (b at Wellington, New Zealand 10 Feb 1886; d near Ottawa 29 Nov 1969). Canada's most distinguished pioneer anthropologist, he was educated at U of NZ and Oxford. After fieldwork in New Guinea in 1911-12, he joined the Canadian Arctic Expedition under V. STEFANSSON 1913-16 at the request of the National Museum of Canada. His participation in the traditional life of the COPPER INUIT around Coronation Gulf, NWT, laid the base for his later work. After service in WWI, he joined the museum staff and began his remarkable series of publications in Canadian ethnology, linguistics, physical and applied anthropology and archaeology. *The People of the Twilight* (1928) is probably the best single book on the Canadian Inuit. His classic *The Indians of Canada* (1932), based on field projects among native peoples across the country, has been republished repeatedly. In 1925 he authored a brilliant paper on the prehistoric culture of Arctic Canada. His excavations at Cape Prince of Wales, Alaska, in 1926 resulted in his

Diamond Jenness (left) and W.L. McKinley aboard the *Karluck*, 1913 (courtesy Public Archives of Canada/C-86412).

definition of the Old Bering Sea culture, still a fundamental discovery in Alaskan prehistory.

Jenness became chief anthropologist of the National Museum in 1926. He subsequently represented Canada at many international conferences and served as president of the Soc for American Archaeology in 1937 and the American Anthropological Assn in 1939. Before 1939 he developed the antiquities legislation vital to the protection of archaeological resources in the NWT. Deputy director of intelligence for the RCAF in 1940 and then chief of the Inter-Service Topographical Section, he later organized the Geographical Bureau and was its director until 1947. In 1962 he published an economic history of Cyprus. Between that date and 1968 the Arctic Institute of N America issued his 5 volumes on Eskimo administration in Alaska, Canada and Greenland, adding to his bibliography of some 100 titles.

A kind, quiet, modest man, Jenness was the recipient of honorary degrees from 5 universities and was associated with many learned institutions in Canada and abroad, among them the Royal Canadian Geographical Soc, whose Massey Medal he was awarded in 1962. Diamond Jenness Peninsula on Victoria I was named for him, and in 1970 he was appointed a companion of the Order of Canada, his country's highest honour. WILLIAM E. TAYLOR, JR

**Jerome, Harry Winston**, track and field athlete, consultant, teacher (b at Prince Albert, Sask 30 Sept 1940; d at Vancouver 7 Dec 1982). He was the first man to share world 100-yd and 100 m records. While attending U of Oregon on an athletic scholarship in 1960, Jerome ran the 100 m in 10.0 sec, tying German Armin Hary's world record; in 1962 he ran the 100 yds in 9.2 sec, equalling the mark of Frank Budd and Bob Hayes. An Olympic representative for Canada in 1960, 1964 and 1968, he won the 100 m bronze in the 1964 Tokyo Olympics; he took the 100 m gold in the 1967 Pan-American Games. After retirement, Jerome taught, consulted for Sport Canada and travelled Canada inspiring youngsters to try TRACK AND FIELD SPORTS. TED BARRIS

**Jesuit Relations** (*Relations des jésuites*), the voluminous annual documents sent from the Canadian mission of the Society of Jesus to its Paris office, 1632-72, compiled by missionaries in the field, edited by their Québec superior, and printed in France by Sébastien Cramoisy. As a result of Cardinal Richelieu's decision to enlist the Jesuits in colonizing French N America, the early history of settlement was systematically and colourfully documented by priests attempting to convert the Indians and also to attract support at home for their project. The journals and letters of Paul LE JEUNE, Jérôme LALEMANT, Jean de BRÉBEUF and Paul Ragueneau, among

others, dramatize tribal warfare in HURONIA and the day-to-day life of colonists in ACADIA; these are supplemented by "relations" of Jesuit participation in colonial matters throughout the New World. Invaluable as ethnographic and documentary sources, the *Jesuit Relations* were avidly read in the 18th century, along with the works of Cartier and Champlain, as exciting travel literature. Reuben Gold Thwaites edited 73 volumes as *The Jesuit Relations and Allied Documents, Travels and Explorations of the Jesuit Missionaries in New France 1610-1791* (1896-1901), presenting annotated parallel versions of his translations and the French, Latin and Italian original texts. MICHELE LACOMBE

**Jesuits**, see CHRISTIAN RELIGIOUS COMMUNITIES.

**Jesuits' Estates Act** During the French regime Jesuits were granted considerable property and seigneuries, which they used for educational purposes and for their Indian missions. After the CONQUEST, ownership of these estates passed to Britain, which held them 1763-1800, when the last Canadian Jesuit died. In 1831 London awarded the estates to the Province of Canada. In 1838 Catholic bishops began to petition unsuccessfully for the appropriation of the Jesuits' estates in accordance with the wishes of the donors.

The Jesuits, re-established in Canada in 1842, were authorized by Rome in 1871 to begin negotiating a settlement of their estates with the Québec government, the estates' owner since CONFEDERATION. Archbishop Elzéar-Alexandre TASCHEREAU of Québec then intervened, arguing that revenue from these estates should be divided among Catholic schools rather than being given to the Jesuits, who wished to establish

was allocated to Protestant institutes of higher education. Since Pope Leo XIII had been arbiter the ORANGE ORDER in Ontario vehemently opposed the settlement as a papist intrusion into Canadian affairs. A heated debate occupied the House of Commons in Mar 1889; the motion to disallow the Québec law was defeated by 188 votes to 13. The Jesuits' Estates Act put additional strain on English Protestant-French Catholic relations. PHILIPPE SYLVAIN

**Jeune-Canada**, a FRENCH CANADIAN NATIONALIST movement, fd 1932 in Montréal during the GREAT DEPRESSION. Its membership of some 20 university students included André LAURENDEAU, Pierre DANSEREAU and Gérard FILION. They supported a conservative form of nationalism based on the protection of francophone rights in Canada and the defence of Québec as a Catholic, French, rural and agricultural society whose destiny was one of economic and political independence. For 5 years its members led an awakening of the collective consciousness, speaking at meetings, publishing pamphlets and attacking economic monopolies and governments. By 1938, as the Depression neared its end, the movement faded. RÉAL BÉLANGER

**Jeunesses musicales du Canada/Youth and Music Canada** Founded in 1949 in St-Hyacinthe, Qué, by Gilles Lefebvre, J.H. Lemieux, Anais Allard-Rousseau and Alice Desruisseaux-Boisvert, this nonprofit organization encourages the pursuit of music among young Canadians and helps talented composers and performers in developing their careers in Canada and abroad. In 1950 JMC joined the International Federation of the JM; next year it established a summer music camp which, in 1967, became the JMC Orford Arts Centre, run since 1972 by an independent JMC corporation. Following the initiative of Lefebvre and the JMC the World Orchestra of JM was created in 1969. By 1984 some 80 JMC centres and sections across Canada presented more than 400 concerts each year. Other JMC activities include artists' competitions and tours, instructional workshops, Sunday concerts and recordings. Jean-Claude Picard became director general of this Montréal-based organization in 1976, succeeding Lefebvre (1953-72) and Gaston Germain (1972-76). In 1983 the name Youth and Music Canada, in place of Jeunesses musicales de Canada, was adopted for anglophone members. H. PLOUFFE

**Jewellery and Silverware Industry** includes establishments that manufacture jewellery (including costume jewellery, emblems, watch bracelets and precious metal cigar and cigarette cases) and silverware (including sterling or plated flatware and hollowware, and trophies), and those which refine or roll precious metals and produce precious metal alloys. This entry will concentrate on the jewellery and silverware MANUFACTURING SECTOR.

The jewellery industry in Canada dates back to the 17th century and includes clockmakers and watchmakers as well as silversmiths who emigrated from the British Isles. Canada has a tradition of SILVER crafting, as seen in the Henry BIRKS Collection of antique Canadian silver at the ROYAL ONTARIO MUSEUM. François Ranvozyé (1739-1819), acclaimed as Canada's outstanding silversmith, developed a beaten technique that made his work both beautiful and distinctive. During most of the 19th century, the silversmith's craft in Canada revolved around 2 Montréal workers, Robert Hendery and John Leslie. First as master and apprentice, later as partners, they fashioned silver for dealers in nearly all large population centres. They so dominated the trade that perhaps more than half the silver made in Canada in the last half of the century bears their mark.

Toward the end of the 19th century, a craftsman commonly described himself as a "watch-

a university in Montréal to rival Québec's UNIVERSITÉ LAVAL. As Québec's Roman Catholic hierarchy quarrelled, Québec Prem Honoré MERCIER called upon Pope Leo XIII to arbitrate the dispute. In July 1888 the Legislative Assembly unanimously passed the Jesuits' Estates Act, which provided a monetary settlement: the Jesuits would receive \$160 000 and surrender all claims; \$140 000 would go to U Laval and \$100 000 to selected dioceses. A further \$60 000

maker, jeweller and silversmith" and, as his position in the community consolidated, became a merchant who employed watchmakers and silversmiths. Hence, by the beginning of the century the jeweller was firmly established as a link between the public and the craftsman. In this period, there were about 2000 jewellery firms in Canada. Many jewellers acted as opticians or worked closely with them in the early years when spectacle frames were made of silver.

Formal government intervention in the industry began in 1906, when the Precious Metals Marking Act was introduced to control the quality of precious metals used in jewellery. In 1918 the government placed a discriminatory 5% excise tax on jewellery; by 1982 the tax was 10%, in addition to the 9% federal sales tax. In Jan 1982 the industry became one of the first in Canada to implement METRIC CONVERSION.

The Dept of Industry, Trade and Commerce (Regional Economic Expansion) encourages export of Canadian jewellery by sponsoring foreign trade missions for jewellery manufacturers. Markets are sought in the US, Japan and Britain. In 1981 Canada exported about \$10 million in jewellery, including fashion (costume) jewellery. In recent years, Canadian jewellery has received worldwide attention through international competitions in which Canadian designers have received awards. This recognition has led foreign buyers to take a greater interest in Canadian jewellery products. The Canadian gold maple leaf, a consumer jewellery item produced by the federal government, is also popular in international markets.

Various native craftsmen are also producing a range of jewellery (necklaces, brooches, bracelets) in a variety of materials (eg, gold, silver, copper, bone). Foremost among these is Northwest Coast artist Bill REID, who in 1951 began to produce jewellery in Vancouver. His work, like that of other native craftsmen, is characterized by the adaptation of traditional native style and iconography to new materials and forms.

In 1981 the industry included over 4000 retail outlets with total annual sales of nearly \$1 billion. In addition, there are about 375 manufacturing firms, employing over 6000 persons; about one-third are small companies, each employing up to 4 people. Often, several generations of a family have carried on a business. Most jewellery and silverware manufacturers are located in Ontario and Québec, with some in BC, Alberta and Manitoba. A single organization, the Canadian Jewellers Assn (CJA), represents manufacturers, wholesalers and retailers. It was formed in 1918 to promote sales and to represent the industry to government. The CJA publishes the *Jewellery Journal* which, along with regional associations, keeps members informed of national activities such as developments in insurance, excise tax, appraisals, ethics, precious-metals marking regulations and metrication. The educational branch of the CJA, the Canadian Jewellers Institute (incorporated 1945), offers courses at various levels of expertise, beginning with the 2-term Retail Jewellers Training Course. Completion of this course leads to a diploma and the designation "Graduate Jeweller" (GJ). Other educational and training courses are offered by the Québec Jewellers Corporation, the Canadian Gemmological Association and community colleges. These courses and practical training have increased the professionalism of Canadian jewellers. Three trade publications serve the jewellery industry in Canada: *Bijou*, *Canadian Jeweller* and *Jewellery World*.

DOROTHY A. LENARCIC

**Jewett, Pauline**, educator, politician (b at St Catharines, Ont 11 Dec 1922). Educated at Queen's, Radcliffe, Harvard, Oxford and London School of Economics, she was a professor of political science (1955-71) and head of the Insti-

tute of Canadian Studies (1971-74) at Carleton before being appointed president of SFU (1974-78), the first woman to head a major coeducational university in Canada. Jewett was a Liberal MP for Northumberland from 1963 to 1965 and in 1966 she was vice-president of the national Liberal Party. In 1979, 1980 and 1984 she was elected MP for New Westminster-Coquitlam for the New Democratic Party. In Parliament she has acted as NDP critic on education and external affairs. HARRIET GORHAM

**Jewish Writing** in Canada is characterized by linguistic and thematic influences derived from successive waves of immigration, and it appears mainly in Yiddish, Hebrew, English and French. Some Jewish writers work in other languages, such as German and Hungarian, reflecting countries of their origin. Jewish concerns are also treated by non-Jewish authors; eg, Gwethalyn Graham's *Earth and High Heaven* (1944) deals with intermarriage and anti-Semitism, and Yves THÉRIAULT's *Aaron* (1954) concentrates on the rejection of orthodoxy and the question of assimilation.

Yiddish and Hebrew writing began to appear in Canada before WWI when large numbers of Jews arrived after fleeing pogroms in tsarist Russia. In 1851 there were barely 450 Jews in Canada; in 1901 there were almost 17 000, and suddenly there was a Yiddish reading public. By 1931 there were about 156 000 — mainly in Montréal, Toronto and Winnipeg — of whom 95% claimed Yiddish as their mother tongue. Yiddish was at its crest 1930-45, being used by Jewish communal institutions, 3 daily newspapers and numerous journals. For another decade Yiddish was bolstered by the influx of Holocaust survivors, including famous writers such as Melech Ravitch (1893-1976) and Rochl Korn (1898-1982), who continued the "internationalism" of Yiddish literature in Canada begun 1912 by the great Yiddish-Hebrew author Reuben Brainin (1862-1939) when he was editor of the Montréal Yiddish daily *Kanader Adler*.

Unlike most immigrant groups, Jews brought writers who tended to write with a "foreign" perspective for a worldwide public. Early in the 1920s J.I. Segal (1896-1954) led a group of poets who were raised or began writing in Canada. Most notable were A.S. Shkolnikov (1896-1962), A. Almi (1892-1963), Ida Maze (pseudonym for Ida Massey, 1893-1963) and Sholem Shtern (1907-). Together they established Montréal as a centre of Yiddish creativity. The most distinctly Canadian is Shtern, whose 2-volume epic *In Kanada* (1960; 1963) narratively describes the Jewish immigrant experience in Canada. With Shabtai Perl (1906-76) and 3 noteworthy Toronto "native" poets — Abraham Nisnevitch (1886-1955), Shimon Nepom (1882-1939) and Judica (Yehudit Zik, 1898-) — Shtern belongs to a group loosely called "proletarian" because their verse was heavily Marxist.

The writers who arrived after WWII intensified the "international" tendency, and their influence, and that of the Holocaust, became dominant. Korn's dark but strangely undespairsing poetry has been translated by Seymour Mayne and others in *Generation* (1982), and the "Auschwitz" poems of Joseph Rogel (1911-) have appeared in English and French as well as Yiddish. Novelists Yehuda Elberg (1912-) and Chava Rosenfarb (1923-) are known worldwide for their description of Jewish life in Poland before and during WWII. In Toronto fabulist Peretz Miransky (1908-), lyricist Simcha Simchovitch (1921-), and poet and critic Itzhak Goldkorn (1911-) are also recognized for Holocaust writing. Two younger survivors, Jack Kuper (1932-) in *Child of the Holocaust* (1973) and Abraham Boyarsky (1942-) in *Shreiber* (1982), have written in English about wartime experience. Most mainstream Jewish writers publishing in English,

such as Eli MANDEL, Irving LAYTON and Phyllis GOTTLIEB, have also attempted to deal artistically with the tragedy.

The use of Yiddish declined in Canada as succeeding generations turned to English; recent arrivals from Arab countries, Israel and Russia know no Yiddish. Iraqi-born Naim KATTAN writes in French about acculturation in his novels *Farewell Babylon* (1972) and *Paris Interlude* (1977), and in the collection *The Neighbour and Other Stories* (1982); he is perhaps the most important Jewish writer in French Canada. Michel Solomon, born 1919 in Romania, is also widely known in Québec for his memoirs *Magadan* (1971) and *Mon Calvaire roumain* (1976), and his novel *Eden retrouvée* (1980).

Most of those writing in Hebrew were usually also Yiddish writers, the exception being authors of religious works. Until WWII Yiddish was widely regarded as too vulgar for serious literature. Later it had to compete with the Zionist revival of Hebrew. Thus most of the rabbinic sages who settled here — such as world-renowned Rabbi Judah Rosenberg, grandfather of Mordecai RICHLER — wrote mainly in Hebrew, although Rabbi Rosenberg also published several books on legends in Yiddish. The only poet composing exclusively in Hebrew is Miriam Schneid (1924-), but poet and educator Isaiah Rabinovitch (1904-) and novelist Joshua Altman (1898-) also wrote in Hebrew.

Jewish writers publishing in English in Canada share certain concerns with their immigrant predecessors: immigrant acculturation, the Holocaust, Zionism and the birth of the state of Israel, and fear of assimilation. Thus, nostalgia for the vanished traditions of European Jewish life, dominant in the work of Segal and the early Yiddish writers, reappears in A.M. KLEIN's attempt to synthesize Jewish culture and English language. His shock at the collapse of European Jewry during the Nazi ascendancy produced the first Canadian Holocaust poetry in *Hath Not A Jew* (1940) and in the bitter hyperbole of his satire *The Hitleriad* (1944), and scenes of Jewish wartime suffering in *The Second Scroll* (1951), his powerful, symbolic Zionist novel.

Klein is thus a pivotal figure; others followed his example. Although Mandel, Layton, Miriam WADDINGTON, Joseph ROSENBLATT and Leonard COHEN represent some of the most important influences of mainstream Canadian poetry, they also reflect in various ways their Jewish heritage, eg, in Cohen's darkly satiric *Flowers for Hitler* (1964-) and *his Death of a Lady's Man* (1978), in which he attempts to blend romantic and Holocaust visions. Layton's poetry, especially after the Arab-Israeli War of 1967, has become increasingly concerned with Jewish, rather than artistic, alienation and with anxiety over Israel's survival. Among novelists these concerns surface in *The Sacrifice* (1956) by Adele WISEMAN, in *The Rich Man* (1948) and *The Betrayal* (1965) by Henry KREISEL, and in Mordecai Richler's fiction, particularly *The Apprenticeship of Duddy Kravitz* (1959) and *St Urbain's Horseman* (1971). The shorter fiction of Jack Ludwig and Norman Levine also reflects facets of the Jewish experience in Canada, as do the plays of Leonard Angel, Sharon Pollock, Ted Allan and Beverly SIMONS.

Canada's Jewish population is predominantly urban, but its concentration in a few major cities has not led to a marked regionalism in Jewish writing. The eastern Ontario novels of Matt COHEN are an exception, and Richler's *St Urbain Street* can be seen as an urban "region" akin to Hugh GARNER's Cabbagetown or Ethel Wilson's Vancouver. Even the radicalism of playwrights Rick Salutin and Janis Rapoport, while it has its own form of regionalism, is actually in the tradition of Yiddish socialist writing. In their concern over identity, Canadian Jewish writers are related to their American

counterparts and reflect the international orientation of their immigrant predecessors. Through the unique linguistic and cultural experience of its authors, Jewish writing continues to enrich the Canadian identity. See also LITERATURE IN ENGLISH and related articles. ADAM G. FURSTENBERG

**Jewison, Norman Frederick**, film director and producer (b at Toronto 21 July 1926). Jewison has an international reputation as a filmmaker of talent and integrity. Though the bulk of his career has been spent outside Canada, Jewison believes his Canadian perspective has brought an important objectivity to his work. He was a graduate of U of T and worked as an actor and writer for both the British and Canadian broadcasting corporations before moving on to direct live TV in Canada and the US. In 1963 he directed his first film, *Forty Pounds of Trouble*, for Universal Pictures. Since that time, Jewison has maintained complete artistic control of all the films he has directed, and has, in most instances, functioned as both producer and director. These films include *The Cincinnati Kid* (1965), *In The Heat Of The Night* (1967; Academy Award for best picture), *Fiddler on the Roof* (1971), *Jesus Christ Superstar* (1973), *And Justice For All* (1979) and *A Soldier's Story* (1984). Jewison has also produced a number of films which he did not direct, such as *The Landlord* (1969), *Dogs of War* (1980) and *The Iceman* (1983). In all his work, Jewison has attempted, with frequent success, to balance popular appeal and serious social comment. Jewison moved back to Canada in the late 1970s, with the desire to make a significant contribution to Canadian film.

KAREN LAURENCE

**Jewitt, John Rodgers**, armourer (b at Boston, Eng 21 May 1783; d at Hartford, Conn 7 Jan 1821). Jewitt was an armourer aboard the American fur-trading ship *Boston*. He and one companion were spared by Nootka chief Maquinna, whose followers destroyed the ship in Nootka Sound 22 March 1803. Jewitt agreed to remain as Maquinna's gunsmith and blacksmith. Immersed in Nootka culture, Jewitt was initiated into the Winter Ceremonial and took a Nootka wife. His journal was published in 1807, 2 years after his rescue, inspiring Richard Alsop to interview Jewitt at length. The result was *A Narrative of the Adventures and Sufferings of John R. Jewitt* (1815) — a classic of captivity literature — and a broadside ballad "The Poor Armourer Boy," which Jewitt hawked around New England. Jewitt was a shrewd observer, and his accounts are valuable records of Northwest Indian culture.

DEREK G. SMITH

**Jews** The first Jews to make their permanent home in Canada arrived with General Jeffery AMHERST, who entered Montréal in 1760, eg, Aaron Philip Hart, who settled in Trois-Rivières. Most of the original Jewish settlers emigrated from the US and the majority settled in Montréal. The 1831 census recorded 107 Jewish residents in Upper and Lower Canada; by 1851 this number had increased to 451. These pioneering Jewish settlers were not, in one sense, a typical immigrant group. Most belonged to the middle class, were well educated and engaged in trade, commerce and industry. Many played an important role in the economic growth of the country.

Between 1850 and 1900 the nature of Jewish immigration changed. The 1850s marked the beginning of a period of intensive emigration from Europe (which was torn by wars, revolutions, national rivalries and religious conflicts) to the New World, which needed labour power for development. It has been estimated that between 1850 and 1900, some 15 000 Jewish immigrants arrived in Canada. The 120 000 Jews who immigrated between 1900 and 1920 were primarily from eastern Europe, but those who

arrived between 1920 and 1940 (60 000) and from WWII to the present (135 000) included Jews from the US, North Africa and the Middle East. The Jews migrated for the same reasons that other peoples did, except that economic and social discrimination, social and political inequality, and racial and religious persecution in their native lands made the position of Jews more precarious, and thus made the drive for migration very strong. Emigration was often synonymous with survival.

Between 1850 and 1914, immigrants wishing to emigrate to Canada encountered relatively unrestricted admission provisions, but restrictions tightened after WWI, at the same time that upheavals in Europe forced many Jews, particularly those of Russia, Poland, Austria-Hungary, Romania and the Baltic states, to emigrate. As a result of virulent anti-Semitism, thousands of European Jews were massacred or were driven from their homes, or fell victim to disease and starvation. The rise of Nazism in the mid-1930s threatened Jews throughout Europe, yet it became difficult for Jews to find refuge because the traditional countries of immigration, including Canada, had imposed restrictions on immigration. As a result, millions of Jews and non-Jews perished. Canada's record was particularly dismal.

In the middle of the 19th century, Jews were largely a European people, but today only 25% of all Jews live in Europe, most of them in the Soviet Union. The largest number (6 million) live in N America, some 300 000 of whom are in Canada.

During the first century of settlement Jews lived primarily in Upper and Lower Canada, but by the 1850s they had settled in all the provinces. Although they generally settled in "urban centres" (a census term, in 1851, for all nonrural areas), there were also Jewish farm colonies in various parts of Canada. In 1981 Jews were distributed as follows: Ontario (131 320), Québec (90 355), Manitoba (14 950), BC (13 170), Alberta (9460), Nova Scotia (2090), Saskatchewan (1515), New Brunswick (720), Newfoundland (285), PEI (80) and Yukon and NWT combined (80).

**Economic Life** Economic and occupational distribution among Jews has been diversified (ie, they have entered a variety of occupations), although there has been a relative concentration in specific fields. Jews in Canada have been victims of overt discrimination (eg, restricted admission to universities and professional schools) and subtle discrimination, which has tended to diminish during the last 30 years (see PREJUDICE AND DISCRIMINATION).

**Religion, Social and Cultural Life** The synagogue has served as a house of worship and of study and as a place of bringing together the members of the community for social and philanthropic work. Several forms of religious expression exist within the Canadian Jewry, such as orthodox, conservative, liberal and reconstructionist (see JUDAISM). Certain other groups practise specific religious philosophies.

Orthodox Jews follow the 16th-century laws of the authoritative code of religious observance known as the "Shulchan Aruch," which is based on the Halakha, or legal part of Talmudic law. Conservative Judaism, an essentially American movement whose influence is spreading, maintains that Judaism can retain its distinctiveness and still be responsive to the changing social, economic, religious and moral needs of Jews. Reform Judaism, which originated in the past century, has advocated the abolition or modification of some traditional religious practices and beliefs that are considered anachronistic. According to reconstructionism, which originated in the US in 1935, Judaism is not only a religion but a dynamic religious civilization. It supports the reestablishment of the Land of Israel as the historic home of Jewish civilization,

organic Jewish communities outside of Israel, free inquiry and acceptance of diversity in Jewish thought, and respect for traditional cultural values. Adherents of various Hasidic religious movements are strictly orthodox.

As the Jewish community grew, organizations were established to serve specific functions, eg, to support local and national philanthropy; to provide health and social services; and to aid immigrants and refugees. There are also fraternal organizations, mutual and self-aid societies, Jewish groups of various ideological leanings, Jewish labour groups, organizations related to Zionism and Israel, and organizations to promote Jewish culture. National organizations include the National Budgeting Conference of Canadian Jewry, the Canadian Jewish Congress (which is sometimes known as "the parliament of Canadian Jewry" and is the most representative of national organizations as far as general community participation is concerned), the Jewish Immigrant Aid Services of Canada, the Canada Israel Committee, the B'nai B'rith, the Canadian Zionist Federation, and the National Council of Jewish Women. As an integral part of the world Jewish community, the organizational structure of Canadian Jewry aims to maintain local communal agencies while providing a bond between scattered communities in Canada and in other countries.

The Jewish community is served by one Yiddish and 4 Anglo-Jewish weeklies, one monthly magazine, a number of house organs of general interest and periodic publications.

The Canadian Jewish community has contributed significantly to various forms of cultural expression. Jewish poets and writers, artists, musicians and performers include Lloyd Bochner, Pauline DONALDA, LORNE GREENE, John HIRSCH, Johnny WAYNE and Frank SHUSTER. Mordecai RICHLER, A.M. KLEIN, IRVING LAYTON, LEONARD COHEN, PETER NEWMAN, Alexander BROTT and LOUIS APPLEBAUM.

**Education** Most Jewish children in Canada attend public schools, but almost every Jewish community provides facilities for religious and Jewish education through supplementary schools. In the larger communities, there is also a network of Jewish day schools that combine a program of secular and Jewish education at the elementary and high-school levels. Some Canadian universities have developed programs of Judaic studies. There are several orthodox rabbinical schools. Jewish education is considered vital for group identity, and every community attempts to provide schools, synagogues, publications, etc, usually with the assistance of national organizations devoted to this purpose.

**Politics** Ezekiel Hart, son of Aaron Hart, was elected to the legislature of Lower Canada in 1807, but was unable to take his seat because the law prescribed that an oath be taken "on the true faith of a Christian." This condition was removed by legislation 5 June 1832 and Jews were granted the same civil and political rights as other Canadians — some 25 years before similar legislation in England. Canadian Jews are represented in all Canadian political parties and voting patterns on a national level appear to follow general trends. Jews are represented in the provincial legislatures, the House of Commons, the Senate, the Judiciary (eg, the late Supreme Court Chief Justice BORA LASKIN) and have served or are serving as members of the provincial and federal Cabinets.

David LEWIS, former leader of the national New Democratic Party, was of Jewish origin. Jews have also figured prominently in the Canadian labour movement; the Jewish Labour Committee, formed shortly after WWII, promoted human rights legislation in Canada. About 17 000 Canadian Jews served in the Canadian armed forces during WWII.

**Group Maintenance** Ever since the biblical origin of the Jews and throughout their history — including their history of migration and resettlement in various countries — religion has been the major force of group cohesion, not only as a faith but as the fountainhead of education and social and communal organizations.

Three major historical events have affected the Jews during the 20th century: intensive migration, which resulted in the formation of new or enlarged communities in N and S America, Australia, Africa, the UK, France and Israel; the decimation of the Jews during the Nazi persecutions and WWII; and the establishment of the state of Israel in 1948, which posed a number of political, social and economic challenges to Jewish communities throughout the world. Finally, Jews have had to face the difficulty of maintaining Jewish identity in a relatively open society during the transitional stage between generations. More and more Canadian-born Jews are identifying themselves by religion rather than ethnic origin, and English and French are replacing Yiddish as the mother tongue. Although the decline in formal religious identification with the synagogue has been replaced by other manifestations of Jewish identity, eg, identification with Israel, the task of Canadian Jewry is to evolve specific programs designed to aid the retention of Jewish values and cultural life.

JOSEPH KAGE

Reading: A. Horowitz, *Striking Roots: Reflections on Five Decades of Jewish Life* (1979); E. Kallen, *Spanning the Generations: A Study in Jewish Identity* (1977); H. Troper and I. Abella, *None is Too Many* (1982).

**Jiu-jitsu** is a martial art developed by the warrior class of Japan. The modern martial ways of Judo, Aikido, Hapkido, Nippon Shorinji Kempo and some systems of Karate-doh all have their roots in Jiu-jitsu. Jiu-jitsu is a generic or collective term which when translated means "the art of flexibility or adaptability." In Canada, in addition to a combat self-defence art, Jiu-jitsu is practised as a healthy and exciting sport at the provincial, national and international level. The Canadian Jiu-jitsu Association, founded in 1963 by Ronald W. Forrester, sent its black-belt team to Honolulu, Hawaii, in 1977 to win top honours in the first recorded international Jiu-jitsu team tournament. At the 1978 Canadian National Exhibition, the Canadian Jiu-jitsu black-belt team defeated teams from the US and West Indies; in addition, Canadian Jiu-jitsu athletes won the first 5 places in individual competition, male and female divisions. In 1981 the Canadian Jiu-jitsu team defeated the Florida State black-belt team by winning 7 matches out of 8. Jiu-jitsu now ranks as one of the most popular of the martial arts. RONALD W. FORRESTER

**Jobin, Louis**, sculptor (b at St-Raymond, Qué 26 Oct 1845; d at Ste-Anne-de-Beaupré, Qué 11 Mar 1928). In 1870, after 4 years of apprenticeship in Québec City and New York, Jobin opened his own studio in Montréal. He filled many naval and commercial orders: ships' figureheads, signs and furniture. Moving to Québec in 1875, he increasingly specialized in large religious statues in metal-covered wood for the exterior of buildings. He did many Calvary scenes, monuments to the Sacred Heart, and numerous angels and saints. The huge Notre-Dame-du-Saguenay statue (7.5 m) is his most famous creation of this period (1881). After an 1896 fire in his workshop, Jobin moved to Ste-Anne-de-Beaupré where, until his retirement in 1925, he continued to serve his religious clientele. Here he made his celebrated monument of St George on horseback for St-Georges-de-Beauce (1912). After his prolific 60-year career, Jobin was "rediscovered" by the anglophone and francophone intelligentsia, and his works are now much sought after by Canadian museums.

MARIO BÉLAND

**Jobin, Raoul**, teacher, administrator, civil servant (b Joseph Roméo Jobin at Québec C 8 Apr 1906; d there 13 Jan 1974). He was the greatest francophone tenor of his age. His studies, begun at U Laval, were continued in Paris. Throughout a long and fruitful career, he was frequently asked to interpret strong characters such as Samson, Don José and Lohengrin. He was first tenor at the Opéra-Comique de Paris during the 1930s before joining the Metropolitan Opera in New York (1940-50). He taught at the music conservatories in Montréal and Québec (where he was also director 1961-70). Cultural consultant with Québec's general delegation in Paris 1970-73, he was a knight of the Légion d'honneur in France (1951) and a companion of the Order of Canada (1967).

HÉLÈNE PLOUFFE

**Jodoin, Claude**, labour leader (b at Westmount, Qué 25 May 1913; d at Ottawa 1 Mar 1975). During the Depression he worked in the garment industry, becoming in 1937 an organizer for the International Ladies' Garment Workers' Union. Selected president of the Montréal Trades and Labour Council in 1947, he was elected VP of the TRADES AND LABOR CONGRESS in 1949. During 1953-54 he played an important role in arranging a "no raiding pact" between the TLC and the CANADIAN CONGRESS OF LABOUR, setting the stage for the complete amalgamation of the 2 by 1956. President of the TLC 1954-55 and 1955-56, he was selected first president of the new CANADIAN

*Trumpeting Angel*, woodcarving by Louis Jobin, whose works have been recently "rediscovered" and are in great demand (courtesy Royal Ontario Museum).

Claude Jodoin, first president of the Canadian Labour Congress, 1956-66. He was a strong proponent of Canadian labour unity (courtesy Public Archives of Canada/PA-116448).

LABOUR CONGRESS (CLC) in 1956, retaining the position for 10 years. Labour unity, in his view, was essential if organized labour was to influence the social, economic and political life of Canada and raise the standard of living of working people. Despite his early opposition to organized labour's involvement in politics, he supported the CLC's decision to back the NEW DEMOCRATIC PARTY in 1961.

M.D. BEHIELS

**Jagues, Isaac**, Jesuit missionary, martyr (b at Orléans, France 10 Jan 1607; d at Auriesville, NY 18 Oct 1646). Jagues entered the Society of Jesus in 1624. Sent to the Canadian missions in 1636, he was captured and tortured by the Iroquois in 1642. A year later, Dutch traders arranged his escape to France. Nevertheless, Jagues returned to Canada in 1644 and in 1646 volunteered for a peace embassy to the Iroquois. He was murdered that year on his second trip into Iroquois country. In 1930 Jagues and 6 other martyrs of the Huron missions were canonized. JOHN S. MOIR

**Johannsen, Herman Smith**, "Chief Jack-rabbit" (from his Cree name), ski pioneer (b at Horten, Norway 15 June 1875). One of the best all-round skiers in Norway during the early 1890s, he became a salesman of engineering equipment and made Montréal his headquarters in 1919. A pioneer in all forms of skiing, he cut alpine and cross-country trails all over the Laurentians and acted as an organizer, instructor, coach and official of international stature well into his nineties. A living legend in 1984, he remains a quick-witted and popular speaker on skiing and natural living. He is the patron of the nationwide "Jackrabbit" league, which introduces children to cross-country skiing. MURRAY SHAW

**John Labatt Corporation**, with head offices in London, Ont, is a management holding company which was begun as a small family brewery in 1832 by John Kinder LABATT. The company was incorporated in 1930 and became public in 1945. Today it has interests in 3 areas: brewing, packaged food and agricultural products. The principal company in the brewing group is Labatt Brewing Company of Canada; Laura Secord and Catelli are parts of the packaged foods group. John Labatt Corporation has also been involved, with Redpath Industries, in the Zymaze experiment, producing high-fructose syrup from corn. As of Apr 1983, it had \$1.9 billion in annual sales or operating revenue (ranking 43rd in Canada), assets of \$953 million (ranking 88th) and 11 000 employees. BRASCAN LTD holds 40% of the shares. DEBORAH C. SAWYER

**Johns, Harold Elford**, physicist, educator (b at Chengtu, W China 4 July 1915). Educated at McMaster and U of T, Harold Johns devoted his career to the application of physics to medicine and biology and to training students with similar interests. He is best known for his development of COBALT therapy units which revolutionized the radiation treatment of cancer worldwide, and for his pioneering efforts in a variety of areas of medical physics and photochemistry. His work was at all times characterized by the application of imagination and experimental skill backed by theoretical rigor to the solution of major problems, largely related to cancer diagnosis and treatment. An inspiring and enthusiastic teacher and lecturer, he was the initiator of Canada's first department of medical biophysics at U of T and gained international recognition for his research and educational efforts. He is author of numerous scientific papers and *The Physics of Radiology* (1961, rev 1970). GORDON WHITMORE

**Johnson, Byron Ingemar**, "Boss", businessman, politician, premier of BC (b at Victoria 10 Dec 1890; d there 12 Jan 1964). After service in WWI, Johnson and his brothers formed a building supply company in Victoria. Elected as a Liberal in Victoria in 1933, he was defeated in 1937. During WWII he was in charge of building RCAF airports in BC. In 1945 he was elected Coalition (Liberal) MLA for New Westminster and in 1947 succeeded John HART as premier. The coalition disintegrated in 1952 and Johnson was personally defeated in the election. His government introduced compulsory hospital insur-

ance and the retail sales tax, negotiated the Alcan agreement, promoted highway expansion and began extension of the Pacific Great Eastern Ry. PATRICIA E ROY

**Johnson, Daniel**, lawyer, premier of Québec (b at Ste-Anne-de-Danville, Qué 9 Apr 1915; d at the Manic Dam near Baie Comeau, Qué 26 Sept 1968). Elected Union nationale MNA for Bagot in the 1946 by-elections, he did not enter the Cabinet until 1956, when Maurice DUPLISSIS made him minister for hydraulic resources. Chosen party leader in 1961, he worked to reorganize the UNION NATIONALE by giving it a solid program and democratic structures. In 1965 Johnson published *Égalité ou indépendance* and had his party adopt the principle — political equality between the 2 founding peoples of Canada — that was his government's touchstone on the subject of constitutional reform. Having won power in 1966, the new premier continued and even accelerated the major reforms of the QUIET REVOLUTION; for example, he created the U du Québec and Radio-Québec and laid the foundations for the future health-insurance system. PM Pierre TRUDEAU strongly disagreed with Johnson's defence of Québec's interests in FEDERAL-PROVINCIAL RELATIONS and his search for a new constitutional arrangement. Johnson is the father of Pierre-Marc Johnson, a minister in the Parti Québécois government, and of Daniel Johnson, a Liberal MNA. DANIEL LATOUCHE

**Johnson, Edward**, tenor, opera administrator (b at Guelph, Ont 22 Aug 1878; d there 20 Apr 1959). After amateur experience in Guelph and success in a Broadway operetta, Johnson studied singing in Italy, made his opera debut in Padua in 1912 and for 8 years, calling himself Edoardo Di Giovanni, won a devoted Italian following. In 1919 he joined the Chicago Opera Co and in 1922 went to New York's Metropolitan Opera where for 13 seasons he remained one of its most highly acclaimed singers. During this period he made a few recordings. As the Metropolitan Opera's general manager 1935-50, Johnson expanded the company's repertoire and introduced to the public many of opera's most spectacular personalities. Retiring to Canada in 1950, he helped establish the Edward Johnson Foundation to support public music education. BARCLAY MCMILLAN

Reading: R. Mercer, *The Tenor of His Time* (1976).

Emily Pauline Johnson, the daughter of a Mohawk chief and an Englishwoman, best known for her poetry celebrating her Indian heritage. She is shown characteristically dressed as an Indian princess (courtesy Public Archives of Canada/PA-111473/Cochrane).

**Johnson, Emily Pauline** (she adopted the native name Tekahionwake, meaning "double wampum"), Métis poet, entertainer (b at Six Nations IR, UC 10 Mar 1861; d at Vancouver 7 Mar 1913). The daughter of a Mohawk chief and an Englishwoman, Pauline Johnson is best known for her poetry celebrating her Indian heritage, such as "The Song My Paddle Sings." Her work was well received by critics and popular with the public during her lifetime, but faded into obscurity after her death. Much of her writing might be seen as an early expression of NATIONALISM since it deals with Canadian themes. Between 1892 and 1910 she undertook a series of speaking tours in Canada, the US and England. She crisscrossed Canada, giving poetry readings in many remote settlements that saw few other forms of entertainment. Characteristically dressed as an Indian princess, she acted as a Canadian cultural ambassador throughout her travels. Her first collection of poems, *White Wampum*, was published in 1895, followed by *Canadian Born* (1903); *Flint and Feather* (1912); a volume of tales, *Legends of Vancouver* (1911); and a novel, *The Shagganappi* (1913). HARRIET GORHAM

**Johnson, Sir John**, soldier, Loyalist, public servant (b at Mohawk Valley, NY 5 Nov 1742; d at Mount Johnson, near Montréal 4 Jan 1830). He was the son of Sir William JOHNSON and heir to the Johnson family's massive Mohawk Valley estates. With the outbreak of the AMERICAN REVOLUTION, he moved to Montréal and organized and commanded the 2 battalions of King's Royal Regiment of NY, a Loyalist Provincial corps. In Mar 1782 Johnson was appointed to command the British Indian Dept, a position he held until 1828. He assisted in resettling the LOYALISTS, especially along the upper St Lawrence. Appointments to the legislative councils of Québec in 1787 and Lower Canada in 1796 followed. During the WAR OF 1812, he commanded the Six Township Battalions of Québec Militia. ROBERT S. ALLEN

**Johnson, Thorvaldur**, plant pathologist (b at Arnes, Man 23 Oct 1897; d at Winnipeg 15 Sept 1979). Johnson became Margaret NEWTON's assistant at the Winnipeg Rust Research Laboratory in 1925 and was its head from 1953 until his retirement in 1962. His chief work was the plant-disease survey, especially for wheat. Following the discoveries of J.H. CRAIGIE, a constant watch was kept for new varieties of crop-plant diseases, and genetic material was collected for C.H. GOULDEN to breed into new disease-resistant wheats. Johnson later wrote the standard history, *Rust Research in Canada* (1961), and an informal memoir of the rust laboratory and its staff 1925-67. DONALD J.C. PHILLIPSON

**Johnson, Sir William**, superintendent of northern Indians (b at Smithstown, County Meath, Ire c1715; d at Johnson Hall, near Johnstown, NY 11 July 1774). As a landowner and militia officer Johnson amassed a fortune in the Mohawk Valley, NY, and cultivated close relations with the Six Nations Indians. Superintendent of Indian Affairs, he solved a number of problems of Indian-white relations and led Indians and irregulars in several actions in the SEVEN YEARS' WAR, including at Lk George (1755), Ft Niagara (1759) and Montréal (1760). Johnson's second wife was Mary BRANT, sister of Joseph BRANT. CARL A. CHRISTIE

**Johnston, Francis Hans** (later Franz), painter (b at Toronto 19 June 1888; d there 9 July 1949). Among those who founded the GROUP OF SEVEN in 1920, Johnston was unusually well trained in academic practice, first at Toronto's Central Technical School with Gustav Hahn and at the then Central Ontario School of Art with William Cruikshank and G.A. Reid. After a stint at Grip Ltd in 1908, he studied at Philadelphia and

*Baichawana Falls* (1918), tempera on illustration board, by Frank H. Johnston, who participated in the Group of Seven's first show in 1920 (Collection of The Winnipeg Art Gallery, Ernest P. Mayer/Franz Johnston/Paul Rodrik Foundation).

did commercial work in New York before returning to Toronto in 1915. In 1917-18 he was commissioned by the Canadian War Memorials to record the activities of Canadian flying personnel training for overseas duty. Johnston's landscapes reflect his knowledge of turn-of-the-century ideals, being more atmospheric than those of the Group. The difference in ideology and technique may partially explain why he participated only in the Group's first show (1920). Johnston may have felt also that the adverse publicity generated by the show might affect his sales. He was principal of the Winnipeg School of Art (1922-24) and taught at the Ontario College of Art (1927-29).

JOAN MURRAY

**Johnston, George Benson**, poet, translator (b at Hamilton, Ont 7 Oct 1913). Johnston is best known for lyric poetry that delineates with good-humoured wisdom the pleasures and pains of suburban family life. After serving as an RCAF pilot in WWII and studying at U of T, Johnston joined the Dept of English at Carleton, where he taught until retirement in 1979. He is the author of *The Cruising Auk* (1959), *Home Free* (1966), *Happy Enough: Poems 1935-72* (1972), *Taking a Grip: Poems, 1971-78* (1978) and *Auk Redivivus: Selected Poems* (1981). His translations of poetry from Old Norse include *The Saga of Gísli the Outlaw* (1963), *The Faroe Islanders' Saga* (1975), *The Greenlanders' Saga* (1976) and *Wind over Romsdalen: Poems by Knut Odegard* (1982).

JAMES STEELE

**Joint Commission**, a mechanism used extensively by Britain and the US to settle bilateral disputes mainly of a technical nature. Bodies composed of one or more representatives from each country, occasionally with a neutral chairman, are appointed to collect the facts of a dispute and offer recommendations for its solution. The ancient principle of arbitration was revived in N America by JAY'S TREATY, 1794, which set up 3 commissions to resolve intractable British and American differences. One, identifying the "true" ST CROIX R mentioned in the TREATY OF PARIS, 1783, was outstandingly successful and began the use of mixed commissions to clarify the route of the Canadian-American border. The method was also applied to the determination of merchant-shipping losses in naval warfare and to disputes over the N Atlantic fisheries. When joint commissions failed, matters were referred to diplomatic negotiation (eg, ASHBURTON-WEBSTER TREATY, 1842) or to arbitration by a friendly power (eg, San Juan Is decision by the German emperor, 1872).

Following the US Civil War the practice began of referring a range of questions to a joint or mixed commission for simultaneous decision.

The most famous of these bodies was the 10-member commission (among whose members was PM Sir John A. MACDONALD) that resulted in the 1871 TREATY OF WASHINGTON. Another commission, meeting in Québec City and Washington 1898-99 and including PM Sir Wilfrid LAURIER and 2 Cabinet ministers among its members, failed to settle the ALASKA BOUNDARY DISPUTE. The most successful mixed commission has undoubtedly been the permanent INTERNATIONAL JOINT COMMISSION (1909). Joint commissions between Canada and the US have dealt with diverse topics: fisheries, defence, marking of the boundary and reconciliation of trade statistics. Parity of membership has enhanced Canada's standing in an asymmetrical relationship, and both countries have benefited from the disposition to solve problems constructively.

D.M.L. FARR

**Joliette**, Qué. City, population 16 987 (1981c), inc 1863 and as a city in 1918, is located 60 km NE of Montréal on the banks of the Rivière L'Assomption, close to the Laurentians and surrounded by a prosperous agricultural region. It was founded around 1824 by Barthélemy Joliette, seigneur de Lavaltrie, who wanted to become involved in the forestry industry. The lumber mill was one of the first buildings constructed. The town's economy diversified rapidly with the establishment of stone quarries and a foundry. Joliette himself sought to establish new businesses, including a distillery (1839) and a railway (1848-50). After his death in 1850, diversification continued and the town has always had a varied manufacturing base, ranging from food products to ceramics, textiles, tires, building materials and specialized metal products. As of 1847, a classical college drew students to Joliette from surrounding areas. In 1858 the town became a seat of the district court, and toward the end of the century built a hospital. Establishment of the Joliette diocese in 1904 confirmed the town as a regional service centre. Today Joliette still plays a dual role as a small industrial and service centre, with 2 hospitals, several educational institutions, a CEGEP, a museum of art and government offices.

JEAN-CLAUDE ROBERT

**Jolliet, Louis**, explorer, cartographer, king's hydrographer, fur trader, seigneur, organist (bap at Québec 21 Sept 1645; d near Ile d'ANTICOSTI late summer 1700), best known as the co-discoverer of the Mississippi. In 1656 Jolliet entered the Jesuit college at Québec where he studied for the priesthood and became an accomplished organist. He took his minor orders in 1662 but left in 1667 to become a fur trader. In 1672 he was chosen by Intendant Jean TALON to lead an expedition to determine whether the Mississippi, known from native accounts, flowed into the Gulf of Mexico or the Pacific Ocean. By 17 June 1673, Jolliet, with Father MARQUETTE and 5 others, was on the Mississippi and in mid-July he reached 33°40' N lat near the mouth of the Arkansas R, sufficiently far S to prove that the river flowed into the Gulf of Mexico. Upon his return to Québec, Jolliet was denied a fur concession he sought for the Illinois area and joined his father-in-law in a company trading at Sept-Îles. In Mar 1679 Jolliet was granted a trade concession at Mingan in the Gulf of St Lawrence to which Ile d'Anticosti was added in 1680. After an overland voyage to Hudson Bay in 1679 Jolliet concentrated on trade and fisheries at his concession until 2 raids by the English in 1690 and 1692 dealt him a financial blow from which he never recovered. Jolliet was commissioned in 1694 to chart the

Labrador coast, a task he accomplished to 56°8' N lat near the present Zoar. In 1697 he succeeded Franquelin as king's hydrographer and teacher of navigation.

C.E. HEIDENREICH

**Joly de Lotbinière, Sir Henri-Gustave**, lawyer, politician, premier of Québec 8 Mar 1878 to 31 Oct 1879 (b at Eprenay, France 5 Dec 1829; d at Québec C 15 Nov 1908). He represented Lotbinière in the Assembly of the PROVINCE OF CANADA 1861-67, in the Québec Assembly 1867-85 and in the House of Commons 1867-74. Leader of the Liberal Party of Québec from 1867, he was asked to replace BOUCHER de Boucherville as premier. Joly was unable to govern effectively, lacking majority Liberal support, and his government was defeated in the Assembly in the fall of 1879. He returned to federal politics in 1896 and joined PM LAURIER's Cabinet as controller (later minister) of inland revenue 1896-1900. He was lieutenant-governor of BC 1900-06.

**Jones, Alice**, writer (b at Halifax 26 Aug 1853; d at Menton, France 27 Feb 1933). Developing international themes and the "New Woman" figure in her novels, Jones counterpointed the superficiality of European life against the vitality of Canadian society and character. Besides short stories and travel pieces for periodicals, she wrote *The Night-Hawk* (1901, pseud Alix John), *Bubbles We Buy* (1903, repr in England as *Isobel Broderick*, 1904), *Gabriel Praed's Castle* (1904), *Marcus Holbeach's Daughter* (1912), and *Flame of Frost* (1914). In 1903 a reviewer in *The Canadian Magazine* called her "the leading woman novelist in Canada," a consideration encouraged by her practice of including Canadian characters and settings in her fiction even after she had moved to France in 1905.

GWENDOLYN DAVIES

**Jones, Douglas Gordon**, poet, literary critic, editor (b at Bancroft, Ont 1 Jan 1929). Jones ranks among the major lyric poets in English in Canada. He has written 4 books of poetry: *The Sun Is Axeman* (1961); *Phrases From Orpheus* (1967); *Under the Thunder the Flowers Light Up the Earth* (1977), which won the Gov Gen's Award; and *A Throw of Particles: New and Selected Poetry* (1983). Furthermore, his work as an editor of *ellipse* has been vital in making poets of English and French Canada mutually intelligible. Although chiefly inspired by rural Ontario and Québec, his work is not "nature" poetry, but rather a Taoist meditation on language, love and art whose roots are in Archibald LAMPMAN as well as Ezra Pound and William Carlos Williams. One of the crucial aspects of this poetry is its development from a central Canadian "garrison mentality" to neo-romanticism, expressed in the leitmotif of his book on Canadian literature *Butterfly on Rock* (1970) — "let the wilderness in." E.D. BLODGETT

**Jones, George Clarence**, naval officer (b at Halifax 24 Oct 1895; d at Ottawa 8 Feb 1946). Jones joined the RCN in 1911 and spent WWI at sea in British warships. From 1940 to 1942 he was commanding officer Atlantic coast, at that time the senior Canadian naval appointment on either coast. He became chief of the naval staff 15 Jan 1944, overseeing Canada's acquisition of major warships, including 2 cruisers and a light fleet aircraft carrier, and supervising the demobilization of the navy for peacetime. He died in office.

ROGER SARTY

**Jones, Hugh Griffith**, architect, artist (b at Randolph, Wis 3 Dec 1872; d at Montréal 16 Feb 1947). Trained in Minneapolis, he practised in Chicago and New York, and came to Montréal in 1908 to work as a designer and assistant chief architect for the CPR. One of the designers of Toronto's UNION STATION (1913-14), his outstanding achievement was a redevelopment plan for the downtown core of Montréal on property owned by the CNR; the plan occupied his in-

terest 1923-32 but was thwarted by the world financial slump. Besides enjoying a successful private practice, Jones received wide recognition for his watercolours and oils, examples of which are in the Montréal Museum of Fine Arts.

ROBERT LEMIRE

**Jones, John Walter**, farmer, politician, premier of PEI (b at Pownal, PEI 14 Apr 1878; d at Ottawa 31 Mar 1954). An unsuccessful Progressive candidate in the federal election of 1921, Jones was first elected to the provincial legislature as a Liberal in 1935. In 1943, following Premier Thane CAMPBELL's appointment as chief justice, he became premier. A student of agricultural science and a successful farmer, "Farmer Jones" championed rural interests. As premier he took on the powerful PEI Temperance Federation when in 1945 he favoured strict government regulation of intoxicants rather than PROHIBITION. When the Lt-gov, a prohibitionist, refused assent to the necessary legislation, Jones, characteristically, proceeded by ORDER-IN-COUNCIL. During a 1947 Canada Packers strike, his government, claiming to "protect the farm interest," seized the plant, employed scab labour and outlawed unions affiliated with national or international labour organizations. Colourful, outspoken and popular, Jones was appointed to the Senate in 1953. DAVID A. MILNE

**Jones, Peter**, or Kahkewaquonaby (Sacred Feathers), Methodist minister, chief, translator (b at Burlington Heights (Hamilton), UC 1 Jan 1802; d at Brantford, Canada W 29 June 1856). Son of a white surveyor and a Mississauga (Ojibwa) woman, he became the first native Methodist missionary to the Ojibwa after his conversion to Christianity in 1823. With his brother John, he prepared the earliest translations of the Bible from English into Ojibwa. Elected chief of 2 Ojibwa bands, he argued articulately for Indian land rights. His *Life and Journals* (1860) and *History of the Ojibway Indians* (1861) were published posthumously.

DONALD B. SMITH

Peter Jones was converted to Christianity in 1823 and became a missionary to his Ojibwa people. He prepared the first translation of the Bible into Ojibwa (courtesy Victoria University Library, Toronto).

**Jones, Richard Norman**, scientist (b at Manchester, Eng 20 Mar 1913). A British-educated specialist in infrared SPECTROSCOPY, which is used to elucidate molecular structure, he retired from 3 decades of service with the NATIONAL RESEARCH

COUNCIL in Ottawa 1978. Among his contributions was the harnessing of computers to refine instrumented spectrometric information. He was one of Canada's most "international" scientists, giving lectures and working on committees across the academic world. He developed strong links with Japanese colleagues and was a guest professor at the Tokyo Institute of Technology 1979-82. Having a historical bent, he has written illuminatingly on the origins and evolution of vibrational spectroscopy. His publications run to over 200 titles.

N.T. GRIDGEMAN

**Jones Case** (1975) In *Jones v A.G. of Canada and NB* the Supreme Court had to judge, among other things, the validity of the federal OFFICIAL LANGUAGES ACT (challenged by Mayor Leonard Jones of Moncton), which makes English and French the official languages for everything that derives from the Parliament and government of Canada, by granting their use equal status, rights and privileges in all institutions of Parliament and of the government in Canada. The judges unanimously found that by virtue of its residual power Parliament could enact such a measure.

GERALD-A. BEAUDOIN

**Jones Konihowski, Diane**, pentathlete, track and field coach (b at Vancouver 7 Mar 1951). Educated at Saskatoon, Jones first competed internationally for Canada in 1967, and has been a member of 3 Olympic teams since 1972, finishing out of the medals each time; she won gold medals in the 1975 and 1979 Pan-American Games pentathlon, and in the XI Commonwealth Games at Edmonton (1978) with a Canadian record 4768 points. Throughout her amateur career, she has spoken for Canada, athletes in general and women in sport.

TED BARRIS

**Jonquière**, Qué. City, pop 60 354 (1981c), inc 1975, is located at the confluence of the SAGUENAY R and Rivière aux Sables, 5 km W of CHICOUTIMI and 200 km N of Québec City. Regional metropolis of the Saguenay-Lac St-Jean area, the present city includes the amalgamated municipalities of Jonquière, Arvida, Kénogami and the parish of Jonquière. It was named after J.P. de Tanel, marquis de la Jonquière, governor of New France 1749-52.

As the industrial axis of the region, its history is closely tied to the history of big business, specifically to that of the Price and Alcan companies. An agricultural parish founded in 1847, Jonquière began developing in 1900 when a group of citizens built a pulp mill on the Rivière aux Sables. The mill was soon bought by William PRICE, who turned it into a paper mill. In 1911 the company built a larger paper mill near the town, which, like the town built to house its employees, was called Kénogami. By 1912 Jonquière was the major producer of newsprint in Canada. In 1925 the Aluminum Co of America (Alcoa, later ALCAN) built the aluminum plant that gave rise to Arvida on the plain between Jonquière and Chicoutimi. Arvida (from the name of Arthur Vining Davis, then president of Alcoa) was a fine example of a right-wing company town. Its 1926 charter contained many deviations from the Québec law for cities and towns. The company ran every aspect of the townspeople's lives, from the urban plant to education (the school board), sports and health. Besides factories, Alcan built a hydro station on the Saguenay near Jonquière, which was finished in 1931. During WWII Alcan boosted its production capacity at Arvida and built the Shipshaw hydro station, at the time the largest aluminum production centre in the Western world, a title it still holds. Basically an industrial centre, Jonquière began to change in the 1960s as services began to develop. Along with its commerce and professional services the city has since 1975 become home to the regional offices of a number of Québec government minis-

tries. As well, the Collège de Jonquière (1967), part of the CEGEP network, has an admirable reputation at the provincial level.

MARC-ST-HILAIRE

**Joual** is a type of Canadian French language. The term, often used pejoratively, derives from a colloquial pronunciation of the word *cheval* ("horse"), which came to symbolize this form of speech. Just as Canadian English is different from English spoken elsewhere, French in Canada is different from that of France. But the standard has traditionally been set in France alone. The more an individual's speech diverges from standard French (this usually depends on education), the more it is considered joual, but there is no clear dividing line between joual and simply Canadian French. Features such as *môé* (*moi*), *m'as partir* (*je vais partir*), *achaler* (*ennuyer*), and the extensive use of words borrowed from English are often construed to be joual; but such features are found in informal Canadian French in general.

The significance of joual is as much political and cultural as linguistic. The word was first given prominence in the early 1960s, at the beginning of the QUIET REVOLUTION, by André LAURENDEAU, editor of *Le Devoir*, and Jean-Paul Desbiens, author of *Les Insolences du Frère Untel*, who attacked the "incorrectness" of Québec French as one of the evils of their society. At the same time, many Québec writers, especially those of the review PARTI PRIS, began using joual in their novels, plays, poetry, radio and TV scripts, and popular songs. For the first time, a substantial proportion of such material was being written in the real language of the people, rather than in an aseptized, artificial French. Most of these works were set among the working class, and while joual enhanced the social realism, it also symbolized the degradation suffered by the people as a result of English Canadian economic and political domination. The joual movement was controversial: many believed that such language should not be made public. For that reason Michel TREMBLAY's play *Les Belles Soeurs* was refused a government subsidy for a European tour. Today "joual" is no longer a watchword. The role of a spoken variety of Canadian French in popular culture is firmly established.

SINCLAIR ROBINSON

Reading: M.M. Orkin, *Speaking Canadian French* (1971); Sinclair Robinson and Donald Smith, *Practical Handbook of Quebec and Acadian French* (1984).

**Journalism** is the occupation of a diverse group of people who earn their living by writing or editing material of current interest for dissemination via print or electronic media. The libertarian norms of "freedom of the press," the unofficial status of a "fourth estate," and the notion that modern society is greatly influenced by the content of the mass media all suggest an impressive and privileged role for the journalist in Canadian society. In an age of mass media administered by corporate executives, and rapid advances in electronic communications, the character of journalism is by no means simple to define.

Journalism has always been conditioned by a series of institutional constraints: the state, the party system, the business imperatives of MEDIA OWNERSHIP, and the impact of technological innovation. These factors have interacted throughout the development of Canadian journalism to condition the standards, style, social status and freedom of journalists. The professionalization of journalism is best understood as a historical process in which journalists responded to these various constraints with a variety of strategies to defend their group integrity. This process, however, has not amounted to a simple progression towards "freedom of the press." Instead, escape from one institutional constraint has led to a new one, usually more

subtle and posing even greater problems to the ideal of professionalization.

As a colony of the centralized Bourbon monarchy of France, NEW FRANCE was not allowed a printing press before 1760. Journalism came to NS in 1751 in the wake of the British expedition to found Halifax, and to Québec in 1764 after the British conquest. The character of publishing and the nature of society, however, provided little scope for journalists. Most of the population was still illiterate and circulations were small. The typical journalist was usually a publisher, editor and printer all in one. The weekly newspaper "gazettes" that developed were dependent on government printing for revenue. Journalists were subject to arbitrary arrest and they often had to post bond to ensure good behaviour. A publisher could be convicted of criminal or seditious libel merely for criticizing public officials.

In an age of revolution abroad and political reaction at home, the outspoken journalist was associated with rebellion, sedition and treason, an impression reinforced by the defection of Joseph Willcocks to the Americans in 1812. Colonial elites looked upon the press as a convenience of the state, otherwise intolerable. The suppression of *Le Canadien* and the imprisonment of Pierre Bédard and François BLANCHET in 1810 is just one example of this intolerance. Most journalists, however, accepted state patronage, toed the official line, and served a faction of the ruling oligarchy.

The libel case of Joseph HOWE in 1835 established the press as a vehicle of legitimate dissent in Canada. Impatient with the slow pace of reform, Howe used his paper *The Novascotian* (acquired 1827) to criticize public policy and the magistrates who administered it. He was sent to jail and indicted for criminal libel. At his trial, he gave an impassioned defence of a free press and submitted evidence substantiating his allegations. Although he was clearly guilty, for the only issue of law before the court was whether or not he had published the defamatory remarks, the jury nonetheless acquitted Howe. The real and psychological threat of criminal libel that colonial regimes had held over the heads of publishers was now practically removed.

Further augmenting journalistic independence was the growth of commerce, literacy and the mechanization of printing. Colonial society began to experience serious tensions that gave rise to competitive political parties, first in LOWER CANADA, after 1800, then in UPPER CANADA in the 1820s, and later in the Maritime colonies. Political conflict gave scope for the newspaper as a vehicle for dissent, a ready readership for such "opinionated" journalism, and the backers necessary to supply operating capital when necessary. In this changed environment, journalism began to take on a different character. The chief offering of the mid-Victorian press was opinion, usually partisan. Partisan or not, the Victorian journalist entered his "profession" because he had something to say. It might be William LYON MACKENZIE attacking the FAMILY COMPACT, or Egerton RYERSON defending the dissenting majority of Upper Canada in his *Christian Guardian*. "Personal" journalism flourished.

Individuality in journalism was often achieved at the expense of profit for the paper. Even large dailies were short-lived before Confederation. In the face of commercial uncertainties and the heat of political battle over RESPONSIBLE GOVERNMENT, journalists readily allied themselves with political parties. George BROWN, eg, was encouraged by the Reform Party in 1844 to start the *Toronto Globe*. He employed the *Globe* as a party organ to expand readership, and thereby to attract advertising revenue. The influence BROWN gained as publisher helped consolidate his position as leader of the recon-

stituted Grit Reform Party after 1854, which in turn gave him tremendous editorial freedom as a journalist. Other successful newspaper entrepreneurs such as Edward Whelan of the Charlottetown *Examiner* or Etienne PARENT of *Le Canadien* exercised influence and enjoyed editorial latitude through their combined role of publisher-politician.

The payoffs of the party connection were real enough: partisan publishers gained access to patronage, power, even office. The progressive revision of libel laws to limit the liability of journalists, the formative conventions of the PARLIAMENTARY PRESS GALLERY, and favourable postal rates for periodicals were all effected at the high tide of party journalism. Partisan journalism, however, meant biased reporting. The maverick publisher faced financial reprisals, boycotts, loss of patronage and the threat of a new party-sponsored rival.

Party papers only gradually asserted their editorial independence after Confederation, 1867, leaving the norms of partisan conformity at least outwardly intact until 1914. Yet, even in the pioneer communities of the West, dependent party publishers like Nicholas FLOOD DAVIN of the Regina *Leader* or FRANK OLIVER of the Edmonton *Bulletin* could offer quality in their news and editorial columns. Ultimately, party journalism did not prevent the achievement of better standards.

By the 1880s a revolution in the pattern of daily competition had begun. A new type of paper, the "people's journal," was developing in industrial cities to win a mass readership. Their style varied greatly, but they abandoned close affiliation with political parties and emphasized not opinion but news, especially sensational news. They were challenged by revamped quality papers, such as the *Montréal Gazette* or the *Toronto Mail*, which strove to win an elite readership by offering extensive coverage of political and business affairs. The dailies separated the functions of reporters, desk men, city and news editors, and columnists.

The personnel of journalism was changing in other ways as well. By the turn of the century, the increased complexity of the newspaper enterprise had encouraged the appearance of professional editors, such as John W. DAFOE of the *Manitoba Free Press*. The poorly paid reporter became the workhorse of the 20th-century newspaper office, and job pressures weeded out all but careerists. At the *Toronto Star*, Joseph E. Atkinson experimented in recruiting a few university men. Women were also able to gain entry into journalism, as Kit Coleman at the *Mail and Empire* and Edouardina Lesage ("Collette") at *La Presse*, eg, started their careers in the new "women's sections" (see CANADIAN WOMEN'S PRESS CLUB). E. CORA HIND, agricultural specialist of the *Manitoba Free Press*, and Simma Holt, crime reporter for the Vancouver *Sun*, found other ways to establish reputations.

The initiative in creating the original people's dailies was taken by individual entrepreneurs. Publishers were still people with something to say — and many failed precisely because they considered what they had to say more important than profits. Those who found a balance became the characters of their age: Hugh GRAHAM of the *Montréal Star*, E.E. Sheppard of the *Toronto News*, Wilson and Harry SOUTHAM of the *Ottawa Citizen*, and Joe Atkinson of the *Toronto Star*. Among the weeklies of the western frontier, Robert (Bob) EDWARDS of the Calgary *Eye Opener* (1902-22) and Margaret (Ma) Murray of the Bridge River-Lillooet, BC, *News* gained national notoriety.

The growing business imperatives of newspapers altered the conventions of the old party journalism. In Montréal, the sensationalist *La Presse* (1884) of Trefflé Berthiaume almost wiped out the old-style dailies. Party organs imitated

"Ma" Murray (courtesy Provincial Archives of British Columbia/60425).

the people's journals to survive. Beneath the gloss and diversity of the new popular style, however, a second more subtle revolution was occurring which proved more fundamental in shaping journalism as a profession: the industrialization of newspapers into big business. In the face of rising costs and factionalized advertising revenues, the chief imperative of all newspapers was to find the formula to maximize readership and attract the most advertising. Papers that fell behind were doomed to extinction. Between 1914 and 1931, the trend was established for the single newspaper city and the newspaper chain. Successful publishers became associates of the corporate elite. The model of journalism based on the "independent" editor-publisher was clearly obsolete.

Ironically, journalism as a profession had only escaped its partisan master to face a new order of big business. By the 1920s big-city dailies settled down in their rationalized markets to a superficial formula of day-to-day headline journalism. The rough edges of personal idiosyncrasy were smoothed away and newspapers came to be more and more alike. The scoop, the stunt or the human-interest story substituted for editorial character. In this atmosphere a new ideal of objectivity or balanced coverage defined the professional ethos of career journalists, though the ideal was honoured no more consistently than the "principled" standards of the personal journalism it had superseded.

The triumph of a business ethos at big-city dailies prompted a variety of strategies to achieve a new degree of professionalism. The Canadian Press Assn and its successor, the Canadian Daily Newspapers Assn, were effective publisher lobbies which helped to rationalize the business side of newspapers; they also contributed to the defence of publishers' prerogatives in such classic challenges to freedom of the press as the arbitrary Alberta Press Act of 1937. (see ALBERTA PRESS ACT REFERENCE) John M. Imrie of the EDMONTON JOURNAL received a Pulitzer Prize for leadership in the fight.

News services developed at the initiative of publishers, CANADIAN PRESS, eg, emerging out of a rebellion of western newspapers against the Canadian Pacific Telegraph Co. By 1923 CP had become a nationwide co-operative of member papers, controlling the rights to the Associated Press world report. CP and its rivals were influential in developing the contemporary ideal of objective reporting, as they sought to serve an

CBC radio reporter (later premier of Québec) René Lévesque, interviewing a soldier during the Korean War, 14 Apr 1951. Many of Canada's leading political figures, from W.L. Mackenzie and Henri Bourassa to the present day, began their careers in journalism (courtesy Public Archives of Canada/C-79009/DND Post-WWI Collection/MacLean).

editorially diverse constituency. Also conducive to professional standards after 1900 was the Press Gallery which, by the 1920s, had become a voluntary, self-governing body. Admission gave entry to a competitive "jungle" in which political reporters sharpened their investigative skill.

By the mid-20th century the tempo of change accelerated. Journalism was transformed by the internal need of working journalists to develop new strategies to define role and status, and the external pressure from the communications businesses to find a successful formula in the competition for advertising. With the advent of television in the 1950s, old newspaper formats no longer assured a market share. In the resulting uncertainty, journalists found greater latitude for initiative. The PIPELINE DEBATE of 1957 seems to have been a turning-point, at which the Press Gallery began to act like a public watchdog, criticizing the government. Canadian political journalism (Jack Scott, Bruce Phillips, Douglas Fisher, Charles Lynch) suddenly became "opinionated" again — but this time in an adversary role with the politicians. Public-affairs programs on television, whether a newsmagazine such as "This Hour Has Seven Days" or a special documentary like "Air of Death" (1967), were particularly prone to editorializing about perceived public wrongs (see TELEVISION PROGRAMMING).

Technology gave greater latitude to the photo, film and broadcast journalists. René LÉVESQUE, eg, capitalized on the novelty of television to launch himself as a media star and leading personality in Québec politics. Gordon Sinclair settled for media stardom and personal wealth by simultaneously pursuing careers in 3 media.

The expanded opportunities for journalists did not translate into an improvement of working conditions, and journalists turned to union organizations to deal with problems of poor pay and job security, irregular hours and arbitrary management. The most successful union was the American Newspaper Guild (ANG), which signed its first collective agreement with the *Toronto Star* in 1949. By 1960 union rates, if not

unionization, set the standards for the industry.

French Canadian journalists, following the bitter strike of French-speaking CBC personnel in 1958-59, became the militant vanguard. The radical idea of using collective bargaining to achieve editorial independence for staff members, however, was defeated in the bitter strike at *La Presse* in 1964. Though the 1969 contracts at *La Presse* and *Le Soleil* contained "professional clauses," the legal language deprived them of much substance. Declarations of editorial policy at management initiative, eg, at the *Toronto Star*, provided the most ambitious professions of standards in the industry, but could not resolve the tension between working journalists and the management of mass media organizations. A survey of Canadian journalists at major dailies in 1973 showed that 50% of those surveyed had their copy altered significantly without prior consultation. Unionized journalists took compensation in better working conditions, hours and pay, and thereby attracted a new generation of university graduates, including women, into its ranks.

After WWII some universities in Canada introduced courses in journalism. Carleton U and Ryerson Polytechnical Institute established the first full undergraduate programs, while U of Western Ontario became an innovator in specialty seminars and graduate programs oriented to working journalists. In 1968 Laval U introduced journalism in Québec universities. By the 1970s dozens of universities, community colleges and CEGEPs offered an array of diplomas, certificates and degrees in communications studies or journalism. By 1983, 10 universities offered graduate programs. The changes in educational standards were evident by 1973: over 40% of working journalists at city dailies had a university degree of some kind.

By the 1960s journalists had become more self-critical about their craft. Organizations of working journalists, eg, la Fédération professionnelle des journalistes du Québec or the Institute for Investigative Journalism, provided a forum for journalists to develop a common sense of professionalism, as did radical "alternative" magazines such as *Content*. A few newspapers and the CBC (after 1967) provided training programs, though these initiatives were weakened rather than strengthened by community college programs. Some newspapers initiated summer training schools for select university undergraduates. Since 1962 the Southam

chain has offered fellowships for a year of study at U of T, and by the 1980s journalists were often granted a leave of absence to further their formal university studies.

The trends in unionization, university education and professional development contributed to a rising debate about the role of the press and its freedom. Critics came up with a variety of catch phrases to rationalize a new degree of professional independence and indict the status quo. Under the influence of communications theory, newly affluent journalists became self-conscious about bias created by "snailwords," social class, or "pack journalism"; their ideological role as gatekeepers; and the behavioural effects of the mass media. Proposed reforms included advocacy journalism, investigative reporting and the more radical notions of an alternative press, "staff democracy," or reporter control. The New Journalism, however, was far less radical than the rhetoric would imply. Compromise on standards was made possible by the technological nature of the new media environment. Efficient use of news-gathering technologies required some delegation of authority and editorial independence, at least to the more experienced reporters. Moreover, changes in technology made it imperative to find journalistic formats that attracted the attention of a more affluent and sophisticated audience. See also MAGAZINES, NEWSPAPERS.

**Juan de Fuca Strait** is an inlet of the Pacific Ocean between VANCOUVER I and Washington state, connecting the Str of GEORGIA and Puget Sound to the outer ocean. The international boundary with the US follows its 160 km length. Tides are complicated and dangerous for ships using it to approach mainland harbours. It was named for mariner Juan de FUCA, whose voyages to the area were likely apocryphal. In 1787 the trading captain Charles Barkley entered the strait and named it. For many years it was considered a possible entrance to a NE passage to the Atlantic.

DANIEL FRANCIS

**Judaism** is the religion of Jews. Canadian JEWS, with few exceptions, find their religious heritage in Rabbinic Judaism, which emerged after the destruction of the Temple in Jerusalem in AD 70, an event precipitated by a Jewish revolt against the Roman Empire. By the 7th century Rabbinism was the religion of virtually all Jews in the Middle East, N Africa, Asia Minor and Europe. It remained the dominant form of Judaism there through the late 19th and early 20th centuries, the period of massive immigration of Jews to N America.

The Rabbinic Judaism of the immigrants had provided them in their homelands with a comprehensive cultural system. According to the ancient rabbis (teachers; religious leaders), the God of Israel, YHWH, having made a covenant with the ancestors of the people of Israel, vouchsafed to Moses on Sinai a dual revelation (Torah). One, in written form, they hold, is the Pentateuch (the first 5 books of the Hebrew Bible); the other Moses communicated orally to the first of successive generations of Israel's (religious) leaders. The rabbis claim religious "mastery" because of their knowledge of the whole Torah. Although their writings — the Mishnah (oral law recorded about 200 AD), the Palestinian and Babylonian Talmuds and subsequent codes and commentaries — are expressions of Torah, ultimately Torah resides in the persons and pronouncements of rabbis and their disciples. The content of this whole Torah of Moses, "our Rabbi," is open-ended; under the authority of the rabbi's Torah come not only such matters as prayer, synagogue ("house of assembly") and

religious fasts and festivals, but also family, business, civil and criminal law, and the court system by which these are legislated and enforced. Thus the Rabbinism of the immigrants provided them with all requisites of religion, society, and culture.

The N American context provided Jews and Judaism with a cogent challenge. Free and open participation by a Jewish minority in N America's secular society (overwhelmingly indebted to Protestantism for its culture) meant relegating their life as Jews to something other than an all-encompassing cultural system. This was now defined by the Canadian and N American milieus, in which a reasonable level of participation was not only desirable but a requisite of economic survival. Canada was and remains a society in which cultural differences are permitted, even encouraged. But societies depend for their cohesiveness upon shared values and lifestyles. The costs of not conforming are social prejudice and limited economic opportunity. Insofar as Jews overwhelmingly opted to remain, in some significant sense, Jews, and to contribute fully to, and benefit from, Canadian life, they have adopted distinctive definitions of "Judaism" and "Jewishness" — all by means of an unofficial consensus, without regard to the authority of tradition, which is vested in the rabbi.

Canadian Jews generally practise Rabbinic Judaism highly selectively. Rabbinic legal injunctions (the *halakhah*, the "way") concerning such matters as refraining from all labour on the Sabbath and on festivals (New Year, Day of Atonement, Booths, Passover, and Pentecost) seem little honoured. So too are dietary laws, injunctions regarding daily prayer, distinctive dress, menstrual taboos, regular study of Torah and the like. Most laws governing business and the courts have been laid aside in deference to Canadian law and jurisprudence. Synagogues as the locus for communal prayer suffer infrequent and sporadic attendance, although formal affiliation through membership dues remains relatively high.

That Jews have abandoned much of their traditional religion is not surprising; most Canadians have done so. Nevertheless, Canada's Jews appear remarkably persistent in those parts of their traditional religion they do practise. For example, prayer services on the New Year (Rosh Hashanah) and Day of Atonement (Yom Kippur) see heavy attendance, along with fasting on the latter. Whereas laws pertaining to the Passover (Pesach) may not be observed, the family service and feast (*seider*) marking the first 2 eves of the Passover find widespread participation. Many families still gather at a Friday evening meal ushering in the Shabbat (Sabbath), although Sabbath observances are honoured by relatively few Jews. The festival of Hanukkah, commemorating the successful Jewish revolt against the Seleucid Empire in the 2nd century BC, also retains a considerable following. Further, there is general consensus among Canadian Jews that they should marry within the faith, even though intermarriage is increasingly common.

The consistency in what has been selected for continued observance is explained in part by Canadian Jewry's commitment to participation in N American life. Traditional practices which impinge upon an "appropriate" level of participation in Canadian life have been abandoned. But Canada's Jews remain Jews and wish to invest that identity with some transcendent, or religious, legitimacy and meaning. Hence, most contemporary Jewish practice stresses the importance of family and people. In all the retained ritual activity, Jewish peoplehood and its constituent unit, the Jewish family, are endowed with ultimacy. God and Torah seem either conspicuously absent or carefully hidden.

This selective practice has its counterpart in other activities recently incorporated into the "religion of Jewish peoplehood." The destruction of European Jewry in WWII's Holocaust and the establishment of the state of Israel have come to constitute powerful symbols to Canadian Jewry of the "eternity" of the people, guaranteed by a deity of whom few Jews will speak. Thus a mythic Israel (not entirely identified with the political state) appears a phoenix rising out of the ashes of Auschwitz (one of the most notorious death camps, where millions of Jews were killed), the ultimate symbol of those forces bent upon destroying the people. These events function as sacred stories, endowing Jewish peoplehood with transcendent meaning, but the actual events that brought about both the mass murder of Europe's Jews and the politics of Israel have relatively little significance. Thus, Holocaust Memorial Day (and the functions related to the Holocaust) and Israel's Independence Day have come to constitute major "religious" commemorative festivals for Canadian Jews.

In sum, the dynamics of the religion of Canada's Jews lie in 2 principal commitments: first, to full participation in Canadian life and society; second, to retention, in some significant way, of the Jewish identity.

**Institutions** Canadian Jewish institutions are both instruments for the realization of ideas selected from European and N African rabbinical traditions, and a social reality in themselves. Belonging to virtually any Jewish group, which may range from a weekly bridge club to a Zionist association or a Jewish hospital, has become a definition and measure of being Jewish. Statistics are not available, but participation is high.

Jewish religious organization in Canada is not limited to the spiritual, to Torah learning, or to the ritual. It reflects communal, social and educational, as much as theological, concerns. This is true of synagogue membership and even of its leadership. From 1770 to 1860 each local community established one synagogue. Montréal alone had 3 by 1882. In the 1880s, with the strong informal organizational traditions of the great migration, orthodox congregations in Montréal, Toronto and Victoria multiplied beyond record. By the mid-1920s there were many more congregations than now remain.

Schoolchildren viewing Old Testament scrolls at the Machzikel Hades Synagogue in Ottawa. The synagogue is a focus of Jewish tradition (courtesy Canapress).

After WWII congregations reorganized and consolidated, thus reducing the total number, despite increased Jewish population and a larger proportion of it willing to identify with a synagogue. In 1963 Max Bookman counted 210 Canadian congregations, but in 1982 there were 113 synagogues, 57 of them in Montréal, Toronto and Winnipeg, the rest in 40 other centres. Fifty-two are Orthodox, 45 Conservative, 15 Reform, and one (in Montréal) Reconstructionist. The distinctions are not rigid; there is a wide gradation, but no clear demarcation. There are no true denominations in the Christian sense, and all divisions are in communion. Each synagogue creates its own place in the order, as, in fact, does each Jew.

The synagogue is probably a greater focus for family life than it was in the past, and it is a major vehicle for Jewish culture and tradition. The cantor (one who sings liturgical music and leads a congregation in song and prayer) has won a key role which he has not had for 1000 years. Musicologists may find in the Canadian synagogue a very high quality of performance. In larger cities, synagogues (and to some extent their clergy) compete for congregations in a common pool of potential members — in a manner somewhat akin to the merchandising philosophy of consumerism; frequently the product is bland and noncontroversial. The ancient decisive role of custom and consensus has dominated, but probably for the first time it has been a popular, not a learned, consensus. The rabbi has taken to pastoral and organizational work and to sermonizing frequently. He speaks in the language of contemporary sociology, not that of Talmud studies. In the Canadian synagogue there is not a deterioration but a new Jewish religious civilization slowly taking shape.

The centrality of Jewish organization dates mainly from the 17th-century Hassidic revolution and the emergence of secularism. In the new world of industrialization, cosmopolitanism and other concomitants of the American and French revolutions, the survival of Judaism could not depend solely on the expectation of divine intervention or on patient suffering of cataclysmic violence. From western Europe Judaism imported the fundamental philosophical value of organizing information, and of organizing a disunited society as an instrument of action. To counteract geographic dispersion, poverty, anti-Semitism and even the lack of a common language, the communal ideal of vol-

untary organization arose. This inspiration led to the Zionist organization to restore statehood, the syndicalist Bund to bring nearer the other messianic objective of justice and equality, and other organizations. Since Jewish communities in the New World either were formed by migration of secularists or were quickly secularized, it was here that this philosophy flowered.

In Canada, local structures for voluntary self-taxation, such as the United and Combined Jewish appeals and welfare funds, enroll citizens for voluntary effort and financial contribution. This structure reaches nearly every Jewish citizen above the level of social aid recipients. The oldest such agency, the Hebrew Benevolent Society of Montréal (later Allied Jewish Community Services), was founded in the 1860s when a wave of eastern European migrants arrived. This group's prevailing civic religion altered, as it became ever more integrated into Canadian middle-class society, and its ethic moved from the religious to the philanthropic. Simultaneously, power and honour within the community moved from learning and piety to participation in organized services.

The Toronto, Winnipeg, Victoria and Saint John experiences were similar. At present their UJAs comprise nearly all the agencies dealing with the Jewish community's needs, from welfare to libraries and legal aid. That community's representatives apportion large budgets, study performance and, in effect, constitute the agencies' executive. In Canada, where the state is deeply involved in social work, contact with the political machinery is inevitable. The people selected for these processes must be devoted, skilled and trusted. They clearly constitute an elite, constantly required to justify their appeals to the total voluntary community.

The need for efficiency in communal concerns justifies the enrolment of available talent, regardless of individuals' commitment to the society's fundamental principles. But mobilization of "useful" manpower helps to cement more and more persons into organizational structures, thus strengthening the Jewish community and the (secular) Jewish identity of individual participants. This condition has opened participation and leadership in the community to women, who form a large talent pool. The National Council of Jewish Women, an old parallel to the Canadian Council of Women, has been influential from coast to coast. The Jewish Council of Women has for decades searched out the vanguard of social thought and has worked to introduce hitherto neglected areas of welfare.

Canadian Jews also consider themselves well served nationally by the Canadian Jewish Congress (f'd 1919). This body deals with nationwide responsibilities, eg, co-ordinating immigrant reception, advancing civil rights, sponsoring historical interests and acting for Canadian Jewry on perennial international questions, especially those related to Israel. The congress works closely with the World Jewish Congress and other such institutions. The democratically structured CJC comprises representatives of Jewish groups across Canada. At its triennial plenary sessions virtually every Jewish man and woman has full opportunity of expression and is represented on its committees.

Another national organization is the B'nai B'rith, with both men's and women's chapters. It advances general Jewish causes and co-operates in adult education, welfare, camp programs and combating anti-Semitism. Because of its large membership it exerts some influence in the community, but it shuns controversy and does not pretend to innovation. Jewish Immigrant Aid Services is atypical in being an independent service organization, formulating and executing its own programs nationwide, though it co-operates closely with related agencies. Another structure independent of the cen-

tral network is that of the Young Men's and Young Women's Hebrew associations (parallel to the YMCA and YWCA), with large memberships, broad programs and long traditions.

The Zionist movement is central in importance. It began with the thesis that scattered persons, by uniting, propagandizing and structuring their adherents, can accomplish politically what 2000 years could not achieve through communion, prayer and traditional communication. Zionism has had a simple purpose: to establish a publicly assured Jewish state in Palestine. Its history in Canada has involved gathering disparate Canadian Jews and forming local groups; raising funds; pleading with the outside world; and winning more and more of the Jewish community until the state took shape. Organization in Canada came early — even before Theodore Herzl crystallized the world movement in 1896. Remarkably, Canadian Zionists had broad support. The movement's structure was largely "political," divided along lines parallel to the division in world Zionism: labour Zionists (Po'alei Zion), religious Zionists (Mizrachi) and free enterprise (General) Zionists, each group engaged in such ideological programs but all supporting the advancement of the Jewish state.

The sectarian programs are still vigorous, notably the women's institutions such as Hadassah-WIZO and Pioneer Women (labour-oriented). But since WWII Zionism has become central, and Israel is conceived generally as essential to Jewish survival. Dissidents are hard to find. Although there are extensive organizations devoted entirely to Zionism, the major Canadian contribution to the Jewish state is provided not by strictly Zionist institutions, but by the total organizational structure of the community.

It is in education that the voluntary and democratic options of organization have their widest range. Every parent must decide whether his or her child is to receive training for living as a Jew, the nature of this education, and the relation between it and the Canadian provincial curricula. These questions, complicated by unavoidable ideological problems, have faced Canadian Jews (as they have, in some ways, faced Canadian Roman Catholics) for 2 centuries, and have evoked imaginative resolutions. Historically, solutions have included private tutors (*melammedim*), exclusive private schools and sections in established schools, universities and other institutions. Until recently, special schools (Talmud Torahs) have operated after public school hours. The children learn Hebrew, the Bible, religious practices and traditions, Jewish history and current affairs. Although many such schools are now in systems, a number continue to operate independently, and here Yiddish has remained a factor; Canada has been among the world pioneers in Yiddish education and literature.

Over 50 years ago Jewish day ("parochial") schools ventured to provide an integrated double curriculum, combining Jewish and public system curricula within the traditional public school timetable. This daring program succeeded and was widely adopted. The Jewish system of day and afternoon schools is essentially private, but the community has virtually assumed the additional cost of public education, even as Jewish parents continued to pay school taxes. Some provincial governments have begun contributing to the public education programs of Jewish day schools. See also JEWISH WRITING.

JACK N. LIGHTSTONE AND DAVID ROME  
Reading: B.G. Sack, *History of the Jews in Canada* (1965).

**Judicial Committee of the Privy Council**, a British institution, until 1949 the court of final appeal for Canada. Drawn mainly from persons who had held high judicial office in Britain,

with a sprinkling of Commonwealth judges, its authority rested on British statute and on the royal prerogative. An unsuccessful attempt was made by Canadian Justice Minister Edward BLAKE to abolish appeals to the Judicial Committee when the SUPREME COURT OF CANADA was established in 1875. Nevertheless, appeals in criminal cases were abolished in 1888, a limitation that existed until 1926, when it was held invalid. The STATUTE OF WESTMINSTER (1931) gave Canada the authority to re-enact the regulation. WWII delayed the movement for completely ending appeals, but in 1949 an amendment to the Supreme Court Act transferred ultimate appellant jurisdiction to Canada.

Arguments against the appeal to the Judicial Committee rested on the claims that it was demeaning for Canada to have to go outside the country for final judicial decision, that the Privy Council was poorly equipped to consider problems of Canadian federalism, and that the committee had misinterpreted the BNA Act in many of its more than 170 constitutional judgements. See also CONSTITUTIONAL HISTORY. D.M.L. FARR

**Judiciary**, judges of the courts, collectively; also, the branch of government in which judicial power is vested. Judges are public officers appointed to preside and administer the law in a court of justice. The CONSTITUTION ACT, 1867, provides for the establishment and operation of Canada's professional judiciary. It gave exclusive lawmaking power over CRIMINAL LAW and CRIMINAL PROCEDURE, but not over criminal courts, to the federal government, and exclusive lawmaking power over the administration of justice in each province to the provinces. The federal government appoints the judges of the SUPREME COURT and the FEDERAL COURT, and under section 96 of the Constitution Act it also appoints judges to some provincial courts. Sometimes referred to as "section 96 judges," they sit in the provincial Supreme Court or Court of Appeal or in equivalent courts such as the Court of Queen's Bench, the Divisional Court or the Superior Court. Provincial or municipal governments appoint judges of provincial lower courts, magistrates, justices of the peace, coroners, sheriffs and other officers of provincial courts. Provincially appointed judges deal with both provincial and federal legislation.

Whether it presides over criminal prosecutions or civil lawsuits (see CIVIL PROCEDURE), the role of the judiciary is to serve as an impartial arbiter. The court's impartiality flows from the essential feature of our judicial system — independence of the judiciary. Although the judiciary is sometimes regarded as equal to the executive and legislative branches of government, and although appointment, removal and remuneration of judges are dependent upon the other branches, the quality of justice to which Canadians are accustomed can only be maintained if an independent judiciary is jealously guarded. The notion of judicial independence has been shaken by some provincial court judges who have refused to rule on various cases, claiming they are not independent of the provincial government, which sets their salaries and working conditions.

The Constitution Act and the federal Judges Act provide the basis for the appointment, removal, retirement and remuneration (including matters such as pension) of federally appointed judges. Similar provisions contained in various provincial enactments which vary to some extent, from province to province, exist for provincially appointed judges. Most federal appointments are made by the minister of justice after Cabinet consultation and approval, but some, eg, to the Supreme Court and to the various chief and associate chief justiceships and judgeships, are made by the prime minister, again after Cabinet consultation and approval.

Prospective federal appointments are usually considered through the office of a special assistant to the minister of justice and are reviewed and rated by the Judicial Appointments Committee of the Canadian Bar Association. Provincial appointments are made by the attorney general of the province, after provincial Cabinet consultation and approval. Although there is no formal review by a Canadian Bar Association committee, in some provinces the attorney general appoints a judge only after consideration of the application by a special committee constituted for that purpose.

Federally appointed judges must be lawyers who have been members of a provincial bar for at least 10 years. Although "horizontal" appointments from bar to bench have been traditional, judges are now frequently elevated from a lower to a higher court. The composition of the judiciary is changing with the recent appointment of women, younger persons, academics and others. Provincially there is no minimum requirement of 10 years at the bar, and other eligibility rules vary among provinces. In some provinces prospective judges must have been members of the bar for 5 years, while in others they need not even be lawyers. Many police magistrates are retired members of national or local police forces. However, even in provinces where judges need not be lawyers, only lawyers are now appointed.

Federally appointed judges hold office during "good behaviour" and can be removed only by Joint Address of the House of Commons and the Senate. Under the federal Judges Act, however, matters not constituting good behaviour are given broad definition to include conditions such as senility. The Judges Act also created the Canadian Judicial Council, comprising the various federally appointed chief and associate chief justices whose president is the chief justice of Canada. The Judicial Council provides continuing education for federally appointed judges, makes recommendations to the minister of justice following investigation and review of complaints against them, and recommends, when appropriate, their removal. While no federally appointed judge has been removed this way, some have resigned in the course of or under the threat of the invocation of this impeachment process. Similar, but varying guidelines for judicial behaviour exist for provincially appointed judges. Some provincially appointed judges have been removed by an impeachment process which in certain provinces follows investigation and review by a provincial judicial council similar to its federal counterpart. Judges have been disciplined or removed for the commission of crime, moral turpitude or gross addiction.

Federally appointed judges hold office until their mandatory retirement at age 75 if they are serving on a superior court, or at age 70 if they are serving on a county or district court. After they have served 15 years on the bench and have reached the age of 65 or more, or, in the case of superior-court judges, after they have served 10 years on the bench and have reached the age of 70, they can partially retire or go "super-numerary," sitting on cases from time to time. The retirement age of provincially appointed judges (usually age 70) is set out in statutes creating the provincial courts.

The process of judicial appointment has always been surrounded with secrecy which has perpetuated the belief that political considerations influence the appointment of judges. It is widely held that to become a judge it is beneficial to be politically affiliated with the party in power — a fact generally regarded by the public in a somewhat negative way. However, a person should not be disentitled from a judicial appointment because of past political affiliation. This matter became the subject of

public debate during the 1984 federal election following a spate of PATRONAGE appointments by the outgoing Trudeau Liberals. Since the early 1970s, all federal judicial appointments are externally reviewed by the Judicial Appointments Committee of the Canadian Bar Association. This review served as a buffer against the usage of judicial appointments as political patronage. This procedure was not followed in a 1984 appointment and the CBA publicly expressed its concern and created a national committee to study judicial appointments.

Most newly appointed judges are persons trained and experienced in the law. A great deal is expected of them by society, yet they possess no superhuman qualities. In return for special legal and ethical constraints imposed upon them, society provides them with status, prestige and trust. Because they are also entrusted with the ultimate responsibility of adjudicating personal, sensitive, delicate and emotional disputes as well as resolving the major social, economic and occasionally political issues that arise in some legal contexts, the judiciary helps mold the social fabric governing our lives.

GERALD GALL

**Judique**, NS, UP, pop 925 (1981c), is located 189 km SW of Sydney, Cape Breton I. The name is likely of French origin, perhaps a corruption of the name for Judith. Judique is an administrative district extending along Cape Breton's western shore from Port Hood to Port Hastings and including several small settlements. Known for its green meadows and many fine inlets and coves, Judique was settled by Highland Scots who emigrated to Pictou, NS, in the late 18th century in search of unoccupied farmland and finally settled on Cape Breton I. Judique became a prominent Catholic centre in western Cape Breton during the 19th century owing to the uninterrupted residency of Catholic priests. The area depended on mixed farming and fishing for its livelihood, but poor docking facilities discouraged development of the latter; out-migration of Judique's youth led to agricultural failure. Today, there is a little fishing and forestry, but no major industries. DEBRA McNABB

**Judo** literally means "the gentle way." It is a sport developed from JIU-JITSU, a group of self-defence methods, but with certain harmful techniques eliminated or modified for safety's sake. Judo incorporates ethics, art and science into a sport which uses the opponents' strength against themselves. Judo was begun in June 1882 in Tokyo, Japan, by Dr Jigoro Kano in a small hall which became the Kodokan, the mecca of judo. Kano defined the purpose of judo as the training of one's mind and body to use energy efficiently, in competition and everyday life, toward the goals of physical development, contest proficiency and mental and moral development.

Around 1924 judo was introduced on the Canadian West Coast by pioneers such as S. Sasaki, first director of the Vancouver Judo Club. WWII moved many Judokas east of the Rockies, establishing new centres to practise the sport. Judo Canada, the governing body for the sport, was established in 1956. Each province has affiliated associations to help govern and promote judo. Participants are graded from 6th Kyu (white belt) to Ikkyu (brown belt) provincially, and from 1st dan (degree), or black belt, to 9th dan. The highest rank in Canada at present is the 8th dan.

Judo received Olympic recognition at the 1964 Tokyo Olympics, at which Doug Rogers won a silver medal for Canada in the heavy-weight class. Since then, Canada has been represented at all Olympics, world championships and Pan-American Games. Other highlights for Canada were the 1981 world championships

in Maastricht, Holland, where Phil Takahashi and Kevin Doherty both won bronze medals in the 60 kg and 78 kg classes respectively. Later Takahashi, Brad Farrow (65 kg) and Louis Jani (86 kg) won bronze medals at the 7th world university championships in Jyväskylä, Finland, August 1982. YOSH SENDA

**Jukes, Joseph Beete**, geologist (b near Birmingham, Eng 10 Oct 1811; d at Dublin, Ire 29 July 1869). Jukes had attended geology lectures at St John's College, Cambridge, graduating with a BA in 1836. In 1839 he became Newfoundland's geological surveyor and began a scientific search for mineral resources, prospecting many coastal areas. After a fruitless search he returned to England in Oct 1840. *Excursions in and about Newfoundland* (1842), a rich record of colonial Newfoundland society 1839-40, emphasized negative results and discouraged "rash speculation" in mining. In 1842 Jukes was appointed naturalist on a surveying expedition into Australasian waters. His career culminated in 1850 with the directorship of the Geological Survey of Great Britain's Irish Branch.

RICHARD DAVID HUGHES

**Julien, Octave-Henri**, painter, illustrator (b at Québec C 14 May 1852; d at Montréal 17 Sept 1908). He began his career as engraver and lithographer with Desbarats's printing firm (about 1868), where he also learned drawing and painting. He accompanied the expeditionary force of NWMP sent to suppress the liquor traffic on the Prairies (1874) and prepared illustrations of western life for the *Canadian Illustrated News*. He became art director of the *Montréal Star* in 1888, where he developed his skill for capturing portraits with a few strokes of a pencil. He soon became Canada's foremost newspaper illustrator, executing brilliant cartoons of Sir Wilfrid LAURIER and his Cabinet. His keen interest and sharp sense of humour produced some of the best political comment of the time. He also worked in watercolours and oils, exhibiting regularly with the Royal Canadian Academy. JAMES MARSH

**Julien, Pauline**, singer, actress, songwriter (b at Trois-Rivières, Qué 23 May 1928). She studied drama in Paris and made her debut there as a singer about 1957. She first appeared in Montréal at a cabaret called Au Saint-Germain-des-Prés, and she introduced the songs of Kurt Weill and Bertolt Brecht to Québec, soon adding songs by Raymond Lévesque and Gilles VIGNEAULT to her repertoire. Julien made her first album in 1962 and 2 years later took second prize at the International Festival of Song in Sopot (Poland), singing "Jack Monoloy" by Vigneault. In 1968 she began to write some of the words for her songs. Feminism is only one of the topics she treats with fiery passion. As an actress she has appeared in several films, including *La Mort d'un Bûcheron*. Her album *Suite québécoise* won a Grand Prix du disque from the Académie Charles-Cros in Paris (1970) and she received the 1974 Prix de musique Calixa-Lavallée. HÉLÈNE PLOUFFE

**Juliette**, stage name of Juliette Augustina Sysak, singer, entertainer (b at St Vital, Man 26 Aug 1927). She started her singing career as a child, making her CBC radio debut at 15. After regular CBC appearances, "Our Pet, Juliette" ran her own program 1956-66. Her folksy pop style created one of CBC's most popular shows. This success was followed by several TV specials and regular CBC-TV performances: "After Noon" (1969-71) and "Juliette and Friends" (1973-75).

ANN SCHAU

**Juniper**, evergreen CONIFER, genus *Juniperus* of cypress family (Cupressaceae). About 60 species occur worldwide, primarily in the Northern Hemisphere; 4 are native to Canada. Of these, eastern red cedar (*J. virginiana*) of the Great Lakes

Common juniper (*Juniperus communis*), with flowers (left) and fruit (artwork by Claire Tremblay).

region, and Rocky Mountain juniper (*J. scopulorum*) of arid regions of BC, reach TREE size. Common juniper (*J. communis*) and creeping juniper (*J. horizontalis*), both shrub species, occur in the boreal forest and on the prairies. Scalelike or awl-shaped leaves usually have a distinct resin gland on the surface. The round, berrylike seed cones are composed of fleshy, fused bracts (modified leaves) and scales. Male pollen cones and female seed cones usually grow on separate trees. POLLINATION occurs in spring; cones mature in the second or third year, turning blue. They have been used as flavouring (eg, gin). The seeds are small, with 2 lateral wings, and the wood is hard, heavy, aromatic, purplish red and decay resistant. Juniper trees are usually too small to be commercially valuable in Canada, but are widely used as ORNAMENTALS. JOHN N. OWENS

**Jurisprudence**, literally "knowledge of law," is used in several different senses. Occasionally it simply means law in general or of a particular kind, eg, "medical jurisprudence"; rarely, it denotes the study of law, eg, an Oxford degree in jurisprudence. Today when using it civil lawyers (see CIVIL LAW) usually mean a body of case law or court decisions, and common lawyers (see COMMON LAW) usually mean a philosophical inquiry into problems about rather than of law, such as What is law? or What is the relationship between law and justice? In this sense jurisprudence in English-speaking countries has traditionally been divided into legal theory, analysis of specific legal concepts, and sources of law. Legal theory, generally considered the most important, focuses on the definition of law and analysis of the notion of a legal system. It has generated most of the jurisprudential literature and spawned many theories, including the theory of natural law, expounded originally by

Aquinas, which views law as comprising rules that accord with right reason, and therefore claims an intrinsic connection exists between law and morality; legal positivism, according to which law is distinct and separate from morality, the validity of a law deriving from its pedigree rather than its content; legal realism, according to which, as expressed by some American scholars, law is only the practice of the courts and various officials, and as expressed by certain Scandinavian philosophers the concept is a fiction; pure theory, according to which law is a system of norms deriving from a basic norm; and Hart's theory of law, according to which laws are special kinds of social rules, legal systems depending on an interplay between them. Recently legal theory has gained attention not only from academic lawyers but from philosophers who have created an American Society of Philosophers of Law. A Canadian section was set up in 1982 under the director of the Westminster Institute for Ethics and Human Values in London, Ont.

Today, with accelerating change and law reform, it is becoming evident that fundamental questions of law are really questions of politics, and these in turn are ultimately questions of morality. Students of ethics, philosophers and students of jurisprudence are needed to assist in their exploration. This is clear in the work being done at the Westminster Institute, at the Centre for Bioethics in Montréal and at the Law Reform Commission of Canada, as well as in the more general investigations in Canada into the nature and justification of criminal law itself. It will become even clearer in future analysis of human-rights problems arising from the new CANADIAN CHARTER OF RIGHTS AND FREEDOMS.

PATRICK FITZGERALD

**Jury** A group of citizens summoned by law to render verdict on a question submitted in a court of justice. Originally, jurors testified too and de-

cided issues on the basis of their own community knowledge, but since the admission of sworn testimony, jury verdicts have been based on evidence submitted at the trial.

Statute governs the right to jury trial. In criminal cases, summary and minor indictable offences (eg, theft not exceeding \$200 in value) are tried without jury (see MAGISTRATE). Serious offences, eg, murder, treason, sedition and hijacking, require trial by jury (except in Alberta). With many less serious indictable offences the accused may elect jury trial. In civil proceedings (proceedings governed by provincial statutes) parties may elect to dispense with the jury except in cases involving libel, slander, seduction, malicious arrest or prosecution and false imprisonment. Even in those cases the jury may be dispensed with if both sides agree (in fact juries in civil trials are becoming the exception), and in highly complicated and technical cases, and in some instances where the assessment of damages is involved, the courts frequently refuse a jury trial.

Because provinces are responsible for the constitution and selection of juries, qualifications vary from province to province. Normally, all Canadian citizens between ages 18 and 65 or 69 who do not suffer mental or physical handicaps that might impede the performance of their duty and who have not been convicted of an indictable offence are qualified to serve as jurors. Certain classes of persons (and occasionally their spouses) are exempt, including members of the Privy Council, provincial Cabinets, the Senate, the House of Commons and provincial legislatures, lawyers, law students, judges, police, law-enforcement officers, clergy, doctors, dentists, veterinarians in active practice and employees of some essential services.

Jury lists (arrays) are prepared annually from a random selection of names from the county assessment roles or voters' lists. In Manitoba, Québec and New Brunswick the use of either official language in the courts is an entrenched right, and in many other areas the accused has the right to trial by a jury speaking his or her official language.

The county SHERIFF is responsible for the summoning and attendance of the jury. Persons normally qualified to serve may be excused on the grounds of illness or if undue hardship would result.

The "petit" (as opposed to a "grand") jury in criminal cases comprises 12 jurors, except in the Yukon and the NWT, where there are 6. The jury's verdict must be unanimous and based on evidence presented in court. If, after a reasonable time, there appears to be no hope of a jury reaching agreement (a "hung" jury), the judge may call for a new jury or set the case for retrial. Fewer jurors (usually 6) are required in civil cases, and unanimity is not necessary; it is sufficient that 5 agree.

The grand jury was the forerunner of the petit jury. The grand jury decided whether reasonable grounds existed for sending a case to trial. If so, it brought in a "true bill." Qualifications for grand jurors are the same as those for petit jurors. The grand jury has been abolished in Canada, except in Nova Scotia.

The jury in criminal cases has historically been regarded as the "foundation of our free institutions," although others have said it "puts a ban upon intelligence and honesty, and a premium upon ignorance and stupidity and perjury." Most surveys on the value of the criminal jury have supported its retention with minor changes, but juries in civil trials are becoming the exception, mostly as a consequence of the extra costs and time involved and the more complex and technical nature of the cases.

K G. McSHANE

Reading: Canada, *The Jury* (1982); P. Devlin, *Trial by Jury* (1956).

**Justice, Department of**, est 1868 by Act of Parliament. The responsibilities of the department include being the legal adviser of the governor general, superintending all matters concerned with the administration of justice in Canada (excluding the jurisdiction of provincial governments) and seeing that the administration of public affairs is in accordance with law. The minister is also attorney general of Canada responsible for the conduct of all litigation for or against the Crown or any public department. The department carries out, on behalf of the federal government, the legal functions and services customarily performed by a law firm for its clients. The Tax Review Board, LAW REFORM COMMISSION OF CANADA, CANADIAN HUMAN RIGHTS COMMISSION and SUPREME COURT OF CANADA report to the minister. The department's 1984-85 budget was \$145 million.

**Jutra, Claude**, filmmaker (b at Montréal 11 Mar 1930). Jutra is best known as the director of *Mon oncle Antoine* (1971), one of the best-loved and most popular films made in Canada. He joined the NFB in 1956 and made a number of shorts before leaving for Africa, where he co-directed *Le Niger, jeune république* (1961) with Jean Rouch. Back in Québec he joined NFB's famed French unit, and directed several short films before attempting his first feature *A tout prendre* (1963), the film that launched the new Québec cinema. With *Mon oncle Antoine*, Jutra established his reputation as an accomplished film director. Set in a small Québec town on Christmas Eve, the film sensitively shows a young boy approaching manhood, and won many awards. *Kamouraska* (1973), an adaptation of Anne Hébert's novel, did not match expectations. After *Pour le meilleur et pour le pire* (1976), Jutra began to work in English for the CBC. "Ada" (1977), "Dreamspeaker" (1977) and "The Wordsmith" (1979) are among the most distinguished TV films produced in Canada. Jutra returned to the theatrical feature with *Surfacing* (1981), based on the Margaret Atwood novel, and *By Design* (1982). His warmth and ironic humour are evident in all his work.

**Juvenile Delinquency**, in social science, refers primarily to social acts of juveniles that are defined and evaluated as deviant or antisocial by legal or social norms and that are usually, though not always, socially learned. When children are designated "juvenile delinquents," it is a precise definition of their legal status and makes

them wards of the court subject to its discretion (see JUVENILE JUSTICE SYSTEMS). In Canada provisions for special institutions and treatment for young people were available in 1857, but the first federal legislation dealing with juvenile delinquents was the Juvenile Delinquents Act passed in 1908 and revised in 1929. Under the Act, the definition of delinquency encompasses more than the adult crimes in the Criminal Code and includes "sexual immorality or any similar form of vice" as well as cases of neglected, abused or uncontrollable children. The Act established the state as a sympathetic guardian which treats the juvenile as a misguided child requiring care and supervision. Courtroom procedures are informal, allowing the judge wide discretion in deciding juvenile proceedings. Dispositions vary from a reprimand, fine or probation to committal to an institution.

In recent years the Act has been attacked for its paternalism, informality and failure to protect the basic rights of the child, and the new Young Offenders Act (passed July 1982, effective Apr 1984) should provide the same safeguards for juveniles as those accorded adults. The Act will likely cover only those young people charged with specific offences against the Criminal Code and other federal statutes and regulations; the age of criminal responsibility will probably be raised from 7 to 12 years and juveniles will have the right to legal representation throughout the court proceedings.

The official statistics on delinquency gathered from the records of public agencies, eg, the police, juvenile courts and correctional institutions, and published by the Centre for Justice Statistics, Statistics Canada, are valuable but reflect the actions of officials rather than children and limit understanding of the nature of delinquency and the process by which an individual becomes delinquent. The behaviour of children varies widely, and since all youngsters likely act in ways that can result in legal action, it is not correct to presume that children are either delinquents or nondelinquents. Moreover, clinically normal children are responsible for most of the delinquency in society, and although some maladjusted children do violate the law, there is no necessary correlation between delinquency and defective personalities. Also, police statistics do not reveal all the delinquency that occurs in society. Self-reported questionnaires on delinquent acts, administered to high-school students, reveal that juveniles from all social classes are responsible for a wide variety of delinquent acts, although according to a Montréal survey the toughest kinds of delinquency usually occur in urban slums. Other recent studies underscore the significance of poverty in explaining the distribution of delinquency.

Maximum delinquent activity occurs during middle adolescence. In 1981 the highest proportion (27.9%) of youths designated delinquent were 15 years old (juveniles aged 15 and 16 accounted for about 51% of all offences). Ratios were higher for boys, as expected, but the ratios for offences such as those relating to liquor and education as well as immorality and theft under \$200 were much more balanced. Of the total number of officially reported delinquencies in 1981, 26% were for breaking and entering. Theft under \$200 accounted for 13% of delinquencies; 6% were categorized as mischief. However, the violation of provincial statutes, which include less serious offences such as truancy, drinking under age and traffic violations, accounted for 23%. Of the 502 sexual offences (494 boys, 8 girls), juveniles aged 13 accounted for 15.5%, while youths aged 14 and 15 accounted for 55.7%. At 16 years of age this decreased to 14.6%. In 1981, 3 provinces accounted for about 65% of all juveniles designated delinquent: Québec 22.3%, Ontario 22% and Manitoba 20.1%. BC

ranks fourth with 17.8%; in Alberta there was a decrease to 8.5%. The NWT, PEI and the Yukon together account for less than 1% of all officially designated delinquents.

**Recent Research** Research in CRIMINOLOGY and delinquency in Canada has increased considerably during the past 25 years, and the schools of criminology at the universities of Montréal, Toronto and Ottawa have developed into important centres of study. A new school of criminology has been founded at Simon Fraser University in Vancouver. Canadian research has been strongly influenced by American theory, eg, psychiatric theories, which argue that delinquency is a solution to psychological problems resulting from early, damaged family relationships; "sociogenic" theories, which emphasize the importance of learned behaviour; "subcultural" theories (gang and subcultural delinquency in Canada is not yet well documented), according to which working-class youths generate a new subculture of norms and expectations in which virtue consists of defying middle-class morality; labelling theories, according to which a delinquent career is a response to institutional processing by official agencies; and finally, control theories, proponents of which emphasize the importance of socialization in helping individuals develop appropriate emotions, beliefs and concerns that bond them to society.

In Canada techniques and mechanisms to control delinquency have not been effective. Treatment (a term that unfortunately implies delinquents have defective personalities that should be cured) programs are well established and include individualized treatment and counselling, group therapy and self-help groups, but their impact on delinquency has been no more impressive than behaviour-modification programs. Nonintervention programs are an attempt to minimize contact between the offender and the criminal justice system. This approach usually includes the idea of restitution and is likely to be successful with those who have committed harmless violations. However, modifications in the criminal justice system are not likely to have much effect on delinquent behaviour. Our understanding of delinquency will not develop without a considerable increase in the extent and quality of our knowledge about Canadian society and its seemingly endemic disparities in wealth, power and opportunities, and about the common motivations for crime and delinquency. Without a willingness to accept widespread reforms and solutions that require major readjustments to our way of life, a vast reduction in delinquency will never be achieved.

EDMUND W. VAZ

**Juvenile Justice Systems** On 7 July 1982, Parliament enacted the Young Offenders Act (effective Apr 1984), which the government claimed would bring about a long overdue reform of Canada's juvenile justice system. This Act replaced the 74-year-old Juvenile Delinquents Act under which juveniles who contravened any federal, provincial or municipal laws were tried, convicted and sentenced. The system that evolved under that Act had permitted many injustices, eg, different age limits for juveniles from province to province, informal court proceedings, the criminalizing of young persons for acts and behaviour that were not illegal for adults, the subjecting of young offenders to indeterminate sentences that were not always related to the seriousness of the offence, and an arbitrary review process whereby the young offenders could be brought back to court at any time until they reached 21 to have new sentences imposed.

The main theme of the Young Offenders Act is that, although young people should be held responsible for their behaviour, they never-

theless have special needs which demand a lesser standard of accountability than that imposed on adults. At the same time, they should have the same right to fair and equal treatment before the law as adults.

Under the Canadian constitution, CRIMINAL LAW is a federal jurisdiction so this Act applies to persons between the ages of 12 and 18 who commit crimes and other offences that are defined in federal statutes. Persons under the age of 12 cannot be convicted of such offences, and those 18 and over who commit such offences must answer for them in adult court.

Generally a young person charged with committing an offence under this Act has the same rights and privileges as an adult who is charged with a crime, including the right to bail, to a hearing conducted according to the rules of evidence, to a lawyer, to a determinate sentence and to appeal. In addition, there are special safeguards for young persons charged under this Act; eg, offences are tried by a special Youth Court; notice of a young person being charged, arrested and detained is to be given to his or her parent(s); a young person, if detained in custody, is to be kept apart from adult prisoners; information which may identify young persons who are involved in Youth Court proceedings (as an accused, a witness or a victim) may not be published; the court may exclude persons from the courtroom; and access to a young offender's record is restricted.

Dispositions or sentences too are related to the needs and circumstances of young offenders. Where young persons are found guilty of an offence, the court may impose a variety of dispositions or sentences: including an absolute

discharge; a fine (not exceeding \$1000) and an order to pay compensation to the victim (in kind or by way of personal service); an order to perform community services; the placement of a young offender on probation for up to 2 years (or, in the case of certain serious offences, up to 3 years); and the placement of a young offender in custody for a period of up to 2 years or, for certain serious offences, up to 3 years.

Custody of a young offender may be open, ie, in a residential centre, group home, child-care institution or wilderness camp; or it may be secure, ie, the young offender is contained, either intermittently or continuously. An offender may only be sentenced to secure custody under certain circumstances related to the seriousness of the offence and to the offender's age and previous criminal record, and in cases where secure custody is considered necessary by the court for the protection of society and having regard to the offender's needs and circumstances. During the course of a disposition or sentence, it may be reviewed by the court (or by a review board, appointed by the province) and varied, if it is deemed necessary, because of changed circumstances of the offender or of the services available to him.

Where a young person 14 years of age or over is charged with certain serious offences, he or she may be ordered to stand trial in adult court, depending on the interests of society and the young person's needs having regard to the offence, the person's age, maturity, character and background, and the availability of treatment or correctional services.

The provinces, through provincially appointed officials, are responsible for providing

care and supervision of persons dealt with under this Act. Youth workers prepare the pre-disposition reports for the court, supervise young offenders on probation, and assist young offenders in complying with their sentences. Provincial directors have certain authority to release young offenders from custody temporarily for medical, compassionate or humane reasons, for rehabilitative purposes, or to allow them to attend school or obtain employment. The provincial director may, under certain circumstances, transfer offenders from secure custody to open custody. The Act permits a province to set up "alternative measures" whereby, instead of answering in court for an offence, young offenders accept responsibility for it and agree to make compensation to the victim or to participate in a program of community service, education or rehabilitation.

Because the Young Offenders Act only applies to crimes and other federal offences, young persons who transgress provincial laws may answer for their offences differently in each province or territory. In 1984 only a few of the provinces and territories had legislation in place specifically dealing with young offenders of provincial laws. It appears that, in some provinces, provincial young offenders will be dealt with under special Acts; in others they will be dealt with under the same Acts that deal with adult provincial offenders; and in at least one other, they will be dealt with under the federal Young Offenders Act. It also appears that proceedings against young persons contravening provincial or territorial laws will contain most of the special safeguards contained in the federal Young Offenders Act. MARGARET DONNELLY

**Kabalarian Philosophy**, see NEW RELIGIOUS MOVEMENTS.

**Kabloona** (or non-Eskimo), the name given by Inuit to white Canadians who are long- or short-term residents in northern communities. Kabloona include missionaries, teachers, police, government personnel and their spouses or companions. Kabloonamuit, or "people of the white man," are those Inuit who are consciously imitative of Kabloona ways. They follow Kabloona-like customs, have a dependence on manufactured food and clothing, and seek wage employment whenever possible. RENÉ R. GADACZ  
Reading: F.G. Vallee, *Kabloona and Eskimo* (1962).

**Kahane, Anne**, sculptor (b at Vienna, Austria 1 Mar 1924). Kahane is nationally recognized for dense, monumental and 3-dimensional figures carved in wood, portraying political satire, humour and human foibles. She immigrated with her parents in 1925, settling in Montréal at age 5. Kahane studied at Cooper Union School, New York C, 1945-47. Her entry took a prize at the first International Sculpture Competition sponsored by the Institute of Contemporary Arts, London, 1953. *Delegation* (Venice Biennale, 1953) is a strong statement on frustration and red tape. In the 1960s she carved large decorative panels for the Winnipeg airport and Winnipeg General Hospital, and figures for Montréal's Place des Arts. By 1978 Kahane had abandoned wood for thin, strong sheets of aluminum, which gave flexibility to figures flattened into abstraction.  
ANNE McDUGALL

**Kain, Karen**, dancer (b at Hamilton, Ont 28 Mar 1951). One of Canada's finest dancers, Kain graduated from the NATIONAL BALLET SCHOOL in 1969 and became a principal of the NATIONAL BALLET OF CANADA in her second season when she danced the Swan Queen in *Swan Lake*. In 1973 she won the women's silver medal and, with Frank AUGUSTYN, the prize for the best *pas de deux* at the Moscow International Ballet competition. Kain's strong technique, breadth of movement, sensitive musicality and daring attack are widely admired in both classical and contemporary works. She created major roles for Roland Petit (*Les Intermittences du cœur*, *Nana*, *Tales of Hoffmann*) and Constantin PATSALAS (*Inventions*, *Rite of Spring*, *Oiseaux exotiques*) and has been a guest artist with the Bolshoi Ballet, Petit's Ballets de Marseille, and, with Rudolf Nureyev, around the world. Kain starred in Norman CAMPBELL'S films of *Giselle* and *La Fille mal gardée*. See also BALLET.  
PENELOPE DOOB

Reading: D. Street, *Karen Kain, Lady of Dance* (1978).

**Kaka**, see QAQAQ ASHOONA.

**Kale** (*Brassica oleracea*, Acephala Group), cole crop (like CABBAGE, CAULIFLOWER, etc), belonging to the Cruciferae family. Native to the Mediterranean, kales are now more common in northern temperate parts of the Eastern Hemisphere. Types with attractive curly foliage and coloured centres are used as ORNAMENTALS. Kales are cold hardy but not heat tolerant; thus, they do best as spring or fall crops. Curly kales are 35-45 cm high, 65-75 cm wide. Upright, straight-leaved cultivars (commercial varieties) attain 75-90 cm in height. They mature in 55-65 days. They are vulnerable to aphids, cabbage worms, loopers, root maggots, damping-off and blackleg. Kales produce neither heads nor edible flowers, but are used mainly as a potherb, and are rich in vitamins A, B<sub>1</sub> and C. They are widely grown in Canadian gardens, but commercial production is limited.  
V.W. NUTTALL

**Kallmann, Helmut**, music historian, librarian (b at Berlin, Germany 7 Aug 1922). He is the foremost scholar of Canadian MUSIC HISTORY. The publication of his *A History of Music in Canada 1534-1914* (1960), the subject's first comprehensive treatment, delineated the field and encour-

aged other researchers. Since 1970 Kallmann has headed the Music Division of the NATIONAL LIBRARY OF CANADA, building there an unsurpassed collection of musical Canadiana — printed material, manuscripts and recordings. With K. Winters and G. Potvin he was editor of the *ENCYCLOPEDIA OF MUSIC IN CANADA* (1981) and responsible for its overall content.

BARCLAY MCMILLAN

**Kalm, Pehr**, botanist (b in Sweden 6 Mar 1716; d in Finland 16 Nov 1779). Kalm was educated in Finland and Sweden. He met the leading European naturalist, Linnaeus, in 1741, and under his influence became an expert on botanical applications to agriculture. Linnaeus proposed a trip to N America to discover plants that might be viable in Scandinavia and chose Kalm, who reached Philadelphia in Sept 1748, to meet the foremost American naturalists. Arriving in New France in July 1749, he botanized near Lk Champlain before moving on to Montréal and Québec. His work there was financed by the French as a favour to Sweden. He met the leading scientific lights, including J.F. Gaultier and GOV LA GALISSONNIÈRE. He returned to New York that autumn but made a botanical foray to Niagara during the summer of 1750. Returning to Sweden in 1751, he took up a professorship at Abo. Kalm's record of his visit to New France, published 1753-61, offers one of the best studies of intellectual and social life during the final years of the French regime. Besides providing new botanical information, it brought Canada to European attention. In his diary he stated that the scientific interest exhibited by the French was superior to that of the British Americans.

RICHARD A. JARRELL

**Kalvak, Helen**, graphic artist (b on Victoria I, NWT 1901; d at Holman, NWT 7 May 1984). Although Kalvak only began to draw in her early 60s, she created over 3000 drawings vividly portraying the traditional life of the COPPER INUIT. Kalvak showed a deep interest in spiritual tradi-

Helen Kalvak, whose remarkable career as an artist did not begin until her early 60s (courtesy Tessa Macintosh).

tions, and her drawings are rich with references to legends, shamanism and ceremonial life. In the print *Kidnapper* (1973), Kalvak portrays Ar-nakafaluk, the legendary woman who appears out of the sea to kidnap children who wander away from their parents' camp. A recurring theme in her work is the interrelationship between the human and animal worlds. In the print *Don't Be So Noisy* (1969), the festive spirit of a drum dance attracts the curiosity of a polar bear. Kalvak's drawings, interpreted in stone relief or stencil prints by the printmakers of Holman, have drawn international attention. She was elected a member of the Royal Canadian Academy of Arts in 1975. See INUIT ART.

BERNADETTE DRISCOLL

**Kamloops**, BC, City, pop 64 048 (1981c), 71 722 (1982e); inc 1893 and amalgamated with N Kamloops 1967 to form the new city of Kamloops, is located in southern BC 420 km NE of Vancouver. It is situated at the confluence of the N and S THOMPSON rivers near their entrance into Kamloops Lk, and covers an area of 31 141 ha. Kamloops has a rapidly expanding role in mining, is the centre of BC's cattle industry, and is bidding to overtake PRINCE GEORGE as the largest city in the BC interior. It is governed by a mayor and 8 aldermen.

The region's first inhabitants were members of the Shuswap tribe of the SALISH nation, who named the area *cume-loups*, likely meaning "meeting of the waters." David Stuart of the Pacific Fur Co spent the winter of 1811 in the area and was impressed with the fur-trading possibilities. He built the first trading post, Ft Kamloops, in Sept 1812 — the first white settlement in southern BC. In Nov the NWC arrived and constructed a post, Ft Thompson, on the other side of the river. The HBC took over Ft Kamloops after the union with the NWC in 1821. In the 1850s gold seekers arrived; Kamloops became a depot for the region and farming began. The completion of the CPR 1885 encouraged further development, and by 1893 Kamloops had a population of 6000. Since the late 1950s, it has grown rapidly as a regional metropolis.

Served by the CPR and CNR and by Pacific Western Airlines, and situated at the junction of 2 large rivers and 2 highways, Kamloops is the natural trade and distribution centre in the southern BC interior, and is the financial, travel, cultural and administrative centre for Thompson-Nicola, Lillooet and Southern Cariboo regions. Initially, ranching and fruit and vegetable growing dominated the economy, but by the 1960s, the forest industry and mining had become more important. A large pulp mill and the province's only copper smelter are located here. Tourism is growing as well; the region's more than 200 lakes offer excellent fishing and boating, and several ski resorts are found nearby. Kamloops is served by the Royal Inland Hospital, by numerous provincial and federal agencies and by Cariboo Community College. It has 2 newspapers, a museum, art gallery, symphony orchestra and theatre company.

ALAN F.J. ARTIBISE

**Kamouraska**, Qué, Village, pop 442 (1981c), inc 1858, is located on the S Shore of the ST LAWRENCE R, 125 km NE of Québec City. In Algonquian its name means "rushes at the water's edge." In 1674 a seigneurie was granted to Olivier

Morel de la Durantaye. In 1714 the parish of St-Louis was founded. In the 18th century, Kamouraska was one of the largest settlements on the S Shore. At the start of the 19th century, the seigneurie belonged to the Taché family, one of whose members, Étienne TACHÉ, became prime minister of the PROVINCE OF CANADA 1854-56. Agriculture prospered in the area and the region was called "the granary of Lower Canada." In 1849 the first superior court outside Québec City was established here. Kamouraska was an important tourist area in the 19th and early 20th centuries. People came to admire the countryside, breathe the salt air and bathe in the sea. As the parishes grew in size, a number of them such as St-Pascal, St-Denis and Ste-Hélène separated from St-Louis, thus accounting for its small population today. Anne HÉBERT's novel *KAMOURASKA* recounts tragic events that occurred in 1839.

ANTONIO LECHASSEUR

**Kamouraska**, novel by Anne HÉBERT (1970), is a psychological gothic romance based on an actual murder committed in 1839 in the village of KAMOURASKA, Qué., by a female ancestor of the author. The action takes place in Elizabeth's mind on the night of her second husband's impending death, transmuting the facts surrounding an earlier crime of passion into a haunting study of internalized guilt and the search for freedom. Attending Jérôme Rolland's sickbed, she revisits in dream and memory her stifling childhood; her escape into an unhappy marriage to the squire of Kamouraska; an affair with Dr Nelson, with whom she plotted to kill her husband; her trial and acquittal; and her subsequent quest for respectability, leading to her second, equally stifling marriage. A fragmented juxtaposition of first- and third-person narration communicates Elizabeth's inner turmoil in an interior monologue with feminist overtones. Claude JUTRA's film *Kamouraska* (1973) captures the poetic quality of HÉBERT's writing, whereas Norman Shapiro's translation of the novel (1974) recaptures the jarring, schizophrenic quality of Elizabeth's narrative.

MICHÈLE LACOMBE

**Kamsack**, Sask, Town, pop 2688 (1981c), inc 1911, is located in E-central Saskatchewan, about 86 km NE of YORKTON and 27 km from the Manitoba border. The general area was fur-trading territory for many years, and the town was named after a well-known Indian. A DOUKHOBOR settlement was located nearby at the turn of the century. Kamsack primarily serves as an agricultural service centre for the surrounding district, which contains both grain and mixed farms. As a service centre, it provides a modern shopping area, medical, dental and hospital services, elementary and secondary schools, and a wide range of recreational facilities.

DON HERPERGER

**Kananaskis Country** comprises 5200 km<sup>2</sup> of the front range of the Rocky Mts W of Calgary and adjoining the Trans-Canada and Kananaskis highways. It includes 4 zones. On the E are rolling sandstone foothills, with dry grassy areas and patches of lodgepole pine and aspen. Mammals include deer, hare, coyotes, moose and black bears. Higher up is a montane zone with a cooler, wetter climate that supports spruce, fir and birds (eg, warblers, thrushes, wrens). The alpine meadow zone displays carpets of wildflowers amid islands of larch and whitebark pine. Between 1830 and 2440 m is an alpine barren zone of rock, lichen and saxifrage, with glaciers prevailing along the Continental Divide. STONEY and SARCEE long occupied the area and, in the 19th century, numerous explorers, including John PALLISER (1858), penetrated the area searching for routes through the mountains. As settlement increased to the E, the area was exploited for RANCHING, logging, COAL

MINING and HYDROELECTRICITY. Today, it is managed primarily for nature conservation and recreation. The area contains 3 provincial parks. Bragg Creek Park on the E (121 ha) offers swimming, fishing and camping. Bow Valley Park in the N has an extensive campground with many services. Kananaskis Provincial Park, a 508 km<sup>2</sup> section of mountain wilderness including an amphitheatre of glacier-clad peaks around the Kananaskis Lks, is 60 km S. It provides opportunities for outdoor recreation. JOHN S. MARSH

**Kananginak Pootoogook**, sculptor, designer, draftsman, printmaker (b at Ikerrasak camp, S Baffin I, NWT 1935). Son of the great camp leader Pootoogook, he came to Cape Dorset in 1957. In 1958, when James HOUSTON brought PRINTMAKING to the North, he became one of the 4 original printers. Kananginak works in all media, including silk-screen printing of textiles. However, he excels as an engraver and lithographer, particularly of wildlife art, which he has mastered completely while retaining a personal style with definite abstract qualities. His sister Napatchie and brother Paulassie are also good artists.

GEORGE SWINTON

*Dance of Love* by Kananginak Pootoogook (courtesy West Baffin Eskimo Co-operative, Cape Dorset, NWT).

**Kane, Paul**, painter (b at Mallow, Ire 3 Sept 1810; d at Toronto 20 Feb 1871). The most famous of all Canadian artist-explorers, Kane emigrated with his family to York [Toronto] before 1822. He worked as a decorator of furniture, and in 1841-42 visited Italy to copy old masters. An exhibition of George Catlin's American Indian paintings in London so excited him that he returned to Canada determined to paint a similar series in the Canadian North-West. Kane left Toronto in 1845 to sketch Indians in their homelands and collect Indian legends. He travelled around the Great Lakes but, warned of

Paul Kane, the most famous of Canada's artist-explorers, shown here in his *Self-Portrait*, oil on paper (courtesy Stark Museum, Orange, Tex.).

the dangers of a solitary trip to the Pacific, he contacted Sir George SIMPSON, superintendent of the HBC, who arranged for him to accompany the fur-trade canoe fleets to the West. He joined the traders at FT WILLIAM [Thunder Bay, Ont] in May 1846 and travelled W with them to Ft Garry. He witnessed the last great BUFFALO HUNT in that region, continued to Norway House, and followed the Saskatchewan R to Ft Edmonton. After crossing the mountains on horseback, he descended the Columbia R to Ft Vancouver and sketched Mt St Helens and the coastal tribes around Victoria. He returned to Toronto in 1848, having made 700 sketches of western scenery and of Indians from some 80 tribes.

Kane lived quietly in Toronto after his return. He painted canvases from his sketches, rendered in a contemporary European genre style. One hundred canvases bought by George Allan are now in the Royal Ontario Museum, while 12 bought by the Canadian government are in the National Gallery. Kane's account of his travels was published in 1859 and translated into Danish, French and German. A Canadian classic, full of anecdotes, it complements his sketches in its vivid description of the life of Indians, Métis, HBC traders and missionaries in the 1840s.

J. RUSSELL HARPER

Reading: J.R. Harper, *Paul Kane's Frontier* (1971).

**Kane Basin** is a broad expanse of water, about 3900 km<sup>2</sup>, that leads northward between the eastern shore of ELLESMERE I and the W coast of Greenland. It is relatively shallow; for the most part depths reach 180 m. Ice conditions are a severe impediment to navigation. The persistence and heaviness of sea ice prevent the southward drift of icebergs from the Arctic Ocean and those calved from glaciers coming off Greenland, which collect in groups at the glaciers' mouths. Favourable sea-ice conditions paradoxically increase the iceberg hazard, since these result in a marked increase in the outflow of formerly trapped icebergs.

DOUG FINLAYSON

**Kangaroo Rat**, solitary, strictly nocturnal rodent of the N American family Heteromyidae. The family comprises 75 species (see POCKET MOUSE). Of the 14 species of kangaroo rat only one occurs in Canada. Ord's kangaroo rat (*Dipodomys ordii*) of the Great Sand Hills of SW Saskatchewan and Alberta is one of Canada's rare desert-dwelling MAMMALS. Its front legs are weak; hindlegs, long and powerful. The tail, longer than the body, is used for support and balance. These features enable the rat to move by jumping. The kangaroo rat grows up to 30 cm long. Its body is tawny with white underparts. White patches occur on the upper lip, above the eyes and behind the ears; white stripes across the hips. Cheek pouches are used to carry grain to the burrow, where kangaroo rats shelter in winter. Insects are also eaten. Kangaroo rats drink little water, having adapted to minimal water loss. Although very agile, they are preyed on by carnivorous mammals, birds and snakes. The reproductive cycle is not fully understood: mating occurs in spring; gestation lasts 29-30 days. Females can produce 2 or more litters annually, each averaging 3.5 young. JEAN FERRON

**Kapuskasing**, Ont, Town, pop 12 014 (1981c), inc 1921, located on the Kapuskasing R, 493 km NW of North Bay. The name derives from an Indian term meaning "branch" (the Kapuskasing R being a branch of the Mattagami). Although the area had been explored since the 18th century by HBC and NWC fur traders, the site itself only came into existence in 1910 as a station along the National Transcontinental Ry, a line linking Québec City and Winnipeg, incorporated into the CNR system 1922. During WWI an internment camp was established near the town, its prisoner-of-war and "enemy alien" occupants developing what is now a federal ex-

perimental farm. After the war the community's agricultural base was further expanded by a government soldier-resettlement program. Kapuskasing's future lies in its rich surrounding forests; and since the 1920s the pulp and paper industry, represented by the Spruce Falls Power and Paper Co., and tourism have become its chief economic mainstays. Half of Spruce Falls's daily newsprint output goes to the *New York Times*.

MATT BRAY

**Kap'Yong** On 23 Apr 1951, during the Korean War, the 27th British Commonwealth Infantry Brigade was ordered to protect the withdrawal through the Kap'Yong R valley, about 20 km S of the 38th parallel in central Korea, of the ROK (S Korean) Division, which had been dislodged by a major Chinese offensive. The 2nd Battalion, Princess Patricia's Canadian Light Infantry, and the 3rd Battalion, Royal Australian Regiment, were assigned forward hilltop positions, the Canadians on the west side of the valley and the Australians to the east. The Australians bore the brunt of the initial attack and were forced to retreat, with 155 casualties, late Apr 24. The Chinese then turned their attention to the PPCLI, which managed in heavy all-night fighting on Apr 24-25 to stop their advance. Canadian casualties were 10 killed, 23 wounded. The battle contributed significantly to the defeat of the general Chinese offensive. Both the Canadians and the Australians received Distinguished Unit Citations from the American government.

DENIS STAIRS

**Karlsefni**, common name for Thorfinn Thordarson (fl 1000-20). Sometime between 1003 and 1015 AD Karlsefni set out to colonize Vinland. Evidence for his adventure, based on the *Eric the Red's Saga* and the *Greenlanders' Saga* is vague and the location of the colony impossible to identify, but excavations at L'ANSE AUX MEADOWS ended doubts that the Vikings had reached America. See NORSE VOYAGES.

JAMES MARSH

**Karoo Ashevak**, artist (b near Spence Bay, NWT 1940; d there 19 Oct 1974). Gaining recognition only late in his short artistic career, Karoo is now acknowledged as an important figure in contemporary Canadian INUIT ART. He grew up living the traditional life on the land and began carving in the late 1960s after moving into Spence Bay. About 5 years later he and his wife perished in a fire at their home. Karoo brought to his work a lively imagination, a knowledge of traditional culture, a love of gadgets and tremendous skill as a carver. Working primarily in whalebone with stone, baleen and ivory highlights, he gave to his subjects — people, SHAMANS, animals and birds — a sense of life, humour and spirituality. The approximately 250 sculptures he produced during his lifetime are now eagerly sought after.

JEAN BLODGETT

**Karsh, Yousuf**, photographer (b at Mardin, Armenia-in-Turkey 23 Dec 1908). As a boy Karsh survived the Armenian massacres and escaped to Canada in 1924 to live with a photographer-uncle, George Nakash. Later he apprenticed under photographer John H. Garo of Boston, Mass, where he learned the dramatic use of lighting that characterizes his work. He opened

a studio in Ottawa in 1932 and met with growing success. In 1941 he photographed the visiting British PM Winston Churchill. That portrait, the first to carry the copyright "Karsh of Ottawa," brought him international fame and remains one of the most widely reproduced portraits in the history of photography. Karsh photographed famous personalities on every continent and his portraits of political, literary, artistic, theatrical and scientific figures made being "Karshed" (Field Marshal Viscount Montgomery's term) a mark of achievement. His work hangs in major art galleries in Europe and N America and his *Portraits of Greatness* (1958) set new standards for Canadian publishing. In 1965 Karsh was awarded the Canada Council Medal and in 1968 the Medal of Service of the Order of Canada.

IAN MONTAGNES

Reading: Y. Karsh, *Karsh: A Fifty-Year Retrospective* (1983) and *In Search of Greatness: An Autobiography* (1962).

**Karst Landform** feature created on the Earth's surface by the drainage of water into the ground or its discharge at springs. The term derives from an area on the coast of Yugoslavia where these features (eg, sinkholes, caves, natural bridges, sinking streams, etc) are common. Karst landforms are an important variant of landforms created by flowing water. In the former, water is routed underground via solutional cave systems, instead of flowing at the surface in normal river channels (see RIVER LANDFORM). The development of karst landforms is limited to areas where comparatively soluble rocks, principally limestones and dolomites (carbonate rocks) and gypsum and anhydrite (sulphate rocks), occur. Approximately 8% of the Earth's land surface is karst terrain. There are 1.2 million km<sup>2</sup> of karst rock outcroppings in Canada. They are common in all GEOLOGICAL REGIONS except the Canadian Shield.

There are 2 solution processes important to karst terrain formation. Gypsum, anhydrite and very soluble substances such as natural salt dissolve in the presence of water. For example, gypsum dissociates until there are 2500 mg dissolved per litre of water (at 25°C). The solution is then saturated and may precipitate gypsum crusts, eg, at mineral SPRINGS. Calcite (the limestone mineral) and dolomite are dissolved by carbonic acid produced by the solution of atmo-

spheric carbon dioxide (CO<sub>2</sub>) in water. Rates of limestone solution are determined, therefore, by the amounts of water and CO<sub>2</sub> available in an environment. CO<sub>2</sub> may build up to high concentrations in soils, where it is dissolved by rainwater. Rates of limestone solution range from less than 5 m<sup>3</sup> per km<sup>2</sup> per year in deserts and very cold regions to more than 100 m<sup>3</sup> in rain forests.

The most widespread surface karst landforms are small solution pits, grooves and runnels, termed karren. Individual features are rarely longer or deeper than 10 m, but frequently they are densely clustered to dissect larger areas, termed limestone pavement. Solution pavement is particularly well developed in Île d'ANTICOSTI, Qué., BRUCE PENINSULA and MANITOULIN I., Ont. Small patches may be seen within the city limits of Hamilton, Montréal, Ottawa, etc. In Winnipeg, approximately 3500 km<sup>2</sup> of solution pavement is preserved beneath later glacial-lake clays and forms an important industrial water store.

The diagnostic karst landform is the sinkhole (doline). This is a bowl-, funnel- or cylinder-shaped depression feeding water underground. There may be a periodic or permanent pond in the base. The length or diameter of sinkholes ranges from 10 to 1000 m. Most are formed by solution focused in the funnel or by collapse of the roof of an underlying cave. In southern Saskatchewan, collapse-solution cavities in salt have extended through as much as 1000 m of overlying insoluble rocks to produce shallow sinkholes at the surface. Sinkholes often occur in lines or clusters. In some karsts (eg, central Kentucky) their frequency exceeds 500 per km<sup>2</sup>, giving the terrain a shell-pitted appearance. Thousands are known in southern Canada, from gypsum terrains in western Newfoundland to limestones on Vancouver I. There are many large, spectacular examples in WOOD BUFFALO NATIONAL PARK, the Franklin Mts and W of Great Bear Lk, where limestones and dolomites have collapsed into cavities in gypsum. Some new collapses occur each year, the hole appearing in a matter of seconds. These are a hazard to settlement on gypsum terrains in parts of Newfoundland and NS.

Larger karst landforms include dry valleys and gorges, carved by past rivers which now flow underground, and poljes, which are major sinkholes with alluviated, flat floors. Medicine Lk in JASPER NATIONAL PARK is a polje measuring 6 km by 1-2 km. The Maligne R drains into it and floods it to a depth of 25 m during the summer melt season. In winter, the lake reduces to small pond sinkholes in the polje floor. The sinking water is discharged 16 km NW at some 60 springs in the floor of Maligne Canyon. With an aggregate discharge that may exceed 65 m<sup>3</sup> of water each second, these are the largest karst springs known in Canada.

Karst landform development is rather limited in Canada when compared to countries that have not undergone repeated GLACIATION. Glacier action has eroded or infilled much karst. Our finest karstland, NAHANNI Karst, is found in a region of the Mackenzie Mts, NWT, which has escaped glaciation for the past several hundred thousand years. Major karst forms have developed without interruption or destruction and include hundreds of sinkholes up to 150 m deep, giant solution grooves intersecting to form a natural labyrinth, several poljes and dry canyons. Parts of the karst have reached a very advanced stage, displaying residual rock towers and natural bridges, features rarely seen in northern latitudes.

Alpine karst, comprising fields of karren and shaft sinkholes above the TREELINE that drain into deep caves, is well developed in parts of the Rocky Mts and Vancouver I. The largest icefield in the Rockies, COLUMBIA ICEFIELD, is mostly

drained by sinkholes surviving in the limestone beneath it. The waters flow in great caves through a mountain, to emerge as spectacular springs in the valley of Castleguard R. D.C. FORD

**Kasba Lake**, 1342 km<sup>2</sup>, elev 336 m, max length 79 km, is located very near the common border of the NWT, Manitoba and Saskatchewan, about 700 km S of the Arctic Circle. It is fed by Snowbird Lk and other smaller lakes, and drains N via the KAZAN R into CHESTERFIELD INLET and thence to Hudson Bay. Discovered by Samuel HEARNE (1770-72), it appears on his map as Rock Partridge Lk. DAVID EVANS

**Kasemets, Udo**, composer, educator, writer (b at Tallinn, Estonia 16 Nov 1919). Following musical studies in Estonia and Germany, Kasemets immigrated to Canada in 1951 where he established himself as a teacher, conductor and music critic in the Hamilton-Toronto area. In the 1960s he was involved in several performance groups specializing in experimental music and multimedia presentations. He derived his experimental aesthetic in large part from the controversial work of American composer-philosopher John Cage. The result has been, since 1960, the creation of a series of musical and mixed-media works exploiting chance operations and game situations with the intention of blurring the lines of demarcation between composer, performer and listener, thereby enhancing the sensory awareness of audiences by involving them more directly in the creative process itself. ALAN M. GILLMOR

**Kaska** live in the mountainous region drained by the LIARD R of the southern Yukon and northern BC, primarily in the communities of Lower Post, Upper Liard (near Watson Lake), and Ross River in the Pelly drainage. With their TAHLTAN and TAGISH neighbours, they speak dialects of a single variety of Athapaskan and, in 1982, numbered about 500. The territory was one of the last regions explored by the HUDSON'S BAY COMPANY, after 1834. At that time parts of the region were only seasonally exploited, in winter by the Tahltan and in the spring by Kaska from the upper Pelly R. The Tahltan considered much of this district their territory and defended their middleman trade position between the coast and interior groups by attempting to keep the HBC out.

Early contact period Kaska material culture and subsistence was basically similar to that of other Athapaskan peoples of the subarctic plateau, especially those who similarly lacked salmon and migratory herds of barren-ground caribou. Woodland caribou, moose, Dall sheep, berries and whitefish are among the principal traditional resources of the rugged upper Liard region.

During the middle to latter half of the 19th century there were 4 regional Kaska bands — Frances Lake, Upper Liard, Dease R and the Nelson Indians — though these divisions were not cohesive social units. The primary unit of Kaska society was the local band, consisting of an extended family with a male leader. Although most Kaska belonged to one of 2 exogamous matri-moieties, Wolf and Crow, with reciprocal obligations, moiety bonds appear to have been weak.

Many Kaska only formed village communities following the 1873 Cassiar gold rush, when other Indians, Métis, Europeans and Chinese entered the region. By 1888 the number of miners had dwindled, but many natives, referred to as Cascar, remained. The backgrounds of the families aligned with the Lower Post and McDame trading posts were diverse, though Athapaskan speakers made up the majority, but intermarriage between the offspring of the immigrants represented the first step towards integration of the communities. As wage-labour op-

portunities declined, hunting and fur trapping provided the most stable resources. Their exploitation played a primary role in the emerging social pattern, especially through the formation of trapping alliances. Upon marriage, each couple had to consider the situation at hand and no simple rules regarding exogamy, postmarital residence or household composition were formulated.

After the 1920s, when Lower Post was linked into the air route between Edmonton and Whitehorse, Euro-Canadian influences increased again. The WWII period provided good returns from trapping and wage labour: Watson Lake was a supply station during construction of the ALASKA HIGHWAY, and Lower Post became a depot. After the war governmental services increased dramatically, though interaction with Euro-Canadians, channelled into administrative and educational functions and mining operations, became more formal. See also NATIVE PEOPLE: SUBARCTIC and general articles under NATIVE PEOPLE.

Reading: J. Helm, ed, *Handbook of North American Indians*, vol 6: *Subarctic* (1981).

**Kaslo**, BC, Village, pop 854 (1981c), inc 1893, located 70 km N of Nelson, overlooking Kootenay Lk. It was established 1892 to service the silver-mining boom sweeping the Kootenays; destroyed 1894 by the great flood on the Kootenay-Columbia system, it was immediately rebuilt. Mining declined at the end of WWI, but fruit farming and logging grew in the 1920s. In 1942, 964 JAPANESE were relocated there. Lumbering was spurred by the need for housing and other services. Kaslo protested the removal of this energetic community to New Denver in 1946. The present population is supported mainly by logging, sawmilling and catering to the increasing flow of tourists exploring the region's excellent fishing and sightseeing. Kaslo is the anglicized spelling of the name of a prospector, John Kasleau, who arrived in the vicinity c1880. WILLIAM A. SLOAN

**Kattan, Naim**, writer, literary critic (b at Baghdad, Iraq 26 Aug 1928). Kattan studied law at U of Baghdad before studying literature at the Sorbonne. His fictionalized memories of these years appeared as *Adieu, Babylone* (1975) and *Les Fruits arrachés* (1977). He immigrated to Canada in 1954 and in 1984 headed the writing and publishing division of the CANADA COUNCIL. Kattan has contributed to magazines and newspapers in the Near East, Europe and N America, and has written several books, distinguishing himself in the genres of the essay, novel, short story and theatre. In *Le Réel et le théâtre* (1970), a collection of essays that won the Prix France-Canada (1971), Kattan pondered the elements that over the ages have differentiated and distinguished cultures and civilizations, the relationship of oriental and occidental man with nature, other men and the beyond. He continued this reflection in *La Mémoire et la promesse* (1978) and *Le Désir et le pouvoir* (1983). In addition, Kattan has long been interested in Canadian, American and Latin American writers. His 3-vol *Ecrivains des Amériques* (1972, 1976 and 1980) has helped to make these writers better known in Canada. JACQUES COTNAM

**Kavik, John**, sculptor and potter (b in Gjoa Haven, NWT 1897). Having moved inland to hunt in the Barren Lands, he almost died during "the great starvation" of the 1950s. He eventually moved via Baker Lk to Rankin Inlet, where he took up carving in the early 1960s, as well as working in clay in 1964. Like the work of his great friend TIKTAK, Kavik's work is primary and stark, but his is filled with narrative content. This is particularly evident in his totally original pots, which are covered with 3-dimensional protruding figures full of humour and folklore. See INUIT ART. GEORGE SWINTON

**Kawartha Lakes** are 14 interconnected lakes stretching across Peterborough and Victoria counties in S-central Ontario. Ranging in size from 5 to 45 km<sup>2</sup>, they are Katchiwano, Clear, Stony, Lovesick, Lower Buckhorn, Buckhorn, Chemong, Pigeon, Sturgeon, Cameron, Scugog, Balsam, Mitchell and the man-made Canal Lk. Lake Katchiwano in the SE drains through the Otonabee and Trent rivers to Lk Ontario. On the W the chain drains into Lk SIMCOE. The resources of these beautiful, wooded lakes were first exploited by native people, chiefly the Mississauga who were occupying the region when European settlers arrived early in the 19th century. There is an Indian reserve on Chemong Lk.

Once the centre of a thriving logging industry, the island-studded lakes became a popular vacation area after 1890, especially for sportfishermen. Steamboats carried visitors to several palatial resort hotels. Today cottages line the shores and pleasure craft crowd the waters. The lakes form part of the Trent-Severn navigation system linking Lk Ontario and Georgian Bay. Locks at 9 locations allow pleasure boats to connect with all the lakes. Major towns include LINDSAY, Fenelon Falls and Bobcaygeon. The name is a corruption of an Indian word meaning "bright waters and happy land." DANIEL FRANCIS

**Kayak** All INUIT groups used some form of kayak, except for the most northerly polar Eskimo. Essentially a one-man closed-deck hunting craft, it was employed sometimes for transport of goods. Fast and seaworthy and ranging from 4 m to 7 m in length, it was built to hold from one to 3 persons. Covered with dehaired seal or caribou skins, the frame was often of driftwood, with ribs of willow branches. Both single and double-bladed wooden paddles were used. To make the entire craft watertight, even when tipped, the hunter wore a PARKA which was tied around the hatch hole rim.

RENÉ R. GADACZ

**Kazan River**, 732 km long (from Ennadai Lk), rises in the SE Northwest Territories near the Saskatchewan border. Flowing N it follows an irregular course through several lakes, draining a large part of the Barren Lands. It joins the THELON R on the S shore of Baker Lk, not far from the Inuit hamlet of the same name. It is a popular wilderness canoe route. The name comes from an Indian word for white partridge.

DANIEL FRANCIS

**Kean, Abraham** (Abram), "Killer Kean," master mariner, legislative councillor (b at Flowers Island, Nfld 8 July 1855; d at St John's 18 May 1945). The archetypal sealing captain, Kean is accused, in legend and popular mythology, of responsibility for the loss of 77 lives in the Newfoundland sealing DISASTER of 1914. William Coaker accused Kean of irresponsibly leaving 132 men from his son's ship on the ice where many froze to death during a violent storm. Exonerated by a court of inquiry, Kean kept his formidable reputation as "the greatest seal killer of all time." In 1934, when he surpassed his personal goal of 1 million seals killed (with 1 008 100 seals), he was fêted by the Board of Trade, awarded the Blue Ensign and created OBE. He wrote his autobiography, *Old and Young Ahead* (1935). LINDA WHALEN

Reading: Cassie Brown, *Death on the Ice* (1972); G.A. England, *The Greatest Hunt in the World* (1969).

**Keefer, Samuel**, engineer (b at Thorold, ON 20 Jan 1811; d at Brockville, Ont 7 Jan 1890). The first chief engineer of the Board of Public Works of the Province of Canada in 1841, he built the first suspension bridge in Canada in 1843 spanning the Ottawa R at Chaudière Falls. He resigned his government post in 1853 to become an engineer for the GRAND TRUNK RY. As supervising engineer for the Brockville and Ottawa Ry, he built the first railway TUNNEL in

Canada at Brockville. In 1857 he re-entered government service as inspector of railways and deputy commissioner of public works; having selected the plans for the PARLIAMENT BUILDINGS in Ottawa in 1859, he directed their construction. He retired again from public service in 1864 and 5 years later built the Clifton Bridge over the Niagara R. For the design and construction of this bridge, he received the 1878 Gold Medal at the Paris Exposition. PHYLLIS ROSE

**Keefer, Thomas Coltrin**, civil engineer (b at Thorold, UC 4 Nov 1821; d at Ottawa 7 Jan 1915). He was involved in a number of important engineering works, and his pamphlet *Philosophy of Railroads* (1849) was widely used. He himself began the survey for a railway connecting Kingston, Ont, and Toronto (1851), was in charge of the survey for a line between Montréal and Kingston, and determined the site for the Victoria Bridge over the St Lawrence R at Montréal. His essay *The Canals of Canada* (1850) brought him work in hydraulic engineering. He served as chief engineer of the Montréal Water Board and designed the water-supply system for Hamilton, Ont (1859), as well as the waterworks in Ottawa (1874). His Hamilton Pumping Station, with its working Gortshore beam engines, has been declared a national historic site. Keefer was a founding member and first president of the Canadian Soc of Civil Engineers (1887). As the "dean of Canadian engineers," he received many honours including the presidency of the American Soc of Civil Engineers. PHYLLIS ROSE

**Keen, George**, salesman, co-operative leader (b at Stoke-on-Trent, Eng 8 May 1869; d at Brantford, Ont 4 Dec 1953). Keen immigrated to Canada in 1904. In 1906 he helped organize the Brantford Co-operative Soc, a consumer co-operative. In 1909 he called the meeting that organized the Co-operative Union of Canada, the national organization for co-operatives in English Canada, and was its general secretary 1909-45. Keen believed that all economic activities should be organized co-operatively and was particularly devoted to encouraging consumer co-operatives. Between 1922 and 1939 he visited western Canada annually and Atlantic Canada frequently, thereby playing a significant role in developing the CO-OPERATIVE MOVEMENT in those regions. He also became an authority on legislation for the co-operative movement, and he frequently defended it before provincial and federal governments.

IAN MACPHERSON

Reading: G. Keen, *The Birth of a Movement* (1952).

**Keene, Minna**, née Bergman, photographer (b at Arolsen, Germany 5 Apr 1861; d at Oakville, Ont Nov 1943). A self-taught photographer, she was a member of the Linked Ring and the London Salon, societies devoted to the promotion of pictorial photography. In 1908 she became the first woman to be admitted as a fellow to the Royal Photographic Society. Immigrating to Canada about 1913, she was commissioned by the CPR to photograph the Rockies (1914-15), opened a studio in Toronto in 1920 and relocated to Oakville in 1922. Keene travelled, exhibited and lectured widely. She received medals for photographic excellence in Japan, South Africa and Australia. Her photographs are in the collections of the Public Archives of Canada and the Smithsonian Institution, Washington, DC.

LAURA JONES

**Keenleyside, Hugh Llewellyn**, public servant (b at Toronto 7 July 1898). Joining the Dept of External Affairs in 1928, Keenleyside served in Tokyo 1929-36. During WWII he was secretary of the Canadian section of the PERMANENT JOINT BOARD ON DEFENCE, and an opponent of the INTERNMENT of Japanese-Canadians. He was ambassador to Mexico 1944-47 but then left the department, disillusioned with diplomatic life.

He was deputy minister of mines and resources and commissioner of the NWT, 1947-50, and director-general, UN Technical Assistance Administration, 1950-58. Chairman of the BC Power Commission 1959-62 and the BC Hydro and Power Authority 1962-69, he was deeply involved in the COLUMBIA RIVER TREATY negotiations. Keenleyside wrote *Canada and the United States* (1929, rev ed 1952) and 2 impressive volumes of *Memoirs* (1981-82). NORMAN HILLMER

**Kejimikujik National Park** (est 1968, 375 km<sup>2</sup>). Tranquillity is the keynote of this glacier-scarred PARK situated 170 km SW of Halifax in central NS. Its brooding forests and dark waters are disturbed only by the loon's cry or the swirl of a paddle. In the past, most of the park was logged over and burned, but the primeval character of the forest is once again intact, and scattered stands of ancient hemlocks can still be found. The wildlife is diverse. The park's marshes, bogs and shallow lakes support more species of REPTILES and AMPHIBIANS than occur anywhere else in Atlantic Canada, including such rarities as the ribbon snake and Blanding's turtle. The woods are home to mammals common to eastern Canada, eg, black bear, mink, flying squirrel, red fox. The area's first inhabitants, the Micmac, left hundreds of petroglyphs depicting legends and events. The waterways linking the Atlantic Ocean and Bay of Fundy provided the Micmac and French with a major canoe route, and the park is still a canoeist's paradise. Scottish and Irish immigrants settled as early as the 1760s, and wealthy Boston families used the area as a summer retreat in the late 1800s. The name derives from a Micmac word referring to the exertion required in paddling across the lake. LILLIAN STEWART

**Kelly, Leonard**, "Red," hockey player (b at Simcoe, Ont 9 July 1927). He was a star with the powerhouse St Michael's College junior teams of the 1940s and was one of the best defencemen in the NHL with Detroit, winning the JAMES NORRIS TROPHY in its first year. In 1960 he was traded to TORONTO MAPLE LEAFS, where as a centreman he was a key figure in 4 STANLEY CUP victories. He coached Los Angeles, Pittsburgh and Toronto. He scored 281 goals, 542 assists in regular season play, and 33 goals, 59 assists in playoffs. A smooth skater and effective playmaker, he won the LADY BYNG TROPHY 4 times. He served 2 terms as an MP for the Liberal Party. JAMES MARSH

**Kelly, Peter Reginald**, Methodist-United Church of Canada cleric, Indian activist and leader (b at Skidegate, BC 21 Apr 1885; d at Nanaimo, BC 2 Mar 1966). A member of the HAIDA nobility, Kelly was educated at Coqualeetza Institute and Columbia College, both Methodist institutions. Before becoming a lay preacher, he taught school for 5 years at Skidegate. By 1911 he had begun to distinguish himself in the BC LAND CLAIMS issue and in 1927, as president of the Allied Tribes of BC, he testified on Indian grievances before a special parliamentary committee. Prominent in the Native Brotherhood of BC in the 1930s, he was a key figure in the consultations of the late 1940s that led to a revision of the Indian Act. A clergyman as well, he also served in several pastorates and as captain of the *Thomas Crosby III* and *Thomas Crosby IV* mission ships. E. P. PATTERSON II

**Kelowna**, BC, City, pop 59 916 (1981c), inc 1905, located in S-central BC on the E shore of Okanagan Lk. The area was first visited by David Stuart, a Scottish fur trader 1811. Oblate missionaries built a mission on the present site 1859, and planted the first fruit trees 3 years later. The townsite was laid out in 1892, and the name chosen — from an Indian word meaning "grizzly bear." At incorporation, population was 600, and shortly after there were 11 sawmills, 3 fruit-packing plants and 2 canneries. Main-line

rail service did not arrive until 1925, and population increased to 5100 in 1941, reaching 13 000 by 1961. Kelowna is the main marketing and distribution centre of the central OKANAGAN VALLEY. The city's large area contains many orchards and vineyards, numerous canning plants and BC's largest winery (started 1932). A bridge, with a long section floating on pontoons, was built across the lake in 1958. The city is served by road to Calgary and Vancouver, and has the third-busiest airport in BC. It has the Sunshine Theatre Co, a symphony orchestra, museum and art gallery. Okanagan College, begun 1963, offers adult education and a 2-year transfer program. With the largest beach on Okanagan Lk, a sunny climate and a pretty harbour for thousands of boat owners, the city is a popular tourist centre. The main summer attraction is the Kelowna Regatta, begun 1906. JAMES MARSH

**Kelsey, Henry**, explorer (b at East Greenwich? Eng 1667?; d there and buried 2 Nov 1724). He was apprenticed to the HBC in Mar 1684 and served the company nearly 40 years — all but 3 of them at Hudson Bay. He is chiefly remembered for his journey to the Canadian plains 1690-92. His exact route is unknown, but he left YORK FACTORY in June 1690 and with his Indian guides travelled the Hayes and Saskatchewan rivers and wintered near The Pas, Man, before striking out on foot across the prairie, possibly as far as the Red Deer R. Kelsey's journal of the trip, which opens with some curious, rhyming doggerel, describes buffalo, grizzly bears and an Indian group — possibly the Sioux or Gros Ventres. The company's hold on the bay was tenuous, and Kelsey twice negotiated surrender of York to IBERVILLE (1694 and 1697). His reward for loyal service was his appointment as chief trader at Albany (1705) and governor of all the bay posts (1717). *The Kelsey Papers*, a single, paperbound volume dated 1693, were not known to historians before 1926, and mysteries still surround them. JAMES MARSH

**Kelso, John Joseph**, social reformer (b at Dundalk, Ire 31 Mar 1864; d at Toronto 30 Sept 1935). While a reporter for the *World* and the *Globe*, Kelso founded the Toronto Humane Society in 1887 for the prevention of cruelty to children and animals, the Fresh Air Fund and the Santa Claus Fund in 1888 to provide excursions and cheer for poor women and children, and the Children's Aid Society in 1891. In 1893 he was appointed the first superintendent of neglected and dependent children in Ontario and, until his retirement in 1934, directed the establishment of children's aid societies throughout Ontario and played a key role in their acceptance in other provinces. He also advocated special juvenile courts, mothers' allowances and the legalizing of adoption, and was active in closing reformatories and organizing playgrounds. In these reforms he was not an original thinker but a popularizer and promoter of policies and programs developed elsewhere. After 1895 he was recognized as Canada's leading expert in child welfare and gloried in the title the "children's friend."

Reading: A. Jones and L. Rutman, *In the Children's Aid: J.J. Kelso and Child Welfare in Ontario* (1981).

**Kemp, Sir Albert Edward**, businessman, politician (b at Clarenceville, Qué 11 Aug 1858; d at Pigeon Lake, Ont 12 Aug 1929). After establishing himself in business as owner and president of a sheet-metal manufacturing company, Kemp was a Conservative MP for East Toronto, 1900-08 and 1911-21. As minister of militia and defence 1916-17 and minister of the overseas military forces 1917-20, Kemp helped restore order to the chaos created by former defence minister Sam HUGHES, but he was careful not to surrender ministerial authority to the soldiers. He served in the Senate from 1921 until his death.

STEPHEN HARRIS

**Kempt, Sir James**, soldier, colonial administrator (b at Edinburgh, Scot 1764; d at London, Eng 20 Dec 1854). He attained the ranks of lieutenant (1784), captain (1794) and major (1803) in the British army. He saw active service during the Napoleonic Wars in the Mediterranean, the Peninsular War and the Battle of Waterloo. He was promoted lieutenant-colonel and served as quartermaster general of British N America 1807-11, as lieutenant-governor of Nova Scotia 1820-28 and as administrator of the government of Canada 1828-30. Although seen as little more than a caretaker administration, Kempt's short term in Canada temporarily eased the tensions that had arisen between Gov DALHOUSIE and the Parti PATRIOTE led by Louis-Joseph Papineau.

DAVID EVANS

**Kemptville**, Ont, Town, pop 2362 (1981c), inc 1963, located on Kemptville Cr, a branch of the Rideau R, 60 km S of Ottawa. Named after Sir James Kempt, administrator of UC 1828-30, it was first called Clothier's Mills after Lyman Clothier, who developed it on an 81 ha site. Its growth speeded with the arrival of the Bytown and Prescott Ry, then of the CPR. Once an active manufacturing centre of stoves and leather, it is now an agricultural servicing centre, site of the Kemptville School of Agricultural Technology and of a provincial forestry station. It was the birthplace and home base of G. Howard FERGUSON, premier of Ontario in the 1920s.

K.L. MORRISON

**Kenderdine, Augustus Frederick**, painter (b at Manchester, Eng 31 Mar 1870; d at Saskatoon 3 Aug 1947). With James Henderson, he was the most significant painter in Saskatchewan before 1950. He arrived at Lashburn to farm in 1907 and began recording prairie life in his paintings. He trained at the Manchester School of Art and the Académie Julian in Paris, exhibited at the Royal Academy in London, and had an established commercial reputation in England. In keeping with his training, Kenderdine's interpretation of the prairie landscape was romantic. He relied on rich tonal effects and subtle colour to convey with European dignity a sensuous ruggedness in the mood of the Prairies. Kenderdine joined the art department at U Sask in 1920, and in 1935 started the Summer School of Art at Emma Lk, Sask.

KATHLEEN LAVERTY

**Kennedy, Garry Neill**, artist, teacher (b at St Catharines, Ont 6 Nov 1935). Since 1967 he has been president of the NOVA SCOTIA COLLEGE OF ART AND DESIGN (Halifax), Canada's only degree-granting art college. Kennedy's other life is that of a nihilist artist, rooted in conceptual art, suspicious of art systems and traditions, and doubtful that valid art is possible unless founded in irony and disenchantment. A series of 1976-77 paintings began from the premise that the traditional reasons for painting were exhausted and that only the craft and the material conditions of painting — paint, brush, canvas — were realities. Scornful of references to taste, he produced a series of unexpectedly strange and beautiful works. With a shrewd sense of humour his subsequent work has probed the systems that operate in museums, commercial galleries and the art world in general.

ROALD NASGAARD

**Kennedy, Sir John**, civil engineer, harbour authority (b at Spencerville, UC 26 Sept 1838; d at Montréal 25 Oct 1921). Educated at McGill, he first worked under Thomas KEEFER on the St Lawrence Ship Channel below Montréal. Attracted by early railway building, he moved to Ontario and became a divisional chief engineer of a branch of the GREAT WESTERN RY. In 1875 he returned to Montréal as chief engineer, Montreal Harbour Commission. For 44 years he was in charge of developing the port to its international status. In 1907 he became blind but continued as consulting engineer to direct all

engineering work for the harbour. A man of wide interests, he presided over the founding meeting of the Canadian Engineering Standards Assn.

R.F. LEGGET

**Kennedy, Leo**, poet, critic (b at Liverpool, Eng 22 Aug 1907; moved to Montréal 1912). Kennedy helped change the direction of Canadian poetry in the 1920s and, through critical manifestos and literary journals, shared in avant-garde literary movements (1925-38). After only 6 years of education, Kennedy took to the sea and then had a variety of jobs. Friend of A.J.M. SMITH, F.R. SCOTT, A.M. KLEIN and Leon Edel, he contributed to the *McGill Literary Supplement*, *McGill Fortnightly Review* and *Canadian Mercury* and was part of a politically active circle of intellectuals in Montréal and Toronto in the 1930s and an editor of *New Frontier* 1936-38. In 1933 he published *The Shrouding* (poems) which, marked by a fascination with death and symbolic resurrection, reflects his wit and forceful personality. Most of his life he worked as a copywriter in the US; recently he has lived in Montréal, writing poems for children, satiric verse and broadsides.

PATRICIA MORLEY

**Kennedy, Theodore**, Ted or "Teeder," hockey player (b at Humberstone, Ont 12 Dec 1925). He played senior hockey at Pt Colborne and joined TORONTO MAPLE LEAFS 1942-43. Hardworking and tenacious, he typified the powerful, tough checking Maple Leaf teams built by Conn SMYTHE. He lacked skill as a skater but was a resourceful playmaker and scored 231 goals and 560 points in 696 games. He won the HART TROPHY (most valuable player) in his last full season, 1955. He later operated a thoroughbred training centre in St Mary's, Ont.

JAMES MARSH

**Kennedy, Thomas Laird**, farmer, politician, premier of Ontario (b at Dixie [Mississauga], Ont 15 Aug 1878; d there 13 Feb 1959). An army officer in WWI and later a militia brigadier, he was a Conservative member of the Ontario Legislature 1919-34 and 1937-58, serving as minister of agriculture 1930-34 and 1943-53. An amiable, homespun man, he was widely popular and respected among farmers. He was appointed premier temporarily (1948-49) in recognition of long public service.

ROGER GRAHAM

Inuk artist Kenojuak Ashevak preparing a drawing that will later be made into a print, Cape Dorset, NWT (courtesy National Film Board/Photothèque).

**Kennedy, William**, explorer (b probably at Cumberland House, Rupert's Land 26 Apr 1814; d 25 Jan 1890). He was the son of a fur-trading father and an Indian mother, was educated in the Orkney Is and worked for the HUDSON'S BAY CO. 1833-45, serving mostly at posts in Québec. In 1851-52 he led the 13th expedition in search of Sir John FRANKLIN. In what was unknown territory, he and Joseph-René Bellot sledged along the E coast of Somerset I, crossed Bellot Str to Ommanney Bay on Prince of Wales I, then trekked N to Cape Walker and back to base at Batty Bay. Kennedy settled at St Andrews, Man. He was a strong advocate of the annexation of Rupert's Land to Canada and worked diligently for an all-Canadian route from Toronto to the RED RIVER COLONY, and for the development of the seaport at Churchill.

SHIRLEE ANNE SMITH

**Kennedy, William Paul McClure**, historian, jurist, educator (b at Shankill, Ire 8 Jan 1879; d at Toronto 12 Aug 1963). He was educated at Paris, Vienna and Berlin, and at Trinity College, Dublin, where he majored in modern history, jurisprudence and constitutional law. He came to Canada in 1913 and taught English at St Francis Xavier. In 1915 he was hired by U of T as lecturer in English and history. He was a special lecturer on federal institutions in the dept of political economy 1922, and became professor of law and political institutions 1926. Largely through his efforts a separate department of law was created in 1930, and he became its first head. Kennedy was founder-editor of the *U of T Law Journal* and a prolific author. Through such books as *The Constitution of Canada* (1922) he influenced a generation of students with his "Actonian" view of nationalism. He advised many government commissions, including the federal Royal Commission on DOMINION-PROVINCIAL RELATIONS (1937); He was respected rather than liked; his colleagues found him "mercurial" and "somewhat erratic."

M. BROOK TAYLOR

Reading: C Berger, *The Writing of Canadian History* (1976).

**Kenojuak Ashevak**, artist (b at Ikerrasak camp, S Baffin I, NWT 3 Oct 1927). She is perhaps the best-known Inuk artist for her famous print *The Enchanted Owl*. The first woman to become involved with the newly established PRINTMAKING shop at Cape Dorset, Kenojuak began drawing in the late 1950s; her works have inspired about 200 prints produced since then. Her drawings, primarily of birds, are character-

ized by a strong sense of composition, colour, design and draughtmanship. Although best known as a graphic artist she also carves, making sculptures and (with her late husband Johnniebo) a mural for the 1970 World's Fair in Osaka, Japan. The recipient of numerous awards, including the Order of Canada (companion in 1982) and participant in many exhibitions, Kenjoak has travelled to southern Canada and Europe. She was featured in a National Film Board film in 1962 and in a limited edition book published in 1981. Kenjoak became a member of the Royal Canadian Academy of Arts in 1974. See INUIT ART. JEAN BLODGETT

**Kenora, Ont.** Town, pop 9817 (1981c), located on LAKE OF THE WOODS, 50 km E of Manitoba border, seat of Kenora Dist (about 441 000 km<sup>2</sup>). The LA VERENDRYES built Ft St-Charles on the NW arm of the lake in 1732. Incorporated as Rat Portage by Manitoba 1882 during a boundary dispute with Ontario, and subsequently by Ontario 1892, the current site was renamed Kenora 1905. The name derives from *Keewatin*, *Norman* and *Rat Portage*, interdependent communities clustered where the lake spills into the Winnipeg R. Kenora's scenic location on a major international waterway determined its growth patterns. A prehistoric dependence on caribou, fish and wild rice continued through the FUR-TRADE era. By 1836 the HBC established a post within the present town limits. Construction on the Pacific railway beginning 1879 brought lumbering, steamships, gold mining, fisheries, hydroelectric development and flour milling. Seaplanes and the TRANS-CANADA HWY (1935) swelled summer traffic. Kenora's economy is based on a pulp-and-paper mill, tourism, CP Rail and government offices. Neighbouring reserves affirm a significant Ojibwa presence. Nearby Manitoba and the US exert a strong social, economic and political influence. E. BARR Reading: F. Mead, ed, *Through the Kenora Gateway* (1981); F.E. Jackson, *North Wind Blowing Backwards* (1977).

**Kent, John**, merchant, politician, premier of Newfoundland (b at Waterford, Ire 1805; d at St John's 1 Sept 1872). First elected to the Assembly in 1832, Kent championed Catholic rights and aroused the sectarian disorders that led to a modified constitution, 1842-48. Thereafter the Reform movement stalled, especially when Kent accepted an executive appointment as collector of customs 1849-52. However, when Philip LITTLE, a more Reform-minded and less intemperate leader, led the province to self-government in 1855, Kent became colonial secretary and in 1858 succeeded Little as premier. Easily re-elected in 1859 Kent was forced to the polls in 1861 when his government was dismissed by the governor. Kent's campaign, fought along sectarian lines, led to murderous riots and a narrow victory for Protestant Conservatives. He soon retreated from the Liberal leadership and joined a coalition government favouring denominational amalgamation and confederation. His tenure as receiver general, 1865-69, concluded his illustrious political career. JOHN GREENE

**Kent, Tom**, journalist, public servant (b at Stafford, Eng 3 Apr 1922). An Oxford graduate, Kent worked for the *Manchester Guardian* and the *Economist* before coming to Canada, where he became editor of the *Winnipeg Free Press* (1954-59).

In 1963-66 he was PM PEARSON's principal policy adviser, then served as deputy minister in the depts of Manpower and Immigration and Regional Economic Expansion. He headed Devco and Sydney Steel in NS, became dean at Dalhousie, and in 1980-81 headed a royal commission on the press. ROBERT BOTHWELL

**Kentville, NS**, Town, pop 4974 (1981c), inc 1886, is located on the Cornwallis R, 103 km NW of Halifax. Kentville was settled in the 1760s by New Englanders with lots at the western end of Horton, one of 13 townships established by the NS government after the expulsion of the ACADIANS. Known to the Micmac as *Pemook* ("fording place") and to the New Englanders as Horton Corner, it was, because of its location at a bend in the Cornwallis R, a natural crossing point between Horton and Cornwallis townships. It became shiretown of Kings County at the end of the 18th century and, being at the junction of 7 roads, grew into a commercial centre, serving agricultural villages and hamlets in the Annapolis Valley. Named Kentville in honour of Prince Edward, duke of Kent, in 1826, the community thrived when the Windsor-Annapolis Ry (later Dominion Atlantic) established its headquarters there in 1868 and began shipping Annapolis Valley apples to British markets. Government facilities followed, including a militia installation at Camp Aldershot (1904) and the 183 ha Kentville Regional (agricultural) Research Station (1910). Although the British fruit market collapsed with WWI and trucking of freight replaced rail transport, Kentville has survived, remaining the area's financial centre. DEBRA MCNABB

**Keremeos, BC**, Village, pop 830 (1981c), inc 1956, is located in the fertile bench beside the Similkameen R, 42 km S of Penticton. Its name likely derives from an Indian phrase meaning "wind channel in the mountain." Site of a prehistoric Indian village, the area was visited by fur trader Alexander Ross in 1813. An HBC post located at Cawston was moved to Keremeos in 1864 and was shut down in 1872. Barrington Price, an Englishman, pre-empted land in 1873, founded a cattle ranch and built a gristmill in 1877. Keremeos Land Co, mainly interested in orchards, was formed in 1906. The Great Northern Ry arrived in 1907. Hedley Camp, an important gold producer, operated nearby 1904-58. Agriculture is the most important economic sector today, with grape growing recently showing an increase. Many roadside stands service the travelling public. Mining is still an important activity. WILLIAM A. SLOAN

**Kerr, Illingworth Holey**, "Buck," painter, illustrator, writer (b at Lumsden, Sask 20 Aug 1905). Kerr attended Central Technical School, Toronto, and the Ontario College of Art. He also studied at the Westminster School of Art, London, in 1936 and, after returning to Canada, taught at the Vancouver School of Art (1945-47). In 1947 he became director of the Calgary Art School, Provincial Institute of Technology. His early landscape style reflects the influence of Lawren HARRIS in his long, curving brush strokes and emphasis on design. He applied paint heavily, giving relief to an otherwise flat, spatial quality in his work. In later works Kerr has used a broken brushstroke style that creates visual tension to counteract this 2-dimensionality. KATHLEEN LAVERTY

**Kerr, Robert**, track and field athlete, coach (b at Enniskillen, Ire 1882; d at Hamilton, Ont 12

May 1963). Despite the "marathon craze" of the time, Kerr took advantage of the speed required for his occupation as a Hamilton fireman and won the 100-, 440- and 880-yd races at the 1902 Coronation Games. He could not afford to attend the unofficial 1906 Athens Olympics, but at the 1908 London Olympics he won the 220-yd gold and 100-yd bronze. Though he set the 50-yd record and was selected to the 1912 Stockholm Olympics team, Kerr chose retirement. He was captain of the 1928 Olympics team and manager of the 1932 team, the last to win an Olympic gold medal in TRACK AND FIELD for Canada. TED BARRIS

**Kerwin, Larkin**, physicist, research director (b at Québec C 22 June 1924). Kerwin joined Laval's physics department in 1946 after study at St FX, U of T and the Massachusetts Inst of Technology and after earning his DSc at Laval rose to become its rector in 1972. He was one of the first French Canadians to specialize in atomic physics, the first layman to become rector of Laval, and the first French Canadian appointed president of the NATIONAL RESEARCH COUNCIL (1980). At the NRC he prepared a 5-year expansion plan focused on industrial research and laid the foundations of a closer relationship between the NRC and the Cabinet. DONALD J.C. PHILLIPSON

**Kestrel**, see FALCON.

**Ketchum, Jesse**, businessman, politician (b at Spencertown, NY 31 Mar 1782; d at Buffalo, NY 7 Sept 1867). Ketchum moved to Upper Canada as a youth and became a leading merchant and landowner in York (Toronto). A noted philanthropist, he is most often remembered for his dedicated work to establish common schools, though he himself had little formal education. However, he generously donated time and money to set up benevolent and relief societies, to construct churches, Sunday schools and Bible societies, and the York Mechanics' Institute. In politics Ketchum opposed the FAMILY COMPACT, and helped organize numerous Reform committees and associations. He held office once — from 1828 to 1834 he was in the House of Assembly. He did not participate in the 1837 Rebellion but following its collapse moved his business to Buffalo. There he soon was similarly successful, becoming a leading merchant and generous philanthropist. VICTOR RUSSELL

**Kettle Valley** is a dry, forested area in the Okanagan Highland of southern BC. The name relates either to rock formations in the falls at the confluence of the Kettle and COLUMBIA rivers in Washington state or to the shape of baskets woven by Salish there. Bypassed during the gold rush into nearby boundary country in the 1880s, the Kettle Valley developed a stable silver-mining industry after becoming the final link of the railway system between the Kootenays and the Pacific Coast. Begun in 1910, the CPR's Kettle Valley Division included a passenger service between Midway and PENTICTON (terminated 1964) popular with railway buffs. The Highland Bell mine complex has produced silver-bearing ore continuously since 1922. The valley's forests supply sawmills at Midway and Grand Forks and local cattle ranches with forage. PETER GRANT

**Keynesian Economics** is a method of analysing the behaviour of key aggregate economic variables such as output, employment, inflation and interest rates. British economist John Maynard Keynes initially developed this analytic structure (and as a result virtually established the modern field of macroeconomics) during the 1930s, as a method of understanding the GREAT DEPRESSION. Prior to this time, economists generally believed that cyclical swings in employment and output would be relatively small and self-correcting; if for some reason overall demand in the economy weakened, causing a tem-

porary drop in production and jobs, the resulting slack labour and product market conditions would force a rapid drop in both wages and prices, which in turn would operate to restore full employment.

The trauma of the Depression severely challenged such an optimistic view of macroeconomic behaviour. In his *General Theory of Employment, Interest and Money* (1936) Keynes argued that rigidities existed that would prevent the necessary equilibrating fall in wages and prices. As a result, a drop in demand could cause a fall in output and employment that was not quickly self-correcting and, indeed, might endure for some time. Keynes also identified a number of characteristics of market economies that would cause any demand decrease to be magnified into an even larger decline in overall demand. For example, worsening business conditions can cause firms to reduce investment in new plants and equipment with a consequent drop in overall expenditures. Keynes argued that the answer to such destabilizing private-sector behaviour was an activist public-sector STABILIZATION policy. He specifically argued for increased government expenditures and lower taxes to raise demand and pull world output and employment out of their Depression slump. Subsequently, other economists used Keynesian ideas to assert that stabilization policy could be used not only to prevent prolonged economic declines, but also to dampen inflationary booms and to promote high economic growth.

Canadian economics scholar Mabel TIMLIN's book, *Keynesian Economics* (1942) influenced thinkers in Canada and abroad and affected economics teaching in Canadian universities. Canadian government policy also was affected by the new Keynesian concepts, chiefly through the persuasion of several able young civil servants, especially Robert BRYCE, who eventually became deputy minister of finance. Indeed Canada was one of the first countries of the world to commit itself to active use of fiscal (and later monetary) policy to stimulate domestic output and employment. The buoyant economic period of the 1960s and 1970s seemed to support the appropriateness of such a Keynesian approach. However, the higher rates of both unemployment and inflation from the mid-1970s through the early 1980s caused critics, in academic and government circles, to argue on both theoretical economic and political grounds that Keynesian-style interventions are more likely to increase, rather than dampen, economic fluctuations. Furthermore, they claim that such actions have an inherent inflationary bias which has created severe long-term economic problems both in Canada and in other countries. Keynesian economists counter that many of the difficulties of the last decade can be attributed to events (such as the rapid rise in world oil prices) that are largely outside the control of national economic policies. Furthermore, while they acknowledge that some policy errors have been made, they assert that the application of Keynesian principles has kept the world from experiencing another Depression. See ECONOMICS. R. WIRICK

**Keys, David Arnold**, physicist (b at Toronto 4 Nov 1890; d at Ottawa 28 Oct 1977). He was a much-loved professor at McGill 1922-47 and thereafter the "mayor of Chalk River" — administrative manager of the Canadian atomic project. After research on antisubmarine warfare with J.C. MCLENNAN in WWI, Keys earned PhDs at both Harvard and Cambridge before joining in 1922 the McGill physics department, where he became Macdonald research professor in 1941. His own special field was geophysics, for which he wrote one of the earliest textbooks in 1929. During WWII he was research director of the bureau of technical personnel, in charge of assigning Canadian scientists to war work,

and organized special classes at McGill that trained 2000 radar technicians for the RCAF. The NATIONAL RESEARCH COUNCIL appointed Keys VP in charge of the Chalk River Nuclear Laboratories in 1947 and he retired in 1961 after serving as London liaison officer for ATOMIC ENERGY OF CANADA LTD. A lifelong diarist, in retirement Keys wrote his memoirs, unpublished to date. DONALD J.C. PHILLIPSON

**Khorana, Har Gobind**, scientist (b in Raipur, India 9 Jan 1922). His mother was illiterate and his family impoverished. His first class was in the open on the edge of the Rajasthan Desert. Gobind's brilliance was obvious early and, with scholarships, he earned degrees in organic chemistry at Punjab U. He obtained a PhD at Liverpool (1948) and then spent 3 years studying proteins and nucleic acids at Cambridge. In spite of his ability, his race precluded him from appointment as a professor in Britain. In search of an outstanding young scientist, Gordon Shrum, a physicist from UBC, hired Khorana to do organic chemistry at the BC Research Council in Vancouver in 1952. Gifted with a photographic memory, relentless drive, high standards and exquisite experimental dexterity, Khorana soon made an international reputation. Attracting a group of brilliant scholars, he succeeded in synthesizing pure ATP, the cellular source of energy. He made co-enzyme A, a complex molecule, important in metabolism. He showed how enzymes break down DNA, he studied cyclic precursors of DNA, and he discovered how to join building blocks into chains of DNA. Each discovery opened up new vistas for research.

In 1960 Khorana went to the US where he proved the triplet DNA code and synthesized a gene in a test tube. When he earned a Nobel Prize for medicine in 1968, he pointed out the importance of the Vancouver work and acknowledged 3 scientists, all at UBC. DAVID T. SUZUKI

**Kicking Horse Pass**, elev 1627 m, straddles the Continental Divide on the BC-Alberta border, 10 km W of LAKE LOUISE. Sir James HECTOR and a party of the PALLISER EXPEDITION explored the pass in 1858. The peculiar name derives from an incident in which Hector was kicked in the chest by a packhorse. The pass was selected as the route for the transcontinental CANADIAN PACIFIC RY, despite its severe inclines; construction was completed in 1884. The steep rail grades of 4.5% on the BC side of the pass were lessened to 2.2% by construction of Spiral Tunnels (1909), now a popular tourist attraction. The pass, which connects Yoho and Banff national parks, is also crossed by the Trans-Canada Hwy. GLEN BOLES

**Kidd, James Robbins**, "Roby," adult educator, internationalist b at Wapella, Sask 4 May 1915; d at Toronto 21 Mar 1982). Founder and first secretary-general of the International Council for Adult Education (ICAE), Kidd was a leader in the movement to recognize adult education as an important field of endeavour in Canada and abroad. Kidd's own formal education was completed while he worked for the YMCA (1935-47) in Montréal, Ottawa, and New York. He joined the Canadian Assn for Adult Education in Toronto, in 1947, and worked there 13 years, the last 10 as director. In 1959 he founded the Overseas Book Centre (now Canadian Organization for Development through Education), and in 1961 the Overseas Institute (now Canadian Council for International Cooperation). The ICAE was incorporated in 1973, with 26 countries as members; more than 70 national and regional associations were members in 1984. Kidd was professor (1972-82) and chairman (1965-66) of the dept of adult education at the Ontario Institute for Studies in Education; he participated fully in international activities, notably as chairman of the Second Unesco World Conference

on Adult Education at Montréal in 1965. He defined the central goal of education as "learning to be, learning to become, learning to belong." His best known book is *How Adults Learn* (1952), widely translated.

SUSANNE MOWAT

**Kidder, Margot**, movie actress (b at Yellowknife, NWT 17 Oct 1948). With no theatrical training, she performed in numerous Canadian TV shows as a teenager, before being cast in the American movie *Gaily, Gaily* (1969) by director Norman JEWISON. With *The Amityville Horror* (1979) and *Superman* and *Superman II* (1978, 1980), where she played reporter Lois Lane, Kidder achieved widespread recognition. Her starring role in Don SHEBIB's *Heartaches* (1981) won her praise. ALLAN M. GOULD

**Kidnapping**, historically, indicated the seizing and carrying away of children to make them slaves or servants or for some other nefarious purpose, eg, the marriage of an infant heiress to acquire a claim to her property. The term now applies to any taking or carrying away of persons against their will, either by transporting them out of the country or by confining them within the country to secure a ransom or some other concession in return for their freedom. Kidnapping is expressly condemned in the Canadian Criminal Code. Anyone who confines or imprisons another against his will, or causes another to be sent without lawful justification out of Canada, or, and this is the most usual and popular conception of the offence, holds another against his will for ransom or services is liable to life imprisonment. It is also an offence to imprison a person unlawfully, not necessarily holding him in a jail, but, for example, without lawful cause detaining him for any purpose, even without seeking a ransom or other concession for his freedom (see CIVIL LIBERTIES). Such unlawful imprisonment is punishable by a 5-year sentence. The code treats the kidnapping of a female or a child under 14 as the distinct offence of ABDUCTION, regarding such an act as usually being for sexual purposes. In 1981, there were 1205 reported cases of kidnapping, and 782 charges were laid against 300 males, 33 females and 13 juveniles.

Perhaps the most famous recent case of kidnapping (1970) in Canada was that of James Cross (a British trade commissioner) and Pierre LAPORTE by the Front de libération du Québec (see OCTOBER CRISIS). The 1973 Treaty on the Prevention and Punishment of Crimes against Diplomats made the kidnapping of diplomats criminal by international law. Canada is a party to this treaty, and under the Criminal Code (s 381.1) the kidnapping of a diplomat is recognized as a separate crime. L.C. GREEN

**Kierans, Eric William**, economist, politician, businessman (b at Montréal 2 Feb 1914). Educated at Loyola Coll and McGill, Kierans was director of the School of Commerce at McGill 1953-60, president of the Montreal Stock Exchange 1960-63, and minister of communications and postmaster general of Canada 1968-71. Kierans achieved political prominence despite brief service in only 2 governments, partly because those governments — Jean LESAGE's QUIET REVOLUTION and Pierre TRUDEAU's first Cabinet — made beginnings of significance to Canadian politics and partly because Kierans stirred up controversy outside government. Examples include his attack on Walter GORDON's 1963 budget; his 1967 challenge to René LÉVESQUE to abandon separatism or quit the Québec Liberal Party; his candidacy for the national Liberal leadership in 1968; and his sustained criticism of Trudeau's economic policies. Although he is often labelled an "economic nationalist," his views are rooted more in his belief in the primacy of politics over economics, his distrust of econom-

Izaak Walton Killam, who built a Canadian and Latin American investment empire, and was said to be the richest Canadian of his day (courtesy Izaak Walton Killam Hospital for Children).

ic, political and intellectual "monopoly," his insistence that Canada's natural resources belong to the public, and his conviction that things do not improve unless somebody speaks out.

JOHN McDougall

**Killaly, Hamilton Hartley**, engineer, civil servant (b at Dublin, Ire 1800; d at Picton, Ont 28 Mar 1874). Killaly attended Trinity Coll, Dublin, and worked as an engineer on canal projects before immigrating to Upper Canada in 1835. He worked on the Welland Canal and in 1841 was appointed chairman of the Board of Works of the Province of Canada. Canada was then building canals between Lk Erie and Montréal, a program Killaly pursued vigorously and competently. Unfortunately, he was notoriously casual about financial controls and resistant to political restraint, and by 1846 the government had removed him. In 1851, however, he was appointed assistant commissioner of public works. He was soon challenging the chief commissioner, and in 1859 legislative action forced him out. Thereafter, Killaly, responsible for so many public works, worked in various temporary government positions, including a royal commission on fortifications in 1862. DOUG OWRAM

**Killam, Izaak Walton**, financier (b at Yarmouth, NS 23 July 1885; d at Grand-Cascapedia, Qué 5 Aug 1955). Born into a family of merchants and shipowners, Killam had little formal education but great entrepreneurial drive. He joined the Union Bank of Halifax as a clerk in 1901 and was transferred to head office 2 years later. He befriended Max Aitken and like him gravitated to Montréal. From 1909 to 1913 Killam managed the London office of Aitken's Royal Securities Co. In 1915 he became president and 4 years later bought out Aitken, remaining president until 1954. Killam built an investment empire in Canada and Latin America with holdings in publishing, utilities (International Power, Calgary Power, Ottawa Valley Power Co), pulp and paper (BC Pulp and Paper, Mersey Paper), construction and films. The epitome of the financial power of Montréal's St James Street, secretive and austere, Killam was said to be the richest Canadian of his day. In 1922 Killam married Dorothy Brooks Johnston (b at St Louis, Mo 1900?; d at Villefranche-sur-Mer, France 27 July 1965). After his death she more than doubled her \$40-million inheritance and carried out her husband's wishes to assist the

arts, education and sciences. The CANADA COUNCIL was partially launched (1957) from inheritance taxes on the Killam estate. Izaak Walton Killam Hospital for Children in Halifax is a leading facility of its kind. The Killam Memorial Prize honours eminent Canadian scholars, and Killam research fellowships are presented to Canadian scientists and scholars.

DUNCAN McDOWALL

**Killam, Thomas**, merchant, shipowner, politician (b at Yarmouth, NS 8 Feb 1802; d at Digby, NS 15 Dec 1868). He became the central figure in a group of related families who dominated the commercial and social activities of Yarmouth from the 1840s into the 1860s. He was the senior partner of Thomas Killam and Co 1849-62, a marine-insurance company director 1837-57, and on the board of the Bank of Yarmouth 1865-66. He emerged from municipal politics to become an influential member of the Legislative Assembly 1847-67 and the first MP for Yarmouth County in 1867.

GERRY PANTING

**Killiney Island**, 269 km<sup>2</sup>, is located off the northern tip of the Labrador Pen on the S side of the entrance to HUDSON STR. The provincial boundary passes across the island, so that its eastern portion belongs to Newfoundland and the rest is part of the NWT. It is only 29 km long and about 13 km wide, with a high, rocky coastline, and is separated from the mainland by the narrow, steep-sided MacLellan Str. Port Burwell on the SW side of the island has been an important arctic harbour since the 1880s. Sheltered behind precipitous cliffs, it has been the site of an Inuit camp, a trading post and a Moravian mission.

DANIEL FRANCIS

**Kimberley**, BC, City, pop 7375 (1981c), inc 1944, is located on the slope (elev 1120 m) of Sullivan and North Star mountains, 29 km NW of Cranbrook. Since the Sullivan and North Star mines were discovered 1892, Kimberley has been mainly a mining centre. Consolidated Mining and Smelting gained control of the Sullivan Mine 1920 and used advanced technology to separate the ore components. By 1937 the Sullivan was the largest zinc-lead-silver mine in the world, producing 10% of the world's output. Tin and iron were processed at Kimberley until 1972. By-products led to the building of a fertilizer plant. Cominco has begun mechanization of its methods to increase productivity and improve working conditions. Renowned for its sports, Kimberley won the Allan Cup and World Hockey Championship 1937-38 and the Allan again 1978. Its downtown renewal on a "Bavarian" theme and potential expansion of ski facilities promise a future as a tourist centre.

WILLIAM A. SLOAN

**Kincardine**, Ont, Town, pop 5778 (1981c), inc 1875, is located along the shore of Lk Huron, about 225 km NW of Toronto and 80 km SW of Owen Sound. In the earliest settled part of Bruce

Lighthouse and Huron Terrace Bridge at Kincardine Harbour, Ont (photo by Sean Murphy).

County, the community was first named Penetangore (1848). It was subsequently named (1851) for the earl of Elgin and Kincardine, governor general of N America 1847-54. By 1867 it had 5 hotels and numerous services and small industries, including cabinet shops, 4 carriage and wagon shops, water-powered gristmills and sawmills, 2 foundries, pearl-ash factories, woolen factories, blacksmiths, tinsmiths, tanneries, harness and saddlery shops, a bakery and confectionery and a brewery. Until the mid-1960s the town still had some notable furniture factories, but today it depends on summer tourists and particularly on the Bruce Nuclear Power Development about 16 km N; over 1200 Ontario Hydro employees live within the municipality and faced an uncertain future after the announcement (1984) that the Douglas Point plant was being phased out. Long a popular summer resort, the town boasts a new community centre that features year-round sports and social facilities.

JAMES J. TALMAN

**Kindergarten**, conceived by Friedrich Froebel in 19th-century Germany, refers to a program of education of 4- and 5-year-old children. Although the first public-school kindergarten in Canada was established in Toronto in 1883, kindergarten programs in public schools are not yet available to all Canadian children. Whether public or private, kindergartens continue to reflect Froebel's belief that education must be attuned to the child's level of development and his belief in play as an avenue for learning. Recently, however, the extent to which kindergarten should emphasize the preparation of children for the school's academic program has become an issue. Some educators see such emphasis as desirable; others believe it would detract from kindergarten's historic concern with the development of the "whole child."

ELLEN M. REGAN

**Kindersley**, Sask, Town, pop 3969, (1981c), inc 1911, is located in W-central Saskatchewan, 200 km SW of SASKATOON and 65 km E of the Alberta border. The town quickly developed into a service centre for the surrounding agricultural area after the CNR laid steel through the townsites in 1909. By 1911 it had a population over 1000. Sir Robert Kindersley, a heavy stockholder in the CNR at that time, was honoured by having the town named after him. Agriculture remains the most important element in Kindersley's economy; however, oil and natural-gas wells N of the town have provided some diversification.

DON HERPERGER

**Kindle, Edward Martin**, paleontologist, sedimentologist (b at Franklin, Ind 10 Mar 1869; d at Ottawa 29 Aug 1940). Educated at U of Indiana, Cornell and Yale, Kindle moved from the staff of the US Geological Survey to that of the Geological Survey of Canada as an invertebrate paleontologist in 1912. He was chief of the paleontology division 1919-38. His early work was mainly on the Palaeozoic fossils of north-central US, Greenland, Alaska and northern Canada. Later he made pioneer observations and experiments on the origin and significance of sedimentary deposits. He wrote on the resources and development of the N American Subarctic, and he inaugurated a catalogue of Devonian type fossils. Under him the paleontological research and museum displays of the Geological Survey were greatly expanded.

LS. RUSSELL

**King, Allan Winton**, filmmaker (b at Vancouver 6 Feb 1930). King was involved in the Vancouver Film Society before joining CBC Vancouver in 1954. He formed his own company in England in 1961 to produce documentaries, and at the time shot his first dramatized documentary, *Running Away Backwards* (1964). He returned to Canada in 1967 and soon commanded international attention with 2 documentaries, *War-*

rendale (1966) and *A Married Couple* (1969). His growing interest in fiction resulted in the "staged" documentary *Come on Children* (1973). Devoting his attention to drama, he directed a number of distinguished films for the CBC: "A Bird in the House" (1974), "Six War Years" (1975), "Red Emma" (1976) and "One Night Stand" (1977). He made a successful transition to the fiction feature with his adaptation of W.O. MITCHELL's *Who Has Seen the Wind* (1977); his second dramatic feature, *Silence of the North* (1981), was not a commercial or critical success.

PIERS HANDLING

**King, George Edwin**, lawyer, politician, judge, premier of NB (b at Saint John, NB 8 Oct 1839; d at Ottawa, 7 May 1901). First elected MLA for Saint John in 1867, he was minister without portfolio in the Confederation Cabinet of A.R. WETMORE. In 1870 he won the election as government leader but resigned to a stronger leader, G.L. HATHEWAY. As attorney general, King was chief architect of the NB Common Schools Act of 1871, which aroused religious and cultural animosity (see NEW BRUNSWICK SCHOOL QUESTION). In 1872 he was chosen Liberal-Conservative premier, retiring in 1878. He was appointed judge of the NB Supreme Court in 1880 and was raised to the Supreme Court of Canada in 1893.

DELLA M.M. STANLEY

**King, William Frederick**, astronomer (b at Stowmarket, Eng 19 Feb 1854; d at Ottawa 23 Apr 1916). King worked as a Dominion land surveyor and topographical surveyor in western Canada. With E.G. DEVILLE and O.J. Klotz he formed the astronomical branch of the Dept of the Interior and was appointed chief astronomer in 1890. A small observatory, built in 1890, was succeeded in 1905 by the larger Dominion Observatory, of which he was named first director. He directed plans for the 72-inch (1.8 m) telescope at the Dominion Astrophysical Observatory in Victoria, BC, but died before its completion. He was appointed superintendent of the Geodetic Survey of Canada, was named international boundary commissioner several times and awarded the CMG for his work. He was a president of the Royal Soc of Canada and founding president of the Ottawa centre of the Royal Astronomical Soc of Canada.

MALCOLM THOMSON

**King, William Lyon Mackenzie**, politician, prime minister (b at Berlin [Kitchener], Ont 17 Dec 1874; d at Ottawa 22 July 1950), grandson of William Lyon MACKENZIE. Leader of the LIBERAL PARTY 1919-48, and prime minister for almost 22 of those years, King was the dominant political figure in an era of major changes. King graduated from U of T in 1895 and studied economics at Chicago and Harvard. In 1900 he became Canada's first deputy minister of labour; in 1908 he was elected in North York as a Liberal and in 1909 entered Sir Wilfrid LAURIER's Cabinet as minister of labour.

His interest in labour coincided with an expansion in manufacturing and a concern with industrial relations. King acted as conciliator in a number of strikes, his major legislative achievement being the Industrial Disputes Investigation Act of 1907, which delayed strikes or lockouts in public utilities or mines until a conciliation board achieved a settlement or published a report. He was defeated in the 1911 federal election and the 1917 CONSCRIPTION election. He maintained his connections with the Liberal Party but during the war acted as a labour consultant and was employed by the Rockefeller Foundation. His book *Industry and Humanity* (1918) outlined his view that there were 4 parties to industry — capital, management, labour and society — and that the government, acting on behalf of society, had an interest in the peaceful resolution of industrial disputes.

PM William Lyon Mackenzie King broadcasting to Canada from San Francisco, VE-Day, 8 May 1945 (courtesy Public Archives of Canada/C-26989).

At the 1919 Liberal convention King was appointed Laurier's successor. Two years later the Liberals won a bare majority in the federal election and King became prime minister. He set out to regain the confidence of the farmers in Ontario and western Canada who had supported the new Progressive Party, but his reductions in tariffs and freight rates were not enough, and in the 1925 election the Liberals could stay in office only with Progressive support. During the first session of the new Parliament, when it was clear this support would be withdrawn because of a scandal in the Dept of Customs, King asked Gov Gen Viscount BYNG for a dissolution. Byng refused and called on Arthur MEIGHEN to form a Conservative government, which was defeated in the House a few days later. In the 1926 election King stressed the alleged unconstitutionality of Meighen's government, but the Liberal victory stemmed from the support of Progressives who preferred the Liberals to the high-tariff Conservatives (see KING-BYNG AFFAIR).

In the prosperous years after 1926 the Liberal government provided a cautious administration which reduced the federal debt. Its only initiative was an old-age pension scheme. King insisted on Canadian autonomy in relations with the UK and contributed to the definition of Dominion status at the 1926 Imperial Conference. In 1930 he was reluctant to acknowledge that there was an economic crisis and the Liberals were defeated by the Conservatives under R.B. BENNETT.

King was an effective Opposition leader, keeping his party united as he attacked Bennett for unfulfilled promises and rising unemployment and deficits. His only alternative policy, however, was to reduce trade barriers. In 1935 the Liberal Party campaigned on the slogan "King or Chaos," and was returned to office with a comfortable majority. King negotiated trade agreements with the US in 1935 and with the US and Great Britain in 1938. The economic downturn in 1937 left the government with high relief costs but no coherent economic response. King was forced to pay more attention to international affairs, from the Ethiopian crisis to the Munich crisis, and he hoped war could be averted through appeasement. He insisted that the Canadian Parliament would decide on Canada's participation if war came, and to make such a decision more palatable, particularly to

French Canadians, he promised there would be no conscription for overseas service. Britain declared war on Germany in Sept 1939; the Canadian Parliament was recalled in an emergency session, and, with only token opposition, declared that Canada was at war.

King called a snap election early in 1940 and his government was returned with an increased majority. Co-operation between the government and business and labour leaders shifted Canadian industrial production to a wartime footing. The remarkable industrial expansion involved special financial arrangements with the US and economic planning on a continental scale. Early German victories led some Canadians to advocate conscription but, fearing a political crisis, King tried to compromise. He introduced conscription for the defence of Canada in 1940. In a 1942 plebiscite a majority of Canadians favoured relieving the government of its promise not to introduce conscription for overseas service, but Québec voters were opposed. High casualties in 1944 and a declining rate of voluntary enlistment led to prolonged debates within the government and the resignation of the minister of defence, James Layton RALSTON. In Nov, King abruptly agreed to send some of the home-defence forces to Europe, a decision grudgingly accepted, even by French Canadians.

To placate Canadians who feared the return of the Depression after the war and who looked to the government for greater social security, King introduced unemployment insurance in 1940, and his reconstruction program, based on KEYNESIAN ECONOMICS, included family allowances and proposals for health insurance. The Liberals narrowly won the 1945 election. King did not play a decisive role in the postwar era, preferring a minimal role for the government at home and abroad. He was persuaded to resign as prime minister in 1948 and was succeeded by Louis ST. LAURENT. He died 2 years later.

Mackenzie King has continued to intrigue Canadians. Critics argue that his political longevity was achieved by evasions and indecision, that he failed to provide creative leadership; his defenders argue that King gradually altered Canada, a difficult country to govern, while keeping the nation united. Recent revelations show that this apparently proper and colourless man was a spiritualist, in frequent contact with his mother and other dead relatives and friends.

H. BLAIR NEATBY

*Reading:* R.M. Dawson wrote the first vol of the official biography *W.L. Mackenzie King 1874-1923* (1958), followed by 2 vols by H. Blair Neatby for the years 1923-32 and 1932-39 (1963, 1976). J.W. Pickersgill and D.F. Forster edited King's diary as *The Mackenzie King Record*, 4 vols (1960-70); C.P. Stacey, *A Very Double Life* (1976), and J.E. Esbrey, *Knight of the Holy Spirit* (1980), discuss King's personality.

**King-Byng Affair** After the 29 Oct 1925 federal election, Parliament supported the minority Liberal government until 25 June 1926, when it defeated a motion to remove censure from a motion of no-confidence. PM Mackenzie KING asked Gov Gen Lord BYNG to dissolve Parliament before the vote was taken. Byng refused: a request for dissolution while a motion of censure was under debate was unprecedented. The previous election, only 8 months before, had been held at King's request; an alternative government in the existing Parliament seemed possible. King resigned, and Conservative leader Arthur MEIGHEN was asked to form a government. The House of Commons then carried the motion of censure on King's government, defeated 4 motions of no-confidence in Meighen's, then passed a fifth no-confidence motion. The House had now censured both governments; no alternative in the existing House was now possible. Lord Byng granted Meighen a dissolution, and King won the ensuing election with a majority.

EUGENE A. FORSEY

**King George's Sound Company** (Richard Cadman Etches and Co), fd 1785 in London to trade for furs on the NORTHWEST COAST. Nathaniel Portlock and George Dixon, veterans of James COOK's third voyage, commanded the company's first 2 vessels, which were licensed by the SOUTH SEA COMPANY and the EAST INDIA COMPANY. The company effectively merged on 23 Jan 1789 with that of John Meares, and its commercial activities virtually ended with the NOOTKA SOUND CONTROVERSY that year.

BARRY M. GOUGH

**King William Island**, 13 111 km<sup>2</sup>, in the ARCTIC ARCHIPELAGO, is a lake-studded, gently rolling plain, with a maximum elevation of 137 m. Its vegetation, a polar semidesert, serves as summer range for mainland caribou. It was discovered 1830 by Sir John Ross and named after the British monarch King William IV. Remains of the ill-fated FRANKLIN Expedition have been found here.

S.C. ZOLTAI

**Kingbird**, see FLYCATCHER, TYRANT.

**Kingfisher** (Alcedinidae), family of robust BIRDS, with large heads, strong, pointed bills, short tails and small feet. The middle and outer toes are joined together for over half their length. The family comprises 87 species worldwide. The only representative in Canada, the belted kingfisher (*Megascops alcyon*), is 30-33 cm long, white underneath and blue grey on the back, with a large, ragged, double crest on its head. Belted kingfishers defend feeding territories along edges of water bodies. Kingfishers

Of 87 species of kingfisher worldwide, only one occurs in Canada: the belted kingfisher (*Megascops alcyon*), which dives headfirst into water to capture prey, often submerging completely (photo by Tim Fitzharris).

perch on dead branches, watching for minnows, frogs and large aquatic insects. They dive headfirst into the water to capture prey, often submerging completely. Prey are returned to the perch, struck against it several times, tossed into the air and swallowed headfirst. Nests are burrows, 1-3 m long, dug into dirt banks. Once the female starts incubating the 5-8 white eggs, the male feeds her on the nest. Newly hatched kingfishers intertwine into a compact mass for warmth. Burrows are often reused in subsequent years, regurgitated fish scales and bones from the previous season supplying nesting material.

PHILIP H.R. STEPNEY

**Kinglet**, tiny, highly active, insectivorous songbird, olive grey with brightly coloured crown, sharp, slender bill and short, stubby tail. Kinglets belong to the large (about 1400 species) Old World family Muscicapidae, subfamily Sylviinae (Old World warblers). This subfamily was sometimes elevated to family status. In Canada, it is represented by golden-crowned kinglet (*Regulus satrapa*), ruby-crowned kinglet (*R. calendula*) and blue-gray GNATCATCHER. Kinglets summer in forested parts of Canada, from Aklavik, NWT, southeast to northern Québec and then into the US, parts of Mexico and the Guatemalan highlands. They are migratory, although both species winter in southern Canada, where they frequent coniferous or mixed-deciduous woodland. Breeding occurs from mid-May to mid-July. Nests are pensile (suspended) or semipensile, made of moss and lichens, and take up to a month to build. Clutch includes 5-11 eggs. Kinglets are parasitized, rarely, by brown-headed cowbirds (*Molothrus ater*). Ruby-crowns have a loud, bubbling, musical song; that of golden-crowns is similar but higher-pitched. The scrub-dwelling arctic warbler (*Phylloscopus borealis*) occurs only accidentally in Canada.

J.C. BARLOW

**Kings Landing Historical Settlement**, an outdoor museum covering about 160 ha, established in the early 1960s in the tranquil beauty of the Saint John R valley about 40 km W of Fredericton, NB. It is a crown corporation under the New Brunswick Historical Resources Administration, a provincial government department. Officially opened in 1974, the settlement contains more than 70 restored buildings, including homes, a school, store, church, forge, carpenter's shop and inn. This living-history site depicts the period from the LOYALIST era to

Kings Landing, NB (photo by Malak, Ottawa).

late Victorian times. A unique attraction is a reproduction of a pre-Confederation Saint John R woodboat. See HISTORIC SITE.

ROBERT S. ALLEN

**King's Posts**, a name applied during the French regime to FUR TRADE and fishing posts in the King's Domain (Domaine du Roy), the vast territory N of the St Lawrence R to the Hudson Bay watershed, between the E end of the seigneurie of Les Éboulements (E of Québec City) and Cape Cormorant. The land was owned by the king but leased to a private company; posts included TADOUSSAC, CHICOUTIMI, SEPT-ÎLES and LA MALBAIE. The term "King's Posts" was also applied to forts farther N toward Hudson Bay, such as Mistassini, and farther W, such as Lachine, FT FRONTENAC, Ft Rouillé and FT DUSQUESNE. After the CONQUEST the King's Domain was leased to private individuals and companies, including the HBC (1842-59). In 1859 the government took over the administration of the land, continuing to lease fishery and timber rights, while the HBC continued to operate several fur-trade posts.

**Kingsmere**, Qué, a property left to the nation by former PM William Lyon Mackenzie KING (although it is not named for him, but an early pioneer family), is administered by the NATIONAL CAPITAL COMMISSION. Located in Gatineau Park 12 km from Hull, Qué, this domain of about 240 ha includes the Moorside ruins, a peculiar collection of materials from old Ottawa buildings. "The Farm" has become the residence of the Speaker of the House of Commons.

CLAUDINE PIERRE-DESCHÊNES

**Kingsmill, Sir Charles Edmund**, naval officer, public servant (b at Guelph, Canada W 7 July 1855; d at Portland, Ont 15 July 1935). He joined the Royal Navy as a midshipman in 1869, served in the Sudan in 1884 and as British vice consul and agent at Zeyla, Aden. He rose to captain by 1898 and subsequently commanded ships on the Australia, China and Home stations. In 1908 he retired from the RN as a rear admiral and took charge of the Canadian Marine Service. He played a prominent role in the founding of the Royal Canadian Navy in 1910, and, as vice admiral, became the first director of the Naval Service. He commanded the RCN throughout WWI and was promoted admiral in 1917.

MARC MILNER

**Kingston**, Ont, City, pop 52 616 (1981c; 59 045, 1971c), located at the eastern end of Lk ONTARIO, 170 km SW of Ottawa. Its position at the junction of the Great Lks and ST LAWRENCE has been crucial to its economic and political history.

**Settlement and Development** The French entered the region 1673 and constructed a fort and trading post on the site, Ft Cataraqui, which developed into the elaborate FT FRONTENAC, and became an important base for mounting military forays against the Iroquois and the British to the S and explorations along the lakes to the W. In 1758 the fort was captured by the British.

In 1784 the British government negotiated with the Mississauga Indians who were occupying this area for lands on which to settle LOYALISTS from the American colonies. King's Town, as it was then named (in honour of King George III), was made capital of the new district (Mecklenburg) encompassing townships along the Upper St Lawrence and eastern end of Lk Ontario. The town was not negatively affected by the WAR of 1812. Instead, the significant military and naval presence there stimulated the local economy. Being at the junction of lake and river transport, Kingston was also the site of much transshipment activity for the chief staples of the export trade, lumber and grain, and for inward-moving merchandise and passengers. The construction of the RIDEAU CANAL, linking Upper and Lower Canada by the Ottawa R rather than the vulnerable St Lawrence, reinforced this commercial function. Kingston remained the capital of the district (Midland) and rapidly became the largest town in the province, but not the capital, as hoped — a severe psychological as well as economic blow. By mid-century however, the flow of grain down the St Lawrence had diminished; improvements in navigation of the St Lawrence allowed more through traffic; rail transport became a competitor to water transport, and larger lake vessels posed problems for Kingston's exposed and shallow harbour. The resulting commercial erosion was accompanied by the formal closing of the naval base in 1852, followed by the departure of the imperial garrison 1871.

Rail ventures were explored to extend Kingston's hinterland, leading to its inclusion in 1856 in the E-W GRAND TRUNK RY system. By the 1880s the Kingston-Pembroke railway had trains running over 160 km N to Renfrew. Despite offers of bonuses and tax relief, Kingston could not attract significant capital. Not until WWII, with its stimulus of shipbuilding and other productivity, did large new industries (Alcan Aluminium, Dupont Nylon) enter the city's economy.

Kingston's society and economy have a distinctive institutional base instead. Ft Henry, the Royal Military College, the National Defence College and the extensive military establishment at Barrifield are part of a continuing military presence in the city. Similarly, the Provincial Penitentiary, opened in 1835, led governments to locate a number of other federal and provincial correctional institutions in Kingston and its environs. "Queen's College at Kingston," a college of the Presbyterian Church in Canada, was founded in 1842, developed into QUEEN'S UNIVERSITY, and by the early 20th century had a national reputation in arts and science, medicine and theology. Finally, hospitals and other medical establishments, along with branch offices of government agencies, are part of the institutional presence in Kingston. Lacking dominant industries and significant population increase, Kingston retains much of the physical fabric and employment structure of its 19th-century form.

**Cityscape** As in the original town plot of 1783, Kingston's downtown continues to be focused on the few blocks around Princess (Store) and Brock streets between Barrie and Front, near the waterfront. Apart from commercial activities, it is characterized by edifices of institutional and architectural note. The imposing KINGSTON CITY HALL and magnificent St George's Cathedral are the focal points of several build-

Kingston, with Fort Henry in the foreground (photo by Malak, Ottawa).

ings from the last century. The Customs House, Grand Trunk and Kingston and Pembroke stations, Martello towers and Ft Frontenac all reflect a former way of life. A few blocks away are Kingston's residential areas, featuring the city's traditional limestone construction. There are grand contemporary residences as well, making Kingston a pleasing mixture of architectural styles reflecting the community's different periods of construction and social structure.

Since 1945, suburbanization — particularly to the W in Kingston Township (in such communities as La Salle Park, Collins Bay and Amherstview) — has been a feature of Kingston's urban growth. After a shift of much retailing to suburban shopping malls in the 1960s and 1970s, the city's waterfront has witnessed a major revitalization through the introduction of condominiums, hotels, restaurants, apartment houses and boutiques.

**Population** Kingston's failure to grow economically in the 19th century on a scale with other large Ontario communities such as Toronto, Hamilton and Ottawa has meant a slow population growth, even some periods of decrease. From a permanent population of about 2000 just after the War of 1812, the city grew to almost 12 000 by mid-century and 14 000 by 1881. With 30 000 in 1941, population expanded beyond the city limits after WWII in to the Kingston Urban Area (about 50 000, 1951). By 1981 almost half of the KUA population resided outside the city, in Kingston and Pittsburgh townships.

Kingston was bypassed by the immigrants of the late 19th and early 20th centuries. From 59% in 1851, its foreign-born population decreased to 14% in 1951. Over 75% of this group were British, Irish or American born. Only in the 1960s and 1970s did a more ethnically diverse population develop, with substantial groups of Portuguese, Italians, Dutch and Asians. Even so, the city remains dominantly Anglo-Celtic in its heritage and social structures.

**Economy** As commercial activities eroded in the late 1800s, institutional employers, such as the university, penitentiaries, the military and hospitals, became more important in the city's

economy. In the period up to 1940 some industries such as Canadian Locomotive Co and Kingston Cotton Mills were attracted, but these were the exceptions. Others were added by the early 1950s — Alcan, Dupont and Celanese Canada — but institutional employers like Queen's, Kingston General Hospital and Frontenac County Board of Education still dominate the employment picture.

**Government and Politics** Though governed by English law as part of UC under the Constitution Act of 1791, Kingston was a "police town" until well into the 19th century, administered by the Court of Quarter Sessions. In 1838 Kingston was incorporated as a town with a mayor and elected aldermen and councillors serving 4 wards. John A. MACDONALD promoted Kingston's incorporation as a city (1846), and a new 20-man council of councillors and aldermen who elected the mayor from among themselves was created. In 1850 Kingston extended its limits to annex some outer suburbs, but not until 1952 were the city's limits again extended — W to Cataraqui Cr and N to the present Hwy 401. With the city's shortage of land for industrial and residential development — readily available in the adjoining townships — some are promoting a regional government system for the KUA.

**Cultural Life** Kingston has a diverse cultural life, with a symphony orchestra of some distinction, several local theatre groups, the Agnes Etherington Art Gallery and a full calendar of visiting artists, scholars and entertainers. Queen's and RMC have long contributed to the musical, theatrical and general cultural scene, and St George's Cathedral choir has achieved recognition beyond the community. The *Whig Standard* is one of Canada's oldest newspapers. Among Kingston's numerous tourist attractions are Ft Henry, Bellevue House (the home of Canada's first prime minister), the Thousand Islands, the Rideau Canal and the architecture of "Old Kingston."

Kingston's chief claim to sporting fame — apart from Queen's football Gaels — is the superlative sailing throughout the Kingston Bay-Bay of Quinte area, accompanied by extensive moorings and docking facilities at the site developed for the 1976 sailing Olympics.

BRIAN S. OSBORNE

**Kingston, George Templeman**, meteorologist, (b at Oporto, Portugal 5 Oct 1816; d at Toronto 21 Jan 1886). For successfully promoting and organizing one of Canada's first scientific services, Kingston has been called the father of Canadian METEOROLOGY. He was a Cambridge graduate and came to Canada in 1852; 3 years later he became professor of meteorology at U of T and director of the Toronto Observatory, a position he held until 1880. He was founding director of the national meteorological service 1871-80. With new federal resources in 1871-72, he initiated a daily exchange of weather data with the US and a few years later began the dissemination of daily storm warnings and weather forecasts to eastern ports and cities.

MORLEY THOMAS

**Kingston City Hall** and market was begun in 1842, a year after Kingston had been named capital of the PROVINCE OF CANADA. Designed by George BROWNE, one of Canada's leading architects of the 19th century, it was an ambitious plan for the period. All civic offices — the town hall, municipal offices, post office, custom house, police station, market hall and mechanics' institute — were to be housed in one massive complex. Its heroic scale would have dwarfed all surrounding buildings and reflected the pride of the city fathers in the new status and future growth of their city. Though the capital was moved in 1843, the building was completed the following year. The city hall and market was Browne's most important commission and the design, with its dome and monumental portico which dominated the main facade, represented a superb example of civic architecture in a neoclassical style.

JANET WRIGHT

Reading: M. Angus, *The Old Stones of Kingston* (1966).

**Kirby, William**, novelist, journalist (b at Kingston-upon-Hull, Eng 23 Oct 1817; d at Niagara-on-the-Lake, Ont 23 June 1906). Author of a classic English Canadian historical novel, *The Golden Dog* (1877), Kirby also edited the *Niagara Mail*. Immigrating with his parents to the US in 1832, Kirby arrived in Niagara in 1839, where his house still stands. A grandmother had been a United Empire Loyalist. He married into a family of prominent LOYALISTS and established himself as a major figure in that tradition, delivering the principal address at the 1884 UEL centennial celebration. Still in print in an abridged edition, *The Golden Dog* is a swash-buckling historical romance. Based upon historic figures, the product of meticulous research, the novel depicts moral progress leading from the corruption of the last days of NEW FRANCE to French Canada's incorporation into the loyal, upright Canadian state. A Loyalist version of history also informs his epic poem, *The U.E.: A Tale of Upper Canada* (1859).

DENNIS DUFFY

**Kirk, Lawrence Eldred**, agriculturist (b at Bracebridge, Ont 27 May 1886; d at Saskatoon 27 Nov 1969). Kirk's most significant contribution was the breeding and introduction in 1932 of Fairway, the first variety of crested wheat grass, to the great plains of Canada. The use of this grass was a contributing factor in bringing the "dust bowl" of the 1930s under control. Fairway crested wheat grass is still the main grass used to reseed rangeland. Kirk taught at U of Sask and Moose Jaw Collegiate Inst before joining the Experimental Farms Service as Dominion Agrostologist in Ottawa. He then became dean of agriculture at U Sask before moving to Rome as head of the plant-industry branch in the UN Food and Agriculture Organization, a position he held until retirement in 1954.

T.H. ANSTAY

**Kirke, Sir David**, adventurer, governor of Newfoundland (b at Dieppe, France c1597; d near London, Eng 1654). Accompanied by his brothers **Sir Lewis** (b at Dieppe c1599; d 1683), **Thomas** (b at Dieppe c1603; d after 1641), **John**

and **James**, he captured TADOUSAC in 1627. His demand that CHAMPLAIN surrender QUÉBEC was refused and he retired, capturing a French supply fleet off Gaspé. He returned in 1629 and the destitute French surrendered Québec July 19. Thomas was left in charge of the post as governor. The brothers were ordered to restore Québec to the French in 1632, but David was made co-proprietor and became first governor of Newfoundland in 1637. He took possession of FERRYLAND, but came into conflict with the fishing merchants and was recalled in 1651 to answer charges of withholding taxes. He was imprisoned on a suit resulting from his seizure of Ferryland and died in jail. A hero to some English writers and a pirate in the eyes of the French, Kirke remains controversial.

JAMES MARSH

**Kirkland Lake, Ont. Town**, pop 12 219 (1981c), inc 1972, located 241 km NW of North Bay. Named after a secretary in the Ontario Dept of Mines, Winnifred Kirkland, the lake around which the town grew has been filled with the tailings of the GOLD mines that brought the town to prominence. Sir Harry OAKES was not the first prospector into the district in the summer of 1911, but he and others such as Bill Wright and the Tough brothers were responsible for discovering and developing the gold mines (Lake Shore, Wright-Hargreaves, Kirkland Minerals) that were the basis for the town's growth and prosperity during the 1920s and 1930s. The population reached a peak of nearly 25 000 at the outbreak of WWII. Since then, downward fluctuations in gold mining have deflated the town's fortunes, although the decline was ameliorated in the 1960s and 1970s by the growth of iron mining and the tourist industry.

MATT BRAY

Reading: S.A. Pain, *Three Miles of Gold: The Story of Kirkland Lake* (1960).

**Kitamaat** The contemporary Kitamaat Band is an amalgamation of the 2 Haisla-speaking tribes, the Kitamaat of upper Douglas Channel and Devastation Channel and the Kitlope of upper Princess Royal Channel and Gardner Canal in BC. The Kitamaat call themselves *Haisla* ("dwellers downriver"); and the Kitlope *He-naak-siala* ("dying off slowly"), a reference to their traditional longevity. The official designations *Kitamaat* ("people of the snow") and *Kitlope* ("people of the rocks") were adopted from the names used by their TSIMSHIAN neighbours. The Haisla language is the northernmost of the North Wakashan division of the Wakashan language family.

No formal estimates of precontact population exist, although native tradition asserts that each tribe numbered about 1000. Epidemics and endemic diseases brought by Europeans reduced that population, and after the 1918 influenza pandemic, fewer than 300 survived. The decline was arrested around 1930, and by 1982 the population of the combined tribes had reached 1000. There are also additional persons of Haisla ancestry who have lost their status (see INDIAN ACT).

Unlike those of other Wakashan-speaking tribes, the Kitamaat and Kitlope social system was based on the matrilineal CLAN. This principle was also followed by the Tsimshian tribes, with whom the Haisla enjoyed close economic

and social relations. Aboriginally, there were 8 clans (Eagle, Beaver, Raven, Crow, Killer Whale, Salmon, Wolf and Frog), each composed of a number of family units or lineages, occupying one or more communal dwellings housing up to 30 individuals (see HOUSE). The highest-ranking members of each house or lineage formed a council of nobles for the clan chief, who himself acted as counsellor to the tribal chief. Each clan controlled its own resource sites within the general tribal territory, and each occupied an independent winter village. With the population decline, the Wolf and Frog clans disappeared entirely. The survivors of other clans formed linkages, in which they united to occupy a common winter village, and co-operated economically and socially, as in the planning and amassing of wealth for the POTLATCH. Eventually the whole tribe began to occupy the same village, although clan distinctions and linkages remain.

The remoteness of their villages, situated far up northern inlets, enforced isolation on the Kitamaat and Kitlope until the 1890s, when a mission and residential school were established at Kitamaat. Missionaries and government agents believed that the flamboyant, theatrical aspects of traditional culture were impediments to "civilization" and should be eradicated. They exerted pressure to abandon feasts, dancing and potlaches; the traditional communal houses were pulled down, and the children were forbidden to speak the native language. During the same period, the decline in population shattered the clans and lineages and disrupted orderly lines of succession to titles and property in the traditional social order. After several decades of strain and dislocation, a culture has emerged that combines elements of both their traditional heritage and Euro-Canadian culture. See also NATIVE PEOPLE: NORTHWEST COAST and general articles under NATIVE PEOPLE.

JOHN PRITCHARD

Reading: R. Olson, "The Social Organization of the Haisla of BC," *Anthropological Records* 2, no 5 (1940).

**Kitchener-Waterloo** are twin cities in central southwestern Ontario, 110 km SW of Toronto. Kitchener, larger of the two (139 734, 1981c), is also county seat and judicial and financial centre of the new Regional Municipality of Waterloo (pop 305 496, 1981c) formed 1973 by combining Waterloo County and several communities within its boundaries, including the newly created city of CAMBRIDGE. Waterloo has a population of 49 428 (1981c).

**Settlement** The cities and entire regional area were originally part of a tract of more than 243 000 ha set aside by the British Crown in 1784 as a reserve for the Six Nation Indians. In 1798 this land was subdivided and sold, Block 2 becoming the future Waterloo Township. Purchased first by speculators, then in 1805 by Pennsylvania MENNONITES, it was the nucleus of a large German-speaking settlement, swelled by the 19th-century exodus from Germany of skilled craftsmen, artisans and tradesmen as well as farmers and agricultural labourers. Both communities were included as villages in the 1850s, Kitchener being known then as Berlin. (It was renamed for Lord Kitchener during WWI.)

**Development** of the communities was determined primarily by the entrepreneurial skills and cohesive nature of the German community. Even in 1911, 70% of the inhabitants of Berlin and Waterloo were of Germanic origin. Economic growth was aided by Berlin's location on the GRAND TRUNK RY. An effective system of municipal support and "bonusing" for industrial growth led by prominent German Canadian families aided Berlin's industrial pre-eminence in the area. After 1900 external investment and branch-plant industries, particularly in rubber and automotive parts, brought Kitchener and Waterloo more fully into Canada's economy.

**Population:** Kitchener 139 734 (1981c); Waterloo 49 428 (1981c); 287 801 (CMA); 305 496 Regional Municipality

**Rate of Increase (1971-81):** Kitchener 5.1%; Waterloo 3.02%

**Rank in Canada:** Eleventh (by CMA)

**Date of Incorporation:** Kitchener 1912 (Town of Berlin 1876);  
Waterloo 1943

**Land Area:** Kitchener 133.95 km<sup>2</sup>; Waterloo 66.37 km<sup>2</sup>

**Elevation:** 335 m

**Climate:** Average daily temp, July 19.9°C, Jan 10.5°C;  
Yearly precip rain 686 mm, snow 157.5 cm;  
Hours of sunshine 1936.4 per year

The transmission of inexpensive Niagara hydroelectric power to Berlin in 1911 — the first inland Ontario community to have access to this new source of power — reinforced the industrial growth of the communities.

**Cityscape** The swampy terrain along the Great Road from Dundas determined the location of the first urban settlement of Berlin and Waterloo. Population slowly encroached on existing farmlands, but without large annexations from nearby townships until the rapid population growth of the 1950s. Early housing, generally of white or yellow brick, featured a unique Germanic vernacular. After WWI, styles began to conform to national stereotypes: bungalows, "ranch style," and row housing. Strenuous efforts began in the 1980s to halt the erosion of the cities' central cores, but little of the 19th-century ambience remains.

**Population** Though the prevalent German language and culture of Kitchener and Waterloo at the turn of the century made them unique in Canada, immigration from the fatherland ceased with the outbreak of war in 1914. The rise of Hitler, the Great Depression and WWII

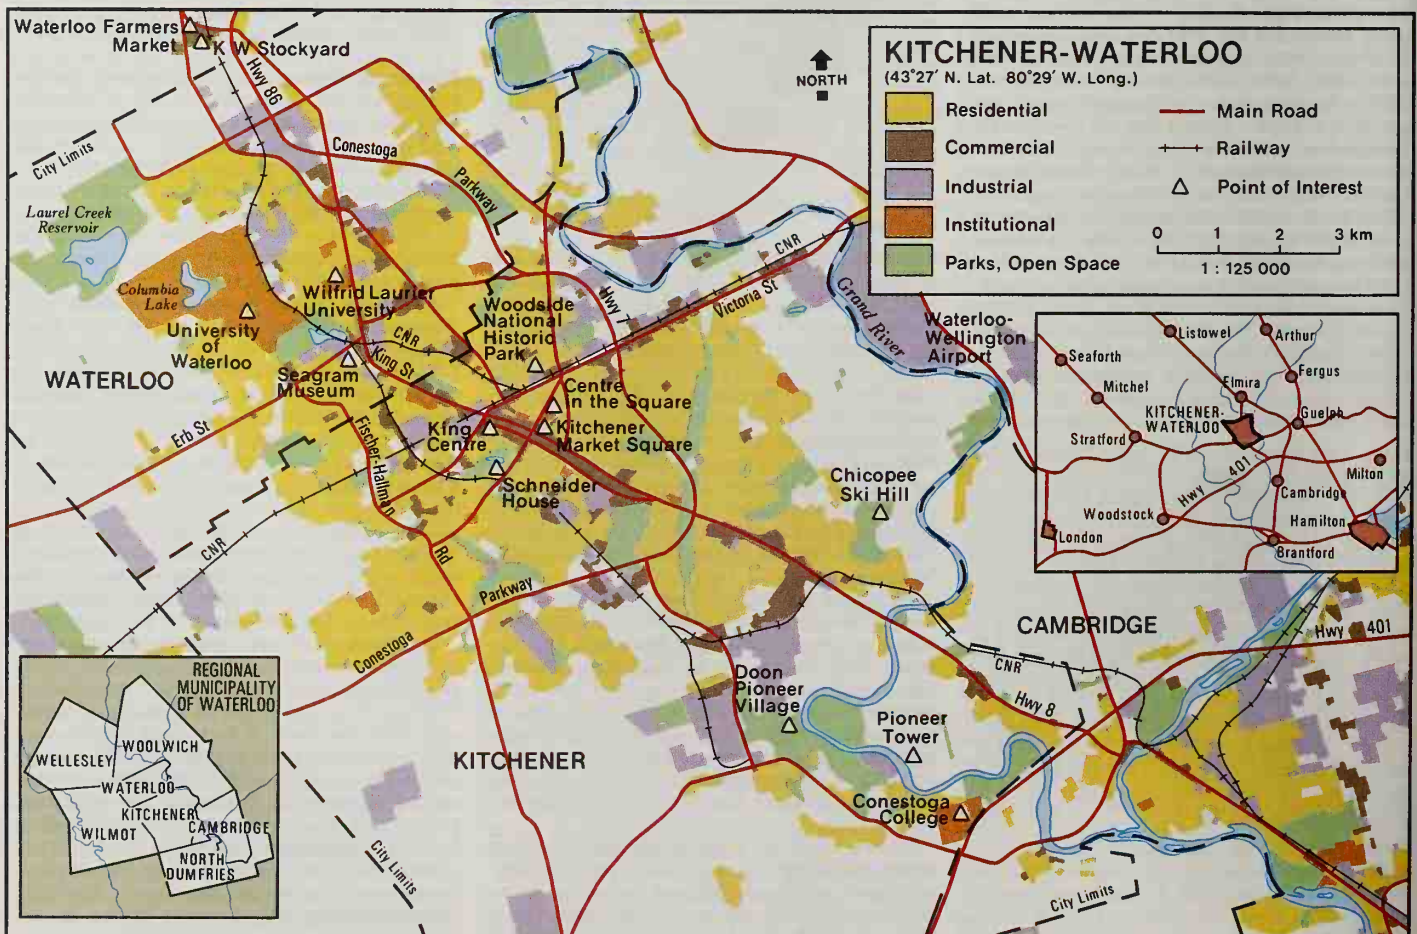

The economic growth of Berlin (later named Kitchener) was greatly aided by the arrival of the Grand Trunk Ry, shown in this view of 1854 (courtesy Waterloo Historical Society).

stifled subsequent German immigration, and by 1941 less than half the population saw itself as German. However, new German refugees who had fled or been expelled from eastern Europe (Romania, Yugoslavia, Poland, the USSR) reached Kitchener and Waterloo after the war. By the 1970s the cities were once more extolling their German identity though an annual Oktoberfest, which became a national tourist attraction. Other ethnic groups — Poles, Greeks, Portuguese, Italians, Chinese and West Indians — created a new population mixture throughout the 1960s and 1970s. With more than 45% of the population being British by ethnic origin as

well, the community, like the nation, had become multicultural.

**Economy and Labour Force** The business and artisan skills of the German immigrants created a diversified industrial base. J.M. Schneider, a meat packer, began making sausage. Joseph E. Seagram's distillery was an auxiliary enterprise to a gristmill. Kuntz brewery (now Labatt's) began producing German lager beer, and Electrohome was aided in its early growth by the presence of skilled craftsmen. Some 20 furniture companies flourished in the early 20th century. Fire-insurance companies, particularly the Economical in Kitchener, and life-insurance companies in Waterloo, such as Mutual, Dominion and Equitable Life, drew on the local community's stability. The rubber industry came with the automobile era, as B.F. Goodrich, Uniroyal and Kaufman established factories and head-of-

### Distribution of Industrial Activity\* by Industry Grouping within Census Metropolitan Areas, 1980

#### Industry groupings

1. Food and beverage and tobacco products industries
2. Leather, textile, knitting mills and clothing industries
3. Wood, furniture and fixtures, paper and allied and printing, publishing and allied industries
4. Machinery, transportation equipment and electrical products industries
5. Primary metal and metal fabricating industries
6. Rubber and plastic products, petroleum and coal products and chemical products industries
7. Non-metallic mineral products and miscellaneous manufacturing industries.

\* Industry activity based on the average of percentage shares of the value shipments of goods of own manufacture, total value added and total number of employees for each of the selected metropolitan areas.

Source: Figure II, Catalogue 31-209, Statistics Canada.

fices in Kitchener. An excellent road and rail transportation system gave access to the Canadian and American markets and a stable and efficient labour force (about 37% unionized) provided additional incentives. Technically oriented Conestoga College and UNIVERSITY OF WATERLOO (with Canada's largest engineering school and co-operative work-study programs with industry) have continued the community's original orientation.

**Government and Politics** From the beginning, Kitchener and Waterloo maintained independent municipal governments with few shared services or mutual concerns. With the establishment of a 2-tiered REGIONAL GOVERNMENT in 1973, city councils remained, but the regional government assumed control over services such as police, fire, planning, engineering, health and social development. Rather than drawing Kitchener and Waterloo more closely together, their rivalries were now provided with a forum for discontent. Administrative bureaucracies expanded dramatically and professionals and elected officials asserted control. Kitchener and Waterloo created or encouraged "neighbourhood" or residents' associations to make their councils more amenable to the wishes of constituents. Though local politics have lacked the fractiousness of some municipal governments, Kitchener has had its share of maverick mayors.

**Cultural Life** German cultural events predominated in the 19th century: saengerfests, turnvereins and celebrations of the birthdays of Kaiser Wilhelm and Chancellor von Bismarck were highlights. The love of music has survived and flourished in the 20th century, particularly the symphonic and choral traditions as well as a penchant for band music. Live theatre, by contrast, has not fared well. Organized sports, particularly hockey, have a prominent role in the

community. WILFRID LAURIER UNIVERSITY and U of Waterloo, Kitchener's multipurpose Centre-in-the-Square theatre, the Kitchener-Waterloo Symphony Orchestra and Art Gallery provide local access to international performances. Kitchener's Saturday Farmer's Market is a popular southern Ontario attraction.

K.M. McLAUGHLIN

**Kitimat, BC**, District Municipality, pop 12 814 (1981c), inc 1953, is located at the head of Douglas Channel, 110 km E of Prince George. Named for the nearby KITAMAAT ("people of the snow") by the HBC around 1837, its modern founding occurred in the early 1950s. The ALCAN aluminum smelter was located at the head of the Douglas Channel because it provided a deep-water port with access to world markets; the alluvial plain of the Kitimat R provided flat land for the smelter and town. The massive hydro-electric power required for the smelting of ALUMINUM was provided by a dam on the Nechako R, which diverted its flow westward through a tunnel to a gigantic generating station at Kemano. Although one of the great metallurgical plants in the world, Alcan is no longer the only employer. The Eurocan pulp-and-paper complex plays a secondary role and logging also extracts timber for conversion at southern mills. A new methanol plant has pioneered a potential for petrochemical activities, and natural-gas export may also prove important. See COMPANY TOWN.

WILLIAM A. SLOAN

**Kittigazuit Site**, archaeological site located at the mouth of the MACKENZIE R, was the largest INUIT village in arctic Canada during the 19th century. It was occupied by the Kitegaryumiut band of the MACKENZIE INUIT, who used it primarily as a summer beluga-hunting camp. As many as 1000 people lived in the village during the WHALING season and up to 200 kayakers joined in communal hunts, which involved driving herds of beluga onto shoals in the river. Several hundred of the small whales could be killed in a single day by this technique. During the winter a much smaller population remained at the village, living in large multifamily houses built of driftwood and covered with turf. Archaeological research indicates that the site had been used in this way for about 500 years. Most of the Kitegaryumiut died in a measles epidemic in 1902, and the village was abandoned except for occasional use as a trading post. See also ARCHAEOLOGY.

ROBERT MCGHEE

**Kitwanga Fort**, a Northwest Coast Indian village on the Kitwankul R in BC, was part of a complex trading network. In 1979 field research conducted at Kitwanga, combined with records of oral traditions, indicated that intertribal trade and warfare were prevalent along the coast. Periods of war involving Kitwanga Ft began before 1700, continuing to the 1830s. Twenty-two trails were plotted along the Skeena, Nass, Stikine R system where this trade and warfare activity took place. Archaeological discoveries showed that after 1741 trade was undertaken primarily with Russian traders. Warfare was motivated by the desire to gain control over new resources, particularly metals and weapons. The exploits of Nekt, a warrior who became a legendary archetype, demonstrate the struggle for economic superiority and honour along the

Northwest Coast. Kitwanga Fort has been declared a National Historic Site. See also ARCHAEOLOGY.

LILLIAN STEWART

**Kiugak Ashoona** (also known as Kiawak), sculptor (b 16 Sept 1933). Son of renowned Inuit artist PITSEOLAK Ashoona, Kiugak recounts that his own prodigious artistic career began in his childhood, while the family was still living at a camp on the land. His first carving, made from walrus tusk, was taken by his brother QAQAQ Ashoona to exchange for supplies at the Baffin Trading Co. While focusing on typical Inuit subject matter — people engaged in traditional activities, mythological and fantasy creatures — Kiugak, who resides at CAPE DORSET, NWT, earns his reputation as an artist for the elegance and formal beauty of his work. His sculpture of the Inuit sea goddess Sedna was featured on a 1980 Canadian postage stamp. See INUIT ART.

MARIE ROUTLEDGE

Kiugak Ashoona's *Woman Holding Fish*, typical of the elegance and formal beauty of the artist's work (courtesy West Baffin Eskimo Co-operative, Cape Dorset, NWT).

**Klee Wyck**, collection of literary sketches by Emily CARR (Toronto 1941). *Klee Wyck* — the Indian name given Carr, meaning "Laughing One" — is an evocative work that describes in arrestingly vivid detail the central influence on Carr of Northwest Coast Indian life. Carr's clear, poetic prose summons up totems, abandoned villages, Indian character, broken-English dialogue and natural scenery without lapsing into nostalgic sentimentality, sociology or romance. Her writing inevitably invites comparison with her PAINTING: Carr's gifts with words are of a different but not a lesser order; she achieves a remarkable purity of effect through her careful translation of images, perceived by a keenly sympathetic eye, into translucent language. *Klee Wyck* has been translated into French (Montréal, 1973).

NEIL BESNER

**Klein, Abraham Moses**, poet, writer (b at Ratno, Ukraine 14 Feb 1909; d at Montréal 20 Aug 1972). One of Canada's greatest poets and a leading figure in Jewish-Canadian culture, Klein was raised in the working-class Jewish immigrant district of Montréal. He studied classics and political science at McGill (1926-30) and as a student began to publish poetry and prose in Canadian and American periodicals. An excellent speaker and debater, he became active as a

Abraham Moses Klein, poet whose work is remarkable for its linguistic exuberance, wit and moral fervour (courtesy Public Archives of Canada/C-64042).

writer, editor and educator in the Zionist youth organization Young Judaea. His close friends at McGill included David LEWIS, F.R. SCOTT, A.J.M. SMITH, Leo KENNEDY and Leon Edel. After graduating from Université de Montréal law school (1933) he practised law until his retirement in 1956. Editor and principal columnist (1938-55) of the weekly *Canadian Jewish Chronicle*, he worked as a ghostwriter and public-relations consultant for Samuel BRONFMAN during the same period. He was a visiting lecturer in poetry at McGill (1945-48) and was affiliated with the *Preview* group of Montréal poets. In 1949 he ran unsuccessfully as a co-OPERATIVE COMMONWEALTH FEDERATION candidate. In the early 1950s he suffered a mental breakdown, withdrew from public activity and gradually lapsed into silence for the remainder of his life.

Much of Klein's verse (*Hath Not a Jew....*, 1940; *Poems*, 1944) was infused with Jewish images and ideas. In *The Hitleriad* (1944) he vented his spleen against the Nazis. His last and finest collection, *The Rocking Chair* (1948), is a sentimental and satirical portrayal of Québec. His short allegorical novel *The Second Scroll* (1951) was based on his 1949 journey to Europe, Israel and Morocco. Klein also published many newspaper articles, stories, book reviews and translations from Hebrew and Yiddish. His work is remarkable for its linguistic exuberance, wit, learning and moral fervour. Klein has rightly been called the "first contributor of authentic Jewish poetry to the English language." His writings articulate the feelings of a generation that witnessed the destruction of European Jewry and the fulfilment of the Zionist dream.

USHER CAPLAN

Reading: Usher Caplan, *Like One That Dreamed: A Portrait of A.M. Klein* (1982). Klein's collected works are being published by the University of Toronto Press.

**Klein, George Johnn**, design engineer (b at Hamilton, Ont 15 Aug 1904). Possibly the most productive inventor in Canada in the 20th century, he spanned in his career the "stick and string" era of aviation to the Space Shuttle. Klein worked 1929-69 at the NATIONAL RESEARCH COUNCIL and as a consultant after retirement. He designed the NRC's first wind tunnels and undertook research on fitting skis to aircraft, which led in turn to designing the Weasel army snowmobile (mass-produced in the US as the M-29)

and ultimately to studying the mechanics of snow, on which he became an authority. Gearing systems were a lifelong speciality. During WWII he designed aiming systems for artillery and naval anti-submarine mortars and in his 70s he was chief consultant on gear design for the CANADARM. In 1951 he invented the STEM (Storable Tubular Extendible Member), a radio antenna that can be retracted into a flat reel and rolled out again on command. First used in space by the Alouette 1 satellite of 1962, the STEM increased the maximum size of satellite antennas from 6 metres to 45 metres, and was subsequently adopted as standard space technology. In 1944-54 Klein headed the team that designed the Zero Energy Experimental Pile, the first atomic reactor outside the US. His other inventions ranged from a wheelchair for quadriplegics to a microsurgical staple gun used to suture blood vessels.

DONALD J.C. PHILLIPSON

Reading: W.E.K. Middleton, *Mechanical Engineering at the National Research Council of Canada, 1929-1951* (1984).

**Kleinburg**, Ont, straddles a hogback between 2 branches of the Humber R, 40 km NW of Toronto. It has no legal entity, being part of the sprawling rural Town of Vaughan (formerly Vaughan Township), and therefore no official boundaries; but its population is generally reckoned at 1250. Founded around 1847 by an Alsatian immigrant, John Kline (*sic*), who built the first gristmill, it is known today as the site of one of Canada's largest art galleries, the MCMI-CHAELE CANADIAN COLLECTION; for the Toronto International Film Studios, a major centre for TV and motion-picture production; and for the annual Binder Twine Festival, which attracts 30 000 people to the main street each Sept. Once an important farming centre, it has become a bedroom community for Toronto, its residents lured by the unspoiled beauties of the Humber Valley and the rural atmosphere of the village they struggle fiercely to preserve. PIERRE BERTON

**Klinck, Carl**, literary historian, educator (b at Elmira, Ont 24 Mar 1908). Klinck helped make CANADIAN STUDIES a central part of the curriculum: his *Canadian Anthology* (edited with R.E. Watters, 1955, 1974) established a canon of poetry, short fiction and critical essays. A graduate of Waterloo College (U of Western Ontario) and Columbia, Klinck taught Canadian works in a continental context. Introductions to Frances BROOKE's *The History of Emily Montague* (1961), Susanna MOODIE's *Roughing It in the Bush* (1962) and John RICHARDSON's *Wacousta* (1967) stirred inter-

est in early Canadian novels. Perceptive and historically searching articles, and book-length studies of W.W. CAMPBELL (1943), E.J. PRATT (1947), "Tiger" DUNLOP (1958) and Robert SERVICE (1976) were capped by his integrative work as general editor of *The Literary History of Canada* (1965, 1976). He is a fellow of the RSC and an Officer of Canada officer. ELIZABETH WATERSTON

**Klondike Gold Rush**, touched off by the 16 Aug 1896 discovery of placer gold on Rabbit (later Bonanza) Creek, a tributary of the Klondike R, by George Washington Carmack and his Indian brothers-in-law, "Skookum Jim" and "Tagish Charley." This accidental find was the result of a tip by a Canadian prospector, Robert Henderson, now credited as codiscoverer. The GOLD RUSH that followed was confined that first year to the Yukon interior. Miners already on the scene staked every creek in the Klondike and Indian river watersheds, including the fabulously rich Eldorado.

The world did not learn of the strike until some of these newly rich pioneers reached the West Coast by steamship in mid-July 1897. The Seattle *Post-Intelligencer's* description of "a ton of gold" actually touched off the stampede. The effect on the depressed economy was instantaneous as hoarded funds were freed to finance some 100 000 amateur goldseekers who started N that fall and winter. The rich went all the way by water; the poor struggled over the WHITE PASS and CHILKOOT PASS, then down the Yukon R in handmade craft; the foolhardy took the "all-Canadian" routes through BC or out of Edmonton and found themselves spending 2 years on the trail. Soon much of Alaska and the Canadian Northwest was speckled with men and pack animals. Every Canadian community from Winnipeg to Victoria was permanently affected by the boom. The Canadian North was seen as something more than frozen wasteland: Klondike fever was the catalyst for a chain of later mineral discoveries. Sixty steamboats plied N of Seattle and W of Winnipeg, boasting telephones, electricity and motion picture theatres. PROSTITUTION was tolerated; saloons, dancehalls and gaming parlours ran wide open except on Sundays. The NORTH-WEST MOUNTED POLICE kept

Prospectors' camp at Teslin Lake, BC, June 1898, en route to the Klondike (courtesy Public Archives of Canada/PA-16141).

GROUP OF MINERS, N. EL Dorado Creek

Dawson a law-abiding town while the YUKON FIELD FORCE, a military unit, maintained Canadian sovereignty in the face of a predominantly American population. The Spanish-American War and the news of a strike at Nome, Alaska, ended the stampede in the summer of 1899. By then, it is estimated, the goldseekers had spent some \$50 million reaching the Klondike, a sum about equal to the amount taken from the diggings in the 5 years following Carmack's discovery.

PIERRE BERTON

Reading: Pierre Berton, *Klondike* (1958).

**Klotz, Otto Julius**, astronomer (b at Preston, Canada W 31 Mar 1852; d at Ottawa 28 Dec 1923). With W.F. KING and E.G. DEVILLE, Klotz was responsible for the formation of the astronomical branch of the Dept of the Interior, and for the building of the Cliff Street Observatory in 1890. With King he planned the Dominion Observatory and in 1917 succeeded him as director. As an astronomer he established positions along the CPR right-of-way through BC in 1885, participated on the team that determined the longitude of Montréal W of Greenwich, and in 1903-04 extended the longitude from Vancouver across the Pacific along the new cable route, closing the link previously established from England eastward to Australia.

MALCOLM THOMSON

**Kluane National Park** (est 1972, 22 000 km<sup>2</sup>) is an area of unclimbed peaks, vast ice fields, clear lakes, GLACIERS and spectacular wildlife. Tucked in the SW corner of YT, 150 km W of Whitehorse, the PARK contains Canada's highest peak, Mt LOGAN. Surrounding its jagged 5951 m summit and dominating the park is the world's largest concentration of icefields and glaciers. The landscape includes alpine meadows, tundra and lush, forested valleys. The park is well known for its abundant wildlife, including ground squirrels, mountain caribou, moose, grizzly and black bears, Dall sheep and mountain goats. Over 170 bird species, from golden eagles to golden-crowned sparrows, inhabit the park. Archaeologists believe humans may have lived in the area at least 30 000 years ago. More recently the Tutchone Indians hunted there. Explorers, prospectors, climbers and hunters settled around Kluane beginning in the 1890s. Today, those seeking adventure can camp at

Kathleen Lakes, hike and climb, or fish (June-Aug). There are winter facilities for cross-country skiing, ice fishing and camping. Nearby towns of Haines Junction and Destruction on the ALASKA HWY provide essential services. The park is a UNESCO World Heritage Site.

LILLIAN STEWART

**Kluane Ranges**, the easternmost of the St Elias Mtns in the Yukon Territory, extend 350 km NW from the Tatshenshini R to just beyond the Yukon-Alaska boundary. The ranges rise in a wall-like front at the SW edge of Shaskwak Valley to elevations of 2000-2800 m and are bordered on the W by a succession of valleys and plateaus collectively known as the Duke Depression. Several large valleys drained by wide, braided rivers cut across the ranges. Although not as high as the Icefield Ranges farther W, the Kluanes show a unique ruggedness typified by serrated narrow ridges, steep slopes and long talus scree. They are sculpted mainly from Paleozoic and Mesozoic volcanic and sedimentary rocks that are laced with faults, some of which may still be active. Spruce forest is common below about 1200 m elevation, but the upper slopes of the ranges are treeless. The area supports an abundance of wildlife, including grizzly and black bear, timber wolf, Dall sheep, mountain goat, caribou and moose. The ranges are partly within KLUANE NATIONAL PARK and are a popular destination among hikers and climbers.

JOHN J. CLAGUE

**Knight, Harry Upperton**, photographer (b at Tillington, Eng 6 July 1873; d at Victoria 28 Dec 1973). After operating a PHOTOGRAPHY studio in Cranleigh, Eng, Knight immigrated to Canada in 1910. He sold real estate in Vancouver, and in 1917 he established a studio in Victoria. Knight spent the next 47 years taking portraits and creating a vision of the city that mixed Old World sentiment with soft-focus Pictorial moodiness. Although his career spanned nearly half a century, and he witnessed profound social and cultural changes, his style remained firmly rooted in turn-of-the-century concepts of photography as an inferior cousin of painting.

DAVID MATTISON

**Knights of Labor**, the major labour reform organization of the late 19th century, organized Dec 1869 by Philadelphia garment cutters. Growing slowly in the 1870s, the secret organization emphasized co-operation and education. The Knights believed in organizing all workers,

without regard to skill, sex or race. Their major organizational breakthrough was the mixed assembly of various types of workers, which allowed the order to expand into small towns and villages. Entering Ontario, perhaps in 1875, and certainly in 1881 in Hamilton, the order organized some 450 local assemblies across Canada. Strongest in Ontario, Québec and BC, the Knights also enjoyed success in Nova Scotia and Manitoba and established locals in New Brunswick and present-day Alberta.

In Ontario and Québec, leading Knights played key roles in organizing the TRADES AND LABOR CONGRESS of Canada, and were prominent in independent labour political campaigns in the 1880s and 1890s and in considerable parliamentary lobbying. The Knights peaked in Ontario and the West in 1886, but were most successful in Ottawa and Québec in the 1890s. Their expulsion for dual unionism from the TLC in 1902 at Berlin (Kitchener) abetted the development of distinctive Québec unions. Key Knights' strongholds were Toronto, Hamilton, Montréal, Québec, Ottawa, St Catharines, St Thomas, London, Kingston, Winnipeg and Victoria. Canadian Knights such as A.W. Wright, Thomas Phillips THOMPSON and D.J. O'DONOGHUE made important contributions in the US as well. The Knights' major contributions to the Canadian working class lay in the notion of the organization of all workers and in their efforts to formulate social alternatives to the growth of monopolistic capitalist society.

G.S. KEALEY

**Knowles, Dorothy Elsie**, artist (b at Unity, Sask 7 Apr 1927). Knowles studied at the Emma Lake Summer School (Sask), at U Sask with Eli BORNSTEIN, and at the Goldsmith School of Art in London. Married to painter William PEREHUDOFF, she was one of those artists stimulated by the Emma Lake Artists' Workshops, especially that of 1962 led by Clement Greenberg, who encouraged her interest in landscape. Her work is distinguished by a delicate, broken touch influenced by Cézanne and by thin paint surfaces that owe to a suggestion from Kenneth Noland. Knowles's long-standing interest in watercolours aligns her with the traditions of English landscape painting so important in Saskatchewan since the arrival in 1907 of Augustus KENDERDINE. An important exhibition of her work was organized by the Edmonton Art Gallery in 1983.

KEN CARPENTER

**Knowles, Stanley Howard**, politician (b at Los Angeles, Calif 18 June 1908). The best-known and respected of Canada's Opposition MPs, Knowles represented Winnipeg N Centre for the CCF/NDP 1942-58 and 1962-84 using a legendary knowledge of parliamentary procedure to promote social justice. Born in the US of Nova Scotian/New Brunswick parentage, Knowles had a profoundly religious upbringing in the SOCIAL GOSPEL tradition of the Methodist Church. He never forgot his mother's death from tuberculosis in 1919 or his father's being fired from a machinist's job in 1932; both incidents marked his choice for theological studies at United College, Winnipeg, and then for political action via the CO-OPERATIVE COMMONWEALTH FEDERATION in 1935. He had to change laws rather than souls. From 1942 (when he won the by-election after the death of J.S. WOODSWORTH), he did so by an increasing mastery of the rules of procedure: for almost 40 years he badgered successive governments into enlarging Canada's nascent WELFARE STATE. The PIPELINE DEBATE of 1956 was the most publicized illustration of his parliamentary skills; the founding of the NDP in 1961 confirmed his promotional abilities. Knowles's political life took a heavy personal toll but his sense of duty, his will power and the public esteem he commands sustained him through multiple sclerosis (since 1946), marital estrangement (since the 1950s) and a massive stroke

Lowell Glacier, in Kluane National Park, YT. The park was established in 1972 (courtesy Parks Canada/Prairie Region).

(1981). In 1984 Parliament, in an extraordinary retirement gift, named him an honorary officer of the House with a place, for life, at the Clerk's Table.

SUSAN MANN TROFIMENKOFF

*Readings:* Gerry Harrop, *Advocate of Compassion: Stanley Knowles in the Political Process* (1984); Stanley Knowles, *The New Party* (1961); Susan Mann Trofimenkoff, *Stanley Knowles* (1982).

**Knox, Walter**, track and field athlete (b at Listowel, Ont 1878; d at St Petersburg, Fla 3 Mar 1951). Knox was one of the most versatile and successful performers in Canadian sport. From 1896 to 1933, he obtained 359 1sts, 90 2nds and 52 3rds in competition. He won 5 Canadian titles in one afternoon in 1907 — 100 yds, broad jump, pole vault, hammer throw and shot put — and he defeated various champions during his international career as a gambling "gypsy athlete." In 1914 Knox defeated British champion F.R. Cramb for "world all-round championship" at Manchester, Eng, winning 6 of 8 events. Coach of the Canadian track and field team at the 1920 Antwerp Olympics, he also coached Ethel CATHERWOOD, gold-medal high-jump winner at the 1928 Amsterdam Olympics.

GERALD REDMOND

**Knudson, George**, golfer (b at Winnipeg, Man 28 June 1937). Knudson was introduced to golf as a teenager at St Charles Country Club, Winnipeg, and later moved to Toronto. Fascinated with the golf swing, he was determined to make his reliable and efficient. He became known as a superior ball-striker and, after turning professional in 1958, won 8 events on the US tour. In 1968 he won consecutive events in Phoenix and Tucson, Ariz, and in 1969 finished 2nd by a stroke in the prestigious Masters. During the late 1970s he turned to teaching golf.

LORNE RUBENSTEIN

**Koerner, Leon Joseph**, lumberman, philanthropist (b at Nový Hrozenkov [now in Czechoslovakia] 24 May 1892; d at Vancouver 26 Sept 1972). Born into a prominent Austro-Hungarian lumbering family, Koerner was a founder of the European Timber Exporters Convention and once served as Czechoslovakia's timber controller. After the dismemberment of Czechoslovakia in 1938, Koerner, who was of mixed Slav and Jewish ancestry, came to Vancouver where 3 brothers joined him. In 1939 he bought a defunct lumber mill in New Westminster. Applying curing techniques developed in Europe and using his British trade connections, his Alaska Pine Co sold hemlock, hitherto a waste wood in BC, as Alaska Pine. In 1955 he and his wife established the Leon and Thea Koerner Foundation which continues to provide financial aid for higher education, cultural and creative arts, and public welfare (see FOUNDATIONS). BC was a special beneficiary of Koerner's philanthropy.

PATRICIA E. ROY

**Koffman, Morris**, "Moe," flautist, saxophonist (b at Toronto 28 Dec 1928). One of Canada's most popular instrumentalists, Koffman began as a saxophonist with dance bands in Toronto and, from 1950 to 1955, the US (Sonny Dunham, Jimmy Dorsey, etc). He moved to the forefront of Toronto's jazz and studio worlds, especially with a flute recording in 1957 of his "Swinging Shepherd Blues," a tune subsequently recorded by more than 300 artists. Koffman's pop-jazz bands have been a fixture at George's Spaghetti House restaurant in Toronto for over 25 years; he has been a soloist with other Toronto jazz bands, including Rob McCONNELL's Boss Brass. His recordings (19 albums 1957-82) combine versatility with a sure commercial instinct, mixing jazz lightly with other styles of music, from classical (*Moe Koffman Plays Bach, Master Sessions*) to disco (*Jungle Man, If You Don't Know Me by Now*).

MARK MILLER

**Kogawa, Joy**, poet, novelist (b at Vancouver, BC 6 June 1935). During WWII she and her parents were among the thousands of JAPANESE Canadians forcibly removed from the coastal areas and interned in the interior of BC: an experience Kogawa dealt with in her 1981 novel *Obasan*. Prior to its publication she was known mainly as a poet, as evidenced in *The Splintered Moon* (1967), *A Choice of Dreams* (1974) and *Jericho Road* (1977), collections of tightly controlled verse in which her Japanese ancestry becomes a growing preoccupation. Her cool appraisal of such themes and her natural dignity and understated literary power have won her numerous awards.

**Kohlrabi** (*Brassica oleracea*, Gongylodes Group), sometimes called stem turnip or cabbage turnip, an important Canadian garden VEGETABLE of the Cruciferae family. Seedlings and leaves resemble those of most cole crops (eg, BROCCOLI; CAULIFLOWER). Plant height ranges from 25-40 cm. The edible part of the kohlrabi is an enlargement of a small portion of the above-ground stem. In shape the swollen stem varies from nearly round to a flattened globe; in outer colour, from greenish white to reddish purple. Kohlrabi is cold tolerant, like CABBAGE. It matures in 45-60 days and can be direct seeded, but a GREENHOUSE or hotbed start results in earlier maturity. INSECT PESTS and diseases include aphids, cabbage worms, damping-off and blackleg. Kohlrabi is a good source of potassium. It is a common Canadian garden crop, but commercial production is limited to large-city market gardens.

V.W. NUTTALL

**Koje-Do**, island 40 km SW of Pusan, S Korea, location of a series of disorders in American-operated POW camps during the KOREAN WAR. Quartered in huge compounds containing as many as 6000 men, the 160 000 N Korean and Chinese prisoners were inadequately controlled, and in May-June 1952 had to be dispersed with the help of tanks after they captured the camp commander and extorted a "confession" of inhuman treatment. Hoping to distribute POW administration more widely among UN powers, the Americans, without consulting the governments concerned, requested guard duty contingents from British Commonwealth units. A company of the Royal Canadian Regiment thus served on Koje-Do from 25 May to 8 July 1952. Fearing possible political implications, Ottawa delivered a public diplomatic protest to the US government, officially on the grounds that it was government policy to keep Canadian troops unified under Canadian command. American authorities were accommodating, although privately infuriated.

DENIS STAIRS

**Kokoask, Rivière**, 874 km long (to head of Caniapiscou R), final leg of a river system that drains a vast area (133 000 km<sup>2</sup>) of northern Québec. The main branch is formed by the Caniapiscou R, which rises in Lac Caniapiscou, and its main tributary, the Swampy R, and flows generally NNW. The more westerly branch is formed by Rivière aux Mélézes and its tributaries R du Gué and R Delay. The Caniapiscou and Mélézes join to form the Kokoask, which flows N 145 km past Ft Chimo to UNGAVA BAY. The name is likely a translation of an Inuit word meaning "big river," and the Kokoask is over 1600 m wide near its mouth. A dam on the Caniapiscou R has tripled the size of Lac Caniapiscou, and water is being diverted to the JAMES BAY hydroelectric development via LA GRANDE RIVIÈRE.

JAMES MARSH

**Komagata Maru**, a Japanese-owned freighter chartered out of Hong Kong in Apr 1914 by 376 Punjabis, mostly SIKHS, bound for Canada. At the time, EAST INDIANS were kept out of Canada by an order-in-council requiring them to come to Canada by continuous passage from India, when no steamship line provided the service.

East Indian immigrants waited for 2 months aboard the SS *Komagata Maru* while immigration officials maneuvered to keep them out of Canada (courtesy Vancouver Public Library/6232).

Before the Canadian government, under tremendous pressure, closed the door in 1908, about 2000 Sikhs had settled in BC. In 1913, 38 Sikhs contested the continuous-passage order and were admitted. This encouraged others to charter the *Komagata Maru*. When it arrived at Vancouver in May 1914, most of the passengers were detained on board. They waited for 2 months while immigration officials maneuvered to keep them out of court and, after they had lost their case, while their leaders negotiated departure terms. The arrival of the RCN cruiser RAINBOW on July 20 added to the Canadian pressure, and on July 23 *Komagata Maru* sailed for Calcutta, where it was met by police suspicious of the organizers' politics. On disembarkation, 20 passengers were killed in a shooting exchange. The affair strengthened Indian nationalist feeling, but did not significantly soften Canadian immigration law.

HUGH JOHNSTON

**Kootenay** are divided into "Upper" and "Lower" divisions, respectively occupying eastern and western portions of their plateau habitat. The Kootenay R in southeastern BC served as the unifying centre of their aboriginal territory and culture, provided many of their subsistence needs, and was also the location for their villages and a means of transportation. The term "Kootenay" is an anglicized form of either a Peigan or an old Kutenay word. Kutenay is a language isolate.

The various bands of the Upper and Lower Kootenay were well adapted to their somewhat different natural environments. The Upper Kootenay exploited a greater abundance of big-game animals (deer, caribou, elk, mountain sheep and goat) while the Lower Kootenay relied more on fish and other aquatic resources. The Upper Kootenay undertook annual bison hunts over the Divide, probably after acquiring the horse. This intensified their contact with Plains cultures, resulting in their adoption of a veneer of Plains culture traits apparent after 1800 (see NATIVE PEOPLE: PLAINS).

The lands along the Kootenay R were segmented into BAND or group territories. Shifting residence patterns allowed utilization of various economic resources according to the season. Men fished, hunted and, when necessary, cared for horses. In addition to child rearing, women were responsible for root gathering, preparation of food and hides, and making clothing. The Kootenay kinship system was bilateral, but lacked lineages or clans (see CLAN). Reciprocal exchange among relatives was the principal means of redistributing economic goods, acquiring protection and achieving social status. When the Kootenay bands were in their winter villages, each was under the relatively informal leadership of a man respected for his success in accumulating wealth and for his generosity. With adoption of the horse, certain bands came

to rely more on the bison, and more powerful leaders emerged. A principal sodality, the "Crazy Dogs," was composed of warriors who functioned as a police unit within the band and during bison hunting and was probably borrowed from the Plains. Other sodalities included the "Crazy-Owl" society for women and shamanistic groups such as the Conjuring or Blanket societies (see SHAMAN).

As seen in their mythology, Kootenay regarded the Earth as an island surrounded by water, covered by the dome of the sky. The supernatural side of man was his soul, but humans also possessed numerous personal spirits who were often associated with the rivers and their cascades. The spirits offered their powers to Kootenay, who sought them through "vision quests." The principal ceremonies today are the Conjuring or Blanket ceremony and the SWEAT LODGE ceremony. Other rites include the SUN DANCE, the Bluejay Dance and the Grizzly Bear, Game Calling and First Fruits ceremonies.

Although semi-subterranean pit houses have been reported, the Lower Kootenay usually occupied long, mat-covered lodges similar to those of the neighbouring Interior SALISH. During summer, temporary conical lodges covered by boughs of spruce or fir bark were used. After adopting the horse, the Upper Kootenay replaced brush shelters by the skin-covered T tipi.

Most of the contemporary Kootenay of Canada are located on 5 INDIAN RESERVES: Columbia Lake, Lower Kootenay, St Mary's, Shuswap and Tobacco Plains. Although severely decimated by epidemics in the 18th and 19th centuries, the Kootenay population appeared to stabilize in the late 19th century and had increased from 543 in 1893 to 580 in 1980. They earn their living from wage labour and a few tribal enterprises. Their tribal councils are working to improve health and education, and are participants in the movement to secure LAND CLAIMS settlements for their extensive aboriginal territory. See also NATIVE PEOPLE: PLATEAU and general articles under NATIVE PEOPLE. DEWARD E. WALKER, JR

Reading: H. Turney-High, *Ethnography of the Kutenai* (1941).

**Kootenay, Lake**, 407 km<sup>2</sup>, elev 532 m, is situated in the mountainous SE interior of BC. A long, narrow lake squeezed between the SELKIRK and Purcell mountain ranges, it is a widening of the Kootenay R, which rises in the Rocky Mts and flows S into the US before looping sharply N back into Canada. The lake drains W to the COLUMBIA R. The town of NELSON is on the W arm. David THOMPSON visited in 1808 during one of his fur-trading ventures across the Rockies and found the area occupied by the Kootenay Indians. Late in the century the logging and mining industries moved into this corner of the province. The name derives from an Indian word meaning "water people." DANIEL FRANCIS

**Kootenay National Park** (est 1920) is located on the W slope of the Continental Divide. The PARK, stretching N and S for 104 km, is bounded on the E by BANFF and on the N by YOHO. Vegetation ranges from alpine TUNDRA to forests of Douglas fir. Large mammals found in the park

Radium Hot Springs in Kootenay National Park. Ancient pictographs suggest that plains and mountain Indians met regularly at these hot springs (courtesy Parks Canada/Ted Grant).

include mountain goat, bighorn sheep, elk, mule deer, black bear and the occasional grizzly, as well as numerous smaller mammals and over 150 species of birds. Kootenay has always been a travel route. Ancient pictographs suggest that plains and mountain Indians met regularly at what is now Radium Hot Springs. Later, the Kootenay Indians settled there, but still made regular trips across the Rockies to hunt bison on the plains. David THOMPSON, who was exploring a route to the Pacific, was the first European to travel through the area. Today the Banff-Windermere Parkway passes through the park and provides dramatic views of snow-capped peaks and narrow canyons. The park offers year-round camping and swimming at the hot springs, as well as outdoor recreational facilities.

LILLIAN STEWART

**Korean War** In Dec 1947 PM Mackenzie King chastised his external affairs department for agreeing to membership on the UN Temporary Commission for Korea. Nevertheless, on 27 July 1950, after King's funeral, his former colleagues decided in principle to contribute a Canadian Army unit to assist UN forces in Korea. In the government's view, Canada would fight not for Korea but for the UN and the principle of collective security.

The war had begun 25 June 1950. The next day Gen Douglas MacArthur informed US Pres Harry Truman that S Korean defences were collapsing and defeat was imminent. The Americans decided to help the south defend itself against the communist north, but through the UN. The UN General Assembly was dominated by Western countries and, since the Soviets were boycotting the Security Council because of the UN's refusal to seat the new communist Chinese regime in Council, they could not exercise a veto. The Security Council thus condemned the N Koreans and called on UN members "to render every assistance" to the beleaguered south. The Americans quickly offered air and naval assistance. On 28 June 1950 Lester PEARSON, Canada's secretary of state for external affairs, commended them, believing that Canada must respond as well through the UN and under US military leadership.

In 1950, perhaps the worst period for COLD WAR fears, Canadians accepted and even encouraged American leadership in resistance to communist expansion. There was, however, some fear that the Americans were too impetuous in defending the "free world." Pearson therefore emphasized that Canada's participation was part of a UN, not an American, operation. Initially, Canada contributed 3 destroyers and an air-transport squadron. The Americans, thinking this inadequate, used UN Secretary General Trygve Lie to pressure Canada and other nations to expand their efforts. The Canadian government needed little external pressure; domestic interests exerted the necessary influence. Even

the socialist CCF urged the government to commit ground forces. Canada's major difficulty was the weak state of the armed forces, but on Aug 7 Prime Minister Louis ST LAURENT announced rearmament measures and plans for a Canadian Army Special Force to carry out Canada's UN obligations.

At first it appeared that Canadian soldiers would never fire a shot. Under MacArthur UN forces drove the N Koreans back to the border at the 38th parallel. Canadians and most others expected MacArthur, having vanquished the aggressor, to halt. To Pearson's shock and disappointment, he did not. Canada nevertheless publicly supported the US decision to carry the war into the north. Now the Canadians sought to restrain the American-dominated military action lest the Chinese communists be drawn into battle. By the end of Oct Chinese "volunteers" crossed the Yalu R, driving back the UN forces. Pearson's concern was expressed publicly in mid-Nov when he emphasized that Canada had always sought a "confined and localized" war that did not imperil the security of "Korea's neighbours." MacArthur did not exaggerate when on 28 Nov 1950 he called it "an entirely new war." Canadians would not escape the battles.

In Feb 1951 the Princess Patricia's Canadian Light Infantry landed in Korea, and in May the CASF followed. The Canadians fought on rough terrain and in an unfamiliar environment. The UN forces established a stable front near the 38th parallel, and until the war ended 8 June 1953, the fighting took place along this line. Canadians distinguished themselves at KAPYONG in Apr 1951 and at KOJE-DO in May-July 1952. There were 21 940 Canadians who served in the army and approximately 3600 naval personnel. Eleven army officers, 298 other ranks and 3 sailors fell in action. Fifty-nine officers and 1143 other ranks were wounded or injured. By all accounts, the Canadians performed admirably.

Pearson and his colleagues had thought American leadership essential, but its character became increasingly troubling. First, there were careless remarks by Pres Truman about Gen MacArthur's right to decide alone on the use of atomic weapons. Then MacArthur clearly indicated that he wanted to expand the war into China, an action that might have caused World War III. Even Truman's firing of MacArthur on 10 Apr 1951 failed to remove many concerns. During the war, Canadian diplomats sought to "constrain" the American decision-makers from the risky actions they sometimes considered. Certainly the Canadians worked with exceptional zeal and skill in UN corridors and in Washington offices to advance arguments for a negotiated peace. Their influence, however, remains open to question. Although some Canadians believe Canada's actions did restrain American aggressiveness, it must be admitted that American evidence offers little support. The Korean War has thus become part of a larger historical controversy concerning the nature of CANADIAN-AMERICAN RELATIONS JOHN ENGLISH

Reading: L.B. Pearson, *Mike*, II (1973); J.W. Pickersgill and D.F. Forster, *The Mackenzie King Record*, IV (1970); Denis Stairs, *The Diplomacy of Constraint* (1974); Herbert F. Wood, *Strange Battlefield* (1966).

**Koreans** Korea is a mountainous peninsula E of China and W of Japan. In June 1950 the country was divided into northern (communist) and southern (American-influence) zones. Almost all Korean immigration to Canada has been from the S. The earliest known contacts with Canadians occurred in 1890 through Canadian missionaries working in Korea. Subsequently, Koreans emigrated to Canada through these same church connections, seeking opportunities for economic independence and a future for their families. Immigrants came not only from S

Korea, but also from Europe, Vietnam, S America and the US. Most Korean Canadians are highly skilled workers or professionals, eg, doctors, professors, engineers, or are engaged in business, eg, food stores, restaurants, printing shops, real-estate and insurance agencies. Others have entered the labour force as skilled and semiskilled workers.

Most Koreans have settled in urban centres, particularly in Toronto, Vancouver, Edmonton and Calgary. The number of Koreans in Canada today exceeds 25 000.

**Social and Cultural Life** In traditional Korean social structure, the clan system, with its emphasis on hierarchical relationships, is important. Customs derived from Confucianism, the philosophical system of traditional Korea, have been retained by Korean Canadians, although Christianity, with its modern education system, has had a profound effect on the shaping of modern Korea. The first Korean United Church was established in Vancouver; 9 United Church congregations now serve Koreans in Vancouver, Winnipeg, Edmonton, Toronto, Hamilton, Windsor and Montréal. The Korean Presbyterian and Korean Catholic churches are also well established. Koreans are rich in folk traditions. Contributions to Canadian culture range from dance, music and Tae Kwon Do (the art of self-defence) to specialized Korean cuisine such as *bul-go-gi* and *kimchee*.

Club Coreana was founded in 1970 for social gatherings of Korean students at U of T. Other organizations include the Cultural Centre for Korean Canadians and the Association of Korean Scholars. A Korean Canadian association in Toronto has started a Korean-language school. The Ad Hoc Committee for the Orientation of Korean Immigrants (1972) in Vancouver was founded to assist new immigrants, as was the Korean Human Rights Council in Ontario, which also serves the community.

*Canada News* and *New Korea Times* are weekly publications, as is the Korean journal *Sangjo*, published by the Korean Vancouver Society.

Although there is a tendency for them to be assimilated easily to the Canadian way of life, Koreans are also conscious of maintaining their independent identity. National celebrations include National Independence Day on 1 March, which is related to the 1919 movement for independence.

DAVID BAI

**Kotcheff, William**, "Ted," filmmaker (b at Toronto 7 Apr 1931). He studied literature at U of T, joined the CBC in 1952 and soon began directing. He left for England in 1957, directing many TV productions, stage plays and his first films. After making *Outback* (1971) in Australia, he returned to Canada to adapt Mordecai RICHLER's novel about a young Jewish hustler living in Montréal. At the time, *The Apprenticeship of Duddy Kravitz* (1974) was the most expensive privately financed film produced in Canada, but it did not sacrifice artistic integrity for commerce. Kotcheff has subsequently worked entirely in the US.

PIERS HANDLING

**Kouchibouguac National Park** (est 1969, 238 km<sup>2</sup>), on the eastern NB shore of Northumberland Str, is a delicate blend of beaches, sand dunes and salt marshes framed by a mixed maritime forest. A 25 km long barrier-island system shelters placid lagoons from the often violent sea. Concealed within the park's forested plain are extensive bogs and cedar swamps, home to over 25 species of orchids. The broad band of salt marshes and lagoons provides food and shelter for a wide variety of creatures: herds of grey seals, colonies of terns, vast migrating flocks of WATERFOWL. Inland, common wildlife species include deer, moose, black bear, red fox and, most recently, coyote. French, English and Indian cultures have shaped the traditions of farming, fishing and

self-sufficiency in the area around the park, and the Acadian spirit adds a special touch to the region's character. Visitors can swim, camp, beachcomb and observe lagoon life by canoe or rowboat.

LILLIAN STEWART

**Kreiner, Kathy**, alpine skier (b at Timmins, Ont 4 May 1957). She began skiing at age 3, racing at 7 and World Cup competition at 14, winning her first World Cup race at Pfronten in 1974. She won Canada's only 1976 Olympic gold medal in the giant slalom, for which she was named Canada's Outstanding Female Athlete of 1976.

MURRAY SHAW

**Kreisel, Henry**, novelist, professor, administrator (b at Vienna, Austria 5 June 1922). He was one of the first people to bring the experience of the immigrant to modern Canadian literature. Drawing on personal knowledge of fascist pre-WWII Austria, Kreisel has powerfully dramatized the anguish experienced by Jews there. He left Austria for England in 1938 and was interned for 18 months during WWII. After studying at University of Toronto, he began teaching in 1947 at University of Alberta, where he has remained. He served as vice-president, 1970-75 and in 1975 was named University Professor. In both Kreisel's novels, Canadian security is contrasted with European turbulence. In *The Rich Man* (1948), an immigrant who has achieved modest success in Toronto returns to Vienna to discover that his claims to wealth deceive and harm his despairing Austrian relatives. *The Betrayal* (1964) explores questions of guilt and revenge that arise when a man who has escaped from the Nazis finds his would-be betrayer in Edmonton. *The Almost Meeting* (1981) is a collection of short stories with a variety of Canadian and European settings.

THOMAS E TAUSKY

**Krieghoff, Cornelius David**, painter (b at Amsterdam, Holland 19 June 1815; d at Chicago, Ill 8 Mar 1872). Krieghoff's colourful paintings of Québec habitants, sporting life and Indians have fascinated succeeding generations. Of German parentage, Krieghoff spent his youth in Düsseldorf and Schweinfurt, Germany, and studied at the Düsseldorf Academy, famous for its genre painters. He and his brother Ernst emigrated to America 1835 or 1836 and fought with the Americans in the Seminole War in Florida. He met Louise Gauthier (or Gautier) from Boucheville, Qué, in New York and by 1840 they

were living in Montréal, where he worked as a musician and painter. He was in Rochester, NY, in 1842-43, but went to Paris for study in 1844.

Krieghoff lived in Longueuil, a village across the St Lawrence from Montréal, in 1845-49. He also maintained a studio in Montréal, where he was establishing himself as a major artist. His paintings of local habitant life embodied satirical humour, ironical anecdote and brilliant colours. Typical is one which portrays with suppressed mirth a priest tyrannically guarding his parishioners' morals by catching them eating meat during Lent. In others, men cheat at cards, lovers flirt on winter evenings, and neighbours gossip. Indians greet each other along the frozen river while Montréal gentlemen sweep by in handsome sleighs. All Krieghoff's canvases read like gripping narratives. The family moved to Montréal in 1849, where he continued painting, but sales of his works were poor.

Krieghoff moved to Québec, likely in 1853, at the urging of John Budden, whose auction firm sold his canvases. For 11 years he fraternized with the affluent Québec sporting fraternity of wealthy lumber merchants, army officers and businessmen, and painted many well-known canvases. *Merrymaking* is a rowdy winter party at a country inn. Others picture incidents on winter hunting and sleighing trips and fishing expeditions in autumn woods. There are picturesque waterfalls and Indian groups in the forest. Habitant life is the theme in paintings such as *Spill My Milk!* in which a girl is being scolded for carelessness. In *Bilking the Toll*, youths evade the old keeper unable to collect the fee from a speeding sleigh. Krieghoff was commissioned to paint canvases for the chamber of the new Québec Legislative Assembly.

The artist left Québec in late 1863 or early 1864 and lived in Paris and Munich, where he painted additional versions of Canadian subjects. He visited Québec in 1867 and moved back in 1870. His former patrons, the garrison officers, had returned to England, and he could not pick up his old carefree life. Krieghoff moved to Chicago late in 1871, where his daughter was living, only to die there suddenly. His 2000 canvases of popular, anecdotal, genre subjects had brought new dimensions to the Canadian scene and a colourful romanticism unsurpassed by contemporary artists.

J. RUSSELL HARPER

Reading: J. Russell Harper, *Krieghoff* (1979).

**Krill**, see CRUSTACEANS; ZOOPLANKTON.

**Kroetsch, Robert**, writer, editor, teacher (b at Heisler, Alta 26 June 1927). He grew up on his

Cornelius Krieghoff, *The Habitant Farm* (1856), oil on canvas (courtesy National Gallery of Canada/gift of the estate of the Hon W.C. Edwards, 1928).

father's farm and studied at University of Alberta and University of Iowa. He taught at State University of NY, Binghamton, until the late 1970s, meanwhile writing a series of novels set mostly in Alberta that won him a growing critical reputation.

Kroetsch's first novel, *But We Are Exiles* (1966), was a serious affair lacking the ribald comic energy of his later works. His major theme of Dionysian chaos versus Apollonian order was present, though he had not found the proper style to explore it. In *The Words of My Roaring* (1966), he began to use the tall-tale rhetoric of prairie taverns. Both *The Studhorse Man* (1969), which won the Governor General's Award, and *Gone Indian* (1973) call the conventions of realistic fiction hilariously into question. *Badlands* (1975), a comic triumph, could be called an example of feminist fiction-making because of the questions it raises about masculine conventions of behaviour and storytelling. In 1975 Kroetsch also published his first 2 books of poetry. *The Ledger* (1975), the first book of the ongoing *Field Notes* (1981), is a special kind of documentary, and raises questions about literature in the New World. Kroetsch published separate volumes from *Field Notes* in the next few years: *Seed Catalogue* (1977), *The Sad Phoenixian* (1979) and *Sketches of a Lemon* (1981). He also published *What the Crow Said* (1978), a magic-realist fiction.

Kroetsch is a synthesizer of new literary theory. Through interviews and essays, he has encouraged critical thinking about contemporary writing. Perhaps the most significant example is *Labyrinths of Voice: Conversations with Robert Kroetsch* (1982) by Shirley Neuman and Robert Wilson. *Open Letter* published his collected criticism (1983). Through his teaching, at universities of Calgary and Manitoba in the late 1970s and Saskatchewan Summer School of the Arts, as well as through his writing, Kroetsch has powerfully influenced recent writing on the Canadian Prairies and elsewhere.

DOUGLAS BARBOUR

**Krol, Joseph**, "Joe King," football player (b at Hamilton, Ont 20 Feb 1919). He played collegiate football in Windsor and at Western helped the Mustangs win the 1939 intercollegiate title. After playing with the Hamilton Wildcats, Grey Cup winners 1943 and finalists 1944, he joined the TORONTO ARGONAUTS, leading them to 3 consecutive Grey Cups (1945-47). Krol and receiver Royal Copeland — "the gold dust twins" — were a potent passing combination, and Krol was an effective runner and kicker. His passing and kicking accounted for all the Argos' points in their 1947 Cup win over Winnipeg. He retired after 1952 but returned in 1955 to punt for the Argos.

FRANK COSENTINO

**Ksan** is a reconstructed Gitksan (TSIMSHIAN) Indian village located at the junction of the Skeena and Bulkley rivers in Hazelton, BC, where Indian villages have stood for thousands of years. Ksan, the Gitksan name for the SKEENA R ("River of Mists"), is the result of a joint project by Indians and non-Indians to help solve the area's social and economic problems by promoting a better understanding of local Indian culture and reviving its artistic traditions. In 1958 the Hazelton Library Assn raised \$10 000 and constructed the Skeena Treasure House for exhibition of ceremonial regalia on loan from many Gitksan chiefs in the area. Following the decision of the volunteer planning committee to build a replica of an Indian village of the early 1800s, construction began in 1968, with combined financial help of the Ksan Assn and the provincial and federal governments. Ksan was officially opened 12 Aug 1970. Buildings, modeled on communal houses with painted fronts, include a carving school and workshop, a shop for sales of carvings and Gitksan and CARRIER native crafts, and a museum where the regalia of chiefs

Ksan, a reconstruction of an early 1800s Gitksan village in Hazelton, BC, where Indian villages have stood for thousands of years (photo by John deVisser / Masterfile).

are housed and displayed until needed at ceremonial feasts (see POTLATCH). A 19th-century Wolf Crest House prepared for a feast and a prehistoric Frog Crest house with displays depict traditional activities.

Some Ksan buildings are open year round, and tours and dance performances are scheduled during the summer. In Gitksan villages near Ksan, visitors can see some of the oldest TOTEM POLES still in a native setting and learn more about the local history. See also NORTHWEST COAST INDIAN ART.

V. JENSEN AND J. V. POWELL

Reading: *Ksan*, published by Ksan Assn (nd).

**Ku Klux Klan** [Gk *kuklos*, "circle"], an ultra-conservative, secret fraternal organization dedicated to the supremacy of an Anglo-Saxon, Protestant society. Formed in Pulaski, Tenn, in Nov 1865 by 6 ex-Confederate soldiers, it was outlawed in 1871 because of violent and outrageous acts against blacks and northerners. Re-

vived Nov 1915 in Atlanta, Ga, it drew its support from middle- and lower-class Americans who feared the loss of conservative and rural values. In 1921 the Klan was reported active in Montréal; by 1925 "klans," or locals, had been established all across Canada. Like their American counterparts, Canadian Klansmen had a fanatical hatred for all things Roman Catholic and feared that the purity of the Anglo-Saxon race was being jeopardized by new immigration. Moreover, they were not averse to stepping outside the law to achieve their goals.

The Klan appealed to few Canadians and remained relatively obscure, except in Saskatchewan. After American organizers absconded with approximately \$100 000 of Klan funds in 1927, the Saskatchewan organization regrouped and, at its height, just after the 1929 provincial election (in which it was instrumental in ending 24 years of Liberal rule), it boasted of having 40 000 members. Thereafter, the Saskatchewan Klan declined rapidly, as did the organization in the rest of Canada. In the late 1970s the Klan attempted once more to organize in Canada, notably in Ontario, Alberta and BC. The organization's avowed white-supremacist stance and further outrages committed by the American Klan during this period have done little either to increase membership or to establish the Klan's credibility in the eyes of the Canadian public.

PAUL BANFIELD

Reading: J. Sher, *White Hoods* (1983).

**Kuerti, Anton Emil**, pianist, teacher, composer (b at Vienna, Austria 21 July 1938). Kuerti began performing at age 9 as soloist with the Boston Pops Orchestra. He continued studies at the Peabody, Cleveland and Curtis institutes, and before moving to Canada in 1965 had performed with every major N American orchestra and given solo recitals in most large N American and European cities. An interpreter and performer particularly of Beethoven, Schumann, Mozart, Brahms, Schubert, Scriabin and Bach, Kuerti is one of Canada's leading pianists. Very much an individualist, Kuerti eschews high concert fees and performs in many smaller centres, always with his own piano. His recording of the 32 Beethoven sonatas won a Juno Award

Ku Klux Klan members at Kingston, Ont, 31 July 1927. Like their American counterparts, Canadian Klansmen displayed fanatical racial and religious hatred (courtesy Public Archives of Canada/PA-87348).

in 1976. As a teacher at the Faculty of Music, U of T, Kuerti has encouraged several notable young pianists, and as an international performer has premiered the works of numerous Canadian composers. He has also initiated individual concerts and festivals, including the Festival of the Sound, established at Parry Sound, Ont, in 1980.

MABEL H. LAINE

**Kurelek, William** (Wasył), painter and writer, evangelist (b near Whitford, Alta 3 Mar 1927; d at Toronto 3 Nov 1977). Influenced by Bosch and Brueghel and by prairie roots, his UKRAINIAN heritage and Roman Catholicism, Kurelek's realistic and symbolic paintings record his historic culture and religious vision. The oldest of 7 children, he was expected to help run the farm. His lack of mechanical aptitude attracted harsh criticism from his father, as did his wish to be an artist. He studied at Winnipeg, Toronto and San Miguel, Mexico. In England (1952-59), he sought psychiatric help and was hospitalized for severe emotional problems, depression and eye pain. He converted to Roman Catholicism (1957), credited God with his healing, and began to paint the Passion of Christ according to St Matthew. This series of 160 paintings is housed in the Niagara Falls Art Gallery and Museum.

William Kurelek, showing himself at work in *The Painter* (1974), mixed media (courtesy the Isaacs Gallery, Toronto).

Returning to Toronto, he was established by the early 1960s as an important painter, alternating realistic works depicting his prairie roots with didactic series. In the 1970s he began to publish his paintings with simple texts. His books for children (*A Prairie Boy's Winter*, 1973; *Lumberjack*, 1974; *A Prairie Boy's Summer*, 1975; and *A Northern Nativity*, 1976) have become modern classics. His autobiography, *Someone With Me* (1973, rev ed 1980), ends with his marriage to Jean Andrews (1962). Kurelek was an outstanding artist with a unique idealistic and pragmatic vision. A modern Jeremiah, he painted a coming apocalypse — divine justice on a materialistic, secular society.

PATRICIA MORLEY

**Kutchin**, the northernmost of all N American Indians, occupied a broad sweep of territory located primarily N of the Arctic Circle and extending across the Mackenzie drainage and northern tributaries of the Yukon R into NW Alaska. Their northern boundary abuts INUIT land. They speak an Athapaskan language, unintelligible to all other Athapaskans except possibly the HAN.

Depending on an upland or lowland habitat,

the 9 or 10 regional bands concentrated on moose hunting or salmon fishing, though caribou, captured in impressive corrals, were available to all bands. Even though big game supplied the greater part of their food and hides for clothing and shelter, the Kutchin also caught whitefish, hare and other small game. Kutchin knowledge of their environment was extensive, one anthropologist recorded 400 Kutchin names for plants and animals. Kutchin technology was similar to that of other subarctic Athapaskans, with distinctive western elements including large metal knives with double recurved handles, sleds, chair-style birch bark baby carriers, partially decked-over kayak-canoes, and portable domed caribou-skin tents. Adults and children alike wore V-tailed summer cloaks decorated with red ochre, dentalium and dyed porcupine quills. Women tattooed their chins and, on ceremonial occasions, men coiffed their hair with red ochre mixed with grease and sprinkled with down.

A pair of same sex siblings with their nuclear families customarily formed a household. Several households related to one senior person or "chief" made up a local band, which worked together to build caribou surrounds and large fish traps, but sometimes larger groups met to hunt. Several local bands formed a regional band, maintained through intermarriage and other interactions between constituent families within a single geographic area. Regional bands assembled for annual festivities and ceremonies. Kutchin identity was achieved through language. Crosscutting the band structure were 3 matrilineal clans which regulated marriage.

The Kutchin world view included beliefs in animal spirits, spirit beings, bushmen (wild Indians with supernatural attributes), and the culture hero-trickster Raven (crow), recorded in culture hero myth cycles and raven myths.

In 1789 the Kutchin were contacted by Alexander MACKENZIE, S of the Mackenzie Delta. Within 2 decades they were trading extraterritorially at posts on the Mackenzie R and, in 1840, Ft McPherson was built on the Peel R. The HUDSON'S BAY COMPANY established Ft Yukon, Alaska, in 1847. The Kutchin became middlemen in trade between the coastal Eskimo and interior tribes and between the Mackenzie and Yukon and resented establishment of European trading posts in their territory. In the 1980s Kutchin population was approximately 2500 persons, with slightly more than half living at Old Crow, Ft McPherson and Arctic Red River or in the mixed Inuit/Indian/white communities of Aklavik and Inuvik. The remainder live in Alaska. See also NATIVE PEOPLE: SUBARCTIC and general articles under NATIVE PEOPLE.

A. MCFADYEN CLARK

Reading: J. Helm, ed, *Handbook of North American Indians*, vol 6: *Subarctic* (1981).

**Kwakiutl** The "kwakwakawok" (often referred to as Kwakiutl, which is the name of the Ft Rupert band) occupy coastal areas of BC extending from Smith Inlet in the N to Cape Mudge in the S, W to Quatsino and N to Knight Inlet. Originally, there were 28 tribes, all speaking dialects of Kwakwaka, from which comes the people's name for themselves, *Kwakwakawakw*. The first census in 1835 recorded the total population as 8575. A member of the Wakashan language family, Kwakwaka is related to other languages such as Westcoast (NOOTKA), Heiltsuk (BELLA BELLA), Oowekyala (Rivers Inlet people) and Haisla (KITAMAAT). The culture of the Kwakiutl is similar to that of their northern neighbours, the Bella Bella and Rivers Inlet peoples. Trails across Vancouver I made trade possible with Nootka villages on the West Coast. Archaeological evidence shows habitation in the Kwakwaka-speaking area for at least 8000 years. In precontact times Kwakiutl fished, hunted and gathered, according to the seasons, securing

Kwakiutl house and heraldic pole at the BC Provincial Museum (courtesy British Columbia Provincial Museum).

an abundance of preservable food. This allowed them to return to their winter villages for several months of intensive ceremonial and artistic activity.

In 1792 Spanish explorer Galiano-Valdes and Capt George VANCOUVER encountered most of the south Kwakiutl groups, and Vancouver wrote detailed descriptions of them. Farther N, in 1849 the HUDSON'S BAY CO established Ft Rupert, which operated until 1877, when it was sold to Robert Hunt, the last factor. George HUNT, Robert's son, became anthropologist Franz BOAS's assistant, and together they wrote a large body of material on the language and culture of the Kwakiutl.

A federal law of 1884 prohibiting the POTLATCH threatened to destroy the heart of the culture. In 1921 a large potlatch at Village I resulted in the arrest of 45 people, of whom 22 were imprisoned, their ceremonial goods confiscated. Knowing that these masks and other ritual objects had been wrongfully taken, the *Kwakwakawakw*, in 1967, initiated efforts to secure their return. The NATIONAL MUSEUMS OF CANADA agreed to return that part of the collection held by the NATIONAL MUSEUM OF MAN, on the condition that 2 museums be built, the Kwakiutl Museum in Cape Mudge and the U'mista Cultural Centre in Alert Bay (see NORTHWEST COAST INDIAN ART).

Today, most Kwakiutl children speak English as their first language, and many schools in the area sponsor programs in Kwakwaka and traditional dance and art. Traditionally fishermen, the *Kwakwakawakw* continue to fish commercially in a highly competitive industry. Hereditary chiefs still pass on rights and privileges at potlatches, but band government is conducted by elected councilors. A number of original villages have been abandoned as inhabitants moved to communities such as Alert Bay, Campbell River and Port Hardy, to be close to schools and hospitals. Only 10 villages are now inhabited, with a total population of about 3400 for the area. See NATIVE PEOPLES, NORTHWEST COAST and general articles under NATIVE PEOPLE.

GLORIA CRANMER WEBSTER

Reading: F. Boas, "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Smithsonian Institution Annual Report for 1895* (1897), and Kwakiutl *Ethnography* (ed H. Codere, 1966); R. and E. Rohner, *The Kwakiutl* (1970).

**Kwong, Normie**, "The China Clipper," football player (b Lim Kwong Yew at Calgary, 24 Oct 1929). As a running back over 14 seasons in Calgary and Edmonton, he was a Canadian Football League all-star 5 times, twice won the Schenley Award as outstanding Canadian player (1955-56) and was Canada's athlete of the year (1956). Together with teammate Johnny Bright, Kwong gave Edmonton Eskimos a potent running attack. From 1950 to 1961 he gained 9022 yards, averaging 5.2 yards per carry, and scored 74 touchdowns.

GERALD REDMOND

**La Baie**, Qué. City, pop 20 935 (1981c), inc 1976, is located at the end of Baie des Ha! Ha! on the SAGUENAY R. 10 km E of CHICOUTIMI and 200 km N of Québec City. Seaport and cradle of the Saguenay-Lac Saint-Jean region, La Baie is the amalgamation of 4 former municipalities: Bagotville, Port-Alfred, the parish of Grande-Baie and the parish of Bagotville. La Baie was founded in 1838 by employees of the Société des vingt-et-un, a Charlevoix forestry company bought by William PRICE in 1842. Price's sawmills were soon joined by port facilities, making La Baie, a natural harbour, a major port on the Atlantic coast. A paper mill was built there in 1917 (Consolidated Bathurst) and an aluminum plant in 1979 (Alcan). The Musée du fjord shows the maritime character of La Baie. The Monument des vingt-et-un and the Fêtes du Saguenay, held each June, are reminders that this city is the oldest municipality of the Saguenay-Lac Saint-Jean region.

MARC ST-HILAIRE

**La Barre, Joseph-Antoine Le Febvre de**, governor of New France 1682-85 (b in France 1622; d at Paris, France 1688). La Barre's administration in New France was disastrous, particularly from a military point of view. Like many governors, he enriched himself in the FUR TRADE. Joining forces with several Canadian merchants, he attempted to secure the trade with the Illinois by confiscating the posts of Cavelier de LA SALLE, protégé of the previous governor, FRONTENAC. Some said it was to secure this business that La Barre launched his ill-planned expedition against the Iroquois in 1682. His troops were so weakened by disease that he was forced to sign a humiliating peace at FT FRONTENAC. This failure, and La Salle's complaints, led to his dismissal. See IROQUOIS WARS.

ALLAN GREER

**La Brosse, Jean-Baptiste de** (1712-82), Jesuit missionary in the Saguenay-St Lawrence Gulf region remembered for having predicted his own death on 11 April 1782. Upon his death, darkness is said to have covered the SAGUENAY R. and in all the parishes where he had preached the bells began ringing without anyone coming near them.

NANCY SCHMITZ

**La Capricieuse** The first French naval vessel to visit Canada after the CONQUEST, *La Capricieuse* received a tumultuous welcome at Québec on 14 July 1855. Commander Paul-Henry de Belvéze proceeded by steamer to Montréal, Toronto and Ottawa before leaving Québec for France on Aug 25. His mission was to report on the prospects of trade with Canada, made possible by Britain's proclamation of free trade and by the Anglo-French alliance of 1854. The result was the opening of a French consulate at Québec in 1859, followed by mutual, short-lived tariff concessions and the development of a modest trade. However, the visit is remembered chiefly as the official endorsement of the Franco-Canadian cultural rapprochement that had been gathering impetus since the 1830s.

DALE MIQUELON

**La Corriveau**, popular designation of Marie-Josephite CORRIVEAU. In Apr 1763 a controversial court martial, based largely on rumour and hearsay, convicted Joseph Corriveau of the murder of his son-in-law, Louis Dodier. His daughter, Marie-Josephite, was convicted as an accessory and a servant, Isabelle Sylvain, was convicted for perjury. After being sentenced to hang, Corriveau confessed that he was merely an accessory to his daughter's crime. In a second trial she confessed and was sentenced to be hanged and then gibbeted in an iron cage at Pointe-Lévy — an unusual punishment unknown during the French regime and reserved in England for persons found guilty of particularly heinous crimes. This treatment fired the popular imagination and gave rise to many legends and myths. Following the discovery

about 1850 of an iron cage near the Lauzon cemetery, the oral traditions concerning the incident were transferred into literature by Philippe AUBERT DE GASPÉ in *Les Anciens Canadiens* (1863). Several other authors, notably Louis FRÉCHETTE, Sir James MacPherson LeMoine and William KIRBY, elaborated on the legend by adding imaginary crimes and gruesome details. Other embellishments include the number of husbands killed (2 to 7), her dissolute life and her haunting various places. In 1981 Andrée Lebel published the historical novel *La Corriveau*.

JOHN A. DICKINSON

**La Galissonnière, Roland-Michel Barrin de La Galissonnière, Marquis de**, naval officer, commandant general of New France (b at Rochefort, France 10 Nov 1693; d at Montreuil, France 26 Oct 1756). He was born into a powerful family and rose to lieutenant general of the French naval forces. He was in NEW FRANCE from 19 Sept 1747 to 21 Oct 1749, during which time he strongly advocated building a line of garrisoned posts down the Ohio Valley to hold the English colonies along the coast. He enthusiastically promoted the colony's interests, seeing it as a viable economic asset in classic mercantilist terms, as well as a military distraction to the English. La Galissonnière had broad humanistic and scientific interests and had his officers collect botanical specimens from across the colony. His report on France's colonies, found in *Mémoires des commissaires du roi* (1755-57), contained a lucid account of colonial policies and of the potential riches of Canada. Despite his brief stay in Canada, La Galissonnière's engaging personality, intelligence and fervent activity on the colony's behalf made him popular and left a lasting impression.

JAMES MARSH

**La Grande Rivière**, 893 km long, rises in the rugged forest highlands of central Québec and drains W into JAMES BAY. Its 97 700 km<sup>2</sup> drainage basin is the third-largest in Québec. The river has long been populated by CREE, whose hunting territories stretch along to its banks and tributaries. In 1803 the establishment of a fur-trade post at the river mouth marked the origins of the modern native settlement of Fort George. For many years the river too was called the Fort George. During the 1970s it was transformed by

the JAMES BAY PROJECT, a scheme to divert major rivers flowing into eastern James Bay for hydroelectric development. Phase one of the project involved erecting huge dams on the La Grande and flooding low-lying areas to create reservoirs. After a prolonged legal dispute, an agreement was signed with the native people who feared the destruction of their wildlife resources, and construction on the river was completed.

DANIEL FRANCIS

**La Liberté, Alfred**, composer, pianist, teacher, lecturer (b at St-Jean, Qué 10 Feb 1882; d at Montréal 7 May 1952). He was the pupil, friend and fervent disciple of the Russian composer Scriabin (who entrusted him with manuscripts of some of his works) and helped make his music better known. La Liberté opened studios in Montréal (1911) and New York (1913), and taught at the motherhouse of the Sisters of the Holy Names of Jesus and Mary in Montréal. Wilfrid PELLETIER was one of his pupils. Nicolas Medtner and Marcel Dupré dedicated works to him. Some of La Liberté's numerous harmonizations of folk songs were published in the *Recueil de chants populaires du Canada* (1925) and in the Montréal periodical *Le Passe-Temps*.

HELENE PLOUFFE

**La Jonquière, Jacques-Pierre de Taffanel de La Jonquière, Marquis de**, naval officer, governor general of New France, appointed 1746, served 1749-52 (b near Albi, France 18 Apr 1685; d at Québec 17 Mar 1752). In 1746 La Jonquière was a veteran of 49 years in the French Navy. War raged with England at the time; he served in the expedition of the Duc d'Anville in 1746 and was taken prisoner of war in 1747. He finally reached Québec in 1749. France and England were theoretically at peace during his administration, but La Jonquière's main concern was to prepare for the next armed struggle, reinforcing his troops and fortifying posts on the Great Lakes and along the frontier of Acadia. He was implicated in some of the speculations of INTENDANT François BIGOT.

ALLAN GREER

**La Malbaie**, Qué. Town, pop 4030 (1981c), inc 1958, is situated on the lower N shore of the ST LAWRENCE at the head of Murray Bay, 150 km E of Québec City. Named *malle baye* by CHAMPLAIN in 1608 for its difficult anchorage, La Malbaie is the seat and centre of Charlevoix East County. Some of New France's first rural settlements were located in the area. Two Scottish soliders, John Nairne and Malcolm Fraser, the first resident seigneurs, called it Murray Bay. They occupied grants on either side of Malbaie R until about 1815 and introduced many visitors to the area. The county's renowned resorts are among the oldest on the continent and include Manoir Richelieu in Pointe-au-Pic and hotels situated in Cap-à-l'Aigle. Tourist accommodation, outdoor recreation and market gardening are the main activities of the La Malbaie economy. A poultry abattoir and an aluminum-products plant are its largest industries.

PAULA KESTELMAN

Reading: G.M. Wrong, *A Canadian Manor and Its Seigneurs* (1926).

**La Mauricie National Park** (est 1970, 544 km<sup>2</sup>) is situated about 220 km NE of Montréal. The gently rolling Laurentian Hills form a backdrop for the PARK's billion-year-old Precambrian granite and gneiss landscape, sculpted by the action of GLACIERS during the last Ice Age. The same glaciers scraped out the numerous lakes dotting the park. La Mauricie has a mixed forest vegetation. Coniferous species typical of the boreal forest share the hillsides with deciduous species found more abundantly in the St Lawrence Lowlands. Wildlife includes moose, black bear, lynx, red fox and wolf. Some 116 bird species nest in the park. The lakes and bogs support 17 species of amphibians and reptiles. The remains of red-ochre rock paintings testify that

nomadic tribes hunted and fished here over 2000 years ago. Explorers and missionaries inhabited the area from the mid-1600s, but the lumber industry did not become established until 1825. The abandoned camps are a reminder of the colourful history of the lumberjacks and log drivers. The ST MAURICE still carries millions of logs to mills in nearby towns.

LILLIAN STEWART

**La Palme, Béatrice**, soprano, violinist, teacher (b at Beloeil, near Montréal 27 July 1878; d at Montréal 8 Jan 1921). She was the second Québec vocalist, after Emma ALBANI, to appear on the great lyrical stages. She studied violin with Frantz JEHIN-PRUME and Fernandez Arbos, and sang with Gustave Garcia and Nelly Rowe. At the suggestion of Albani, she decided to devote herself exclusively to song. She appeared before Massenet, and sang various times 1905-09 at the Opéra-Comique de Paris. She then toured with the Montréal Opera Company. After 1914 she taught in the studio run by her husband, French tenor Salvator Issaurel.

HÉLÈNE PLOUFFE

**La Peltrie, Marie-Madeleine de Gruel de**, née Chauvigny, patron of Ursuline nuns in New France (b at Alençon, France 1603; d at Québec City 18 Nov 1671). Born into the aristocracy, widowed at 22, Mme de La Peltrie was influenced by *Relations des Jésuites* to devote her life and fortune to Amerindian missions. Introduced to MARIE DE L'INCARNATION, she sailed with her and 3 Ursulines to Québec to found a monastery in 1639. Except for an 18-month absence to help found the utopian colony of VILLE-MARIE (Montréal) in 1642, she lived cloistered with the nuns she supported. When she died her body was buried in the Ursuline chapel and her heart was sent to the Jesuits.

CORNELIUS J. JAENEN

**La Prairie**, Qué, Town, pop 10 627 (1981c), inc 1909, a suburb of Montréal, is located on the S shore of the St Lawrence R. It took its name from the land called "La-Prairie-de-la-Magdeleine," occupied by the Jesuits as of 1647 and granted by the Abbé de La Ferté, de la Madeleine, a member of the Compagnie des Cent-Associés. After the CONQUEST, British merchants emigrated to La Prairie and soon controlled its economy, which was linked to river transportation. In 1836 the first Canadian railway, linking La Prairie with St-Jean, was inaugurated. After construction of the Victoria Bridge, goods trains coming from the east were diverted from the town. Around 1890 the establishment of brick-yards gave the town new vigour; one of these yards is still among the largest in Canada. In the 20th century, La Prairie's economy has undergone little growth. Other industries (electrical equipment, electronics, printing and food processing) have been established, but in the service sector, La Prairie is largely dependent upon Montréal.

SYLVIE TASCHEREAU

**La Rocque, Marguerite de**, coseigneuse of Pontpoint (place and date of b and d unknown). She was a close relative of the Sieur de ROBERVAL and accompanied him on his 1542 voyage to Canada. Shocked by Marguerite's conduct in taking a lover, Roberval set her ashore on Île des Démons, in the St Lawrence R, with her lover and a servant girl. (A more romantic version of the story has the young man put ashore and Marguerite joining him.) The young man, the servant and a child Marguerite bore all died. Marguerite managed to survive and was rescued some years later by fishermen.

JAMES MARSH

**La Salle, René-Robert Cavalier de**, would-be Jesuit, fur trader, explorer, intriguer, discoverer of the Mississippi delta (b at Rouen, France 21 Nov 1643; assassinated 19 Mar 1687 in Texas). In 1658 La Salle began his novitiate in the Society of Jesus. Mental instability caused his release from his vows in 1667. He crossed to NEW FRANCE

and 2 years later, falsely claiming to speak fluent Iroquois, he joined a Sulpician exploration expedition. Upon their encountering some Seneca he had to admit his total ignorance of their language and went off on his own. In 1673 he joined the coterie of Gov Gen FRONTENAC, with whose support he obtained letters of nobility. At the French Court, meanwhile, 2 clerics, Abbés Eusèbe Renaudot and Claude Bernou, to advance their own careers on La Salle's coattails, obtained a commission for him to explore the mid-west. In 1678 he began establishing a chain of trading posts, and then in 1682, with a small party of French and Indian guides, he descended the Mississippi to its mouth. On Apr 9 he claimed the entire region for Louis XIV.

Returning to France he fell in with a scheme of Bernou's to establish a base at the mouth of the Rio Grande for the conquest of Mexico. To make it seem more feasible to the king he falsified geography, situating the Mississippi over 600 miles W of its true course. Given command of the expedition, he displayed incompetence and paranoia. That, and his earlier duplicity, caused him to land in Feb 1685 at Matagorda B [Texas] which he claimed to be an outlet of the Mississippi. Most of the expedition's supplies having been lost and the Indians alienated, starvation loomed. In Apr 1686 La Salle set off with 20 men to seek help at Ft St-Louis-des-Illinois. Dissension in his party and at the base resulted in desertion and murder, and finally in the assassination of La Salle. The wonder is that his men had not killed him long before.

A romantic hero to 19th-century historians, La Salle was in fact a victim of his own incapacities. His one claim to fame is his descent of the Mississippi, upon which French claims to Louisiana were to be based.

W.J. ECCLES

**La Sarre**, Québec, Town, pop 8861 (1981c), inc 1949, is located in the western part of the Abitibi region, near Lac ABITIBI and the Ontario border. Founded in 1917, it was one of the first agricultural centres to be settled when the transcontinental railroad opened up the Abitibi region around 1910. The place was originally called *Wabakin*, an Algonquin expression meaning "white fish river," referring to the Rivière La Sarre which flows through the town and into Lac Abitibi. It was later named after the La Sarre regiment, which had been sent to New France in 1755 and gained fame at the Battle of the Plains of Abraham. La Sarre's agricultural and forest industries have made it one of the principal urban centres in Abitibi-Témiscaming. The town is located in the heart of rich, agricultural lands around Lac Abitibi. Its economy is largely dependent upon its sawmills and wood-processing plants. The Normik-Perron plant, one of the largest timber companies in eastern Canada, is also located here.

BENOÎT-BEAUDRY GOURD

**La Tour, Charles de Saint-Étienne de**, colonizer, trader, governor of Acadia (b at Champagne, France 1593; d at Cap de Sable, Acadia 1663). La Tour possibly reached Acadia as early as 1606, living there permanently from 1610. When Charles de BIENCOURT died in 1623, La Tour assumed leadership of the colony and 8 years later received a royal commission as lieutenant-general. Shortly afterwards he became embroiled in a dispute with governor Charles de MENOU D'AULNAY, which ended with La Tour's military defeat and exile in 1645. He returned to Acadia following d'Aulnay's death in 1650, but was captured by an English invading force in 1654. Eventually, he came to terms with his captors and returned to an Acadia under English occupation. During the short-lived Scottish occupation of NS in 1629-32, he had been given the title of knight-baronet of Scotland, and in the 1650s he allowed this title to be used to give legitimacy to the English conquest. This arrangement has frequently been termed treach-

ery and opportunism by La Tour's critics but La Tour had tenaciously defended his settlements when necessary and his commitment to Acadia can be measured by his lifelong residence there.

JOHN G. REID

**La Tour, Françoise-Marie de Saint-Étienne de**, née Jacquin, Acadian heroine (b in France 1602; d at Ft La Tour [NB] 1645). Civil war raged in Acadia in 1640 when she married Charles de Saint-Étienne de LA TOUR, one of 2 claimants to the colony's governorship. She proved to be his most courageous and resourceful supporter, travelling to France, England and Boston to secure supplies and men to fight his rival, Charles de MENOU D'AULNAY. During her husband's absence in 1645, she was in command of Ft La Tour at the mouth of the St John R when d'Aulnay attacked. Despite her stout defence, her outnumbered forces were defeated and her men were hanged by the victors.

ALLAN GREER

**La Tuque**, Qué, Town, pop 11 556 (1981c), inc 1911, is located on the Rivière ST-MAURICE, 165 km N of Trois-Rivières. Isolated in a huge forest zone in the heart of the Maurice region, the town was built at the start of the 20th century on the site of a former trading post. It owes its name to a mountain shaped like a triangular woolen hat, popularly known as a "tuque." In 1904 the Brown Corp, an American paper company, bought the falls and neighbouring lands and in 1907 built a pulp mill powered by electricity from a dam. The town born of this industry grew and became the gathering point for forest workers. The hydroelectric station, whose power was increased in 1943, is used by HYDRO-QUÉBEC. In 1954 the Canadian International Paper Co (CIP) bought the pulp mill, which it operates today. La Tuque lives primarily from FORESTRY and its derivatives: mills and construction wood. CIP makes industrial wrapping paper, cartons and bleached kraft paper.

CLAUDINE PIERRE-DESCHÈNES

**La Vérendrye, Louis-Joseph Gaultier de**, "Chevalier," explorer, fur trader, military officer (b at Île aux Vaches, New France 9 Nov 1717; d at sea 15 Nov 1761). Youngest son of Pierre Gaultier de Varennes et de LA VÉRENDRYE, Louis-Joseph is best known for having led the first European exploration across the Missouri R into the Great Plains. He joined his father's westward explorations in 1735 and helped him establish Ft Maurepas and Ft La Reine. In 1738 he accompanied his father to the Mandan country (near Bismarck, N Dakota) and in 1739 was sent N to explore Lk Winnipeg. It is likely that he reached THE PAS on the lower Saskatchewan R. In 1742 Louis-Joseph, his brother François Gaultier Du Tremblay and 2 other Frenchmen, undertook their epic 15-month journey SW of the Mandan in search of the fabled "western sea." Having reached what were probably the Big Horn Mtns (Wyoming) they returned along the Cheyenne and Bad rivers, and buried a lead plaque at Pierre (S Dakota), unearthed in 1913. After 1743 Louis-Joseph served as post commander at Chequamegon, Kaministiquia and Michipicoton.

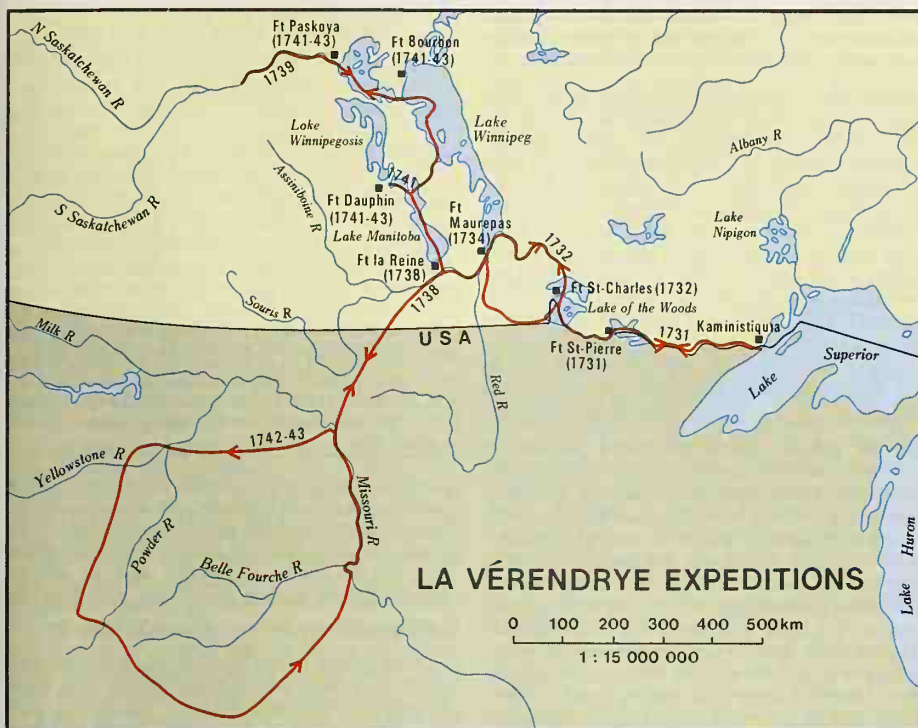

In the east, he participated in the Mohawk campaign (1748) and on Lk Champlain (1759) during the SEVEN YEARS' WAR. The most active and gifted of the 4 La Vérendrye sons, Louis-Joseph died in a shipwreck off Cape Breton.

C.E. HEIDENREICH

**La Vérendrye, Pierre Gaultier de Varennes et de**, military officer, farmer, fur trader, explorer (b at Trois-Rivières 17 Nov 1685; d at Montréal 5 Dec 1749). The expeditions organized by La Vérendrye and spearheaded by his sons were the first to open the country from Lk Superior to the lower Saskatchewan R and the Missouri R to the French fur trade.

Early in life La Vérendrye had chosen a military career. He saw action during the American

### LA VÉRENDRYE EXPEDITIONS

0 100 200 300 400 500 km  
1 : 15 000 000

phase of the WAR OF THE SPANISH SUCCESSION and, in 1708, was wounded and taken prisoner in France. Released in 1710 he returned to Canada in 1712, married and became a farmer on his wife's land on Île aux Vaches and Île Dupas in Lac St-Pierre. Tiring of this life, he decided to join his brother Jacques-René when he became commandant of the posts along the N shore of Lk Superior in 1726. After succeeding his brother as commandant in 1728, La Vérendrye began to revive the old dream of discovering a route to the hypothetical "western sea" believed by some geographers to be a large gulf in the western interior that opened to the Pacific. With permission from the minister of the marine, Maurepas, but no financial backing, La Vérendrye sought and received a 3-year monopoly on the fur trade of the area in 1731. He formed a partnership with a number of merchants and between 1731 and 1737 he was active building posts from Lk Superior to Lk Winnipeg promoting the fur trade, and gathering native information. These accounts mentioned 2 rivers leading west. La Vérendrye named them *Rivière Blanche* (Saskatchewan) and *Rivière de l'Ouest* (Missouri). Dissatisfied with La Vérendrye's progress in exploration (6 years to get to Lk Winnipeg), Maurepas demanded action. Accordingly, La Vérendrye struck SW in 1738 to the Mandan country on the Missouri R. It was the only journey of exploration in which he had not been preceded by one of his sons or his nephew Christophe Dufrost de La Jemerais. Unsure of what he had found, exhausted physically and financially, La Vérendrye returned to Ft La Reine (PORTAGE-LA-PRAIRIE) and left further exploration to his sons. In 1742-43 his sons Louis-Joseph and François Gaultier Du Tremblay journeyed SW beyond the Mandan proving that the sea did not lie in that direction. In the meantime La Vérendrye continued the development of the fur trade in the Manitoba Lks area. Expectations for a major discovery were so high that Maurepas lost patience, blaming La Vérendrye for diverting energies from exploration to trading and suggested to Governor BEAUHARNOIS that he be replaced. In 1743 La Vérendrye resigned but was reappointed in 1746. He planned the exploration of the Saskatchewan R but died before he could undertake it. C.E. HEIDENREICH

**Labatt, John**, brewer, entrepreneur (b in Westminster Twp, Middlesex County, Upper Canada 11 Dec 1838; d at London, Ont 27 Apr 1915). Third son of John Kinder LABATT, he was educated at Caradoc Academy and secondary school in London. He studied under an English brewer in Wheeling, West Virginia, 1859-64. Two years later, on his father's death, he entered into partnership with his mother to manage and then own the London Brewery, changing its name to John Labatt. Specializing in an English-type India pale ale, he marketed beyond the local region by the use of railways and bottling agencies, advertising by using prizes won at international expositions. Though he invested in other ventures, even founding an implement company to compete with Massey-Harris, none succeeded. Finally he confined himself to brewing, resisting merger first with Carling and then with O'Keefe. In 1911 he finally incorporated the firm as JOHN LABATT CORP, with a capital of \$250 000 and a capacity of some 30 000 barrels annually. ALBERT TUCKER

**Labatt, John Kinder**, farmer, brewer (b at Mountmellick, Ire 1803; d at London, Canada W 26 Oct 1866). Descended from French Huguenot exiles who had become Anglican, he emigrated from Ireland to England and thence to Upper Canada in 1833 with his wife. They settled on land of the Canada Co in Westminster Twp, Middlesex County. After 13 years Labatt sold his farm and invested as a partner in a small London brewery near the forks of the Thames R. In 1855 he became sole owner, and went on to build the business into a successful enterprise which combined the making of malt with the brewing of English types of ale. ALBERT TUCKER

**Labatt, John Sackville**, brewer (b at London, Ont 10 Mar 1880; d at Port Stanley, Ont 8 July 1952). The eldest son of John LABATT, he was educated at Trinity College School and McGill. Succeeding his father, he was president of John Labatt Ltd 1915-50. Not a dynamic man, he combined ingenuous charm with the sense to maintain family control through the years of prohibition in Ontario (1916-27) and in the US (1920-33). During these years the company made large profits from the sale of beer and whiskey across Lk Erie and the Detroit R. These

profits made him the target for kidnapping in Aug 1934, when he became the first important Canadian business figure to be kidnapped for a high ransom. The ransom was never paid, and he was released unharmed. In the subsequent trial he mistakenly identified the wrong man, who was imprisoned. The experience made Labatt apprehensive and defensive. Though maintaining his visibility as president and his cordial relations with employees, he depended on others for direction through the period of expansion in the 1930s and 1940s. ALBERT TUCKER

**Labelle, François-Xavier-Antoine**, Roman Catholic priest (b at Ste-Rose, Qué 24 Nov 1833; d at Québec C 4 Jan 1891). One of the best-known and most popular figures in Québec at the time, Curé Labelle was instrumental in promoting colonization of the Ottawa Valley. Appointed parish priest of St-Jérôme de Terrebonne in 1868, he dreamed of a francophone and Catholic reconquest of northern Canada, from Montréal to Winnipeg, through the establishment of a chain of colonies. A remarkable orator and assiduous lobbyist in Québec C and Ottawa, the huge priest devoted most of his energy to the first stage of this project: the settlement and agricultural, commercial, mining and manufacturing development of the area northwest of Montréal. An ardent supporter of building the CPR in 1872, he was sent as an envoy to Europe by the Canadian government in 1885 and the Québec government in 1890. In 1888 the Prem Honoré MERCIER, appointed him deputy minister of agriculture and colonization. Although Labelle encountered innumerable obstacles over the years and saw his most grandiose dreams crumble, he contributed directly to the establishment of some 20 parishes.

GABRIEL DUSSAULT

**Labelle, Huguette**, née Rochon, nursing teacher and administrator (b at Rockland, Ont 15 Apr 1939). One of a few women to achieve senior administrative positions with the federal government, she began her career as a general staff nurse at the Ottawa General Hospital. After changing to teaching, she became founding director of the Vanier School of Nursing in Ottawa. In 1973 she was appointed principal nursing officer with Health and Welfare Canada, nursing's highest administrative post. A past president of the Canadian Nurses' Assn, she became under secretary of state in 1980 and in 1985 deputy clerk of the Privy Council and associate secretary to the Cabinet. DANIEL FRANCIS

**Laberge, Albert**, journalist, author (b at Beauharnois, Qué 18 Feb 1871; d at Montréal 4 Apr 1960). He produced several collections of tales, short stories and critical essays and is known especially for *La Scouine*. Laberge began school at the Académie Saint-Clément in Beauharnois and later attended Collège Sainte-Marie in Montréal, which he left in 1892. In 1894 he studied law at the École de Leblond de Brumath. His first poetic tales appeared in *Le Samedi* (1895). From 1896 to 1932, he worked at *La Presse*. He helped found the École littéraire de Montréal but did not participate in it until 1909. *La Scouine* (1918), a novel of rural customs, established Laberge as a naturalist writer. Besides *La Scouine*, Laberge published 10 collections of stories, 3 essays and some literary criticism — all at his own expense. His autobiographical novel, "La memento," was unfinished. Laberge tried to describe life as he saw it and placed particular emphasis on the dark side of life. Some of his stories have become classics: "La Femme au chapeau rouge" (1947), "Les Noces d'or" (1950), "La Rouille" (1950), "Le Dernier Souper" (1952) and "Madame Pouliche" (1963). PAUL WYCZYNSKI

**Laberge, Louis**, aircraft mechanic, labour leader (b at Ste-Martine, Qué 18 Feb 1924). At age 22, after working 2 years for Canadair, Laberge be-

Under the leadership of Louis Laberge, the *Fédération des travailleurs du Québec* incorporated nationalist and independentist objectives (courtesy *Canapress*).

came shop steward of his union. Three years later (1948), he became the union's business officer and was president 1956-63 of the *Conseil des métiers et du travail de Montréal*. His election as president of the *Fédération des travailleurs du Québec* in 1964 came when it was losing ground to the *Confédération des syndicats nationaux*. Under his leadership, the FTQ, while defending the advantages of international ties and allegiance to Canada, also incorporated Québec neo-nationalist objectives. During the 1960s and 1970s, the FTQ sought greater independence from the Canadian Labour Congress, supporting the *PARTI QUÉBÉCOIS* and moving ideologically to the left. Laberge has been re-elected easily at every congress since 1964. JACQUES ROUILLARD

**LaBine, Gilbert**, prospector, mining promoter (b at Westmeath, Ont 10 Feb 1890; d at Toronto 8 June 1977). He and his brother Charlie formed *Eldorado Gold Mines* (1926) in Manitoba. When the mine petered out, he used the company's remaining funds to finance prospecting trips around Great Bear Lk, where in 1930 he discovered a valuable deposit of silver mixed with pitchblende (radium). After establishing a refinery at Port Hope, Ont, LaBine entered the world radium market in 1933. His mine was forced to close in 1940, but American demand for uranium reopened it in 1942. That year the government secretly bought control of *Eldorado*, and in 1944 the company was nationalized. LaBine remained president until 1947. A brilliant prospector and creative promoter, LaBine was less at home with routine administration. His other interests included *Gunnar Mines* and *Nesbitt-LaBine Mines*.

ROBERT BOTHWELL

**Labour Canada**, est 1900 as the Department of Labour under the Conciliation Act (now Department of Labour Act) to "aid in the prevention and settlement of trade disputes." The department's objectives are to promote and protect the rights of parties involved in work and to ensure equitable access to employment opportunities. Its functions are implemented through the Federal Mediation and Conciliation Program, which appoints conciliation officers in labour disputes; Program Developments and Central Operations Program, which produces labour-related data; the Policy Co-ordination and Liaison Program, which co-ordinates Canada's participation in the International Labour Organization; and the Administrative Policy and Services Program, responsible for the department's personnel rela-

tions. The Canada Relations Board and CANADA POST CORPORATION report to the minister. The department's 1984-85 budget was \$95 million.

**Labour Day**, honouring organized labour, is a legal holiday observed throughout Canada on the first Monday in Sept. The contribution of organized labour to Canadian society has been recognized since 1872, when parades and rallies were held in Ottawa and Toronto. The earliest American labour parades were not held until 1882 and in Europe Labour Day has been celebrated since 1889 on May 1, thereby merging traditional May Day festivities with labour celebrations. This spring date was briefly observed in Canada, but the N American need for a long weekend at the end of summer brought about the fall observation, recognized by Parliament in 1894. JOHN ROBERT COLOMBO

**Labour Force**, total of the adult population available to the LABOUR MARKET at a specific time; defined by Statistics Canada as "that portion of the civilian noninstitutional population 15 years of age and over who, during the reference week [in which the employment survey was taken], were employed or unemployed." Employed persons include all those who worked, part or full time, and those who would have been at work were it not for illness, disability, family responsibilities, bad weather, labour disputes or vacations. The unemployed include those without work but seeking work, those laid off for less than 6 months but available for work or those who have not sought work in the previous 4 weeks but have a job to go to within 4 weeks. This definition is a technical one for gathering statistical data and has been refined and modified over the years both for operational reasons and to reflect social and economic changes. For instance, earlier in this century the labour force was considered those 10 years of age and over. This changed to 14 years in 1931 and 15 years in 1951, reflecting the decline of an agriculturally based economy.

The size of the labour force is determined by the size of the adult population (potential labour force) and the proportion of that population willing and able to work (actual labour force); it is calculated from a monthly survey of 55 000 households across Canada, from which unem-

Beginning in 1872, Labour Day has continued to be celebrated with parades, such as this one in what is now Thunder Bay, Ont (courtesy *Thunder Bay Historical Museum Society*).

# The Canadian Labour Force: 1911-1981

(Source: Census of Canada, 1971; The Labour Force, June 1981)

Year	Labour Force (000s)			Female
	Total	Male		
1911	2 698	2 341		357
1921	3 143	2 658		485
1931	3 908	3 245		663
1941	4 183	3 352		831
1951	5 277	4 114		1 162
1961	6 458	4 694		1 764
1971	8 608	5 648		2 960
1981	12 178	7 235		4 688

Note: Excludes the Yukon, the NWT and, prior to 1951, Newfoundland. Excludes the unemployed who have never been employed and those on active service in 1941. Prior to 1951 the concept used was the "gainfully occupied" rather than the "labour force." Data prior to 1961 has been adjusted to eliminate all those under the age of 15.

ployment rates, employment rates, reasons for leaving the labour force, etc, are also calculated. The proportion of the adult population in the labour force is referred to as the participation rate, which varies by region and by demographic factors such as age or sex. PAUL PHILLIPS

**Labour History**, see WORKING-CLASS HISTORY.

**Labour Law** governs COLLECTIVE BARGAINING and other collective relations among employers, their unionized employees and trade unions. In Canada a distinction is commonly made between labour law narrowly defined in this way and EMPLOYMENT LAW, the law of individual employment relationships. In England, labour law describes both, and of course a close relationship exists between them. In most provinces these matters are covered in separate statutes, but the Canada Labour Code, Parliament's major labour-law enactment for industries within federal jurisdiction, also regulates labour standards and occupational health and safety.

As soon as there were unions in Canada there were labour laws (see WORKING-CLASS HISTORY), but it was not until 1944 that a full system of collective labour-relations law was established by regulation PC 1003, under federal government emergency powers. After the war it was replaced by federal and provincial legislation (see LABOUR RELATIONS), eg, *Industrial Disputes Investigation Act* 1947. These statutes, variously called labour codes, labour or industrial-relations Acts or trade-union Acts, are all based on

the idea, expressed in the preamble to Part V of the Canada Labour Code, that "the common well-being" is promoted "through the encouragement of free collective bargaining and the constructive settlement of disputes." At the heart of labour law lies the volatile ideological issue of how completely the state should regulate the use of economic power by labour and management in bargaining over wages and other terms or conditions of employment.

The Canada Labour Code and each equivalent provincial statute protects the right of employees to join the union of their choice by making it an unfair labour practice for an employer to discriminate against employees for joining a trade union or participating in any of its lawful activities. Moreover, the employer is required by law to bargain in good faith with the union chosen as bargaining agent by a majority of his employees. To protect these rights each statute provides for the appointment of a labour relations board, to which complaints of unfair labour practices may be taken and which, upon application for certification, decides whether a majority of the employees in question wish to be represented by that union. In deciding whether to certify a union the board must determine the "appropriate bargaining unit," i.e., the group of employees by whom and for whom the selection of the bargaining agent is to be made. Once the appropriate bargaining unit is determined the labour relations board must ascertain the wishes of the majority by examining dues receipts and other evidence of membership in the union or by administering a secret-ballot vote, or both. In addition to the legislation there are regulations, practices, countless decisions by labour boards and many court judgements that make up the labour law governing unfair labour practices, union certification and the duty to bargain in good faith.

Once a union has been certified it is entitled to require the employer to meet with its representatives and bargain over the terms and conditions of employment that will form the collective agreement for the employees in the bargaining unit. Either the union or the employer may apply to the minister of labour for the province (or for Canada if the industry is under federal jurisdiction) for conciliation. If no collective agreement is reached by that process, and in some provinces after a strike vote, the employees can lawfully strike. Legally, a strike is a concerted withdrawal of labour; at that same point in the process the employer can legally lock the employees out. Usually in a strike or lockout everybody loses something: the employer his profits and continuing costs, the employees their wages and the union its strike funds. It is generally believed that the fear of this mutual loss is the driving force behind collective bargaining. In most cases the union and the employer sign a collective agreement without a strike. The agreements are usually for one or 2 years and during that time any strike is illegal. When the agreement expires the process of collective bargaining, conciliation and strike or lockout starts over again.

The ordinary CRIMINAL LAW and the law of TORTS and DELICTS determine the legal limits on picketing and other union activity in support of a strike, although in some provinces special laws limiting such activities are administered by labour-relations boards. Strikes are usually lawful and peaceful and are concluded by the signing of a collective agreement, but not necessarily. If the employer wins the strike or lockout so completely that no collective agreement is reached, the employees' jobs are protected only by the unfair-labour-practice laws and individual employment law. Aside from the legal aspects of strikes, their economic, political, social and personal implications may be very important.

In public sector collective-bargaining relationships, federal or provincial law may substitute interest ARBITRATION (which is otherwise non-compulsory) for the right to strike, particularly when essential services are involved. The interest arbitrator's function is to establish the terms of the collective agreement upon which the parties have been unable to agree, usually the amount of the wage increase, but certain non-monetary conditions of employment can be equally or more contentious.

When a collective agreement is in force, it becomes, in effect, the private law of the employer, the employees and the union. Disputes over the application, interpretation or breach of the collective agreement are settled through a grievance procedure which leads finally to grievance arbitration, but arbitration is not always the final step because application may be made to the courts if arbitrators do not perform their functions properly. The enormous number of arbitration awards and court judgements relating to arbitration comprise the most practically important, if not the most newsworthy, component of labour law. For every strike there are tens of thousands of grievances that are settled by the people involved and hundreds of grievance arbitrations.

Labour law is also concerned with the relationships between unions and their members. Since collective agreements can legally make union membership mandatory, employees may need protection against their own unions. Generally employees are hired and then required by "union shop" provisions to join the certified union. In some industries, eg, longshoring and construction, because of closed-shop provisions union membership is a prerequisite to being hired. The common, or judge-made, law, the Canada Labour Code and the labour statutes of some provinces protect employees against unfair union disciplinary procedures and, in the case of the statutes, limit the reasons for which an employee can be expelled from a union or fired as a consequence.

The central issues of labour law are the central issues of our society. How much state regulation should exist? Can economic justice be defined and administered, or must the free market be given more play? Is there a breakdown in order as competing interests vie for public sympathy and support? Paradoxically, the trend in the 1980s appears to be toward greater state regulation of all aspects of the employment relationship, including the wage bargain. Labour relations is increasingly a matter of labour law.

INNIS CHRISTIE

**Labour Market** is a generalized concept denoting the interaction between the supply (number of persons available for work) and the demand (number of jobs available) and the wage rate. Labour-market analysis is complicated by the need to consider not only the short-term supply and demand for labour, but their allocation among regions, occupations and industries. In addition many institutions influence and regulate the distribution of workers.

The many labour markets in Canada are indistinctly divided and sometimes overlap. The most obvious types are geographical and occupational. The market for unskilled labour would normally be the local area, while that for highly trained professionals would be international. However, there are exceptions. Canada imports agricultural workers from Caribbean countries rather than paying wages and providing working conditions adequate to induce Canadian workers to accept jobs in this seasonal industry. By contrast, because of the surplus of trained teachers in most major urban centres, school boards rarely need recruit beyond the local area. In this sense the size of the labour market is determined by worker mobility — the

Labour Force Distribution by Region  
and by Rural-Urban: 1961-1984

Rural-Urban			
Rural	30.4	20.8	N/A
Urban	69.6	79.2	N/A

ability and willingness of workers to move from one labour market to another occupationally as well as geographically. To complicate matters further, a significant number of firms, particularly large ones, do not hire on the open market except to fill low-level positions or "entry ports." Otherwise their jobs are filled from internal labour markets through promotion. Legislation may also affect how people choose or are chosen for jobs; eg, lawyers and doctors are restricted from practising within a province unless they are certified by that province. Under current immigration laws, employers may not seek workers outside Canada unless they can demonstrate that there are no qualified personnel available in Canada. Some union agreements stipulate that employers may not hire from outside the local union. Various professions and technical jobs require certificates attesting to an individual's training, eg, a university diploma or a journeyman's certificate attained through an apprenticeship.

The total supply of labour is determined by the size of the adult population, defined statistically as all those 15 years of age and over. Only a portion of the potential LABOUR FORCE actually participates in the labour market, the main determinants of participation being age and sex, economic conditions, social institutions and attitudes. Many young people, until their mid-twenties, attend school or training institutions, and participation declines rapidly as people approach and pass the age of 60. The participation

rate of women, particularly those between the ages of 25 and 64, has traditionally been much lower than that of men, although this is changing as more married women enter the labour force. Increasing participation of WOMEN IN THE LABOUR FORCE has been attributed to changing social attitudes, declining birthrates and family size (which may be a consequence rather than a cause), higher education levels, growing availability of jobs, the need to maintain a family and economic pressures.

The total labour supply is not evenly distributed among regions or even subregions nor between rural and urban labour markets. Its size in any local labour market is affected not only by the size and participation rates of the local population and the rate of natural increase, but also by migration into or out of markets. The rate of migration into or out of a labour market varies directly with economic opportunities. The relative growth of the labour force in different regions has reflected Canada's economic development. In the early 20th century, the advent of the wheat economy brought explosive growth to the Prairies. Later, expansion was concentrated in central Canada but has recently shifted again to the West.

For practical and administrative purposes and because of geographical limits, Canada has been divided into 99 labour-market areas in the labour-force survey, but the 350-400 Canada Employment Service areas, within each of which is a Canada Employment Centre, are a better measure of the number of local labour markets, except that major urban areas have a number of centres, which may result in an overestimation of the number of markets. Occupationally, it is possible to estimate roughly the flow of new workers with certain occupational skills into the labour market by monitoring the output of education and training institutions; formal on-the-job industrial and apprenticeship programs and the occupational skills of immigrants. Such an estimation would be imprecise, however, because it does not include informally acquired skills and workplace training, which are not normally recorded, and does not record the number of workers employed at jobs that do not utilize their actual skills. According to a study for Employment and Immigration Canada, in 1976, 37.7% of university graduates and 25.3% of community-college graduates 2 years after graduation were employed in jobs that did not utilize their qualifications. There is also no accurate record of the skills lost to the country by EMIGRATION. The actual occupational distribution of the labour force is therefore more accurately determined by measuring the demand for, rather than the supply of, skills. The prolonged reliance upon immigrants for certain skills and repeated complaints of employers in periods of low unemployment of a shortage of available tradesman are evidence that the domestic supply of certain skills has fallen behind the demand.

**Market Demand for Labour** The demand for labour is indirectly determined by the demand for the goods and services that labour produces. Demand for labour has geographical and occupational dimensions, but is also affected considerably by the industrial distribution of demand and the organization of industries. Geographically, the demand for labour will not normally equal the geographical distribution of supply. Consequently, differences in both unemployment rates and in average wage levels for essentially similar jobs will often exist.

According to the industrial distribution of the employed labour force, the difference between male and female distribution is again quite pronounced, primarily because of differences in the occupational composition of the demand for labour in the various industries. The figures reveal more rapid growth in recent years of em-

#### Regional Differences in Average Wage Rates and Unemployment: 1984

(Source: Canadian Statistical Review, Sept 1984)

Region	Average Weekly Earnings (Industrial Aggregate, June 1983)	Unemployment Rate (%) (Annual Average, 1983)
Atlantic provinces	\$347.24	15.0
Québec	\$384.72	13.9
Ontario	\$386.13	10.4
Prairies British Columbia	\$402.66	9.7
Canada	\$428.98	13.8
	\$390.46	11.9

ployment in the service-producing industries, similar to the occupational distribution trend towards increasing numbers of white-collar workers.

**Wages and Unemployment** In an economist's ideal model of the labour market, wages would adjust to eliminate all unemployment and, over time, labour would move between regions, occupations and industries until real wage rates were equalized when adjusted for differences in skill, education and training, and nonmonetary costs and benefits of individual working environments. In fact, such ideal conditions do not exist and disparities in the supply and demand for labour persist, particularly between regions and between jobs with similar skills, in training requirements and working conditions and in wide differences in unemployment rates between occupations and regions. Analysis of these disparities is extremely complex, but regional disparities reflect how far the Canadian situation falls short of the equilibrium of supply and demand posited by the economic theory of labour markets.

The concept of a labour market must be considered a complex and imperfect tool for analysing the system by which the total supply of Canadian labour, including employers, managers and the self-employed, is allocated among the total of employment opportunities in the economy.

**Participation Rates**, the proportion of people within any given age/sex group that participate in the labour market, have been undergoing quite marked changes in recent years as a larger percentage of women enter the market. In 1961 less than 30% of Canadian women were in the labour market; by 1984 this had risen dramatically to 54%, mainly as a result of fewer women leaving the labour force for marriage or for raising families. Male participation, on the other hand, has remained relatively constant despite a steady decline in participation by males 65 years of age or older as a result of improved retirement provisions. The participation rate of males 15 years of age or older has remained considerably higher than the female rate despite this trend, standing at 78.8% in June 1984 compared to the female rate of 54.3%.

PAUL PHILLIPS

**Labour Mediation** is the process of trying to effect a collective agreement between a union and management (see LABOUR LAW and COLLECTIVE BARGAINING). Since 1907 Canadian labour legislation has required unions to try "conciliation" before they can legally strike (see STRIKES AND LOCKOUTS). The responsibility for labour conciliation is generally that of conciliation officers who are civil servants expert in the field, but in some provinces 3-person conciliation boards are used in difficult or major labour disputes. The term "labour mediation" is often used interchangeably with "labour conciliation," but strictly speaking, under most Canadian labour legislation, mediation is a special attempt to achieve agreement, usually after the regular conciliation process has failed, by an independent expert.

INNIS CHRISTIE

**Labour Organizations** may include all types of workers' associations, whatever their objectives, but generally the term is used synonymously with trade unions.

Until Confederation, 1867, labour associations were limited to local groups, almost always of tradesmen. Regrouping of local units began in the 1870s; in 1883 the TRADES AND LABOR CONGRESS (TLC), the first Canadian central labour body, was founded in Toronto. From 1880 to 1910, union locals were organized in great numbers, but total membership did not represent more than 10% of all paid nonagricultural workers. The membership rose to 15% around 1920 and remained at that level or below until the 1930s.

Industrial-type unions have existed in Canada under different names since the first assemblies of the KNIGHTS OF LABOR in 1881, but they really came to life in the late 1930s and early 1940s with the rise of Canadian locals of the newly formed Congress of Industrial Organizations (CIO) in the US. The major growth of labour organizations in Canada resulted from the industrial development that was spurred by the war industries and postwar boom, but also from new legislation (1944) permitting union certification and forcing employers to accept COLLECTIVE BARGAINING with employee representatives. Thus, during the 1940s, membership in labour organizations more than doubled from less than 400 000 to 1 000 000, and the level of unionization rose from 20% to 30%. The degree of unionization reached 34% in 1954, but returned to 30% in the late 1950s and beginning of the 1960s. Even in absolute numbers, union membership declined between 1959 and 1963. In the 1960s efforts were made to tap new sources of members, ie, office workers and some professional employees. In the late 1960s all Canadian jurisdictions (except Saskatchewan, which had done so in 1944) granted public-sector employees the right to organize and bargain collectively. The level of unionization consequently rose to 40% of Canadian nonagricultural paid workers by the 1980s. The percentages in Québec and BC were above the national average. Total membership was 3.5 million.

There have been 3 major periods in the history of labour organizations in Canada: the development and dominance of the trade unions from the 19th century to the early 1930s; the major upsurge of industrial unions and general labour organizations during and following WWII; and in the late 1960s and early 1970s the unionization of public-sector employees. Until the 1930s, workers had to be persuaded individually to sign up to join the union; after WWII many continued to sign up voluntarily, but others were forced to join directly because of a union shop or indirectly because of a RAND FORMULA clause in the collective agreement. The public-sector employees were brought into the labour movement by government legislation. There has been little "autonomous" growth of labour organizations since the 1960s.

Despite the common stance on solidarity, the labour movement has always been divided internally. With the reunification of the TLC and Canadian Congress of Labour in 1956, the Canadian Labour Congress became the mouthpiece of close to 80% of all union members. New divisions developed in the 1970s. Unaffiliated or independent unions grew in number and importance; in the early 1980s they accounted for 20% of all union members in Canada. A major split among CLC-affiliated unions occurred in 1982 when the building trades seceded to form the Canadian Federation of Labour (CFL), resurrecting the name of an old federation that had existed from 1902 to 1927. The split came because for many years the CLC sided with the industrial unions against the building trades on different questions, eg, regarding whether certain types of work should belong to the shop

employees or to the construction workers. Because of the fragmentation, the CLC represented, in the early 1980s, less than 60% of all union members in Canada.

Labour organizations have always struggled for at least 2 different sets of objectives. One is directly concerned with the economic interests of the members themselves, the other with social reform in general. The former, pursued through collective bargaining, has been labelled "business unionism." The latter objectives, pursued through activities such as the NINE-HOUR MOVEMENT are concerned with a variety of social reforms, from UNEMPLOYMENT INSURANCE to medicare.

Labour organizations have also engaged in political action, from ad hoc nonpartisan positions on specific issues to direct affiliation with a political party (see CLASS AND POLITICS). Representations on specific issues were made most frequently to object to, or sometimes to support, certain pieces of legislation directly concerning labour. More direct involvement has been less constant. During the first 50 years of its existence, the TLC had to follow the neutral policy decided upon by the American Federation of Labor. The Canadian Congress of Labour enjoyed more freedom, and in 1942 endorsed the Co-operative Commonwealth Federation (CCF) as "the political arm of labour." Although the formation of a labour party, either at the federal or provincial level, was occasionally discussed, it never materialized. A socialist party was formed in Québec by leftist intellectuals and some labour leaders, but it never had any real influence.

Ideological biases have marked certain labour organizations. Probably the most controversial case was the infiltration of communism into some organizations in the 1930s and the early 1940s. At the other extreme, the Roman Catholic Church, since the 1900s, was involved in the development of the Québec-based syndicates, which remained faithful to the program of Catholic social reform until 1960, when the formal links with the church were severed and the name of Canadian Catholic Confederation of Labour was changed to Confederation of National Trade Unions (CNTU). The group has remained highly militant.

Labour organizations have traditionally been suspicious of legal action. Before 1872 their very existence was illegal, and despite their recognition in 1872 labour organizations have had no efficient recourse in law, at least not until 1944 when union certification was introduced. Even then their legal status remained doubtful, as was the legal value of the collective agreements they signed. But things have changed gradually, and labour organizations are now claimants in legal suits or actions as frequently as they are defendants.

In the early 1980s labour organizations in Canada faced a number of challenges from both inside and outside their ranks. Ideological divisions still existed. Unions preoccupied with social reform had a tendency to become radical, more in the public than the private sector. Many members from private-sector unions have viewed public-sector salary increases as coming directly from the taxes they themselves have to pay. Although no split has actually occurred, serious tensions have been felt between the 2 groups, especially within the ranks of smaller central labour bodies, such as the CNTU. Another source of controversy has been the divergent views of various labour organizations regarding co-operation with management and governments. So-called "tripartism" has been a source of contention among unions. Some consider such mechanisms the only feasible and practical avenue of the future; others regard them as a downright betrayal of their members and of workers in general.

## Degree of Union Organization by Industry, 1980

(Number of Paid Workers Unionized, in Thousands)

Source: Statistics Canada Catalogue 71-202.

As serious as these internal divisions may be, other problems, eg, unsupportive government interventions, decreasing support of public opinion, tougher management and the problems raised by new technology, may be more menacing.

In the 1970s most governments introduced extended and more sophisticated employment standards, together with more constraining health and safety measures. Some have called these new standards the "collective agreement of the unorganized." These measures may either curtail or enhance the unionization of the 60% of workers still not covered by any collective agreement.

A more drastic type of government intervention has to do with the substance of collective bargaining, eg, wage controls (see WAGE AND PRICE CONTROLS) of the mid-1970s and the curtailment of bargaining rights of public-sector employees in the early 1980s. These interventions have considerably reduced the influence of labour organizations on the Canadian economy. Their bargaining power has also been curtailed by the many instances of back-to-work legislation adopted at various times — federally and in all large Canadian provinces. These laws, according to some observers and practitioners, amount to a denial of the right to strike. The support of such government intervention by many Canadians reflects the diminishing support of labour organizations among the public. Public-opinion polls in the late 1970s revealed that the Canadian people trusted management and business representatives more than labour-union spokesmen. On the other hand, employees realize that as a group, perhaps the only opportunity available to them to secure better

working conditions still lies in unionization and collective bargaining.

Another factor influencing the future of labour organizations in Canada is the uncompromising position management has taken at the bargaining table since the recession: in the early 1980s it has become commonplace for employers to try and rescind advantages already conceded. Also, the nonunion sector of private industries has been growing steadily. World competition has made employers aggressive. Labour organizations have grown at different rates around the world, and industry and consumers have taken advantage of the lower working conditions in other countries. HIGH TECHNOLOGY will also cause drastic changes in the labour movement and its organizing tactics, as well as affecting various methods of production; and diversified economic structures may further the balkanization of the labour movement rather than increasing its bonds of solidarity.

Reading: Labour Canada, *Labour Organizations* (publ annually); D. Morton, *Working People, An Illustrated History of the Canadian Labour Movement* (1984).

**Labour Party** That workers should have political representatives of their own class has been a recurrent theme in Canadian labour history. No one organization has provided a permanent home for this idea. Labour candidates and workers' parties emerged during the 1870s and 1880s, often backed by local unions. In 1874 Daniel J. O'DONOGHUE, an Ottawa printer, was elected to the Ontario legislature, and in 1888 A.T. LÉPINE, a Montréal leader of the KNIGHTS OF LABOR, was elected to Parliament. Many union leaders have preferred to advance their cause through established political parties. Also, acceptance of trade unionists and hybrid candidates by the major parties inhibited the formation of independent labour parties. Nevertheless, the TRADES AND LABOR CONGRESS showed a growing interest in political action, and in 1900 A.W. PUTTEE, a Winnipeg Labour Party founder, and Ralph SMITH, TLC president, were both elected to Parliament. While rejecting the more radical Socialist Party of Canada, the TLC in 1906 endorsed the creation of provincial labour parties based on the TLC's platform. Although there were labour candidates from all 9 provinces in the 1921 federal election, only J.S. WOODSWORTH, Winnipeg, and William IRVINE, Calgary, were elected. Labour candidates had greater success at the provincial level, winning seats in NS, Manitoba and BC in 1920, and participating in the Farmer-Labour government in Ontario (1919-23). In 1920 also, more than 100 mayors and municipal councilors were elected as labour

candidates. Nevertheless, attempts to create a cohesive Canadian Labour Party failed. Since then working-class representation has found a place in the COMMUNIST PARTY, the CO-OPERATIVE COMMONWEALTH FEDERATION and the NEW DEMOCRATIC PARTY, though labour parties have continued to appear occasionally, especially at the local level.

DAVID FRANK

**Labour Policy** includes policies concerned with relations between employers and employees and those concerned with manpower or the LABOUR MARKET. INDUSTRIAL RELATIONS in Canada were governed through the common law of conspiracy in restraint of trade until 1872 when, as a result of the jailing of striking Toronto printers in a dispute with George BROWN, PM John A. MACDONALD introduced the Trade Unions Act legalizing unions. While professing neutrality in labour matters, government has often intervened without legal basis on behalf of employers. The first direct legislative intervention in labour-management relations came with the Industrial Disputes Investigation Act (1907) prohibiting STRIKES AND LOCKOUTS in public utilities and mines until a dispute had been investigated. The Act had been prepared by Mackenzie KING who, in 1909, became the first full-time labour minister.

Jurisdiction over labour relations was transferred to the provinces in the interwar period until wartime emergency and rising labour discontent led to the passage of wartime order-in-council PC 1003 (1944), which provided for the right to organization and to engage in COLLECTIVE BARGAINING. After the war, jurisdiction over most labour relations returned to the provinces, though governments at both levels have generally adopted the principles of the wartime measures. Since that time conflicts and disagreements over industrial relations are normally referred to provincial or federal tribunals or boards for adjudication.

Labour policy has been aimed at maintaining, allocating and ensuring a plentiful supply of labour; implementing strategies to increase the mobility of labour, including relocation and retraining; job creation and enhancement; managing the unemployed; and implementing appropriate social policies. It has always reflected economic policy which has traditionally involved hinterland resource exploitation, eg, the squared-timber industry in the Maritimes and northern Québec and Ontario. A comprehensive manpower policy was introduced (excluding wartime) only in the 1960s. Most provinces have their own policies, not all of which are in harmony with those of the federal government.

The earliest Canadian labour-market policy was the attempt during the time of Jean TALON, in the late 17th century, to consolidate French control of the St Lawrence region through settlement. Although opposed by the fur-trading monopolies, efforts were made to increase population through encouragement of immigration, the shipment of young women from France, the settlement of demobilized soldiers and the promotion of natural increase through state subsidies for early marriage and large families. In the FUR TRADE, the native people provided much of the labour as suppliers and transporters, and French Canadian traders, COUREURS DE BOIS and VOYAGEURS located new resources and brought the furs to port. The HUDSON'S BAY CO developed another de facto policy. The native peoples acted as suppliers and brought the furs to the Bay until Orkney labourers began to handle transport to the interior. Métis communities developed as suppliers of PEMMICAN, guides and labourers; the English were merchants, traders and managers. The encouragement of immigration and settlement continued after the Conquest (1760), reaching its peak in the late 19th century and the first decade of the 20th. Massive numbers of immigrant workers were imported

to build the transcontinental railway. A Royal Commission (1905) revealed that 2 CPR subcontractors alone had imported some 6000 oriental labourers. The federal government and the CPR also co-operated in an ambitious recruiting campaign to populate the Prairies, first in England, Scandinavia and W Europe and then, by necessity, in Eastern and Southern Europe. Many of these immigrants supplied a labour reserve for mines, highways and factories as well as breaking land on the Prairies. The policy of importing workers was vigorously opposed by labour, which was able to persuade government to intervene, eg, in passing the Alien Labour Law (1897).

Government support of manpower development was not restricted to encouraging immigration. Soon after the Conquest, agricultural societies and exhibitions were promoted as a means of providing agricultural education. Beginning in Ontario, public education spread across much of Canada in the second half of the 19th century, one of its explicit aims being the preparation of young men for the labour market. Prior to WWII there were a number of sporadic and ad hoc incursions into labour-market policy by all levels of government, usually in response to high unemployment. Several municipal governments in the larger centres established employment exchanges or became involved in public relief work, as did provincial governments.

By 1914 "relief work" was a common response to the growing numbers of unemployed men who were given bed and meals in exchange for performing menial or odd jobs, eg, cutting firewood and sewer work. During the GREAT DEPRESSION the federal government resorted to deportation and work camps. In 1930, at the urging of provincial and municipal governments, 4000 people were deported, some 45% of whom had been receiving public assistance, several hundred of whom were ill. Relief work was reinstituted and in 1932 work camps administered by the Department of National Defence were established. Around 17 000 men were detained in 10 camps in remote areas of Alberta alone. The Conservative government under Prime Minister R.B. BENNETT did attempt unsuccessfully to introduce an unemployment insurance program in 1935, but it was not until a constitutional amendment to the BNA Act in 1940 that the federal government became directly involved in employment exchanges.

The establishment of the Unemployment Insurance Commission (UIC) and its affiliated National Employment Service (NES), which derived from the wartime registration program (1940), marks the first systematic labour-market policy. The NES was to match unemployed workers with unfilled job vacancies, using the employment centres as clearing houses. Almost immediately it began allocating labour to priority wartime work and administering the selective-service system, but in the generally buoyant economic conditions after the war it returned to its earlier placement work.

In the late 1950s, unemployment and concern with structural unemployment (unemployment created by regular cyclical crises and that created by technological change, corporate conglomeration and shifting world markets) began to rise, resulting in the Technical and Vocational Training Assistance Act (1960), a shared-cost program with the provinces for the provision of occupational training and training facilities. The central importance of the labour-exchange function of labour-market policy was consequently downgraded. In 1966 the government established the Department of Manpower and Immigration (DMI), responsible for all manpower policy except UNEMPLOYMENT INSURANCE. The Adult Occupational Training Act (1967) under the Canada Manpower Training Plan

(CMTP) emphasized training; it was federally funded but no longer included capital grants for facilities and was restricted to adults only. New provisions were also introduced promoting worker mobility. Grants were available for relocation, job seeking and travel to seasonal and temporary work.

In the 1970s the persistence of unemployment and poverty particularly among disadvantaged youth, women, natives, the handicapped and residents of areas suffering high unemployment prompted a new interest in the management of unemployment and in the containment of potential crises. Training, counselling and relocation strategies proved inadequate and governments again resorted to job creation. In the 1950s they had funded winter-works programs to combat seasonal unemployment. In the 1970s Opportunities for Youth (OFY), a summer scheme for students, Local Initiatives Program (LIP) for winter unemployment, and Local Employment Assistance Program (LEAP) to aid the hard-core unemployed were introduced under the Job Creation Branch of the DMI. In 1975 a joint scheme with the provinces was added, the Community Employment Strategy. In addition, the federal and provincial governments attempted to stimulate activity in the private sector through a variety of incentives, eg, tax considerations, loan guarantees, direct grants and subsidies and infusions of equity. The government also reunited its labour-market and immigration branch with the UIC in 1976. The new department, Employment and Immigration, supervises the Canadian Employment and Immigration Commission, which is responsible for implementing programs and the insurance scheme. Under revisions to the Unemployment Insurance Act, insurance funds also became available for job creation and for work sharing. Young Canada Works (1976) and Canada Works (1976), with other youth- and student-employment programs, replaced OFY and LIP.

In 1982-83, 4.1 million people registered for employment at the 453 Canada Employment Centres (CECs) across the country, although this figure includes those who may register several times in a year. Temporary employment offices to service student and seasonal needs also existed. Employers registered 733 000 vacancies, which included casual, temporary and seasonal labour. The CECs made 2.2 million referrals resulting in 570 000 placements, 15% of them for casual labour. There were also special placements under the Farm Labour Pool and the Outreach program for disadvantaged workers.

The labour-exchange function has been declining fairly steadily in importance since the 1950s, but training has not. In 1982-83, 86% of the 272 000 students trained were enrolled in institutional training under the National Training Program, 14% in industrial training under the General Industrial Training Program and Critical Trade Skills Training. However, most vocational training in Canada occurs in post-secondary institutions; it is heavily subsidized by government and used disproportionately by youth of relatively high-income families. Industry is not generally satisfied with the quality of vocational training, but provides little substantial training itself for those who enter the labour market instead of advancing to post-secondary education. Total federal government expenditure on training in 1982-83 was \$926 million, putting Canada ahead of most industrialized nations in the proportion of its gross national product devoted to occupational training. Mobility programs have played a considerably smaller role in manpower policy because high rates of unemployment are now country-wide; 1982-83 expenditures on worker relocation, grants for job seekers and for seasonal and agricultural work totalled \$8.1 million. Immigration, which for most of Canada's history was a

significant labour-market policy tool, is now less important, although immigrants still fill a disproportionate number of job openings in certain skilled trades.

PAUL PHILLIPS

**Labour Relations** refers to the relations between employers and employees. They are affected by a number of factors, including labour organizations, COLLECTIVE BARGAINING, LABOUR MARKET, government policy, the structure of the economy, LABOUR LAW and technological change. Because labour relations are commonly associated with unions, it is significant that in Canada, until the 1970s, a substantial number of unions and union members belonged to American-based industrial and construction unions. American employers are also influential — more than 4000 branch plants and subsidiaries of American corporations exist in Canada. During this century, labour relations in Canada and the US have been remarkably similar; a 1959 survey of 15 countries over more than 15 years described labour relations in the two countries as "a single system."

The outstanding feature of N American industrial relations, according to some observers, has been the unusually high incidence of STRIKES. Studies have also disclosed that the incidence of violence and illegality arising out of labour disputes has been much higher in the US and Canada than in other comparably industrialized countries — characteristics attributed to a few political and institutional factors that Canada, until the 1960s, shared with the US. They included the relatively recent development of large-scale "mass unionization," a considerable residue of tension and mutual hostility arising from the widespread, protracted and frequently violent opposition of employers to unions; intense organizational and leadership rivalries among unions; the highly decentralized structure of labour organization and collective bargaining in most industries; and the absence of a strong or dominant labour party capable of gaining power at the national level. Despite these broad similarities, however, labour relations in Canada have differed from those in the US in some important respects, which appear to have widened in recent years. For example, until the late 1950s the incidence of strikes in Canada was well below that of the US. Canada was less industrialized, with a smaller proportion of unionized workers. Until WWII only 25% of Canada's labour force was employed in industry and 50% in agriculture, but by 1951 only 10% were employed on farms, while 33% were involved in industry — 30% of whom were unionized. In the 1960s and 1970s the trade-union movement mushroomed dramatically once again with the growth of public-sector unions. By the early 1980s, 39% of non-agricultural workers in Canada were unionized.

The relative strength of labour in Canada was also affected by cultural and ethnic divisions among workers, particularly the formidable gap between Francophones and Anglophones, which was exemplified by the formation of the separate francophone Confederation of National Trade Unions. Pronounced geographic and political divisions have also precluded effective unionization and often set the interests of the workers in one region against those in another. For example, the interests of packinghouse workers in the food-processing industry in eastern Canada have often conflicted with those of their western counterparts, particularly regarding transportation, international trade and government subsidies. Politically, the labour movement has been decentralized since the turn of the century, when the Trades and Labor Congress, backed by the American Federation of Labor, evicted the militant KNIGHTS OF LABOR. Conflicts over opposing ideologies, programs and organizational objectives have continued to

rage. Temporary alliances of one decade would give way to open hostility in the next. In the 1960s several unions now affiliated with the Confederation of Canadian Unions broke away from traditional American-supported organizations in a drive for national autonomy, although earlier the nationally based Canadian Seamen's Union had been overcome by the American-based Seafarer's International Union. Government intervention is another factor increasingly influencing labour relations. Since W.L. Mackenzie KING, as federal deputy minister, introduced the Industrial Disputes Investigation Act of 1907 to curb western Canada's militant coal-mine workers, governments in Canada have acted to maintain "law and order" and to protect employers' property and latitude of action rather than to protect the rights of employees to organize and bargain collectively. This tendency is evident in a history of expeditious resort to compulsory intervention, such as back-to-work legislation and binding arbitration, to settle disputes.

As far as employers are concerned, the Canadian situation differs from the American in that employers in most major industries in Canada have been relatively larger and more concentrated in their respective labour and product markets, and in earlier decades enjoyed relatively stronger bargaining power vis-à-vis organized labour. Where they have operated as subsidiaries or "branch plants," their strength has increased because their freedom to invest selectively and to relocate physically have provided them with a definite advantage in their labour relations.

Labour relations changed dramatically during and after WWII, and Canadian and American positions were, in some respects, reversed. Union organization and membership grew more rapidly in Canada, and for the past several years union members have comprised a considerably larger percentage of the labour force. Since the 1960s the incidence of industrial conflict has also risen far more rapidly in Canada, and has remained at a considerably higher level for almost 20 years. A rapidly growing but highly erratic and irregular wave of industrial disputes developed in Canada from the mid-1960s to the mid-1980s, reaching record peaks in the numbers of strikes, workers involved and person-days lost in 1965, 1966, 1968, 1972, 1974, 1975 and 1976 (the all time high) and 1980 and 1981. During the past 2 decades Canada shared with Italy the rather dubious distinction of having the world's highest annual average time loss per 1000 workers, with the US a distant third. Illegality and violence arising from labour disputes also increased in Canada during this period, particularly in Ontario and Québec, in a pattern reminiscent of the 1930s and earlier. As a result, and in response as well to the emergence of powerful public-sector unions, governments in Canada severely restricted organized labour. Strikes were banned in essential services, and in 1975 the federal government imposed a mandatory incomes policy administered by an Anti-Inflation Board. "Six and five" legislation followed in early 1980s, and various provincial governments imposed wage-guide-line policies.

Labour relations have also been affected by the structure of the Canadian economy. During the 1960s and 1970s Canada's LABOUR FORCE grew more rapidly than that of any other industrial country and was accompanied by and dependent upon an unusually high rate of capital investment, particularly by American corporations. Postwar economic expansion, however, produced an economy heavily reliant upon primary-resource extraction and export, susceptible to "boom-and-bust" cycles. Canadian governments, owing partly to the inability of a highly decentralized federal system of govern-

ment and partly to tradition, have not generally introduced measures to promote long-term stability or planning in the economy. Instability, inflation and unemployment have generated corresponding instability in labour relations. The concentration of strikes in cyclically sensitive industries seems to indicate a close relationship between economic instability and industrial conflict. Over the past 2 decades, only 6 industries, employing less than 15% of the labour force, accounted for more than 50% of all person-days lost and for more than 66% of the unusually large and protracted strikes. In order of percentage of time loss from strikes, they were construction, mining and smelting (particularly nickel), and (in manufacturing) transportation equipment (mainly automobiles), primary metals (mainly iron and steel) and wood products (mainly lumber and pulp and paper).

A by-product of Canada's rapid but unstable pattern of economic growth and one particularly provocative of industrial conflict has been the problem of wage disparities. During periods of rapid expansion, greater disparities have tended to develop more within the general wage structure of Canada than within that of other industrial countries, primarily because of widely unequal rates of growth and profitability among different industries and regions and because of wide differences in bargaining power among unions. In Canada's very decentralized labour movement, collective bargaining is highly localized and competitive. Three-quarters or more of all collective agreements are negotiated with individual employers, and multi-employer bargaining is usually local or district wide. The resulting differences in wages and fringe benefits have made it difficult for unions to achieve their general goal of parity among workers and have tended to provoke widespread conflict.

The problem of unequal growth during the 1960s and early 1970s particularly affected the public sector, partly because of growing intervention of government at all levels in disputes and strike settlement procedures in other industries under the aegis of postwar labour legislation. The (implied) responsibility of governments for the gains in wages and benefits in the private sector and the wage lag in various public and publicly controlled sectors has resulted in the formation of militant unions, the enactment of new legislation providing for union certification and collective bargaining, and numerous large and protracted strikes among public-service workers. The onset of a severe recession and serious unemployment in the 1980s greatly weakened the bargaining power of unions. In the period 1983-84 strikes generally reached the lowest levels since the early 1960s.

**Labrador**, mainland section of the province of NEWFOUNDLAND, lies almost entirely N of the Island, 20 km across the Strait of Belle Isle, and some 800 km S of Greenland. The long (1125 km) Labrador coast is indented by innumerable fjords, bays and inlets, notably HAMILTON INLET (Lk MELVILLE), which penetrates the rocky interior for over 200 km. Geologically, Labrador is part of the Canadian SHIELD, a massive granite plateau rising some 300 m from sea level to the interior watershed. Most of coastal and northern Labrador is bare rock and barren tundra, but river valleys S from Lk Melville and the deep interior contain valuable forest reserves. The TORNGAT MTS of the far N rise in splendid isolation — the highest peaks E of the Rockies. Though in the same latitude as the British Isles, Labrador's forbidding terrain and extreme climate support only sparse settlement. The Labrador Current, sweeping S from arctic waters, chills the coast and clogs harbours with ice from Dec to May.

Cape Mugford, Labrador. Labrador contains some of the most rugged and splendidly isolated scenery in N America (photo by John deVisser).

The primary settlements in 1983 were Cartwright (658), Rigolet (271), Makkovik (347), Postville (223), Hopedale (425) and NAIN (938) S to N along the coast; North West River (515) and HAPPY VALLEY - GOOSE BAY (7103) on Lk Melville; and Churchill Falls (936), Wabush (3155) and LABRADOR CITY (11 538) in the interior.

The Labrador coast has been occupied for a very long time. Evidence of Maritime Archaic Indian occupation, dating back 8000 years, has been found at L'ANSE AMOUR BURIAL SITE in the S. Labrador was likely the "Markland" of the Viking sagas, which described the anomalous silvery beaches near Groswater Bay. BASQUE fishermen established a great whale fishery, centered at RED BAY on the NE coast of the Str of Belle Isle, even before Jacques CARTIER explored the coast in the early 16th century. Maritime Archaic culture was displaced about 4000 years ago by southward expansion of Paleoeskimos from the Arctic, who were in turn displaced by the ancestors of the MONTAGNAIS-NASKAPI and Inuit. Portuguese explorers were active along the coast and the name "Labrador," which was first applied to the coast of Greenland, likely derives from the Portuguese explorer João FERNANDES, a *lavrador* or "landholder" in the Azores. Early European occupation was entirely focused on the coastal fishery and was fiercely opposed by the Inuit to the N and the Naskapi in the S. Control of the coast was contested by the British and French, but control by either was tenuous. In the early 19th century, thousands of New England fishermen and whalers descended on the coast annually.

Settlement was haphazard, begun by a few fishermen who stayed on each winter (called LIVEYERS), while thousands of "stationers" (those who fished from land bases in summer) and "floaters" (those who used schooners as their bases) came and went with the fishing season. George CARTWRIGHT established a business at Cape Charles in 1770 and persevered for 16 years. The Moravians set up a mission at Nain in 1771 that has been in continuous operation since. The HBC established its first post at Rigolet in 1834, another at North West River in 1836 and a third at Cartwright. HBC employee John MCLEAN explored the interior in 1839, but the fur trade remained marginal in Labrador. In the 1890s geologist A.P. LOW reported the massive iron-ore deposits of the interior and in 1937

and 1939 Finnish geographer V.A. Tanner compiled the most detailed designation of Labrador to date. The small coastal settlements of Labrador were among the most isolated, deprived and neglected in the world. With the exception of the Moravian mission at Nain, Labrador was without medical care, schools or adequate housing until the heroic efforts of Wilfred GRENFELL in the 1890s. Grenfell and his associates established hospitals, schools, orphanages and co-ops — financed by fund-raising tours around the world.

The break with the traditional dependence on the fishery alone came during WWII when the airport at Goose Bay was built as a staging point for FERRY COMMAND. It later continued as a USAF base and by the early 1950s was the second-busiest airport in the world. Happy Valley grew up nearby. Meanwhile the completion of the monumental Québec North Shore and Labrador Ry (1954) opened the vast iron reserves of the interior, and BRINCO tapped the huge power of the Churchill R at CHURCHILL FALLS — the second-largest hydroelectric development in Canada.

THE LABRADOR BOUNDARY DISPUTE was one of the most celebrated legal cases in British colonial history. Though Newfoundland's claim to the watershed of all rivers flowing into the Atlantic Ocean is recognized in the Constitution Act, many Quebecers still consider Labrador part of "Nouvelle-Québec."

JAMES MARSH

**Labrador Boundary Dispute** The territorial limit between Québec and Newfoundland in the LABRADOR peninsula, at over 3500 km long, is the longest interprovincial boundary. It has not yet been surveyed and marked on the ground. A dispute concerning the ownership of Labrador arose in 1902 when the Québec government protested NEWFOUNDLAND's issuing a timber licence on the CHURCHILL R. Two years later Québec asked Ottawa to submit the controversy to the JUDICIAL COMMITTEE OF THE PRIVY COUNCIL in London. This reference to an outside impartial body was appropriate, since Canada and Newfoundland were separate members of the British Empire and neither could have settled the issue through its own courts. Only Canada and Newfoundland were admitted as parties to the case, and Québec had no direct representation.

The dispute dragged on, and in 1922 Canada and Newfoundland agreed to ask the Privy Council to decide only "the location and definition of the boundary as between Canada and Newfoundland in the Labrador Peninsula under the statutes, orders-in-council and procla-

mations." The panel of 5 judges was confined to this question; it could not create a new boundary or suggest a territorial compromise. The main point in the case was the meaning of "coast," for that was how Labrador was legally described. Newfoundland traced its claim of ownership to the commission issued to Gov Thomas Graves in 1763, which extended his jurisdiction to the "Coasts of Labrador." Canada argued that a royal proclamation later that year merely placed the territory under the governor's "care and inspection" for fishing purposes. In 1774, it was pointed out, Labrador was transferred by statute to Québec, but in 1809 it was reannexed to Newfoundland; in 1825 the coast of Labrador W of a line extending due N from the bay of Blanc-Sablon to the 52nd parallel of latitude was once again restored to Lower Canada [Québec].

The judicial committee refused to accept Canada's contention that "coast" meant a strip of land one mile (1.6 km) wide along the seashore. It found that the evidence supported Newfoundland's inland claim as far as the watershed line or height of land. The court's decision in Mar 1927 settled the boundary in its present location. When Newfoundland joined Confederation in 1949, its boundary in Labrador was confirmed in the Terms of Union (now the Newfoundland Act), enshrined in the CONSTITUTION ACT, 1982. A 1971 Québec royal commission decided that Québec's case against the 1927 boundary was not worth pursuing; nevertheless, in the early 1980s the province did not consider the issue to be settled.

ALEC C. MCEWEN  
*Reading: Alec C. McEwen, "The Labrador Boundary," Canadian Surveyor, vol 36, no 2 (June 1982). F.W. Rowe, A History of Newfoundland and Labrador (1980).*

**Labrador City**, Nfld, Town, pop 11 583 (1981c), inc 1961, is located in western Labrador near the Québec border and the base of the Wapussakatoo Mts, adjacent to one of the richest iron-ore formations in Canada. The ore was discovered in 1892, and the mineral rights were acquired in 1936 by the Iron Ore Co of Canada (IOC). In 1958 formal mining operations began at Carol and Smallwood Mines, and by 1959 construction of a planned townsite had begun by the shore of Carol Lk. In 1960 a railway linked Carol Lk to Québec. When incorporated in 1961, Carol Lk was renamed Labrador City. By 1968 the town, with a population of nearly 8500, was the largest in Labrador. Constructed by IOC, by 1960 it had an airstrip, a hospital and numerous churches and schools. Because Labrador City's economic fortunes are tied to those of world markets for iron ore, employment has fluctuated accordingly.

J.E.M. PITT AND R.D. PITT

**Labrador Highlands** extend 400 km S from Cape Chidley, at the northern tip of LABRADOR, almost to NAIN. The uninhabited highlands contain 3 mountain groups: the TORNGAT, Kaumajet (Inuktitut, "shining top") and Kiglapait ("sawtooth"). The highest summits are Mt Caubvick (1738 m) in the Torngat, Brave Mt (1220 m) in the Kaumajet and Man O'War Peak (1050 m), which rises just S of the main range of the Kiglapait. Formed of ancient Precambrian rocks and heavily glaciated in recent times, the mountains support more than 70 small glaciers, the southernmost in eastern N America. Bold cliffs fall sheer to the LABRADOR SEA or the narrow water of FJORDS, while the valleys support only arctic vegetation and wildlife.

R.J. ROGERSON

**Labrador Inuit**, who sometimes refer to themselves as Labradorirmiut, have occupied most of the Atlantic coast of LABRADOR during the historic period. In early historic times they ranged even farther to the south, crossing occasionally to northern Newfoundland and travelling far into the Gulf of St Lawrence. However, the nature and extent of former Inuit presence in southern Labrador is uncertain. The Inuit ap-

pear to have made contact with European explorers, fishermen and whalers in the south of Labrador by the late 16th century. In spite of frequent misunderstanding and bloodshed during the first few centuries of contact, an intermittent trade was already well established when Britain acquired Labrador in 1763. The Inuit had obtained a wide variety of European goods, including wooden sailing boats, in exchange for their baleen (horny plates in the jaws of certain whales), sealskins and blubber. Until they obtained firearms in the 1780s, the Labrador Inuit tried to avoid contact with their sometimes hostile Indian neighbours, the MONTAGNAIS - NASKAPI, who had been armed earlier by French fur traders.

The traditional Labrador Inuit, who numbered about 1500 during the late 18th century, derived most of their livelihood from the sea. While coastal waters remained unfrozen (mid-June to mid-December), the men hunted walrus, beluga and seal from their KAYAKS. In late autumn they hunted the giant Greenland whale from their open skin-covered UMIKs. During winter they hunted seals. Large winter houses, made of sod, stone, timber and whalebones, were usually shared by several families.

Most Labrador Inuit now live in NAIN, Hope-dale and Makkovik, settlements which were founded by Moravian missionaries in 1771, 1784 and 1896. Since WWII some have moved to the inland communities of Happy Valley and North West River. Those who had migrated even farther to the south in earlier times were decimated by various contagious diseases, and their survivors have been largely absorbed through intermarriage with European settlers. As a result of government relocation projects in the 1950s there are no longer any permanent Inuit settlements on the coast N of Nain. Nevertheless, many people still travel north from Nain each summer to fish for arctic char, one of the main sources of earned income for the modern Labrador Inuit. See NATIVE PEOPLE: ARCTIC.

J. GARTH TAYLOR

Reading: Carol Brice-Bennett, ed, *Our Footprints Are Every-where: Inuit Land Use and Occupancy in Labrador* (1977).

**Labrador Sea** is the body of water between Greenland and the coast of Labrador. It is 3400 m deep and 1000 km wide where it joins the N Atlantic and shallows to less than 700 m where DAVIS STR separates it from BAFFIN BAY. The NW Atlantic Mid-Ocean Channel, a 100-200 m deep channel some 1.5-2.5 km wide in the seafloor, follows the axis of the Labrador Sea, some 3800 km from the mouth of HUDSON STR, southward into the N Atlantic. The sea's circulation is anti-clockwise. At the surface the West Greenland Current transports warmer, more saline water northward, while the Labrador Current transports cold, less saline water southward. At a depth of 2500-3000 m the dense outflow from the Greenland Sea flows around the basin and then southward as a bottom boundary current. A water mass, the Labrador Sea water, is formed in the western Labrador Sea by wintertime cooling and spreads into the NW Atlantic at depths of 1500-2000 m.

The northern and western Labrador Sea is ice-covered from Dec through June. This pack ice is the whelping and breeding area for harp and hooded seals in early spring. The Labrador and Greenland banks are commercially fished for cod. As well, a shrimp fishery has developed in recent years. The Labrador Sea is a feeding ground for ATLANTIC SALMON and several species of marine mammals. Icebergs, carried southward in the Labrador Current, are an impediment to the exploitation of recently discovered natural-gas fields off Labrador.

ALLYN CLARKE AND KEN DRINKWATER

**Labrador Tea** (*Ledum groenlandicum* and *Ledum palustre*), also called Hudson's Bay or Indian tea,

shrubs of the heath family (Ericaceae). They grow up to 2 m high in wet, acidic soil throughout much of northern Canada and in peat bogs to the south. Some 4 species of genus *Ledum* exist worldwide, 3 in Canada. The third, *L. glandulosum* (trapper's tea), should not be used for tea. Labrador tea leaves are elliptical, up to 6 cm long, with revolute (backward-rolled) margins and dense, whitish to rust-coloured fuzz on the lower surfaces. The flowers are white and clustered. The aromatic young twigs, leaves and flowers have been used, fresh or dried, as tea by native peoples and settlers. "Tea" should be weak; a small handful of leaves steeped in boiling water for 5 min yields a pleasant beverage. See PLANTS, NATIVE USES.

NANCY J. TURNER

**Labrosse, Paul-Raymond Jourdain, dit,** joiner-sculptor, organ builder (b at Montréal 20 Sept 1697; d there 8 June 1769). He was hired in 1721 to repair an old organ and build a new 7-stop instrument for Notre-Dame in Québec. The leading Montréal joiner-sculptor from 1730 to 1760, he trained at least 3 apprentices. He sometimes worked as a joiner, but was usually employed as a wood sculptor by a dozen Montréal-area parishes, creating for them retables, tabernacles and statues as well as various liturgical accessories. Few of his works remain. One is the richly ornamented tabernacle (1741) originally in the old Longueuil, Qué, church, now in the National Gallery of Canada. There is also the vigorous *Christ* (1741) in Notre-Dame, Montréal, and some small baroque-style statues.

JOHN R. PORTER

**Lac La Ronge,** 1414 km<sup>2</sup>, elev 364 m, is located in the rugged, sparsely populated SHIELD country of central Saskatchewan, 235 km N of Prince Albert. About 58 km long and studded with many islands, it drains NE via the Rapid R into the CHURCHILL R. When the first Europeans arrived, the area was inhabited by Cree. Peter POND built a fur-trade post in 1781; the village of La Ronge on the W shore is one of the oldest settlements in Saskatchewan. Today the area is a tourist centre catering to campers, fishermen and hunters. The name probably comes from the French verb *ronger*, "to gnaw," referring to the local beaver population.

DANIEL FRANCIS

**Lac-Mégantic,** Qué, Town, pop 6119 (1981c), inc 1912, is located on the NE shore of Lac MÉGANTIC, 85 km E of SHERBROOKE. On nearby Mont Mégantic (1100 m) are located the oratory of St-Joseph de la Montagne, a pilgrimage site built in 1855, and an astronomical OBSERVATORY. The observatory, with its 1.6 m diameter telescope, is shared by Université de Montréal and Laval. The Rivière CHAUDIÈRE starts in Lac-Mégantic, the name of which in Abenaki means "the place of fish." The river was a traditional Indian route. The first settlers (SCOTS), arrived in Lac-Mégantic in the mid-19th century. After 1895 a branch of the Quebec-Central rail line linked Lac-Mégantic to LÉVIS. Today the city, a commercial and industrial crossroads and tourist site, is a service centre for the surrounding rural region and features the large Baie des Sables recreational complex. The Manesokanik museum traces local history. CLAUDE PIERRE-DESCHÈNES

**Lac Ste Anne,** Alta, UP, pop 34 (1981c), is located 75 km NW of Edmonton on the lake of the same name. The Rev Jean-Baptiste Thibault, an Oblate priest, named the lake for his patron, Ste Anne de Beaupré, and the shrine became a PILGRIMAGE destination in 1889, when rain fell following prayers. Thousands still visit the shrine on the feast day of Ste Anne (July 26), and bathe in the lake, which is believed to have curative powers.

ERIC J. HOLMGREN

**Lacewing,** common name for small, fragile INSECTS of the 2 most common families (Chrysopidae, green lacewings; Hemerobiidae, brown

lacewings) of order Neuroptera. Most green lacewings have golden or copper eyes and are found on foliage. They are poor, erratic flyers and strongly attracted to light. Some 25 species occur in Canada, the most common (*Chrysopa carnea* and *C. oculata*) in all provinces and territories. Eggs are laid on foliage or other objects, singly or in groups of 20 or more. Larvae are voracious predators, seizing small insects or arachnids with pincerlike jaws. Thus the possibility of rearing and releasing large numbers for biological control of INSECT PESTS has been studied. When fully grown, larvae spin cocoons, usually in secluded places. Brown lacewings resemble greens but are generally smaller and less common. They frequent wooded areas. About 23 species are found in Canada; the most common, *Hemerobius humulinus*, occurs across country. Beaded lacewing (family Berothidae) and giant lacewing (Polystoechotidae) have one species each in Canada: *Homomyia occidentalis* (southern BC), and *Polystaechotes punctatus* (BC, Alberta, Ontario and Québec).

J.E.H. MARTIN

**Lachance, Louis,** priest, philosopher (b at St-Joachim de Montmorency, Qué 18 Feb 1899; d at Montréal 28 Oct 1963). His *Nationalisme et religion* (1936) provided the base for a nationalism based on reason — distinct from that advocated by Lionel Groulx which was based primarily on feeling. His pioneering *Philosophie du langage* (1943) helped give Thomism a contemporary relevance and direction. Among philosophers, he is best known for *Le Droit et les droits de l'homme* (1959) which develops the theory that human rights are meaningless if seen merely in the context of the individual and his desires. They depend upon the community and must be related to the common good and to basic social responsibilities.

Lachance studied at the Petit Séminaire de Québec and then joined the Dominican order at St-Hyacinthe, the traditional stronghold of Québec Thomism. He studied and taught in Ottawa until 1936, apart from the years 1929-31 when he studied in Rome. In 1936 he returned to Rome to teach at Angelicum U. His career there was cut short by WWII and he returned to Canada as a priest, and in 1943 moved to U de M as professor of philosophy.

LESLIE ARMOUR

**Lachine,** Qué, City, pop 37 521 (1981c), inc 1907, is located on the S bank of Montréal I and forms part of the MONTRÉAL urban community. In 1669 Cavelier de LA SALLE travelled inland in search of China, whence the derisive nickname Lachine applied to his land grant. In 1689 it was the site of a battle between the French and IROQUOIS in which the Indians killed 24 settlers and took more than 60 prisoners (see LACHINE RAID). Lachine remained the nerve centre in the Canadian FUR TRADE for several decades, and the HBC maintained a trading post there for many years. The development of the Lachine Canal in the 19th century, the establishment of the MONTREAL AND LACHINE RAILROAD in 1847, and the expansion of the trucking businesses in the 20th century gave Lachine a major role in the trade network extending to SW Canada and the US. The town's industrialization, one of the most rapid in Canada, attracted a large working-class population. Today, its economy is dominated by steel plants and by the electrical-appliance and electronics industries.

SYLVIE TASCHEREAU

**Lachine Raid** French westward expansion in the 1670s and 1680s cut off the IROQUOIS Confederacy from new sources of beaver and threatened New York's fur trade. As long as France and England were at peace, little could be done to impede French traders, but after the Glorious Revolution of 1688-89, New York authorities could encourage the Iroquois on the warpath. On the morning of 5 Aug 1689 some 1500 warriors fell on the little settlement of Lachine just W of Montréal, killing or capturing nearly 100

settlers. The ferocity of this attack terrorized the inhabitants of the Montréal region, who were to suffer many more such raids in the following decade. See IROQUOIS WARS. JOHN A. DICKINSON

**Lachute**, Qué. City, pop 11 729 (1981c), inc 1885, is located on the Rivière du Nord where the first Laurentian foothills meet the plain of Montréal. Having developed through its close connection with the paper and textile industries, its economy is now increasingly diversified. The first settlers, who arrived in 1789, came from Jericho, Vermont. Early in the 19th century, population grew so rapidly that the settlers needed a flour mill to grind their grain, and built one at the foot of a rapids that stretched across the Rivière du Nord at a spot subsequently called "Lachute." GILLES BOILEAU

**Lacombe, Albert**, Oblate priest, missionary (b at St-Sulpice, LC 28 Feb 1827; d at Midnapore, near Calgary 16 Dec 1916). A successful missionary to the CREE and BLACKFOOT, Lacombe used his trace of Indian blood to gain an entry to the hearts and minds of the Fort Edmonton Métis and Indians in 1852 when he came to serve them. In due course, he either founded or ministered at the Alberta missions of Lac Ste Anne, St Albert (1861) and St-Paul-des-Cris (Brosseau) 1865. After 7 years as a travelling missionary among the Indians, he moved to Manitoba in 1872 and took over St Mary's parish, Winnipeg. On his return to Alberta in 1882, he became priest of Calgary's St Mary's parish and also served in southern Alberta at Fort Macleod and from his "Hermitage" at Pincher Creek. In 1883, when the CPR came into conflict with the Blackfoot, who threatened to block the route across the reserve, Father Lacombe successfully negotiated on behalf of the railway with Chief CROWFOOT. In 1894 Lacombe was principal of an industrial school at Midnapore; he initiated the colony of St-Paul-des-Métis in 1895, and in 1909 he started the Midnapore Old Folks' Home. As the church's spokesman for the prairies, he played a significant part in influencing government policy, as well as helping settle the prairies. His love for the native people never faded. Called by the Indians "The Man of the Good Heart," he wrote a Cree grammar and a dictionary. J.G. MACGREGOR

Reading: J.W. Grant, *Moon of Wintertime* (1984).

**Lacroix, Richard**, printmaker, painter, sculptor (b at Montréal 14 July 1939). He learned etching, lithography, silk-screen and block printing in Montréal with Albert DUMOUCHEL. Under an Arts Council of Canada grant (1961) he went to Paris, where he studied with Stanley Hayter at Atelier 17 and learned that studio's method of multicolour printing from one plate, a technique unknown in Canada. Shortly after his return to Montréal in 1964, Lacroix set up his own workshop and quickly drew other artists eager to learn the new techniques. Committed to reaching the widest audience possible, he established La Guilde graphique (1966) to generate public interest by distributing prints. In 1964 he and several other artists had formed Fusion des arts in an attempt to reflect the concerns of Quebec society through a Québec popular art. Fusion's activities were later politically scrutinized, resulting in police raids on its offices and the loss of a group commission for Expo 67. Lacroix himself provided a kinetic sculpture and produced a show for this event.

Lacroix's prints are often highly organized geometrics or carefully orchestrated abstractions of great technical expertise. By pioneering colour printing in intaglio, working to establish the print as an "original" work of art and attempting to make the public more aware of the print medium, he has greatly increased respect for Canadian prints. See PRINTMAKING.

CAROL ANN POPE

**Lacrosse** originated among the Algonquin tribes of the St Lawrence Valley in eastern Canada. For this reason, it is often described as the oldest organized sport in N America. The game has 2 forms. Field lacrosse is played outdoors on a ground that is 110 by 64 m, by teams of 10 players each. A hard rubber ball is passed and thrown between players by means of large, curved sticks with a pocket of netting or webbing. The object is to score points by tossing the ball into the opposing team's goal. The field game is played in England, Australia and New Zealand and by colleges along the eastern seaboard of the US. Although this form is Canadian in origin, box lacrosse or "boxla" is more commonly played in Canada. In the latter form 7-man teams play on an indoor surface the size of a standard hockey arena.

Historians have recorded that the French missionary Jean de BRÉBEUF first saw the game in 1683 and called it *la crosse* because the sticks reminded him of a bishop's crozier or *crosse*. The Indian term for the original game was *bag-gataway*, derived from the Ojibwa word *pagaado-wewin* or "ball." Thus, white men named the game from the stick used, while the Indians named it after the ball. Lacrosse had an important role in Indian society, as it held religious significance and functioned in the training of young warriors. Since wagers were frequently taken on the outcome of matches between tribes, it also could play an economic role, raising or lowering a tribe's fortunes. Indian baggataway was a rough melee. Matches could last 2 or 3 days and goals, marked by bushes or trees, could be 450 m or more apart. The arrival of French and later English fur traders and the consequent opening of trade routes throughout N America may have helped spread the game to other Indian nations. Perhaps the most famous incident in the game's history occurred in 1763. Ojibwa used the game as a cover to gain entry to Ft Michilimackinac and massacred the English soldiers camped inside. In 1834 a team of Caughnawaga first demonstrated the game before a white audience on the St Pierre racecourse in Montréal. The first all-white lacrosse team was formed in 1842 as part of the Montreal Olympic Athletic Club. Next year, the first game between whites and Indians took place. Until 1867 lacrosse's growth was slow and uneven and largely confined to Montréal and the towns of the Ottawa Valley.

Box lacrosse, in which 7-man teams play indoors on a surface the size of a hockey arena, is the form of lacrosse now most commonly played in Canada (photo by Toby Rankin/Masterfile).

One of the game's primary exponents at this time was George BEERS, who in 1860 at age 17 had been goalkeeper in a match played before the Prince of Wales. That same year, he set down lacrosse's first code of rules. A strong Canadian nationalist, Beers saw lacrosse as a way to encourage fitness and bravery among the young men of the new nation. In Sept 1867 he organized a convention in Kingston, Ont, at which the National Lacrosse Assn was formed. Beers was an ardent promoter of the sport and it was he who gave rise to the enduring misconception that lacrosse is the officially recognized national game of Canada. If lacrosse is not by law Canada's national game, it can be said that by 1889 its popularity was such that it was in fact the national game. Through the 1880s, it enjoyed sustained growth, spreading from coast to coast, and by 1900 its position seemed secure. It was also beginning to be played outside of Canada. In 1868 the first international match had been held in Buffalo, NY. Tours of Canadian teams to England were organized in 1876 and 1883 to introduce the game there. In 1901 Gov Gen Lord Minto presented the Minto Cup for the senior amateur Canadian championship. Within 3 years it had become emblematic of the professional championship and, in 1910, the gold Mann Cup was donated for the Canadian amateur title. Although Canadian teams won Olympic gold medals in 1904 and 1908, the sport during this period was embroiled in unending disputes over professionalism. Finally, in 1912, the Amateur Athletic Union of Canada stepped in to form the Canadian Amateur Lacrosse Assn. By then, lacrosse was being played by only a small portion of the population. It had no minor system to develop young players and was not played in the country's schools, as was FOOTBALL. Following WWI, BASEBALL replaced lacrosse as a summer sport. The automobile's growing popularity affected the game as well, as it took potential players and spectators out of the cities on weekends and holidays. After struggling with these problems, the Canadian Amateur Lacrosse Assn decided to adopt box lacrosse as its official game. It was hoped this move would increase the game's popularity, as well as make use of unoccupied arenas during the summer months. An attempt was made to start up a professional lacrosse league in Montréal and Toronto, but by 1937 the professional game was gone and the Minto Cup was placed in junior competition.

The game is now largely played on Canada's West Coast and in medium-sized towns in Ontario. In fact, both national championships are held alternately in BC and Ontario. The switch to box lacrosse also effectively isolated the Canadian game from international competition. Eventually, supremacy by Canadians in the game they invented was severely challenged. In 1967, a world field lacrosse championship was held in Canada as part of the centennial celebrations. The US won. The best Canada could do at the 1974 world lacrosse series in Australia was a 2nd-place tie. In 1978, however, at the first true world championship, in Stockport, Eng, the Canadian team won after a dramatic last-minute goal in the final game. In 1982 the US took the title, while Canada finished third.

**Lady Byng Trophy** is awarded annually to the NATIONAL HOCKEY LEAGUE player chosen by hockey writers as best combining sportsmanship and skill. It was first presented in 1925 by Lady Byng, wife of the governor general. After Frank BOUCHER won the trophy 7 times, he was given it to keep, and another was donated to the league. JAMES MARSH

A species of orchid, the pink lady's slipper (*Cypripedium acaule*) is the floral emblem of Prince Edward Island (photo by Mary W. Ferguson).

**Lady's Slipper**, common name for some members of the ORCHID family in which modified petals (labella) fold inward to make the toe of the "slipper." Insects must pass through the structure to obtain nectar, pollinating the plant in the process. Only the genus *Cypripedium* is hardy enough to withstand the Canadian climate. Its 50 species are scattered throughout northern temperate regions of America and Eurasia. Of the 13 N American species, 8 are native to Canada. The pink or stemless lady's slipper (*C. acaule*), also known as moccasin flower, has 2 leaves at the base of the plant and produces a single flower. The 5 cm long slipper is split along its length. This spring-flowering plant grows in moist places, preferably in acidic soil, from Newfoundland to Manitoba. The lady's slipper was selected (1947) as the PROVINCIAL FLORAL EMBLEM OF PEI. The showy lady's slipper (*C. reginae*) was chosen first but, because it is rare, was replaced in 1965 by the pink lady's slipper. As it is difficult to grow, the lady's slipper should not be disturbed in its native stands. The sedative qualities of a root infusion of yellow lady's slipper (*C. calceolus*) or of moccasin flower were known to Canadian native people. See PLANTS, NATIVE USES. CÉLINE ARSENEAULT

**Ladysmith**, BC, Town, pop 4558 (1981c), inc 1904, is located on the E coast of VANCOUVER I, 95 km N of Victoria. It is situated on Oyster Harbour on the northern edge of a lucrative farming area. Indians were attracted here by the abundance of oysters. The area's COAL mines and Ladysmith's fine harbour spurred development in the late 1890s. Initially designed by Premier James DUNSMUIR as a recreation area and dormitory for miners, it was named after the relief of Ladysmith in the SOUTH AFRICAN WAR. In the 1930s lumbering became the economy's mainstay. Commercial fishing is also important, and tourism is developing as an industry.

ALAN F.J. ARTIBISE

**Lafitau, Joseph-François**, priest, Jesuit missionary, legal philosopher (b at Bordeaux, France 1681; d there 3 July 1746). He was the discoverer of GINSENG in N America, and his landmark study of the laws and customs of the IROQUOIS, *Moeurs des sauvages américains, comparées aux mœurs des premiers temps*, was published in 4 vols in Paris in 1724, subsequently translated

into Dutch and German, and even circulated in China. Stationed at Sault-St-Louis [Caughnawaga] in NEW FRANCE by his Jesuit superiors in 1713, Lafitau spent 5 years observing the customs of the Iroquois with a view ultimately to illuminating those of the ancient civilizations he had studied at several European universities through comparison and contrast with Iroquois practices. *Moeurs*, the result of this empirical ethnography, bears a striking resemblance to philosopher Montesquieu's famous *De l'esprit des lois*, published 28 years later, although Montesquieu did not cite Lafitau. Largely ignored by other Enlightenment thinkers, this early philosopher has only received prolonged attention in the 20th century, principally as a result of the favourable review of his work by such contemporary historians of ideas as Arnold Van Gennep, Gilbert Chinard, Alfred Métraux and Peter Stein.

G. BLAINE BAKER

**Laflamme, Joseph-Clovis-Kemner**, priest, educator, scientist (b at St-Anselme, LC 18 Sept 1849; d at Québec C 6 July 1910). After studying at the Séminaire de Québec and later spending periods at Harvard and in Europe, Laflamme became professor of geology and mineralogy at Laval in 1870. He also taught physics 1875-93. From 1880 on, he was given several assignments to conduct explorations in Québec on behalf of the GEOLOGICAL SURVEY OF CANADA. Despite his contributions in this field, he is better known for his activities in education and in the dissemination of scientific knowledge. A founding member of the RSC, he became its president in 1891. In 1893 he was appointed rector of Laval. Through his lectures, science manuals and numerous newspaper articles, Laflamme made French Canada aware of the major scientific discoveries of his era, particularly the new uses of electricity, the telephone and X rays. At the end of his life he was unanimously recognized as the leading scholar of French Canada.

RAYMOND DUCHESNE

**Lafleche, Louis-François**, Roman Catholic bishop (b at Ste-Anne-de-la-Pérade [La Pérade, Qué] 4 Sept 1818; d at Trois-Rivières, Qué 14 July 1898). After a diversified career as missionary to RUPERT'S LAND (1844-56), professor and administrator of the Collège de Nicolet (1856-61) and diocesan bursar (1861-66), he became bishop of Trois-Rivières (coadjutor, 1867-70; titular, 1870-98). A faithful disciple of Mgr Ignace BOURGET, he was a member of the intransigent Ultramontane group that battled liberalism and opposed Archbishop E.-A. TASCHEREAU and his allies over the Programme catholique, the university question, the issue of undue clerical influence in electoral campaigns and the reform of the CIVIL CODE; after 1876 he was the recognized and unyielding leader of the group. Despite his weakened standing within the office of the archbishop and in Rome he again took up the cudgels over the MANITOBA SCHOOLS QUESTION and was supported by most Québec bishops. When the pope refused to condemn the compromise policy of Wilfrid LAURIER, Lafleche acquiesced and until his death devoted himself to his religious duties. His ideas, summarized in his *Quelques considérations sur les rapports de la société civile avec la religion et la famille* (1866), had a long-lasting influence on nationalist and Catholic circles in Québec. See ULTRAMONTANISM.

NIVE VOISINE

Reading: Nive Voisine, *Louis-François Lafleche, deuxième évêque de Trois-Rivières* (1 vol to date, 1980).

**Lafleur, Guy Damien**, hockey player (b at Thurso, Qué 20 Sept 1951). His outstanding 1971 junior exploits (130 goals and the Memorial Cup for his team, the Québec Remparts) made him a much heralded rookie with the MONTREAL CANADIENS. In his first 3 professional seasons Lafleur struggled to meet the high standards expected of

him, but in 1975 he turned his career around dramatically. Playing bareheaded in the era of the helmet, his streaming hair accented a fluid skating style that, along with instinctive play-making and an accurate shot, carried him to 6 consecutive 50-goal seasons and NHL all-star selections (1975-80). He won the HART TROPHY 1977-78, the ART ROSS TROPHY 1976-78, and while contributing to Montreal's STANLEY CUP wins of 1973 and 1976-79 was awarded the 1977 CONN SMYTHE TROPHY. On 20 Dec 1983 he became only the tenth player in NHL history to reach the 500-goal plateau. He retired early in the 1984-85 season.

DEREK DRAGER

**LaFontaine, Sir Louis-Hippolyte**, also La Fontaine, politician (b at Boucherville, LC 4 Oct 1807; d at Montréal 26 Feb 1864). Educated at the Collège de Montréal, LaFontaine was called to the bar of Lower Canada in 1828. He began his political career with election to the Lower Canadian Assembly in 1830. Although a radical follower of PAPINEAU, he opposed the 1837 call to arms, and travelled to London to plead with the imperial government for constitutional reform. He was arrested in 1838, but released without trial. He then became leader of the French Canadian moderate reformers.

After the 1841 union, he worked with Robert BALDWIN and Francis HINCKS to found a united party of Upper and Lower Canadian reformers. He insisted on speaking French in the Assembly, and because of his action the imperial government later repealed the ACT OF UNION clause prohibiting official use of French. In 1842 he formed an administration with Baldwin, but resigned in Nov 1843 to protest Governor General Sir Charles METCALFE's political actions. In 1848, he was again called to form a ministry, this time by Lord ELGIN, who fully recognized RESPONSIBLE GOVERNMENT. LaFontaine thus became the first prime minister of Canada in the modern sense of the term. During this second administration, he demonstrated the achievement of responsible government by the passage of the REBELLION LOSSES BILL, despite fierce opposition and violent demonstrations. His ministry also passed an AMNESTY ACT to forgive the 1837-38 rebels, secularized King's College into U of T, incorporated many French Canadian colleges, established Laval University, adopted important railway leg-

LaFontaine, a tall, portly man who resembled Napoleon, was instrumental in the achievement of responsible government and was in effect the first PM of Canada (courtesy Public Archives of Canada/C-596.1).

isolation and reformed municipal and judicial institutions.

LaFontaine retired to private life in 1851 but was appointed chief justice of Canada E in 1853. In 1854 he was created a baronet by Queen Victoria and a papal knight by Pius IX. A tall, portly man, resembling Napoleon, LaFontaine was a master politician who commanded respect and inspired others with his high ideals and patriotism.

JACQUES MONET, SJ

Reading: J.M.S. Careless, *The Union of the Canadas* (1967); Jacques Monet, *The Last Cannon Shot* (1969).

**Lagemodière, Jean-Baptiste**, also spelled Lagimodière, Lagimonière and Lajimodière, fur trader (b at Trois-Rivières, Qué 26 Dec 1778; d at St-Boniface, Man 7 Sept 1855). Going west as a hunter and trapper about 1800, he returned to Québec in 1806, where he married Marie-Anne Gaboury. Taking her west, he was a free trapper near the RED RIVER COLONY and later near Ft Edmonton. In 1815, during the troubles at the Red River settlement, he was given despatches to take to Montréal for the Hudson's Bay Co, informing Lord SELKIRK of the dangerous situation in the West. He made the arduous 3000 km journey in 5 months, but on his return was captured near Ft William and held prisoner by the North West Co for 56 days. Upon his release and return to Red River, he was given a land grant across the river from Ft Garry.

HUGH A. DEMPSEY

**Lagemodière, Marie-Anne**, née Gaboury, western pioneer (b at Maskinongé, Qué 2 Aug 1780; d at St-Boniface, Man 14 Dec 1875). Married to Jean-Baptiste LAGEMODIÈRE, a fur trader, in 1806, Marie-Anne returned to the Red River and Ft Edmonton areas with him, becoming one of the first white women on the western prairies. Her daughter, Reine (b 1807), was the first legitimate white child in the West. Of Marie-Anne's 8 children, the second youngest, Julie, was the mother of Louis RIEL.

HUGH A. DEMPSEY

**Lagomorpha**, order of MAMMALS containing 2 families: the RABBITS and HARES (Leporidae), with long ears and hindlimbs, small tufted tail and hopping gait; and the small, lesser-known PIKAS (Ochotonidae), with smaller, rounded ears, hindlegs and forelegs of approximately the same length, no apparent tail and running gait. Approximately 61 species are found in a wide variety of habitats, on every continent except Antarctica. Seven species are native to Canada (5 leporids, 2 ochotonids); 2 leporid species have been introduced. They range from the US border to the arctic islands and are a familiar sight to almost every Canadian. All lagomorphs are terrestrial, herbivorous and active year-round. Pikas are most active during the day, rabbits and hares mainly in the evening and at night. Both groups exhibit coprophagy (the reingestion of feces), which allows them to extract maximum nutritional value from fibrous plant food and is somewhat reminiscent of chewing the cud in ruminant mammals. Two types of fecal pellets are produced: soft, moist pellets which are eaten, and hard, fibrous ones which are discarded. The lagomorphs were classified as rodents until formally separated, in the early 1900s, on the basis of numerous differences in dentition, skeleton and musculature. Rodents are no longer considered to be even close relatives. The origin of the lagomorphs is uncertain.

M.L. WESTON

**LaHave**, NS, UP, pop 195 (1981c), is located at the mouth of the LaHave R, 11 km SW of LUNenburg. The Micmac called it *Pijelooekak* ("having long points"). In 1604 de MONTS gave the name La Hève to the nearby cape. In 1632 de RAZILLY brought with him from France several families to settle the area. A fort was built to protect the settlement; a school, said to have been the first Acadian school, was established. The settlement

was later transferred to PORT-ROYAL, though a few families remained behind. By the 1760s an English fishing base had been established at the former Acadian settlement. The 19th century saw industries connected with the fisheries, such as shipbuilding and sawmills, become an important part of the LaHave economy, while farming remained a support industry. At this time the centre of development shifted upriver to Bridgewater. Today, residents are mostly of German descent.

JEAN PETERSON

**LaHave River Estuary** is a narrow, shallow inlet of the Atlantic Ocean extending 24 km from Bridgewater, NS, to the coast. This lovely sheltered waterway is favoured for recreational sailing and fishing, especially for salmon and striped bass. The principal industry is fishing, with smaller amounts of farming and shipbuilding. East LaHave was the first land reached by de MONTS in 1604 and later became the site of one of the earliest European settlements in the province. (It was named after Cap de la Hève, near Le Havre, France.) In the early 1800s LaHave was used as a depot by pirates preying on New England shipping. Cape LaHave I is the largest of a group extending 7 km offshore from the mouth of the estuary.

P.C. SMITH

**Lahontan, Louis-Armand de Lom d'Arce, Baron**, officer, author (b at Lahontan, France 9 June 1666; d in Europe before 1716). During Lahontan's 10 years in NEW FRANCE (1683-93), he fought the Iroquois, explored the Mississippi and helped defend Québec in 1690 and Newfoundland in 1693 against English attacks. Lahontan's fame rests on the 1703 publication of his colourful travels and memoirs (*Nouveaux Voyages dans l'Amérique septentrionale; mémoires de l'Amérique septentrionale*) and on a supplementary volume of imaginary dialogues with an Indian chief that contributed to the vogue of the "noble savage." The 3 volumes, retouched in 1705 by an unfrocked Benedictine monk, Nicholas Gueudeville, were frequently republished and translated for European readers during the 18th century.

DAVID M. HAYNE

**Laidler, Keith James**, chemist, professor (b at Liverpool, Eng 3 Jan 1916). After studying at Oxford and Princeton, and holding appointments at the National Research Council and Catholic U, Washington, DC, he joined University of Ottawa in 1955. He is coauthor of *The Theory of Rate Processes* and has published 246 research papers, 6 research monographs on chemical kinetics and 3 chemistry textbooks. His research has covered the principal fields of chemical-reaction kinetics, fundamental theoretical aspects of kinetics and experimental study of many types of systems. Elected a fellow of the RSC in 1960, he received the Chemical Institute of Canada Medal in 1971 and the Queen's Jubilee Medal in 1977.

B. CONWAY

**Lake** The hydrologic cycle supplies the world's landmasses with WATER as precipitation. In areas where precipitation is neither totally retained as ICE nor totally evaporated, excess water must find its way back to the sea via surface runoff, RIVERS and GROUNDWATER percolation. Where these flows are intercepted by a naturally occurring impervious basin or depression, a lake may result. A lake represents a short-term dynamic balance and a long-term evolution. A constant water level is maintained only if inflows from precipitation, runoff and groundwater percolation balance losses from outflow, evaporation or groundwater movement. Over geological time, lakes are transient; inflows carry dissolved and suspended material washed from the surrounding high ground, and biological productivity adds organic material to the accumulating sediments. These sediments gradually fill the basin. Human activities in a lake's DRAINAGE BASIN can accelerate the aging and

infilling processes through increased EROSION accompanying agricultural and urban developments and through addition of biologically active materials or nutrients.

The 6 most important geological processes involved in lake formation are described in order of importance.

**Glacial** Movements of ice sheets and valley GLACIERS in past ICE AGES have scoured basins in underlying terrain. Glacial deposits (eg, MORAINES, ESKERS, DRUMLINS) may create favourable sites for lakes and ponds. Most Canadian lakes are of glacial origin.

**Tectonic** Movements of the Earth's crust, ie, folding and faulting, can create basins later filled by lakes. Lake Superior has been formed by glacial and tectonic processes.

**Coastal** Waves contribute to erosion and generate coastal currents which move sediments along the shore to zones of relative calm. The sandbars thus formed may block the entrance to a bay, forming a lagoon. If fresh water drains into the lagoon, a coastal lake, separated from the sea by a narrow barrier, may result. Many small lakes so formed occur along the Atlantic coast of NS, and several good examples occur within Lk Ontario, eg, Hamilton Harbour.

**River Processes** In floodplains, river meanders can be separated from the main flow and become oxbow lakes or sloughs. Deposition of sediments across the mouths of tributaries can flood the upstream tributary valley. At river mouths, where a DELTA is formed, a combination of river and coastal processes can form shallow deltaic lakes.

**Volcanic** Centres of volcanic cones may collapse into craters, forming crater lakes, often very deep in relation to their surface area. Lava flows may dam rivers to form lakes.

**Solution** Relatively soluble rock may be slowly eaten away by percolating groundwater, creating caverns which may collapse into water-filled depressions or solution lakes. This process occurs most frequently in limestone or gypsum regions. A somewhat analogous process occurs in the Arctic when collected surface water melts underlying PERMAFROST, forming a thaw lake.

#### Distribution of Lakes in Canada

Recent surveys suggest that there may be as many as 2 million lakes in Canada. About 7.6% of Canada's nearly 10 million km<sup>2</sup> is covered by fresh water; enough water is contained by these lakes and rivers to flood the entire country to a depth of over 2 m. Canada possesses nearly 14% of the world's lakes having surface areas over 500 km<sup>2</sup>. Although Canada stores a disproportionate share of the world's surface fresh water, the amount available for use depends more on the volume supplied annually than on that stored over many years. Therefore, despite an apparent abundance, the freshwater resource must be managed carefully.

Surface GEOLOGY and CLIMATE govern the nature and distribution of lakes. It is convenient to describe lakes in relation to the PHYSIOGRAPHIC REGIONS of Canada. Many lakes are distributed through a 1000 km swath of land surrounding Hudson Bay, the Canadian SHIELD. Nearly all are of glacial origin. Thin soils and high resistance of the rocks to weathering tend to make the lakes clear, biologically unproductive and relatively long-lived because of slow sedimentation. The Shield is dome-shaped in cross section, dipping to contact the softer SEDIMENTARY ROCKS of the Hudson Bay Lowlands and the Western Interior Lowlands. The lowlands along the SW shore of Hudson Bay have only recently emerged from the sea as the land rebounds from the last GLACIATION. This region of poor, disorganized drainage is carpeted with MUSKEG and peat bogs. Within the peatlands are many small, shallow lakes and ponds having a teardrop shape aligned to the prevailing winds, the result

of wave action on the fragile shorelines. Close to the coast, ancient beach ridges define long, narrow, shore-parallel lakes and ponds. Old river channels, abandoned as the land rises, are frequently occupied by lakes in this region.

The line of contact between the Shield and the Western Interior Lowlands is marked by a band containing Canada's largest lakes, ranging from Great Bear Lk, NWT, to the Great Lakes, Ont. Glaciers pouring off the Shield and carrying with them hard granitic debris, gouged deeply into the thin edge of the softer sedimentary rocks before spreading over the lowlands. Glacial deposition of till, rather than extensive scouring, marks the effect of glaciers on the plains. Unlike Shield lakes, prairie lakes are formed in a thick overburden of clay, till and soil. Lakes in the Western Interior Lowlands tend to be more shallow, more rapidly filled by sediments and more biologically productive than Shield lakes.

Annual rainfall decreases and evaporation increases from NE to SW; the corresponding trend in lake distribution is for fewer, sometimes seasonally transient lakes, carrying higher concentration of dissolved materials. In the dry SW, numerous alkali lakes and ponds occur in which concentrations of dissolved materials reach saturation and evaporite crystals, usually sodium sulphate, precipitate out. Glacial deposition in the SW has left the ground pocked with small depressions which fill to become ponds or sloughs in spring, often drying up by late summer. Although the total water volume of these ponds is small in comparison with well-established lakes in other places, they are important to AGRICULTURE and as WATERFOWL habitat. In the Far North, parkland and forest yield to the boreal forest proper, with extensive areas of muskeg and bog lakes.

Lakes in the rugged terrain W of the Great Plains are relatively sparse compared with those of eastern Canada (covering less than 2% of surface area), but they are extremely varied. Lakes in western Canada are mainly of glacial origin: large lakes in BC and the YT are generally confined to deep, glaciated valleys; smaller scour lakes are found on upland plateaus. Tectonic processes associated with MOUNTAIN building provide other natural basins. The Cariboo region (Southern Interior Plateau) of BC, in the rain shadow of the Coast Range, is relatively arid and contains alkali ponds and lakes. Some lakes occupy the heads of ancient FJORDS near the coast. Powell Lk, near Vancouver, was formed when isostatic rebound (the tendency for land to rise once the heavy ice cover melts) isolated a fjord from the sea. Although this took place thousands of years ago, the lake's bottom water is still salty, a fossil seawater.

The Atlantic provinces lie in a region of ancient mountains, a northern extension of the Appalachians. This land was also heavily glaciated. The many lakes in areas underlain by hard IGNEOUS or metamorphosed rocks closely resemble the lakes of the Shield. More permeable sedimentary rocks underlie eastern NB, northwestern NS and PEI, and hence fewer lakes occur in these areas. Many small coastal lakes occur in NS.

The St Lawrence Lowlands and lower Great Lakes region contain some of Canada's richest farmland, but compared to the scoured region of the Shield, small- and medium-sized lakes are rare. However, this region is adjacent to the Great Lakes, which together constitute the largest body of fresh water on Earth. Lakes SUPERIOR and HURON lie across the contact between shield rocks and the more recent sedimentary rocks. Lakes Michigan, ERIE and ONTARIO are underlain by sedimentary rocks with thick overburdens of glacial deposits. The geology of the drainage basins has affected the primordial character of each lake and has determined the settlement

patterns, which in turn have had a considerable impact on Lakes Erie and Ontario.

### Biological Properties

Lakes are ecosystems: biological energy flows through a food chain and spent organic matter is recycled into materials that are again available to living organisms. The first and most important stage, primary productivity, is photosynthesis, where nutrients are combined into organic matter through the energy of sunlight and the action of chlorophyll contained in plant cells. Most lake plants are single-celled microscopic ALGAE (phytoplankton), which are suspended in the water and move with it. In abundant quantities, they may colour the water, rendering it turbid. A host of tiny ZOOPLANKTON graze on the phytoplankton and, in turn, are eaten by fish. Bacteria decompose dead material into constituents available for new cycles of life. Carbon, hydrogen and oxygen are usually freely available in sunlit surface waters. Usable forms of nitrogen and phosphorus may be scarce, limiting primary productivity. Nutrients may be supplied by inflows and by local runoff; their distribution within a lake is controlled by physical processes.

### Physical Properties

Water movements in lakes are governed by 3 sources of energy: the flow of water from inlet to outflow and the stirring action of wind (both mechanical sources), and heat energy, gained in spring and summer, lost in fall and winter. The longest time scales of motion, having perhaps a yearly cycle, are those associated with the flow of water through a lake from inlet to outlet (hydraulic component of flow). Outflow removes dissolved and suspended materials along with the water. Since lakes vary widely in size and rate of outflow, it is useful to define a flushing time as the volume of the lake divided by the average rate of outflow (ie, the time required to drain the lake at the mean outflow rate). Permanent lakes with flushing times much less than a year are quite rare, and their behaviour is strongly marked by vigorous flow, biological productivity usually being depressed. At the other extreme, lakes with flushing times greater than 10 years are considered sensitive to external changes; recovery from a polluted state requires at least one flushing time.

Superimposed on this motion are movements driven by wind and by convection caused by surface cooling or heating. Wind-driven motions, mechanically the most important, include surface waves, turbulent mixing and systems of currents circulating around the lake. These motions distribute dissolved and suspended materials through the lake.

Lakes gain heat from solar radiation; they lose

heat as water evaporates from the surface; they may gain or lose heat directly from the atmosphere. Except for solar radiation, these fluxes are absorbed or emitted in the top few centimetres of the water column. Solar radiation, which powers photosynthesis in addition to heating the water, may penetrate effectively to a depth of 30 m in a very clear lake, or may be absorbed in the top metre of a lake made turbid by suspended sediments or an abundance of plankton. A kilogram of water must absorb or lose 4200 joules of heat to raise or lower its temperature by 1°C. This is one of the largest "specific heats" of all substances. Compared with the land, lakes can store and release huge amounts of heat; therefore, large lakes may moderate the climate near their shores. Stone fruits can be grown on the Niagara Pen because it is protected from severe winter weather by the open waters of Lk Ontario.

As the surface water warms or cools in response to the surface heat flux, its density changes. Fresh water is most dense not at freezing point (0°C) but at 4°C. As water is warmed above or cooled below 4°C, its density decreases (it expands). If the heat flux acts to increase the surface density (fall cooling or early spring warming), surface water tends to sink and mixing by convection takes place. If the heat flux decreases the surface density (winter cooling just before freezeup, spring and summer warming), the lighter surface water tends to float on the heavier underlying water. Wind mixing may not be strong enough to overcome this extra stability, particularly in summer, and a layered distribution of warm and cool water can persist through the summer in deep lakes. These lakes are said to be thermally stratified, and it is usually possible to define 3 layers: a warm, actively wind-stirred upper layer called the epilimnion; a cool, relatively homogeneous bottom layer called the hypolimnion; and a transitional layer called the thermocline between the warm and the cool layers.

Stratification strongly affects all other physical, biological and biochemical processes. It influences the horizontal distribution of nutrients, and the speed with which nutrients trapped in the hypolimnion and in bottom sediments are made available to algae in the surface waters. Furthermore, inflows and outflows often occur at shallow depths within the epilimnion. If the inflowing water is of equal or lesser density than the surface water of the receiving lake, the hydraulic flow and attendant flushing is confined to the epilimnion. This restriction may retard the effective flushing of a contaminant from a lake since much of it will be stored in the sheltered hypolimnion.

Seasonal thermal stratification has other important consequences. Diversity of habitat encourages diversity of living organisms; therefore, stratified lakes may permit the coexistence of warm-water fish (eg, bass) and cool-water fish (eg, trout). Diversity may be limited by the interaction of stratification with primary productivity and bacterial decomposition, which may be influenced by human activities.

Overfertilization by sewage or agricultural runoff may lead to an increase in algal growth, with a corresponding rise in dead organic material in the cool waters of the hypolimnion. This results in depletion of oxygen, caused by increased bacterial decomposition, and may lead to the loss of cool-water fish species. If the system has been pushed far enough, recovery may become impossible, even with greatly reduced external loading of nutrients. Poor FORESTRY practices (eg, extensive clear-cutting in inappropriate areas) can have similar effects because increased runoff carries soil nutrients into nearby lakes. Logging and settlement in the basins of Lakes Ontario and Erie are thought to have modified these lakes considerably.

## Other Human Impacts

Overenrichment (cultural eutrophication) is not the only problem in lake management. Many compounds used in agriculture or industry are dangerous toxins; the more insidious have chemical affinities to natural organic material and enter the food chain, becoming increasingly concentrated (see HAZARDOUS WASTES, WATER POLLUTION). Another serious problem arising from human activities is ACID RAIN, which results from the burning of fossil fuels. The effects of the fallout on lakes are strongly governed by the region's surface geology. Shield lakes are vulnerable to these effects, which may include a complete loss of fish. Lakes in limestone-rich areas are less vulnerable because acidity is neutralized by dissolution of limestone.

In Canada many lakes have been created by damming rivers for RESERVOIRS for hydroelectric developments, sources of water for irrigation and domestic use, and for flood control. Reservoir design and management draw on all aspects of lake science. For example, the large fluctuations in water level accompanying reservoir operation can cause accelerated shore erosion and are potentially harmful to fish spawning in shallow water.

F.M. BOYCE

**Lake Carriers**, or "lakers," are ships whose design is unique to the GREAT LAKES of N America. The lake carrier's long and flat shape reveals its basic purpose — to move bulk cargoes through the ST LAWRENCE SEAWAY and Great Lakes, a total distance of 3766 km. The *John B. Aird*, a typical modern Canadian lake carrier, was launched in 1983 by Collingwood Shipyards on Georgian Bay, is 219 m long and has a deadweight tonnage of 30 700 tonnes. Similar to an increasing number of lake carriers of her size which are fitted with cranes or conveyor belts, the *John B. Aird* is a self-unloading lake carrier.

Ships of this size can carry one million bushels of wheat on a single voyage (27 000 tonnes). Wheat and other feed grains account for about 40% of all cargoes carried by Canadian lake carriers, followed by coal, iron ore and limestone. The annual 9-month shipping season of the lake carriers does not include the winter months of late December to early March when the seaway is closed and ice covers much of the Great Lakes.

Most of the 247 lake carriers in service in 1984 belonged to member companies of the Dominion Marine Assn (DMA) of Ottawa, founded in 1903, and the US Lake Carriers' Assn, formed in Cleveland, Ohio, in 1892. Of these vessels, 143 are Canadian ships on the DMA register and the remaining 104 are US-owned vessels. The Canadian lake-carrier fleets have a total deadweight tonnage of 3.5 million tons and in 1983 carried bulk cargoes worth an estimated \$7 billion.

The modern Canadian lake carrier is the result

The *John B. Aird*, a bulk carrier with a self-unloading system. The lake carrier's characteristic shape, long and flat, reveals its purpose of moving bulk cargoes (courtesy Lucas Photographics, Thunder Bay).

of more than 100 years of continually changing Great Lakes ship design and modification (see SHIPBUILDING AND SHIP REPAIR). Earlier types of cargo carriers on the Great Lakes, all of them built for the bulk transit of goods, included the exotically named hermaphrodite barquentines of the age of sail and the whalebacks and canalers of the age of mechanical propulsion. As becomes the name "hermaphrodite," which means having 2 opposite qualities, this class of sailing ship had 2 masts, with square-rigged sails on the foremast for maneuvering in and out of dock and in narrow passages, and fore-and-aft rigged sails on the mainmast for speed. Except for their tall funnels and awkward deck structures, the whaleback of the age of coal-fired steam engines, squat and broadbeamed, looked like the modern nuclear submarine. The whalebacks were also called "pig boats" because their bows ended in a steel snout built above the waterline. The later canalers were designed to fit snugly into the narrow locks of the old Welland Canal, linking Lakes Erie and Ontario and passing near St Catharines, Ont, and the canal system between Lk Ontario and Montréal which terminated at the Lachine Canal. The canaler was one-third the length of the *John B. Aird*. In 1959 canalers were replaced in the wider and longer locks of the St Lawrence Seaway system by upper lakers, which had previously been restricted to the upper lakes above Niagara because of their size. These locks can take ships up to 222.5 m in length and 23.16 m in breadth.

Some of these larger carriers, though designed primarily for the inland lakes, have been built for both the coastal trade and deep-sea service and are called ocean lakers. This is not entirely a new trend since some earlier lakers were requisitioned to serve on the N Atlantic during WWII, and a few of them were sunk by German U-boats.

The Great Lakes have been a graveyard for hundreds of ships, most of them lost during the age of sail between 1750 and 1870, in storms, fires and collisions. Despite their size, even modern lake carriers can be victims of severe ice conditions and storms. The tragic sinking on 10 Nov 1975 of the *Edmund Fitzgerald*, a 222 m long US iron-ore carrier, was commemorated in song by Gordon LIGHTFOOT. After battling 7.5 m waves and record 125 km/h winds on Lk Superior, she suddenly plunged to the bottom with the loss of the entire crew of 29, including her experienced captain.

Reading: H.C. Campbell, *Early Days on the Great Lakes: The Art of William Armstrong* (1971); J. Lesstrang, *Lake Carriers: The Saga of the Great Lakes Fleet* (1979).

**Lake Louise**, 2.4 km long, elev 1731 m, is located in BANFF NATIONAL PK SW Alberta; its outlet is a stream flowing into the Bow R. Indian guides took CPR workman Tom Wilson to the site in 1882; he named it Emerald Lk, but the name was changed (1884) to honour Princess Louise Caroline Alberta, fourth daughter of Queen Victoria and wife of Gov Gen the marquis of LORNE. The community of Lake Louise (UP, pop 355, 1981c) is near the lake, on the site of the former CPR station, Laggan, which was base camp for 12 000 workers in 1884, when CPR construction proceeded through KICKING HORSE PASS. The jewellike lake, framed by blue mountains and gleaming snowfields, is one of the most famous mountain vistas on the continent. Chateau Lake Louise stands atop the huge glacial moraine that dams the lake. JAMES MARSH

**Lake of the Woods**, 4349 km<sup>2</sup> (of which 3149 km<sup>2</sup> are in Canada), elev 323 m, fed by Rainy R from the S and drained to the NW by the WINNIPEG R; it is a remnant of former glacial Lake AGASSIZ. The S shore is regular, low and sandy, contrasting with the granite edge, myriad channels, peninsulas and 14 632 islands of the N shore. Thrust into the lake from the E is Aul-

neau Peninsula, named for the Jesuit priest Jean-Pierre Aulneau (1705-36) who, along with 17 other members of the LA VÉRENDY party, was killed in the area by Sioux warriors. The French explorer Jacques de Noyon reached the lake in 1688, and La Vérendrye built Fort Saint-Charles on the N shore (1732). The lake was part of the main FUR-TRADE ROUTE, and voyageurs frequently lost their way among its islands. Cree, Ojibwa and Sioux lived in the area first, and rock paintings have been found at several sites. About 2000 native people still live around the lake in numerous reserves. The Canada-US border runs from the mouth of Rainy R NNW across the lake, leaving a small peninsula of US territory above the 49th parallel.

The scenic lake attracts a thriving tourist trade. In early August, sailboats from Canada, Britain and the US take part in the Lake of the Woods Regatta, a 7-day race from KENORA around the lake. The lake's islands are wooded, but the name is likely a mistranslation of an Indian word meaning "inland lake of the hills."

JAMES MARSH

**Lake Superior Provincial Park** (est 1944, 1540 km<sup>2</sup>), located N of SAULT STE MARIE, Ont, includes part of the wild shoreline of eastern Lk SUPERIOR and a hinterland of rugged, forested Canadian SHIELD country. Pink granitic hills and boulders dominate the landscape but lavas are found near Cape Gargantua and sandstones on the offshore islands. The mixed forest of maple, birch, poplar and spruce produces a magnificent display of colour in autumn. The commonest mammal is the moose, but visitors may also see white-tailed deer, red squirrel, chipmunk, beaver, bear, wolf and some 250 species of bird, including Canada goose, heron and sandhill crane. Except for garter snakes, there are few reptiles. Animals such as caribou, lynx and pickerel feature prominently in the PICTOGRAPHS visible especially along the coast. These rock paintings reflect some 10 000 years of Indian occupation. There has been sporadic mining for copper and gold, commercial fishing and lumbering. Early in this century the region attracted the attention of the GROUP OF SEVEN painters. Lake and river fishing and, in autumn, moose hunting are possible.

JOHN S. MARSH

**Lakehead University**, THUNDER BAY, Ont, was founded in 1965. Lakehead Technical Institute, est 1946, added introductory university courses to its program in 1948; its name was changed to Lakehead College of Arts, Science and Technology in 1956, and in 1957 the city of Port Arthur donated the land for a new college campus. Second-year arts courses were added in 1960-61, and in 1962 the college received some university powers. Its first degrees were awarded in 1965, the year that Lakehead became a university with all degree-granting powers. B. BEATON

**Lalemant, Charles**, Jesuit missionary, first superior of the Jesuits at Québec (b at Paris, France 17 Nov 1587; d there 18 Nov 1674), brother of Jérôme LALEMANT. He organized the first Jesuit

mission to Canada in 1625, returning to France in 1627 to counter the objections of merchants and Protestants to mission work. He went back to Canada in 1634, having been taken prisoner of war and shipwrecked twice in the meantime. He ministered to the French immigrants at Québec until 1638 when he returned to Paris to serve as first procurator of the missions of New France until 1650, a period when missions and fur trade were complementary. He brought together *dévôts* of the Compagnie du Saint-Sacrement who planned and founded the utopian colony of VILLE-MARIE on Montréal I in 1642. In addition to many letters, he wrote a devotional treatise on the Eucharist.

CORNELIUS J. JAENEN

**Lalemant, Jérôme**, Jesuit missionary (b at Paris, France 27 Apr 1593; d at Québec City 26 Jan 1673), brother of Charles LALEMANT. He arrived in Canada in 1638 and was named superior of the Huron mission. He completed the first census of a native nation, introduced *données* (lay workers) as domestics and in 1639 founded STE MARIE AMONG THE HURONS, a fortified headquarters and model community. Author of *Relations des Jésuites*, 1639, 1644, and much of the *Journal des Jésuites*, he was superior at Québec 1645-50. In 1649 the Huron mission was destroyed, and in 1656 he returned to France and taught at La Flèche college. Recalled as superior at Québec 1659-65, he helped resettle Huron refugees.

CORNELIUS J. JAENEN

**Lablond, Alfred**, sculptor, painter, memorialist (b at Ste-Élisabeth de Warwick, Qué 19 May 1878; d at Montréal 13 Jan 1953). In 1896 he began studying modelling and design at the Conseil des arts et manufactures (CAM), Montréal. In 1902 he left for Paris, where he studied at the École des beaux-arts, met suzot-côté and had several showings at the Salon du printemps. He was named a professor at the CAM, Montréal, in 1907, and had his first showing at the Art Assn. His work totaled some 925 bronze, marble, plaster and wooden statues, plus about 500 canvases of lesser interest. He sculpted busts, historical statues (BALDWIN, BRÉBEUF), public and commemorative monuments (LAURIER, LOUIS HÉBERT), allegorical and religious statues, and over 200 small bronzes illustrating legends, customs and rural trades. While influenced by various sources, his work reflects the nationalist and conservative ideology of his Québec contemporaries who gloried in their national history and were strongly attached to the land. Three of Lablond's manuscripts appeared in 1978 under the title, *Mes souvenirs*.

JOHN R. PORTER

**Lalonde, Édouard**, "Newsy," hockey and lacrosse player (b at Cornwall, Ont 31 Oct 1887; d at Montréal 21 Nov 1970). He excelled at both sports and gained notoriety and fame for his intense competitiveness. He picked up his nickname during a stint as reporter and printer for the *Cornwall Freeholder*. He played hockey with Cornwall and turned professional with Sault Ste Marie. He was a member of MONTREAL CANADIENS at their inception (1910) and rejoined them in 1913, winning the scoring title 4 times and scoring into brawls. Lalonde was the best LACROSSE player of his generation and was in great demand posing players, notably Joe Hall, often erupted into brawls. Lalonde was the best lacrosse player of his generation and was in great demand across Canada; a Vancouver team paid him \$6500 for one season. He was voted Canada's outstanding lacrosse player of the first half century.

JAMES MARSH

**Lalonde, Marc**, politician (b at Île Perrot, Qué 26 July 1929). Educated at U de M, Oxford and U of Ottawa, Lalonde at first sought a legal and academic career but interrupted it to become special adviser in 1959-60 to E. Davie FULTON, minister of justice under PM DIEFENBAKER. After practising law in Montréal, Lalonde returned to

Ottawa as special adviser to PM PEARSON in 1967, and stayed on in the PMO as Pierre TRUDEAU's principal secretary 1968-72. In 1972 he ran successfully for Parliament and under Trudeau held various portfolios, including minister of national health and welfare, minister of state for federal-provincial relations, minister of energy, mines and resources (1980-82) — in which capacity he implemented the NATIONAL ENERGY POLICY — and minister of finance under both Trudeau and PM TURNER (1982-84). Lalonde was closely identified with Trudeau and his various causes and was a vigorous federalist advocate in Québec and Ottawa. He did not run in the 1984 federal election.

ROBERT BOTHWELL

**Lamarche, Gustave**, priest, dramatist (b at Montréal 17 July 1895). He is best known for the vast dramatic frescoes on religious themes, often reminiscent of medieval passion plays, that he began to compose and direct in Québec in the 1930s, especially his *Jonathas* and *Tobie* (both 1935), *La Défaite de l'enfer* (1938), *Notre-Dame-des-Neiges* (1942) and *Notre-Dame-de-la-Couronne* (1947), the latter 2 performed outdoors before thousands of spectators. His collected 6-vol *Oeuvres théâtrales* (1971-75) include 34 plays. In restoring the respectability of stage arts, long considered suspect in French Canada, Lamarche has made an important contribution to contemporary Québec culture.

L.E. DOUCETTE

Reading: René Pageau, *Gustave Lamarche, poète dramatique* (1976).

**LaMarsh, Judy Verlyn**, lawyer, politician, broadcaster, novelist (b at Chatham, Ont 20 Dec 1924; d at Toronto 27 Oct 1980). Liberal MP for Niagara Falls 1960-68, Judy LaMarsh was a controversial member of PM PEARSON's Cabinet and was responsible for some of that government's more innovative legislation. Under her aegis as minister of national health and welfare 1963-65, the CANADA PENSION PLAN was implemented and Canada's "medicare" system designed. As secretary of state 1965-68, she brought in the Broadcasting Act, presided over the CENTENNIAL YEAR celebrations, and established the Royal Commission on the STATUS OF WOMEN IN CANADA. Her books include *Memoirs of a Bird in a Gilded Cage* (1968).

HARRIET GORHAM

**Lambert, Betty**, née Elizabeth Minnie Lee, playwright (b at Calgary 23 Aug 1933; d at Burnaby, BC 4 Nov 1983). Author of some 70 adults' and children's plays for radio, TV and stage, Lambert also taught at Simon Fraser from 1965 until her death. Often called a feminist, she was concerned with injustice to and victimization of men as well as women, concerns which appear as ironic wit in her comedies and as compassion and a profound sense of evil in her tragedies. She is author of the children's play *The Riddle Machine* (performed 1967, published 1974); *Sqrioux-de-Dieu* (1975, 1976); the novel *Crossings* (1979); and *Jennie's Story* (1981, 1982).

ANN MESSENGER

**Lambeth, Michel**, filmmaker, writer, photojournalist, teacher, publisher (b at Toronto 21 Apr 1923; d there 9 Apr 1977). He served in the Canadian Army 1942-45, and then studied art in London and Paris. Returning to Toronto in 1948, he supported himself with clerical work and free-lance writing. By 1959 he had become a committed photojournalist, and during the 1960s worked for the *Star Weekly*, *Saturday Night*, *Maclean's*, *Time* and *Life*. He had numerous shows and the National Film Board of Canada toured his exhibition *Encounter* nationally. He was honoured with the Canadian Centennial Medal in 1967. During the 1970s he taught and became a spokesman for Canadian Artists' Representation. His photography reflects a love for working people, and the reality of street life and the social conditions of the disadvantaged.

MAIA-MARI SUTNIK

**Lamèque, Île**, 150 km<sup>2</sup>, is located off the NE corner of New Brunswick at the entrance to CHALEUR BAY. Originally called Shippegan I, its present name was confirmed in the 1970s and derives from a MICMAC word describing tidal flows in the area. Nineteen km long and 11 wide, the island is sandy and flat, covered in grasses and a few stunted trees. Originally inhabited by Micmac, its modern residents are mainly French speaking. As well as a small fishing industry, the island features vast bogs of PEAT moss, sold primarily to the US. The island is connected by bridge across the Shippegan Sound to the mainland community of Shippegan and by ferry to MISCOU I, its sister island to the N.

DANIEL FRANCIS

**Lamontagne, Joseph-Georges-Gilles-Claude**, air-force officer, politician (b at Montréal 17 Apr 1919). Lamontagne studied at the Collège Jean-de-Brébeuf and the École des hautes études commerciales in Montréal. A bomber pilot in the RCAF, he was shot down over Holland and was a prisoner until 1945. He bought an importing firm in Québec C in 1946, was elected mayor of Québec C in 1965, and Liberal member to the House of Commons for Langelier in 1977. In 1978 he became postmaster general and in 1980 minister of national defence. In February 1984 he was named lt-gov of Québec.

JEAN PARISEAU

**Lamontagne, Maurice**, economist, politician (b at Mont Joli, Qué 7 Sept 1917; d at Ottawa 13 June 1983). A graduate of Laval and Harvard, Lamontagne taught at Laval 1943-54. In 1954 he became a federal civil servant and in 1957 professor of economics at U of Ottawa. He also served as an adviser to Lester PEARSON, 1958-63, and ran for the House of Commons in 1958 and 1962, finally getting elected in 1963. Lamontagne, a strong federalist, promoted bilingualism and biculturalism and worked to strengthen the Liberal Party's base in Québec. After serving as president of the Privy Council and secretary of state in Pearson's Cabinet, 1963-65, he was appointed to the Senate in 1967.

ROBERT BOTHWELL

**Lamothe, Arthur**, film director, producer, editor (b at St-Mont, France 7 Dec 1928). Lamothe immigrated to Canada in 1953 and joined the NFB in the late 1950s as a researcher and writer. His first film was *Bûcherons de la Manouane*, a documentary made in 1962 about lumber camps. He soon left the NFB to start his own production company where he directed a full-length fictional film, *Poussière sur la ville* (1965), which was not a commercial success. Lamothe returned to documentaries, particularly those with a social perspective. In 1970 he produced for the Confederation of National Trade Unions a full-length film on the working conditions of construction workers. *Le Mépris n'aura qu'un temps* firmly determined the direction of Lamothe's future work: social and economic criticism designed to promote change. In 1973 he began work on *Carcajou et le péril blanc* (1973-76), a series of 8 films on the Montagnais culture and the first such film study to adopt the Indian viewpoint. He continued this theme in a more political series of 4 films, *Imu Asi / La terre de l'homme* (1979-80), and a more anthropological one of 3 films, *Mémoire battante* (1983).

PIERRE VÉRONNEAU

**Lampman, Archibald**, poet (b at Morpeth, Canada W 17 Nov 1861; d at Ottawa 10 Feb 1899). Lampman is by common agreement the finest of Canada's late 19th-century poets. After an attack of rheumatic fever at age 7, he was educated at home and then sent to a private school in 1870. He went to Trinity Coll School and finally to Trinity Coll, Toronto, graduating in classics in 1882. Lampman then joined the civil service in Ottawa and worked in the Post Office Dept until his untimely death. *Among the Miller*, his first book of poems, appeared in 1888, followed by *Lyrics of Earth* in 1895. His third

Archibald Lampman, generally considered the finest of Canada's late 19th-century poets, was at the height of his powers when observing and contemplating nature (courtesy Public Archives of Canada/C-68854).

book, *Alcyone and Other Poems*, was being readied for publication when he died; his friend and literary executor, D.C. SCOTT, edited a collection of his poems that included *Alcyone* in 1900. Along with Scott and William Wilfrid CAMPBELL, Lampman also contributed a weekly literary column, "At The Mermaid Inn," to the *Globe* in 1892.

Lampman was at the height of his powers when observing and contemplating nature. His habitual stance begins in watching, closely observing the details of a natural setting, and closes with a reverie, a dream in which the watcher and the scene momentarily coalesce. Though his favourite form was the sonnet, Lampman also wrote several longer narrative poems, including the apocalyptic "The City of the End of Things," which dramatizes his horror at mechanized, industrialized society. But Lampman's power and sensitivity are most effectively fused in sonnets such as "Heat" or "In November." Although the English Romantic influence, in particular that of Keats, is evident in his poetry, Lampman had the genius to create a distinctive voice recognizably his own. His acute powers of observation, along with his gift for immersing his meditations in a keenly perceived natural setting, distinguish his poetry as the most luminous 19th-century Canadian response to its own natural landscape. NEIL BESNER

**Lamprey**, group of primitive VERTEBRATES which together with HAGFISH and various extinct forms comprises the FISH class Agnatha. Lampreys have a cartilaginous skeleton and an eel-like body form. They lack scales and paired fins, but have 1 or 2 dorsal fins. Seven external gill openings appear on each side of the body, near the head. Development begins with a larval stage, the wormlike ammocoete, which has a life span longer than that of the adult. The ammocoete has a broad, hoodlike structure overhanging the mouth. Its principal food is microscopic algae. Eyes are rudimentary and hidden under the skin. For respiration and feeding, water enters the mouth and is extruded through the gill openings. At the onset of metamorphosis the ammocoete shrinks in length. In adults, water for respiration enters and exits only through the gill openings. Metamorphosed individuals acquire a sucking disc with horny teeth. They may be nonparasitic, lacking a functional intestine and not feeding after completion of meta-

morphosis; or parasitic, retaining a functional intestine and feeding primarily on the blood and body fluids of fish. Of the 37 Northern Hemisphere species, about 15 are parasitic. Non-parasitic species are confined to freshwater habitats. Although adults of certain species can live in salt water, all species spawn only in fresh water in specially prepared nests, and die shortly after. Before spawning, mature males and females shrink in length. Eggs are small (1 mm diameter); 1000-260 000 may be laid, depending on the length of the female.

Lampreys occur in both Northern and Southern hemispheres. About 41 extant species are known, as well as fossil forms dating from the Mississippian and Pennsylvanian (345-280 million years ago) in the US. Twenty-three species are found in N America, of which 21 are indigenous. Twelve species occur in Canada. Three N American species are very destructive to fisheries: Atlantic sea lamprey (*Petromyzon marinus*), 900 mm maximum length, spends some time in the Atlantic and becomes landlocked in the Great Lakes; Pacific lamprey (*Entosphenus tridentatus*), 690 mm maximum length, found in the West; and arctic lamprey (*Lententeron japonicum*), 625 mm maximum length, of arctic regions of N America and Eurasia. These species attack other fish, attaching themselves by their oral discs and sucking the blood and flesh of the host. In the Great Lakes, the Atlantic sea lamprey contributed to the decline of the lake trout and other fishes. The species always lived in Lk Ontario, but was first found in Lk Erie in 1921, apparently having passed through the Welland Canal, and was established in the Great Lakes by 1940. The Canadian and American governments have instituted a program to reduce the population. Although *Lampetra fluviatilis* is considered a delicacy in Europe, lampreys are little eaten in N America, except by natives of the West Coast. See also PARASITOLOGY.

VADIM D. VLADYKOV

**Lancaster, Ronald**, FOOTBALL player, coach (b at Fairchance, Pa 14 Oct 1938). He quarterbacked the Ottawa Rough Riders from 1960 with Russ JACKSON and was later traded to Saskatchewan (1963-78). In his 19-year playing career Lancaster completed 3384 passes for 50 535 yards and 333 touchdowns. He set 30 CANADIAN FOOTBALL LEAGUE records, was twice selected the outstanding player in the country, and 17 times led his team into the playoffs (and to 2 Grey Cup wins). His quick, analytic play and determination earned him the nicknames "little general" and "little assassin" — he is 178 cm tall. After retirement he was head coach of the SASKATCHEWAN ROUGHRIDERS (1979-80).

FRANK COSENTINO

**Lancaster Sound**, arm of BAFFIN BAY and major passage through the ARCTIC ARCHIPELAGO, 400 km long and some 100 km wide. It lies at the N end of BAFFIN I and is connected to Barrow Str on the W. As a result of the interaction of currents, the sound is rich in nutrients and supports a biologically varied community of birds, mammals and fish. It provides breeding grounds for some 3 million seabirds alone. The area has provided sustenance for INUIT cultures for thousands of years: ringed seals, walrus and polar

bears, and narwhals, belugas, killer and bowhead whales. Arctic fox is trapped in almost every inlet, and arctic char is taken at the mouths of rivers. European interest began in the 17th century, with the search for the NORTHWEST PASSAGE, and William BAFFIN was likely the first to discover the sound (1616). It was named for English navigator Sir James Lancaster (d 1618). WHALING became important at the end of the 19th century, and trading posts were established at Port Leopold, Button Pt, Albert Harbour, Arctic Bay, Pond Inlet and Dundas Harbour. Today, interest centres on geological evidence of petroleum, and on mining sites at Mary River (iron), Arvik (lead-zinc) and Nanisivik, where some 150 000 tonnes of lead-zinc are being taken. With ICEBREAKERS, the passage could be used year-round for local shipping and for tankers from the BEAUFORT SEA. Increased human activity threatens the area's wildlife, which is concentrated at a few sites and therefore highly vulnerable.

JAMES MARSH

**Land**, in LAW, is an area of the Earth's solid surface which is the property of an individual, group or state. Hence, the Canadian polity controls a total of 9 167 165 km<sup>2</sup> of land, and 755 165 km<sup>2</sup> of fresh water, for a total territory of 9 922 330 km<sup>2</sup>. In popular usage, "land" refers simply to the ROCK and SOIL that make up the solid part of the Earth's surface.

**Land Claims** are dealt with by a process established by the federal government to enable INDIANS, INUIT and MÉTIS to obtain full recognition of their rights under treaties or as the original inhabitants of what is now Canada (see INDIAN TREATIES; ABORIGINAL RIGHTS). At the core of the process is negotiation between native groups and the federal government, and in some cases the provincial and territorial governments and other third parties. The process is formally based on legal concepts such as land title and treaties, and is intended to make economic and social adjustments between 2 different societies.

**Historical Basis, 1763-1969** The Royal PROCLAMATION of 1763 reserved an unspecified area of what is now Canada for the use of Indians, and forbade any unauthorized purchase or possession of those lands by non-Indian settlers. The British government, followed after 1867 by successive Canadian governments, concluded treaties with various groups of Indian people to legitimate European settlement in their lands.

The gradual occupation of Canada by immigrants, with or without treaties, has continued for almost 400 years and has made the native people a small minority within an industrial nation. In some cases Indian bands that had concluded treaties have lost control of reserve lands, and in others the reserve lands promised according to treaty were not requested or allocated (see INDIAN RESERVES). Native people, many of whom had been nomadic, often found themselves isolated on reserves with little or no access to wildlife and no money, skill or natural resources to make a living from their reserves. For those Indians, Inuit and Métis who did not sign treaties or take reserve land, the impact of being surrounded or overrun by agriculture, industry, cities and "foreign" institutions has been similar to that on the treaty Indians. They have suffered the shock of great change in every aspect of their lives and in their homelands.

**Development of the Claims Process** Although native people have from the beginning struggled to maintain their identity, the "movement" for aboriginal rights and native claims which began for a few bands in the 19th century did not become prominent until the 1960s. Many factors contributed to the expression of native aspirations. Minority rights of all kinds and concern for the environment became worldwide causes. The search for new sources of oil, gas and hydroelectricity brought the native peo-

ple of the NORTH into the mainstream of Canadian life. At the same time, although an imposed education system threatened native languages and cultures, it also prepared young native people to enter and challenge the "white man's" political and legal system (see NATIVE PEOPLE, POLITICAL ORGANIZATION AND ACTIVISM).

Canada has been influenced by the treatment of claims and aboriginal rights in other countries. In 1946 the US government created an Indian Claims Commission and in 1971 legislated the Alaska Native Claims Settlement. Australia passed an Aboriginal Land Rights Act in 1976, and in 1980 Denmark granted home rule to Greenland. Proposals to establish a body similar to the US Indian Claims Commission in Canada resulted in the drafting of 2 bills, 1963 and 1965, which proved unsatisfactory to the Indian people and were never enacted. In 1969 the federal government appointed Lloyd Barber as commissioner of Indian claims to determine and recommend appropriate means of resolving native claims. Early in the 1970s the government set up a system of research funding for native political and cultural associations to enable them to document and organize their land claims.

In 1972 the Indians of Old Crow in the Yukon Territory presented a petition to Parliament concerning oil and gas exploration on their hunting grounds. In the *Calder* case in 1973 the Supreme Court of Canada split 3 to 3 in recognizing the aboriginal land title of the Nishga Indians of BC, and in the same year the Yukon Indian Brotherhood presented a formal claim to the federal government.

In 1973 Justice Morrow of the NWT recognized the aboriginal title of the Dene of the Mackenzie R Valley (see DENE NATION) and in 1973 Justice Malouf of Québec recognized the title of the CRÉE and Inuit of Québec. These decisions were later appealed and overturned, but they gave important weight to the native cause.

**The Process** On 8 Aug 1973 the federal government, wishing to clear the way for industrial development of the North and to improve the position of native peoples in Canada, announced a new policy for the settlement of native claims. The policy confirmed the responsibility of government to meet its lawful obligations through fulfilment of the terms of the treaties and to negotiate settlements with native groups in those areas of Canada where native rights based on traditional use and occupancy of the land had not been dealt with by treaty or superseded by law. The policy emphasized that the co-operation of provincial and territorial governments would be required. The Indian interpretation of "lawful obligations" was broader than that of the government, and the debate over the meaning of "lawful" as opposed to "legal" or purely technical obligations remains an obstacle to claims settlement.

In order to carry out the new policy, the Office of Native Claims (ONC) was created in 1974 within the Department of INDIAN AFFAIRS AND NORTHERN DEVELOPMENT. Under the leadership of an assistant deputy minister, negotiators, lawyers and researchers deal with 2 main types of claim: specific and comprehensive. Specific claims are based on problems arising from the administration of Indian treaties, the INDIAN ACT, Indian funds and disposition of Indian land. Although negotiation is the preferred course of action to settle these claims, settlement may also be reached by administrative remedy or court action. Specific claims are usually made by Indian groups living in the provinces, as opposed to the territories, and most settlements consist of compensation of land. Since 1973 there has been widespread Indian complaint about the limited basis of settlements offered by the government. In 1982 the federal government reaffirmed a commitment to settle claims,

Nellie Courneyea, after the signing of land claims agreement June 1984 (photo by Stanley Klenganberg/Inuvialuit Communications Society).

as outlined in the booklet *Outstanding Business*. Comprehensive claims are based on the traditional use and occupancy of land by Indians, Métis or Inuit who did not sign treaties and were not displaced from their lands by war or other means. These claims, which are settled by negotiation, involve the 2 territories and the northern parts of some provinces. The areas of land and the numbers of native people involved are usually greater than in the case of specific claims. Settlement of these claims comprises a variety of terms including money, land, forms of local government, rights to wildlife and rights protecting native language and culture. The federal government policy booklet, *In All Fairness* (1981), outlines its comprehensive claims policy. Various native organizations have also produced policy statements (eg, the Dene Nation).

The federal government provides funding in the form of contributions to native associations for the research and presentation of their claims. Once claims are submitted, lawyers of the Dept of Justice and officials of the ONC are supposed to determine whether or not the claims are acceptable according to government policy and law. If they are, additional funding is granted in the form of loans to the associations for further research and for negotiation. These loans must be reimbursed from the proceeds of the eventual settlements.

In 1980 the government appointed the first chief government negotiator from outside the public service to bring a fresh and more neutral perspective to the negotiation of comprehensive claims. These claims are now negotiated by such appointees, who work on contract, assisted by negotiating teams in the ONC.

**The Progress of Specific Claims** In Nov 1984, 87 specific claims, as defined by the ONC, had been filed or submitted to the federal government for review; 83 others had been accepted and were under negotiation; and 19 others had been settled. Many more claims are likely to be identified and put forward in the future. In BC, a number of Indian bands sought restitution for land that was "cut off" from reserves by the federal and provincial governments; several of these claims have been settled. In Alberta, Saskatchewan and Manitoba most of the claims concerned lands to which the Indians were entitled under various treaties but which were not fully allocated. In Manitoba several bands received benefits under the terms of the Manitoba Flood Agreement of 1978, concerning the effects of damming certain rivers flowing to Hudson Bay. A special Indian Claims Commission had been established in Ontario to facilitate the negotiation of claims there. Other specific claims had been accepted for negotiation in Québec, NS and NB. The claims of the Wagmatcook Band, NS, and the Oromocto Band, NB, were settled in Jan 1981 and Mar 1983, respectively, through negotiations.

**The Progress of Comprehensive Claims** Com-

prehensive claims cover about half of the total area of Canada. Problems include the differing powers and objectives of federal and provincial governments; the different legal status and goals of Indians, Métis and Inuit; the overlapping of native territorial claims; the divergence of native desire for independence and government's wish to exercise control; conflict caused by industrial development and political evolution in the North and constitutional changes in Canada.

By Nov 1984, 7 comprehensive claims had been filed or submitted for review (6 in BC, 1 in Nfld). Sixteen claims had been accepted for future negotiation (13 in BC, 1 in Qué and 2 in Labrador). Five claims were under negotiation (Council for Yukon Indians, all of Yukon Territory; Dene Nation and Métis Assn of NWT, Mackenzie R Valley; Tungavik Federation of Nunavut; Conseil Attikamek-Montagnais du Québec, east-central Québec; and Nishga Tribal Council, Nass R Valley, BC). Three claims had been settled and legislated (JAMES BAY and Northern Québec Agreement, settled Nov 1975; Northeastern Québec Agreement, settled Jan 1978; and Inuvialuit Final Agreement [see COPEL], settled June 1984).

**Recent Developments** During the decade of formal treatment of comprehensive claims, the circumstances that gave rise to the claims changed. Improved transportation and communication and the educational nature of the claims process itself modified the differences between native and non-native people. In the northern territories, native people gained effective political influence, and national economic conditions reduced both the scale of industrial development and native opposition to such development.

THE CONSTITUTION ACT, 1982, with its recognition of aboriginal and treaty rights, will have important implications for native claims, but the details have not yet been worked out.

KEITH CROWE

Reading: P. Cumming and N. Mickenberg, *Native Rights in Canada* (2nd ed, 1972); G. Dacks, *A Choice of Futures* (1981); R.C. Daniel, *A History of Native Claims Processes in Canada* (1980).

**Land God Gave to Cain, The**, was Jacques CARTIER's description of the N shore of the Gulf of St Lawrence, which he first sighted in 1534. Cartier was presumably alluding to Genesis 4, in which Cain, having killed his brother, is condemned to till land that is barren.

**Land Question, PEI** In 1767 the British government decided to allocate, prior to settlement, virtually all of PEI to proprietors who would become semi-feudal resident landlords paying annual quitrents to the Crown to finance the cost of governing and colonizing the island. Most proprietors remained absentees, their quitrents perpetually in arrears and their colonizing obligations unfulfilled. Soon after 1770, PEI residents sought to force the proprietors either to live up to their obligations or to surrender their land to those in actual possession. An attempt by Walter Patterson's island government to force the sale of land by distraint proceedings (seizure of property) in 1780-81 failed. The question had already taken on a circular quality it was never to lose. The island's elite insisted that the terms of the grants, which were quite unrealistic, be fulfilled or the land be forfeited, whereas the proprietors insisted that they could not fulfil the terms because the actions of the island's elite and government made any investment on the island insecure.

Escheat, the process by which unimproved lands would revert to the Crown and become subject to reallocation, became the rallying cry throughout the 19th century, although it shifted considerably in meaning. Under Edmund Fanning, lieutenant-governor 1787-1804, and his immediate successors, escheat implied little

more than the transfer of proprietorship from absentee to resident landlord. But the 1830 enfranchisement of Roman Catholics, most of them tenants, led to the emergence of a popularly based Escheat Party, which called for distribution of the land to those in actual occupation. The British government, ever protective of property rights, opposed escheat without compensation. Gradually the absentees were eliminated. By the 1880s most of PEI was owned by the small yeoman farmers in actual occupation. But resentment over the Land Question remained, particularly against Britain for its refusal to respect the popular will, and in some quarters against island governments which had acquiesced in the principle of compensation.

**Landform Regions.** *see* PHYSIOGRAPHIC REGIONS.

**Landlord and Tenant Law**, governed by provincial statutes and judge-made law, varies considerably from province to province. Essentially, a landlord and tenant relationship is contractual (*see* CONTRACT LAW). The tenant acquires an interest in land and the right to exclusive possession of defined premises. However, not every person permitted to occupy the premises of another is a tenant in the eyes of the law; for example, boarders or lodgers, who are not granted exclusive possession, would not qualify. Most leases are either for a fixed period, eg, 1 year, or for a periodic term, eg, from month to month. If the latter, the lease may be terminated by either party by giving appropriate notice (usually set out by statute). Leases do not have to be written, although in some provinces long-term leases must be in written form and signed by the parties. Many of the obligations owed by the landlords and tenants to each other defy precise definition; in the absence of express, agreed terms upon which they generally depend, the law will imply certain obligations. The tenant's primary responsibility is to pay rent; the landlord's corresponding obligation is to provide the premises to the tenant, together with the assurance that the tenant has the right to enjoy possession of the premises. Consequently, a landlord who interferes with this possession, even indirectly, eg, by permitting noxious fumes to seep into the rented premises, may be in breach of the lease agreement.

Within the last 20 years statutory reforms have greatly redefined the obligations of both landlords and tenants, but they have been primarily concerned with residential leases and have not greatly altered the existing law respecting commercial leases. They have tended to enhance the legal position of the tenant, and many new tenant rights cannot be altered by a contrary provision in the lease. In commercial tenancies, landlords are under no statutory obligation to keep the premises in good or even reasonable state of repair, but under the reforms the landlord of residential property must undertake all major repairs. The tenant's only obligation is to maintain the property in a reasonably clean condition and to use it suitably. Tenants have a right to assign or sublet the rented premises to others, unless the lease provides otherwise. Sometimes the tenancy agreement will require the landlord's consent to any assignment or sublease, in which case the landlord may not unreasonably or arbitrarily withhold consent. If a tenant violates the tenancy agreement by failing to pay rent or by abandoning the premises prior to the termination of the lease or in other ways, a landlord may sue the tenant to recover arrears of rent or damages. A landlord may sue to repossess the premises, in which case a court order may be necessary if the tenant does not consent.

M.M. LITMAN AND BRUCE ZIFF

**Landry, Sir Pierre-Amand**, lawyer, politician, judge (b at Memramcook, NB 1 May 1846; d

at Dorchester, NB 28 July 1916). He was the first NB Acadian Cabinet minister and Supreme Court judge, and the only knighted Acadian (1916). He articulated with Albert J. SMITH and practised in Dorchester. In 1870 he was elected MLA for Westmorland County. Defeated in 1874, he was re-elected in 1878 and in 1883, serving as commissioner of public works and provincial secretary. Elected MP for Kent County in 1883 and 1887, he carried Acadian support to John A. MACDONALD and lobbied for Acadians and for NB. In 1890 he was appointed a county court judge and was raised to the NB Supreme Court bench in 1893.

DELLA M.M. STANLEY

**Landscape Architecture** refers to the conscious modification and shaping of outdoor environments for human use. In the past, those who conceived and implemented landscape designs were trained in such diverse skills as horticulture, gardening, ARCHITECTURE, AGRICULTURE, SILVICULTURE and hydraulics. Although the field was generally regarded as horticultural, adoption by mid-19th century of the term landscape architecture was meant to convey the growing significance of both environmental concerns and professionalism in landscape design. Today's landscape architects are often involved in projects relating more to planning or URBAN DESIGN. While they continue to work extensively with plant materials and landform, they do so with regard to ecological considerations, resource conservation and the creation of outdoor spaces rather than simply for the aesthetic qualities of plants.

European and American influences have affected landscape architecture in Canada. Publications and immigrants from both countries were sources of ideas about gardening styles, park design, new-town planning, garden suburbs and city beautification. Americans were also influenced by British ideas, but they expanded the scope of landscape architecture beyond garden design to include large-scale planning. European and American landscape architects were brought to Canada to work on important projects such as the National Capital Region Plan, Mount Royal Park, the Niagara parks and numerous city planning schemes in the early 20th century. Since a university degree in landscape architecture was not offered in Canada until 1964, many Canadians went to the US to study and to work before returning to practise in Canada.

The work of early Canadian practitioners clearly indicates their varied origins and training. George Laing and Charles Woolverton came from an agricultural and horticultural tradition, as their gardenesque designs for large estates indicate. H. Dunnington-Grubb and his English wife Laurie were trained in the aristocratic traditions of the beaux-arts style, of which the Oakes Garden at NIAGARA FALLS is a surviving example. Others such as Gordon Culham, Frederick Todd, Humphrey CARVER and Carl Borgstrom were more concerned with social issues and the integration of nature into urban environments. The National Capital Region is probably the best example in Canada of the continuing influence of landscape architects in the design process, though the work done by Calvert Vaux at the Houses of Parliament no longer exists and that of Frederick Todd was never implemented as he had envisioned (*see* NATIONAL CAPITAL COMMISSION).

Since WWII, opportunities for landscape architects in Canada have greatly increased. Rapid urban expansion, economic growth and various government programs have meant more involvement in urban design, regional planning, and the design of recreational areas, housing environments and industrial sites (*see* URBAN AND REGIONAL PLANNING; ZONING). The Canadian Society of Landscape Architects was established in Toronto in 1934 and professional programs

at Canadian universities have been developed; both the society and the programs have encouraged landscape architecture that is better adapted to Canadian needs and conditions. Major projects such as EXPO 67, Don Mills, campus planning, urban open-space systems and Olympic development have helped to bring public recognition to the profession and establish its role in the environmental design process (*see* DEVELOPMENT INDUSTRY).

Landscape architecture involves economical and efficient use of land, together with a concern for its visual appearance and social purpose. Projects may range in scale and emphasis from detailed site design to comprehensive development plans. Though landscape architects work primarily on recreational, commercial and institutional projects, they are now becoming more involved in large-scale planning, landscape rehabilitation and reclamation, visual resources management and historic landscape conservation and restoration. These new specializations require additional training in environmental psychology, HERITAGE CONSERVATION, soils chemistry, and public-participation processes, although the basis of the profession continues to lie in an ethic of conservation and stewardship of the land.

The universities of Guelph and Manitoba and the PUBLIC ARCHIVES OF CANADA house important archival material relating to landscape architecture in Canada. Of particular interest are the J. Austin Floyd Papers at PAC and the collected drawings of H. Dunnington-Grubb at Guelph. Evidence suggests that landscape architects have worked in Canada since the early settlement period, but little is known about them or their works. Protection and restoration of some important examples of landscape architecture have been undertaken by Parks Canada (eg, MOTHERWELL HOMESTEAD, Sask), and other groups are also becoming increasingly active in preservation.

The first professional landscape architecture program in the world was established at Harvard in 1900. The first Canadian professional degree program was instituted at Guelph in 1964 and is available at both a bachelor's and master's level. The U of Manitoba offers a master's degree, and U of T, U de Montréal and UBC offer Bachelor of Landscape Architecture degrees. Diploma courses in landscape technology and architecture are available from several colleges and technical schools.

The Canadian Society of Landscape Architects deals with matters pertaining to maintenance of high standards of professional practice in Canada, including ethics, publicity, education and archives. In matters of licensing and registration, associations from each province (the Maritimes has a joint association) are the controlling bodies.

SUE DONALDSON

*Reading:* S. Buggey and J. Stewart, "Canada's Living Past: Historic Landscapes and Gardens," *OALA Review* 2 (Aug 1976).

**Landslide**, downward and outward movement of a soil mass that formed part of a slope. Although the term landslide often has a broad meaning, this entry is restricted to landslides in soils and excludes creep movements, falls and ROCKSLIDES. A landslide may occur with or without any apparent disturbance and involves a soil mass ranging from a few to several million cubic metres. Slope failure may occur within a few minutes or take several months or even years. Landslides occur in every province in Canada and in both natural and man-made slopes. Slope failures have been responsible for loss of life, destruction of property, reduction in property values, loss of productivity of agricultural and forested land, disruption of transportation systems and destruction of utilities.

The common landslide types (circular-arc failure and noncircular-arc or translational failure) can be analysed and the risk of failure cal-

culated. The major causes of slope failure are removing material at or near the base of a slope by natural erosion or human excavation; adding weight to the upper part of a slope by natural or human agencies; increasing the water pressure within the slope by rainfall or snow-melt, local irrigation or leaking sewer or water mains. Land-use studies in the design stages of a project can avoid or minimize subsequent landslide activity.

Clayey soils were deposited in the CHAMPLAIN SEA that invaded the St Lawrence and Ottawa River lowlands between 11 000 and 8000 years ago. These sediments are termed sensitive CLAYS and transform from a brittle soil to a viscous fluid when sufficiently disturbed. This transformation occurs quickly and with little warning. The remolded mass can flow for long distances. Thousands of landslides have been identified on air photographs. In 50 large, documented landslides in sensitive clays in eastern Ontario and Québec over 100 people have been killed and 40 000 ha of land destroyed. The South Nation River landslide (16-17 May 1971) occurred at a site 48 km E of Ottawa and involved nearly 28 ha. Debris from the failure was carried upstream and downstream, filling nearly 2.5 km of the riverbed to a depth of 11 m. At St-Jean-Vianney, Qué., another major landslide in the sensitive clay destroyed 27 ha and 40 homes, and killed 31 persons in 5 minutes (4 May 1971).

Landslides contribute to the retreat of the stiff clay bluffs along the N shore of Lk Erie and the Scarborough Bluffs E of Toronto on Lk Ontario. In Winnipeg, slope instability along the Red and Assiniboine rivers has been a problem for many years.

Over large areas of the western Canadian PRAIRIE, a thin veneer of late Pleistocene deposits rests on the soft rocks of Upper Cretaceous age. During deglaciation, some 10 000 years ago, rivers were diverted from their preglacial courses and rapidly eroded deep, steep-walled, post-glacial valleys (see GLACIATION). Geologic evidence indicates that the rivers have been eroding laterally for about the last 6000 years (see RIVER LANDFORM). This lateral erosion, which removes support at the base of the slopes, results in reactivation of ancient landslides and in many recent landslides. Because the soil strata are flat lying, the failed mass undergoes a dominantly translational movement. At a site on the South Saskatchewan River, S of Saskatoon, erosion at the toe of the slope is causing slope failure. Many similar cases have been documented in Saskatchewan and Alberta. A landslide, largely the result of toe erosion, is endangering the bridge across the Little Smoky River N of Valleyview, Alta. The bridge was completed in 1957; movement was noticed the following year. The distribution of landslides along major rivers in southern Alberta shows that clayey bedrock deposited in ancient marine seas is most prone to failure. Slope failures in Saskatoon appear to be caused mainly by erosion from groundwater seepage, augmented by lawn watering. In the Edmonton area, many landslides have been induced by human activity.

In the Vancouver area, the most common and destructive landslides are debris AVALANCHES and debris flows. These failures are triggered by heavy rains that saturate the surface layer of soil. As this saturated mass moves down the steep slopes, it gains volume and velocity. The major result is damaged and destroyed property near the base of the slope. Dikes were installed at Port Alice on Vancouver I to protect the town from debris flows such as those which occurred in 1973 and 1975.

In the PERMAFROST areas of the western Canadian Arctic, many landslides are caused by melting ground ice which is exposed by sea or river erosion or by the destruction of vegetation

on slopes by forest fires. The ice melts during summer and the overlying soil collapses and is carried away by the meltwater. The retreat of the top of the slope can amount to several metres per year.

S. THOMSON

**Landymore, William Moss**, naval officer (b at Brantford, Ont 31 July 1916). He joined the Royal Canadian Navy in 1936 and was promoted lieutenant in 1940. Landymore saw action in the Arctic, Atlantic and Pacific oceans during WWII and commanded the destroyer *Iroquois* off Korea, 1951-53. He was promoted captain in 1953 and held a series of posts until 1963 when, as rear admiral, he became flag officer, Pacific coast. In 1965 he was appointed officer commanding, Maritime Command, but a bitter public disagreement over unification led to his early retirement in 1966.

MARC MILNER

**Lane, George**, rancher (b near Des Moines, Iowa 6 Mar 1856; d at Bar U Ranch, near Pekisko, Alta 24 Sept 1925). Lane came to the Canadian West from Montana in 1883 and was hired as a ranch foreman by the North West Cattle Co. In 1891 he went into the stock business for himself and, with the 1905 purchase of the Bai U Ranch, became one of the largest ranchers in Alberta. Lane also developed one of the continent's outstanding Percheron breeding herds and was one of the "Big Four" who organized the first CALGARY STAMPEDE.

DAVID H. BREEN

Reading: David H. Breen, *The Canadian Prairie West* (1983).

**Lane, Patrick**, poet (b at Nelson, BC 26 Mar 1939). Lane began publishing himself and others in the 1960s when still leading a nomadic knockabout life in northern BC logging camps, small towns and mines, and his poetry has remained true to the ideals of brutal honesty and self-reliance. Important early collections were *Letters from the Savage Mind* (1966) and *Separations* (1969). There were also many chapbooks and broadsides published from wherever the poet happened to be at the moment and distributed to other poets. Such people constituted his primary readership until the publication by Oxford University Press of *Poems New and Selected* (1978, Gov Gen's Award). Lane's poetry at its most characteristic deals straightforwardly, yet with lush descriptive imagery, with man's rough treatment of his environment and of his fellow human beings. Several of his books are illustrated with his own graphic works. Lane is the brother of the near-legendary poet Red Lane (1936-64) and he edited the *Collected Poems of Red Lane* (1968).

DOUG FETHERLING

**Lang, Charles Benjamin**, industrialist (b at Thornton, Ill 17 Sept 1887; d at Montréal 23 Feb 1958). For 44 years Lang was an executive of the Dominion Steel and Coal Corporation (DOSCO), Maritime Canada's largest integrated steel producer. After working with the Brownell Improvement Co and several Chicago-area steel companies, Lang went to Montréal 1914 as manager of Peck Rolling Mills. By 1920 he was managing director. In 1930 he joined DOSCO as a vice-president. He had a sound knowledge of the steel industry and utter devotion to his company. In 1948 he became president of DOSCO and its subsidiary companies and was chairman from 1950 until he retired in 1957. The unexpected death of his successor as president obliged Lang to return to DOSCO at age 70. He died in office.

DUNCAN McDOWALL

**Langevin, André**, writer (b at Montréal 11 July 1927). His first 3 books made him one of the most celebrated novelists in Québec before 1960, first year of the QUIET REVOLUTION. These books introduced a new problematic into Québec letters, inspired by existentialism and Albert Camus's humanism; *Poussière sur la ville* (1953) is still the best known. With its sympathetic presentation of secular (rather than the tradi-

tional, church-dominated) culture and its tragic but nonpuritanical view of love, the novel foreshadowed value changes that have since become part of Québec. Two later novels had a more contemporary treatment, especially *L'Élan d'Amérique* (1972), which borrowed aspects of the French nouveau roman. *Une chaîne dans le parc* (1974) in some ways echoed *Évadé de la nuit* (1951), with its autobiographical themes. Langevin's novels are moving, packed with meaning and carefully written. All deal with man's vain efforts to escape fate, which sometimes wears the Christian face of an evil Providence. Langevin is also a playwright and columnist (notably in *Le Magazine Maclean*, 1961-69), dealing with culture, education and politics.

ANDRÉ BROCHU

**Langevin, Sir Hector-Louis**, lawyer, journalist, politician (b at Québec C 25 Aug 1826; d there 11 June 1906). He was admitted to the bar on 9 Oct 1850 and turned to journalism in 1847, becoming editor of *Mélanges religieux* and a contributor to *Journal d'Agriculture*; editor of *Le Courrier du Canada* in 1857; political editor of *Le Canadien* 1872-75; and owner of *Le Monde* in 1884. He began his political career as mayor of Québec C (1857-61) and was elected in 1857 to represent Dorchester County in the Assembly, serving as solicitor general for Lower Canada 1864-66 and postmaster general 1866-67. He was also head of the ST-JEAN-BAPTISTE SOCIETY in Québec C 1861-63 and of the INSTITUT CANADIEN 1863-64.

Langevin was a FATHER OF CONFEDERATION, defending Québec's interests at the CHARLOTTETOWN and QUÉBEC CONFERENCES in 1864 and at the LONDON CONFERENCE in 1866. After 1867 he represented Dorchester County in both Québec and Ottawa until dual representation was abolished in 1874. In Ottawa he was secretary of state and superintendent of Indian affairs in John A. MACDONALD's Cabinet 1867-69 and minister of public works 1869-73. He succeeded George-Etienne CARTIER as leader of the Québec wing of the Conservative Party 1873-91. He was implicated in the PACIFIC SCANDAL and did not stand in the next federal election. His return to active political life in 1876 was delayed by a contested election in Charlevoix, but in 1878, after a defeat in Rimouski County, he was elected for Trois-Rivières. Langevin had considerable influence in the Macdonald government following the 1878 election. He headed the post office 1878-79 and then public works 1879-91. Compromised by another scandal and linked to Thomas McGreevy's patronage, Langevin was forced out of the Cabinet after Macdonald died. He retired from politics in 1896.

ANDRÉE DESILETS

Reading: Andrée Désilets, *Hector-Louis Langevin* (1969).

**Langford, Sam**, "The Boston Tar Baby," boxer (b at Weymouth Falls, NS 4 Mar 1886; d at Cambridge, Mass 12 Jan 1956). Langford fought professionally in the lightweight, welterweight, middleweight and light-heavyweight ranks, finishing as a heavyweight. His best weight was just over 77 kg, though he retired weighing over 90.7 kg despite his 167 cm height. He has been considered one of the best half-dozen heavyweight boxers ever to fight, though he never fought for the world championship. He was denied a bout with champion Jack Johnson, because Johnson's management claimed that 2 blacks would not draw. Langford held the Welsh middleweight crown and the heavyweight championships of England, Spain and Mexico; he won the last despite being declared legally blind at the time of the 1923 fight. Canadian Press named him "Boxer of the Half-Century."

A.J. "SANDY" YOUNG

**Langley**, BC, District Municipality, pop 44 617 (1981C), inc city 1955, is located about 45 km E of Vancouver. FORT LANGLEY, an HBC post built 1829 and now restored, was BC's first capital. It

was named after HBC director Thomas Langley. Before the advent of the Trans-Canada Hwy in the early 1960s, the area had an economy based largely on agriculture; Langley City was its trade and service centre. Improved access and land suited for subdivision led to a residential construction boom. Large industrial estates have drawn numerous manufacturing and warehousing operations and made Langley a regional commercial and industrial centre. Enterprises include a distillery, cedar-products firm, machine shops and meat packers. Poultry productions, dairying, beef farming and berry growing are part of a thriving agricultural economy. Attractions include historic Fort Langley.

ALAN F.J. ARTIBISE

**Langstaff, Annie**, née MacDonald, feminist, legal scholar, aviatrix (b at Alexandria, Ont 1887; d at Montréal 29 June 1975). First woman graduate of McGill's professional schools and first woman graduate in law in Québec (first-class honours, 1914), she achieved notoriety as a result of litigation against the Québec Bar, in which she sought permission to take its qualifying examinations. Defeated, Langstaff returned as a para-legal in 1916 to the Montréal law firm of her sponsor and advocate, Samuel W. Jacobs. She wrote several articles on FAMILY LAW published in popular women's journals, as well as the unique *French-English, English-French Law Dictionary* (1937), and continued to agitate for the admission of women to law practice in Québec until it was achieved in 1942. Langstaff herself was never admitted to the bar. G.B. BAKER

Reading: M. Gillett, *We Walked Very Warily* (1981).

**Langton, Hugh Hornby**, librarian, editor, historian, translator (b at Québec C 29 Aug 1862; d at Toronto 30 Sept 1953), son of John LANGTON. Educated at U of T, he was the first full-time registrar of the university 1887-92 and its librarian 1892-1923. He established the library on a firm footing after the fire of 1890, and he developed the collection, staff, services, procedures and traditions from which the present system has grown. He also brought high standards to his role as the first general editor of the university's scholarly publishing program, 1897-1923, and as joint editor with George M. WRONG of the *Chronicles of Canada* (32 vols 1914-16) and of *The Review of Historical Publications Relating to Canada* (1897-1919), which at his initiative became the *CANADIAN HISTORICAL REVIEW*. After retiring in 1923 he continued to translate for the CHAMPLAIN SOCIETY, to edit and to write biographies. His last publication was an edition of journals and letters of his aunt Anne Langton, *A Gentlewoman in Upper Canada* (1950).

ROBERT H. BLACKBURN

**Langton, John**, first auditor general of Canada (b at Blythe Hall near Ormskirk, Eng 6 Apr 1808; d at Toronto 19 Mar 1894). Educated at Cambridge, he immigrated to Canada in 1833 where he established a farm near Fenelon Falls, Upper Canada. He represented Peterborough in the Assembly of the Province of Canada 1851-55. His grasp of administration led in 1855 to his appointment as first auditor for the Province of Canada. As auditor he established systematic and responsible accounting, and after Confederation he became the first auditor general of the Dominion. When the Treasury Board was founded in 1869 he was its secretary. From 1870 till his retirement in 1878 he was in the unique and somewhat anomalous position of being both auditor general and deputy minister of finance. As vice-chancellor of University of Toronto, elected in 1856, he pushed ahead with plans to convert a large part of the endowment into the University College building, a project he managed to get planned and completed within 3 years.

ROBERT H. BLACKBURN

**Language** is a term that covers a vast array of concepts best understood through a series of basic distinctions. Language is a form of communication — specifically, a communication system based on human sounds. There are several types of communication systems, which can be based on touch, scent, movement, colour, gesture and even the electrical impulses that pass through computers. A bee is able to communicate the location of nectar by performing a dance for other bees in the hive, just as the peacock can communicate by displaying brightly coloured feathers and strutting about. However, such forms of communication do not match the marvelous complexity of human language.

Linguist C.F. Hockett suggested that there are some universal features of human language that distinguish it from other forms of communication. Perhaps most important is "productivity," a feature implying that there are no limitations to what speakers can express through language. We can talk about anything; we are able, with no effort, to utter and understand sentences that we have never heard before. Hockett also noted that language is an arbitrary (or conventional) system: it does not matter what sequence of sounds is used to symbolize a thing or idea, as long as it is mutually agreed upon by the speakers in the community.

A user of language employs syntax (including word order), morphology (word roots, affixes), phonology (functional sounds) and prosody (intonation, stress, tone) in order to categorize things, events and ideas. What is expressed in one language by differences among words may be expressed in another language by differences in grammar or intonation. For example, in Classical Arabic, the notion "to cause" (as in "to cause to remember") is expressed by systematically modifying the verb form. In English, on the other hand, we use either a syntactic construction ("to cause to remember") or a completely different verb (eg, "to remind").

A further distinction within the concept of language should be made between natural and artificial languages. Some artificial languages were invented in response to a desire for a universal medium of communication. Esperanto, Novial and several hundred other artificial languages have been proposed over the past few centuries, but none of them has met with universal acceptance. Computer technology has brought about another kind of artificial language: FORTRAN, BASIC and COBOL are some of the codes with which humans can communicate with machines, but none of them is nearly as elaborate as a natural language. Natural languages have evolved within communities, some of them over many millennia; they are all based on human speech sounds, with the exception of sign languages (used by the deaf). An infant surrounded by individuals speaking a particular language will eventually learn that language just as he learns the behaviours expected of him by his family and community.

Only those who succeed in speaking a language to the satisfaction of a given linguistic group are eventually integrated into the group. It is as if the speech community were to say, "this person, who speaks like one of us, must be one of us." Language, even more than religion, social behaviour, dress, food or custom, is the most integrative and exclusive component of culture. As a living monument fashioned by countless generations of users it has encoded all that its speakers have considered important. It has also left uncoded that which was considered unimportant. For example, nomadic Canadian Inuit on the fringes of the Arctic seas had little interest in distinguishing different types of trees; what they needed were words to talk about snow. In some Inuit dialects, more than 50 words referring to ice and snow are in use. All cultures have words that reflect their needs.

**Language, Dialect and Register** It has been said that no 2 people, not even twins, speak the same language in exactly the same way. Every individual has an *idiolect*, yet the degree of individual difference cannot be such as to make mutual comprehension impossible. Groups of people who communicate frequently develop a common speech and a threshold of tolerance for individual speech differences. Consequently, people living in the same region are likely to speak in a similar way; ie, they speak the same *dialect*. Dialects have traditionally been described along 2 parameters, geographic and social. Just as people tend to speak in a manner similar to that of those living nearby, their speech usually resembles that of their socioeconomic peers. An example of a dialect based on social position is the British RP "received pronunciation", the "public school" accents of English as spoken by the people educated in the private schools of Great Britain. Language varies in degree of formality depending on the occasion and on the relative familiarity of the speakers. Thus everyone speaks a number of different *registers*. What is appropriate in speaking to a family member may not be acceptable to a group of strangers at a public meeting, and we adjust our speech accordingly.

**Languages of the World** Since the difference between adjacent speech communities is one of degree, there has not always been total agreement on what dialect belongs to which language, and in some cases there is debate as to whether a given dialect is, in fact, a separate language. This has influenced estimates of the number of languages there are in the world: counts have ranged from 3000 to about 8000. Recognition of a dialect as a language is a matter of circumstance. In the past, the dialect of the royal court, the capital city or the seat of national government was usually selected as a state's language (see ENGLISH LANGUAGE; FRENCH LANGUAGE). Today linguists seek more objective criteria (eg, mutual intelligibility) for recognizing a language. If 2 speech communities can understand each other they are commonly thought to speak dialects of the same language, whereas 2 communities using mutually unintelligible speech might claim to be speaking 2 different languages. This is generally the way in which distinctions are made today, although political boundaries still have an influence on linguistic classification.

Languages are grouped into families, a language family being a number of languages that have all developed historically from the same *protolanguage* (source language). There are a number of families in the world, including Sino-Tibetan, Afro-Asiatic, Uralic-Altaic, Austronesian and Uto-Aztecan. The languages of Canada's native people have been grouped into Algonquian, Athapaskan, Salishan, Wakashan and other families (see NATIVE PEOPLE, LANGUAGES). One of the world's largest and most widespread language families is Indo-European, whose members include English, French, Irish, Spanish, Romanian, Russian, Greek, Farsi (Persian), Armenian and Hindi. The English language belongs to the so-called Germanic branch of this family, as do German, Dutch, Yiddish, Danish, Icelandic and many others. French belongs to the Italic branch, which includes Italian, Latin, Portuguese, Spanish, Italian, Romanian and others.

**Language Change** Language differentiation is a function of time and space. When a group of people emigrates from its home community, the farther away it goes and the longer it remains isolated, the more different its language will become from that spoken in the area of origin. Although related languages may be mutually incomprehensible, it is possible, using techniques of comparative reconstruction, to establish sound-to-sound and word-to-word rela-

tionships — even if the groups have been apart for a thousand years or more. The same techniques that permit the identification of related languages also show how one language evolves into another. By comparing forms of the same word in documents of different dates, linguists have demonstrated, for example, the conditions under which the Latin of the Roman legions and their subjects developed into Spanish in Spain, French in France and Romanian in Romania. The process continues today, as the Haitian language clearly shows: on the early plantations of Haiti, the African slaves speaking mutually incomprehensible languages developed their own simplified version of the speech of their French-speaking supervisors; in a few generations, this creole developed into the national speech of all Haitians.

**Official Languages** A nation in which many languages are spoken may choose to do all its legal, administrative and other official business in one or more official languages. Canada, which has a great many languages as a result of both indigenous development and immigration, has adopted 2 OFFICIAL LANGUAGES, English and French. A language may be official according to 2 principles, the principle of territoriality and the principle of personality. According to the first, it is the individual who must accommodate to the language of the state. According to the second, it is the state that must accommodate to the language of the individual. The principle of territoriality was adopted for the first time in 1974 as the basis for Québec's Official Languages Act. By contrast, in 1969 both Canada and New Brunswick had formalized through their Official Languages Acts the application of the principle of personality in all dealings, in English or French, between the government and its citizens. See BILINGUALISM; DICTIONARY; ETHNIC LANGUAGES; LANGUAGES IN USE; LINGUISTICS; TRANSLATION WILLIAM F. MACKAY

**Language Policy**, official efforts to affect the relative status and use of one or more languages. Language policies of one sort or another have featured in human history from the earliest times. Latin was carried along with the military conquests of the Romans; French, once one of several dialects within France's borders, was deliberately developed as a unifying national tongue at Cardinal Richelieu's instigation.

In a strictly monolingual society, language policy is usually concerned exclusively with promoting an approved, standard grammar of the common language, but in Canada the term is more often associated with a multilingual situation where several languages are in contact or even in conflict. Language policy in Canada is designed to influence the relative use of the various languages in whatever ways are currently judged to serve the general interest. As those perceptions change over time, so does the consensus about what constitutes linguistic justice. Language policy is not a fixed law, but an evolving accommodation to changing linguistic circumstances and the social and political climate (see ETHNIC AND RACE RELATIONS).

**The History of Language Policy in Canada** Canadian language policy is the fruit of the historical relationships among various language communities. The national language debate has often focused on the use of English and French (see FRANCOPHONE-ANGLOPHONE RELATIONS), but both Canada's official languages were preceded by the languages of the Inuit and Indian races and succeeded by many other European and non-European languages (see NATIVE PEOPLE, LANGUAGES).

Of the 3.5 million inhabitants of the 4 original Canadian provinces in 1871, over 2 million were British in origin and over 1 million were French. By 1981, the proportion of those of British origin in the population had decreased sub-

stantially. Of 24 350 000 Canadians, 6.2 million claimed French as mother tongue; 15 million claimed English, and over 3 million claimed a language other than English or French. The English-speaking community is distributed fairly evenly across Canada, but French speaking Canadians are concentrated in Quebec, New Brunswick, Ontario and parts of Manitoba.

It may be assumed that the earliest language policy in the colonies resulted from the usual highly pragmatic and commercial decisions that characterize new contacts between language groups, eg, decisions about which of the available native or European languages best suited the task at hand. But as the confrontation between the 2 colonizing powers spread to N America, the stage was set for generations of conflict over language and the development of distinctively Canadian language policies. Since the concerns of Indian and Inuit languages were seldom given serious attention, the heart of the Canadian language question became the relative standing and sanctioned uses of English and French.

The terms by which French territory was ceded to the British in 1763 were, on the surface, unusually tolerant. Continued use of French by the French-speaking population was, in principle, enshrined in the QUEBEC ACT of 1774 and the CONSTITUTIONAL ACT, 1791. Whether this was prudent was warmly debated. The view that it was politically unwise to foster the coexistence of 2 major linguistic communities within a single state was expressed by Lord DURHAM, who argued to that effect in his report. Others argued that, because the French and English were effectively partners in the founding of the colonies and therefore of Canada, some degree of linguistic pluralism was inherent in a united Canada.

French in Canada, whether through official tolerance or native resilience, remained vigorous in many domains of public and private life. By consecrating some of the more institutional uses of French — in laws, legislatures and courts — the Act of Union (1841) and the BRITISH NORTH AMERICA ACT (1867) were in effect formalizing policies that had already taken root in the developing country. Parents' right to educate their children in English or French was not enshrined in the BNA Act, but the right to maintain denominational schools was, and has often been interpreted as a guarantee of the language of education.

If the French language held its own until Confederation, the next 50 years of Canada's expansion and modernization took a heavy toll both of the use of French and of the policies believed to support it. During the late 19th and early 20th centuries, several public Acts, such as the abrogation of official bilingualism in Manitoba in 1890 (see MANITOBA SCHOOLS QUESTION), the abolition of French schools in Ontario in 1912 (see ONTARIO SCHOOLS QUESTION) and the strict limitations imposed on French-language instruction in other provinces, were deliberately aimed at repressing the use of French. Moreover, because English was the language of N American commerce, the attractiveness of French tended to decline as the continental economy expanded.

By 1963, when the Royal Commission on BILINGUALISM AND BICULTURALISM was created by PM Lester Pearson, the relative status of the French language had declined to an unacceptable extent. The commission, asked to review and assess Canadian language policy, was primarily concerned with promoting a concerted federal-provincial response to what it called the "crisis" in English-French relations. It also had to take account of the fact that increasing numbers of Canadians no longer had any inborn allegiance to either English or French. Language relations had already entered a new era, but language policy lagged behind. The B and B

Commission found that French lagged behind English, eg, in the public service, to a politically and socially unacceptable extent. It urged that a "new charter for the official languages of Canada, a charter founded on the concept of equal partnership" be implemented by both the federal and provincial governments. In 1969, in response to the commission's recommendations Parliament passed the OFFICIAL LANGUAGES ACT, which was supported by all parties. In an ambitious program that followed, the federal government sought to improve its own capacity to deal with Canadians in the official language of their choice and to allow public servants to use either language at work.

Reaction to federal government reforms was often extremely negative. Besides overseeing federal efforts to comply with the Act, the Commissioner of OFFICIAL LANGUAGES (appointed 1969) and others have had to devote much energy to persuading Canadians that these reforms are necessary and just. Some provinces, eg, Ontario and New Brunswick, provide government services in both languages and have tried to implement their own language policies, particularly in regard to minority-language and second-language education.

The principles of the Official Languages Act and other important components of language policy were enshrined in the 1982 Constitution through the CANADIAN CHARTER OF RIGHTS AND FREEDOMS. The impact of the Act, particularly on the field of minority education, has been felt but it does not make federal and provincial policies complementary in every respect. Recent language-policy initiatives by the Quebec government appear to be based on the conviction that it is vital that the interests of the French-speaking majority be fully protected before significant concessions can be made to any other language group, including the English. In 1977 Quebec adopted the charter of the French language, BILL 101, making French the only official language within the province and strengthening its position as the most important language of work, commerce and community life. The right to choose English as the language of schooling has been restricted, as has the public use of any language other than French. However, as the use of French has become more firmly established, the provincial government has shown some willingness to relax these restrictions. New Brunswick has its own provincial Official Languages Act, parallel English and French school systems and legislation requiring equal government treatment of both language groups. In Ontario, home to the largest francophone population outside Quebec, the provincial government has not passed legislation guaranteeing equal status to French as an official language, although it has gradually expanded French-language services in those parts of the province where the majority of Franco-Ontarians live and has passed legislation making French an official language of courts. Manitoba, under the terms of its entry into Confederation (1870), formally recognized the use of French and English in its laws, its legislature and its courts. It failed, however, to abide by these provisions. Following a 1979 Supreme Court decision requiring reinstatement of institutional bilingualism, the province has been engaged in debating whether to comply retroactively with the Manitoba Act of 1870 or to devise a compromise that would attempt to give contemporary expression to the bilingual spirit of that fundamental law. The matter was submitted to the Supreme Court of Canada in 1984.

Language policy strongly influences EDUCATION POLICY across Canada. Many provinces, supported financially by the federal government, have extended and improved their minority- and second-language education programs (see SECOND-LANGUAGE INSTRUCTION). During

the 1970s and 1980s several provincial governments that had not previously done so took steps to provide primary and secondary schooling in French. In spite of recent developments, the English educational network in Quebec remains the most complete minority-language educational system in Canada. In English-speaking provinces the number of students enrolled in French immersion has increased dramatically, and English as a second language is still a compulsory subject for French-speaking children in Quebec through a large part of their elementary and secondary schooling.

There are over 100 languages spoken in Canada, and in some places people of non-English and non-French origin are more numerous than those of English or French extraction, a fact often ignored in the continuing struggle between English and French communities over power sharing. Some social services are available in languages other than English or French, but although Canadian governments officially endorse MULTICULTURALISM, they are vague about the rights and privileges to be accorded these other languages. Whereas the various Inuit and Indian languages are receiving some belated institutional recognition, the so-called "heritage" languages, brought to Canada from all over the world, only rarely enjoy a degree of official support, usually in the form of educational privileges. Some languages, eg, Ukrainian and German, are relatively well established in certain parts of Canada, but many others are maintained voluntarily, almost completely within the family or the community. No clear policy toward all Canadian language groups has been devised. See also ENGLISH LANGUAGE; FRENCH LANGUAGE.

MAX YALDEN

*Reading: Annual Report of Commissioner of Official Languages; C.A. Sheppard, The Law of Languages in Canada (1971); R. Wardhaugh, Language and Nationhood: The Canadian Experience (1983).*

**Languages in Use** Canada has 2 official languages (see ENGLISH LANGUAGE and FRENCH LANGUAGE), but the country's linguistic wealth is much greater. Beginning with the oldest languages, there are no fewer than 53 Indian and Inuit tongues, some of which seem to be disappearing. In 1981 only about 167 000 persons (0.7% of Canada's 24 million inhabitants), declared these languages as their mother tongue, compared to the 1971 figure of 180 000. According to the 1971 census, 25% of those claiming one of these languages as their mother tongue no longer used that language in the home, at least not as their main language. This is not a new phenomenon; in 1971 those whose mother tongue was an Indian or Inuit language comprised only 58% of those who stated that they were of the corresponding ethnic origin. Since "mother tongue" is defined as the first language learned in childhood and still understood, this figure means that the parents or ancestors of 42% of those with Inuit or Indian backgrounds had already abandoned their ancestral languages (see NATIVE PEOPLE, LANGUAGES).

The dominant languages in Canada — English and French — are those of the colonizers. In 1763, when New France was ceded to England, there were about 80 000 French and 20 000 English in the territory that is now Canada. Forty years later, the English were becoming dominant, and by the mid-19th century a state of equilibrium had been established. Although

Number of persons whose mother tongue (1981 and 1971) and home language (1971) were one of the 10 most widely spoken languages in Canada (Source: Canadian censuses, 1971 and 1981)

\* In thousands

the relative size of the language groups fluctuated in subsequent years, the balance remained fairly constant. Only since 1931 have Canadian censuses provided information on mother tongues for the country as a whole; for earlier periods it must be calculated from information concerning population distribution by ethnic origin. In 1871, however, there was probably not much difference between mother tongue and corresponding ethnic origin.

The table indicates that English representation has again risen almost to its 1871 level. French representation fluctuated between 27% and 31% until 1961, and has since decreased. The other language groups grew in relative size until 1931 but since then have declined. The explanation for these movements is very complex, but 2 factors appear primarily responsible — first, the arrival of immigrants who spoke languages other than English or French, which initially increased the size of the "other" group; and second (and more decisive in the long term), the adoption of English by the descendants of these immigrants.

The power of attraction of the English language is easily illustrated by information on the language usually spoken at home, provided for the first time by the 1971 census. When the number of persons with a given mother tongue is compared to the number of persons who use this language mainly in the home, the gains or losses of each language group become clearer.

English gained 1 472 000 but at the expense of the 2 other groups; French lost 248 000 and other languages, 1 225 000. The relative loss of the "other" languages was thus almost 44%. However, closer examination reveals that abandonment of that "other" language, especially in favour of English, is even greater. Among adults with "other" mother tongues, 80% of those born in Canada (40% if born abroad) generally speak a language other than their mother tongue at home. Of adults whose mother tongue is English and who were born in Canada, only 1% (3% if born abroad) do not generally speak English at home, while 8% of those whose mother tongue is French (20% if born abroad) do not generally use their French at home. The long-term ability of the other languages to survive thus appears to be very weak.

Some of these languages, however, are still quite strong. According to the 1981 census, each of 40 languages, other than English and French, is the mother tongue of at least 10 000 people; of these, 18 are spoken by between 10 000 and 25 000 people each; 9 by between 25 000 and 50 000 people; 5 by between 50 000 and 100 000 people; and 8 by between 100 000 and 530 000 people. Table 2 shows the number of people whose mother tongue in 1981 and 1971 was one of these last eight languages, as well as the number of those using mainly these languages in the home (home language) in 1971.

Comparison of the numbers for mother tongue and home language in 1971 reveals the losses

suffered by all these languages (except English), and particularly by German, Ukrainian, Dutch and Polish.

A distinction does exist between Québec and the rest of Canada. In Québec, 98% of Francophones keep their mother tongue all their lives; this is also the case for 90% of Anglophones (about 10% have adopted French as their home language), and for about 70% of persons with other mother tongues. Yet in Québec, which is over 80% French-speaking, about 66% of immigrants who have chosen to learn one of the 2 official languages have chosen English (although this may alter as a result of the effects of BILL 101). In the rest of Canada, the situation is more clear cut; almost all Anglophones keep their language; almost all non-English-speaking people who abandon their language choose English; and about 40% of adults with French as their mother tongue speak mostly English at home. In 1976, 94.6% of Anglophones (home language) lived outside Québec; on the other hand, 84.8% of all Francophones lived in Québec. The percentage of Anglophones in Québec (14.7% in 1971) will probably be between 9% and 12% by the year 2000; that of Francophones in the rest of Canada (only 4.4% in 1971) between 2.5% and 3.5%.

Official Languages (%)

Known	1931	1951	1961	1971
English	67.5	67.0	67.4	67.1
French	17.1	19.6	19.1	18.0
English and French	12.7	12.3	12.2	13.4
Neither	2.7	1.1	1.3	1.5
Total	100.0	100.0	100.0	100.0

English-French bilingualism is not very widespread. It is especially prevalent, though, among mother-tongue Francophones and Anglophones living in Québec. For Canada as a whole, 7% of those with English as their mother tongue and 46.2% of those with French as their mother tongue are bilingual. In Québec the figures are 44.9% and 37.8%, and for the rest of Canada, 4.4% and 88.8%.

Here we find another aspect of English language dominance in Canada: while the majority of Anglophones in Québec can ignore the French language, the same is not true for Francophones in other provinces with respect to English. It is conceivable, however, that fewer and fewer Anglophones will be able to live exclusively in English if they wish to remain in Québec.

**Languirand, Jacques**, dramatist, essayist (b at Montréal 1 May 1931). In the 1950s and 1960s he was Canada's most important exponent of the theatre of the absurd, having been much influenced by playwrights in vogue during his stay in Paris, 1949-53. Several of his dramatic texts were performed on radio in Montréal before his first stage play, *Les Insolites*, which was performed in 1956 (pub 1962) and awarded the prize for best Canadian play at the Dominion Drama Festival. Other successes were *Les Grands*

*Départs* (1958) and the musical comedy *Klondyke* (1970). Although his plays focus on the isolation of the individual in a modern society bereft of traditional values, they failed to attract Québec audiences after the onset of the QUIET REVOLUTION. Languiand has since abandoned theatre in favour of more esoteric pursuits in works such as his mystical *La Voie initiatique* (1978) and *Mater Materia* (1980).

L.E. DOUCETTE

**Lansdowne, Henry Charles Keith Petty-Fitzmaurice, 5th Marquess of**, politician, governor general of Canada 1883-88, viceroy of India 1888-93 (b at Lansdowne House, London, Eng 14 Jan 1845; d at Clonmel, Ire 4 June 1927). Henry was educated at Eton and Balliol Coll, Oxford. He entered the Lords as a Liberal and served as a lord of the Treasury 1869-72, as undersecretary for war 1872-74 and, after Gladstone's Liberals returned to power in 1880, as undersecretary of state for India. A model governor general, he presided over the turbulent political period of the NORTH-WEST REBELLION without incident. Soon after he arrived in Canada he organized the despatch of the NILE EXPEDITION. Lansdowne seemed to regard his Canadian years as a respite from the more arduous duties of British public life.

CARMAN MILLER

**L'Anse Amour Burial Site**, located on the Str of Belle Isle coast of southern LABRADOR, was occupied between at least 5500 and 2000 BC by Maritime ARCHAIC Indians who used the area for fishing and hunting harp seals and walrus. The earliest known portion of the site consists of a burial mound which has been radiocarbon dated to between 5500 and 5000 BC. The mound, 8 m across and covered with large boulders, protected an empty burial cist of upright slabs extending one metre below the surface; ½ metre farther below was found the skeleton of an adolescent child covered with red ochre and accompanied by several stone and bone spearpoints and knives, a walrus tusk, harpoon head, ivory carving and bone whistle. It is estimated that the burial ceremony must have involved at least one week's labour for the local hunting band. L'Anse Amour site is the earliest mound burial of this type known at present anywhere in the world. See also ARCHAEOLOGY; PREHISTORY.

ROBERT MCGHEE

**L'Anse aux Meadows**, the first authentic Norse site found in N America, is located on the northern tip of Newfoundland's Great Northern Peninsula. Newfoundlander William A. Munn suggested in 1914 that Norse landings had occurred on this spot, but remains were not discovered until 1960 when the Norwegian explorer and writer Helge Ingstad and his wife, archaeologist Anne Stine, searched the area. The site was excavated by Anne Stine, 1961-68, and by Parks Canada, 1973-76. The Norse remains consist of 3 building complexes, each comprising a large dwelling and associated workshops. Finds show evidence of ironworking and carpentry, the first known iron smelting in the New World. Distinctive artifacts include a bronze pin, a spindle whorl, sewing tools and broken wood objects. Building types, artifacts and radiocarbon dates indicate an occupancy of short duration between 990 and 1050 AD. The site also contains evidence of Groswater, Maritime ARCHAIC and DORSET occupations predating the Norse, and several Indian occupations ranging in date between 900 and 1600 AD. Since 1977 L'Anse aux Meadows has been a National Historic Park administered by Parks Canada. The site was declared a UNESCO World Heritage Site in 1978. The modern settlement (UP, pop 66 by the 1981 census) was first a French fishing station; in 1835 William Decker, an English seaman, founded the fishing and sailing community which since 1977 has derived most of its employment from the park. See also NORSE VOYAGES.

ARCHAEOLOGY; PREHISTORY B. L. WALLACE

**Lapalme, Georges-Émile**, politician (b at Montréal 14 Jan 1907). Leader of the Québec Liberal Party 1950-58, he left his mark as a reformer of the party and thus helped prepare it for its role as catalyst of the QUIET REVOLUTION. The Liberal member for Joliette-L'Assomption in the federal House of Commons, 1945-50, he was afterwards the Liberal member of the Québec Assembly for Outremont 1953-66. He served as deputy premier 1960-64 and attorney general 1960-63, but his greatest contribution was as the first minister of cultural affairs 1961-64. As such, he supervised the creation of the department and was responsible for the actions of the Québec state in cultural matters. After retiring from active political life he was first chairman of the CANADIAN FILM DEVELOPMENT CORP in 1968 and headed the Commission des biens culturels. He published his memoirs 1969-73.

DANIEL LATOUCHE

**Lapointe, Ernest**, politician, (b at St-Éloi, Qué 6 Oct 1876; d at Montréal 26 Nov 1941). Educated at Rimouski Coll and Laval, he was called to the bar in 1898 and practised law in Rivière-du-Loup and Québec City. He was elected Liberal MP for Kamouraska in 1904. In 1919 he shifted to Québec E, the former riding of Sir Wilfrid LAURIER, which he represented until his death. Lapointe was a little-noticed backbencher in his early years, but the burly, slow-moving member learned English and gradually won respect for his sound judgement and unswerving loyalty to the party. In Laurier's last years he was the most prominent among the younger French Canadian members, and led the debate on the controversial ONTARIO SCHOOLS QUESTION. Under PM Mackenzie KING, Lapointe was minister of marine and fisheries (1921-24), minister of justice (1924-30, 1935-41) and, more importantly, was recognized as King's Québec lieutenant and his most influential adviser. He shared King's commitment to Canadian autonomy, accompanied him to the Imperial Conference of 1926 and chaired the Canadian delegation in the discussions that led to the STATUTE OF WESTMINSTER in 1931. In domestic affairs he was identified with the low-tariff wing of the Liberal Party and with provincial autonomy. As minister of justice he disallowed some of ABERHART's Social Credit legislation in Alberta because of its encroachment on the federal sphere. He did not disallow DUPLESSIS's PADLOCK ACT, despite its threat to civil liberties, because he believed DISALLOWANCE would strengthen Duplessis's political position in Québec. In 1939 Lapointe's prestige, coupled with his guarantee that there would be no CONSCRIPTION for overseas service, was instrumental in winning French Canadian support for Canadian participation in WWII. His intervention in the Québec provincial elections of Nov 1939 contributed to Duplessis's defeat and the election of a more co-operative Liberal government under GODBOUT. Under Lapointe's leadership, Québec was a federal Liberal stronghold, a pattern that survived long after his death in 1941.

H. BLAIR NEATBY

**Lapointe, Paul-Marie**, writer, journalist (b at St-Félicien, Qué 22 Sept 1929). His unique synthesis of a surrealist heritage and a profoundly N American outlook, along with the richly imaginative nature of his writing, make him one of Québec's greatest poets and among those with the widest influence and audience.

After studies in Chicoutimi and at the École des beaux-arts in Montréal, he published *Le Vierge incendié* (1948), a piercing and violently surrealistic collection, just when Paul-Émile BORDUAS and his friends put out their REFUS GLOBAL manifesto. He then was silent for 12 years while pursuing a career in journalism. He was with *L'Événement-Journal* 1950-54, *La Presse* 1954-60, was information officer with the short-lived *Nouveau Journal* 1963, and then was

editor-in-chief of *Le Magazine Maclean* 1963-68, before joining Radio-Canada where he became programming director for radio. Lapointe published *Choix de poèmes: Arbres* (1960) and *Pour les âmes* (1964), which were republished in 1971 along with *Le Vierge incendié* in his retrospective *Le Réel absolu* (Gov Gen's Award). His poetry was relatively unaffected by the 1960s nationalism, but is imbued with rebellion and sensuality, is close to nature, and shot through with a keen awareness of Western history. His works have been translated for various anthologies and foreign magazines and in 1976 won the prize of the International Poetry Forum in the US. Other collections, including *Tableaux de l'amoureuse* (1974) and *Écritures* (1980), have joined this exclusively poetic body of work.

PIERRE NEPVEU

**Laporte, Pierre**, politician (b at Montréal 25 Feb 1921). Kidnapped by the FRONT DE LIBÉRATION DU QUÉBEC on 10 Oct 1970, he was killed on Oct 17 and his body was found in St-Hubert, Qué. Originally a journalist and parliamentary correspondent for *Le Devoir*, 1945-61, he was one of Premier MAURICE DUPLESSIS's fiercest opponents. He was elected Liberal member for Chambly in a 1961 by-election and served as minister of municipal affairs 1962-66 and cultural affairs 1964-66 during the Jean LESAGE administration. Defeated as a candidate for the Québec Liberal Party leadership in 1970, he held the posts of minister of immigration and of manpower and labour in Robert BOURASSA's government until his death. His murder intensified the OCTOBER CRISIS and was the federal government's justification for imposing the WAR MEASURES ACT.

**Larch** is the Lat name for CONIFERS of genus *Larix* of the PINE family (Pinaceae). All 10-12 species of *Larix* grow in the Northern Hemisphere; 3 in Canada. Tamarack (*L. laricina*) is a small tree of cold, wet areas from eastern BC to the Atlantic provinces. Alpine larch (*L. lyallii*) occurs at high elevations in southern BC and Alberta. Western larch (*L. occidentalis*) is a large tree of southern BC and southwestern Alberta. Larches are slender, with straight, gradually tapering trunks and narrow, irregular crowns. Larches are the only Canadian deciduous conifers, turning golden and shedding their leaves in fall. The leaves are needlelike, soft and borne in clusters on dwarf twigs. The cones are 1-4 cm long and composed of smooth scales and pointed bracts (modified leaves). Western larch is the most important timber-producing larch. Tamarack is used for pulp. Tannin, for tanning leather, can be extracted from the bark of the larch. JOHN N. OWENS

Eastern larch, or "tamarack" (*Larix Laricina*), with young fruit (pink) and older cones (artwork by Claire Tremblay).

**Lark**, common name for small songbirds of the primarily Old World family *Alaudidae*. Larks inhabit open country and are ground dwelling. Characteristically, they run or walk, rather than hop. The hind claw is long and sharp; wings are long and pointed. Both sexes are similarly coloured, mainly in subdued browns, which blend with their usual surroundings; young are spotted. Many larks have elaborate, impressive flight songs. Of the world's 75 species, 2 occur in Canada. The horned lark (*Eremophila alpestris*) is a native, holarctic species found throughout Canada. Fond of open expanses, it breeds across prairies, arctic and alpine tundra and sea coasts, even in airports, cultivated fields and pastures. In settled areas, horned larks eat quantities of weed seeds and insects. Although migratory, larks begin nesting before the snow disappears (late Mar). The female constructs the nest, a grass-lined cup dug into the ground, and incubates 3-6 eggs. Horned larks winter from southern Canada southward, congregating in loose flocks. The Eurasian skylark (*Alauda arvensis*), introduced in 1902-03, is now resident on southern Vancouver I. The population remains low and has spread little. The skylark's song is immortalized in English poetry and prose. The MEADOWLARK is not a lark. PHILIP S. TAYLOR

**Larkin, Peter Anthony**, zoologist, educator (b at Auckland, NZ 11 Dec 1924). Educated at U Sask and at Oxford (Rhodes scholar), he joined the faculty of UBC, where he has served as head of zoology, dean of graduate studies and, since 1980, VP of research. Larkin has exerted great influence on the development of policies for natural resource management, both in Canada and abroad, particularly in fisheries. He has also made many original scientific contributions in fish biology, ecology and in the mathematical modelling of biological systems, and he was a founder and director of the Institute of Animal Resource Ecology at UBC.

**Larose, Ludger**, painter (b at Montréal 1 May 1868; d there 13 Nov 1915). Like many other painters of his day, Larose studied art under Abbé Chabert. In 1887 he left for France where he studied in Delauney's studio at École des beaux-arts, Paris; he subsequently studied with Gustave Moreau and Jean-Paul Laurens. In Rome, around 1891, the young Larose received his first design award. He also made a copy of the famous Raphael painting, *Disputa del Sacramento*, which hangs in the Stanza della Segnatura in the Vatican. His copy was destined for the Sacré-Coeur chapel of Notre-Dame de Montréal. Later, in Paris, he produced 6 more large canvases for this same chapel. Returning home 1894, he taught design at the École normale du Plateau in Montréal until 1910. From 1912 until his death, he taught painting at Westmount Public School. He died after a bout of typhoid fever at age 47, leaving behind some 380 portraits, still lifes and landscapes. MICHEL CHAMPAGNE

**Larsen, Henry Asbjorn**, mounted policeman, seaman, explorer (b at Fredrikstad, Norway 30 Sept 1899; d at Vancouver 29 Oct 1964). He went to sea in a square-rigger at 15; inspired by the career of his countryman Roald Amundsen, he dreamed of exploring the Arctic. After a voyage to the Beaufort Sea he became a Canadian citizen in 1927, and in 1928 joined the RCMP. He was assigned as first mate to RCMP schooner *St. Roch* on her maiden voyage to the western Arctic in 1928; later that year he was made skipper, a position he retained until 1948. Under Larsen, called by the Inuit "Hanorie Umiarjuag" or "Henry with the Big Ship," the *St. Roch* patrolled the Canadian Arctic coast, often wintering in the North. The first ship to traverse the NORTH-WEST PASSAGE from W to E (1940-42), it was the first to make the passage in both directions (1944); later it was the first ship to circum-

Captain Henry Larsen, who was called Hanorie Umiarjuag ("Henry with the big ship") by the Inuit, is shown aboard RCMP patrol schooner *St. Roch* in the Arctic (courtesy Public Archives of Canada/C-70771).

navigate N America (1950). Larsen retired with the rank of superintendent in 1961.

Reading: Henry Larsen, *The Big Ship* (1967).

**Laser** (light amplification by stimulated emission of radiation), device used to generate high-intensity light. Unlike light from conventional sources, which is emitted incoherently (ie, light waves are unsynchronized or scattered) and over a range of frequencies, laser light is coherent (waves move in unison) and monochromatic (of a single colour/frequency). The frequency of the light emitted is determined by the nature of the atoms and molecules making up the laser medium. The maser is a similar device that emits coherent radiation at microwave frequencies. The 3 major components of a laser are the laser medium, an optical cavity for producing feedback (eg, pairs of mirrors), and a means of exciting the laser medium, thereby increasing the energy level (excitation) of the constituent atoms and molecules (eg, a flash lamp).

**Types** Maser emission was first demonstrated in 1954 by J.P. Gordon, H.J. Zeiger and C.H. Townes at Columbia University. Arthur L. Schawlow, a graduate of University of Toronto, and Townes proposed a technique for obtaining laser emission in a paper published in 1958. Operation of the first laser was reported by American physicist Theodore Maiman in 1960. This device had a ruby crystal medium.

The first gaseous laser, demonstrated in 1960, used a mixture of helium and neon as the laser medium and had an output power of 15 milliwatts. In 1960 John C. POLANYI, working at University of Toronto, suggested a new type of laser based on the exchange of molecular vibrational energy in a gas. In 1964 this suggestion led to the development by C.K.N. Patel of the carbon dioxide laser, which operates in the infrared. Carbon dioxide lasers are the most powerful CW lasers available at present with outputs of up to 100 000 W. An important advance in carbon dioxide laser technology, made in 1970 by A. Jacques Beaulieu, a scientist at the Defence Research Board laboratory in Valcartier, Qué., allowed these lasers to operate efficiently under pulsed conditions and has resulted in many new industrial applications for these devices.

**Applications** Lasers are widely used in many areas of technology. In industry the high power and narrow beams available have led to applications in materials forming, joining, ma-

chining, heat treating and marking. Lasers are extensively used in the manufacture of semiconductor elements and devices (see MICROCHIPS). The monochromaticity of laser radiation has opened up new areas in chemistry, through the use of laser radiation to modify chemical reactions and separate isotopes. In COMMUNICATIONS, lasers are used as optical transmission links, often through optical fibres. The science of holography, the generation of 3-dimensional pictures, has expanded with laser development. In medicine, lasers are routinely used in eye surgery and, in the case of the carbon-dioxide laser, as a scalpel in various surgical techniques. Optical lasers, used to read the digital information on compact discs, have revolutionized the home audio industry. The ability of a laser to project a beam of light over vast distances has resulted in the use of lasers for REMOTE SENSING of atmospheric pollutants. Several studies are proceeding in which very high-power lasers are being used in an effort to achieve NUCLEAR FUSION. See PHYSICS.

W.W. DULEY

**Lash, Zebulon Aiton**, lawyer, civil servant, businessman (b in Nfld Sept 1846; d at Toronto 24 Jan 1920). Called to the Bar of Upper Canada in 1868, he joined the federal Dept of Justice in 1872 and was deputy minister 1876-82. In this period the department assisted in defining the central government's powers by reviewing provincial legislation and frequently recommending DISALLOWANCE. The department also played a key role in the colonization of the PRAIRIE WEST. Lash administered the MANITOBA ACT to encourage maximum dispersal of the MÉTIS, thus freeing over 1.2 million ha for Ontarians. He then entered private practice in Toronto with Edward BLAKE and developed many links with business, especially firms with interests in the West. Lash was also a leading imperial federationist. His publications include *The Banking System of Canada* (1907) and *Defence and Foreign Affairs* (1917).

D.N. SPRAGUE

**Laskin, Bora**, lawyer, judge (b at Fort William [Thunder Bay], Ont 5 Oct 1912; d at Ottawa 26 Mar 1984). After graduating from U of T (BA 1933, MA 1935), Laskin received an LLB from Osgoode Hall in 1936 and an LLM from Harvard in 1937. Called to the Ontario Bar in 1937, he taught law at U of T from 1940 to 1945, Osgoode Hall from 1945 to 1949, and returned to U of T from 1949 to 1965. He was appointed QC in 1956, to the Ontario Court of Appeal in 1965, and a puisne judge in the Supreme Court of Can-

Bora Laskin, chief justice of Canada (1973-84), was well known as a civil libertarian and a brilliant legal scholar (courtesy National Film Board/Photothèque).

ada in 1970. Named chief justice of Canada in 1973, he died in office. Known throughout his career as a civil libertarian and as a brilliant legal scholar, especially in constitutional and labour law, he was author of *Canadian Constitutional Law* (1963) and *The British Tradition in Canadian Law* (1969).

FREDERICK VAUGHAN

**Lasnier, Rina**, poet (b at St-Grégoire d'Iberville, Qué 6 Aug 1915). She studied at the Collège Marguerite Bourgeoys, Montréal, and at U de M. Her first publication was *Féerie indienne* (1939), a religious play followed by several others: *Le jeu de la voyageuse* (1941), *Les fiançailles d'Anne de Noüe* (1943), *Notre-Dame du Pain* (1947). Her predominant interest lies in poetry and in the renewal of its forms and themes. After *Images et proses* (1941) and *Madones canadiennes* (1944), in which prose poems accompany pictorial equivalents, Lasnier published *Le Chant de la montée* (1947), a Biblical meditation upon the human antecedents of the Incarnation. *Escapes* (1950) demonstrates the richness and complexity of her mature poetic style. After travelling in Europe (1953-54), she published in 1956 *Présence de l'absence*, which symbolically expresses inner conflict and sorrow. *Miroirs* (1960) consists of autobiographical prose texts while *Mémoire sans jours* (1960) envisions poetic creation as an arduous submarine quest. Much recognition has come her way, including the Prix Duvernay (1957), the MOLSON PRIZE (1971), the Prix France-Canada (1973) and The Prix David (1943). Her symbolic vision continues to unfold through her work of the 1960s and 1970s: *Les Gisants* (1963), a meditation on death and eternity; *L'arbre blanc* (1966), dramatizing the poetic vocation in today's Québec; *La Salle des rêves* (1971) with its measured response to the intuitions of psychology. Her poetry was collected in *Poèmes I et II* (1972), but she has published many works since that time, including *L'invisible* (1969), *Le Rêve du quart jour*, (1973), *Amour* (1975), as well as the prose poems *L'Échelle des anges* (1975), *Les Signes* (1976), *Matin d'oiseaux* (1978), *Paliers de paroles* (1978), *Entendre l'ombre* (1981) and *Voir la nuit* (1981), in which she continues to probe for the unity that may lie beyond sensory experience.

EVA KUSHNER

**Latin Americans** are among the most recent cultural groups to arrive in Canada. According to unofficial figures released by several community agencies there are about 200 000 people of Latin American extraction now living in Canada.

**Origins** Most historians and sociologists studying Latin America have generally done so from a colonial Spanish and Portuguese perspective; as a result, Latin Americans see themselves as a product of the Spanish conquest in the 16th century, and as a consequence the history of the region is wrongly considered to have begun with the Spaniards' arrival in the new world. The Inca, Aztec and Maya civilizations are merely looked upon as "prehistory." The region's culture, however, is a mixture of European elements (primarily Spanish, Portuguese, but also Italian, German and Dutch) and native elements. There are 19 countries in Latin America.

**Migration** The first wave of Latin American immigrants arrived in Canada between 1970 and 1973. (Official figures show that Canada's total Latin American population was less than 3000 before 1970.) The influx of Latin Americans (some 68 000) in the early 1970s can be partly attributed to Canada's "open door" IMMIGRATION POLICY. From 1969 to 1972 it was possible to arrive in Canada as a tourist without a visa and later apply for landed immigrant status from within the country. At the same time, due to a growing demand for labourers willing to perform jobs with low social status (see IMMIGRATION), Canada relaxed its immigration requirements.

Argentinian immigrants, who before 1970 had arrived at a rate of 200 yearly, numbered 948 in 1973, 1088 in 1974 and 674 in 1975. The vast majority of Chilean political REFUGEES emigrated to Canada by way of Argentina after the overthrow of the Allende regime. From 1963 to 1973, only 2135 persons were recorded as emigrants from Chile; by 1976, 4600 had immigrated to Canada as part of the Special Chilean Movement initiated by the Canadian government. During the early 1970s about 20 000 Ecuadorians in search of a better life emigrated to Canada, primarily to Montréal and Toronto. Since the beginning of 1982 several hundred Central Americans have arrived as refugees.

**Settlement Pattern** Most Latin Americans settled originally in the downtown areas of Toronto and Montréal. But since industry, and above all light manufacturing requiring semi-skilled workers, is located in the suburbs of Toronto and Montréal, the need to live near their work forced many Latin Americans to move to some of the more isolated neighbourhoods.

Hundreds of Latin American families have migrated west, mostly to Alberta, in search of work. There are now Latin Americans settled in all provinces and territories.

**Economic Life** The service industry, light industry manufacturing and the garment industry are the areas of employment to which Latin Americans gravitate. There is a perceptible shift, over time, from lower skilled jobs obtained upon arrival to positions requiring greater skills. With the growth and stabilization of the Latin American community in the late 1970s and early 1980s, a number of its members have entered occupations such as insurance, real estate, restaurants and travel agencies. Also, a growing number of professionals and academics, mostly from Chile and Argentina, have now revaluated their qualifications in Canada and are entering their professional fields of expertise.

**Social Life and Community** The social life of Latin Americans is centered around community activities and family gatherings. Clubs regularly hold dances and sporting events. These mutual-aid clubs serve to maintain group ties and keep cultural heritage alive. Latin American associations include the Centre for Spanish-Speaking Peoples in Toronto and the Latin Association de Sud Américanos in Montréal.

The community is not divided by class or income (although a small number of professionals and executives see themselves as a separate group) but rather by nationality. Chileans have formed organizations such as the Winnipeg Chilean Association, which has committees for education and culture, finance, women and social welfare. In Toronto and Montréal, The Ecuadorian-Canadian Soccer League holds weekly matches.

The biggest challenge so far for the Latin American community seems to be the newly gained independence of women. Feminist self-assertion, which comes from living in a more liberal N American environment, is a constant source of contention between Latin American couples.

**Religion and Cultural Life** Although most Latin Americans are baptized as Catholics, many do not consider themselves practising members of the church. In Canada this separation has been reinforced because of the absence of social pressures and the opportunity to engage in alternative activities.

Spanish-language newspapers, 2 of which are published in Toronto, one in Vancouver, and others in Calgary and Edmonton, serve the Latin American community in Canada. Theatre presentations, poetry recitals and art exhibits are becoming more frequent in the community. Dozens of folkloric groups, both dance and mu-

sic, are very active. Several Latin American writers, poets, painters and journalists are becoming known in Canada.

**Education** In 1970, in the combined school systems of Toronto and Montréal, there were 342 students from Latin America. By 1980 their number had climbed to 9738. The number of students in Canadian universities and technical colleges who claim Spanish as their mother tongue increased from 67 in 1970 to 583 in 1980. Largely because of emotional and behavioural problems, many Latin American children and parents experience difficulty in their adjustment to Canadian schools. The parents' own difficulties in adjustment and the problem of communication with the school are the major barriers to happy, successful schooling.

**Group Maintenance** Latin Americans, even those who, as political refugees, may have hoped to return to their countries of origin, have become increasingly involved in Canadian life. Many, as they succeed in Canada, may suffer the loss of their language and some isolation from their communities.

WILSON RUIZ

Reading: Wilson Ruiz, *The Latin American Community Survey* (1982).

**Latter Rain Movement**, see NEW RELIGIOUS MOVEMENTS.

**Latulippe, Rose**, one of many girls in French Canadian tradition who were supposed to have danced with the devil, some to survive, others to be carried off and never to be seen again. Rose Latulippe neglected her fiancé, Gabriel, in favour of a handsome stranger whose horse breathed fire and who had claws inside his velvet gloves. Just as the devil tried to put his own necklace around her neck to bind her to him, the local parish priest (curé) rushed in, placed his stole around her shoulders and put the devil to flight, restoring Rose to her fiancé. Such stories were prevalent as sanctions against dancing, particularly during Lent or on Sundays.

NANCY SCHMITZ

**Latvians** Latvia is a small country situated on the eastern shore of the Baltic Sea. Established as an independent state after WWI, Latvia was occupied by the Soviet Union in 1940, by the Nazis 1941-44 and then again by the Soviet Union. In 1945, 110 000 Latvians who had fled to western Europe were classified as displaced persons. Of these, 14 911 eventually emigrated to Canada.

The first Latvians (mainly farmers) to arrive in Canada were refugees from Tsarist Russia in the 1890s. They settled primarily in Manitoba and Alberta, although during the GREAT DEPRESSION many sought work in eastern Canada. The Canadian census of 1941 lists only 975 Canadians of Latvian origin, but by 1981, 18 515 Canadian residents claimed Latvian ancestry. Of these a majority reside in Ontario, particularly in Toronto, which has become the centre for almost all Latvian cultural, social and political life in Canada.

A very high percentage of post-WWII Latvian immigrants are professionals, eg, doctors, engineers and lawyers. They have been able to integrate into Canadian society with considerable success. The majority of Latvians belong to the Lutheran Church, although there are Baptists and Roman Catholics among them.

All sizable Latvian centres have their own congregations and professional and social organizations. The activities of these local groups are co-ordinated by the Latvian National Federation in Canada, headquartered in Toronto. The Latvian community also supports 10 Latvian-language Saturday schools.

The most spectacular demonstration of the Latvian culture is the song festival, dating from the 19th century. The tradition has been transplanted to N America. The one-week festivals

(massed choirs, symphony concerts, recitals, folk dancing, theatre performances and exhibits of fine arts and handicrafts) are held at 2- or 3-year intervals in Toronto and the US alternately. J. MEZAKS

**Laure, Carole**, stage name of Carole Champagne, later Carole Lord, actress, singer (b near Montréal 5 Aug 1949?). She studied for a career as a concert pianist and made her theatre debut in an experimental piece by Pierre Moretti called "Equation pour un homme actuel" and acted in the musical comedy "Demain Montréal m'attend" by Michel TREMBLAY. In 1973 she starred in Gilles CARLÉ's *La Mort d'un bûcheron* (1973). Her career has since paralleled that of Carle with whom she has made 6 films, including *La Tête de Normande St-Onge* (1975), *L'Ange et la femme* (1977), *Fantastica* (1980) and *Marie Chapdelaine* (1983). Her performance in *La Menace* opposite Yves Montand led to her role in *Préparez vos mouchoirs* (*Get Out Your Handkerchiefs*) directed by Bertrand Blier and Joyce Bunuel's *La Jument vapeur* (*Dirty Dishes*). Laure has recorded 2 record albums in France and once took the extraordinary step of taking over the Bobino Theatre in Paris to sing songs created especially for her by Lewis Furey.

Film actress Carole Laure in the 1983 film *Marie Chapdelaine* (courtesy Canapress).

**Laurence, George Craig**, nuclear physicist (b at Charlottetown 21 Jan 1905). Educated at Dalhousie and Cambridge (under Ernest RUTHERFORD), Laurence became the NATIONAL RESEARCH COUNCIL's radium and X-ray physicist in 1930, when J.A. GRAY's pupils at Queen's constituted the only Canadian laboratory for atomic physics. Most of the early NRC work was developing medical and industrial radiology, but in 1939-40 Laurence attempted, virtually alone, to build a graphite-uranium atomic reactor in Ottawa. In 1942 he joined the Anglo-French atomic research team in Montréal that built the ZEEP reactor, the first outside the US, at Chalk River in 1945, and served in the Canadian delegation to the UN Atomic Energy Commission (1946-47). Laurence then became a senior scientist at the CHALK RIVER NUCLEAR LABORATORIES and president of the Atomic Energy Control Board (1961-70). DONALD J.C. PHILLIPSON

**Laurence, Margaret**, née Jean Margaret Wemyss, novelist (b at Neepawa, Man 18 July 1926). She was educated in Neepawa and at United College, Winnipeg, and married Jack Laurence, a hydraulic engineer, in 1947. In 1949 they moved to England and later to Somaliland and Ghana where he worked as a dam builder with the British Overseas Development Service. Their 2 children were born in 1952 and 1954.

Margaret Laurence's novel *The Stone Angel* (1964) was a landmark event for Canadian literature, setting the town of Manawaka firmly in Canada's imaginative landscape (photo by Doug Boulton).

In 1957 the family moved from Ghana to Vancouver, and in 1962 Margaret Laurence and the children moved to England, settling in the village of Penn in Buckinghamshire. Margaret and Jack Laurence were divorced in 1969, and in 1974 Margaret Laurence returned to live permanently in Lakefield, Ont.

From age 7 she wrote stories; though she wrote throughout high school and college and worked after graduation for the *Winnipeg Citizen*, a labour daily, her first work for publication did not occur until the Somaliland years. In 1954 the British Protectorate of Somaliland published *A Tree for Poverty*, her translations of Somali folktales and poetry. Africa transformed Laurence from an idealistic young western liberal to a mature woman who saw at first hand the problems of emergent nations, empathized with their peoples and read deeply in their history and literature. Her first published fiction was a story, "Uncertain Flowering," published in a Whit Burnett anthology for 1954; it was followed by the stories set in Ghana published in various journals and gathered into *The Tomorrow-Tamer* in 1963. *This Side Jordan*, her first novel, was set and drafted in Ghana and published in 1960. All her African fiction reflects a determined apprenticeship to writing and a burgeoning talent based on a passionate belief in the dignity and potential of every human being.

Back in Vancouver she revised her memoirs of the Somaliland years, published as *The Prophet's Camel Bell* (1963), and then turned her attention to Hagar Shipley, who had developed in her imagination out of her prairie background. *The Stone Angel* (1964), the story of Hagar's last journey towards recognition of love and freedom, was a landmark event for Canadian literature and the keystone of Laurence's career. It set the town, Manawaka, firmly in Canada's imaginative landscape and pointed the way for the works to follow. *A Jest of God* (1966) is the story of Rachel Cameron, who, through the ordeal of one summer in Manawaka in the 1960s, finds a fragile but sustaining selfhood. Seven of the 8 stories of *A Bird in the House* were published from 1962 onward; with the addition of an 8th they were gathered together and published in 1970. The maturing of Vanessa MacLeod, their heroine, is based on Margaret Laurence's own experiences. The deaths of her own parents, the changes caused first by loss and grief and then by the practical circumstances of her life are present in Vanessa's story, not in correspondence of detail, but in truth of spirit. Stacey Mac-

Aindra of *The Fire-Dwellers* (1969) is Rachel Cameron's sister. Married to a struggling salesman, living in Vancouver and mother of 4, Stacey is the beleaguered housewife of our time. She thinks of herself as commonplace and ordinary, but Laurence's great achievement is to reveal to us her extraordinary qualities of love, fortitude and vitality. *The Diviners* (1974), the story of writer Morag Gunn, is true in its spirit to Laurence's own maturing and is the climactic work of the Manawaka cycle. A complex and profound novel, it brings the Scottish pioneers and the Métis outcasts of Manawaka together and culminates in the joining of past and present and the affirming of the future in the person of Pique, the daughter of Morag and Jules Tonnere.

From time to time Margaret Laurence has found refreshment in writing children's books. *Jason's Quest* (1970) is a joyfully inventive tale about a mole and his friends, its essence a confrontation between the forces of darkness and light. *Six Darn Cows* (1979) is a carefully crafted story for very young readers, and *The Olden Days Coat* (1979, rev 1982) is a magic Christmas story. *A Christmas Birthday Story* (1980) is the retelling of a work first written when her own children were very young. In 1968 Margaret Laurence's continuing interest in African literature was expressed in *Long Drums and Cannons*, her tribute to the upsurge of Nigerian writing in English between 1958 and 1964. In 1976 she collected and introduced a group of her occasional essays, *Heart of a Stranger*. Margaret Laurence is much beloved and has been honoured in Canada and abroad, where her works are widely translated. She served a term as chancellor of Trent University in Peterborough, she is also active in many causes for world peace. CLARA THOMAS

**Laurendeau, Joseph-Edmond-André**, journalist, politician, playwright, co-chairman of the royal Commission on BILINGUALISM AND BICULTURALISM (b in Montréal 21 Mar 1912; d at Ottawa 1 June 1968). A lifetime French Canadian nationalist, he helped prepare the way for Québec's QUIET REVOLUTION by redefining nationalist aspirations for an urban and industrial society. After completing his classical education at Collège Sainte-Marie in Montréal, he pursued graduate work in literature and history at the U de M where he came under the influence of Abbé Lionel Groulx. After a brief sojourn in the separatist youth mouvement, Jeune-Canada, André Laurendeau spent 2 years in France, 1935-36, taking courses at the Sorbonne, the Collège de France and the Institut Catholique. While in Europe he came to embrace the social CATHOLICISM and the personalism of Emmanuel Mounier, Jacques Maritain and Étienne Gilson. He returned home critical of the concept of political independence for the French Canadian nation but determined to reorient FRENCH CANADIAN NATIONALISM toward socioeconomic issues. As editor of ACTION NATIONALE, 1937-43, he attempted to pursue this goal.

In 1942 he joined forces with other nationalists to create the Ligue pour la défense du Canada to fight for a "no" vote in the Apr 1942 plebiscite called by Mackenzie King over CONSCRIPTION for overseas service. Following the success of the league — over 80% of French Canadians voted no — a nationalist third party was created in the fall of 1942. The BLOC POPULAIRE fought against the threat of conscription and demanded greater equality for Francophones in the federal system. Laurendeau was selected provincial leader of the Bloc in Feb 1944 and was one of the 4 Bloc members to win election to Québec Assembly in 1944. He denounced the centralist economic and social policies of the federal government and called upon the Union Nationale regime of Maurice Duplessis to make provincial autonomy meaningful by

implementing long overdue socioeconomic reforms.

In 1947 he resigned from the party, then close of *Le Devoir* where GÉRARD FILION was editor and publisher. At the same time he was editor of *L'Action nationale* again 1948-54, and became editor in chief of *Le Devoir* in 1958. Along with his nationalist colleagues, Filion, Jean-Marc LÉGER and Pierre LAPORTE, he fought the politically and socially regressive regime of Duplessis, and turned *Le Devoir* into an effective forum for criticism. Laurendeau called for a redefinition of traditional French Canadian nationalism to reflect more clearly the problems and aspirations of an overwhelmingly urban and industrial society. This neo-nationalism was adopted by the Québec Liberal Party of Jean LESAGE prior to the 1960 provincial election in which the Union Nationale was defeated.

Fearing the political and economic implications of the rise of SEPARATISM in Québec after 1960, Laurendeau called upon the DUFFENBAKER and the PEARSON governments to investigate the crisis in Québec-Ottawa relations. PM Pearson responded by creating in 1963 the B & B Commission with Laurendeau and Davidson DUNTON as co-chairmen. Until his premature death in 1968, Laurendeau pursued diligently, but with a growing sense of despair, the challenge of finding a long-term solution that would provide a constitutionally entrenched equality for the French Canadian majority of Québec and the francophone minorities outside Québec. His fellow commissioners, reflecting the divisions within Canadian society at large, could not come to terms with the constitutional implications of linguistic duality and cultural pluralism, and thus the final volume of the Report never materialized. The country did respond to the crisis by making room for French Canadians at the federal level through the OFFICIAL LANGUAGES ACT.

In addition to his other work, Laurendeau was a radio and TV personality, and wrote articles, TV dramas, a play, *Deux femmes terribles* (1961), and a novel, *Une Vie d'enfer* (1965). He was a member of the Royal Soc of Canada and the Académie canadienne-française.

MICHAEL D. BEHIELS

**Laurentia**, the name given by geologists to a land mass that, between 600 and 500 million years ago, embraced eastern N America, most of Europe and much of Asia. Writers have also used the word "Laurentia" as their name for a utopian Québec. Jules-Paul TARDIVEL set his futuristic novel *Pour la Patrie* (1895; trans *For My Country*, 1975) in the "Laurentian Empire," a state separate from Canada. Lionel GROULX in 1937 defined his "Laurentia" as a separate French, Catholic state. The Latin name is that of Saint Lawrence, the Christian martyr burned to death by the Romans in AD 258. It was on St Lawrence's feast day, Aug 10, that Jacques CARTIER in 1535 named after the saint a bay he discovered; the name was later applied to the river.

JOHN ROBERT COLOMBO

**Laurentian Highlands** are part of the plateau and dissected southern rim of the Canadian SHIELD in Québec. Viewed from the valleys of the Ottawa and St Lawrence rivers, the S-facing escarpments of the Shield give the appearance of mountains 500-800 m high; looking across the plateau, the relief is more moderate and subdued. These scarps mark the dramatic southern edge of the highlands. Although the other limits are less well defined, the highlands may be considered to extend 75-150 km northward from the scarps and to stretch from the Gatineau R in the W (mean elev 400 m) some 550 km to the SAGUENAY R in the NE. Here they attain their maximum elevation N of Québec City in the Parc des Laurentides (1200 m). Individual summits rise above the plateau surface: Mont Sir

Wilfrid (783 m) and Mont Tremblant (968 m) in the W, Mont Ste-Anne (815 m) at Québec, Mont Raoul-Blanchard (1166 m), Mont Bleu (1052 m) and Mont des Conscrits (1006 m) in Parc des Laurentides. Cap Tourmente (579 m) and Mont des Eboulements (770 m) are dramatic examples of the scarp face as it drops precipitously to the St Lawrence R.

The 1000-1700-million-year-old rocks of the Shield are mostly metamorphosed granites and gneisses in this area. They have been faulted, uplifted and eroded. The ice of the Pleistocene glaciation (1 million years ago) scraped the plateau surface bare in many sections, but elsewhere deposited rock, sand and gravel as moraines, resulting in a disrupted drainage system with many lakes and youthful rivers. The ice also overdeepened the valleys that lead southward from the Shield, the most dramatic of which is the fjord of the Saguenay R (500 m cliffs and 600 m depths). When the ice sheets finally melted (about 10 000-20 000 years ago) many of these valleys were partially filled by sands, gravels and other outwash material carried by the meltwaters. Postglacial uplift and continued downcutting by past and present rivers have resulted in the formation of terraces and plains along the river valleys. The resulting local relief of 300-600 m along these valleys adds to the ruggedness and scenic beauty of the highlands. The Rivière ST-MAURICE, flowing from the large GOUIN RESERVOIR on the Shield some 520 km to the St Lawrence at TROIS-RIVIÈRES, is one of the largest rivers, but the Nord at ST-JÉRÔME and the Montmorency and Jacques Cartier, flowing from Parc des Laurentides to the St Lawrence E of Québec, must also be noted.

The southern limits of the vast boreal forest of subarctic Canada cover most of the highlands. Black and white spruce, balsam fir, tamarack, poplar and white birch are the dominant tree species. Along the southern edge of the plateau and in the valleys these mix with white pine and deciduous species common to the ST LAWRENCE LOWLAND — sugar maple, beech, hemlock. These forests attracted the early explorers and settlers from the lowlands for hunting, trapping and eventually for forestry. Lumbering became a major industry and many species of trees were cut and floated down the numerous rivers to sawmills. These were located near rapids or falls where the rivers left the Shield or joined the Ottawa or St Lawrence rivers. Hull and LACHUTE at the mouths of the Gatineau and Nord rivers and Grand-Mère and Trois-Rivières on the St-Maurice are typical. As technology advanced and rivers were harnessed for electricity (SHAWINIGAN, 1899) the lumber mills were joined by other industries such as textiles at Lachute and St-Jérôme and pulp-and-paper mills and chemicals at Shawinigan and Grand-Mère.

The valleys leading from the Shield tempted some hardy, early settlers who, pressed by the scarcity of unoccupied farmland on the lowlands, tried to develop an agricultural base. An early wave in the mid-1800s of Irish and other European immigrants were partially successful in the lower valleys. A second wave of French settlers, inspired by Father LABELLE in the late 1800s, initiated several colonization schemes. St-Jérôme, founded in 1840, became the springboard for the push up the Nord and Rouge valleys. The railway (Petit Train du Nord) reached STE-AGATHE in 1892 and a first period of success occurred. The podzolic soils and the humid, cool continental climate proved unsuitable for agriculture, however, and within 2 generations most of this marginal land was abandoned. The farmers found work in the forest industries, which stretched even farther N in search of marketable trees, and in the industries and mills along the rivers.

The physical environment that was hostile to agriculture was ideal for recreation, a fact recog-

nized by some of the colonists. As early as 1894 Ste-Agathe and the surrounding hills, lakes and streams attracted summer and, by the 1920s, winter tourists. Vacationers from the cities, not only nearby Ottawa, Montréal and Québec, but also from the US, began a seasonal migration. Tourists of all ages and incomes flock to the resort areas and family cottages throughout the highlands. The federal and provincial governments established nature and recreational parks to protect the natural environment and provide extensive areas for outdoor recreation. Gatineau Park N of OTTAWA-HULL, Mont Tremblant Park near St-Jovite, La Mauricie NW of Grand-Mère and Laurentides between Québec and Lac SAINT-JEAN offer a wide variety of hunting (moose, deer, grouse) and fishing (trout, perch, pike), camping, swimming and sailing. Winter sports include downhill and cross-country skiing, skating, snowshoeing and snowmobiling. Extensive modern road networks, particularly the Laurentian Autoroute N from Montréal (built in the late 1960s), provide rapid access to such centres as St-Sauveur, Ste-Agathe and Mont Tremblant and, near Québec City, MONT STE-ANNE.

R.N. DRUMMOND

**Laurentian Thesis**, an influential theory of economic and national development set forth by several major English Canadian historians from the 1930s through the 1950s. The theory received its most sustained and sophisticated expression in the writings of Donald CREIGHTON, especially *The Commercial Empire of the St. Lawrence* (1937). Creighton argued that Canadian economic and national development derived fundamentally from the gradual exploitation of key staple products — fur, timber and wheat — by colonial merchants in the major metropolitan centres of the ST LAWRENCE R system. That system provided the means by which both a transatlantic and a transcontinental market economy could be created. In stressing the connection with the metropolitan capitals of Europe, Creighton undermined the CONTINENTALISM implicit in American historian Frederick Jackson Turner's *Frontier Thesis* while emphasizing environmental factors. In Creighton's view, the 1885 completion of the CANADIAN PACIFIC RAILWAY marked an extension of the potential for national development inherent in the St Lawrence system. Creighton's theory was derived in part from the STAPLE THEORY advanced by H.A. INNIS, particularly in *The Fur Trade in Canada* (1930), in which Innis emphasized the importance of European linkages and determining environmental factors.

The Laurentian thesis, given complete expression by Innis and Creighton by 1940, was a major influence on historians writing after WWII. It was not, however, without critics. In a 1946 address called "Clio in Canada: the Interpretation of Canadian History" (published in *University of Toronto Quarterly*), W.L. MORTON warned of the potential for cultural and regional exploitation inherent in the expansion of central Canadian commerce and institutions, nevertheless accepting as historical fact, here and in *The Kingdom of Canada* (1963), the development made possible by the Laurentian waterway. J.M.S. CARELESS's *Canada: A Story of Challenge* (1953) also built upon the theory, although Careless paid closer attention to regional differentiation and metropolitan influence (see METROPOLITAN-HINTERLAND THESIS).

Since 1960 the Laurentian thesis has received much scholarly debate, particularly (as Morton warned) because it rests upon imperial exploitation and control over regional hinterlands. With the regionalization of the historical profession, and with the rise of a SOCIAL HISTORY sensitive to regional and class exploitation, most recent discussion has been critical; nevertheless, even under attack it continues to be the mechanism of

historical synthesis against which all others must compete as a means of explaining Canadian history.

**Laurentian University**, Sudbury, Ont., was founded in 1960; instruction is in both French and English. Laurentian U dates from 1913 when the Roman Catholic Collège du Sacré-Coeur was established in Sudbury. In 1957 it became University of Sudbury. In 1960 and 1963, respectively, representatives from the new Huntington U (United Church) and Thorneloe U (Anglican) joined in a nondenominational federation with the university. Each church-affiliated university provides a college for Laurentian. Nipissing College in North Bay, Collège de Hearst in Hearst, and Algoma College in Sault Ste Marie are also members of the Laurentian federation.

**Laurier, Sir Wilfrid**, lawyer, journalist, politician, prime minister of Canada (b at St-Lin, Qué 20 Nov 1841; d at Ottawa 17 Feb 1919). As leader of the LIBERAL PARTY 1887-1919 and PM 1896-1911, Laurier was the dominant political figure of his era. A skillful and pragmatic politician with a charismatic personality, he unceasingly sought compromise. Above all, he was a fervent promoter of national unity at a time of radical change and worsening cultural conflict.

After obtaining his law degree from McGill in 1864 and practising in Montréal, Laurier went in 1866 to live in L'Avenir and then Arthabaska, Qué, where he ran the newspaper *Le Défricheur*. Upholding the position of the radical PARTI ROUGE, Laurier, a former vice-president of the INSTITUT CANADIEN in Montréal, vigorously opposed CONFEDERATION. In 1871, when the Catholic Church in Québec led by Bishop BOURGET was ferociously attacking the Rouges and liberalism, he became the Liberal member for Drummond-Arthabaska in the Québec legislature. His lack of interest in regional questions led him to resign in 1874 and, reconciled to Confederation, he was immediately elected a Liberal member to the House of Commons of Canada. Thus began an uninterrupted stay of some 45 years in Ottawa. In Oct 1877, some months after giving a vigorous speech in Québec City in defence of political liberalism, he was appointed minister of inland revenue in Alexander MACKENZIE's Cabinet. The most prominent Liberal of his province, Laurier became the recognized leader of the Québec wing of the party. But his party's defeats in the elections of 1878 and 1882 meant a curb to his ambitions, though he himself was re-elected in Québec-Est, and he took less interest in political debate. In 1885 his ardour was aroused by the hanging of Louis RIEL and he vigorously defended the cause of the Métis leader and the need to unite the French and English in Canada. In 1887 Edward BLAKE, disappointed by the recent electoral defeat, chose Laurier to succeed him as leader of the Liberal Party, despite the opposition of several eminent Liberals.

Sir Wilfrid Laurier, 7th prime minister of Canada, 1896-1911, speaking at Sorel, Qué, 1911 (courtesy Public Archives of Canada/C-16748).

From 1887 on, Laurier devoted himself to building a truly national party and to regaining power gradually. His efforts were divided into 2 distinct phases. The first and less successful, 1887-91, emphasized the policy of unrestricted RECIPROCITY with the US; announced in 1888, the program was rejected in the 1891 general election. Perceived as a continentalist and as anti-British, Laurier was trampled by the Canadian electorate even though, for the first time since 1874, Québec gave a majority of its seats to the Liberals. The second more fruitful phase took place between 1891 and 1896; this was the period when Laurier, more sure of himself, managed to take his party in hand while the Conservatives, after the death of Sir John A. MACDONALD, were mired in difficulties. In 1893 Laurier organized an impressive political convention in Ottawa which approved a new program and the basis for a truly national structure. In the 1896 election, when the education rights of the Catholic minority in Manitoba, curtailed since 1890, became an important issue (see MANITOBA SCHOOLS QUESTION), Laurier, more a skillful politician than a sincere defender of the Catholic minority, avoided taking a definite stand. On 23 June 1896, Canadians chose him over Charles TUPPER to lead their country as prime minister.

During the period of prosperity that then ensued, Laurier and his government concentrated on the country's development and on implementing policies designed to heal the wounds to national unity. In 1896, with the signing of the Laurier-Greenway agreement, the prime minister decided the fate of educational rights for Manitoba's Catholic minority: never again would this group have the separate schools it enjoyed prior to 1890, but it would henceforth be possible to obtain, under well-defined conditions, religious instruction during the last half-hour of the school day and instruction in a language other than English. In the name of national harmony and the politics of the "lesser evil," Laurier thus launched his policies of compromise which kept him in power for many years but never completely redressed the wrongs committed against the Catholic minority. After

beginning, with Clifford SIFTON, to reorganize the immigration system, and finalizing with William FIELDING the details of a tariff policy based on imperial preference, Laurier participated in 1897 in London, Eng, at his first colonial conference. Guided by his belief in the future independence of Canada, he resisted every effort the British Empire made toward unification. Nonetheless, in 1899 he agreed to help defray the costs of transportation and material of Canadians wishing to fight for England in the SOUTH AFRICAN WAR; this conciliatory stance would bring reproach from those French Canadians fiercely opposed to any participation. But Laurier and his Liberals easily won the 1900 general election, well supported by Québec which gave them 57 of its 65 seats.

After 1900, Laurier led his country forcefully. Within Cabinet, it was he who directed policy, and he did not hesitate to push aside dissenters such as the powerful Israel TARTE, who was forced to resign in 1902. In this year Laurier also commanded attention outside the country when, at the colonial conference in London, he again opposed all proposals to unify the Empire. In 1903, however, shortly after the failure of the ALASKA BOUNDARY discussions with the US, Laurier revealed the most important policy of his second term: the construction of a second transcontinental railway. The GRAND TRUNK PACIFIC would build the section from Winnipeg westward, while the government would undertake the construction of a line (called the National Transcontinental) from Moncton and Québec C to Winnipeg. Indeed, Laurier was so optimistic about the nation's progress that he allowed the CANADIAN NORTHERN RY to build a third transcontinental. By agreeing to this multiplication of railways, much of it at public expense, Laurier mortgaged the future with a heavy financial burden. At the peak of this prestige, Laurier would allow nothing to check his ambitions as prime minister. Moreover, the people agreed and re-elected him with a comfortable majority on 3 Nov 1904.

The progressive decline of the Laurier government began in 1905 despite Laurier's pursuit of ambitious projects such as the creation that year of 2 new provinces, Alberta and Saskatchewan. Although a reflection of the country's development, this undertaking necessitated defining the educational rights of the Catholic minority. Once again, yielding to pressures from Anglophones and Protestants, Laurier took refuge behind the status quo, thus depriving the minorities of separate schools. As a result, the last chance to establish genuine cultural dualism throughout Canada was lost. Offended by this retreat, French Canadian nationalists bitterly criticized Laurier, whose prestige in Québec began to fade. In the years that followed, the prime minister sought chiefly to counter accusations of corruption and patronage within his administration and to rebuild his Cabinet. In the 1908 general election, Canadians once again entrusted him with their destiny. His party's majority, however, though still solid in Québec, was somewhat reduced. After 1908, despite his desire to correct certain abuses arising from the far-reaching changes in society, Laurier focused his attention primarily on 2 bills which, in the final analysis, resulted in his defeat. The first, the NAVAL SERVICE Bill, presented in 1910, was to establish a Canadian navy composed of 5 cruisers and 6 destroyers; the navy was to be ready to fight with Great Britain anywhere in the world. Insufficient in the eyes of English Canadian imperialists, excessive according to French Canadian nationalists led by Henri BOURASSA, this moderate measure would cost Laurier precious support, especially in Québec. The second bill concerned reciprocity with the US, the old Liberal dream of 1891. Brought to the Commons early in 1911, it provided for the free trade

of several natural products and reduced duty for an imposing number of Canadian manufactured products entering the US. Despite the attractions of the plan, it raised the ire of Canadian industrialists and provided a target for the Conservative Party under R.L. BORDEN, who accused the Liberals of disloyalty toward England and of leading the country towards political annexation. To settle the issue the prime minister called a general election and, on 21 Sept 1911, suffered a bitter defeat.

Laurier was an energetic and vigilant leader of the Opposition. If he failed to renew his liberalism as progressive Liberals would have wished, he kept his troops united until at least 1916, and relentlessly attacked the government's failure to address problems such as the rising cost of living. Prior to 1914, he fought mainly against the emergency contribution of \$35 million offered to Great Britain to help strengthen its navy and against the financial assistance given to the Canadian Northern Ry. Out of personal conviction, Laurier vigorously supported Canadian participation in WWI. He ardently promoted voluntary enrolment and proposed a political truce. In 1915-16, at age 75, he even held several recruiting meetings. In 1917, when the country was plunged into national crisis following imposition of military CONSCRIPTION, Laurier again turned to compromise. To save Canada's threatened unity, he refused to support this measure which was so repulsive to Québec and proposed instead a referendum and continued voluntary enlistment. This time, because his proposal was not supported by the majority of English Canadians, the formula collapsed in general bitterness. Idolized by his French Canadian compatriots who still remembered his vigorous defence of the rights of Franco-Ontarians in 1916, he became a symbol of division within the country. Now even his party disintegrated when several eminent English Canadian Liberals crossed the floor to join the UNION GOVERNMENT in which Laurier refused to participate. In the general election of Dec 1917, Laurier was overwhelmingly defeated by Borden's Unionist Party. The vote was divided along distinctly cultural lines. Laurier died on 17 Feb 1919, just after beginning his courageous effort to restructure his party and to rebuild Canadian unity.

Under Laurier's leadership the country continued its industrialization and urbanization and was strengthened by the addition of 2 provinces and 2 million inhabitants. A clever and eloquent politician, a true legend in his own time, Laurier has been judged in a variety of ways. For some, he was the spiritual successor to Macdonald, who pursued and consolidated Confederation. For others, Laurier, in the name of national unity and necessary compromise, too often sacrificed the interest of French Canadian Catholics to those of a majority little inclined to support the ideals of Confederation. Finally, some think he too often governed his country with only Québec's interest in mind. Support for each of these opinions can be found in Laurier's actions in Ottawa but the last view is most open to argument. REAL BELANGER

**Lauson, Jean de**, governor of New France 1651-56 (b c 1584; d at Paris, France 16 Feb 1666). Long before coming to the colony as governor, Lauson had enjoyed a close and lucrative connection with Canada. As intendant of the COMPAGNIE DES CENT-ASSOCIÉS since 1627, he had accumulated vast estates in the St Lawrence. As governor, Lauson used his authority to enrich himself and his family. In 1654, a time of declining prosperity, he gave himself a vir-

tual monopoly in the fur trade, and 2 years later he seized pelts worth 300 000 livres from DES GROSEILLIERS. ALLAN GREER

**Lauson de Charny, Charles de**, acting governor of New France (b in France 1629?; d there after 1689). When his father, Jean de LAUSON, returned to France in 1656, Charles assumed command of the colony. A few months later, the death of his wife led him to turn to the priesthood. He served as vicar general and ecclesiastical superior of the HÔTEL-DIEU of Québec. ALLAN GREER

**Laval, François de**, first bishop of Québec (b François-Xavier de Montmorency-Laval de Montigny at Montigny-sur-Avre, France 30 Apr 1623; d at Québec 6 May 1708). Destined for the church at age 8, a would-be missionary, Laval was initially a political pawn. For 10 years he studied with the Jesuits, who nominated him for bishop of Québec in opposition to a Sulpician candidate, de Queylus, who would have kept the Canadian church within the crown-controlled state church of France, and who wanted to control the Jesuit missionaries serving the European colonists. To preserve their independence, the Jesuits, supported by the queen-regent and other notables, promoted Laval.

In defiance of French bishops and the *parlements* of Rouen and Paris, a papal nuncio in 1658 consecrated Laval bishop of Petreae, a diocese in Muslim lands — there being no diocese of Québec yet. Although he swore allegiance to the French king, Laval was the pope's vicar-general. After his arrival at Québec in June 1659, Laval asserted his primacy over de Queylus and rejected the governor's claim to precedence in religious ceremonies. Before leaving Canada, Governor Voyer d'ARGENSON wrote of Laval's "adherence to his own opinions and . . . zeal that bore him beyond his mandate . . . that he listens to no one." On his authority and on morality, Laval was inflexibly singleminded. Although willing to compromise on some issues, such as the scale of tithes, he fought an unrelenting battle against the liquor trade with Indians. With the king's backing and by quiet determination, Laval outlasted vociferous opponents, including governors.

His goal was a diocese of Québec in which all religious were subject to the bishop. To reduce lay control of the clergy, Laval instituted a church court to judge cases involving clerics. In 1663 he founded the SÉMINAIRE DE QUÉBEC as a theological college and a mother house of all secular priests. Curates could be recalled at will and their parishioners' tithes went to the seminary. His reluctance to appoint permanent, resident curates — as was done in France — was criticized. He replied that, until he was bishop of Québec, he could not lawfully create new parishes for curates.

Louis XIV's aggressiveness towards the papacy made Rome delay creation of the Québec diocese. Laval left Canada in 1671 determined not to return except as Québec's bishop; his wish was granted in 1674. Although his faith was austere and self-denying, it was charitable and practical. It resulted in new churches, schools and good works. He resisted any multiplication of religious orders as a burden on the colonists and a threat to the centralized church structure. The king financed Laval's work while containing the bishop's ambitions. The bishop and the Jesuits were counterbalanced by royal protection for the Sulpicians and the reintroduction of the Franciscans, loyal crown agents.

In 1685 infirmity and advancing age made Laval offer his resignation as bishop in favour of Jean-Baptiste de La Croix de SAINT-VALLIER. Laval's church seemed firmly established. His headstrong, tactless and improvident successor was a disappointment. With pained and silent

resignation, Laval watched the young bishop undo much of his work. In 1700 Saint-Vallier was detained in France and thereafter Laval acted as bishop of Québec until his own death.

Laval's episcopacy had 2 great consequences. His seminary for colonial priests facilitated the "Canadianization" of the clergy so that, after the British Conquest, the Roman Catholic Church was the national church of French Canada. By keeping his diocese independent of any French see, but linked to Rome, Laval prepared the way for the Ultramontane politics of 19th-century Québec (see CATHOLICISM; NEW FRANCE; ULTRAMONTANISM). PETER N. MOOGK

**Lavallée, Calixa**, composer, pianist (b at Verchères, LC 28 Dec 1842; d at Boston, Mass 21 Jan 1891). Author of the music for O CANADA which became the Canadian national anthem, Lavallée was a pioneer in music both in Canada and the US. Taught first by his father, he studied in Montréal, then left for the US in 1857 and toured S America, the West Indies and Mexico. After returning to Verchères in 1863, he gave concerts and taught. On 24 Jan 1864 he gave a concert in Montréal playing piano, violin and cornet. From 1865 to 1872 he again lived in the US and from 1873 to 1875 studied piano, harmony and composition in Paris; one of his piano studies composed at this time, *Le Papillon*, was particularly successful. He later opened a studio in Montréal with Frantz JEHIN-PRUME and Rosita del Vecchio, was twice president of the Académie de musique de Québec, and tried unsuccessfully to open a conservatory of music. In 1880 his comic opera *The Widow* was presented in New Orleans. HÉLÈNE PLOUFFE

**Lavell, Jeannette Vivian**, née Corbière, community worker (b at Wikwemikong, Ont 21 June 1942). From 1970, Jeannette Corbière-Lavell was at the centre of a controversy over inequities in federal Indian status law. In 1970 she married a non-Indian, thus losing her legal status as an Indian under the INDIAN ACT. Since Indian men do not lose status when they "marry out" (but gain status for their wives and children), Lavell appealed to the Federal Court of Canada, which in 1971 rejected her case. The Supreme Court of Canada in 1973 confirmed this ruling in a complex and much-questioned decision, stating that the 1960 Bill of Rights did not prohibit this particular kind of racial-sexual discrimination and did not invalidate the Indian Act. Controversy over the LAVELL CASE and similar cases led to censure of Canada by international human rights groups, as well as to a split in the Indian community arising from differing views on intermarriage (see NATIVE PEOPLE, LAW). BENNETT MCCARDLE

**Lavell Case** (1973) In *A.G. (Can) v Lavell* the Supreme Court of Canada considered whether the Indian Act (\$12), in providing that an Indian woman who marries a non-Indian lose her Indian status (while an Indian male not lose his status by marrying a non-Indian), is contrary to the principle of equality before the law found in the Canadian Bill of Rights of 1960. The Court ruled in a divided judgement of 5 and 4 that the measure was valid. In its controversial decision the court held that the concept of equality means equality in the administration or application of the law. Parliament could not exercise its jurisdiction over the Indians without passing legislation listing the characteristics required for a person to have the right to Indian status; according to the court, the Act could be enforced reasonably without infringing upon the rights of Indian women to equality before the law.

GERALD-A. BEAUDOIN

**Law, Andrew Bonar**, statesman, prime minister of Great Britain (b at Kingston, NB 16 Sept 1858; d at London, Eng 30 Oct 1923). The only

colonial to become PM of Great Britain, Law grew up in simple surroundings, until at 12 he was sent to live with affluent relatives in Scotland. At 16 he joined the family banking firm and became a prominent iron merchant. He entered Parliament as a Conservative in 1900. Champion of the IMPERIAL PREFERENCE and an opponent of Irish Home Rule and socialism, Law was wartime chancellor. In Oct 1922 he became PM but served only 209 days before retiring because of poor health. He was a close friend of Max AITKEN. DUNCAN McDOWALL

**Law** governs the relationship of society's individual members to each other and to society as a whole. Every human society has a legal system, because every society must attempt to resolve the basic conflict between the needs of the individual and those of the community. Law is not synonymous with justice, although it has been described as "part of Western man's dream of a life governed by reason."

#### The Structure of Canadian Law

Canada has inherited 2 of the world's basic law systems: common law (in the 9 provinces and the territories) and civil law (in Québec). Common law, which originated in England, is unenacted law, as opposed to statutes and ordinances. In theory it is traditional law — that which has always been and still is law, if it has not been overridden by legislation. Civil law, however, is based on ancient Roman law, which, together with laws derived from French custom and legislation, was codified by Napoleon. Most of continental Europe, Scotland, Central and S America, some of the W Indies and much of Africa now use the civil law system. The phrase "common law" has different meanings in different contexts. Sometimes it refers to a whole legal system (in contrast with "civil law" systems). Sometimes it refers to judge-made law, as opposed to statute. Sometimes it is contrasted with equity, discussed below, and sometimes with criminal law.

New France was the first region of Canada to adopt a system based on European law. In 1664 Louis XIV of France ordained that French law existing in the area surrounding Paris was to apply in the colony. This body of law was supplemented by portions of French law as it developed in France during the 18th century and by the laws and regulations developed by the colonial authorities.

In 1763 the sovereignty of the territory now identified as Canada was transferred from the French to the English Crown, and in 1774 the QUEBEC ACT guaranteed the place of French civil law (*le droit civil*) in Canada alongside English public or constitutional law and English parliamentary institutions. In 1857 the Province of Canada legislated the drafting of a CIVIL CODE and a Code of CIVIL PROCEDURE, major compilations of Québec private law on property and civil rights and the form and style of proceedings before Québec courts. These works were brought into force just prior to Confederation. Today theorists describe the Québec legal system as mixed. The relationships between and transactions among persons subject to Québec law are regulated by both the Civil Code and the Code of Civil Procedure. At the same time, and as a result of legislation passed in Québec since 1763 and later incorporated into the codes, portions of English law have also found their way into Québec private law.

The Civil Code governs the status of individual persons, the law of marriage and relations between married persons, the relations of parents and children, the law of property and the law of contracts and responsibility for civil (noncriminal) wrongs. Today the decisions of French courts and the writings of French legal commentators may be accorded respect when the provisions of French law remain similar to

those in force in Québec, but they have no binding authority in Québec law. Law reform in Québec draws its inspiration as much from legal developments in N America and elsewhere as it does from continental Europe.

The other 9 provinces and the territories have adopted English common law. Each jurisdiction has a statute providing that from a certain date the law of England shall be the law of the jurisdiction unless changed by statute, an important qualification. Until 1949 the highest Canadian court was the Judicial Committee of the Privy Council, which sat in London and was composed largely of English judges; English common-law developments were incorporated more or less automatically into Canadian common law. Since 1949 English court decisions, though not binding on Canadian courts, have been treated with great respect, though the SUPREME COURT OF CANADA has sometimes rejected English authority. Canadian decisions are quite often cited in English cases and have influenced English law. The American states (except Louisiana) also adopted English common law in the 18th century and, although the links with modern English law are naturally weaker there than in Canada, American common law still retains the style of reasoning and argument found in all countries affected by English law. As Canada adopts more legislation based on American models the influence of American law will increase and is likely to be particularly strong in the interpretation of the CANADIAN CHARTER OF RIGHTS AND FREEDOMS incorporated into the CANADIAN CONSTITUTION, for its origins can be directly traced to the American Bill of Rights.

#### Sources of Law

**The Constitution and Legislation** are the most authoritative sources of law. The Constitution outlines the DISTRIBUTION OF POWERS and the legislative jurisdictions of Parliament and the provincial legislatures. Each is granted the right to enact statutes (and in Québec, codes), which are a major source of law, often referred to as primary legislation. Subordinate legislation is legislation (bylaws, ordinances, orders-in-council, regulations) enacted by an individual or group with the delegated power to do so. The courts, bound to give effect to validly enacted legislation, nevertheless retain important powers. First, in the case of a dispute it is up to the courts and ultimately the Supreme Court to determine whether the legislation is validly enacted. Disputes frequently arise over whether a provision is within the powers of the legislature that has enacted it. The rules dealing with the respective powers of the legislatures are a very important part of constitutional law. Secondly, the meaning of words is elusive, and disputes over interpretation of legislation must be resolved by the courts. In interpreting legislation the court must always ask itself, expressly or implicitly, what purpose the legislature had in mind and determine what meaning to give to the words used. By saying, for example, that it presumes the legislature does not intend to take away property from citizens without providing compensation and does not intend to take away other rights unless such a purpose is expressly stated, the court interprets legislation to provide some protection to interests it considers important.

The Canadian Charter of Rights and Freedoms, under which individual interests are more directly protected than in the Constitution, was influenced by British and American traditions. According to the former, protection of individual interests is best secured by Parliament itself, and parliamentary Acts bind the courts even if they are contrary to the court's conception of fundamental justice, though much can be done by the courts through interpretation. In the American tradition, by contrast, the

courts, on the basis of the Bill of Rights, can strike down legislation contravening fundamental rights. As the language of any such charter of rights is very general, this gives the highest court the last word on many matters of social and political controversy. A compromise between these views, the Canadian Charter of Rights and Freedoms, was based on the American Bill of Rights, but the principle of legislative supremacy was preserved by including a power in any legislature to declare expressly in an Act that the Act or any provision of it shall operate notwithstanding certain provisions of the Charter. It remains to be seen how frequently this power will be used and how it will be interpreted by the courts.

**Judicial Decisions** The second most important source of law is judicial decisions, known also as case law. In deciding cases judges often record the relevant facts of a case, the issues of law involved and the reasons for the decision. In the common law, prior decisions of higher courts are binding on lower courts but trial judges are not bound by decisions of judges of the same rank, and it is now established that the Supreme Court of Canada is not bound by its own decisions. Some provincial courts of appeal consider themselves bound by their own prior decisions. Despite this, the doctrine of binding precedent is much less restrictive than it appears. Only the reason for the decision of the prior court is actually binding, and the subsequent court retains the power to define for itself the true reason. The circumstances of cases are never precisely similar, so it is usually possible for the later judge to find between the prior case and the case before him a distinction enabling him to come to a different conclusion. The words used in an earlier case are not construed like statutes but read in the context in which they were spoken. It is essential for the law to retain such flexibility, for a judge can never foresee the infinite varieties of human conduct that will give rise to subsequent disputes, and it would be unduly rigid to apply the words of an earlier judge to circumstances he could not have foreseen. The development of both common and civil law depends on the creation and refinement of distinctions in cases, and the final decision over whether to apply a rule in an earlier case always rests (subject to appeal) with the court called upon to decide the point in the later case.

Legal reasoning in common law is primarily reasoning by analogy. To avoid arbitrary decisions, like cases must be decided alike (*see STARE DECISIS*), but there is always room for argument about which facts of a previous case are relevant and which are not. In this system legal reasoning is an attempt to make persuasive arguments for, or to give a rational explanation for, distinctions between cases. This is a never-ending process, as other cases will always arise; as new decisions are made, the principles and exceptions enunciated as part of that case law form the basis of common law.

In Québec civil law — that is, the portions of Québec private law under the Civil Code — judicial decisions are viewed differently, at least in formal theory. In this system the courts will look to the Code to determine a given principle and then apply the principle to the facts of the case. The primary authority for Québec judges is the Code itself; therefore they are entitled to apply it without being bound by a prior decision, even that of a higher court. In practice, however, great reliance has traditionally been placed on previous judicial decisions (*JURISPRUDENCE*), as in the common-law tradition and for the same reasons — that it is unwise as a matter of public policy to revive uncertainty about a law once its sense and meaning have been established. Moreover the techniques adopted by Québec judges for making distinctions between

cases are similar to those of their counterparts in other provinces. The real status and weight of earlier decisions therefore depend on whether a jurisprudence has been established, and this itself depends upon a judge's interpretation. There is no rule about the number of such cases necessary to establish them as a truly authoritative source of law.

Although it is not as important as statutes or case law, royal prerogative (see *PREROGATIVE POWERS*) does constitute a source of law. In Canada these powers are vested constitutionally in the Crown, represented by the governor general and the provincial lieutenant-governors. The Crown has the prerogative to pardon those convicted of crime. Formerly the Crown could not be sued in tort, and some restrictions on its liability still survive.

**Scholarly Writings** have sometimes been considered a source of law. In the common law, writings were until quite recently considered of inferior weight, and it was said that writers could not be considered authorities until they were dead. Nevertheless, lawyers could always adopt the argument of a writer as their own. The courts now readily hear and cite arguments of contemporary legal scholars, although these are not true sources of law until the judges adopt them. In Québec, doctrinal writings (*la doctrine*) of scholars, living or dead, and whether in the form of books, articles or commentaries on individual judicial decisions, have always been freely consulted and cited by legal practitioners and judges, although they are no more a source of law or of binding authority than they are in the common-law tradition.

**Equity**, meaning fairness or justice, also describes a special body of rules sometimes considered a source of law. These rules developed in England alongside common law to permit enforcement of legal rights for which common law did not provide appropriate remedies. During the Middle Ages the king retained the power to override decisions of the courts on grounds of equity and began to refer petitions for the exercise of this discretion to the chancellor, who for this purpose established the Court of Chancery. By the 16th century this court was conducting a large volume of business, and, as reasons were given for decisions, an originally unfettered discretion became a body of principles and rules. As a result the English legal system contained the principles of both common law and equity, with 2 sets of courts; if the rules conflicted, equity prevailed because the chancellor's orders were enforced by threat of immediate imprisonment. Ironically, the rules of equity became even more rigid than the common law, so that by the 19th century the Court of Chancery was ridiculed by Charles Dickens. Although in England the 2 courts were united and a similar union has been effected in all Canadian common-law jurisdictions, the principles are not yet fully merged.

In Québec no separate body of rules or courts of equity developed. The legislature, in formulating a provision of law, will attribute a measure of discretion to judges, enabling them to bring into play considerations of fairness and equity, and to respond to changing notions of social justice. This equitable discretion may be more widely framed in areas such as family law than in others, eg, property law.

#### Fundamental Legal Concepts

**Justice** is an elusive word. To lawyers it incorporates the notions of rationality and due process. In any disputed case there are always arguments on both sides, and some lawyers would say that often there is no right answer. However, if disputes are determined by fair procedures before an impartial tribunal honestly trying to give rational and consistent reasons for its results, it can be said that justice has been done.

**Rule of Law** is another elusive phrase with several different meanings. It describes an ordered society, like the phrase "law and order," but it also describes judicial independence of the executive branch of government. According to this principle, the police must obey the law and actions of government officers must be authorized by statute. The phrase is also used to support the reasons given by courts for their decisions; in rational explanation lies the assurance to the losing party that the decision is not just a whimsical exercise of arbitrary power. Another aspect of the rule of law, often called the principle of legality, is the avoidance of retroactive lawmaking. The courts will lean in favour of construing penal statutes to apply only to conduct arising after a statute comes into force, a principle included in the Canadian Charter of Rights and Freedoms.

#### Divisions of the Law

**Public Law** The law may be conveniently divided into public and private law. The most important branch of the former is CONSTITUTIONAL LAW, which deals with the powers of governments and the division of powers among different levels of government. The second branch is CRIMINAL LAW, which governs the punishment and deterrence of offences regarded as wrongs against society. Criminal conduct often constitutes a civil wrong as well; eg, an assault is a crime for which the assailant can be punished by the state and a civil wrong for which the person assaulted can recover compensation in a civil court. The distinction is important; because of the consequences of a criminal conviction, greater protection is required for the accused in a criminal case than for the defendant in a civil case, the most important safeguard being the requirement of proof of guilt beyond a reasonable doubt. In contrast, a civil action for damages can succeed on the balance of probabilities. Plaintiffs in civil cases have a right to win if their case is more persuasive, but the complainant in a criminal case has no right to a conviction. The only right to a conviction belongs to the community, and although it is in the interests of the community to suppress crime, it is almost as important not to create a society whose members live in constant fear of wrongful conviction. ADMINISTRATIVE LAW, of increasing importance in a highly regulated society, is the third branch of public law. It governs, among other things, the exercise of government powers, which greatly affect most citizens.

**Private law** regulates the relations of citizens among themselves. The main divisions of the civil and common law governing the obligations of individuals to each other are contracts (the law of agreements and promises) and the law of civil wrongs (TORTS in the common law and DELICTS in the civil law). To these must be added the law of PROPERTY (governing the acquisition and transfer of rights in goods, land and intangible property) and the law providing for recovery to avoid unjust enrichment (restitution or quasi contract). There is no consensus on the proper arrangement of further divisions and subdivisions, although much of Québec law is structured in the Civil Code. FAMILY LAW is perhaps the most important branch of private law as far as its impact on ordinary persons is concerned. Another important branch, known as conflicts, or private international law, governs the effect of foreign (or extraprovincial) elements in a dispute. Other specialized branches of law include corporation law, sales, negotiable instruments, security for debt on property, agency or mandate, taxation, evidence, debtor and creditor, insurance, wills and trusts, patents, copyright, trademark law and transfer of land; some of these may be regarded as sub-branches of contracts and property. See also SUBSTANTIVE LAW; PROCEDURAL LAW

S. WADDAMS AND J. BRIERLEY

**Law and Society** One of the most historic ideas about the LAW is that it is based on human nature or reason, and therefore simply reflects what is natural or reasonable, enabling society to function in a just and effective manner. According to this conception, the law is also an expression of both the common good and the fundamental values of society. It is the same for everyone and protects everyone's interests. Lawmakers take into account the collective will and formulate the best laws possible. The common good, however, must be defined by certain criteria and interests and does not always correspond to the interests of everyone; it is first and foremost the "good" as seen and defined by certain groups. The law is not above or outside of society; it is the reflection of society at a given moment in its evolution, the result of the balance of power between social groups and one of a number of instruments or means used to impose ideas and defend interests. The law can sometimes be an instrument of discrimination or repression and sometimes an instrument of protection. Everything depends on the power or alliances a group has when legislation is prepared, passed by Parliament and implemented. In addition, there is a difference between what is stated or claimed about law and legislation, and what actually happens.

The profound changes society has undergone since the early 20th century have occurred at an increasingly faster pace since WWII. The law has been and still is the major means by which we attempt to cope with these changes, and, as a result, legislation and government regulations have proliferated. Canadians can now be liable for some 350 Criminal Code offences, about 20 000 federal and 20 000 provincial offences and all those created by municipal regulations. In Québec, for example, almost as many new offences or penalties were created between 1965 and 1975 as were created during the entire preceding century. After WWI, the federal government took its first major initiatives in health and welfare by creating the Department of Health (1919). Attempts to define precisely the limits of what is healthy and unhealthy, acceptable or not acceptable, normal or pathological have led to increased legislative intervention. The developments in science and technology have also created new problems, eg, those associated with genetic research and pollution, which the law must attempt to resolve. In 1917 individual and corporate income taxes were introduced to fund the expanding public sector, guaranteeing the bureaucracy the means it needed to grow. According to the LAW REFORM COMMISSION OF CANADA (LRCC), federally, the activities of the WELFARE STATE grew considerably after WWII. The FAMILY ALLOWANCE Plan (1944), OLD AGE PENSIONS (1952) and the CANADA PENSION PLAN (1965) were added to veterans' assistance programs and UNEMPLOYMENT benefits. Over 40% of the gross national product was allocated to government or related activities in 1980. The expansion of related legislation has been enormous.

**Law as an Instrument of Discrimination** The law has the effect of making official, repeating and giving concrete expression to social and economic inequalities. For example, for many years the law expressly deprived women of civil, political and economic rights. It was only toward the end of the 19th century that a woman could consider her salary her own property and not that of her husband, and not until the 1950s did most provincial legislatures recognize that women had the right to the same salary as men. For a long time women were barred from certain professions; eg, in Québec women were not allowed to practise law until 1941. Women could not vote in federal elections until 1918 (and in Québec provincial elections, until 1940). Only after WWII did most provinces al-

low women to serve on juries, Québec being the last province to give them this right, doing so in 1971.

Indians, the Inuit and other groups have also been victims of legal discrimination (see NATIVE PEOPLE, LAW). When the CHINESE came to BC to construct the railroad in the 19th century, the province withdrew their right to vote, enforced restrictive hiring practices and limited their business opportunities and right to own land. The law also discriminates against those who have been arrested and sentenced or imprisoned for a criminal offence. Many provincial or federal laws deprive them of the right to vote or to run for and hold public office; they also authorize the refusal or revocation of permits or licences and of the right to exercise certain professions.

It is probably in the application of law that inequalities of power and the manner in which law can be a de facto instrument of discrimination are more evident. Until recently, the poor, unable to afford lawyers, had little access to the law. It was only in 1967 that the Ontario government established the first provincially financed LEGAL AID service. In Québec there was no such service until 1973. Only since 1972 has the federal Department of Justice contributed to legal-aid expenditures in criminal matters, though all provinces and territories now provide legal assistance to anyone who might be sentenced to prison or might lose his livelihood, and all jurisdictions, excepting NB, also provide some assistance in civil issues. As late as 1974, however, observers were claiming that divorce was the prerogative of the rich, while the poor, unable to afford such a luxury, simply abandoned their families and lived common law, with all the legal problems such a situation entailed. In testimony before a special Senate committee on POVERTY (1971), the chairman of the Clinical Law Program at the Faculty of Law at Osgoode Hall stated that a study of the Family Allowances Act and other post-WWII legislation preceding it would reveal that these Acts have not been the subject of litigation until recently, that the poor, whose material life is regulated by financiers and whose life is conditioned by many difficulties, have never had the chance to have their rights interpreted or to make these same rights the subject of litigation.

Given the behaviour for which they are condemned, the criminal-law system most often and most severely affects the deprived, blacks, native peoples and disadvantaged groups. A few years ago the LRCC found that the prison population contained a disproportionately large number of poor or disadvantaged persons and native delinquents. In 1976, men with 10 years of schooling or less comprised 45% of Canada's male population 15 years of age and over, but 77% of those admitted to penitentiaries. Many economically disadvantaged people go to prison simply because they have not paid fines. In 1974, the LRCC found that the practice of imprisoning for default of payment had for a number of years been the reason for about 50% of admissions to provincial and local detention centres in certain parts of Canada. In some provinces, native people are particularly affected by this sentencing.

**Law as an Instrument of Protection** The law can also be an instrument of protection and advancement. In Canada, these advances have been fairly recent, and possible largely because of the socioeconomic situation and changes at political and economic levels. Only in the last 30 years have antidiscrimination provisions appeared in legislation, and not until 1947 did a province (Saskatchewan) pass the first act dealing with human rights. In 1960, Parliament adopted the Canadian Bill of Rights. All provinces have now adopted antidiscrimination legislation and established Human Rights commis-

sions. The Constitution (1982) now contains an entrenched CANADIAN CHARTER OF RIGHTS AND FREEDOMS which applies to federal and provincial jurisdictions. Other Acts have been passed as well to protect the interests of some traditionally disadvantaged groups. In the 1970s legislation regarding health and safety at work (see SAFETY STANDARDS) was revised in most provinces to give workers more protection, and consumers successfully lobbied for laws to protect their interests. Elsewhere in Canada, legislation governing relations between LANDLORDS AND TENANTS was adopted, as was the Small Loans Act, which protects small borrowers, particularly the poor, from excessive interest rates, deceptive methods regarding credit costs and loan sharking.

However, the rights and interests of the disadvantaged are not automatically protected simply because new legislation has been passed. The first antidiscrimination laws were not very effective, because their enforcement depended largely on the initiative of the victims themselves. There was no way to publicize the laws or educate the public; therefore most people did not know the legislation existed. The creation of human-rights commissions to administer this legislation was a major step forward. Unfortunately, although in principle legislation can protect the rights and interests of the powerless, a very large percentage of this group cannot afford to take advantage of it. The Canadian Charter of Rights and Freedoms guarantees that any person arrested or detained is immediately entitled to the services of a lawyer, but no practical procedures have been established for this purpose. Although social legislation passed to reduce inequalities or their effects has undoubtedly helped the most disadvantaged Canadians, it is generally very difficult for them to have it changed, passed, challenged or even adequately enforced. Legislation in fields such as social assistance, the MINIMUM WAGE, social and health services and family allowances often leaves users at the mercy of impersonal decisions made within government BUREAUCRACIES. OMBUDSMEN, whose job it is to ensure that citizens' rights are not violated through injustice, error or negligence arising from administrative action, and whose positions have been created by legislation in several provinces, have helped to improve this situation. Another useful mechanism is the SMALL CLAIM COURTS, established in a number of provinces in the 1970s. According to the Québec minister of justice, the purpose of these courts is to make justice accessible to citizens, strip it of its formal nature, procure a means of reconciliation that will provide social order, guarantee the coercive force of the law and ensure that justice is inexpensively and promptly meted out.

**Conclusion** Legislation and its enforcement, even if designed to protect the interests of the most disadvantaged groups, are always subject to shifts in the power relationships of a society at a given time. Thus legislation may be stripped of its content or rendered inoperative by subsequent legislative changes. Sometimes political decisions, or lack of them, will virtually paralyse enforcement mechanisms — this will happen, for example, if a chairman or members of a commission are not appointed, or if their budget is not adequate to enable them to operate effectively.

D. LABERGE AND P. LANDREVILLE

**Law and the Press** Operating in a libertarian climate, the Canadian media are mainly unhampered by licensing and little affected by prior CENSORSHIP. Instead, they are governed by laws dealing with contempt of court, civil defamation, criminal libel, OBSCENITY, COPYRIGHT, privacy and government secrecy. Journalists are more likely to commit constructive contempt than contempt "in the face of the court," except when court rules restricting photographing of

trials are violated or when reporters appearing as witnesses refuse to disclose sources. Media reports may scandalize the courts or prejudice a fair trial. For a reporter to publish false "facts" about a case, to report evidence ruled inadmissible in a *voir dire* hearing, or to comment on *sub judice* matters invites legal penalties.

Section 470 of the Criminal Code forbids published mention of confessions considered at preliminary inquiries; Section 467, at the request of the defendant, empowers the court to forbid publication of any evidence given at a preliminary inquiry. Other sources of legal danger to journalists include reporting the amount of damages asked by plaintiffs during examination for discovery; publishing amounts of bail as determined in bail-bond hearings; publishing court documents not entered in evidence in open court; imputing improper motives to judges. In many cases the likelihood of legal punishment is determined by when the offence is committed in relation to the trial proper. Canadian journalists may be compelled to divulge sources of their news stories by courts, parliamentary bodies or properly constituted committees of inquiry. By contrast, no law forbids publication of the names of adults charged with crimes, as the law does in several European countries.

In Canada civil DEFAMATION law is more often resorted to than criminal libel. Civil defamation is based on provincial statutes and common law. In most jurisdictions broadcast defamation, though oral, is libel rather than slander. To maintain a libel action 3 conditions must be proved: defamation (the words complained of are capable of a defamatory meaning), publication and identification (of the claimed libellee). Defendants may plead truth, fair comment or privilege, or consent to defend themselves against defamation claims. Proved truth is an absolute defence in Canada's 9 common-law provinces but not in Québec, where public benefit must also be proved. Journalists are able to enjoy only qualified privilege (privilege which malice destroys) except in fair, accurate and contemporaneous reporting of trials. Defendant journalists may avoid paying general (but not special) damages by making apologies and retractions, provided the libelous statement does not impute a criminal conviction or criminal offence, is not actuated by malice or caused by undue carelessness on the journalists' part. Apologies and retractions must fulfil statutory requirements of prominence and timing.

Defamatory, seditious, blasphemous and obscene libel are all forms of criminal libel covered by the Criminal Code. Truth, fair comment and privilege provide defences against criminal libel charges as they do with civil libel claims, but, as with Québec civil law, public benefit must be proved if the truth plea is to succeed. Incitement to the use of force to bring about a change in government may be punished as seditious libel. However, qualifying stipulations in the Criminal Code are designed to permit political debate, discussion and argument without the incurring of criminal sanctions. In certain sensitive areas the Official Secrets Act inhibits the media in their investigative role.

The Criminal Code defines blasphemous libel only as intention to commit blasphemy, which it does not define. The code provides that the blasphemy law shall not be construed so as to prevent religious discussion conducted in good faith and in temperate language. Section 159(8) of the Criminal Code says that "Any publication a dominant characteristic of which is the undue exploitation of sex, or of sex, and one or more of the following subjects, namely crime, horror, cruelty and violence, shall be deemed to be obscene."

Journalists cannot copyright the news but they can copyright the language of news reports.

For signatories of the Berne Convention, except in the case of serial stories and tales, articles from one newspaper may be copied by another unless such borrowing has been specifically forbidden, but the borrower must indicate the source of those articles.

Privacy does not enjoy complete statutory protection in Canada. Section 178 of the Criminal Code deals almost exclusively with electronic surveillance. Passed in June 1977, in conjunction with the Canadian Human Rights Act but now joined with the Freedom of Information Act, the federal Privacy Act relates primarily to private information in government files and does not deal with the invasion of personal privacy by private persons. BC, Manitoba and Saskatchewan have privacy acts, but as of June 1982 these had produced no press-related case law. Canada's long-gestating Freedom of Information Act was passed in June 1982. It was criticized as being a toothless document, by comparison with the American Freedom of Information Act. Critics considered that there were too many exemptions from the government's requirement to disclose information it held. It is a start, however, in the direction of opening government operations to wider public scrutiny. See also HUMAN RIGHTS; JOURNALISM; NEWSPAPERS; POLITICS AND THE MEDIA.

WILFRED H. KESTERTON

Reading: C.F. Beckett, *The Law and the Media in Canada* (1982); Kent Commission Research Studios, *Newspapers and the Law* (1981); Wilfred H. Kesterton, *The Law and the Press in Canada* (1976); S.M. Robertson, *Courts and the Media* (1981).

**Law Enforcement** refers to the application or threat of legally permitted sanctions to induce compliance with legal rules. Although the enforcement of the LAW may be undertaken by a wide variety of individuals and organizations, law enforcement is often popularly associated with the activities of specialized state agencies, especially the public POLICE forces. Indeed the public police are frequently described as a law-enforcement agency, as if they were the only group engaged in law enforcement and as if the enforcement of laws (especially CRIMINAL LAW) were their primary activity. In fact, the public police are only one of many agencies engaged in law enforcement (see POLICING). In addition, research suggests that only about 20% of police work is concerned with law enforcement as such.

C.D. SHEARING AND P.C. STENNING

**Law of Evidence**, the body of regulations governing the proof of the existence of a fact before a court. It falls under federal and provincial legislation. In matters governed by the former, provisions of the Canada Evidence Act must be applied. Common law must also be applied. In criminal law, the rules of evidence are partially unwritten and derive from judgements in English and Canadian JURISPRUDENCE. One of the basic principles of Canadian criminal law is that the accused is presumed innocent until proven guilty beyond reasonable doubt; because no accused person may be forced to testify against himself, the prosecution must supply evidence of the crime. It may be supplied by witnesses, by documentary evidence, by the exhibition of objects or by circumstantial evidence — as long as the rule of relevancy, which determines the admissibility of evidence in criminal cases, is respected and there is no violation of the exclusionary rule. According to this rule, anything that might establish the guilt or innocence of the accused may be admitted as evidence, the most important exception being hearsay. Generally, oral or written statements made outside the court, unless they are made by the accused, are not admissible. As long as it was free and voluntary, any statement by the accused acknowledging commission of the crime may be introduced to establish guilt. Privileged communications between lawyers and clients are also

excluded; no lawyers may be obliged to testify concerning matters confided to them in the exercise of their profession.

In provincial civil cases the rules of evidence derive from each provincial legislature. The rules governing how evidence is presented are largely the same in all provinces since Québec has adopted the English model, which is based on adversarial procedure, meaning that each party is responsible for proving the facts which it invokes; and in all provinces, witnesses must in principle be heard before an open court where they are first questioned by the lawyer of the party who has called them and then cross-examined by the lawyer of the opposing party. The distinction between the law of evidence in Québec and in the common-law provinces lies in the provisions governing the admissibility of evidence. In the latter, the basic principle is still the rule of relevancy, from which flows the principle of the freedom of means of obtaining evidence. In Québec law, however, evidence concerning contracts must be presented in writing, not orally, although oral testimony may be permitted in a limited number of cases, eg, commercial transactions. Another unique feature of Québec law is called "authentic writing," writing drawn up by a public officer, eg, a notary public. An advantage of an authentic writing is that nobody may prove it false without having first obtained permission from the court to do so and without thereby calling into question the public officer who received it.

In recent years, considerable concern has been expressed regarding the variation of the laws of evidence among provinces and between federal and provincial courts. In 1975 the Law Reform Commission of Canada presented a report to Parliament recommending an evidence code which would replace existing common law. The Ontario Law Reform Commission has also proposed changes in rules of evidence, though its recommendations differ significantly from those of the LRCC. The Uniform Law Conference of Canada, a recommending body of the legal profession, responded by recommending a task force to prepare a Uniform Evidence Act, which, presented in 1981, was adopted by the conference and proposed as a legislative model for Parliament and the provincial assemblies. Federal and provincial work is being done, but no evidence bills have as yet been passed.

LÉO DUCHARME

**Law of the Sea**, for about 300 years, was to a large extent determined by principles of customary law. Coastal states claimed sovereignty over a narrow belt of territorial sea; on the rest of the seas (the "high seas"), the basic principle of freedom of the seas reigned. This freedom was interpreted as freedom to navigate, fish, trade, travel, make war, conduct research, etc. In 1967, in response to a perceived need for change in the law of the seas, the UNITED NATIONS began complex and painstaking multilateral negotiations. This ambitious venture consisted of a conference (with several sessions) which spanned 15 years and produced a comprehensive set of laws dealing with the seas known as the United Nations Convention of the Law of the Sea (UNCLOS). Canada signed the Convention in Dec, 1982. With the second longest coastline in the world, Canada has a wide range of interests in the sea and a substantial stake in the proposed new law of the sea. It therefore played a leading role in shaping the convention. In recent years, Canada has focused its attention on issues concerning territorial sea, fisheries, mineral resources, marine environment, passage through international straits and control over the arctic waters. Between 1956 and 1977, Canada moved from claiming the traditional 3-mile territorial seas to claim a 12-mile territorial sea and exclusive jurisdiction over fisheries within 200 miles

of its coast and over mineral resources of its continental shelf. Canada accepted the concept of a 200-mile exclusive economic zone (EEZ) that emerged from UNCLOS negotiations. The convention provides that coastal states will have sovereign rights over the exploitation of the resources of the 200-mile EEZ and certain rights in respect of the preservation of the marine environment and the conduct of marine scientific research. Canada was unsuccessful in its attempt to obtain preferential rights to harvest fish stocks beyond 200 miles but was successful in obtaining recognition of its primary interest in the conservation and management of anadromous species, eg, SALMON, throughout the limits of their migratory range.

Canada lent its support to the innovative UNCLOS idea that the international sea-bed be reserved for peaceful purposes and that the area be designated the "common heritage of mankind." The convention provides for international machinery both to control and to undertake exploitation of the international sea-bed. Throughout the UNCLOS negotiations, Canada had been particularly concerned about the possible adverse effects of deep-sea mining on Canadian land-based NICKEL production. Canadian mining interests are somewhat protected by a formula in the convention that sets limits to sea-bed production in relation to land production.

Canada has asserted that the waters of the ARCTIC ARCHIPELAGO, including the NORTHWEST PASSAGE, constitute internal waters. As a manifestation of this claim, in 1970 Canada passed the Arctic Water's Pollution Prevention Act. The Act gave the Canadian government rights over a 100-mile POLLUTION control zone around the arctic islands. Despite protests by the US, Canada has persevered in its claim over the arctic waters; during UNCLOS negotiations Canada was actively involved in a campaign to obtain coastal-state rights to prescribe and enforce pollution control standards. Although the convention recognizes only limited coastal-state environmental powers, it does include the so-called "arctic exception," which permits Canada to take antipollution measures in ice-covered areas. Canada attempted to project further its claim in the Arctic by ensuring that the Northwest Passage does not become subject to the rules that pertain to passages through international straits. Canada has consistently asserted that the Passage is not a strait and therefore that the right of "transit passage," ie, a right to navigate through the Passage freely, cannot be claimed.

When the Convention of the Law of the Sea is signed and ratified by the required number of states and comes into effect, it will be binding only upon those states that have signed it. However, many of its provisions, through the practice of states over a period of time, may become customary INTERNATIONAL LAW. EMILY F. CARASCO

**Law Reform** is the process of improving, modernizing or clarifying the law on a particular subject, not mere technical change, but a fundamental recasting. Law is "reformed" when it is organised more rationally, expressed more clearly and works more effectively. The 2 principal sources of law are legislation and case law, but it is through the former that most law reform has been achieved. In the 19th century, Jeremy Bentham (1748-1832) argued that the merits of legislation as a rational form of law were preferable to a bulky mass of unprincipled case decisions, and when the civil law of France was reformed in 1804, statutory codes were enacted to introduce consistent and uniform rules. However, judicial decisions are important, particularly concerning constitutional documents. The power of ultimate interpretation of the Canadian CONSTITUTION, including the CHARTER OF RIGHTS AND FREEDOMS, rests with the courts; judicial interpretations may materially alter the

content and enforcement of criminal law and the general rights and freedoms of individuals. Law reform by legislation is a public and political process. A proposal must be included in a government's legislative program and must therefore be politically acceptable. It may originally be suggested by a private group, eg, a consumers' association or the chiefs of police. It will be based on a study by a government department or on a report by a legislative committee or a royal commission. Professional associations such as provincial law societies, the Canadian Bar Association and academic lawyers also present law-reform proposals.

Law-reform commissions, usually independent bodies established by statute that report to the minister of justice or to the legislature, are relatively new organizations with a general responsibility to suggest reforms. A commission comprises a small number of distinguished judges, lawyers or academics, assisted by a research staff. The Law Reform Commission of Ontario was established in 1964. Most of the provinces have since created similar bodies. In Alberta it is the Institute of Law Research and Reform, which is associated with the University of Alberta. Besides preparing reports recommending reforms, the institute also conducts general legal research. The work of the provincial commissions is restricted to matters which fall within provincial jurisdiction. These include court administration, property law, the law of injury compensation and some aspects of family, commercial and administrative law.

The Law Reform Commission of Canada (LRCC) was established by statute in 1971. It reports to Parliament through the federal minister of justice and is responsible for working towards the modernization and improvement of federal law and the development of concepts in and approaches to law. It is particularly concerned that the methods of both the common-law and the civil-law traditions be reflected in national laws. It recognizes that the law-reform process requires more than statutory revisions and is of concern to all citizens. It has inquired philosophically into the values law should uphold and has relied on social-science research techniques and public consultation. Much of the LRCC's work has been educational. It recognizes that much genuine reform can be achieved through changes in administrative practices and attitudes, but it is also strongly committed to the need for statutory changes, has produced many studies and reports in the areas of family law, evidence law, criminal law, criminal procedure, administrative law and the protection of life and has recommended new legislation. Provincial law-reform commissions have concentrated on preparing recommendations for statutory changes and have had considerable success in having proposals adopted and enacted by their legislatures. Although the LRCC indirectly influences provincial law-reform commissions, only one statute recommended by the LRCC to Parliament has actually been passed by Parliament, reflecting the political and controversial character of much of the LRCC's work. It is, for example, difficult to satisfy all concerns and interests in fields such as criminal law or police powers. The slower pace also reflects differences in the federal commission's approach: it has chosen first to consider and clarify basic principles before proceeding to detailed recommendations.

J. BARNES

**Law Reform Commission of Canada** began operation in 1971 as a permanent body to study and make a systematic review of Canadian law. The LRCC recommends improvement, modernization and reform of some federal laws and deletion of others, as well as providing a philosophical inquiry into legal issues. Although only one draft statute has been accepted by

Parliament so far (*see* LAW REFORM), the LRCC's work influences the legal community and provincial commissions, exercising an indirect effect on administrative and legislative reform. The courts refer to positions adopted by the LRCC frequently when making judgements.

**Law Society** generally refers to incorporated bodies in each province and territory in Canada by which the legal profession regulates itself. In all but Nova Scotia, New Brunswick and Québec such societies are actually called law societies. In Nova Scotia and New Brunswick, they are called barristers' societies. In Québec the legal profession is divided into 2 branches, one composed of members of the Bar of the Province of Québec, ie, barristers and solicitors, and the other of the members of the Chamber of NOTARIES. Members of the chamber perform many legal services not involving matters in court and have the exclusive legal capacity to perform certain services such as making and keeping a register of a particular kind of will known as a notarial will. As is the case with barristers and solicitors, notaries in Québec are a self-regulating profession.

All law societies except that of the Yukon have been incorporated by statute. The first, the Law Society of Upper Canada, formed in 1797, was incorporated in 1822, that of Newfoundland was incorporated in 1834, of Manitoba in 1877, of BC in 1884, of Saskatchewan in 1907, of Alberta in 1907, of the NWT in 1978. The Barristers' Society of New Brunswick was incorporated in 1846 and that of Nova Scotia in 1858. The Barreau du Québec was incorporated in 1849 and the Chamber of Notaries in 1847.

The independence of lawyers from the state in the practice of their profession is essential to a free society. Lawyers, as a profession, have been self-regulating for centuries and provincial legislatures in Canada continue to recognize such self-regulation as the form of control most likely to protect the public interest.

**Lawn Bowling**, or "bowls," is a game played on a flat lawn or green at least 36.6 m<sup>2</sup>. In a match, the object is to roll bowls, or "woods," so that as many as possible are nearer to the "jack" (a smaller white bowl) than the nearest opposing wood. Bowling can be traced back to ancient Egypt. The game spread to Greece and Rome and thence through medieval Europe to Britain, where it has been played since the 13th century. Scotland, where a code of rules was formulated in 1848, is considered the home of the modern sport.

Lawn bowling was brought to Canada by British garrison officers; the first bowling green in Canada was constructed on the garrison grounds at Annapolis Royal, NS. By 1888, a tournament was staged in Toronto, involving 7 clubs. The game's popularity grew during the latter part of the 19th century. The Dominion Lawn Bowling Tournament was inaugurated in 1892. The game flourished from the turn of the century into the 1930s. In 1901, the "points playing" system was introduced and electric lights were first used for late-evening play. The first Canadian touring team travelled to Britain in 1904, and 2 years later a British team toured Canada. The 1913 Canadian team to Britain was the most successful of such groups; it won 17 matches, lost 13 and tied one.

National organizations have been formed to promote the game. The Dominion Lawn Bowling Assn (later the Canadian Lawn Bowling Council) was founded in 1924; its first national championships were held in 1954. Until 1971, women lawn bowlers were associated with clubs affiliated with the CLBC, but in that year the Canadian Ladies' Lawn Bowling Council was organized, and since 1972 men's and women's national championships have been held jointly. Canadian men bowlers have partic-

ipated in the British Empire and Commonwealth Games since 1930, winning silver medals in 1930, 1934 and 1954. Men's teams have also entered the world bowls championships since their inception in 1966. In 1980, after a long period of low rankings, the Canadian pairs team won the silver medal at the world championships. Women's teams have entered the women's world bowls championship since 1969, their best showing being a silver medal in the singles event, won by June Bell in 1977. Canada hosted the 1981 women's world bowls in Willowdale, Ont, with 18 countries represented. In 1982, the women's team entered the first women's Commonwealth Games event.

BARBARA SCHRODT

**Lawrence, Charles**, military officer, governor of NS (b in England c1709; d at Halifax 19 Oct 1760). Though he lacked the backing of any influential patron, Lawrence enjoyed a successful career. He entered the army in 1727, serving in the West Indies and in Belgium, and joined the 45th regiment at Louisbourg (Cape Breton I) as a major 1747. In 1753 he was put in charge of establishing the settlement of German Protestants at LUNenburg, NS. He was named lt-gov of "Acadia or Nova Scotia" in 1754, and is chiefly remembered as the architect of the deportation of the Acadians from the colony in 1755. Though this event would likely never have taken place without Lawrence's influence, administrative talent and actions, final responsibility for this tragedy must be shared much more widely. Lawrence was promoted governor in 1756 and in 1758 he commanded a brigade in the successful expedition against LOUISBOURG. His last years as governor were concentrated on settling migrants, principally from New England, in the colony. On his death this controversial but respected governor was honoured by his associates with the erection of a monument in St Paul's Church, Halifax.

N.E.S. GRIFFITHS

**Lawson, George**, botanist (b at Logan, Scot 12 Oct 1827; d at Halifax 10 Nov 1895). Lawson studied natural and physical sciences at U of Edinburgh. Assistant secretary and curator for the Botanical Soc of Edinburgh, he also worked in Britain's first biological laboratory. Lawson became professor of chemistry and natural history at Queen's in 1858. He founded the Botanical Soc of Canada in 1860 and published its *Annals* until 1863. That year he became professor of chemistry and mineralogy at Dalhousie. He was secretary of the NS Board of Agriculture 1864-85, secretary of agriculture for NS from 1885 to 1895 and a charter member of the RSC (1882). In 1891 he founded the Botanical Club of Canada under RSC auspices. As Canada's first professional botanist, Lawson greatly influenced the fields of study of amateur Canadian BOTANY, as well as agricultural and science education policy in NS.

SUZANNE ZELLER

**Layton, Irving Peter**, né Israel Lazarovitch, poet, short-story writer, essayist, professor (b at Tirgu Neamt, Romania 12 Mar 1912). Since the early 1940s, Layton has been recognized in Canada and abroad as a prolific, versatile, revolutionary and controversial poet of the "modern" school. Layton was brought from Romania to Montréal before age one. He took his BSc in agriculture at Macdonald Coll in 1939. He served briefly in the Canadian Army 1942-43 and then did graduate work in political science at McGill. After graduation he tutored immigrants, taught high school and lectured part-time at Sir George Williams U, Montréal, where he later held a full-time position.

Layton was one of a nucleus of young Montréal poets who believed they were effecting a revolution against insipid romanticism and published their poems in *First Statement* (1942-45), a journal edited by John SUTHERLAND. Layton

Poet Irving Layton, whose work is proof of his theory that poetry must be intense, subtle and dramatic (courtesy Public Archives of Canada/PA-127567/Gail Turnbull).

remained on the editorial board of *Northern Review*, the journal that resulted when *First Statement* merged with *Preview* in 1945. In 1952 Layton assisted Louis DUDÉK and Raymond SOUSTER in founding Contact Press, a co-operative publishing outlet for Canadian poets.

Of the poets that emerged in Montréal during this period, Layton was the most outspoken and flamboyant. His satire was generally directed against bourgeois dullness, and his famous love poems were erotically explicit. Layton's first collection was *Here and Now* (1945). He went on to publish numerous volumes of poems of unusual range and versatility and a few of prose. These include *Now Is the Place* (1948), *The Black Huntsman* (1951), *Cerberus* (with Louis DUDÉK and Raymond Souster, 1952), *Love the Conqueror Worm* (1953), *In the Midst of My Fever* (1954), *A Laughter in the Mind* (1958), *A Red Carpet for the Sun* (1959), which won the Gov Gen's Award, *Balls for a One-Armed Juggler* (1963), *The Laughing Rooster* (1964), *Periods of the Moon* (1967), *The Shattered Plinths* (1968), *Engagements: The Prose of Irving Layton* (1972), *Lovers and Lesser Men* (1973), *The Pole-Vaulter* (1974), *Seventy-Five Greek Poems* (1974), *For My Brother Jesus* (1976), *The Covenant* (1977), *Taking Sides: The Collected Social and Political Writings* (1977), *Droppings from Heaven* (1979), *The Gucci Bag* (1983). Layton has theorized that poetry should be "vital, intense, subtle and dramatic," and his work is ample proof of his description. He has also edited volumes of poems by other Canadians.

In 1967 Layton received a Canada Council award on which he travelled to Israel, Greece, India and Nepal. He has been poet-in-residence at a number of Canadian universities and was professor of English at York 1969-78. Layton was nominated by Italy and Korea for the Nobel Prize in 1981. Throughout his career, he has excelled as a dramatic reader of his own verses, and some of his public performances have been recorded.

ELSPETH CAMERON

**Le Ber, Pierre**, painter (bap at Montréal 11 Aug 1669; d at Pointe-St-Charles, near Montréal 1 Oct 1707). It is not known where Le Ber studied painting, but his family's position and fortune enabled him to found the Hôpital Général of Montréal with François Charon in 1692 and set up his studio in this building. His best-known work is the portrait of Ste Marguerite BOURGEOIS (1700). From 1697 until his death, he worked on decorating the chapel of Ste-Anne at Pointe-St-Charles. Of his many paintings for churches, only the 3 of St Theresa, St Alphonsus Rodriguez and St Charles Borromeo are known. The inventory made of Le Ber's studio after his death suggests substantial artistic output since it lists a quantity of art supplies as well as 12 canvases.

NICOLE CLOUTIER

**Le Caine, Hugh**, physicist, designer of electronic-music instruments, composer (b at Port Arthur [Thunder Bay], Ont 27 May 1914; d at Ottawa 3 July 1977). He was trained as a physicist at Queen's and later at Birmingham (Eng) U. From his youth he also maintained an active interest in music and electronic instruments. In 1939 he joined the NATIONAL RESEARCH COUNCIL (NRC) in Ottawa, working in RADAR development and nuclear physics. In his home studio by 1945 he had begun work on the sackbut, an electronic keyboard instrument now recognized to have been the first "synthesizer." The NRC opened a project in 1954, directed by Le Caine, to design new equipment for electronic music. By his retirement in 1974, he had designed 15 new instruments. He carefully considered their musical expressivity, designing them to accommodate the needs of performers, composers and listeners rather than the demands of the technology. He composed a series of studies at the NRC lab, one of which, *Dripsody* (1955), now a classic of electronic music, uses only the sound of the fall of a single drop of water, transformed by tape-speed changes. The first electronic music studio in Canada, the second in N America, was opened at U of T in 1959. Its unique equipment, designed by Le Caine, used innovative methods of sound production, extending the possibilities available to composers, and attracting many from across Canada and abroad. Le Caine published many articles on his work, primarily in technical journals. Recognized internationally for his contribution to the development of electronic music, he was awarded 3 honorary doctorates in Canada. See ELECTROACOUSTIC MUSIC.

GAYLE YOUNG

**Le Jeune, Paul**, Jesuit missionary and superior at Québec, author (b at Vitry-le-François, France July 1591; d at Paris, France 7 Aug 1664). Converted to Catholicism at 16, Le Jeune was named superior of the Jesuits at Québec in 1632. He advocated language study for missionaries and the settling of nomadic tribes on agricultural reserves. In 1634-35 he accompanied Algonquins on a winter hunt. From 1639 to 1649 he served as missionary priest at Sillery, Tadoussac, Trois-Rivières and Ville-Marie (Montréal), lobbying for military support against the Iroquois and supporting the Ville-Marie settlement project. His annual report of 1632, published by the Jesuit provincial in Paris, inaugurated the series of JESUIT RELATIONS published until 1673 to attract recruits and encourage financial support for missionary work. Procurator of Canadian missions 1649-62, Le Jeune was author of 15 of the *Relations* and 2 devotional books.

CORNELIUS J. JAENEN

**Le Loutre, Jean-Louis**, priest, missionary (b at Morlaix, France 26 Sept 1709; d at Nantes, France 30 Sept 1772). Some historians regard Le Loutre as a political agent for France, others as the consummate missionary, using every means to keep the French Catholic ACADIANS from British Protestant domination. After studies in Paris at the Séminaire du St-Esprit and ordination at the Séminaire des missions étrangères, Le Loutre travelled to LOUISBOURG in 1737. Appointed to the parish of Annapolis Royal — in British territory — he worked among the MICMACS at the Shubenacadie mission near Truro, NS.

In 1744, after war was declared between England and France, he helped François DuPont Duvivier in his siege of Annapolis Royal. When the British took Louisbourg in 1745, Le Loutre went to Québec City to consult the governor of NEW FRANCE, who delegated him to meet the duc d'Anville's fleet, which was to arrive to recapture Acadia. Le Loutre thus became the link between the French authorities and the colonists. After the failure of d'Anville's fleet, Le Loutre arrived in France on *La Sirène*. In 1749, after 2 at-

tempts that ended in English prisons, Le Loutre returned to Acadia. From his new mission at Fort Beauséjour (near Sackville, NB), Le Loutre encouraged the Micmacs to harass the British and urged the Acadians to abandon their lands and take refuge in areas claimed by France. He returned to France in 1752 but came back the following year still determined to oppose the British. After the fall of Beauséjour in 1755, Le Loutre, who knew a price had been put on his head some years earlier, escaped to Québec City. Captured by the British on his way to France, he was imprisoned until 1763. After his release, he worked for the deported Acadians who wished to live in France.

GÉRARD FINN

**Le Moyné, Jean**, writer (b at Montréal 17 Feb 1913). Le Moyné was a founding member in 1934 of *La Relève*, a magazine produced by a group of young French Canadian Catholic intellectuals. He pursued a career in journalism 1941-59 and then went to the National Film Board. In 1961 he published a collection of essays, *Convergences*, which appeared in English in 1966 as *Convergence*. For these he won first prize in the Québec Literary Competition in 1962 and the Gov Gen's Award in 1967. In 1968 he received the Molson Prize. In 1969 he moved to the Prime Minister's Office, where he was an assistant and adviser until retiring in 1978. In 1982 he was made an officer of the Order of Canada and appointed to the Senate.

**Lea, Walter Maxfield**, politician, premier of PEI (b at Tryon, PEI 10 Feb 1874; d at Charlottetown, PEI 10 Jan 1936). A successful farmer and livestock breeder, Lea was the first agriculturalist to lead PEI. Elected to the Assembly in 1915 as a Liberal, he became commissioner (minister) of agriculture in 1919. On 30 May 1930 Lea became premier, attending the Dominion-Provincial Conference (1930), but resigned 29 Aug 1931. Illness during the 1935 general election forced him to direct a campaign from his bed, which resulted in the first sweep of seats in a parliamentary democracy. His second term as premier lasted until his death.

PETER E RIDER

**Leacock, Stephen**, humorist, essayist, teacher, political economist, historian (b at Swanmore, Eng 30 Dec 1869; d at Toronto 28 Mar 1944). The recipient of numerous honorary degrees, awards and distinctions (the Lorne Pierce Medal, the Gov Gen's Award, a postage stamp issued in his honour, the Leacock Medal for Humour established in his honour), Leacock was the English-

Stephen Leacock was the English-speaking world's best-known humorist, as well as an accomplished economist (courtesy Public Archives of Canada/© Karsh, Ottawa/Miller Services Ltd.)

speaking world's best-known humorist 1915 to 1925.

He grew up on a farm near Lk Simcoe, Ont, and was educated at Upper Canada College (where he taught for 9 years), U of T and University of Chicago, where he studied economics and political science (PhD 1903). He joined McGill's dept of economics and political science in 1908, rose quickly to become department head, and remained there until retirement in 1936. A prolific magazine supplier of humorous fiction, literary essays and articles on social issues, politics, economics, science and history, Leacock claimed near the end of his life: "I can write up anything now at a hundred yards." Most of his books are collections of these magazine pieces.

His first book, *Elements of Political Science* (1906), a workmanlike treatment of its subject, was his bestselling book in his lifetime. Although he was not an original or particularly incisive political economist, Leacock's professional opinions on matters such as the need for a GOLD STANDARD have proved prophetic in their commonsense approach to what he considered a jungle of statistics. His writings on the theoretical and technical aspects of humour are similarly refreshing for their accessibility, as are his views on education.

He was politically active in the Conservative Party in both his home riding of Orillia and nationally. In the 1911 general election, his propagandist writings and public addresses on the issue of RECIPROCITY helped defeat Sir Wilfrid LAURIER's Liberal government. Although Leacock is a man of many seeming contradictions, generally his stance is traditionally conservative. A Tory in the precapitalist sense, he valued the community over the individual, organic growth over radical change, the middle way over extreme deviation. Such values form the basis of Leacock's satiric norm, the authorial position from which he attacked rampant individualism, materialism and worship of technology. Although frequently unfaithful to his credo that humour be kindly — he was at times racist, anti-feminist and downright ornery — the unique alchemy of compassion and caustic wit remain the elements which accord his humour a timelessness few Canadian writers have achieved.

His 2 masterpieces are *SUNSHINE SKETCHES OF A LITTLE TOWN* (1912) and *Arcadian Adventures with the Idle Rich* (1914). The first humorously anatomizes business, social life, religion, romance and politics in the typical small Canadian town of Mariposa, whose name has attained mythic significance in the Canadian psyche. Perhaps the greatest creation of *Sunshine Sketches* is the narrator himself, who, in his affection for and bemusement at the community of Mariposa that he so admirably represents, reveals the essential Leacock. *Arcadian Adventures* dissects life in an American city with sharper satire, less qualified by the author's affection and pathos. Taken together, these 2 books reveal the imaginative range of Leacock's vision — the nostalgic concern for what is being lost with the passing of human communities and his fear for what may issue. However, Leacock believed that the best humour resides at the highest reaches of literature. Any list of his own best works, both fiction and nonfiction, would have to include the following selection from some 60-odd books: *Nonsense Novels* (1911), *Moonbeams from the Larger Lunacy* (1915), *Further Foolishness* (1916), *Essays and Literary Studies* (1916), *Frenzied Fiction* (1918), *The Unsolved Riddle of Social Justice* (1920), *My Discovery of England* (1922), *The Garden of Folly* (1924), *Winnowed Wisdom* (1926), *Short Circuits* (1928), *Lincoln Frees the Slaves* (1934), *Humor: Its Theory and Technique* (1935), *Humour and Humanity* (1937), *My Discovery of the West* (1937), *Too Much College* (1939), *My Remarkable Uncle* (1942), *Our Heritage of Liberty* (1942), *Happy Stories* (1943), *How*

*to Write* (1943), *Last Leaves* (1945) and his unfinished autobiography, *The Boy I Left Behind Me* (1946).

GERALD LYNCH  
Reading: Donald Cameron, *Faces of Leacock* (1967); Robertson Davies, *Stephen Leacock* (1970).

**Lead** (Pb), silver-grey metal commonly found with zinc and copper sulphides as the MINERAL galena. Properties such as a low melting point (327.4°C), high density and malleability, corrosion resistance and a good ability to attenuate gamma radiation and sound vibration have led to a wide variety of uses. Lead oxide was used for pottery glazing as early as 7000 to 5000 BC, and lead was one of the earliest smelted metals. It was used for coinage in China and Greece, and about 100 BC the Romans began using it for plumbing and solder. Roofing and ammunition applications developed during the Middle Ages. Lead-acid batteries, the largest use of lead today, were introduced in 1911. Lead is also used as an additive in gasoline and for solders, chemicals and alloys, plumbing and cable sheathing, and as protective sheathing against X rays and nuclear radiation. Lead is easily recycled; scrap accounts for nearly one-third of Canada's supply. Canada mines about 300 000 t of lead annually, ranking 3rd in the world (after the US and Australia). Leading producers are the YT, BC, the NWT and NB. Lead ore is mined, crushed and ground, and the lead-containing mineral is separated by flotation to produce a concentrate. At the smelter, concentrate is roasted to drive off the sulphur and then smelted, usually in a blast furnace, to produce impure lead bullion. Refining by electrolytic or pyrometallurgical means purifies the lead and allows recovery of by-products including silver, antimony and bismuth (see METALLURGY). Smelters at TRAIL, BC, and near BATHURST, NB, convert concentrates to refined metal. About 50% of this metal as well as the remaining mine production is exported to the US, Europe, Japan and elsewhere. The lead industry accounts for about 0.1% of Canada's GNP. Lead is toxic at high levels of exposure and lead poisoning was formerly an occupational hazard. Its present use, eg, in paints, is regulated and the lead content of gasoline has gradually been reduced. The "lead" of lead pencils is not lead but a mixture of graphite and clay. See POLLUTION.

J. BIGAUSKAS

**Leader of the Opposition**, the leader of the political party with the second-largest number of seats in the HOUSE OF COMMONS. (If the party leader, usually elected at a national LEADERSHIP CONVENTION, does not have a seat, the party HOUSE LEADER temporarily substitutes for the leader.) The leader of the Opposition was first recognized by statute in 1905 and given the same salary and allowances as CABINET ministers. The leader of the Opposition is a parliamentarian hoping to become PRIME MINISTER and is the leading critic of government programs and policies. He directs the party in PARLIAMENT and appoints leading members of the caucus as "shadow ministers" to monitor the work of the ministries. He is usually consulted by the prime minister on the appointment of the SPEAKER and sometimes on the appointment of the GOVERNOR GENERAL. If the government is defeated in the Commons, the leader of the Opposition may be asked to form a government if the prime minister chooses to resign rather than to request a dissolution. Provincial legislatures have leaders of the Opposition with similar responsibilities.

JOHN SAYWELL

**Leadership Convention**, meeting of party members to select a parliamentary leader. Of the countries deriving their parliamentary system from the Westminster model, Canada alone has adopted and modified the American national party convention as the means for choosing its party leaders. For more than 50 years after CON-

FEDERATION the parliamentary parties (caucuses) chose their leaders from amongst their own members — senators and MPs — but in 1919 that system came to an end when Sir Wilfrid LAURIER called a national party convention to discuss policy and organization. Between the time the call went out to the 1135 delegates and the time they assembled some months later in Ottawa, Laurier died. The party executive seized the opportunity to convert the meeting into a forum for selecting the new leader.

The convention came at an ideal time for the Liberals. The 1917 "Conscription Election" had split the party, and its forces in Parliament were small and drawn overwhelmingly from Québec. A truly "national" convention presented the party with the opportunity to widen considerably the number of participants in its leadership-selection process. It was decided that an equal number of delegates was to be sent by each federal constituency association. At the same time the party executive accepted as a second principle the notion that a clear majority of delegates should come from the constituencies — the minority being made up of party officials, MPs, senators and provincial legislators.

Both principles have been applied by the LIBERAL PARTY and the PROGRESSIVE CONSERVATIVE PARTY (though not the CO-OPERATIVE COMMONWEALTH FEDERATION, now the NEW DEMOCRATIC PARTY, which has based its constituency representation on the size of party membership lists at the local level) in every national leadership convention since 1919. They have lent support to the common claim of Canadian politicians that leadership conventions are more democratic and representative than any alternative method of choosing party leaders. That the delegates (usually between 2000 and 3500 in number) vote secretly and individually, that no additional names may be placed in nomination once the voting has begun, and that the candidate with the fewest votes is dropped after each ballot until one candidate has won a clear majority of the votes — all of these rules stand in marked contrast to those of an American convention and contribute to the rhetoric about the uniqueness of Canadian leadership conventions.

While leadership conventions have compensated to some degree for the regional imbalances of the parliamentary parties, they have at the same time effectively ended the caucus's monopoly over the selection of a party leader, with a curious result. "Outsiders" (those with little or no prior parliamentary experience) stand a greater chance of being chosen party leader than those who have devoted many years to a parliamentary career and who, in many cases, have served for a long period of time on the Government or Opposition frontbenches. The first 5 leaders of the Liberal Party chosen by national leadership conventions, W.L. Mackenzie KING (1919), Louis ST. LAURENT (1948), Lester B. PEARSON (1958), Pierre Elliott TRUDEAU (1968) and John TURNER (1984), fall into this category. For its part, the Conservative Party has selected 3 provincial premiers as national leaders. Not one had stood for election to Parliament before his selection: John BRACKEN (1942), George DREW (1948) and Robert L. STANFIELD (1967). After only 3½ years in Parliament, Joe CLARK defeated 10 other candidates (some of whom had had lengthy political careers) to become, at the age of 36, Canada's youngest national party leader. Clark was succeeded as Conservative leader in 1983 by Brian MULRONEY, a man who had never previously been nominated for or elected to public office at any level of government. Of the Conservative leaders chosen by convention, only R.B. BENNETT (1927) and John G. DUFFENBAKER (1956) had had extensive prior parliamentary experience.

It seems that convention delegates look for qualities other than parliamentary and Cabinet

experience when choosing their party's leader. Success in previous provincial elections, reputations earned in administrative, industrial and extrapolitical spheres, and potential electoral attractiveness count for more than lengthy service in Parliament. It is debatable whether the openness and freedom inherent in the leadership-convention system, with its challenge to established career patterns and recruitment practices, is necessarily beneficial to the larger political system.

Canadian leadership conventions are not held at regular, stated intervals. Thirty years passed between the first and second Liberal leadership conventions — an unrivalled hiatus that would no longer be tolerated by the press, public and politicians. Leadership conventions are now typically called every 8 to 10 years when, for example, the leader no longer feels equal to the task (St. Laurent and Drew); when he is convinced there is little likelihood of the party gaining office under his leadership (Bracken and Stanfield); or when, as prime minister, he is satisfied that the time has arrived for handing over the reigns of power (King, Pearson and Trudeau).

Another reason for calling a leadership convention has so far been peculiar to the Conservative Party. It stems from the party's internecine battles from the mid-1960s to the early 1980s over its leadership. By his party's approval of a motion to hold a leadership convention within a year, John Diefenbaker, who was unwilling to step down, was forced to choose between retiring from the position and seeking re-election in a convention open to other contenders. He chose the latter and was defeated. At the Conservatives' biennial meeting early in 1983, when Joe Clark was party leader, 66% of the delegates voted against holding a leadership convention (as they were entitled to do under the leadership review provisions of the party's constitution). Despite the support, Clark interpreted the vote as insufficient endorsement of his leadership and he resigned his office, announcing he would be a candidate at the next convention. At that convention (held June 1983) there were 8 leadership candidates. Although Clark led on the first 3 ballots, he was overtaken on the fourth by Brian Mulroney, who won by a vote of 1585 to 1323. The candidate with the least parliamentary experience defeated the former leader, who, among all the candidates, enjoyed the greatest support of his parliamentary colleagues. Mulroney's sweeping victory in the 1984 federal election has almost assuredly guaranteed party support for some time to come.

JOHN C. COURTNEY

Reading: John C. Courtney, *The Selection of National Party Leaders in Canada* (1973).

**League for Social Reconstruction**, organization of left-wing intellectuals, fd 1931-32 in Montréal and Toronto, largely in response to the GREAT DEPRESSION. Although it soon had almost 20 branches elsewhere in Ontario and the West, the founding branches proved the longest lived and most active in political education. Led by historian FRANK UNDERHILL and law professor F.R. SCOTT, the LSR was critical of monopoly capitalism and demanded economic change by parliamentary means. Never formally linked with a political party, it made its sympathies clear with the annual re-election of J.S. WOODSWORTH as its honorary president. The Regina Manifesto (1933) of the CO-OPERATIVE COMMONWEALTH FEDERATION was largely written by LSR members. The league's ideas found fullest expression in the books *Social Planning for Canada* (1935) and *Democracy Needs Socialism* (1938), and in the CANADIAN FORUM, acquired in 1936. Disillusionment with SOCIALISM in the late 1930s weakened the LSR. WWII and the increased organizational demands of the CCF led to the LSR's

quiet demise in 1942. Its influence on the CCF was great; its influence on Canada is still a matter for speculation.

MICHEL HORN

Reading: Michiel Horn, *The League for Social Reconstruction* (1980).

**League of Nations**, international organization established at the Paris Peace Conference (1919) at the end of WWI. It was founded on the principles of collective security and preservation of peace through arbitration of international disputes. American Pres Woodrow Wilson had taken an important part in founding the league, but the US never joined. Sixty-three states were eventually members. With headquarters in Geneva, Switz, it lasted until the founding of its successor, the UNITED NATIONS, in 1946. Canada was a member throughout the league's existence, and served 1927-30 on the council.

The Covenant (the treaty provisions creating the league) established a council, assembly and secretariat. The council met quarterly and comprised the major powers as permanent members, plus non-permanent members elected by the assembly. The assembly consisted of representatives of all member states, and met annually. Under a secretary-general, the secretariat provided the permanent staff. A Canadian, Sir Herbert AMES, was financial director 1919-26, a high administrative position in the secretariat. The league provided opportunities for international discussion of political and legal questions, disarmament, economic relations, the protection of minorities, communications and transit, and health and social questions. Members were required by Article 10 of the Covenant to respect and preserve each other's territory and independence. Aggression against any member would be considered aggression against all, and would lead to collective economic, and possibly military, measures. The purpose of collective security was to avert war, and in the 1920s the league participated in the attempted reconciliation of Germany with France and Great Britain. However, it proved incapable of effective action in the face of territorial aggression in the 1930s by Italy, Germany and Japan. The league ceased to function as a collective-security organization, although its social and economic activities continued until WWII.

From 1920 to 1923 the Canadian government actively but unsuccessfully sought removal of the collective-security guarantees, fearing involvement in European wars. More positively, in 1929, Raoul Dandurand, Canadian representative on the council, successfully proposed strengthening league procedures in overseeing the treatment of linguistic and religious minorities in E Europe. In 1935, when Canada supported the league's sanctions against Italy, Canadian delegate Walter A. RIDDELL proposed stopping all exports of oil, coal and steel to Italy. This action, unauthorized by the new MacKenzie King government, was publicly repudiated. Subsequently, Canada kept a low profile at league meetings.

The League of Nations, even though ultimately unsuccessful in achieving collective security, established a new pattern of international organizational activity. League membership brought Canada its first official contact with foreign governments, helped establish its position as a sovereign state and confronted it with both the opportunities and the dilemmas associated with problems of international co-operation and attempts to prevent war.

RICHARD VEATCH

**League of Nations Society** in Canada, fd 1921 to promote international peace by developing public knowledge of and support for the LEAGUE OF NATIONS. With headquarters in Ottawa, it operated until 1942. Its presidents included such public figures as Sir Robert Borden, Sir George Foster and Ernest Lapointe; John W. Dafeo,

Newton W. Rowell and J.S. Woodsworth served on its national council. The society's activities were primarily promotional and educational. It distributed league publications and its own monthly, *Interdependence*, and sponsored speaking tours and radio broadcasts by supporters. It was the first Canadian organization to encourage public interest in and understanding of international affairs.

RICHARD VEATCH

**Leamington**, Ont, Town, pop 12 528 (1981c), inc 1890, located on the N shore of Lk Erie, 54 km SE of WINDSOR. Named after a town in Warwickshire, Eng, it developed in the 19th century as a lake port and market-gardening centre. Tobacco growing was a major industry in the surrounding area, along with canning and food processing. Today it is the site of a large H.J. Heinz Co food-processing plant. It is also the gateway to POINT PELEE NATIONAL PARK, the most southerly point in Canada.

DANIEL FRANCIS

**Learned Societies**, a term applied in Canada to the large group of scholarly organizations that hold conferences annually from late May to mid-June at a different university location each year. Society members come not only to hear and discuss scholarly papers on the latest work in their fields, but also to renew contacts and share common concerns.

The gathering of these associations in one place over one period is distinctively Canadian and owes more to practical evolution than to planning power. Selecting one site with suitable university accommodation was an answer to Canadian distance that allowed scholars more economical joint arrangements, let them attend meetings of societies besides their own, and encouraged them to visit varied geographical areas. The older ROYAL SOCIETY opened the way by moving from its Ottawa base to annual conferences at Montréal, Kingston or Toronto. Younger, more specialized associations — such as those in history, political science and economics — joined in, holding their own meetings along with, or just following, the senior scholarly society. By the 1930s the practice of an annual learned-conference period at a different site each year was well established, though such sites were usually in central Canada, where most larger universities were located. But in 1949 "the Learned" went to Halifax, and soon afterwards to Winnipeg, Edmonton and Vancouver. Since then the growth of large universities across the country and the multiplication of learned societies — from the Assn of Canadian Archivists to the Canadian Linguistic Assn, the Canadian Institute of International Affairs to the Assn for Canadian Theatre History — have provided still more locations and a greater range of meetings for the organizations of Canadian scholarship. In 1984 about 60 associations congregated in Guelph, Ont.

J.M.S. CARELESS

**Leatherworking** in NEW FRANCE began in the 17th century when the first groups of colonists began farming around Québec City and Ville-Marie [Montréal]. In the young colony, trades were not governed by the statutes and regulations of French guilds, despite repeated attempts by Intendant Jean TALON to establish such regulation (see APPRENTICESHIP IN EARLY CANADA). New France was unlike the mother country, where trades were highly compartmentalized (eg, skinners, tawers, tawers using Hungarian techniques, strap makers, gloves, belt makers, harness makers, cobblers, trunk makers, last makers, heel makers). For example, tanners used methods which, in France, were reserved for other artisans; cobblers and harness makers ventured beyond the tasks originally assigned to them by guild statutes.

**Tanning** At first, Québec leatherworkers were supplied with skins processed in the royal factories of France and by local private tanners; the

first tannery in the colony was established at Pointe-Lévy in 1668. Headed by a master tanner from France, the company quickly achieved success and sparked enthusiasm among other master tanners and merchants, including Johan, Thibierge, Larchevêque, Perthuis, Fornel and Bégon. The Québec government's 68 tanners and merchants obtained their raw materials on contract mainly from butchers, the principal suppliers of sheepskin and cattle hides. Hunting and fishing supplied other types of skins, eg, walrus, seal, moose, deer, bear. Tanning operations were modelled on methods used in France, with local modifications. Tanning mills were driven by wind, water or animal power. Tanners prepared the skins in the traditional manner by washing the leather, soaking or softening it, placing it in a lime pit, and then graining, scraping and trimming it. The tanners of New France prepared their tannin using the bark of hemlock or spruce, rather than oak or chestnut as in France. Most production was of tough leather for the local manufacture of shoes, work boots and harnesses. The tanneries grew and prospered in New France. Despite the owners' high operating costs, the pressing local need for leather goods and the availability of various skins helped the tanneries survive. Originally established and run by master craftsmen from France, tanneries quickly became the preserve of merchants and dealers who could assume the extremely high investment costs.

Between the arrival of British craftsmen after the Conquest, 1759-60, and the end of the 18th century, the art and techniques of the leather trade underwent little change. The 19th century saw developments in tanneries, including innovations in the forms of energy used, technology and work organization, as well as a concentration of capital. During the 1880s, American tanneries broke new ground by abandoning vegetable tannin in favour of the chrome-tanning process. This process reduced the tanning period from 9 months to 5 or 6 weeks, thereby saving time, lowering production costs and even improving product quality. The tanneries of Ontario quickly adopted the new method, but those of Québec did not begin to do so until 1910. This situation may have been a factor in the decline of Québec's tanneries which, until then, had been the leading Canadian producers of leather goods.

In Ontario, the Davis tanneries in the Kingston and Toronto areas exemplify the evolution of this industry. In the mid-19th century, Andrew Davis operated a tannery where craftsmen produced leather goods for local farmers and independent cobblers. Around 1860 he and his son became interested in mechanization. In the next decade, the family installed steam power and began introducing machines. Then, as the shoe industry began to expand in Ontario, the market grew to the point where mass production and the wholesale trade became viable propositions. New machinery helped accelerate production, reduce costs and provide variety in the colour and types of leather of the finished products. At the end of the 19th century, the Davis family experimented successfully with chrome tanning; in the first decade of the 20th century, running water and electricity were installed. Finally, direct access to the CANADIAN NATIONAL RAILWAY resulted in lower transportation costs. The Davis tanneries continued to prosper, entering American and world markets in the 1930s.

The tanning industry originated in Québec but did not develop to its fullest extent in that province. In 1949, Canada had 70 tanneries, 33 in Québec and 28 in Ontario. Québec's tanneries employed 606 workers and supplied 11% of Canada's leather production; Ontario's 3852 workers supplied 86%. Today, Ontario tanneries have production capacities 4 times greater than

those of Québec. The stagnation of Québec's tanneries is seen as one of the factors in the decline of the FOOTWEAR INDUSTRY.

**Cobbling and Footwear Production** Between 1660 and 1760, 132 craftsmen were employed as cobblers or harness makers in Québec. Of that number, 55 independent craftsmen with their own shops were known as "masters." The rest were employed on a fixed-salary or contract basis in shops or tanneries, some of which had their own cobbler's workshop. The cobblers of New France made French shoes, MOCCASIN-style shoes and boots, mules and slippers; harness makers produced harnesses, backstraps, saddles, hame straps and collars for dogs and horses. Because of the severe climate, cobblers had to adopt styles that would offer their customers warm as well as hardy footwear. They thus adopted native moccasins and high, soft boots. The effectiveness of Indian footwear lay in the cut and assembly of the pieces: the upper and the sole formed a single piece joined on the upper part to a tightly sewn, rounded tongue, thereby preventing water from leaking in through seams underfoot. The moccasin boot was a variation of the shoe, with the addition of a knee-high, sewn upper. A lace held the boot snugly against the leg. Cobblers also made more delicate shoes by imitating the styles of French footwear brought to the colony by boat. After the Conquest, new models of army-style boots and shoes were introduced.

Cobblers remained shop craftsmen or eventually became employees of combined shoemaking and tanning factories because no large cobbling enterprises could compete with the firmly established, government-funded tanneries. Cobblers were subject to the requirements and decisions of tanneries, which were made on the basis of the availability and quality of leathers and contracts with the army. As cobblers changed from being employees to owners of small shops, tanners and merchants were establishing control over leatherworking. This situation developed despite the cobblers' complaints and their appearance before the Conseil souverain to try to eliminate the discriminatory power of tanneries over the free enterprise of independent cobblers.

In the first half of the 19th century, Canada's cobblers preserved the trade practices of their ancestors. However, such craftsmen were progressively replaced by cobbler-merchants, journeymen hired by factories and specialized workers in the large 20th-century footwear factories. From about 1810 to 1860, 2 types of shoe production coexisted in Québec: the traditional system, in which independent craftsmen produced the entire shoe to a client's order; and the system in which cobbler-merchants employed journeymen who each produced different parts of the shoe, thereby increasing production. Cobbler-merchants stocked both imported and locally produced shoes. During this period, workshops began to grow in size; fabrication was divided into a series of distinct tasks; journeymen worked as paid employees in workshops or at home; and a concentration of capital was organized to meet rising production costs. Hence, the introduction of a new approach to LABOUR RELATIONS (eg, the close master-journeyman-apprentice relationship was replaced by a hierarchical labour-management relationship), of piecework and of a shorter apprenticeship period. Journeymen faced competition from untrained, poorly paid workers and were financially unable to open their own workshops.

In the first half of the 19th century, the technological revolution, fed by discovery of new forms of energy and by mechanization, transformed the cobbler's trade. Perfected in 1845, sewing machines were used to sew vamps and "Howe" uppers and thus replaced work pre-

viously performed by women working at home. By 1860 the capacity of these machines increased with the introduction of steam power. A few years later, a worker could sew 90 pairs of soles with the McKay "Soles Sewing Machine" in the time it took to sew one by hand. A favourable economy allied with technological progress led to a boom in the footwear industry. Proof of this rapid growth is the fact that Québec City had 9 shoe factories in 1861, 73 by 1871.

With the exception of refinements of mechanization and greater division of labour, the physical organization of factories at the turn of the 20th century remained essentially unchanged. The ground floor of a three- or four-storey building would house several departments: the assembly room, where pins or nails would be used to attach the upper to a false sole on a form; the fitting area, where the sole was joined to the upper; the heel-cutting division; and the finishing and shipping department. The second floor housed the administration, management and sales departments; the third floor was reserved for cutting the leather into uppers, machine assembly of the handcut parts of the upper, and storage of rolls of fine leather and cutting patterns.

THE INDUSTRIALIZATION of shoe production produced major changes in organization and labour relations and required a concentration of capital and cost-effective production methods. Owners had to instill a team spirit among managers, production heads and foremen in order to have workers produce at full capacity. This hierarchical structure was motivated by profit. Employees worked in difficult conditions: unsanitary workshops, long days and fatigue induced by the need to earn a decent income from piecework. They also had to face the danger of accidents, the lack of job security at a time of chronic unemployment and the loss of qualifications formerly required of members of a traditional trade. This last phenomenon, the result of increasingly specialized duties (150 manufacturing operations existed in 1910), required workers to accept low wages since they could no longer use their qualifications to compete with unskilled workers (particularly women and children).

Traditionally, Québec's leatherworkers were not members of trade guilds established to defend their rights. Trade unions, the offshoots of American unions, gained ground in the 1860s but were not legally recognized until the 1870s. Under the influence of Mgr Louis-Nazaire Bégin, the first national Catholic unions appeared in 1901. The arbitration cases and strikes of that era reveal that workers were fighting mainly for the right to union membership, higher salaries and a slow-down in the introduction of machines. MARISE THIVIERGE AND NICOLE THIVIERGE

**Leaver, Eric William**, inventor, electronics engineer (b at Langham, Eng 11 Aug 1915). Leaver came to Saskatchewan as a child and after graduation from high school established himself in the 1930s as an inventor of automatic landing systems for aircraft. At the end of WWII he formed Electronic Associates Ltd with colleagues from Research Enterprises Ltd, the government's radar factory, and set out to develop robotic machine tools. Leaver's AMCRO system (Automatic Machine Control by Recorded Operation) was patented in 1947 and, for lack of risk capital in Canada, developed by American licensees. AMCRO was resisted by manufacturers of conventional machine tools and never fully developed.

Electronic Associates diversified to produce electronic instruments, such as portable Geiger counters for uranium prospectors, radar altimeters for accurate aerial surveys, and automatic process controls for industry, notably mines and paper mills. The firm was selling more than

\$15 million worth of HIGH TECHNOLOGY products a year when Leaver lost personal control in 1974 and became an independent consultant. Renamed Sentrol Systems, the firm was acquired in 1981 by the CANADA DEVELOPMENT CORPORATION. Sentrol and a US subsidiary, now sold off, remain successful. DONALD J.C. PHILLIPSON

**Lebensold, Fred David**, architect, theatre design consultant (b at Warsaw, Poland 1917). Educated in Poland, he went to London, Eng, to study at the Regent Street Polytechnic (1939). He served as a staff captain in the Royal Engineers 1943-47 and then taught design in London. Immigrating to Canada 1949, he was associate professor of architecture at McGill 1949-55. In private practice, he was a founding member of Arcop Associates and emerged as a gifted theatre designer, responsible for the design development of many theatres, including the Queen Elizabeth, Vancouver; Place des Arts, Montréal; National Arts Centre, Ottawa; and City Centre Theatre, New York City. Lebensold's practice also includes domestic architecture, public building developments and historic building rehabilitation. He was an initiator of restoration work in Vieux Montréal. NORBERT SCHOENAUER

**Leblond, Charles Philippe**, anatomist, cell biologist (b at Lille, France 5 Feb 1910). Considered a pioneer in cell biology, Leblond was among the first to use synthetic radioactive isotopes in the localization of labelled molecules within tissues. To achieve this he developed, in collaboration with L. Bélanger in 1946, the now universally used technique called radioautography. This consists of placing thin sections of tissues containing radioactive substances in contact with a photographic emulsion. The presence of developed black silver grains over cells or tissues, when examined with the microscope, reveals the source of radioactivity. Leblond exploited this method to investigate dynamic processes taking place in the body, such as the renewal of tissue components or the elaboration of various substances by the cells. Author of more than 350 scientific articles and professor of anatomy at McGill since 1948, he has received many honours, including membership in the Royal Soc, London (1965), and in the American Academy of Arts and Sciences (1970). YVES CLERMONT

**Leckie, John Edwards**, "Jack," soldier, mining engineer, explorer (b at Acton Vale, Qué, 19 Feb 1872; d at Port Hope, Ont 7 Aug 1950). He was best known for engineering and research work around Hudson Bay. Leckie was educated at Bishop's, RMC, and King's College. He saw service in S Africa and France, and was "Malamute Force" commander in the Russian civil war. He developed mines in Northern BC and in the Zevallos fields of Vancouver I, explored in Mexico and Venezuela and led a major, though unsuccessful, search for Spanish gold on Cocos I. He was a press censor in WWII. Made a Fellow of the Royal Geographical Soc in 1928, he received the DSO and French Croix de Guerre among other decorations. ALLAN LEVINE

**Leckie, Robert**, air marshal (b at Glasgow, Scot 16 Apr 1890; d at Ottawa 31 Mar 1975). A much-decorated, flying-boat pilot in WWI, Leckie was the only airman to be credited with downing 2 Zeppelins. He then joined the newly formed RAF and was seconded to Canada as director of civil flying operations, 1919-22. He played a leading role in the first trans-Canada flight in 1920. Returning to Canada after a series of RAF appointments, Leckie was air member for training, 1940-44, the officer in charge of the BRITISH COMMONWEALTH AIR TRAINING PLAN. He transferred to the RCAF in 1942 and was chief of the air staff, 1944-47. Intelligent, sensitive and forceful, Leckie was the most impressive of Canada's senior air officers in WWII. NORMAN HILLMER

**Leclerc, Félix**, singer-songwriter, composer, poet, novelist, playwright, actor (b at La Tuque, Qué 2 Aug 1914). He was a radio announcer in Québec City, and was encouraged by Mgr Albert Tessier to publish several radio scripts he had written. In 1939 he made his début as a singer for Radio-Canada and then, with 2 colleagues, in 1948 founded the VLM troupe, which presented his own plays throughout Québec. Thereafter, he continued to make himself known throughout Europe, particularly in France, as well as Canada. Some of his most popular songs are "Notre sentier," "Moi, mes souliers," "Bozo" and "Le Train du nord." Recurring themes are love of nature, his homeland and mankind. His poetic work takes its strength from its simplicity. Among other awards he has received the Grand Prix du disque (1951, 1958, 1973). HÉLÈNE PLOUFFE

**Leduc, Alta**, City, pop 12 471 (1981c), inc 1906 (town) and 1983 (city), is located 30 km S of EDMONTON. Originally a telegraph terminus and stop on the Calgary and Edmonton Ry, the town grew as an agricultural centre. On 13 Feb 1947, the Leduc No 1 well successfully tapped the huge Leduc oil field. By the end of 1947, some 30 wells in the field were producing 3500 barrels of oil a day. Today, most of the field is depleted, though Leduc is still a storage and pumping station. It is a farm distribution centre with some light industry connected with oil production, although not as much as formerly. Leduc is a dormitory community for many people who commute to Edmonton or who work at the nearby Edmonton International Airport. It has a hospital, school, churches, public library, parks and other recreational facilities. The newspaper is the *Leduc Representative*. Leduc is named for Rev Hippolyte Leduc, OMI, a pioneer priest in the area. ERIC J. HOLMGREN

**Leduc, Fernand**, painter (b at Montréal 4 July 1916). Leduc studied at the Ecole des beaux-arts in Montréal 1938-42. In 1941 he met Paul-Emile BORDUAS and became a leading member of the AUTOMATISTES, exhibiting with them and signing BORDUAS'S REFUS GLOBAL in 1948. He spent the years 1947-53 in Paris and then returned to Montréal, becoming the founding president of the Association des artistes non-figuratifs de Montréal in 1956. He returned to France in 1959 and has lived there since, except for the years 1970-74 when he taught at UQAM and Laval. Leduc's work moved from the abstract surrealism of the automatiste movement to the rigorous, hard-edge colour abstraction found in the PLASTICIENS and others. With Guido MOLINARI and Claude TOUSIGNANT, he gave force to the direction Montréal painting took through the 1960s. In 1970 he began his *Microchromie* paintings, subtle layerings of colour concerned with the character of coloured light. DAVID BURNETT

Reading: Jean-Pierre Duquette, *Fernand Leduc* (1980).

**Leduc, Jacques**, film director, cameraman (b at Montréal 25 Nov 1941). A writer for the magazine *Objectif* 1961-67, Leduc joined the NFB during that period. He worked as a cameraman until 1967 when he began directing. His first major film, *On est loin du soleil* (1970), was based on the spirit of Brother ANDRÉ and established Leduc's style. In the 5 years after *Tendresse ordinaire* (1973), he directed *Chronique de la vie quotidienne*, a series of 8 films that draw upon daily life, recombining its elements into a work of fiction. This was a change from the traditional direct cinema approach used in Canadian feature filmmaking. His *Albêdo* (1982) develops and transforms this duality: the aesthetic qualities of an episodic film are highlighted in a work in which documentary and fictional elements intertwine. PIERRE VÉRONNEAU

**Leduc, Ozias**, painter (b at St-Hilaire, Qué 8 Oct 1864; d at St-Hyacinthe, Qué 16 June 1955).

Leduc's interest in drawing was encouraged by a local teacher. Around 1883 he joined a Montréal statue-making firm, then became assistant to Adolphe Rho and Luigi Cappello, who introduced him to mural painting as a profession. He began exhibiting his works at the Art Assn of Montréal's annual spring exhibition in 1891, and in 1892 won a prize for his painting, *Nature morte, livres*. Until the early 1920s his works were periodically displayed at the AAM and at annual expositions of the Royal Canadian Academy.

After working on the decorative interior of the church of St-Paul-l'Ermite (1892), he landed his first important contract, with Joliette cathedral, where he completed a group of 23 religious paintings. During his career he decorated 31 churches and chapels in Québec, NS and the eastern US. His most important work includes the churches of St-Hilaire (1894-99); St-Ninian's Cathedral, Antigonish (1902-03); St-Romuald, Farnham (1905); St-Enfant-Jésus du Mile-End, Montréal (1916-19); the chapel of the Sherbrooke bishopric (1922-32); the baptistry in Notre-Dame, Montréal (1927-28); Sts-Anges-Gardiens, Lachine (1930-31); and Notre-Dame-de-la-Présentation, south Shawinigan (1943-55). His religious works are closely linked to his still-life paintings and landscapes inspired by the St-Hilaire region. His paintings of daily life and nature have both a symbolic and spiritual dimension achieved through flowing but concise, meticulous lines, warm and subdued colours and soft light. In this vein his 1913-21 landscapes *Cumulus bleu*, *Fin de jour*, *Effet gris (neige)*, *Pommes vertes*, *Neige dorée* and *L'Heure mauve*, along with drawings from the series *Imaginations* (1936-42), are among the most outstanding of his career.

As a painter of portraits and allegorical and historical figures, Leduc instilled his small works with great suggestive power. His interest in symbolism probably dated back to his brief stay in London and Paris in 1897. His writer friends, Arsène Bessette, Guy Delahaye, Olivier Maurault, Marcel Dugas, Paul MORIN and Robert de Roquebrune, as well as musician Léo-Pol MORIN, encouraged him in this direction. He collaborated with some of them to establish an art appreciation and criticism magazine, *Le Nigog*, published in 1918. He also illustrated several books, including *Claude Paysan* (1899) by Ernest Choquette, *Mignonne allons voir si la rose... est sans épines* (1912) by Guy Delahaye and *La Campagne canadienne* (1927) by Adélard Dugré.

Leduc was not influenced by contemporary Canadian artistic currents and trends. He held only one important exposition at the St-Sulpice Library in 1916. By helping to promote the career of Paul-Emile BORDUAS, he became quite popular late in his career. He also left many texts, poems and short reflections on art. His feelings about modern painting are expressed in the mystical thought that man lives searching for the paradise he hopes to regain through a knowledge of nature and the beauty of art.

LAURIER LACROIX

Reading: J.R. Ostiguy, *Ozias Leduc* (1974).

**Lee, Dennis**, teacher, editor, critic, poet (b at Toronto 31 Aug 1939). A graduate in English from U of T (BA 1962, MA 1965), Lee has taught or served as writer-in-residence for various universities. A founder and highly praised editor (1967-72) of House of Anansi, he later worked as consulting editor for Macmillan (1974-79) and McClelland and Stewart (1981-), as well as writing songs, with Phillip Balsam, for the TV program "Fraggle Rock" (1983-). Lee's prose books include *The University Game* (ed with Howard Adelman, 1968), in which he calls for freedom from inhibiting educational institutions, and *Savage Fields: An Essay in Literature and Cosmology* (1977). The latter explores the interrelationship

Poet Dennis Lee has become as well known for his children's writing as for his fine serious poetry (courtesy Canapress).

between "earth" and "world" — ie nature and civilization, or instinct and consciousness — all with particular application to a critical analysis of works by Michael ONDAATJE and Leonard COHEN.

Lee disavows much of *Kingdom of Absence* (1967), a sequence of 43 sonnet variations, but some of its concerns — modern ills, alienations, emptiness, colonialism, and their effects on the imagination and even on language — are developed in later books, *Civil Elegies* (1968, rev 1972; Gov Gen's Award) is a free-verse lament for Canada's colonized condition and a meditation on the need to become a full citizen: to occupy, imaginatively and in integrity, one's own life and land. Reclaiming language and liberating imagination, key parts of this process, are best begun in childhood; accordingly, Lee tries to free Canadian children from a colonial mentality by creating poems rooted in the words and activities of their everyday lives, poems which encourage free imaginative play. His 2 best children's books appeared in 1974; *Alligator Pie*, for preschoolers, and *Nickolas Knock and Other People* for older children. On the adult level, roots and play (including lovemaking) are further explored in part 1 of *The Gods* (1979). Part 2, *The Death of Harold Ladoo* (1976), is an elegy for Lee's friend, a writer murdered in 1973 during a visit to his native Trinidad. The poem also meditates on the roles of mystical epiphanies and of artistic creation in its attempt to come to terms with the problems of the contemporary world.

JOHN R. SORFLEET

**Lee, James Matthew**, businessman, politician, premier of PEI (b at Charlottetown 26 Mar 1937). After setting up his own real-estate and development company in 1970, Lee ran unsuccessfully as a PC candidate in 1974. In a by-election on 17 Feb 1975, he was elected to the assembly. He held various portfolios and, after winning the 1981 leadership convention, was sworn in as premier in 1982. In 1983 Lee succeeded in securing Maritime and federal agreement for the establishment of a school of veterinary medicine at UPEI.

DAVID A. MILNE

**Leech** (class Hirudinea), segmented ANNELID worm with 34 segments, many external rings and no setae (bristles). Suckers at each end are used in looping movements. Many aquatic leeches can also swim. Some leeches eat detritus;

others, soft-bodied animals with red blood (eg, snails, worms). Most are external parasites on VERTEBRATES. Some may invade the bladder or body parts near the exterior, eg, nostrils. About 300 species are known worldwide, most from freshwater habitats; some are marine or terrestrial, especially in tropical areas. There are some 45 Canadian species, if those known from bordering US are included. The traditional medicinal use of leeches to draw blood continues, eg, in draining blood from reattached, severed fingers before natural circulation is fully restored. The leech's gut has a large storage area to hold massive blood meals needed for balanced diet; the intestine is simple, as blood is easily digested and absorbed.

R.O. BRINKHURST

**Leeson, Thomas Sydney**, anatomist, electron microscopist (b at Halifax, Eng 26 Jan 1926). Having received his arts and medical degrees from Cambridge (1946-50), he later obtained an MD (1959) and a PhD (1971) there. He arrived in Canada in 1957 as assistant professor of anatomy at U of T. In 1963 he became professor in the anatomy dept at U of A, also serving as chairman until 1982. His research on the ultrastructure of tissues has gained him international recognition; he is especially well known for his textbook *Histology* (1966, 4th ed 1981), which he coauthored with his twin brother Charles Roland Leeson.

K.D. MCFADDEN

**Lefebvre, Jean-Pierre**, filmmaker (b at Montréal 17 Aug 1941). Lefebvre's remarkable films, most made on low budgets, present a singularly personal body of work. His first 3 features, including the magnificent *Il ne faut pas mourir pour ça* (1967), were made independently, and his work began to attract international attention. In 1967 he joined the NFB, where he made 2 features as well as producing the films of a number of young Québec filmmakers. He soon left and formed his own company, Cinak. Working consistently with his wife, Marguerite Duparc, who edited and produced almost all his work, Lefebvre advanced his humanitarian view of the world in films such as *Les Maudits Sauvages* (1971), *Les Dernières Fiançailles* (1973), *Le Vieux Pays où Rimbaud est mort* (1977) and *Les Fleurs sauvages* (1982).

PIERS HANDLING

**Legal Aid** The availability of publicly funded legal services for poor clients in Canada has developed only in the latter half of the 20th century. Previously, lawyers were sometimes willing to provide free assistance to poor clients in meritorious cases, and judges would sometimes appoint lawyers to act for poor clients, but such legal services were essentially charitable. Modest arrangements to provide legal services for clients who could not afford them were begun in some provinces in the 1950s and early 1960s by means of municipal and provincial grants and with contributions from lawyers, but it was not until 1966 that Ontario enacted legislation establishing the first comprehensive provincial legal-aid scheme. This legislation represented a major change in the philosophy of legal-aid services — that legal aid was no longer a charity but a right.

**The Impact of Cost-Sharing on Services** Legal-aid programs had been adopted by all other provinces and territories by the mid-1970s. Although legal-aid services fall within the provinces' constitutional responsibility for "the administration of justice," the federal Department of Justice became involved in these programs with federal-provincial cost-sharing agreements for legal-aid services in criminal law, a matter within federal constitutional responsibility. These cost-sharing agreements significantly affected the uniform development of provincial legal-aid plans because they specified both minimum standards of services to be provided and financial eligibility requirements for clients. For

instance, an indigent client anywhere in Canada must be granted legal aid if that client is charged with an indictable offence, and the client is entitled to choose a lawyer in all serious cases where life imprisonment may result.

By contrast, federal funding has been far less available for legal-aid services in noncriminal cases, and provincial programs usually provide only restricted services or none at all. Notwithstanding the idea of legal aid as a right, provincial legislation creating legal-aid programs generally provides for discretion in granting legal aid to clients who are charged with less serious offences, or who must appear in lower courts in family law disputes, or where the client's case is heard in a small-claims court or before a tribunal. In addition, the provision of legal advice, the preparation of documents, and negotiation on behalf of a client are all usually discretionary matters under legal-aid legislation. Thus, legal aid as a right in Canada exists primarily for those poor clients charged with serious criminal offences.

**Financial Eligibility** The cost-sharing agreements require provinces to administer a flexible means test to determine whether a client can retain a lawyer without contracting major debts or having to sell modest assets that are necessary for livelihood. Provincial programs generally require an examination of income, of disposable assets, indebtedness, maintenance obligations, etc, to determine eligibility. Clients receiving social assistance will usually qualify for legal aid anywhere in Canada, but there is some variation from province to province in the application of financial eligibility guidelines for other clients. In addition, clients may sometimes be asked to make a contribution to or to repay legal-aid expenses.

**Salaried or Fee-for-Service Lawyers?** The development of publicly funded legal-aid services in Canada coincided with the expansion of legal aid elsewhere and with the adoption of international commitments to legal aid as expressed, for example, in the International Covenant on Civil and Political Rights that was adopted by the UN General Assembly in 1966. Yet even with broad agreement on the basic objectives of legal-aid services, considerable diversity occurred in their implementation. The US pattern of salaried public defenders in storefront offices contrasted with the delivery model adopted initially in England, where solicitors in private practice provided legal aid to clients and received reimbursement from government. From the inception of modern legal-aid programs in Canada, the issue of the appropriate delivery model — salaried lawyers or private practice lawyers paid on a fee-for-service basis — has been controversial. Several provinces, including Saskatchewan, Manitoba, Québec and Nova Scotia, initially opted for salaried lawyers in storefront locations, while Alberta and New Brunswick adopted the fee-for-service model. BC developed a more "mixed delivery" model, using a combination of salaried lawyers and paralegal workers in storefront clinics, as well as fee-for-service lawyers. The mixed delivery model also developed in Ontario, where the early fee-for-service model was expanded in 1976 and now includes approximately 45 independent community clinics staffed both by lawyers and paralegal workers. Clinics in Ontario provide complementary legal-aid services, particularly for those legal problems excluded from "entitlement" under the fee-for-service program (tenant problems, welfare, workers' compensation, immigration).

By 1980 most provincial legal-aid programs were based, in varying degrees, on this "mixed delivery" model. In addition, many provinces had adopted duty counsel arrangements in courts, and, in the North a duty counsel regularly travelled on circuit. Many programs had

experimented, often quite successfully, with legal-education projects and with arrangements designed to create better access to the law for poor clients. Such projects often used the expertise of paralegal or community legal workers and sometimes resulted in successful legal actions on behalf of groups of poor people.

**Costs, Control and the Charter** By 1980 the strength of the Canadian legal-aid system lay in the combination of its diversity and the maintenance of minimum standards that were effected by the federal cost-sharing agreements. The main issue for legal aid is its cost; total expenditures in 1978-79 reached \$90 million. Even in provinces where responsibility has been vested in independent legal-aid corporations (BC, Manitoba, Saskatchewan, Québec, Nova Scotia and Newfoundland), fiscal restraint has dramatically affected legal-aid resources. Thus, the issue of access to justice through independent legal-aid services in Canada remains unsolved. Ironically, the fiscal restraint responsible for dismantling legal-aid programs coincided with the CHARTER OF RIGHTS AND FREEDOMS which enshrined the "right to retain counsel" as well as "equality before and under the law," "equal protection" and "equal benefit" of the law. The challenge to create an effective right to legal aid and equal access to justice still lies ahead.

MARY JANE MOSSMAN

**Legal Education** Because all provinces but Québec inherited the English COMMON LAW, legal education in Canada — training for the practice of law — was in the beginning modelled on that in England. In England, however, the profession was and is divided into 2 mutually exclusive branches — BARRISTERS and SOLICITORS. Solicitors deal with clients, but if there is to be a trial in the High Court a barrister must be retained to act as counsel. Barristers, who have the exclusive right to represent a party at a trial or on appeal, are the "senior" branch of the profession, but until very recently the educational qualifications were very low. Although most barristers have a university degree (not necessarily in law) it is not obligatory, and students can still become barristers without having ever been in court. Solicitors, however, must be articled clerks to practising solicitors and must pass examinations. The basic period was recently changed from 5 years to 4, which can be reduced to as little as 2 if the candidate passes certain qualifying examinations and has a university degree.

In Canada (except Québec) the division of the profession into 2 mutually exclusive branches has not occurred; today a legal practitioner in the common law provinces is invariably both a solicitor and a barrister, though in practice many act in the capacity of one or the other.

Before the establishment of the modern law school, the typical provincial Act governing the legal profession provided that applicants had to spend 5 years under articles and to write periodic examinations, though if they held a university degree the period was reduced to 3 years. When modern law schools were established, the articling period was usually reduced to one year after graduation. In Ontario and Manitoba it was once possible to combine part-time law school with part-time articles, but now these provinces have the same system as the others.

In Canada, as in the US and unlike England, students do not come directly from high school to law school. The usual minimum is 2 years of university education and most successful applicants have a degree.

The story of the common-law schools can be divided into 2 periods — from the founding of the Dalhousie Law School in 1883 to 1945, and from 1945 to the present. Dalhousie established a full-time 3-year course soon after the school was founded. It had always had links to Har-

vard Law School and at the end of WWI its curriculum resembled that of Harvard. Following the recommendations of the Canadian Bar Association in 1920, this curriculum was widely accepted by other common-law schools.

In Ontario the Law Society created its own law school, Osgoode Hall, in 1889. Later the universities of New Brunswick, Manitoba, Saskatchewan, Alberta and BC established law schools.

Shortly after WWII the Law Society made Osgoode a full-time school, but it did not give complete recognition to other schools in Ontario until 1957. In 1966 the society gave up its school and Osgoode Hall became a part of York University. By that time there were 6 faculties in Ontario — at the universities of Ottawa, Toronto, Western Ontario, Windsor, Queen's and York — and in other provinces law schools were also established at the universities of Victoria, Calgary and Moncton, and a common-law course was begun at McGill. By 1984 the number of full-time teachers had risen from about 20 to 600 and student enrolment is now in the thousands. Most law schools impose a quota on admissions. One notable postwar trend has been the marked increases in women students and in women law teachers.

The standard curriculum of 1920 remained virtually unchanged until 1945. In 1957 the Law Society of Upper Canada prescribed the courses it would require of "approved" schools, making amendments in 1969. As all the common-law schools are approved, it is clear that the Ontario prescription has influenced the curriculum in all common-law schools. There are 25 subject areas, with 6 compulsory "core subjects." The object is to provide a general education that permits a degree of specialization. In some law schools there is special emphasis on specific topics, eg, taxation or oil and gas law.

The teaching method in common-law schools was originally based on the "case method" created in the 1870s by Dean Langdell at Harvard Law School, who believed that law was a science composed of principles that could be learned from reading decisions of appellate courts. Formal lectures were replaced by discussions in class of assigned cases and by questioning of the Socratic type. By the 1920s, all common-law schools in Canada employed one or other variation of the case method.

Since WWII, the use of the case method, at least after the first year of law school, has been criticized on the grounds that it is unproductive and gives a misleading view of law in action. Legislation tends to be ignored in the reading of cases, although its pre-eminent place is now being recognized. There has been emphasis as well on problem solving and legal writing, and on public law as compared to private. Courses in CONSTITUTIONAL LAW were always fundamental, but now COURSES ON ADMINISTRATIVE LAW, taxation and LABOUR LAW are also important. Another trend is the linking of law with other disciplines, eg, economics, history, psychology and sociology; and to answer the criticism that law school study ignores pressing social needs, there are COURSES IN PROPERTY LAW, WOMEN AND THE LAW, and CIVIL LIBERTIES. There has been an effort to strengthen courses on legal theory, the philosophy of law and sociology of law, usually under the rubric of JURISPRUDENCE. Efforts have been made as well to teach ethics and professional responsibility.

The development of these new subjects is not always strong and has to face competition with other subjects. As a result of criticism that law schools fail to teach skills necessary in legal practice — drafting documents, writing opinions, preparing for trial and cross-examination, interviewing and negotiating — there has been increasing emphasis on clinical training. Considerable effort has been made to meet this de-

mand, usually with the help of practitioners and judges. Like every innovation, however, its place in the law school has been debated.

The production of legal journals has conspicuously increased. These journals usefully provide scholarly articles and a forum for criticism and for proposals for reform. In addition, the use of computers is constantly increasing and may soon be indispensable in both law teaching and practice.

The recent report of the Arthurs Committee on Legal Education, *Law and Learning*, states that law schools are "eclectic" and still overemphasize training for the professional rather than the academic. The report advocates research at a high level to help the development of a "scholarly" discipline that will not be shunted aside from professional training. The report specifically recommends an expansion and intensification of graduate study (a number of schools give a master's degree and a few offer a doctorate) with a view to the education of future law teachers and researchers, and recommends that these programs should concentrate on those subjects in which the school is strong. Support for graduate research is hampered, however, by the shortage of funds for scholarships.

The advent of the law school did not mean an end to the system of articles. The purpose of articling is to provide "practical" training, ie, an introduction to practice which the law school has not provided. The success of articles depends on the "principal" and the student. The principal is under a duty to see that the student receives instruction in the basics of practice, but there is little or no supervision to this end. For many years after WWII, the business expansion created a demand for students and good articles were comparatively easy to obtain. In recent years, the number of graduates has been more than the market can easily absorb and the adequacy of the articling system has come into question. To supplement articles, most law societies have established a Bar Admission Course. The most notable is that of Ontario, begun in 1957. When students have finished the year of articles they are required to attend a 6-month course in matters such as rules of procedure, forming companies, handling estates, and real-estate transactions. This course is described in a handbook published by the Law Society of Upper Canada. The other provinces, except for PEI, have each provided in legislation for a bar admission course. However, these courses are less ambitious than Ontario's and vary a great deal. Some are given throughout the period of articles while others are offered near the end of the articling period, the length of the course varying from one week to 6.

In the US, the requirement of articles is virtually nonexistent. In theory, admission to practice is a matter for the state supreme court. The court in fact delegates its function to bar examiners who set comprehensive exams for those seeking to practice, and who conduct character checks. Another difference between the 2 countries is that the American Bar Association publishes a list of approved law schools, though some unapproved schools still exist; the Canadian Bar Association has no such role and there is no category of unauthorized law schools. Finally, the Canadian type of provincial law society, with statutory control over admission and discipline, is quite different from the type of law society in the US.

Once an individual has been admitted to practice it is important to keep up to date. Legal journals and special lectures and meetings of bar associations are helpful but provide uneven coverage and do not always reach those most in need. In recent years there has been a call for a greater and more systematic program of continuing legal education. In 1978 the Federation of Law Societies of Canada held a Conference on

Quality of Legal Services and in 1980 held a workshop on the same subject. It concluded that continuing legal education should be fostered but it was not prepared to recommend mandatory continuing legal education. Organized efforts at programs of continuing legal education are in fact increasing in most provinces.

The legal profession (outside Québec) has never recognized specialties, as does medicine, though in some province practitioners may now announce a preferred area of practice. The significant fact is that the "practice of law" is not homogenous, and the variations go far beyond the differences between barrister and solicitor. In addition, lawyers work not only in private practice but also in government and business.

In Québec the legal profession is divided. Advocates form the Barreau de Québec while notaries, governed by their own statute, are somewhat like solicitors. An individual cannot belong to both branches. The course leading to a degree in law in Québec takes 3 years, and the prelegal requirement is a diploma equivalent to an arts degree. If law students wish to become notaries, they must declare so by 1 Dec of their third year. Up to that point, the courses are the same for both branches, with emphasis on the CIVIL CODE. In many other ways the Québec schools have gone through the same experiences and problems as the common law schools. The first faculty of law was established in 1848 at McGill, which now gives a common law as well as a civil law degree (just as does U of O). Laval's law faculty was founded in 1852 and that of U de M is over 100 years old. Other law schools exist at Sherbrooke and U de Québec at Montréal.

Practical training occurs after graduation. For advocates there is an 8-month "formation professionnelle" (similar to a bar admission course), followed by a "stagiaire" (similar to articles) of 6 months, and finally a bar exam. Graduates who wish to be notaries must attend an additional year in notarial practice at a civil law school; finally, they take a notarial examination.

W.F. BOWKER

**Légaré, Joseph**, painter, art collector, politician (b at Québec City 10 Mar 1795; d there 21 June 1855). Originally a painter and glazier, Légaré became a fine-arts painter around 1819. Self-taught, he never went to Europe for training and learned by copying the work of others. His first efforts to diversify his work were crowned with success when Québec's Société pour l'encouragement des sciences et des arts in Canada gave him a medal of honour (1828) for his painting *Le Massacre des Hurons par les Iroquois*. In all he painted more than 250 oils on canvas or paper, including some hundred religious copies, occasional portraits, some rural scenes and contemporary events (Québec's 1832 cholera epidemic and 1845 fires), some remarkable historical tableaux (*La Bataille de Sainte-Foy* 1854) and native Indian subjects. Légaré, who taught Antoine PLAMONDON, was the first Canadian-born painter to devote himself to landscapes. He also opened Canada's first art gallery (in 1833), featuring his personal collection of canvases and European engravings; it closed in 1835. From 1838 to 1840 and 1852 to 1855 he again offered Québec City art amateurs access to his ever-growing collection. Since 1874 the former Légaré collection has been held in the Musée du Séminaire de Québec, which also holds the most important body of the artist's own output. Légaré worked ceaselessly to promote fine arts in Lower Canada, and after 1845 was one of the greatest supporters of the creation of a national gallery. A Lower Canadian nationalist, he tirelessly promoted humanitarian, social and political goals. His activities included a stint as member of the first Québec C municipal council (1833-36). A faithful follower of Louis-Joseph PAPINEAU, he was arrested for his part in the

Joseph Légaré painted over 250 oils, among which were a number of fine portraits, such as *Portrait of Josephine Ourné* (c 1840) (courtesy National Gallery of Canada).

REBELLIONS OF 1837, 5 years before becoming one of the founding members of the ST-JEAN BAPTISTE SOCIETY of Québec. Defeated as a candidate in the by-elections of 1848 and 1850, he was appointed to the Legislative Council in Feb 1855, a few months before his death.

JOHN R. PORTER

**Legault, Émile**, director, dramatist, critic (b at Ville St-Laurent, Qué 29 Mar 1906; d at Montréal 28 Aug 1983). Ordained a Catholic priest in 1930, he became a teacher and founded, in 1937, a troupe of young actors at Montréal's Collège de Saint-Laurent. This troupe, the Compagnons de Saint-Laurent, would last 15 years and prove to be the most influential theatrical company in the history of Québec. With Legault's guidance and dedication it moved from an early emphasis on religious theatre to classical and contemporary plays, a tendency heightened after his year of drama studies in Paris. Former members of the Compagnons went on to provide leadership in all aspects of the performing arts in Québec for the next 3 decades. After the troupe disbanded in 1952 Legault turned to composing dramatic texts on religious themes, such as *Premiers gestes* (1954), *Le Grand Attentif* (1956) and *Kermesse des anges et des hommes* (1960). A perceptive critic, he is the author of many articles on stage arts in Canada and of a volume of memoirs, *Confidences* (1955).

L.E. DOUCETTE

**Léger, Jean-Marc**, journalist, social theorist, public servant (b at Montréal North 1927). After graduate studies at U de M in law, history and social sciences (1949), he attended the Institut d'études politiques, Paris, and returned to Montréal to become a journalist for *La Presse* until 1956 and with *Le Devoir* until the late 1960s. At U de M, with several other colleagues, he had set up the Équipe de recherches sociales to explore the socioeconomic problems of post-war Québec. They concluded that traditional FRENCH CANADIAN NATIONALISM, thanks to spokesmen like Maurice DUPLESSIS, was synonymous with the exploitation of the working class and the prevention of Québec's modernization. Throughout the 1950s Léger, through his writings in *L'Action nationale* and *Le Devoir* helped re-define this nationalism in terms of economic, social and political liberation for Québec's francophone majority. He was, thus, one of the ideological founders of the QUIET REVOLUTION. He worked for the "revolution" on the international scene as secretary general of the Assn des uni-

versités de langue française, 1961-78, and of the Agence de coopération culturelle et technique, 1969-74. Québec's délégué général in Brussels 1978-81, he was in 1984 an associate deputy minister with the Québec Ministry of Education.

M.D. BEHIELS

**Léger, Jules**, governor general of Canada, 1974-79 (b at St-Anicet, Qué 4 Apr 1913; d at Ottawa 22 Nov 1980), brother of Paul-Émile LÉGER. After studies at U de M and the Sorbonne, and working as a journalist, he joined the Dept of External Affairs in 1940 and began a brilliant diplomatic career that would lead him to ambassadorships in Mexico, Rome, Paris and Brussels. In France between 1964 and 1968, he won admiration for his sensitive handling of General de Gaulle's policy towards Québec. As under-secretary of state 1968-72, he provided the administrative underpinning for Prime Minister L.B. PEARSON's foreign policy and the TRUDEAU government's policy on bilingualism and multiculturalism.

Jules Léger was installed as governor general on 14 Jan 1974 and served until Jan 1979. In June 1974 he suffered a stroke which impaired his speech and paralysed his left arm. Although he regained a degree of health, he was thereafter greatly aided by his wife, Gabrielle Carmel, who in 1976 and 1978 shared with him the long reading of the speech from the throne. In 1978 he became the first governor general to exercise all the powers delegated to the office by King George VI in 1947. During Léger's term the country was divided by many acrimonious disputes over Québec SEPARATISM and the alienation of other regions. Throughout he maintained an unshakable and serene confidence in the unity of Canada and inspired a renewed respect for his office by his dignity, kindness, prudence and courage.

JACQUES MONET, SJ

Jules Léger, governor general of Canada 1974-79 by J. de Lavoye (courtesy Public Archives of Canada/C-98013).

**Léger, Paul-Émile**, cardinal of the Roman Catholic Church (b at Valleyfield, Qué 25 Apr 1904), brother of Jules LÉGER. He was ordained a priest in Montréal in 1929, beginning an ecclesiastical career that took him first to France (1930-33) and then Japan (1933-39). He returned to Valleyfield during WWII (1940-47), was rector of the Pontifical Canadian College in Rome (1947-50) and was then named archbishop of Montréal (1950-67), succeeding Mgr Joseph Charbonneau. Mgr Léger regularly made headlines, thanks to his eloquent speeches, his presence in all the religious and social activities of a city still unable to handle the demands of rapid change, and his clear support for the disad-

vantaged. He won the affection of the city and a reputation that quickly went beyond the borders of Québec. He was a man of action, with an extraordinary ability to stir people's consciences and energies to participate in projects such as the Foyer de Charité, the Hôpital Saint-Charles-Borromée for the chronically ill. He will also be remembered for his independence from politicians during Maurice DUPLESSIS's premiership of Québec and for his willingness to increase the role of the laity by renouncing certain privileges until then reserved to the church. His nomination as a cardinal in 1953 increased his renown. A member of the preparatory commission leading to Vatican Council II (1962-65), Cardinal Léger played an important role as both a liberal and a progressive. Upon returning to his diocese, he worked to implement the decisions of the council and then, in 1967, decided to step down from the episcopal seat in Montréal to become a missionary among lepers and handicapped children in Cameroon, Africa. Though retired, he sees to the continuity of the missionary activities he helped to launch and continues his humanitarian work from Montréal. DENISE ROBILLARD

**Legge, Francis**, soldier, colonial governor (b c1719; d near London, Eng 15 May 1783). After an undistinguished military career spent largely in N America, Legge was appointed governor of NS (1773) by his kinsman the earl of Dartmouth. During his first year in office he studied NS and sought to improve its economic situation and administration, but he soon conflicted with the Halifax merchant oligarchy. An attempt to audit the provincial books and to recover missing funds in the courts completed the process of alienation. By 1775 both Assembly and Council had turned against him, and as open rebellion broke out to the south, NS's military position was weak. Legge was recalled to England and criticized by the Board of Trade in 1776 for want of "Gracious and Conciliating Deportment." Although not formally replaced until 1782, he was not permitted to resume residence in NS throughout the war. J.M. BUMSTED

**Legget, Robert Ferguson**, civil engineer (b at Liverpool, Eng 29 Sept 1904). After working in the Canadian construction industry, Legget taught at Queen's and U of T until 1947, when he joined the NATIONAL RESEARCH COUNCIL to establish and serve as director of its new Division of Building Research, a position he held until retirement in 1969. He is known internationally for contributions to engineering, geology and building research and standardization. He helped establish co-operation among geotechnical engineers, geologists and pedologists in Canada, and his achievements have been recognized by 13 honorary degrees and many fellowships. Legget has written or edited more than 12 well-known books, including *Canals of Canada* (1975), *Glacial Till* (1976) and *Handbook of Geology in Civil Engineering* with P.F. Karrow (1983) and many papers on soil mechanics.

**Leif Ericsson**, Norse mariner (d c1020). The son of ERIC THE RED, Leif was the first European to set foot on the mainland of N America. According to the Saga of the Greenlanders, he bought BJARNI's ship and retraced his course, sighting 3 areas which he called Helluland (likely Baffin I), Markland (likely Labrador) and Vinland (possibly Newfoundland). Archaeological evidence at L'ANSE AUX MEADOWS confirmed Viking presence in Newfoundland, but the ruins need not be from Leif's Vinland. Leif earned his nickname "the Lucky" by rescuing shipwrecked sailors. See NORSE VOYAGES. JAMES MARSH

**Leliefontein** During the SOUTH AFRICAN WAR 90 officers and men of the Royal Canadian Dragoons were assigned to cover the retreat of a British infantry column under attack by several hundred Boer horsemen near Leliefontein farm,

E Transvaal. In the action on 7 Nov 1900, in which the Dragoons were supported by 2 guns of the Royal Canadian Field Artillery, 3 Dragoons won VICTORIA CROSSES, 3 were killed and 11 wounded. BRERETON GREENHOUS

**Lemelin, Roger**, novelist, script writer (b at Québec C 7 Apr 1919). He was born in the working-class St-Sauveur district of Québec C and is mostly self-taught. He has also been a journalist and a businessman with interests in advertising, food processing and lumbering, as well as publisher of the Montréal daily, *La Presse*. Lemelin has published 4 novels, a short-story collection and some nonfiction. Most successful have been his novels, *Au pied de la pente douce* (1944; tr *The Town Below*, 1948) and *Les Plouffe* (1948; tr *The Plouffe Family*, 1950). Critical comment was less favourable to *Pierre le magnifique* (1952; tr *In Quest of Splendour*, 1955) and especially to *Le Crime d'Ovide Plouffe* (1982; tr *The Crime of Ovide Plouffe*, 1984). Lemelin also wrote the long-lasting TV series based on *Les Plouffe*, a great success on CBC's English and French networks in the 1950s, and the scenarios for the popular screen and TV adaptations of the same novel, directed by Gilles CARLE. Director Denys ARCAD'S film, *Le Crime d'Ovide Plouffe* (1984), based on Lemelin's screenplay, reduced some of the original melodrama — the author's major flaw. A pioneer of social realism in French Canada, Lemelin's best writing is characterized by keen observation of his compatriots, with the main targets of his satire being clericalism, traditional nationalism, conventional Québec family, sexual taboos and ignorance. BEN-Z. SHEK

**Lemieux, Jean-Paul**, painter (b at Québec C 18 Nov 1904). Lemieux's artistic universe is often classified as one of northern landscapes, flat, barren and infinite, but this preoccupation is only one characteristic of his work. He studied at the École des beaux-arts in Montréal (1926-34), interrupted by a trip to Paris. After teaching at the École du meuble, he moved to the École des beaux-arts in Québec in 1937, remaining there until 1965. His work draws inspiration from Québec C and from Île aux Coudres, Charlevoix County, which he holds in particular affection. His first paintings reflected daily life, portraits of relatives and familiar landscapes. In the 1940s, his canvases (*Lazare*, 1941; *La Fête-Dieu à Québec*, 1944) in fresco style summarize the attitudes of people. His organization of subject and space was then influenced by the Italian primitivist school and early Québec folk art, which he collects avidly. Gradually his subjects became simplified and his style more geometric. It is not, however, a stiff geometry, for the lines still vibrate, and colours are either transparent or pastel. Space opens up (*Le train de midi*, 1956), and against a line of horizon appear figures (*L'été*, 1959). Part of and yet distinct from the background, his figures evoke a world of dream and

J.-P. Lemieux, photographed in a physical setting not unlike those of his paintings (photo by John deVisser).

memory. Often meditative and serious, Lemieux's art can sometimes be humorous and lyrical, as in his illustrations of Gabrielle Roy's books. His work is regularly exhibited in Canada and internationally, and he has been commissioned to paint portraits of a number of public figures. LAURIER LACROIX

**Lemieux, Raymond Urgel**, professor of chemistry (b at Lac la Biche, Alta 16 June 1920). Internationally recognized for his fundamental and innovative contributions to organic chemistry, especially in the area of carbohydrates, Lemieux obtained his doctorate from McGill (1946). He briefly held research positions at Ohio State U and U of Sask before moving, in 1949, to NRC Prairie Regional Laboratory in Saskatoon as senior research officer. Here he completed the first chemical synthesis of sucrose. He moved to U of Ottawa in 1954, where he pioneered the application of nuclear magnetic resonance SPECTROSCOPY to the structure elucidation of natural products. In 1961 he went to U of A, where his research focused on the special bonding properties termed "anomeric effects" and how these controlled the chemical reactions and shapes of carbohydrate molecules. This work led to the first chemical syntheses of the complex carbohydrates found on human cell surfaces and to an understanding of how the shapes of these molecules control their function. In addition to producing more than 200 scientific publications Lemieux holds over 30 patents, mostly on antibiotics and semisynthetic blood-group antigens, and is the founder of 3 chemical companies. O. HINDSGAUL

**Lemming**, stocky northern RODENT related to VOLES and MUSKRATS. About 16 species occur worldwide; best known of the 7 Canadian species are brown and collared lemmings (*Lemmus sibiricus* and the *Dicrostonyx groenlandicus* complex, respectively) from the arctic islands and mainland tundra W of Hudson Bay, and Labrador collared lemmings (*D. hudsonius*) from Ungava and Labrador. The northern and southern bog lemmings (*Synaptomys borealis* and *S. cooperi*) are uncommon. Lemmings rarely exceed 90 g and 15 cm in length. Their extremities are hidden by, or barely extend beyond, their long brown or grey fur. Collared lemmings are the only rodents that molt to a camouflaging white for winter. Lemmings eat willows and herbs. They are intermittently active day and night, and during winter forage beneath insulating snow. They breed rapidly and every 3-5 years reach peak densities of 60-125 per hectare. Subsequent population declines involve cessation of breeding and massive die-offs, but are not caused by predators, disease, starvation or stress from overcrowding. Lemming populations are self-regulating: genetically determined behaviours (aggressiveness and tendency to disperse) change with population density and influence the cycle. Although some Canadian lemmings emigrate from crowded areas and some accidentally

Roger Lemelin, publisher of *La Presse*, at Québec City, Oct 1976 (courtesy Public Archives of Canada/PA-129660/Morris Edwards/Montreal Star).

drown, they do not make spectacular suicide marches to the sea, as related in folklore. Lemmings are the main food for arctic carnivores, including valuable, fur-bearing arctic foxes and ermines.

DONALD A. SMITH

**Lend-Lease**, an Act of the US Congress passed Mar 1941, providing for the transfer of American war materials to Britain and its allies in return for theoretical deferred payment. Canada's involvement in WORLD WAR II had caused serious deterioration in the BALANCE OF PAYMENTS vis-à-vis the US, and the Lend-Lease Act threatened to divert all British war orders from Canada to the US. To avert a crisis, on Apr 20 PM MacKenzie King and Pres F.D. Roosevelt issued the Hyde Park Declaration, named for the latter's Hyde Park estate, where they met, providing for American war purchases in Canada. American-produced components of war materiel manufactured in Canada for Britain were to be included in the Lend-Lease scheme, an arrangement which alleviated Canada's trade deficit and made it easier for Canada to fill British orders and guarantee financing for them. Lend-Lease, terminated 21 Aug 1945, greatly helped the war efforts of Britain, the USSR and some other Allied powers; it benefited Canada only indirectly.

N.F. DREISZIGER

**Lennoxville**, Qué. Town, pop 3922 (1981c), inc 1871, is located in the Appalachians on the Rivière SAINT-FRANÇOIS, near the junctions of 4 rivers (Massawippi, Coaticook, au Saumon and Ascot), 5 km SE of SHERBROOKE. It was named in honour of the then governor general, the duke of RICHMOND (1818-19). The Abenaki and French missionaries often used the site because it was a focal point for canoes and small boats using the tributaries of the St-François. A sawmill and forest-products plant (lumber and potash) preceded the founding of the first village by LOYALISTS around 1794. From 1860 to 1950, there was some copper mining in the region. Development of road and rail networks 1810-84 brought copper manufacturing (1903), asbestos (1935) and, more recently, maple syrup industries. Located here are BISHOP'S UNIVERSITY (est 1843) and Bishop's Coll School (est 1836), which attract students from across Canada and the US. There are as well federal agricultural research facilities. The town is the centre of activities for the anglophone community in the EASTERN TOWNSHIPS.

JEAN-MARIE DUBOIS AND PIERRE MAILHOT

**Lentil** (*Lens esculenta*), herbaceous, cool-season annual belonging to the legume family. Lentils were one of the first plants domesticated (about 4000 bc). They originated in Asia and spread quickly throughout the Middle East and Europe and, later, the New World. The plants have several ascending branches, varying in height from 15 to 45 cm. The leaves are alternate, with 6 pairs of leaflets per leaf. Each leaf axil bears 2-4 white or pale blue flowers. The slightly inflated pods are 1.5-2.0 cm long and contain 2 doubly convex lens-shaped seeds. Lentils require 80-130 days to mature and need 15-75 cm of precipitation during the growing season. They are cultivated in Asia, N Africa, Europe and N America. Lentils are a high-protein foodstuff used in soups or dhal. Canada produces 20 000 t of lentils annually, primarily in Saskatchewan.

P. McVETTY

**Leonard, Stan**, golfer (b at Vancouver, BC 2 Feb 1915). Leonard turned professional in 1938. He won the Canadian Professional Golfers' Assn championship 8 times 1940-61, was low Canadian in the Canadian Open 9 times 1945-61, won the BC Open 5 times, the Alberta Open 9, and the Saskatchewan Open twice. Until 1955 Leonard's competitive golf was restricted to Canada. Then over 40, he began to compete on the US tour. In 1957 he won the Greater Greensboro (NC) Open, in 1958 the Tour-

namment of Champions and in 1960 the Western Open.

LORNE RUBENSTEIN

**Leonowens, Anna Harriette**, née Crawford, author, teacher, feminist, lecturer (b at Caernarvon, Wales 5 Nov 1834; d at Montréal 19 Jan 1915). After her officer husband died in Singapore in 1858, she established a school there for officers' children and then became a teacher at the Siamese court (1862-67). Her experiences there were the inspiration for 2 of her books, *The English Governess at the Siamese Court* (1870) and *The Romance of the Harem* (1872), which dealt with the exploitation of women in this exotic environment. These later became the basis for *Anna and the King of Siam* by Margaret Landon (1943) and the play *The King and I* (1951). Moving to Halifax in 1876, Leonowens organized a book club and a Shakespearean society, was active in a suffrage association, and was founding secretary of the Halifax Council of Women. She helped found the Victoria School of Art and Design in Halifax in 1888, before leaving there in 1897. She then lived in Germany for some years before settling in Montréal.

ERNIE FORBES

**Lepage, Ernest**, priest and botanist (b near Rimouski, Qué 1 June 1905; d there 4 Jan 1981). Lepage was an assistant parish priest until 1933 and then taught at the Ecole moyenne d'agriculture in Rimouski 1936-61. In 1943 he began his professional association with a fellow Oblate, Arthème Dutilly, and his long concentration on arctic and subarctic flora. Their annual trips, 1945-64, which focused for the most part on the James Bay region, were documented in extensive publications, while their personal herbariums grew constantly. Despite health problems, Lepage continued his regional botanizing and his writing until he suffered partial paralysis from a thrombosis in 1976. He left his herbarium and botanical library to Laval. Although Lepage left no individual disciples the herbaria, writings and archives of Dutilly and Lepage contributed enormously to botanical knowledge in Canada.

BERNARD BOIVIN

**LePan, Douglas Valentine**, public servant, educator (b at Toronto 25 May 1914). LePan taught English literature at U of T and Harvard 1937-41, was a personal education adviser to Gen A.G.L. MCNAUGHTON 1942-43, and fought in the Italian campaign with the Canadian Army. He was a member of the Dept of External Affairs 1945-59, developing an expertise in economics and serving in Washington as minister-counsellor, as secretary and director of research for the Royal Commission on Canada's Economic Prospects, and briefly as assistant undersecretary of state. A volume of memoirs, *Bright Glass of Memory* (1979), recalls LePan's early experiences. After teaching at Queen's 1959 to 1964, he returned to U of T as principal of University College 1964-70 and university professor 1970-79. He won the Governor General's Award for his second volume of poetry, *The Net and the Sword* (1953) and for his novel *The Deserter* (1964), both of which are concerned with the experience of war.

NORMAN HILLMER

**Leprohon, Rosanna Eleanor**, née Mullins, novelist, poet (b at Montréal 12 Jan 1829; d there 20 Sept 1879). Of Irish-Catholic descent and a convent-school education, Leprohon published her first poetry, at age 17, in the *Literary Garland*, followed by serialized novels of manners set in England, published annually from 1848 to 1851. In June 1851 she married a French Canadian, Dr J.L. Leprohon; they had 13 children. Subsequently Leprohon's focus shifted to Québec society. "The Manor House of de Villeraï" (serialized in *The Family Herald* 1859-60) is set in New France during the Seven Years' War; *Antoinette de Mirécourt* (1864) in Montréal just after that war; and *Armand Durand* (1868) in early

19th-century Lower Canada. Soon translated, these novels became part of both Canadian literatures; indeed *Le Manoir de Villeraï* (tr 1861) precedes P.J. Aubert de Gaspé's *Les Anciens Canadiens* (1863) as the immediate literary descendant of Garneau's *Histoire du Canada*. Leprohon's posthumous *Poetical Works* (1881) treat historical and religious subjects, nature and family life.

JOHN R. SORFLEET

**LeRoy, Donald James**, physical chemist, science adviser (b at Detroit, Mich 5 Mar 1913). After gaining his PhD at U of T (1939), he joined E.W.R. STEACIE at the NATIONAL RESEARCH COUNCIL, where he carried out important research on molecular fragments called free radicals, which determine the course of many chemical reactions. In 1944 he joined U of T's chemistry department, becoming chairman in 1960. Through his efforts, the department developed a worldwide reputation in fundamental chemical research. Sharing Steacie's conviction that Canada must increase its scientific stature to survive, LeRoy returned to the NRC in 1969 as VP (scientific). In that office (1969-74) and as science adviser at the Science Council (1974-84), he strongly influenced the building of Canada's research capabilities.

HARRY EMMET GUNNING

**Lesage, Jean**, lawyer, premier of Québec (b at Montréal 10 June 1912; d at Québec C 12 Dec 1980). Known as the father of the QUIET REVOLUTION, he led the government of Québec during that period of profound change to the organization of the collective life of Québécois. Elected federal MP for Montmagny-L'Islet in 1945, he became, in 1953, minister of resources and development and then of northern affairs and national resources. Upon the defeat of the Louis ST. LAURENT government in 1957, he left federal politics to become leader of the Québec Liberal Party in May 1958. He completely reformed the party by attracting dynamic people and by preparing a program of social and political reform. His party came to power in 1960 and introduced many reforms, including the elimination of patronage and corruption, the creation of ministries of education and of cultural affairs, and the establishment of the Société générale de financement. In 1962 he held an election on the issue of nationalizing the electricity companies and won easily under the slogan of "Maître chez nous," which became the byword of his government. Though his government was defeated in 1966, he remained leader of the Liberal Party until his retirement from political life in 1970.

DANIEL LATOUCHE

**Lescarbot, Marc**, lawyer, author (b at Vervins, France c 1570; d in France 1642). A Paris lawyer, Lescarbot sailed for ACADIA in May 1606 at the invitation of one of his clients, colonizer Jean de BIENCOURT DE POUTRINCOURT. He remained there until the summer of 1607, when the colony was abandoned after the revocation of its trading monopoly. Based at PORT-ROYAL (Annapolis Royal, NS), Lescarbot travelled widely in Acadia and took a keen interest in the problems and opportunities of N American colonization as well as the way of life of the region's native peoples. His insights were set down in several published works, most notably his *Histoire de la Nouvelle-France* (1609). Besides being a vivid account of early colonizing attempts in Acadia, the *Histoire* is a remarkable plea for realism in harvesting the colony's natural resources, as against a futile search for quick profits. Also a poet and playwright, Lescarbot presented his *Théâtre de Neptune* at Port-Royal in 1606, reputedly the first theatrical production in N America. After returning to France in 1607, Lescarbot resumed his law practice, but his interest in the progress of Acadian colonization was lifelong.

JOHN G. REID

Reading: Marc Lescarbot, *The History of New France*, ed W.L. Grant (1907-14); John G. Reid, *Acadia, Maine, and New Scotland* (1981).

**Lessard, François-Louis**, army officer (b at Québec C 9 Dec 1860; d at Meadowvale, Ont 7 Aug 1927). He served in local militia units before joining the Québec Garrison Artillery (1880). As a lieutenant in the Cavalry School Corps he served during the NORTH-WEST REBELLION. Promoted lieutenant-colonel to command the Corps (1899), he volunteered for service in the SOUTH AFRICAN WAR, and eventually commanded the 1st Battalion, Canadian Mounted Rifles (Royal Canadian Dragoons). Though promoted major-general in 1912, he was prevented by Sam HUGHES, minister of militia and defence, from getting command overseas at the outbreak of WWI. Appointed inspector general for eastern Canada, Dec 1914, he commanded the Halifax Fortress. In Mar 1918 he was called upon to restore order in Québec City following anticonscription riots. After retiring (1919) near Toronto, he often served as judge at horse shows in Canada and the US.

JEAN PARISEAU

**Lesser Slave Lake**, 1168 km<sup>2</sup>, elev 577 m, located in central Alberta, about 200 km NW of Edmonton. It is fed by numerous small rivers, including the Swan, Driftpile and E and W Prairie, and discharges E via the Lesser Slave R to the ATHABASCA R. It was named for the Slavey Indians, and "Lesser" was added to distinguish it from its namesake in the NWT. The oldest settlement in the area is Grouard (pop 20), once a bustling stopover on the Klondike trail. The site of Slave Lake (pop 4500) was a gathering place for Indian hunting and war parties. By 1900 the town was a steamboat centre, until the arrival of the railway in 1915. Sandy beaches on the S and NE shore have raised talk of tourism, but it is oil that has given the area new importance. There are several Indian reservations along the S shore and Lesser Slave Lake Provincial Park is on the NE.

JAMES MARSH

**LeSueur, William Dawson**, critic, historian, civil servant (b at Québec City 19 Feb 1840; d at Ottawa 23 Sept 1917). Of French Huguenot and English parentage, LeSueur became the most important Canadian-born man of letters of his generation, introducing a spirit of critical inquiry into journalism and historical writing. An Ottawa civil servant from 1856, LeSueur rose to prominence in 1871 with the publication of an essay on the French critic, Sainte-Beuve, in the *Westminster Review*. This was followed by articles on science, social philosophy and religion in Canadian, American and British periodicals in the 1870s and 1880s. A convinced Comtean positivist, LeSueur became notorious for the heterodoxy of his religious views. From the 1890s on, however, his attention turning to historical writing and political criticism, he came ironically to be seen as a man harbouring a "Tory" bias. His 1908 biography of William Lyon MACKENZIE for the Makers of Canada series was critical of the "patron saint" of Canada's liberal tradition, and protracted litigation prevented it from being published; it finally appeared in 1979.

A.B. McKILLOP

**Letendre, Rita**, painter, printmaker (b at Drummondville, Qué 1 Nov 1928). After study at the École des beaux-arts de Montréal, Letendre was influenced by Paul-Émile BORDUAS and the AUTOMATISTES. In 1962 she travelled in western Europe and Israel. Her new interest in more structured composition and simpler shapes is seen in her outdoor mural commission in Long Beach, Calif., where she lived with her sculptor-husband KOSKO ELOUL (1965-70) before moving to Toronto. There her painting became more austere, with large geometric forms and vibrant colour. Letendre is well known for her monumental interior and exterior murals.

SANDRA PAIKOWSKY

**Lethbridge**, Alta, City, pop 54 072 (1981c), inc 1906, is located 215 km by road SE of CALGARY

on the steep, coulee-scarred banks of the OLDMAN R. It is a pleasant, tree-lined service centre for the surrounding agricultural communities. An elected mayor and 8 councilors govern the city with the assistance of an appointed city manager.

**History** Some 500 generations of Blackfoot Indians inhabited the Lethbridge area before recorded history. In 1869 Montana traders built Fort WHOOP-UP, one of the notorious whisky forts dotting the region. The North-West Mounted Police stopped the liquor trade in 1874. Soon coal mining became the primary economic activity. Although coal had been mined from the banks of the Belly (Oldman) R as early as 1872, large-scale mining did not begin until 1885, when the North Western Coal and Navigation Co, directed by Sir Alexander and Elliott Galt, completed a railway from its mines to Dunmore on the CP main line. The colliery created an instant town, soon called Lethbridge (after North Western Coal's president, William Lethbridge), whose population reached 1478 in 1890 when the company completed a rail link with Montana. Railways continued to play an important part in Lethbridge's history. In 1897 the CPR assumed control over the Lethbridge-Dunmore line and extended it through the CROWNEST PASS. In 1905 the transcontinental made Lethbridge a divisional point on its line, expanded the railroads and constructed a station and maintenance facilities. The move firmly established Lethbridge as the region's marketing and distribution centre.

Irrigation has also played a major role in the evolution of Lethbridge. In 1900 the Canadian North-West Irrigation Co, managed by Elliott Galt, completed the first large-scale irrigation system in Alberta. Between the 2 world wars, the Taber and Lethbridge Northern schemes were implemented, and in the postwar period the St Mary R development was realized. Today, pivot irrigation has increased the potential of the area's semiarid lands even more, particularly for market gardening.

**Economy** Lethbridge has always had several manufacturing plants that carried out flour milling, sugar refining, brewing and ironworking. More recently, such corporations as Catelli, General Foods, BC Telephones, Palliser Distillers and Dresser Clark have established their western Canadian plants in the city. The relocation of the CPR outside the city is already in progress and the vacated area will be ready for development by 1985.

**Citiescape** In direct challenge to its dry prairie environment, Lethbridge has built wide, tree-shaded streets, and several wooded parks, which include Henderson Lake and Nikka Yuko Centennial Garden. A spacious sportsplex, several arenas and small parks offer a wide variety of sports facilities. Cultural events are regularly staged at the Yates Memorial Centre, the Bowman Arts Centre and the Performing Arts Centre at UNIVERSITY OF LETHBRIDGE (built 1967 as a Centennial project). Lethbridge also supports a community college.

A.A. DEN OTTER

**Lett, Stephen**, psychiatrist (b at Callan, Ire 4 Apr 1847; d at Kingston, Ont Oct 1905). Having served as assistant medical superintendent of the insane asylums in Malden and London, Ont, 1870-77, he lost out to R.M. BUCKE for the post of London's medical superintendent. A lasting antipathy developed between the 2 imperious men and resulted in Lett's transfer to a post at the Toronto asylum. In 1883 he briefly administered the Hamilton asylum until named first superintendent of the Homewood Retreat in Guelph, Ont. He was a specialist in the early treatment of addiction and his gradual withdrawal therapy for "opium neurosis" proved popular with his upper-crust clientele; however, his late-blooming success was cut short by a neurological disorder contracted in youth.

CHERYL L. KRASNICK

**Lettuce** (*Lactuca sativa*), annual VEGETABLE belonging to the Compositae family. Several species of wild lettuce occur in Canada, including prickly lettuce, a common WEED that is a probable parent species of garden lettuce. Native to Asia Minor, lettuce was introduced to Haiti by Christopher Columbus. Of the 4 major varieties, head lettuce, which is firm and keeps well, is the most widely grown. The other varieties — small, tender-headed Bibb lettuce, long-headed Romaine lettuce and high-quality leaf lettuce — all lack the firmness required for most marketing purposes. Lettuce thrives in cool climates and is well suited to Canada's organic soils. Being frost resistant, it is usually sown in early spring. Less firm varieties are often grown in GREENHOUSES in autumn. SLUGS, APHIDS and leaf rot are its principal pests. Lettuce provides average food value (head lettuce being the least nutritious) and because of its freshness is a basic salad ingredient. Over 2000 ha of lettuce are cultivated in Canada, mainly in Ontario and Québec.

ROGER DOUCET

**Léveillé, Claude**, singer-songwriter, actor (b at Montréal 16 Oct 1932). His works, interpreted notably by Edith Piaf and André GAGNON, are marked by the depth and sincerity of the feelings they express. Léveillé was cofounder of the group Les Bozos (1959) and was the first Québec *chansonnier* to present a one-man show at Montréal's Place des Arts (1964). He has toured Canada, France, the USSR, Poland, Belgium, Switzerland, central Asia and Japan. His musical drama, *Concerto pour Hélène*, was played by the Québec Symphony in 1978.

HELENE PLOUFFE

**Lévesque, Georges-Henri**, priest, sociologist, administrator (b at Roberval, Qué 16 Feb 1903). After studying at the Dominican College in Ottawa and U de Lille, France, he taught at the College as well as at U de M and Laval. In 1938 he organized the school of social sciences at Laval, which became a full-fledged faculty in 1943, and was its dean until 1955. A fervent liberal Catholic deeply committed to democratic norms and values, he used his position, as well as the faculty of social sciences, to create new socioeconomic institutions such as the Conseil supérieur de la coopération and the Société d'éducation des adultes, and to initiate the modernization of Québec's church-controlled social welfare organizations. The faculty was also responsible for producing the first generation of university-educated labour organizers. During the 1950s and 1960s this group contributed immensely to the modernization and democratization of organized labour as well as of Québec society in general. His liberal ideas and endeavours brought him into conflict with Québec's intensely conservative clerical and political elites, especially Premier Maurice DUPLESSIS. With the support of his Dominican order and his numerous friends inside and outside the university, he was able to weather several attempts to undermine his career and destroy the faculty.

In the early 1950s he was a member of the Royal Commission on NATIONAL DEVELOPMENT in THE ARTS, LETTERS AND SCIENCES, chaired by Vincent MASSEY, which recommended federal grants to universities and the creation of the CANADA COUNCIL. He served as VP of the Canada Council (1957-62), the Association canadienne-française pour l'avancement des sciences and the Royal Society of Canada (1962-63). Between 1954 and 1963 he acted as the director of Maison Montmorency near Québec C, a centre of social, cultural and religious debate and activism. He helped create a faculty of social sciences at Salamanca, Spain, and was the founder and first rector of the National University of Rwanda in Central Africa (1963-72). He has been a life-long member of numerous international organizations and has been awarded honorary degrees from over a dozen universities. He received the prestigious

Canada Council MOLSON PRIZE in 1966 as well as the Pearson medal for peace in 1983, and was made a companion of the Order of Canada in 1979. His contribution to a more humane, more democratic Canadian society has been immeasurable. M.D. BEHIELS

**Lévesque, Jean-Louis**, financier (b at Nouvelle, Qué 13 Apr 1911). After graduating from St Dunstan's U, in PEI, and Laval, Lévesque worked for the Banque provinciale du Canada in Moncton, NB. In 1937 he became a salesman for a securities firm and in 1941 founded Crédit Interprovincial Ltée. He then began buying, reorganizing and selling companies, including Fashion-Craft Manufacturers 1945, Slater Shoe 1951 and Dupuis Frères 1952. Later he merged his securities firm with L.G. Beaubien et Cie to form Lévesque, Beaubien Inc, the largest francophone brokerage house in Canada, specializing in government bonds. A former director of the Banque provinciale du Canada and General Trust of Canada, he still sits on the boards of several companies, including L'Équitable, Compagnie d'Assurances générales, and Hilton Canada. In 1978-79 he sold the companies he controlled and retired. In the 1950s Lévesque became involved in thoroughbred racing and breeding; his most successful racehorse, L'Enjoleur, won the QUEEN'S PLATE 1975. In 1952 he received an honorary doctorate from UNB; he has received many other honours. JORGE NIOSI

**Lévesque, René**, journalist, premier of Québec (bat New-Carlisle, Qué 24 Aug 1922). A minister on Jean LESAGE's Liberal team, he resigned in 1968 and founded the PARTI QUÉBÉCOIS, whose main objective became Québec sovereignty and the creation of a new form of association with Canada.

A liaison officer and European war correspondent for the American armed forces in WWII, Lévesque joined Radio-Canada International in 1946 and became head of the radio-television news service in 1952. From 1956 he hosted the TV series "Point de Mire" and became one of Québec's most influential TV commentators. After taking part in the 1959 CBC producers' strike, he joined the Québec Liberal Party and was elected MNA for Montréal-Laurier in 1960. He was minister of water resources and of public works 1960-61, minister of natural resources 1961-66 and then minister of family and social welfare. One of the most popular and energetic members of the Lesage government, he was responsible for that government's decision to nationalize private electric utilities and for its efforts at cleaning up political mores.

Increasingly critical of his party's stand on constitutional issues and of its relations with the federal government, Lévesque sat as an independent MNA in 1967 and quit the party for good in Nov 1967 to found the Mouvement souveraineté-association, which in Oct 1968 became the Parti Québécois. Having managed to unite the various groups promoting independence and a new political status for Québec, Lévesque's party won 24 percent of the vote in the 1970 elections. In 1973 the PQ became the official opposition. Lévesque was twice defeated (1970 and 1973) in Laurier and Dorion, but on 15 Nov 1976 he won in Taillon. Campaigning successfully in this election against the unpopular government of Robert BOURASSA, the PQ promised a REFERENDUM ON SOVEREIGNTY-ASSOCIATION. The PQ won a majority of 71 seats, a result that dismayed the rest of Canada.

During its first term the new government passed several progressive measures concerning automobile insurance, rezoning of agricultural lands and the abolition of secret electoral funding. One of the most important pieces of legislation was BILL 101, which formalized the status of French as the official language of Québec. On 20 May 1980 the long-awaited referendum took

René Lévesque was one of Québec's most influential television journalists before joining the Cabinet of Jean Lesage. He left the Liberals to found what in 1968 became the Parti Québécois and led the party to power in Nov 1976 (photo by Jim Merrithew).

place after an emotional campaign led on the Non side by Liberal Opposition leader Claude RYAN and federal Cabinet minister Jean CHRÉTIEN (with key support from PM TRUDEAU) and on the Oui, by Lévesque and his ministers. Lévesque suffered a major personal defeat when the sovereignty-association proposal won only 40 percent of the vote. Against all expectations the PQ was re-elected in 1981 but it suffered another defeat during the 1981-82 constitutional negotiations (see CONSTITUTION, PATRIATION OF), when the other 9 provinces accepted terms rejected by all parties in the Québec National Assembly. In 1982 and 1983 Lévesque's government met with considerable opposition and public disapproval when it attempted to reduce public spending to solve its grave financial problems.

In Nov 1984 a serious crisis affected the PQ government when Lévesque announced his intention of not fighting the next election on the issue of independence while maintaining sovereignty-association as the party's official *raison d'être*. Several ministers resigned in protest but the party reaffirmed Lévesque's leadership at a special convention in Jan 1985.

**Lévis, Qué, City**, pop 17 895 (1981c), inc 1861, is located on the rocky cliffs opposite QUÉBEC CITY, to which it is linked by ferry. Lévis is characterized by steep streets lined with picturesque old homes. Formerly called Aubigny, it was renamed in 1861 to honour Henri de Lévis, duke de Ventadour and protector of Samuel de Champlain, and François-Gaston, duc de Lévis, victor in the 1760 BATTLE OF STE-FOY. In the 19th century it was a major station on the GRAND TRUNK RY line and served Québec City, which had no line until 1879. Today, Lévis's economic activity is largely integrated with that of Lauzon, a major industrial centre. Davie Shipbuilding of Lauzon, founded in 1828, is the oldest and largest SHIPBUILDING company in Canada. In Lévis the Mouvements Coopératif Desjardins is a major employer, as is Baribeau et Fils, a manufacturer of wood items. Its deepwater port can handle 100 000 t tankers. CLAUDINE PIERRE-DESCHÈNES

**Lévis, François-Gaston de, Duc de Lévis**, French army officer (b at Château d'Ajac near Limoux, France 20 Aug 1719; d at Arras, France 26 Nov 1787). Lévis, probably the most capable officer sent to Canada during the SEVEN YEARS' WAR, was appointed brigadier and made second in command of the French regular army in Canada in 1756. Remarkably fair-minded, he avoided the bitter disputes between his commander, MONTCALM, and Governor VAUDREUIL. During the campaigns of 1756, 1757 and 1758, Lévis directed the defence of the Lk Champlain invasion route, joined Montcalm in the successful attack on Ft William Henry (Lk George, NY),

and, in July 1758, helped Montcalm repel the British assault on Ft Carillon (Ticonderoga, NY). He played a leading role in the defence of Québec until Aug when he was sent to protect Montréal from a British advance.

On learning that Montcalm was dead and Québec had fallen, Lévis assumed command. In his bid to retake Québec in April-May 1760, Lévis dealt James MURRAY a severe blow in the BATTLE OF STE-FOY, but lacked the cannon for an effective siege and had to retreat when British ships relieved the defenders. Besieged in Montréal, Lévis hoped to make a last stand but was overruled by Vaudreuil, and the town capitulated Sept 8. After the fall of New France, he rose to *maréchal*, the highest rank obtainable in France, in 1783 and was created a duke in 1784.

IAN CASSELMAN

**Lewis, David**, né Losh, socialist politician, labour lawyer, university professor (b in Svisloch, Russia 23 June 1909; d at Ottawa 23 May 1981). As a child he lived through the German invasion of Russia in WWI and the Russian Revolution. In 1921 his family moved to Montréal where Lewis soon mastered English. Active in municipal socialist politics, he attended McGill (1927-31) and won a Rhodes scholarship to attend Oxford (1932-35), where he established extensive contacts with socialists in the British Labour Party. Upon returning to Canada, Lewis practised law in Ottawa, but in 1936 he commenced work as national secretary for the CO-OPERATIVE COMMONWEALTH FEDERATION. During these years he became a key CCF theorist and member of the LEAGUE FOR SOCIAL RECONSTRUCTION. In 1943 he coauthored with F.R. SCOTT *Make This Your Canada*. Efforts to gain election to Parliament in 1940, 1943 (by-election), 1945 and 1949 were unsuccessful. From 1943 to 1945 Lewis was the primary target of a vicious anti socialist campaign.

In 1950, with CCF prospects dwindling, Lewis practised labour law, though his involvement with the CCF continued. He held a variety of executive positions and helped draft the Winnipeg Declaration of 1956. Lewis consistently worked to rid the labour movement of communist infiltration and to forge a link between the Canadian socialist and labour movements. He was the key architect in the formation of the NEW DEMOCRATIC PARTY in 1961. Through his efforts the primarily western farm-based CCF was transformed into the more urban, labour-oriented and successful NDP.

David Lewis had a long involvement with the CCF and NDP parties. As leader of the NDP, he led the party to its most influential position (courtesy Sophie Lewis).

Lewis ran for Parliament in York S in 1962, 1963, 1965, 1968, 1972 and 1974, losing only in 1963 and 1974. He quickly became one of Parliament's most devastating debaters. Lewis continued to serve in a variety of NDP executive posts culminating in his election as leader at a long and polarized 1971 NDP convention in which he defeated Jim Laxer, representing the WAFFLE, a left-wing NDP faction. Lewis, campaigning on the theme of "corporate welfare bums," achieved greatest political prominence in 1972 when he held the balance of power in the Liberal MINORITY GOVERNMENT of 1972 to 1974. This Parliament enacted a new Elections Expenses Act, pension indexing, PETRO-CANADA and the FOREIGN INVESTMENT REVIEW AGENCY.

After his defeat in the federal election of 1974, Lewis stepped down as NDP leader in 1975 and ended his career as a professor at Carleton U. The first volume of his memoirs, *The Good Fight*, was published posthumously (1981). Lewis was sometimes a controversial figure, but few doubted his intellect, energy and sacrifices on behalf of Canadian socialism.

ALAN WHITEHORN

**Lewis, Stephen Henry**, politician, journalist, labour arbitrator (b at Ottawa 11 Nov 1937), son of David LEWIS. After teaching English in Africa, Lewis worked as director of organization for the federal NEW DEMOCRATIC PARTY 1961-62. He was a member of the Ontario legislature for Scarborough W 1963-78 and became leader of the Ontario NDP in 1970. He was active in demanding the 1972 disbandment of the WAFFLE, a left-wing NDP faction. He achieved greatest success in 1975 when the NDP became the official Opposition. A year after the NDP's electoral setback in 1977, Lewis resigned as leader and became a newspaper columnist, radio and TV broadcaster, lecturer and labour arbitrator. In 1984 external affairs minister Joe CLARK named the articulate Lewis Canada's ambassador to the UNITED NATIONS.

ALAN WHITEHORN

**Lewis, Wilfrid Bennett**, physicist, chief scientist for 26 years of Chalk R Nuclear Laboratories (b at London, Eng 24 June 1908). Lewis trained under Lord RUTHERFORD and worked in atomic physics throughout the 1930s. Like most of his Cambridge colleagues, he worked on radar during WWII, becoming in 1945 superintendent of the main British airborne radar laboratory. His prewar colleague J.D. Cockcroft, earlier superintendent of army radar, was in 1944-45 scientific director of the Canadian-Anglo-French atomic project. Unexpectedly the British government ordered Cockcroft's return, to refound atomic research in Britain. The existence of the Canadian project hung in the balance, since the Canadian government was unwilling to continue it unless a qualified research director could be found. Lewis's name was eventually suggested. He came to Canada in 1946 as director of the Atomic Energy Division of the NATIONAL RESEARCH COUNCIL and served as the government's chief nuclear scientist until retirement in 1973 as senior VP (science) of ATOMIC ENERGY OF CANADA LTD.

Lewis's career had 2 main facets, scientific and political. When he came to Canada, the ZEEP reactor was already in operation and the NRX reactor under construction (completed 1947). Lewis had to find staff and orchestrate their work into an efficient research program, deal with unforeseen problems (notably the NRX accident of 1952), and at the same time plan ahead for new reactors appropriate to new investigations. By 1949 he decided in principle on a large heavy-water reactor, the specialty of the original wartime Canadian project, that could use Canadian-produced uranium fuel, supply especially high quantities of neutrons for research, and produce plutonium that could be sold to defray costs. This was the NRU reactor,

completed in 1957. Its success led to the CANDU reactor program of the 1970s, to generate electricity at competitive rates. Other ventures under Lewis's direction ranged from the Theratron machine for medical radiation to the 1966 proposal to build an Intense Neutron Generator, vetoed by the government as too expensive.

Until the late 1950s, Canada was the only "atomic power" in the world dedicated to exclusively nonmilitary uses of nuclear technology. Thus, when the first "Atoms for Peace" conference was held at Geneva (1955), Canada was in a unique political position, especially attractive to the "unaligned" countries that wanted to develop scientifically without joining the American or Russian camps, such as India and Pakistan, both of which later built Canadian-designed research reactors. Lewis led the Canadian delegation at this and subsequent UN conferences until 1971 and exercised considerable influence. He received numerous honours and awards for his scientific and diplomatic work, including the Atoms for Peace Award in 1967, worth \$50 000, which he donated to McGill to buy scientific apparatus. DONALD J.C. PHILLIPSON

**Lewisporte**, Nfld, Town, pop 3963 (1981c), inc 1946, is a deep-water port and shipping centre in NOTRE DAME BAY, N-central Newfoundland. Settled around 1876, it was formerly called (Big) Burnt Bay and later Marshallville. It was renamed Lewisporte (later Lewisporte) in 1900 after lumber pioneer Lewis Miller, who used the excellent harbour, connected by rail with the interior, as a port for lumber mills at Glenwood and Millertown. A large shipping yard was built at Lewisporte by Newfoundland Timber Estates, which assumed ownership of Miller's holding by 1903. Thus the former fishing, farming and boat-building settlement became a shipping port and sawmilling centre. Today Lewisporte serves as a major distribution, shipping and supply point for the NE coast of Newfoundland and coastal Labrador. It also has large fuel-storage facilities for Gander International Airport.

JANET E.M. PITT and ROBERT D. PITT

**Leyrac, Monique**, née Tremblay, singer, actress (b at Montréal 26 Feb 1928). Thanks to her happy combination of gifts for music and theatre, she has been able to give her shows a rare intensity of emotion. She studied with Jeanne Maubourg before starting her acting career on radio in 1943. She began singing a few years later. Slowly she developed an interest in Québec songs, having started her career performing French music (including that of Edith Piaf) and American songs. In 1965 she won the grand prizes at the International Festival of Song in Sopot, Poland (performing "Mon Pays" by Gilles VIGNEAULT), and at the Festival de la chanson at Ostende, Belgium. She received the 1978 Prix de musique Calixa-Lavallée. Leyrac has acted in several films, including Paul ALMOND's *Act of the Heart*.

HÉLÈNE PLOUFFE

**L'Heureux, Jean-Baptiste** (b at L'Acadie, LC 25 June 1831; d at Midnapore, Alta 19 Mar 1919). L'Heureux studied for the priesthood but was never ordained; a tradition maintains that he was expelled from the Séminaire de St-Hyacinthe for a criminal offence. He came west in the late 1850s and by the early 1860s was in the Montana goldfields, where he passed himself off to the Jesuits as a priest. A short time later, L'Heureux was apparently caught in the act of sodomy and was sent away. Exposed as a fraud, he joined the Blackfoot and in 1862 went to the Oblate fathers at St Albert mission near Ft Edmonton; a year later, Bishop A.A. TACHÉ commented that the man "wanted to pass for a priest, but he is known by all to be a robber and a liar." The same year, L'Heureux was accused of sending a false sample of gold dust to prospectors in Ft Benton, Mont, claiming he had

found a lode and would show them where it was located. A party of men spent weeks searching fruitlessly for him. L'Heureux's name also has been associated with the legend of the lost LEMON gold mine.

L'Heureux spent most of his time with the Blackfoot, performing marriages, baptisms, etc. In their language he called himself *na-okska-tapi*, Three Persons, after the Trinity. He prepared a census of the Blackfoot tribes, wrote a manuscript on stone effigies, described the land features in Blackfoot territory, prepared a Blackfoot-English dictionary and sketched Rocky Mountain House. In an 1871 manuscript, now in the PUBLIC ARCHIVES OF CANADA, he made what is probably the first reference to dinosaur remains in Alberta. He may also have named the St Mary R in southern Alberta and St Mary Lks in Montana. An official witness to Treaty No 7 in 1877, L'Heureux was engaged as interpreter for the Indian department on the Blackfoot Reserve about 1880. He remained there until 1891, when he was dismissed for giving religious instruction to preschool children. He became a recluse near Pincher Creek and in 1912 moved to Lacombe Home at Midnapore. HUGH A. DEMPSEY

**Liard River**, 1115 km long, rises in the Pelly Mtns in the SE Yukon and flows SE into BC, through the Rocky Mtns, then NE through heavily forested land to the Mackenzie R at FT SIMPSON, NWT. Its major tributaries are the SOUTH NAHANNI, Petitot and Fort Nelson rivers. The river is navigable to Ft Liard, about 270 km from its mouth, though much of it is wild and perilous. Named for the liards (a species of poplar) found along its banks, it was called "Courant-Fort" in early days, and appears as Rivière aux Liards on early maps. For many years a fur-trade route, it was first surveyed by R.G. MCCONNELL of the Geological Survey (1887). Gold-hungry prospectors travelled it on the way to the Klondike in 1897-98.

JAMES MARSH

**Liberal Party**, which has dominated federal politics through the 20th century as the "government party," first developed its formula for political success under the leadership of Sir Wilfrid LAURIER who was prime minister from 1896 to 1911. In clear contrast to its enjoyment of power through the politics of pragmatism in this century, the party's 19th-century history is a record of long decades of opposition to the powerful through the pursuit of reform principles.

Opposition politics took organizational shape in the colonies of British N America with the establishment of representative institutions in Nova Scotia (1758), New Brunswick (1784) and Upper and Lower Canada (1791). Since power in these colonies was concentrated in a governing oligarchy of appointed governors and councils that was not held responsible to the elected assemblies, reformers appealed to the Whig principle of parliamentary supremacy in pressing for the adoption of RESPONSIBLE GOVERNMENT. In the Maritimes Joseph HOWE led a 10-year struggle for responsible government that was finally successful in 1848. In the same year, a Reform coalition led by Robert BALDWIN in Canada West and Louis-Hippolyte LAFONTAINE in Canada East achieved the same breakthrough.

In Canada West, the radical farmers of southwest Ontario, known as the Clear Grits, who had been inspired by the anti-British radicalism of William Lyon MACKENZIE, strongly attacked the CLERGY RESERVES as an institutionalization of the FAMILY COMPACT's domination and a denial of liberty to the Protestant denominations. With the vocal support of the Reform publisher, George BROWN, whose newspaper, *The Globe*, was the most influential organ in the colony, the Reformers succeeded in eliminating the reserves by 1850. Co-operation between the anti-Family-Compact Reformers in Upper Canada and the anti-English-oligarchy *Rouges* in Lower Canada

broke down in the 1850s over the question of state support for denominational schools (see SEPARATE SCHOOL). The liberalism of Protestant Reformers led them to believe that each church should be supported by the aid of its adherents, voluntarily offered. By extension, denominational schools should not receive public funds.

Another characteristic of pre-Confederation Reform politicians was also a product of their belief in the principles of English liberalism. Opposition to government intervention in the economy in the form of tariff protection (see PROTECTIONISM), which conservative administrations tended to favour, led mid-century Reformers to advocate free trade with their admired neighbour to the south. The crowning achievement of the Reform administration of Francis HINCKS and A.N. MORIN was the negotiation of a RECIPROCITY treaty with the US in 1854. This proclivity for CONTINENTALISM was to remain a theme of Liberal politics for the next century.

In the early years of Confederation, the Liberals, as the Reform remnants now called themselves, could do little against the political wiles of the Conservative PM Sir John A. MACDONALD and the breadth of his coalition in federal politics. The post-Confederation Liberals developed successful provincial organizations. As premier of Ontario from 1872 to 1896, Sir Oliver MOWAT led the provinces' assault on the power of the Dominion government in the name of provincial rights, a tenet of Liberal thought for several decades. Following the downfall of Macdonald's government over the PACIFIC SCANDAL, the dour stonemason Alexander MACKENZIE formed the federation's first Liberal administration in 1873, but a severe economic depression and Mackenzie's lack of political vision led to Macdonald's re-election in 1878 on a platform of protection. The resulting NATIONAL POLICY of tariff protection was vigorously opposed by Edward BLAKE, a Toronto lawyer and ex-premier of Ontario, who led the Liberal Party from 1880 to 1887. (Blake is the only federal Liberal leader never to become prime minister.) Blake and Mowat pressed for further reforms of the ELECTORAL SYSTEM and managed to wean their Ontario supporters from the fanatical anti-Catholicism they had retained from the Clear Grits and George Brown.

Meanwhile, in Québec, Wilfrid Laurier was turning the *Rouges* — the radical successors of Papineau's PATRIOTES from the 1837 uprising — from anticlericalism by preaching the principles of William Gladstone's English liberalism and the virtues of racial conciliation. Chosen party leader by the reluctant federal caucus upon Blake's advice in 1887, Laurier gradually broadened the Liberals' base in Québec and, on a platform of provincial rights, won the election of 1896 despite the hostility of the Catholic Church hierarchy and the embarrassment of Manitoba's discrimination against French-speaking Catholics (see MANITOBA SCHOOLS QUESTION).

Laurier went on to win the next 3 elections by copying Macdonald's formula for success — a nationwide coalition of forces, an expansionary role for government, and an accommodation between the French and the English — tempering the principles of Liberal reform with pragmatism and PATRONAGE. He built his electoral coalition in English Canada on the organizational backs of Liberal provincial premiers whom he brought into his Cabinet as power brokers for their regions. He endorsed the aggressive IMMIGRATION POLICY to settle the West of his Manitoba minister, Clifford SIFTON, and he entered the same kind of transcontinental railway-building collaboration with the Grand Trunk and Canadian Northern that his caucus had denounced in the 1880s when championed by Macdonald.

Nevertheless, differences of principle still distinguished the Laurier Liberals from their Conservative opponents. In foreign policy, the

# VOTE LIBERAL

## THE WELDER

A 1930 election poster characterizing the Liberal Party as the forger of a national consensus (courtesy Public Archives of Canada/C-85940).

Liberals showed their affinity to Gladstone's anti-imperialism by their preference for an independent Canadian navy over Canadian contributions to the British navy. In commercial policy Laurier achieved the long-held Liberal goal of a reciprocity agreement with the US. It was a victory that proved his undoing: reciprocity alienated the protection-minded business community whose support he had cultivated, and the Liberals went down to defeat in the 1911 election in the face of the Conservative Party's anti-Americanism. Laurier soldiered on as leader, watching in despair as the WWI military CONSCRIPTION issue nearly destroyed his party by temporarily shaking the solidarity of its English-French alliance.

The political longevity of the Liberals' next, and probably greatest, leader, William Lyon Mackenzie KING, who began his career as a public servant and ended it as the most enduring prime minister in Canadian history (1921-48 except for 2 periods in opposition, in 1926 and 1930-35) has been ascribed to his uncanny capacity for blurring political issues to maintain support among such ideologically opposed groups as Western free-trade farmers and protectionist manufacturers of central Canada; his shrewd recognition of the importance of sustaining Québec support, especially during WWII; his talent for attracting to his Cabinet strong ministers with regional power bases and making the best use of their abilities and connections; and his success in presenting a progressive face to the electorate by gradually initiating social-welfare programs while propitiating the business community. King straddled the middle of the political road while leaning slightly left; his genius for obfuscation was epitomized by his vacuous 1935 campaign slogan "King or Chaos" and his delphic position, "conscription if necessary but not necessarily conscription," with which he walked the tightrope between English-Canadian militants and Québec pacifists during WWII.

King's hand-picked successor, Louis ST. LAURENT, was more admired among the bureaucratic and business elites than was King, but because

of his disregard of party organization and his dependence on the Ottawa bureaucracy, his regime saw the collapse of King's great Liberal alliance and the beginning of the party's persistent alienation from western Canada. Since St. Laurent's narrow defeat by John Diefenbaker (1957), the Liberal Party has been struggling to regain its status as a truly national party.

It took Lester Bowles PEARSON, a Nobel-peace-prize winning former diplomat and secretary of state for external affairs who was elected party leader in early 1958, 3 elections before he won back power in 1963. It was largely thanks to the organizational skills and reformist convictions of his close adviser, Walter GORDON, that this most unpolitical of Liberal leaders managed to establish his control over the rebuilt party organization. One price of Gordon's reforms was the alienation of the western provincial organizations from what had become a Toronto-dominated party. Gordon received the credit for winning a minority victory in 1963 and then was blamed for recommending another election in 1965, which returned the Liberals as a MINORITY GOVERNMENT once more. Even when the extraordinary Pierre Elliott TRUDEAU succeeded Pearson in a hotly contested leadership campaign in 1968, the party continued to scramble unsuccessfully to remake its alliance with the West, managing to remain in office until 1979 and then again from 1980 to 1984 despite marked vacillations in its popularity on the basis of its strength in central Canada.

**Party Size** Liberal party officials in the early 1980s claimed 250 000 adherents. Although structured under its elaborate constitution as a mass democratic party whose leadership, in theory, is controlled by the grass-roots membership, it is in fact run along oligarchic lines. Real power is held by the party leader and his coterie. This top-down structure is modified slightly in periods of Opposition when its leadership is forced to appeal for greater rank-and-file participation in policymaking as an inducement to mobilize the grass roots in a collective struggle to regain power. The number of people belonging to the 282 federal constituency associations in the 1980s cannot easily be compared with its membership in the past, because historically the party was a federation of provincial parties whose membership varied greatly, depending on who was in power in individual provinces. In the mid-1980s the Liberals were without a single member in the 4 provincial legislatures west of Ontario, a situation that reflected their federal weakness in the West where they had fallen to third-party stature.

**Splinter Groups** As in any such broadly based party, there are always small but significant groups that oppose the dominant view of the Liberal leadership. In BC in the 1950s many provincial Liberals formed an electoral coalition with the right-wing Social Credit movement, to the dismay of the federal party. In the 1960s, ROSS THATCHER, the Liberal premier of Saskatchewan, strongly opposed the welfare liberalism of PM Lester Pearson. Both conflicts helped destroy the federal party's credibility in the West. Throughout the party's history there has been tension between the forces of continentalism and NATIONALISM within Liberal ranks; it became most obvious during the 1960s when Walter Gordon led the effort to limit the growth of foreign control in the economy (see FOREIGN INVESTMENT). Gordon lost his preliminary battles but did not abandon the war, unlike other dissidents, such as James Richardson and Eric KIERANS. Trudeau Cabinet ministers who quit politics when their policy positions were rejected. In the late 1970s and early 1980s, there were again left-right tensions in the party, chiefly between Pierre Trudeau and John TURNER and their respective followers. Though Turner, Trudeau's former minister of finance, quit the Cabi-

Pierre Elliott Trudeau speaking at the 1978 Liberal convention at the Château Laurier, Ottawa (courtesy National Film Board/Photothèque).

net in 1975, he continued to play the role of Liberal dauphin-in-exile. Two weeks after Trudeau announced he would retire, Turner declared his candidacy for the succession, a goal he achieved on 16 June 1984 at the party's leadership convention. Sworn in as prime minister on 30 June, he quickly called a general election hoping to profit from the Liberals' brief surge of popularity in the public opinion polls. Without an adequate organization, platform or personal campaign style, he led the party to the worst electoral defeat in its history. The results were Progressive Conservatives 211, Liberals 40, New Democrats 30 and Independent, 1.

**Electoral Appeal and Popular Support** Since the 1930s the Liberals' electoral appeal has been based on projecting an image of competence and compromise. Ideologically the party has clung to the political centre, modulating its stance in each region and appealing to the upwardly mobile middle class of urban central Canada. In the Atlantic provinces, where the social democrats have traditionally had great difficulty in becoming a third political force, Liberals vie directly with Conservatives in a 2-party seesaw fight for votes. In Québec a strong plurality of the vote has generally translated into an overwhelming majority of seats, with the dramatic exceptions of the 1958 and 1984 elections. In Ontario, electoral support averaging 40% has been transformed into 60% of the seats since the 1930s. But the third-party status of the federal Liberal Party in the West has turned electoral returns of about 30% of the votes into a tiny number of actual Liberal seats.

**Financial Support** The Liberals traditionally raised election campaign money from big businessmen and to a lesser extent, small entrepreneurs (see PARTY FINANCING). Since the introduction of the ELECTION EXPENSES ACT (1974), reliance on business funding has dramatically declined in favour of tax-deductible member donations and direct subsidies from the public purse (see PARTY SYSTEM).

**Current Issues and Significant Changes in the Party** The most significant changes in recent decades in the Liberal Party were heralded by the accession to the party's leadership of Pierre Trudeau in 1968 and his resignation 16 years later. Under his aegis French Canadians achieved greater equity within the Liberal Party and the government of Canada than ever before.

Trudeau's dedication to FEDERALISM and to combatting the separatist forces of Québec nationalism lay at the heart both of his early electrifying appeal to the public and of the strong animosities he later generated among English Canadian voters. His controversial personal style and the vacillations of his policies (eg, withdrawing, then reinforcing, Canadian troops in NATO; opposing economic nationalism, then endorsing the adoption of a dramatic National Energy Program) kept his personality the chief issue of the political scene, notwithstanding his significant achievement in generating a wide consensus for the "patriation" of the CONSTITUTION in 1982. As Trudeau's period in office ended and his successor was plagued by dramatic problems of ideological direction and party organization, some speculated, as they had in 1957 and again in 1979 when the party fell temporarily from power, that the Liberals were on the edge of disappearing from the country's political map. To others it seemed more likely that, with John Turner's commitments to rebuild the party it would ultimately be able to resuscitate itself. See PARTY ROUGE.

**Liberation of Holland**, begun by American troops, who entered Maastricht on 13 Sept 1944; British troops also played a major part in liberating S Holland, along their axis of advance toward Berlin. The failure of an airborne assault on Arnhem (Sept 17) prevented the liberation of the rest of Holland in 1944. FIRST CANADIAN ARMY, under Gen H.D.G. CRERAR, on the N end of the

Citizens of Leeuwarden, Netherlands, welcoming the Stormont, Dundas and Glengarry Highlanders, 16 Apr 1945 (courtesy Public Archives of Canada/PA-131566).

Allied line, was to clear the Dutch approaches to the key Belgian port of Antwerp, along both banks of the Schelde estuary, a task completed in Nov. There were still more Allied than Canadian troops under Crerar, but in mid-Mar 1945 I Canadian Corps arrived from Italy to replace I British Corps. I Corps pushed N to the IJsselmeer (Apr 18), isolating German forces in W Netherlands, while II Corps drove NE to Groningen (Apr 13) and Leeuwarden (Apr 15), and then E into Germany.

When hostilities ceased 5 May 1945, it fell to the Canadians to liberate W Holland, including the major cities of Amsterdam and Rotterdam and the Dutch capital, The Hague. The Dutch there had suffered through an extremely harsh winter, short of food and fuel, but relief supplies were quickly funnelled into the area. The Canadians were welcomed enthusiastically and the joyous "Canadian summer" that ensued forged deep and long-lasting bonds of friendship between the Dutch and Canadian peoples. See WORLD WAR II.

Reading: D. Kaufman and M. Horn, *A Liberation Album* (1980).

**Liberté**, bimonthly journal fd 1959 in Montréal by poet Jean-Guy Pilon and other writers including Jacques GODBOUT, Fernand OUELLETTE, Paul-Marie LAPOINTE and Gilles HÉNault. Managed in turn by Pilon, Godbout, Hubert AQUIN, again by Pilon and, since 1980, by François RICARD, it occupies a special place because of the quality and biting tone of its writing, its role as a critical forum for all contemporary cultural ideas, its avid interest in other literatures, the number and importance of its special issues and the international writers' conferences it has organized. *Liberté* has published such celebrated works as Lapointe's *Arbres*, Gaston MIRON's *La Vie agonique* (tr *The Agonized Life*, 1980), Aquin's "La fatigue culturelle du Canada français" (tr "The Cultural Fatigue of French Canada," 1979), Ouellette's "La lutte des langues et la dualité du langage" and the first collection by the future writers of PARTI PRIS.

Although most major Québec writers have written for *Liberté*, the journal has always welcomed contributions from foreign authors. Major authors and critics such as René CHAR, Pierre-Jean Jouve, Aimé Césaire, Milan Kundera, Julio Cortázar, Jean Starobinski and René Girard have all contributed. Since 1980, *Liberté* has become more polemical, but continues to diversify its involvement in the cultural field with such undertakings as TV specials, studies of the literary institution and studies of feminism. See LITERARY PERIODICALS IN FRENCH. ANDRÉ BELLEAU

**Libraries** The earliest libraries in Canada were private collections belonging to immigrants from Europe. The first known library belonged to Marc LESCARBOT, a scholar and advocate who came to Port-Royal in 1606. Early religious orders accumulated libraries: volumes from the Canadian Jesuit Mission of 1632 and the Jesuit College in Québec City (est 1635) still exist. Libraries were maintained in the 18th century at military and fur-trade bases — at the Hudson's Bay Co post at YORK FACTORY, by John McKay on Vancouver I after 1786, and by Roderick MACKENZIE at Fort Chipewyan, Alta, after 1788. A garrison library was established in Halifax by Lord DALHOUSIE in 1816.

#### Public Libraries

In the 19th century mechanics' institutes and subscription, social, school-district, university and professional libraries assumed increasing importance. By mid-century, libraries were firmly established in British North America. The first free public libraries date from 1883 at Saint John, Guelph and Toronto, but most public libraries that existed before Confederation were supported by subscription fees: Governor Hal-

dimand established a library at Québec City in 1779, and a library began operation at Niagara in 1800. However, the development of the public library as it is known today was a slow evolution through a variety of forms, in response to the geographic, economic, cultural and demographic conditions of each province. Predecessors of the modern, tax-supported public library were school-district libraries, mechanics' institutes and association or social libraries.

**School-District Libraries** were initiated by Joseph HOWE in NS and Egerton RYERSON in Canada West [Ontario] in 1850. Both men felt that children and adults could be served by local school authorities, with some financial and organizational assistance from colonial legislatures. NB (1858) and PEI (1877) followed this example, but after Confederation school-district libraries disappeared owing to local disaffection with the centralizing tendencies of departments of education.

**Mechanics' Institutes** originated in Great Britain and in 1827 the first institute opened at St John's, Nfld. They quickly became popular in communities such as Halifax, Montréal, Toronto and Victoria because they offered the working class inexpensive access to books and newspapers. Interest began to wane after 1850, and many institutes eventually became part of a public library. In Ontario, for example, this process was facilitated when the 1882 Act to allow the establishment of free public libraries in cities, towns and villages permitted the assets of institutes to be transferred to free libraries. Grants were similarly transferred, with the result that the institutes ceased or were replaced by public libraries.

**Association or Social Libraries** dedicated to a variety of interests flourished in eastern Canada after 1800. The collection of the LITERARY AND HISTORICAL SOCIETY OF QUEBEC (est 1824) was particularly noteworthy. Like the mechanics' institutes, association libraries were public by virtue of serving a membership beyond class, ethnic or religious limitations; many eventually became free public libraries, though the type still exists in some areas, eg, BC.

**Free Libraries** In 1882 an Act of the Ontario legislature provided for the establishment of free libraries, supported financially by a levy of one-half mill to be assessed on the value of all real and personal property. A local board composed of 9 members appointed by the municipal council and school boards was to provide leadership. The Toronto Public Library, which opened in 1884, was the largest among the first libraries to choose free status. This Ontario pattern of legislating tax support for library services was followed in other provinces: BC (1891), Manitoba (1899), Saskatchewan (1906), Alberta (1907), NB (1929), Newfoundland (1935), PEI (1935, repealed 1936), NS (1937), Québec (1959), and the NWT (1966).

**Travelling Libraries** are collections of books which are taken from place to place, returning to headquarters to be checked or repaired. These libraries, initiated in Scotland in 1817, were introduced to BC, Ontario and Québec shortly before 1900. Similar libraries were operated by the universities of Manitoba, Dalhousie, McGill and Alberta, and by provincial authorities in Saskatchewan, Ontario and Newfoundland. By the 1980s they had mostly ceased or been replaced by books-by-mail or other services, but they had helped take books to areas without public libraries.

**Modern Public Libraries** The modern library selects, acquires and organizes books, periodicals, newspapers, government publications, reports, microforms, maps, audiovisual materials, computer tapes and other materials, and makes them available to users. Materials selected to meet user needs are acquired and processed for the shelves using a cataloguing and classifica-

tion system to provide the user with access to the library collection. Reference service offers assistance to the user in determining what is needed and how to find it. Provision of additional services, eg, children's programs, audiovisual services, and selective dissemination of information, depends on the clientele of the library. Public libraries in Canada are governed by provincial statutes and are primarily financed by local tax revenues, with provincial grants supplementing local funding. Public libraries are normally the responsibility of a local library board with authority to appoint or dismiss employees, control library property, establish policies, and budget for library operations. Service has varied depending on the commitment of local communities and their library boards. The period in public library development immediately after 1900 was marked by construction of library buildings and expansion of collections and services. With an emphasis on broadening the membership base, open access was permitted, children's departments were introduced, standard cataloguing and classification systems were adopted, and library extension in rural areas was commenced. Although public library development was checked during the Depression and WWII, the expansion of service resumed after 1945.

Following the 1960s emphasis on education, more than 125 new or remodelled public library buildings were constructed in Canada, in part with Centennial grants, and public library service expanded. Library development has been adversely affected by the inflationary period of the 1970s and early 1980s, and libraries are caught between increasing demands from the public for enhanced services and pressures from municipal or regional jurisdictions to reduce or stabilize expenditures. Expansion of services has slackened, though the statistics are still impressive. In 1983 Statistics Canada reported that (in 1981) 991 public libraries held 51.3 million books, circulated 131.8 million items, spent \$49.5 million on materials, and employed over 10 000 people at 3159 service points across Canada.

**Regional Libraries** Because of Canada's demographic composition, provincial legislatures and professional associations have encouraged the formation of larger units of service such as county, regional and provincial library systems. The first regional systems were demonstrated on a trial basis in the early 1930s in the Fraser Valley and in PEI. After WWII other provinces adopted the regional forms. Some, such as Saskatchewan, have found that a regional system is the best solution to serving small communities separated by great distances — the province's large municipal libraries serve as backup to the regionals. Administrative frameworks and financial support for regional systems differ in each province: some local units are branches in a provincial system whereas others remain autonomous; some provinces provide centralized processing and backup collections for the regional library systems, others do not.

#### University, College and School Libraries

University and college libraries are integral parts of the academic community in which they are located, and are supported with a percentage of normal operating funds (6-8%), with additional special grants from funding agencies or endowments. A university chief librarian usually reports to an academic official, such as the office of vice-president, academic, and is represented on senior academic decision-making bodies of the university. College libraries receive a smaller percentage of operating funds and the administrative structure varies greatly in and between provinces.

**University Libraries** The first academic library in Canada opened in 1789 with the establishment of King's College in Windsor, NS.

Though libraries were included in many colleges and universities founded in the early 19th century in eastern Canada, academic collections remained relatively small until 1950, when Canadian academic libraries escalated rapidly in response to a new emphasis on education and research. According to Statistics Canada, by 1980/81 there were 104 reporting university libraries holding 41.3 million books, spending \$56.0 million on materials and employing 6791 personnel.

Typical of this rapid growth was the establishment of 5 new universities in Ontario, which opened their doors with completely catalogued basic collections thanks to the Ontario New Universities Library Project of the early 1960s, one of the first large-scale uses of library automation in Canada. Other provinces, most notably BC, also funded university library development, and the CANADA COUNCIL and, subsequently, the SOCIAL SCIENCES AND HUMANITIES RESEARCH COUNCIL, provided special grants for the enrichment of collections of national distinction.

In the late 1960s co-operative programs were introduced to allow the reorganization and sharing of collections. The Ontario Council of University Libraries developed a co-operative library network that included a transit system, a structured interlibrary loan system, a automated union list systems for serials and government publications, and interuniversity and reciprocal borrowing agreements. In BC the Tri-University Libraries initiated a government-funded union catalogue project that included college libraries. Similar activities occurred in Québec under the library council for the universities. The most ambitious project, UNICAT/TELCAT (1974-79), based on the bibliographic utility UTLAS (University of Toronto Library Automated System), was a union catalogue and support system shared by 18 Ontario and Québec university and government libraries; it was disbanded when newer technologies made local integrated systems linked to each other via TELECOMMUNICATION networks more cost-effective.

**College Libraries** have developed rapidly in Canada since 1960 — in Québec in Collèges d'enseignement général et professionnel, in Ontario in colleges of applied arts and technology, and in the other provinces in technical institutes or community colleges. These libraries are learning resource centres, emphasizing nonprint materials as much as traditional print collections. In 1978 Statistics Canada reported that 141 community college libraries in 8 provinces held 5.8 million books (an average of 40 900 per library), spent \$6.9 million on materials annually and employed 1300 people.

**School Libraries** in Canada are learning-resource centres for students and teachers, and many have become an essential part of the teaching process. The role of the school library depends on the willingness of the individual school board and principal to provide space, personnel, funding and materials. In an effort to maintain quality, supervisors or consultants are employed by many provincial school-library agencies to help organize and oversee libraries. Provincial school-library associations as well as the Canadian School Library Assn have proposed standards for the size of collections, for staff and physical facilities, and for the role of the librarian in curriculum development.

In 1978 Statistics Canada reported that there were 8201 centralized school libraries holding 49.5 million books (an average of 6042 per library), spending \$26.2 million on materials annually, and employing 5171 personnel in 9 Canadian provinces. No data were available for Québec, the Yukon and NWT.

#### Special Libraries

Special libraries serve the needs of a sponsoring organization, which may be federal, provin-

cial or municipal governments; companies, associations or industries; or public institutions such as hospitals or museums. Special libraries can also be distinguished by a subject such as law, finance, insurance or health science. The origin of special libraries in Canada dates from 1725, when the library of the general hospital in Québec City was opened. Most special libraries in Canada have been established since WWII. They are represented nationally by the Canadian Assn of Special Libraries and Information Services, and by subject-oriented associations such as the Canadian Health Libraries Assn and the Canadian Assn of Law Libraries.

**Government Libraries** The federal government funds the Library of Parliament, the NATIONAL LIBRARY OF CANADA, the Canada Institute for Scientific and Technical Information (CISTI), libraries of government departments and crown corporations, the public library service of the NWT and the Yukon Regional Library System, and contributes to the provision of library service for Indian bands. Federal libraries are responsible to their departments, but co-operate on matters of common interest through the Council of Federal Libraries, whose secretariat is provided by the National Library. The parliamentary librarian reports directly to Parliament; the national librarian, with the status of a deputy head, reports to Parliament through the minister of communications.

**Legislative Libraries** had their beginnings in 1773 with a legislative library in PEI; similar legislative libraries followed in other provinces. In 1867 the Library of Parliament was officially established in Ottawa, based on collections from the legislative libraries of Lower and Upper Canada (1791-1841) and the Province of Canada (1841-67). Until the creation of the National Library in 1953, the Library of Parliament received deposit copies of all books published in Canada. It serves as a reference library for MPs and senators.

**Provincial Legislative Libraries** are financed by provincial governments and serve MLAs and, sometimes, civil servants. Their holdings are an important resource for the history and development of their areas. The growth of government department libraries has been determined by factors influencing the development of their respective provinces, eg, since 1965 they have developed rapidly in Ontario, Québec and Alberta. In Québec the position of the Bibliothèque Nationale is unique; it acts as a depository for all Québec publications, co-ordinates Québec bibliographic projects, and through its mandate to promote literary activity, has entered into cultural agreements between Québec and France.

**Professional, Business and Industrial Libraries** Among the earliest professional libraries were law libraries — the library of the Law Society of Upper Canada was established in 1797 and that of the Barreau de Montréal in 1828. One of the earliest business libraries was organized by a newspaper in Halifax, the *Novascotian*, in 1824. Industrial libraries, eg, Esso Resources Canada Ltd library in Calgary, tend to be in major cities where there are strong concentrations of business and industry, as in Montréal and Toronto. In 1983 scientific and technical libraries formed the largest single group of special libraries.

**Libraries in Nonprofit Organizations** Important literary collections pertaining to fine art, science and technology exist in many libraries attached to nonprofit organizations such as museums and art galleries, in particular the Musée des beaux-arts de Montréal, the NATIONAL GALLERY in Ottawa, the ART GALLERY OF ONTARIO, the NATIONAL MUSEUMS OF CANADA and the ROYAL ONTARIO MUSEUM. Libraries associated with the CANADIAN BROADCASTING CORPORATION and the CANADIAN MUSIC CENTRE in Toronto serve as information centres for broadcasters and composers.

There are over 150 library associations in Canada, including national, provincial, regional, local, and ethnic associations, and groupings by library type such as public, academic, government, school and special libraries. The first was the Ontario Library Assn, established in 1900; other provincial associations followed: in BC (1911), Québec (1932), the Maritimes (1935), Manitoba (1936), Saskatchewan (1942), Alberta (1944) and the NWT (1981). The Yukon is still without a library association.

The Canadian Library Assn was formed in 1946 as a bilingual national association but became unilingual in 1973. The CLA is subdivided into 5 type-of-interest associations, eg, the Canadian Assn of College and University Libraries, and it also sponsors a number of co-ordinating groups and committees. Some of the major activities of the CLA have included microfilming of Canadian newspapers of historical importance; compiling and publishing the *Canadian Periodical Index*; encouraging publication of reference works; developing standards; maintaining liaison with national and international library associations and with the federal government; and providing opportunities for continuing education for library staff through conference programs.

Association pour l'avancement des sciences et des techniques de la documentation (ASTED) is the national association of francophone libraries. Like CLA, ASTED has a substructure of sections for academic and public libraries.

In the postwar decades all types of libraries in Canada responded to the increasing information requirements of users. Collections changed to encompass such new formats as microforms, audio and video cassettes, films, talking books, braille and kits. Programs for cultural or minority groups became an important part of public library service, and information retrieval, frequently from external computer-based bibliographic data bases, became a major component of reference service in public, academic and special libraries. Service to adult learners has become very important in college libraries and is gaining importance in university libraries as well.

These expanding services have been facilitated by local, regional, provincial and national co-operative agreements or resource-sharing networks and encouraged by support from the National Library and CISTI, both of which readily make their own collections available on loan or through photocopy to libraries across the country.

Although some public and university libraries had separate facilities before 1900, the Andrew Carnegie grants for public library buildings led to the construction of 125 Canadian libraries between 1901 and 1923. Influenced by the beaux-arts design common in public buildings of that period, classical columns and other elaborate ornamentation were features of even the smallest buildings (see ARCHITECTURE DEVELOPMENT; ARCHITECTURAL STYLES). Unfortunately, these early libraries, although functional for the services of that period, proved difficult to modify or expand to meet an increased user population, changing services and new technologies.

A second surge in public library construction in the 1960s and 1970s, with emphasis on internal rather than external monumentalism, led to aesthetically pleasing but not necessarily functional libraries. The Metropolitan Toronto Central Library, which opened in 1977, has attracted international attention for the dramatic access it provides to its collections. Academic library buildings experienced a renaissance during this same period, with new central or divisional libraries constructed on every major university campus in Canada.

Since 1960 the most dramatic influence on libraries of all types has been the introduction of

Reading area of the Metropolitan Toronto Library, designed by architect Raymond Moriyama (photo © 1984 Hartill Art Associates).

new technologies with implications for services, staff, collections and buildings. At the end of the 1970s advances in mini- and micro-computer technology permitted the development of local systems at costs that most libraries could afford; and information networks, encouraged by the National Library and CISTI, provided mechanisms for resource sharing and data exchange.

Library services were changed and expanded with the introduction of computer-based systems which made available the very latest materials. CISTI made major data bases available through CAN/SDI (selective dissemination of information) and CAN/OLE (on-line enquiry), and encouraged electronic messaging for the transfer of interlibrary loan requests and for the delivery of documents (CAN/DOC). The National Library has made its extensive bibliographic data base (DOBIS) available to other Canadian libraries for on-line searching. Many libraries, both public and academic, have added videotex to their information resources, using the Canadian-designed TELDON system. University of Toronto Library Automation System (UTLAS), founded in 1971, provides computerized library-related services, products and systems to about 200 libraries. UTLAS's services are based on its catalogue support system (CATSS) which enables libraries to build and control their own individual, shared or linked files by sharing cataloguing information.

Canadian library schools have responded to changed requirements for librarians by adding computer and telecommunication technologies to their curricula and by providing continuing-education programs in the new technologies. In 1984 there were 7 library schools in Canada, all at the graduate level: UBC, U of Alberta, Western, U of T, McGill, U de Montréal and Dalhousie. Library technician programs have been offered at several community colleges. Requirements for accommodating new and future information systems and resources have become major considerations in the design or renovation of library buildings.

The enhanced potential for gaining access to and sharing library collections, which has been made possible by the new technologies, has presented new challenges. The creation of library systems which combine the resources of all types of library in flexible administrative structures will need to be carefully considered. Support for the library and information networks of the 21st century will have to be co-ordinated at the national level if Canadian libraries are to succeed in meeting the increasing demands of an information society.

MARGARET BECKMAN, MOSHIE DAHMS, LORNE BRUCE  
Reading: "Canada, Libraries in," E.L. Morton, *Encyclopedia of Library and Information Science* 4 (1970), 71-157; "Canada, Libraries in, 1970-1979," B.L. Anderson, *ELIS* 36(1983), 94-155; A. Drolet, *Les Bibliothèques canadiennes de 1604 à 1960* (1960); L.S. Garry and C. Garry, eds, *Canadian Libraries in Their Changing Environment* (1977); National Library of Canada, *The Future of the National Library* (1979).

**Library Science**, which encompasses all aspects of library operation, is an organized graduate course of studies taught at university level and producing practitioners with a recognized professional qualification. Until 60 years ago, most Canadian librarians acquired their knowledge from experience; those with formal training usually were graduates of library schools in the US. Beginning in 1904, when McGill U conducted a 3-week library summer school, instructional programs became available in Canada. These were mainly intermittent, short courses until 1927, when McGill offered a full-year professional course of studies at the undergraduate level. The U of T established a School of Library Science in 1928. In 1931 and 1936, respectively, the McGill and Toronto library schools established postgraduate programs and were accredited by the American Library Assn (ALA). In the 1930s other library schools were established at the U of Ottawa, the École de bibliothécaires in Montréal and Mt St Vincent in Halifax. These 3 schools were never accredited and eventually went out of existence.

McGill and Toronto continued to dominate Canadian library education, but in the period of expansion during the 1960s the need for librarians was greater than they could meet, and new graduate library schools were established at UBC (1961), U de Montréal (1961), U of Western Ontario (1967), U of Alberta (1968) and Dalhousie (1969). In general these institutions offered the Bachelor of Library Science (BLS), but since the BLS could be taken only by those already holding an undergraduate degree, it was equated with the Master of Library Science (MLS) awarded in the US. All the above Canadian schools were, and continue to be, accredited by the ALA.

In the early 1970s, Canadian library schools made a notable departure from the US pattern. Because of expanding professional knowledge, the growing need for specialization and the continuing need for generalist preparation, Canadian library schools doubled the length of their programs and awarded an MLS instead of the BLS. McGill had already instituted the 2-year MLS in 1964; by 1972, Toronto, Montréal, Western Ontario, UBC and Dalhousie followed suit, and U of A did so in 1976. Canadian library-education programs hence are significantly longer than those in the US and other countries. A number of American library schools have taken or are contemplating a similar measure. Other noteworthy developments of the 1970s were the inception of doctoral programs (U of T and UWO), the erection of impressive physical facilities (Toronto) and a rapid increase in enrolment. The U of Western Ontario and U of T are now among the largest on the continent. In 1975-76 the 7 graduate library schools awarded 495 degrees, of which Montréal, the only French-language school, accounted for 69. The number of MLS degrees awarded in 1981-82 was approximately 500.

Recently there have been considerable revisions in the graduate library-school programs and in the conceptions held about the nature and scope of library science. Traditionally, library science has been equated with the work done in and by libraries. The core elements have been materials selection and acquisition; cataloguing, classification and subject analysis of these materials; services to readers, and such necessary background aspects as the role of the library in society. Though these subjects remain important, the identification of library science with libraries (as institutions) is not nearly as close as it was. Library science is concerned with all aspects of library operation, and more broadly with the entire information-transfer process, whether the medium for such transfer be graphic records or electronically transmitted data. Library science thus conceived overlaps with such

disciplines as documentation and information science. Two of the Canadian library schools include the term "information science" in their names, and all of the schools give considerable attention to information technology, electronic storage and retrieval, and information and communications theory. The graduates of Canadian library schools are therefore increasingly likely to see themselves as "information professionals" rather than as librarians. Though the majority will still work in public, academic or special libraries, other graduates may take jobs in such non-traditional settings as editing, publishing or research enterprises, law offices and records management, or even set up their own companies. In effect, any position that calls for high-level skills in the selection, organization or retrieval of information materials, knowledge of telecommunications and videotex technology and ability to create data bases is suitable for library- and information-science graduates.

In addition to the graduate library-school programs, undergraduate courses in librarianship are offered by the faculties of education of many Canadian universities. These courses are intended for the training of school librarians or teacher-librarians. The latter term reflects the view that the librarian in the school should be primarily an educator, a partner with the classroom instructor in the effective use of learning materials. If the Canadian School Library Association's *Recommended Curriculum for Education for School Librarianship* (1981) is generally implemented, school librarianship in Canada will become a postgraduate discipline.

On the non-professional level, library-technician-training programs are very well developed in Canada. Beginning in Winnipeg (1962), such programs are now offered in 22 institutions. In the 4 western provinces, the parent institutions are community colleges or technical institutes; in Ontario, colleges of applied arts and technology (CAATs) and Lakehead U, which has a 3-year library-technology program; in Québec, Collèges d'enseignement général et professionnel (CEGEPs). There are no library-technician-training programs in the Atlantic provinces. In general, the library-technician-training programs are 2-year programs, and half of that period is given to courses in library work. Apart from Québec, most programs follow the well-designed *Guidelines for the Training of Library Technicians* (1982) issued by the Canadian Library Association. The CLA has also sponsored frequent surveys of the programs, which encourages the maintenance of high standards. Here too, Canada has taken a vanguard position in library education and library science.

SAMUEL ROTHSTEIN

**Lichen**, a dual organism composed of FUNGI living in close association with green ALGAE or BLUE-GREEN ALGAE. As composite organisms, they cannot be formally classified within a single kingdom. Names applied to lichens are actually those of the fungal component of the association because, with few exceptions, each recognizable lichen is the product of a different species of "lichen fungus." However, the algal species involved in the lichen consortium might be found in a number of different lichens. The more conspicuous lichens are foliose, lobed or leafy with distinct upper and lower surfaces; or fruticose, hanging like black or yellow hair from trees, or shrubby and erect on the ground. Crustose lichens form a thin crust over rocks or bark and are conspicuous only if brightly coloured. A typical foliose lichen has a complex organization. The algal cells form a layer within the fungal body, just below a protective cortex of thick-walled fungal cells and above a loosely organized layer of thin-walled cells (medulla). Below the medulla is another protective cortex from which rootlike attachments (rhizines) of-

ten arise. Crustose and fruticose lichens have slightly different tissue relationships.

Lichens grow extremely slowly (about 0.1 mm per year in some arctic species, 5-8 mm per year in temperate species). Estimating the growth rate of a lichen and measuring its diameter shows that some patches of rock-dwelling crustose lichens in the far North may be several thousand years old. Lichens are found from the tropics to the tundra and grow on many kinds of materials or substrates. There are approximately 18 000 species worldwide, with perhaps 2500 found in Canada. They are most conspicuous in cooler regions: on exposed mountaintops, in northern coniferous forests and on arctic tundra. In the subalpine forests of the western mountains and in some boreal forests, lichens often completely cover dead branches of spruce and fir. The caribou lichens blanket the ground over thousands of square hectares in Canada's subarctic woodland. Across the prairies and in the dry interior of BC, brilliantly coloured species invade exposed soil and cover erratic boulders. In eastern Canada, lichens are especially conspicuous on tree trunks, particularly those of roadside elms and maples. On thin or sandy soil, large mixed colonies of fruticose lichens often develop. Some lichens, restricted to coastal rocks, decorate the sea-splashed outcrops with orange, white and black belts reflecting the specificity of certain species to different tidal and splash zones.

Lichens are of great importance in Canada because of their relative abundance in the North. They make up the greater part of the winter diet of barren-ground caribou and are essential for the survival of the herds which form the most important element in the life of many Indian and Inuit groups. Lichens have little nutritive value and are generally used only as an emergency food, although some Indian peoples of interior BC include in their diet species such as the black, hairlike tree lichen. Bark- and twig-inhabiting lichens are extremely sensitive to AIR POLLUTION. Studies have been made in Canada and elsewhere of the relationship between specific levels of pollutants (especially sulphur dioxide) and the distribution and growth of lichens. Hence, lichens are frequently used in biological estimations of pollution levels and as early indicators of pollution problems.

IRWIN M. BRODO

Reading: D.H.S. Richardson, *The Vanishing Lichens* (1974).

**Lieutenant-Governor** combines the monarchical and the federal principle in provincial governments. Although the lieutenant-governor is appointed by the GOVERNOR GENERAL on the prime minister's advice, in the words of an 1892 decision by the JUDICIAL COMMITTEE OF THE PRIVY COUNCIL, a lieutenant-governor "is as much the representative of Her Majesty, for all purposes of provincial government, as the Governor-General himself for all purposes of Dominion Government." The lieutenant-governor, therefore, possesses all the formal, prerogative and discretionary powers exercised by the monarch or the governor general. These include the duty to open, prorogue and dissolve the provincial Assembly; to assent to (or withhold assent from) provincial legislation and ORDERS-IN-COUNCIL; and to give prior approval to money bills. The lieutenant-governor also has the responsibility to select the provincial premier and, presumably as a last resort, to dismiss a government.

Although the discretionary powers may be obsolescent, they are not obsolete. Five governments have been dismissed, and dismissal has been seriously considered on several other occasions — the latest in Alberta in 1938 and Ontario in 1940. The task of selecting a premier has not always been easy, given the early looseness in party structures. But in the 20th century, lieutenant-governors have, with only one ex-

ception, asked the leader of the largest party to form a government or, if one leader died, waited until the party could make its choice known through either Cabinet or caucus.

Dissolution has usually been the result of an uncertain or unstable balance of power within the legislature. Since 1867 there have only been 3 clear cases in which a lieutenant-governor has refused to dissolve the Assembly, although on other occasions the knowledge that a request would be refused forestalled the request. However, the subject has been warmly debated. In 1952 in BC and 1971-72 in Newfoundland the existing government had been defeated, but the new government did not have a clear majority and defeat in the assembly seemed certain. The question was whether the new government could request and receive a dissolution before the House met (the answer in both instances was negative) or whether a newly defeated government could secure a dissolution rather than resign. In BC the lieutenant-governor granted a dissolution to the defeated government, and in Newfoundland he agreed to a dissolution on the first day of the session, before the government had been defeated.

Lieutenant-governors are also officers of the federal government: they are appointed and paid by, and are subject to instructions from, Ottawa, and can be dismissed for cause. The usual term of 5 years is often extended. By the CONSTITUTION ACT 1867 (formerly BRITISH NORTH AMERICA ACT), the lieutenant-governor has the power to reserve provincial Bills and is the instrument through which provincial Acts disallowed by Ottawa are proclaimed. One draft of the BNA Act used the word "superintendent," and at the QUEBEC CONFERENCE of 1864 it was proposed that the subordination of provincial governments be effected, in part, by keeping the power to nominate and dismiss the lieutenant-governor in the central government's hands. Sir John A. Macdonald regarded the lieutenant-governor as one who should serve the Dominion's interests to the greatest possible extent without infringing on the province's right to self-government.

But the principles of provincial autonomy and federal intervention proved to be incompatible. Lieutenant-governors in the early years supported federal interests — eg, during the REPEAL MOVEMENT in Nova Scotia in the late 1860s and the intense federal-provincial disputes in Manitoba — and reserved many provincial Bills on instructions from Ottawa, or because they encroached on federal power or seemed contrary to national policy. As late as 1937, the lieutenant-governor of Alberta reserved 3 Bills, 2 with the concurrence of the federal government. In 1938 the Supreme Court ruled that the power of reservation still existed, but during the constitutional debate of the 1970s there seemed to be unanimous federal-provincial agreement that the provision should be removed from the Constitution. Seventy Bills have been reserved since 1867, but only 4 in the last half century. The last Bill to be reserved was in Saskatchewan in 1961, when the lieutenant-governor believed it was of doubtful validity. The Dept of Justice quickly concluded that the Bill was within provincial jurisdiction and assent was given.

The Constitution Act 1867 protects the office of lieutenant-governor from any amendment by the provincial government. However, many provinces have scaled down the expenses of the office and some have closed official residences. Mitchell HEPBURN (Ontario) closed Chorley Park in 1937; William ABERHART (Alberta) closed Government House in 1938 during his conflict with Ottawa (although another residence was purchased in 1967), and the CCF government in Saskatchewan did likewise in 1944. Although the cost is modest, there have been frequent suggestions that the office be abolished and that the chief justice perform the routine ceremonial

functions. But abolitionists have never received much support, even in the depths of the Depression.

The office has been seen as a form of political patronage. Retired Cabinet ministers, federal and provincial politicians whose day has passed, and party fund raisers have eagerly sought and been given the position. Among the 10 lieutenant-governors in 1982 were 2 who had been federal Cabinet ministers, one retired provincial Cabinet minister, and one who had resigned from the Senate. In 1929 the Judicial Committee of the Privy Council ruled that women could be senators, and in 1934 the Dept of Justice decided that women could be lieutenant-governors. However, it was not until the appointment of Pauline MCGIBBON in Ontario in 1974 that the first woman read the Speech from the Throne in a provincial legislature. In 1985 there were 2 women holding the office: Lt-Gov Pearl McGonigal of Manitoba (appointed in 1981, and the first since McGibbon) and Lt-Gov Helen Hunley of Alberta (appointed in 1984).

JOHN T. SAYWELL

**Life Expectancy,** see POPULATION.

**Lightfoot, Gordon,** singer, songwriter (b at Orillia, Ont 17 Nov 1939). Canada's most popular male vocalist during the 1970s, Lightfoot first drew attention in 1965 as the composer of "Early Morning Rain" and "For Lovin' Me," recorded by folk artists IAN AND SYLVIA and Peter, Paul and Mary, among others. At heart a romantic, in voice a baritone balladeer, he moved easily from folk to pop and by 1970 had become a major concert and recording artist throughout the English-speaking world. Other Lightfoot songs, from more than 15 record albums 1966-82, include pop items "If You Could Read My Mind," "Sundown" and "Did She Mention My Name?" as well as the more traditional "Canadian Railroad Trilogy" and "The Wreck of the Edmund Fitzgerald." Lightfoot has received many Juno awards (as folksinger, male vocalist and songwriter) and in 1971 was named an officer in the Order of Canada.

Singer Gordon Lightfoot performing in a 1980 benefit for Canada's Olympic athletes (courtesy Canapress).

**Lighthouses** Functions of lighthouses vary greatly. The great landfall lights at Cape Race, Seal I, Sambro and Race rocks provide the first sight of land for Atlantic or Pacific travellers after days or weeks at sea. Coastal navigation is by a system of major and minor lights, and smaller lights are used on intricate waterways where numerous islands and channels need to be marked. Harbour lights and range lights mark the final approaches to safe haven.

Duties of lighthouse keepers include the traditional "keeping of the light," radio communications and beacons, fog alarms, rescue services and sanctuary. Certain stations provide regular weather observations as part of the national system, and the station at Langara in the Queen Charlotte Is provides part of the tidal-wave warning system in the Pacific Ocean.

The first documented lighthouse, built at LOUISBOURG in Cape Breton in 1734, was almost immediately destroyed by fire and rebuilt. It was levelled by British guns during the siege of 1758 and rebuilt several times. The oldest existing lighthouse was built on Sambro I at the mouth of Halifax harbour in 1758. The second-oldest surviving lighthouse was built in 1809 on Green I (Isle Verte) in the St Lawrence R, opposite the mouth of the Saguenay. In the early 19th century sea trade between Canada and Europe increased rapidly and so did wrecks and disasters at sea. By 1840 major lights had been placed on Seal I at the entrance to the Bay of Fundy, NS, at several places along the coast of Newfoundland and at the entry to the St Lawrence R. Lights were used on the Great Lakes at Mississauga (1804) and at Gibraltar Pt on Toronto I (1808). The upper Great Lakes remained in darkness until increasing trade forced the lighting of shore lamps throughout the region in the latter half of the 19th century.

On the Pacific Coast it was not until 1860 that the first 2 lighthouses, at Race Rocks and Fisgard, near what is now Victoria, came into service. In the latter half of the 19th century lights were used along the outer coast of Vancouver I and the entryways to Victoria, Vancouver and Prince Rupert. Inland waters, such as the Saint John R, Red R and Lake Winnipeg, were marked with lights and buoys by the early part of the 20th century. In arctic waters beacons were installed in the 1930s, with the opening of the port of Churchill.

The first lighthouses were bonfires on the ends of points at harbour entrances, later replaced by towers with similar beacons on top. Candles were used in the 18th and early 19th centuries, but it took many to make even a dim light. Oil lamps with wicks were used extensively by 1800. Whale oil and a variety of vegetable, fish and seal oils were used in different places, according to the availability of supplies and equipment.

The invention of kerosene by A. GESNER in NS in 1846 led to the production of good-quality kerosene lamps, used extensively in Canada from the 1860s because they were cheap, reliable and efficient. The invention of the mantle lamp and experimentation with various oils produced lighthouses of considerable brilliance by the beginning of the 20th century. Electric lights came to lighthouses in Canada about the end of the 19th century and gradually replaced other forms of illumination.

Parabolic reflectors of polished steel or silvered copper greatly increased the effectiveness of lighthouses in the early 19th century, and some of these reflectors are still in use in lights at Red I in the St Lawrence and East Pt, PEI. Reflecting systems are known as catoptric systems. Simple lens systems (dioptric) and combinations of refracting prisms and concentrating lenses (catadioptric) came into use in the mid and latter part of the 19th century. Many of these systems survive, and Canada's greatest lighthouse, at Cape Race, has such a system weighing many tons and casting its beam 48 km into the Atlantic. By 1800 along the coasts of Europe there were such numbers of lighthouses that it became necessary to invent a system of identifying them. An apparatus was attached to the light to produce a different pattern of flashes for each lighthouse. This sequence is noted in the *List of Lights* for each area. By 1890 the revolving light mechanisms were floated in mercury and

The Bonavista Bay lighthouse, built in 1843, guided Newfoundland mariners until 1966 when it was replaced by a steel tower with an automated beacon (photo by David M. Baird).

driven by clockwork with great weights, which were wound up by the keeper at 2- to 4-hour intervals.

In the 1970s electrification was virtually complete. Modern mercury-vapour and xenon bulbs are so powerful that simple optics of pressed glass or plastic have replaced the great revolving masses of glass and prisms. These new lamps revolve in the same way as airport beacons and lights on tall buildings. Automation has replaced the traditional lighthouse keeper in most stations. The man living with his family at a light station in a remote place has been replaced by the helicopter and the travelling technician who changes or charges the bulbs and batteries. Bulbs are changed automatically and remote lighthouse stations are fitted with automatic standby equipment in case something goes wrong.

Along Canadian coasts, where lighthouses must be seen against snow or rocks and where complicated coastlines result in many lighthouses within short distances along the shore, distinctive patterns are painted on the towers in order to distinguish them from one another. These daymarks have great variety, ranging from a red cross at Head Harbour, NB, to black and white horizontal stripes at Race Rocks in BC.

Construction materials vary with the time of building and local conditions. Wooden lighthouse towers are characteristic of the Canadian lighthouse service. Superb examples are to be found at East Pt, PEI, Pachena on the outside of Vancouver I, and at Gannet Rock on the entrance to the Bay of Fundy. The last, despite its exposed position, has stood for 150 years. Stone towers at Race Rocks, Cove I (near Collingwood, Ont) and on Anticosti I were built with what was available nearby and were as much as 30.5 m high. Lighthouses were sometimes built of brick, and for a period in the late 19th century cast-iron plates were hauled ashore from ships and bolted together to produce the lighthouses at Ferryland, Nfld, and Cape North, NS. The latter is now on the grounds of the National Museum of Science and Technology in Ottawa. Reinforced concrete towers have been built in many places in Canada this century, the most distinctive being built around 1910, with central towers up to 30.5 m high and flying buttresses; examples are the beautiful towers at Father Pt, Qué, Caribou I in Lk Superior and Estevan Pt on the outside of Vancouver I. Steel caissons are set into the riverbed at Prince Shoal and White I Reef in the St Lawrence R, and an open-steelwork tower is on Pigeon I in Lk Ontario. Even fibreglass towers have been tried on the Magdalen Is and in inland waterways. Canadian lighthouses are set in a great variety of environments — in the rain forests of the Pacific

Coast; in the middle of a downtown park, such as Brockton Pt in Vancouver; and on the tops of high-rounded points of islands so thoroughly windswept that the lighthouses are held down by steel guy wires, as at Gull I. Although often starkly functional in setting and design, the lighthouse has become a romantic symbol both of the country's maritime greatness and of safe haven.

DAVID M. BAIRD

**Lighting** From earliest times it has been recognized that artificial light prolongs daytime activities. Relaxation and social interaction necessarily occurred after the day's work was done; therefore, indoor lighting has always had a special association with this aspect of living. The campfire moved indoors to become the fireplace, and from this main source of light a branch could be pulled out and placed in a wrought-iron holder to illuminate other areas, or carried outside to serve as a torch. Small pieces of wood held in a clamp or splint holder would burn for a short period of time. The open flame continued to be the only source of domestic lighting until the incandescent light bulb was introduced in the 1880s. Although the most primitive forms are still in everyday use in some areas, it is possible to view the evolution of lighting as having 3 distinct periods.

**Early Period (to 1780)** During the first period, which ended in about 1780, fats and oils from animal and vegetable sources were used with various types of wicking. In some cases, dried whole animals or fish fastened to a stick served as torches; for example, in BC, oily SMELTS, popularly known as candlefish, were used in this manner. The earliest lamps were simple covered or uncovered saucers with a wick lying along the bottom and extending to the rim; examples include Roman pottery lamps, European iron crucibles, Inuit stone lamps and perhaps shells. Slight improvements, such as a channel or tube to elevate the wick, were incorporated in European spout lamps and in Betty, Kettle and cup-shaped lamps.

A peeled rush, dipped in melted fat, provided a primitive form of candle. Rushlights were rarely used in Canada, but candles were a part of Canadian life from the earliest times of Eu-

Fuel-burning lamps were invented around 1780 and remained in use well into the electric era. This bull's eye lamp of blue opal glass is from the Diamond Glass Co, Montréal, c1902 (courtesy Royal Ontario Museum).

ropean settlement. The self-supporting column containing a cotton wick was commonly made of tallow during pioneer times. Tallow was superseded by paraffin in the 1860s. Candle production has been maintained because of the visual and psychological association of warmth and romance with the flickering flame. Animal fats were readily available in most households and were used for lamp fuel and in soapmaking as well as for candles.

**Middle Period (1780-1880)** The second period, beginning about 1780, was one of invention and discovery. Lamps and burners were created for new fuels, such as artificial gas, burning fluid, rosin oil and kerosene, as well as for old fuels such as WHALE oil and lard. GLASS was the most common material, although brass and other metals were popular. The Swiss scientist Aimé Argand is credited with the first significant invention of this period, the Argand lamp. His centre-draft burner, holding a tubular wick and using a glass chimney, is recognized as the beginning of modern lighting. Such chimneys, being fragile and requiring daily washing, were a staple product of the Canadian glass-houses.

Artificial gas, introduced about 1800, required special burners and, more importantly, a distribution and installation system. This innovation took many years to accomplish, and in N America artificial gas was available only in major cities and towns. In Montréal, Québec City and Toronto, distribution of artificial gas began in the late 1830s and the 1840s, primarily to supply public buildings and the homes of the affluent, as well as some street lighting (see COAL GASIFICATION).

During the entire second period, the shape of lamps reflected inventions tailored to the characteristics of the fuels used and to the manufacturing technology available, particularly in the glass industry, as well as to the influences of contemporary fashion. From 1830 to 1860, the most common illuminants used in N America were animal fats, burning fluid made from camphene (pine oil) and redistilled alcohol. Burning fluid (known as camphine in England), although inexpensive, was highly volatile and resulted in numerous fatal explosions.

Simple whale-oil burners usually had one or 2 vertical wick tubes extending into the fuel container (font). Burning-fluid burners, although similar, did not extend into the font and had single or multiple, divergent wick tubes, with removable wick caps used to extinguish the flame and to prevent evaporation. Whale oil was also used in more complicated lamps such as the Astral or Simumbra lamps, which had ring-shaped reservoirs that permitted unobstructed light to be cast downward. Lamps with offset fonts and separate reservoirs (the most popular being the kerosene student lamps) were used during the entire second period. Lard lamps featured various arrangements designed to force the fuel to the wick and to conduct heat from the flame to the fuel to keep it melted. In the 1850s the solar lamp, designed for lard or whale oil, was the most sophisticated lard lamp in operation and appearance.

Mechanical lamps employed a clockwork mechanism to force highly viscous fuels to the top of the lamp. These were popular in Europe where they were used with Colza (rapeseed) oil (see CANOLA). Another type of mechanical lamp popular during the kerosene period used a fan to maintain a continuous flow of air between the wick tube and the draft deflector of the burner. Chimneys were not required with these lamps. Wanzer mechanical lamps were made in Hamilton, Ont, for several decades beginning in the 1880s, by the Wanzer Sewing Machine Co.

In 1846 Abraham GESNER, a physician and geologist from NS, gave the first public demonstration of a revolutionary lighting fuel in Char-

lletotown, PEI. Kerosene was the name Gesner gave this product in his 1854 US PATENT. It was obtained initially from COAL and later from PETROLEUM. A similar product called Paraffine oil was patented in England in 1850 and in the US in 1852 by James Young from Scotland. These developments, as well as Samuel Kier's contemporary experiments in Pennsylvania, had little effect upon domestic lighting until the late 1850s. Kerosene provided, for the first time, an inexpensive and abundant supply of a safe fuel that could make good lighting available to the general public. It was this dream that sparked the rush to discover and market petroleum, and it was James Miller WILLIAMS of Hamilton who, in 1858, first shipped crude oil from hand-dug wells at Oil Springs, near Petrolia, Ont. American and Canadian patents for kerosene burners and lamps continued long after electric lighting was introduced. In the 1880s a mantle that dramatically increased the intensity of light and could be used with gas or kerosene burners was invented by Karl Auer von Welsbach, an Austrian chemist.

**Late Period (1880 on)** The Paris World Fair of 1878 had introduced the new mode of electric lighting to the world. Montréal J.A.I. Craig, impressed by the demonstration, upon his return helped the Jesuits install the first electric light in the city (based on the arc lamp invention of Russian engineer Pavel Jablochkov) in front of the Jesuit college on Bleury St. American inventor Thomas Alva Edison produced the first successful incandescent electric light bulb in late 1879, and his activities in organizing ELECTRIC-POWER GENERATION and electric-power transmission systems ushered in the third period of lighting.

In Canada, although all cities, towns and villages are served by electric power, domestic lighting in remote areas is still provided by lamps using naphtha gas, propane or kerosene. As electric lights become available, all other illuminants will likely be discontinued. However, for those who still derive great pleasure and satisfaction from the psychological attraction, the magic of the open flame will endure.

**Nondomestic Lighting** Oil (vegetable or animal), gas and kerosene lamps were used extensively for street lighting in N America before electric lamps were introduced. The brilliant carbon-arc lamps invented by Sir Humphry Davy in 1808 were used primarily for large indoor areas and outdoors for streetlights, searchlights and lighthouses. Oil-fueled streetlights were used in Montréal, Québec City and Toronto until replaced by gaslights (1837-47), which were in turn replaced by electric lights.

Horse-drawn vehicles, trains, bicycles, motorcycles, cars and boats had special lighting requirements. To guide the traveller, candles, kerosene, whale oil and carbide lamps were used before battery-powered electric lights. In Ontario, Thomas Leopold WILLSON demonstrated Hamilton's first carbon-arc lamp in the 1880s. Soon after, he went to the US where he discovered a method of producing calcium carbide. This substance was used in vehicle lamps, particularly for bicycles and motorcycles, as well as in lighthouses and in miners' lamps. A controlled trickle of water, combined with the calcium chloride, produced a continuous supply of acetylene gas that was conducted to a special burner. These lamps had worldwide use but, in Canada as elsewhere, have been superseded for transportation purposes by electric lighting, powered by batteries or generators. See TECHNOLOGY.

Reading: L.S. Russell, *A Heritage of Light: Lamps and Lighting in the Early Canadian Home* (1968); Catherine M.V. Thuro, *Oil Lamps: The Kerosene Era in North America* (1976) and *Oil Lamps II: Glass Kerosene Lamps* (1983).

**Lightning**, sudden electric discharge that occurs as a giant spark between one portion of

an overhead THUNDERSTORM and another portion of the overhead CLOUD or some point on the ground below. Thunder is the noise such a discharge makes as the air is violently heated along the lightning stroke path. In the absence of clouds, the Earth has a downward-directed, fair-weather electric field, with positive electric charges carried in the air on various ions, and a neutralizing negative charge on the planet's surface. As a thunderstorm grows, or a mature storm approaches, this electric field is reversed. In general, the lower part of a cloud is negatively charged; the upper portions, positively charged. A further positive charge is induced on the Earth's surface below a thunderstorm. As the storm develops, the electric field within and below the cloud may reach several thousand volts per centimetre, at which stage an electrical breakdown occurs in the form of lightning. A lightning stroke to the ground starts out as a luminous, erratic path of ionized air that proceeds rapidly from the cloud base. As it nears the ground, it is met by an upward-moving column of electric charge originating from some high point on the ground below. On meeting, a violent surge of electric current occurs which constitutes the main stroke. Such lightning is commonly referred to as streak or forked lightning. The sequence of stages is essentially the same when the electrical breakdown occurs between upper and lower portions of the same cloud. In this case the stroke is usually so obscured that only a diffuse flash of light, commonly known as sheet lightning, is seen. The basic mechanism responsible for thunderstorm charging is the interaction of HAIL pellets and supercooled water droplets in colder regions of the growing cloud. Collision of these, followed by partial freezing of the latter, results in the ejection of small, positively charged ice splinters; a net negative charge accumulates on the growing hail pellet. Cloud updrafts then complete the process by carrying the small ice crystals towards the cloud top, leaving the negatively charged pellets at lower levels. Within a vigorous and growing thunderstorm, charge separation by these updrafts rapidly rebuilds the electric field following each lightning stroke, so that another can occur from the same cloud region a few minutes later.

J. MAYBANK

**Lillie, Beatrice Gladys** (Lady Robert Peel), comedienne (b at Toronto 29 May 1898). Her saucy songs and unruly rope of pearls made her a beloved revue entertainer. She began in Ontario as a concert singer with her mother and sister ("The

Lillie Trio") and went to England in 1914 where she was hired for a series of wartime revues. She made her New York debut in 1924, and throughout the 1930s alternately headlined at the Palace Theatre in New York and London's Palladium or Café de Paris. Following WWII, in which she tirelessly entertained the troops, her important shows were *Inside USA* (1948-50), *An Evening with Beatrice Lillie* (1952-56), *Auntie Mame* (1958) and *High Spirits* (1964), the musical version of Coward's *Blithe Spirit*. DAVID GARDNER

**Lillooet**, BC, Village, pop 1725 (1981c), inc 1946, is located in the southern interior of BC, 325 km NE of Vancouver. It sits at the foot of the Cascade Mtns above the W bank of the FRASER R. A larger part of the area's population is native Indian, of the Lillooet tribe of the Interior SALISH.

Miners came by the thousands from the coast to the interior in the 1850s gold rush, travelling up the Harrison, Lillooet, Anderson and Seton Lks to the present site of Lillooet. The new settlement (1858) quickly became an important town on the route to the Cariboo and Fraser R goldfields. It received its name (meaning "wild onion") in 1860. Shortly thereafter it became mile "0" on the new CARIBOO ROAD, and is said to have grown quickly to 4-5000 people. The Lillooet route was abandoned when the Cariboo later went through the Fraser Canyon, and the town declined. After the gold rush waned, the area was known for big-game hunting, and many settlers were employed as outfitters and guides. Logging and lumbering have been important; today a sawmill is the major employer. The local newspaper, the *Bridge River Lillooet News*, achieved notoriety under owner and editor Margaret (Ma) Murray, known for her colourful, commonsense editorials and commentary on public events.

JOHN R. STEWART

**Lily**, common name for members of genus *Lilium* of the lily family (Liliaceae). The family, comprising over 200 genera and perhaps 3000 species, includes PLANTS as diverse as onion, daffodil and lily of the valley. Some authors divide it into subfamilies; others confer separate family status. Family members are mainly herbaceous; rootstocks form bulbs, tubers, rhizomes, etc. Genus *Lilium* comprises about 80 species native to northern temperate regions. Canada lily (*L. canadense*) and western red or prairie lily (*L. philadelphicum*) are native to Canada. Lilies are among the most popular ORNAMENTALS, and many decorative hybrids have been produced. Since 1941, the western red lily has been the PROVINCIAL FLO-

The western red, or prairie, lily shown above (*Lilium philadelphicum*) is the floral emblem of Saskatchewan (photo by Mary W. Ferguson).

The madonna lily (*Lilium candidum*) was chosen Québec's floral emblem for its resemblance to the fleur-de-lis (photo by Mary W. Ferguson).

**RAL EMBLEM** of Saskatchewan. It grows in abundance in meadows and clearings; however, picking the flowers weakens the plant and causes its progressive disappearance. The tall (1.2-1.5 m) madonna lily (*L. candidum*), an introduced Asian species, has fragrant, trumpet-shaped, white flowers with yellow stamens. Although not indigenous to Québec and somewhat difficult to cultivate, it was chosen as Québec's floral emblem in 1963. It resembles the fleur-de-lis on armorial emblems and on Québec's flag; however, the fleur-de-lis is generally thought to be a stylized version of the flower found along the Lys R in France, probably *Iris pseudacorus*. Blue flag (*I. versicolor*) has been proposed as a new floral emblem for Québec. This pretty, bluish violet flower, 8 cm in diameter, is native to Canada (Manitoba to S Labrador, Newfoundland and NS) and appears in late May or early June.

CÉLINE ARSENAULT

**Limestone**, a SEDIMENTARY ROCK largely or wholly composed of calcium carbonate ( $\text{CaCO}_3$ ). Carbonate rocks are important to the CONSTRUCTION INDUSTRY as building stone and aggregate, and as the primary component of portland CEMENT and lime. Limestones are also used in glass manufacture, as fillers, abrasives and soil conditioners and in the manufacture of various chemicals. Quicklime is formed by the process of calcination, in which limestones are heated to the dissociation temperature of the carbonates (402-898°C), and held there long enough to release carbon dioxide. Although the word "lime" is used generally to refer to pulverized limestone as well as forms of burned lime, more correctly it refers to quicklime and its products, slaked and hydrated limes. Slaked lime is quicklime mixed with water; hydrated lime, slaked lime dried and possibly reground. Lime is used principally in the steel, PULP AND PAPER and MINING industries, where its chemical qualities are required as a flux (promoting ease of melting), in digesting liquors and as a neutralizing agent, respectively. Water and sewage treatment and removal of sulphur dioxide from smelter-stack gases and thermal power-plant emissions will require large amounts of lime in the near future. The use of lime in construction (eg, in mortar and sand-lime bricks) has been greatly reduced in recent years.

Lime plants have been established near industrial centres in Canada where reserves of suitable limestone are available and where major consumers are situated. Ontario and Québec produce over 80% of Canada's total lime. A high-bulk, low-cost commodity, lime is rarely shipped long distances because the raw material for its manufacture is so widely available. Calcining is done in kilns of various types, including traditional vertical or rotary types, or more recently developed rotary hearth, travelling grate, fluo-solid and inclined vibratory types. The high cost of energy has required inclusion of preheating facilities in new plants, and environmental regulations have necessitated incorporation of dust-collection equipment. Canada ranks about 12th among world producers of quicklime and hydrated lime. The value of production contributes only 0.05% to the GNP.

D.H. STONEHOUSE

**Lincoln**, Ont, Town, pop 14 196 (1981c), inc 1970, situated in the Niagara Peninsula, immediately W of St Catharines. The town was formed from the townships of Clinton and Louth (part) and town of Beamsville and comprises several distinct communities (Beamsville, Vineland, Jordan, Jordan Station and Campden) interspersed with rural areas. The area was settled in the 1780s, and the various communities grew up in response mainly to agricultural needs. Since 1900 it has been important for tender fruit and grape growing, and Jordan is the home of one of Niagara's oldest

wineries. Though people of British origin predominate, Mennonite and, more recently, Dutch people are also important elements in the population. The town, named for Lincolnshire, Eng, has attracted many light industries, particularly close to the QUEEN ELIZABETH WAY, and various tourist facilities, and the federal and provincial governments have agricultural research facilities in Vineland.

H.J. GAYLER

**Lindbergh**, Alta, UP, pop 47 (1981c), is located 200 km E of Edmonton. Formerly called Mooswa, it was renamed (1928) in honour of American aviator Charles Lindbergh, after his famous solo flight across the Atlantic. The hamlet declined when the CNR branch line (built 1928) was abandoned in 1946. In the 1940s a SALT bed 300 m thick and several kms long was discovered, and up to 350 tonnes of salt are refined and packed daily at the Canadian Salt Co plant. The salt bed contains enough salt to supply Canada's needs for 200 years.

ERIC J. HOLMGREN

**Lindner, Ernest**, artist (b at Vienna, Austria 1 May 1897). Lindner came to Canada in 1926 and worked first as a farm labourer in Saskatchewan. By 1931 he had won local recognition as an artist and by 1933 was beginning to exhibit in eastern Canada. Lindner is best known for his works in watercolour and pencil, although he has produced linocut and wood-block prints and has studied etching and lithography. The subject that has concerned him most is the cycle of life. His preferred metaphor is the plant life of northern Saskatchewan forests. Lindner's images are often composites of human and plant forms, overlapping and blending into each other. He is regarded as a superb craftsman, and is noted for the tenacity of his ideas. He was elected a member of the Royal Canadian Academy of Arts in 1977.

JUDY GOVIN

Reading: T. Heath, *Uprooted: The Life and Art of Ernest Lindner* (1983).

**Lindsay**, Ont, Town, pop 13 596 (1981c), inc 1857, located on the Scugog R, which connects it to Sturgeon Lk and the Trent-Severn Waterway, about 95 km NE of Toronto. Originally it was named Purdy's Mills, after William Purdy, an American settler who built gristmills and sawmills on the site in 1828. The dam Purdy built backed up the Scugog R until it formed Lk Scugog out of what had formerly been bog and swamp, but it also flooded surrounding farmland and the farmers marched to town and destroyed the dam. The name Lindsay commemorates a surveyor's assistant who died after being accidentally shot on the site. In 1844 the government built a lock which opened the Scugog R to navigation. A new one constructed in 1870 is now one of 43 on the Trent-Severn system. Lindsay developed as a farming and lumbering centre. During the summer it is a jumping-off spot for vacationers visiting the central KAWARTHA LAKES. Now the seat of Victoria County, its riverfront is dominated by a stone gristmill dating from the 1860s. A campus of Sir Sandford Fleming College of Applied Arts and Technology is located here. A famous native son was Sir Sam HUGHES, newspaper publisher and controversial minister of militia 1911-16.

DANIEL FRANCIS

**Lindsay, Robert Blake Theodore**, Ted, hockey player (b at Renfrew, Ont 29 July 1925). He joined Detroit Red Wings in 1944 and played left wing on the famous "Production Line," with Sid Abel at centre and Gordie HOWE on right

wing. He won the NHL scoring title in 1949-50, but he was best known for his toughness and fearless checking. He was traded to Chicago when Detroit manager Jack Adams discovered his role in forming the NHL players' union. His 379 goals and 472 assists were records for a left winger when he retired. He returned to Detroit for an unsuccessful stint as general manager.

JAMES MARSH

**Lindsley, Thayer**, mining engineer, promoter (b at Yokohama, Japan 17 Aug 1882; d at New York C 29 May 1976). Born of American parents in Japan, Lindsley returned to the US at 15, graduated from Harvard in engineering and worked for the New York City subway. After serving in WWI, he worked up a mine in Oregon, selling it for \$30 000 in 1923. With this stake he set up Ventures Ltd in 1928. Ventures prospected, developed and financed mines, and by the mid-1950s owned mines or shares of mines on every continent except Asia. Lindsley's best-known venture was Falconbridge Nickel Mines near Sudbury, Ont, which he and a partner, Joseph Errington, incorporated in 1928. He and his brother, Halstead, also helped establish Sheritt Gordon mines in 1927.

ROBERT BOTHWELL

**Linear Mounds**, a cluster of archaeological sites located mainly along the SOURIS R of southwestern Manitoba. Although scattered throughout the northeastern Plains, the linear mounds along the Souris contain the greatest concentration of long prehistoric burial mounds in Canada. These earthen mausoleums, massive undertakings with a technology of stone and bone, consisted of long straight ridges up to 230 m long and 7 m wide, with circular mounds on the ends. They appear to date to 900-1400 AD, and the grave goods, though rare, show that the local Plains Indian tribes were part of vast continental trade networks involving dentalium from the West Coast, obsidian from Yellowstone, brown chalcidony from western N Dakota, copper from Lk Superior, catlinite (red pipestone) from southern Minnesota and items of conch shell traded up the Mississippi R from the Gulf of Mexico. See also ARCHAEOLOGY; PREHISTORY.

E. LEIGH SYMS

**Linguistics**, the study of LANGUAGE. Language accompanies almost all human activities, and is the medium for many of them. The subject of speculation and inquiry throughout history, in the 20th century its study has come to be called "linguistics," and this modern term characterizes a modern emphasis, with special methods and techniques.

The foundations of the modern discipline were laid at the beginning of the 20th century. Ferdinand de Saussure, a professor at U of Geneva, is credited with bringing together the results of many types of language study into a coherent discipline. Numerous scholars elaborated and refined de Saussure's framework in the next 3 decades. Among the influential early contributors were Nikolas S. Trubetzkoy and Roman Jakobson (USSR), Edward SAPIR and Leonard Bloomfield (US), J.R. Firth (Britain), Louis Hjelmslev (Denmark) and André Martinet (France). Since 1950 linguistics has become firmly established throughout the world. Much of its rapid growth is due to the stimulating and often controversial work of American linguist Noam Chomsky, beginning with his first book, *Syntactic Structures* (1957). Chomsky's ideas presented challenges not only to the tradition begun by de Saussure, but also to philosophers, mathematicians and psychologists.

**Linguistics in Canada** Canada is rich in languages, with dozens of native languages (see NATIVE PEOPLE, LANGUAGES), 2 official languages (see ENGLISH LANGUAGE; FRENCH LANGUAGE) and several flourishing immigrant languages, such as Italian, Ukrainian, Greek and Japanese (see

ETHNIC LANGUAGES). Much of Canada's political, cultural and social distinctiveness and many of its national issues are rooted in multilingualism. Language and language-related studies have inevitably played an important part in Canadian society, and the recent growth of linguistics as a systematic discipline has found fertile soil in Canada.

Linguists seek to discover the principles that underlie the human capacity for language. They begin with some fairly obvious observations: that all speakers of a language can utter and understand an unlimited number of sentences; that their capability develops rapidly when they are children, without much conscious learning or teaching; that they automatically know whether a sentence is grammatical, sensible, or ambiguous; and that they cannot discover the principles of their language abilities simply by thinking about what is going on in their minds while they are speaking.

The mental representation that allows speakers to use language is called the *grammar* (not to be confused with the rules intended to help students write better). Those simple observations about language prove that the grammar is not a simple device: it must be a finite device with an infinite output, because each human being can produce and comprehend a potentially unlimited set of utterances; it is organized on several different levels because speakers can judge sentences in several ways; it is subconscious, or tacit; and it is innate, rather than learned. The study of the grammar makes up the core area of linguistics; several subfields apply the results of grammatical study to numerous types of human interaction. The core and the subfields depend upon one another, and in practice it is not easy to separate them; all linguists work in both areas, often simultaneously.

For many years linguists worked individually in branches of the government, in museums or in ANTHROPOLOGY and language departments at universities. The first department of linguistics (still one of the largest in Canada) was formed at U de Montréal in the late 1940s, when Jean-Paul Vinay gathered together several colleagues from various departments. A decisive step in promoting the discipline occurred at U of Manitoba in 1954, when scholars from all parts of the country gathered to form the Canadian Linguistic Assn. Henry Alexander of Queen's U became the first president (1954-56) and, during the early years, other founding members succeeded him: Gaston Dulong, J.B. Rudnycky, E.R. Seary, Vinay, M.H. Scargill, Jean Darbelnet and Walter S. Avis. The founding members also began publishing *The Canadian Journal of Linguistics*, which, from its modest beginning in 1954, has come to provide an international forum for linguistic research.

During the 1960s many universities expanded to include departments of linguistics, beginning with Laval in Québec City (1961). Universities in English-speaking Canada caught up a few years later when Memorial, Toronto, Alberta and Simon Fraser expanded their programs into full departments. By 1975, departments had also been established at Sherbrooke, McGill, Québec à Montréal, Ottawa, Carleton, Calgary, British Columbia and Victoria. Between 1975 and 1984 no new departments were formed, but most Canadian universities offer instruction in the subject.

**Lisgar, Sir John Young, Baron**, politician, colonial administrator, governor general of Canada and governor of PEI 1869-72 (b at Bombay, India 31 Aug 1807; d at Bailieborough, Ire 6 Oct 1876). John Young was educated at Eton and Corpus Christi, Oxford. A Tory MP for County Cavan, he served as a lord of the Treasury 1844-46 and chief secretary for Ireland 1852-55. Young's colonial appointments before

coming to Canada, the Ionian Islands and New South Wales, both ended in controversy. During his term in Canada Lisgar took an active part in diffusing Canadian-American tensions created by the RED RIVER REBELLION and the Fenian raids. A keen supporter of CONFEDERATION, he tried to mediate the conflict created over the transfer of RUPERT'S LAND and the entry of Manitoba into Confederation and encouraged BC to join. He also organized the Governor-General's Foot Guard. Although Lisgar was outspoken and independent, John A. MACDONALD considered him the ablest governor general he had known.

CARMAN MILLER

**L'Islet-sur-Mer**, Qué, Village, pop 1070 (1981c), on the S shore of the ST LAWRENCE R., 100 km E of Québec City, within the former seigneuries of L'Islet-St-Jean and Bonsecours (granted 1677). Before the arrival of the first resident parish priest in 1745, L'Islet was served by missionary priests. The parish of Notre-Dame-de-Bonsecours-de-L'Islet was founded in 1721. Until the end of the 19th century, agriculture was the principal economic activity. The arrival of the railway in 1860 brought some industrial development: several brickworks exploited but soon exhausted the local clay deposits; a foundry that was in operation for several years has more recently become a trailer factory; a large cabinetmaking enterprise also established several shops in the village. These industries have had an influence on urbanization: in 1911 the village separated from the parish municipality (est 1845), and in 1950 L'Islet-Station broke away, eventually becoming a town (L'Islet). The church, built in 1768, is a designated historic building and contains several religious masterpieces. A major maritime museum opened in 1970.

ANTONIO LECHASSEUR

**Lismer, Arthur**, painter, educator (b at Sheffield, Eng 27 June 1885; d at Montréal 23 Mar 1969). Lismer studied at Sheffield School of Art 1899-1906 and the Académie royale des beaux-arts, Antwerp, 1906-07. He moved to Canada in 1911, seeking work as a commercial illustrator. At the Grip Engraving Co in Toronto, he met J.E.H. MACDONALD, Tom THOMSON and F.H. JOHNSTON, and, shortly thereafter, Frank CARMICHAEL. In 1912 he returned to England to marry and spoke so highly of Canada that F.H. VARLEY followed him to Toronto.

Lismer began his distinguished career as an art educator as principal of the Victoria School of Art and Design in Halifax 1916-19. A prodigious worker, he painted views of Halifax harbour and returning troopships for Canadian War Records in 1918-19. He returned to Toronto to become VP of the Ontario College of Art in 1919 and in 1920 became a founding member of the GROUP OF SEVEN.

Lismer's first Canadian paintings were heavily influenced by John Constable, but during the 1920s he developed a powerful expressionist style of his own, characterized by raw colour, heavy impasto, deliberately coarse brushwork and simplified form. But Lismer devoted most of his time to art education. From 1927 to 1938 he was the educational supervisor at the Art Gallery of Toronto (now Art Gallery of Ontario). In 1932 he undertook a nation-wide lecture tour; invitations to conferences in Europe and South Africa followed, and he returned to teach in South Africa in 1936-37. In 1938 he was visiting professor at Teachers' Coll, Columbia. He ran the Montreal Children's Art Centre, affiliated with the Montreal Museum of Fine Arts from 1941 to 1967. This activity left Lismer with little time to paint, but he produced many of his most original works after 1930, painting first in the Maritimes and Georgian Bay, and from 1951 at Long Beach, on Vancouver I, each summer. The lurid, intestinal and claustrophobic qualities of many of these paintings were not to contemporary taste, but have gained acceptance in recent years, for they seem to have developed from a form of deep, personal expressionism.

CHRISTOPHER VARLEY

**Literacy** has been defined both as the ability to read and write one's own name and as the ability to read and understand newspapers and magazines, and encyclopedia articles written at a level of sophistication often well above that of the average graduate of grade 10. Such widely varied definitions make it difficult to form a reliable estimate of the number of illiterates in a particular society. Claims by different writers,

Arthur Lismer, *A September Gale, Georgian Bay* (1921), oil on canvas. An original member of the Group of Seven, Lismer developed a powerful expressionist style of his own, characterized by raw colour and simplified form (courtesy National Gallery of Canada).

eg, that illiteracy in the USSR has been eradicated and that 28% of Canadians are illiterate, are incomparable.

Although no precise figures are available for Canada, in Western societies generally the incidence of complete illiteracy is relatively low. Data from a provincial assessment of reading achievement in BC suggest that no more than 2% of Canadians cannot read or write at all (in this context the fact that a number of recent or older immigrants may be relatively illiterate in English or French but literate in their mother tongue must be considered). Estimates of how many Canadians are functionally literate, ie, able to understand the limited basic written communications thought to be essential in order to function in modern society, provide a more meaningful indication of illiteracy. Tests of functional literacy often include excerpts from such documents as bus schedules, drivers' manuals, classified advertisements, cookbooks, etc. Not surprisingly, scholars studying literacy often disagree on exactly what and how much an individual must be able to read in order to "function" in Canadian society. For instance, is someone who cannot read the Revenue Canada tax forms functionally illiterate?

Organizations such as UNESCO consider that anyone in an industrialized society who has less than a grade 5 education is wholly illiterate and that those with less than grade 9 are functionally illiterate. By these standards, one in every five Canadians was functionally illiterate in 1981. Though females generally learn to read faster and score higher on reading tests while in school, the proportion of functional illiterates calculated by the grade-completed criterion is nearly identical for males (19.6%) and females (20.5%). Literacy has often been equated with occupational status. For example, it was calculated that of the population 15 years of age and over, 60% of those considered functionally illiterate were employed, while among those who did not complete grade 9, only 39% were employed.

"Grade completed" however, is a very indirect and inadequate measure of literacy. First, it is not at all clear whether even with 10 or 11 years of schooling individuals can be considered functionally literate in advanced technological societies; moreover, individuals vary greatly in achievement after a specific period of schooling — many grade 8 students perform well above the level of the average grade 10 student; conversely, many grade 10 students perform below the level of the average grade 8 student.

More importantly, such calculations fail to take into account other and possibly more important factors affecting employment and social mobility, ie, class, ethnicity and sex. In the 19th century the majority of IRISH Catholic immigrants to Canada were literate, but they occupied the lower economic and social ranks. Women and blacks, regardless of education, fared even worse.

In Canada, since the 19th century, literacy has been perceived as a personal and social "good," although the precise meaning of literacy and the understanding of what individuals are expected to achieve from their instruction in and possession of literacy is unclear. Nevertheless, many individuals exert great effort to become literate, even late in life, and societies with sharply contrasting political systems promote literacy through widespread popular education.

In Canada, literacy has been promoted primarily by school boards, libraries and, to a lesser degree, by private organizations. Public EDUCATION in Canada has fostered and encouraged literacy. Among private agencies, Frontier College, est 1898, was the first Canadian organization to receive a UNESCO medal for exemplary work in promoting literacy (1977). Canada's colleges in general are largely responsible for the

provision of basic ADULT EDUCATION programs, including those specifically designed to enhance literacy.

Claims of an absolute increase in illiteracy among Canadians are generally unsubstantiated, but drops in reading performance for specific groups for specific periods of time and for specific skills are recorded occasionally. For example, authorities agree that although basic reading skills at lower grade levels have improved during the last 15 years, a loss among older pupils of higher order skills, such as inferential reading, has been documented. Nevertheless, Canadians in general are gradually becoming more literate and more educated. For example, the proportion of Canadians completing secondary school rose from 62% in 1971 to 70% by 1981; during the same period the percentage of Canadians with university degrees increased from 4.8% to 8%.

Although Canadians are now more literate in an absolute sense, it is not known if they keep pace with the demand in new literacy skills, because little work has been done in tracking the changing levels of literacy needed for full participation in society. The ability to read involves 3 major components: reasoning ability, mastery of language, and familiarity with the alphabetic code. The second component, mastery of language, is particularly important. Much of language is coded knowledge. As knowledge expands, so does the language that is needed to describe it. This in effect means that individuals can be or become relatively illiterate because they are or have become ignorant of new knowledge. In order to read anything at all with understanding, individuals must possess sufficient prior knowledge. If, therefore, knowledge expands at a rate faster than the ability to absorb it, the potential of a decline in situational or relative literacy is real.

Over the past few years the terms "visual literacy" and "computer literacy" have become popular. In both instances "literacy" refers to familiarity with and an ability to manipulate the object in question: visual symbiotic material or computers.

J.J. TUINMAN

Reading: Harvey J. Graff, *The Literacy Myth* (1979).

**Literary and Historical Society of Quebec**, fd 1824, is Canada's oldest HISTORICAL SOCIETY. The Earl of DALHOUSIE, governor-in-chief of Canada 1819-28, was a driving force in establishing the bilingual society, which received its royal charter in 1831. It had as its objective the preservation, care and dissemination of the colony's historical records, and was one of the first bodies to collect archival material for these purposes. It achieved considerable success and shared its findings through an active publications program. By 1924 the Literary and Historical Society of Quebec had published its *Transactions* series for all but its first 5 years, along with numerous monographs. It remains an active organization today.

CARMAN V. CARROLL

**Literary Bibliography in English** The essential foundations of literary scholarship are adequate research tools and definitive texts of the literature itself: both are the products of literary bibliography — the former of enumerative, the latter of textual and analytical, bibliography. Enumerative bibliography aims at recording the literary achievement — past and present, primary and secondary — of a nation. At its best it enables scholars to determine the structure and perceive the historical shape of their discipline; and on a more practical level it helps them to be selective in their research and to establish, without time-consuming work, the publishing history and transmission of primary texts. The bibliographies themselves may range from mere chronological listings of short titles to elaborate catalogues of quasi-facsimile title pages, and may include any combination of primary, sec-

ondary, retrospective and current material. The chief criteria of usefulness are comprehensiveness, accessibility and currency.

The literary scholar's first concern is to know the primary texts. The standard retrospective bibliography in this area of Canadian LITERATURE IN ENGLISH is R.E. Watters's *Checklist of Canadian Literature and Background Materials 1628-1960* (2nd ed 1972) which, though inconveniently organized and now outdated, has contributed greatly to an awareness of the scope of Canadian writing. This work, augmented by such references as Marie Tremaine's *Bibliography of Canadian Imprints, 1751-1800* (1952), library catalogues and current listings in the National Library's *Canadiana* (monthly and annually), goes far towards giving a complete view of Canada's primary texts, but falls far short of the ideal of enabling scholars to ascertain any author's literary corpus.

More helpful in doing so are a number of retrospective primary and secondary bibliographies which attempt to define each author's corpus and also offer complete listings of critical and historical commentary. R.G. Moyle's *English-Canadian Literature to 1900* (1976), Peter Stevens's *Modern English-Canadian Poetry* (1978) and Helen Hoy's *Modern English-Canadian Prose* (1983) together provide a focused view of Canadian literature up to the 1970s. Intended for students and beginning researchers, these offer primary and secondary bibliographies for over 150 authors, and also introduce the user to other reference guides, major anthologies, literary histories and general criticism, and important literary periodicals.

More intensive and detailed is *The Annotated Bibliography of Canada's Major Authors (1979-)* edited by Jack David and Robert Lecker — each volume containing 5 major writers. When completed the series will have covered 50 authors, detailing not merely the usual primary/secondary work, but such important items as manuscripts, works published in periodicals (very important for poets) and reviews.

The scholar's research will, of course, often lead far beyond creative writing, and into many ancillary disciplines such as history or native studies. Bibliographies in these areas can easily be found through Douglas Lochhead's *Bibliography of Canadian Bibliographies* (1972) and a number of specialized regional guides. Also indispensable are such reference tools as *The Canadian Periodical Index* (annual), *The Canadian Book Review Annual*, *Canadiana* and the *MLA International Bibliography* (annual); this last, though American, contains a great deal of current Canadian criticism.

Enumerative bibliography in Canada is nevertheless both disparate and idiosyncratic. There is still too little attention paid to textual transmission, variant editions and minor authors. Bibliographical investigation is still too dependent on individual initiative and preference, and a greater effort must be made to produce, by scholarly consensus, a single complete and comprehensive primary/secondary bibliography of Canada's creative literature. But enumerative bibliography has at least made a strong beginning; textual bibliography has not.

It used to be felt that analytical and textual bibliography were necessary only in defining the provenance of very old texts, eg, those of Shakespeare or Milton, where many authoritative variant versions existed. Analytical bibliography examined the text's printing history and textual bibliography applied those findings to the production of a definitive edition. It is now accepted, however, that following the textual path is necessary in producing a critical edition in the following steps: 1) establishing and collecting the authoritative texts; 2) choosing a base text for comparison; 3) thoroughly collating all texts or versions; 4) determining a

copy text; 5) preparing a critical apparatus; 6) determining through these steps the extent of emendation and correction needed. In the past this was not done: new editions of Canadian classics were, if not truncated or bastardized, merely reprints of any preceding edition.

But now several textual studies of such authors as John RICHARDSON (by William Morley) have made editors aware of the value of scientific textual investigation. New critical editions are being prepared. Most notable are those being produced by the Centre for Editing Early Canadian Texts at Carleton University: Frances BROOKE's *The History of Emily Montague* (1769), James DE MILLE's *A Strange Manuscript Found in a Copper Cylinder* (1888), Thomas MCCULLOCH's "Letters of Mephibosheth Stepsure" (1821-23), Susanna MOODIE's *Roughing It in the Bush* (1852), Richardson's *Wacousta* (1832) and Catharine Parr TRAILL's *Canadian Crusoes* (1852). It is a painstaking task, necessitating considerable cost and computer assistance, but the result is gratifying: the text as the author would have wished it printed. R.G. MOYLES

**Literary Bibliography in French** Bibliographies of Canadian LITERATURE IN FRENCH can be roughly divided into 2 groups: retrospective, which list printed items of an earlier period, and current, which record the publication of books and articles as they appear. Québec books printed after the introduction of printing to central Canada (1764) and before 1820 are called *incunabula* (early printed works) and, because of their rarity, are usually described in detail by bibliographers. Québec incunabula are listed in 3 compilations: Marie Tremaine, *Bibliography of Canadian Imprints, 1751-1800* (1952), John Hare and Jean-Pierre Wallot, *Les Imprimés dans le Bas-Canada, 1801-1840* (only vol 1, 1801-1810, has been published, 1967), and *Laurentiana parus avant 1821* (1976). Books of the later 19th and early 20th centuries are listed in the multi-volume *Bibliographie du Québec, 1821-1967* (1980-) and in *Canadiana, 1867-1900* (on microfiche; 1981-), both to appear over several years.

Among retrospective bibliographies limited to literary works, the most complete are those contained in the *Dictionnaire des oeuvres littéraires du Québec* (1978-); 4 vols to 1984). Separate listings by John Hare for the novel, poetry, drama and essays are included in volumes 3-6 of *Archives des lettres canadiennes* (1961-). Specialized bibliographies exist for 19th-century short stories (Aurélien Boivin, *Le Conte littéraire québécois au XIX<sup>e</sup>* . . ., 1975), novels (David M. Hayne and Marcel Tirol, *Bibliographie critique du roman canadien-français, 1837-1900*, 1968), travel narratives (John Hare, *Les Canadiens français aux quatre coins du monde*, 1964) and journalism (André Beaulieu and Jean Hamelin, *La Presse québécoise des origines à nos jours* (1973-); 6 vols to 1984). Plays of both the 19th and 20th centuries are listed in Édouard-Gabriel Rinfret, *Le Théâtre canadien d'expression française* . . . (4 vols, 1975-78).

Short bibliographies for most Québec writers are provided in Réginald Hamel, John Hare and Paul Wyczynski, *Dictionnaire pratique des auteurs québécois* (1976). More detailed references for authors are found in university theses devoted to them or in library science theses submitted to Québec universities. The former are indexed in Antoine Naaman, *Répertoire de thèses littéraires canadiennes de 1921 à 1976* (1978) and in *Canadian Theses/Thèses canadiennes* (1952-). The latter are listed in Jeanne Proulx, *Bio-bibliographies canadiennes-françaises* (1970) and in *Bibliographie de bibliographies québécoises* (1978; supplement 1980). A few authors have been the subject of book-length bibliographies, eg, Paul Wyczynski's *Bibliographie descriptive et critique d'Émile Nelligan* (1973).

For the current bibliography of Québec's greatly increased literary production since 1960,

the basic reference is the official monthly *Bibliographie du Québec* (1968-), which lists all material published in, or about, Québec. An excellent annual review appears under the title *Livres et auteurs québécois* (1969-; formerly *Livres et auteurs canadiens*, 1961-1968). A comprehensive listing of magazine articles on Québec literature is found in Pierre Cantin, Normand Harrington and Jean-Paul Hudon, *Bibliographie de la critique de la littérature québécoise dans les revues de XIX<sup>e</sup> et XX<sup>e</sup> siècles* (5 vols, 1979), with supplements in each issue of the *Revue d'histoire littéraire du Québec et du Canada français* (1979-). DAVID M. HAYNE

**Literary Magazines in English** After a tentative beginning with the publication of the *Nova Scotia Magazine* (1789-92) in Halifax and the *Quebec Magazine / Le magasin de Québec* (1792-94) in Québec City, brief experiments in literary journalism in the British North American colonies appeared more frequently in the 1820s and 1830s with the increase in an educated middle-class population. The earliest magazines largely contained material reprinted from books, newspapers and British and American magazines. The response of contributors grew, however, and patriotic editors encouraged an indigenous literature, so that increasing amounts of original material were introduced. Contributions were generally unsigned or acknowledged by initials or pseudonyms, such as "Canadensis"; the traditional anonymity of contributors was not abandoned until the latter part of the century. Some early titles — the *Christian Recorder* (Kingston and York, 1819-20, the first in Upper Canada), the *Literary Miscellany* (Montréal, 1822-23), the *Canadian Magazine & Literary Repository* (Montréal, 1823-25), the *Acadian Recorder, or Literary Mirror* (Halifax, 1823-25) — indicate the journals' eclectic nature: in them appeared history, current events, travel description, tales and verse. The term "magazine" was used in its most basic sense, meaning "storehouse." Other titles, such as the *Canadian Garland* (Hamilton, 1832-33), the *Colonial Pearl* (Halifax, 1837-40), the *Amaranth* (Saint John, 1841-43) and the *Mayflower* (Halifax, 1851-52) evoke the flowery gentility of their literature. Most successful was the *Literary Garland* published in Montréal by John Lovell and edited by John Gibson, 1838-51. Its most frequent contributor was Susanna MOODIE; others included John RICHARDSON, Charles SANGSTER, Catharine Parr TRAILL and Anna JAMESON. Mr and Mrs Moodie's venture in Belleville, the *Victoria Magazine* (1847-48), followed the more usual pattern of a short life, expiring within a year.

At mid-century, improvements in printing presses and an increase in literacy opened new markets for special interest publications, most notably those devoted to religion. In 1852 the Royal Canadian Institute founded the *Canadian Journal: A Repository of Industry, Science and Art*. Edited initially by geologist and explorer Henry Y. HIND, it became an important medium for the academics of the newly formed universities of Canada East and West. It was superseded by the *Proceedings of the institute* in 1878. Vying with the popularity of weekly newspapers, easy access to American and British magazines, and struggling to overcome problems of distribution to a scattered population, publishers attempted to reach a national audience with the *Anglo-American Magazine* (Toronto, 1852-55), edited by R.J. McGeorge; the *British American Magazine* (Toronto, 1863-64), published by G. Mercer Adam and edited by Hind; John Dougall's *New Dominion Monthly* (Montréal, 1867-69); and *Stewart's Literary Quarterly* (Saint John, 1868-72), edited by George Stewart, Jr.

The *Canadian Monthly and National Review* was launched in 1872, abetted by the new nationalistic fervour abroad after Confederation. Published by Adam and with the early support,

both financial and editorial, of Goldwin SMITH, it amalgamated in 1878 with *Belford's Monthly* (1876-78) to become *Rose-Belford's Canadian Monthly and National Review*. During its 10 years of publication most of the leading figures of the day contributed articles, essays, fiction and verse. Intellectual in tone, highly moral in purpose, it became a nonpartisan forum for Canadian writers on controversial issues and lent impetus to the development of a Canadian literature. Smith continued some of its tradition in his review of current events in *The Bystander* (1880-83, 1889-90), and *The Week* (1883-96), whose first editor was the young Charles G.D. ROBERTS. By the century's end, mass circulation weeklies and magazines, such as *Saturday Night* (1887-), *Dominion Illustrated* (1888-95), *Canadian Magazine* (1893-1939) and MACLEAN'S (1896-), began to thrive as advertisers' interest in their potential increased. Several university quarterlies were established (see LITERARY PERIODICALS). THE UNIVERSITY MAGAZINE (1907-20) succeeded *McGill University Magazine* (1901-06). Another group of regional magazines appeared at this time: *New Brunswick Magazine* (Saint John, 1898-1905), *Great West Magazine* (Winnipeg, 1891-1908), *Prince Edward Island Magazine* (Charlottetown, 1899-1905), *Acadiensis* (Saint John, 1901-08) and *Westminster Hall* (Vancouver, 1911-27). These magazines are invaluable in providing a picture of the social and political life of the times and a reflection of the current ideas of writing and literary taste. MARILYN G. FLITTON

#### Modern and Contemporary Periods

Until WWI, writers looked to Britain and the US for their literary models, but after 1918 magazines in Canada began to define Canadian literary activity. *Saturday Night* had always noted literary development in Canada and now *Canadian Forum* (1920-) could point with pride to the achievements of Canadian THEATRE and the GROUP OF SEVEN. The Canadian Authors' Association (fd 1921) began with its official organ, *Canadian Bookman*; this was succeeded by the *Authors' Bulletin* (1923-33) and *Canadian Author*; in 1940 this became incorporated into *Canadian Author & Bookman*. *Canadian Poetry Magazine* (1936-), also under the aegis of the CAA, was incorporated into CAB in 1968. The major forerunner to the exciting literary magazines of later years was the supplement to the *McGill Daily*, founded by Frank SCOTT and A.J.M. SMITH. It evolved into the *McGill Fortnightly Review* (1925-27), from which Scott moved to the *Canadian Mercury* (1928-29). Modelled on British examples, the Montréal-based magazine launched a revolution in Canadian poetry inspired by T.S. Eliot and Ezra Pound. Apart from the UNIVERSITY OF TORONTO QUARTERLY (1931-) which brought mature critical standards to Canadian criticism, the Depression years were a barren decade for creative publishing. But during WWII new ground was prepared for serious creative development. It started in Montréal with Patrick Anderson's left-wing *Preview* (1942-45), which published the writing of P.K. PAGE, Scott and A.M. KLEIN. Despite differences in outlook between this magazine and John SUTHERLAND'S *First Statement* (1942-45), the 2 merged as NORTH-EAST REVIEW (1945-56). The magazine was criticized for its right-wing, traditional and formal poetry, but it published early work by Irving LAYTON, Miriam WADDINGTON, Louis DUDÉK and Raymond SOUSTER. From N Vancouver and later Victoria, Alan Crawley published CONTEMPORARY VERSE (1941-52), which later inspired the Winnipeg-based *CV II* (1975-). *Imago* (1944-73) was devoted to the long poem. An expensive but short-lived Toronto publication was *Here and Now* (1947-49).

The 1950s was a decade of literary growth, partly because of the ease of reproduction by mimeograph. *Quarry* (fd 1952 at Queen's U), *CIV/n* (1954-56) and TAMARACK REVIEW (1956-82)

under Robert Weaver published sophisticated writing. In Montréal Louis Dudek began *Delta* (1957-66), which was taken over by *Yes* (1956-70) in 1966. Souster began *CONTACT* (1952-54) and *Combustion* (1957-60). In 1945 A.G. BAILEY had founded *The FIDDLEHEAD* as a poetry magazine at University of New Brunswick; under Fred COGSWELL's editorship (1952-66) it broadened to include prose and scholarship, and became a magazine of national significance. In Vancouver, George WOODCOCK began *CANADIAN LITERATURE* (1953-), which often publishes poetry alongside literary criticism.

The 1960s saw the beginnings of literary magazines in every area of the country. Photo-offset reproduction methods improved production quality at reasonable cost, and literary manifestations of a surging nationalism were encouraged by the CANADA COUNCIL, by provincial arts funding and municipal grants. James REANEY's *Alphabet* (1960-71) was inspired by the mythopoetic theories of Northrop FRYE. Frank DAVEY founded *Tish* (1961-65) at University of British Columbia, stressing the poem as a developing experience, rather than as a finished product. This magazine, which frequently published George BOWERING, Fred Wah, Daphne Marlatt and David McFadden, continues as *Open Letter* (1965-), publishing critical commentary on experimental work. The variety of the 1960s is indicated by such titles as bill BISSETT's *Up the Tube With One I Open* (1961-63), which became the radical *blewointment* (1963-72); *Edge* (1963-69); *Evidence* (1960-67); and *Parallel* (1966-67). *Culture* (1931-71), one of the few bilingual scholarly magazines, began regular publication in 1965. Another bicultural magazine was *Le Chien d'or / The Golden Dog* (1971-75). *Ellipse* (1971-) began publishing translations of French and English poets. Magazines such as *Northern Journey*, Sheila WATSON's *White Pelican* and Dave GODFREY's *Porcépic* all contributed to the nation's awareness of its literary artists. In Québec, a number of important LITERARY PERIODICALS IN FRENCH performed a similar service for francophone writers and readers.

One significant development in the 1960s was the university-based quarterly; creative writing courses were established, and by mid-decade many universities had literary magazines, including *University of Windsor Review* (fd 1965), *West Coast Review* (Simon Fraser, 1966), *Wascana Review* (U of Saskatchewan, 1966), *Malahat Review* (U of Victoria, 1967), *MOsaic* (U of Manitoba, 1967), *Antigonish Review* (St Francis Xavier U, 1970), *CAPILANO REVIEW* (North Vancouver, 1970) and *Exile* (York U, 1972). These in turn have generated short-lived student- and professor-edited publications on campuses across Canada. Another important feature of the 1960s was the alternative newspaper, such as Vancouver's *Georgia Straight* (which evolved into New Star Books), or Guelph's *Marxist Alive*, which likewise grew into a small press. Many magazines of the 1960s evolved into the SMALL PRESS publishers of the 1970s, including *Talon*, *blewointment*, *3c Pulp*, *Alive*, *Porcépic*, *Fiddlehead*, *Square Deal*, *Blackfish*, *Quarry*, *NeWest Review* and *Delta*.

Running against the impulse of nationalism were the internationalist magazines such as *Prism International* (1956-), *Contemporary Literature in Translation* (1967-78), *Malahat Review* and *Exile*. *Descant* (1970-), *Waves* (1972-) and *Jewish Dialog* (1970-) reflected a cosmopolitan awareness. By the 1970s, literary magazines numbered in the dozens. *CANADIAN FICTION MAGAZINE* (1971-), edited by Geoffrey Hancock, published innovative short fiction, especially magic realism, surrealism and fiction of the marvellous. The *Journal of Canadian Fiction* (1972-) published stories, bibliographies and critical commentary. *Essays on Canadian Writing* (1974-), *BOOKS IN CANADA* (1972-), *Canadian Poetry* (1977-) and *Brick* (1977-)

took part in the continuing critical examination of Canadian letters. *Poetry Canada Review* (1978-) was the country's first poetry tabloid. Women's magazines reflected the many concerns arising from the women's movement at the populist and academic levels with *Fireweed* (1977-), *Branching Out* (1971-81), *Room of One's Own* (1975-), *Canadian Woman Studies* (1978-), *Atlantis* (1975-), and others such as *Makara*, *The Other Woman*, *Kinesis* and *Broadside* that answered particular needs.

In the 1980s some ambitious new magazines, like *Ethos* (1983), strove for international circulation. Others, like *Canadian Literary Review* (1982), found a balance between older traditions and the newer international writers. Committed to new writing, literary magazines continue to keep the literature vital. GEOFFREY HANCOCK

**Literary Periodicals in English** In the 19th century, Canada relied mainly on foreign imports for its literary scholarship, and early attempts to provide native periodicals aiming at more than a merely popular standard were generally short-lived. The most successful and long-lasting journals of this kind were the *Canadian Journal* (1852-78), the *Canadian Monthly and National Review* (1872-78, later amalgamated into *Rose-Belford's Canadian Monthly and National Review*, 1878-82) and *The Week* (1883-96). The last 2 were fostered by Goldwin SMITH, and Charles G.D. ROBERTS was the first editor of *The Week*. The 20th century has seen a fragmentation of the audiences, with university-based journals providing academic, learned articles and glossier magazines catering — often superficially — to a more popular audience. In the middle stands the *CANADIAN FORUM*, which has appeared regularly since 1920. Describing itself as "an independent journal of opinion and the arts," it is not officially connected with any university but draws upon the academic community, mainly in Toronto, for many of its contributors. Although its origins were primarily political, reflecting (in the words of its opening editorial) "a desire to secure a freer and more informed discussion of public questions" and generally presenting a radical or left-wing viewpoint, it has consistently endeavoured to "trace and value those developments of art and letters which are characteristically Canadian."

The *Tamarack Review*, which covered all literary genres, set a high standard for later Canadian literary magazines (cover design by Fred Huffman/used with permission).

The first of Canada's 3 main university journals founded to further humanistic scholarship was *QUEEN'S QUARTERLY*, which first appeared in 1893. It began with the twofold aim of serving the intellectual needs of Queen's University graduates and "promoting the interests of culture in Canada." Its early emphasis was on religious matters, but it soon became a wide-ranging, respected academic publication. It was joined in 1921 by the *DALHOUSIE REVIEW*, which claimed in its first issue to be a project "of university extension" discussing "problems of general import" in a style that can be generally understood. Ten years later, the *UNIVERSITY OF TORONTO QUARTERLY* began with similar goals. Offering itself as "a Canadian Journal of the Humanities," it has generally succeeded in providing a forum for academic discourse where Canadian and internationally recognized scholars can appear side by side. All 3 journals have continued to publish and maintain a high standard.

The most remarkable feature of Canadian periodical publishing in recent years has been the rich crop of scholarly journals devoted to discussion of the nation's own literature. The earliest, and still best known, is *CANADIAN LITERATURE*, a quarterly founded in 1959 at University of British Columbia with George WOODCOCK as its first editor. Since then it has published scholarly articles and reviews on works of Canadian origin, often devoting individual issues to topics of special interest and concern. Initially considered by some to be a premature venture, it not only succeeded in creating its own readership, but has, by its very existence as an outlet for Canadian literary studies, helped to nurture the subject to which it is devoted. Without rivals for many years, it was later joined by several journals with similar aims, notably *Essays on Canadian Writing* (fd 1974, York University) and *Studies in Canadian Literature* (fd 1976, University of New Brunswick).

The interdisciplinary *Journal of Canadian Studies*, a wider-ranging quarterly embracing history and social studies as well as literature, was founded at Trent University in 1966. The flowering of Canadian fiction and poetry in recent years is reflected in the appearance of 2 journals specifically devoted to each genre: *CANADIAN FICTION MAGAZINE* (1971-), the *Journal of Canadian Fiction* (1972-), *Canadian Poetry* (1977-) and the *Journal of Canadian Poetry* (1978-). In addition, *Canadian Drama* has been published at University of Waterloo since 1975 and *Theatre History in Canada* appeared in 1980.

A number of Canadian LEARNED SOCIETIES publish their own specialized periodicals, eg, the Association of Canadian University Teachers of English, whose *English Studies in Canada* first appeared in 1975. Of more general interest is the Humanities Association of Canada's *Bulletin* (1951-73), which was replaced with the more ambitious *Humanities Association Review*. Not considered here are the numerous journals from *The FIDDLEHEAD* (1945-) in the Maritimes to the *Malahat Review* (1967-) in BC that concentrate on the publication of creative writing. It will be noticed that the majority of literary periodicals in English that are of scholarly importance were established quite recently, reflecting the expansion of Canadian universities since the late 1950s and the concurrent growth of Canadian LITERATURE IN ENGLISH. See LITERARY MAGAZINES.

W.J. KEITH

**Literary Periodicals in French** Periodicals have always played a leading role in the dissemination and development of Québec literature. In the 19th century, when books were rare, the contributors to periodicals affirmed the need to lay the foundations of a literary identity. Originally patriotic in outlook, the periodicals that coincided with the "Literary Movement of

1860" (SOIRÉES CANADIENNES, 1861-65, *Le Foyer canadien*, 1862-66 and *Les Nouvelles Soirées canadiennes*, 1882-88) encouraged the publication of legends and short stories drawn from popular culture, as well as historical facts that had to be rescued from oblivion. *L'Opinion publique* (1870-83), *L'Album universel* (1884-1902) and *La Revue canadienne* (1864-1922), despite their more diversified content, expanded this concept of an essentially traditionalist and folkloric literature.

Early 20th-century writers preferred to approach the problem of national literature as a choice between regionalism and universalism. Despite their brief existence, *Le Terroir* (fd 1909), whose contributors were members of the École littéraire de Montréal, and *Le Nigog* (fd 1918) were the 2 poles of a debate waged later by essayists and pamphleteers on the theme of the language of writing. Periodicals such as *Idées* (1935-39), *La Relève* (1934-41) and its successor, *La Nouvelle Relève* (1941-48), and *Gants du ciel* (1943-46) sought to stimulate the mind and arouse a spiritual and humanistic renewal. Far from being folkloric, the literary works of *La Relève's* contributors focused on an expression of the self, the psyche and the spiritual problems that affect modern life. AMÉRIQUE FRANÇAISE (1941-63) extended these reflections by posing the problem facing those who have both French and American backgrounds.

More political than literary, CITÉ LIBRE (1950-66) also had an effect on the ideological climate in which the literature of the 1950s evolved. Opposed to the pervasive conservative trend, contributors encouraged internationalism. This group soon became a target of those writing for PARTI PRIS (1963-68), a political and cultural periodical with 3 objectives: independence, socialism and secularism for Québec. *Parti pris* gave nationalism a leftist stance and articulated the relationship between the literary and the political. LIBERTÉ (fd 1959) debates current issues ranging from cultural fatigue to the language battle, from cultural policies to literary institutions. Although it has published articles by foreign authors, *Liberté* gives prominence to young Québec writers, who have often had their first works published there. After a few years, *Liberté* changed its editorial board and found a new dynamic spirit fueled by concern, humour and vigilant criticism.

While *Parti pris* countered *Cité libre* and supported the leftist *Liberté*, LA BARRE DU JOUR (1965-76) and *La Nouvelle Barre du jour* (fd 1977) broke with the strictly social concept of literature: the writer is no longer the measure of society's pain. In tune with his own instincts, he translates a writing in gestation in which one sees the encoded writing of modern times — halfway between literary theory and fiction, where even theory becomes fiction and is considered fictitious. Hence an inevitable formalism. *Herbes rouges* (fd 1968) chose to publish only one author in each issue. Here, too, there was talk of the materiality of the text as the setting for questioning and strategy. The texts of *Herbes rouges* are generally more provocative than those of *La Barre du jour*. Everything is material for prose and poetry, from publicity to comics, from social discourse to political conscience. In another vein, *Estuaire* (fd 1976) publishes young writers' poetry. The journal at first highlighted the poetry of oral expression, of proclamation, of sharing. This initial orientation was gradually replaced by more diversified poetry which still sought a level of readability. Between 1960 and 1980 other periodicals had a fairly ephemeral existence. They included *Main tenant* (1962-75), which published a number of manifestos on Québec language and condition, *Mainmise* (1970-78), a voice of the counterculture originating in the US, *Presqu'Amérique* (1970-73), torn between different intellectual attachments, and the Marxist *Chroniques* and *Stratégie* (1972-77). *Les*

*Têtes de pioche* (1976-79) was in the vanguard of radical feminism in Québec.

There are a number of useful surveys of current Québec literary journalism: *Livres et auteurs québécois* (fd 1961), an annual collection of reviews of Québec's literary production; *Lettres québécoises* (fd 1976), a systematic review of current publications; and *Spirale* (fd 1979), a periodical of literary criticism that tries to fight clichés and received ideas. In theatre, the excellent *Jeu* (fd 1976) links theory and practice, carefully examines productions, interviews troupes and reports on theatrical activity in Québec.

The many university reviews generally devote each issue to the study of a theme or a writer. This is true of *Études littéraires* at Laval and *Études françaises* at the Université de Montréal. *Voix et images du pays*, published by the Presses de l'université du Québec, is the only journal devoted solely to Québec. In Sherbrooke, *Ellipse* publishes works in translation, while *Présence francophone* reports on activities in various French-speaking countries. In Ottawa, *Incidences* and *University of Ottawa Quarterly* discuss literary issues.

The most recent journals include *Dérives* (fd 1975), *Possibles* (fd 1976), *Intervention* (fd 1978), *Le Temps fou* (1978-83) and *La vie en rose* (fd 1980). All favour opening up every field of cultural activity and anti-dogmatism. These periodicals integrate creation within a global view of society and question new cultural practices that are based on co-operative, self-managed and feminist movements. Two journals are devoted to science fiction: *Solaris* (fd 1974 as *Requiem*) and *Imagine* (fd 1979).

Analysis of cultural periodicals thus reveals a number of coexisting currents struggling for symbolic recognition, whereas Québec's literary history has accustomed us to seeing only one group dominate in any single period. Breaks with established trends are less violent than in the days of the REFUS GLOBAL and *Parti pris*. Writers no longer oppose, simply transpose and transgress.

LISE GAUVIN

**Literary Prizes in English** Until the 1920s there were no annual literary awards in Canada for writers in English. Ironically, the first such prize was the Québec Literary Competition prize, awarded 1923-70 by the Province of Québec. The oldest literary prize still being awarded is the Lorne Pierce Medal, sponsored by the ROYAL SOCIETY OF CANADA and first awarded in 1926. In 1928 the Royal Society began offering the Tyrell Medal for contributions to Canadian history. These two medals were presented annually until 1966, when a \$1000 prize was added to each award and they became biennial.

No other literary awards established in the 1920s are still being offered. The Imperial Order of the Daughters of the Empire National Short Story Competition lasted 1923-33, and the IODE National One-Act Play Competition lasted 1923 to 1936. The Montreal Poetry Contest sponsored by the Montréal branch of the Canadian Authors Association (CAA) was offered 1925-46, and the Maclean's Magazine Short Story Awards were presented 7 times between 1927 and 1955.

Of the awards established in the 1930s, the GOVERNOR GENERAL'S LITERARY AWARDS have become pre-eminent in Canada. Begun in 1936 by the CAA, they were originally made in 3 categories: fiction, nonfiction and poetry or drama. In 1959 the CANADA COUNCIL took over partial responsibility for the awards, created matching categories for works in French, and added a \$1000 prize to each award. Finally, in 1971 the Canada Council took over full responsibility for the awards, the value of which increased to \$2500 in 1966 and \$5000 in 1975. In 1981 a separate category for drama was created.

Two other awards from the 1930s have survived: the Alberta Poetry Contest, established in

1930 by the Edmonton branch of the CAA, and the Canadian One-Act Playwriting Contest, established in 1937 by the Ottawa Little Theatre. The various awards offered 1934-69 by the Dominion Drama Festival were once prominent, but the festival (now Theatre Canada) became noncompetitive in 1970.

The most familiar award created in the 1940s is perhaps the Stephen Leacock Memorial Medal (est 1947), awarded for humour. In 1973 the Manufacturer's Life Insurance Co added a cash prize, for which the Hudson's Bay Co assumed responsibility in 1981. Other prizes established in the 1940s include the Book of the Year Medal for children's books, begun in 1947 by the Canadian Association of Children's Librarians; the IODE Provincial Chapter of Ontario Short Story Competition, established in 1948; the Eaton Short Story Competition, set up in 1948 by the Winnipeg Women's Canadian Club and the Winnipeg branch of the CAA (the present name was adopted in 1960 when the T. Eaton Co began contributing a cash prize); and the Nova Scotia Poetry Contest, created in 1949 by the Nova Scotia Centre of the Poetry Society of England. Also established in the 1940s were the Ryerson Fiction Award, presented by Ryerson Press 14 times between 1942 and 1960; the O'Leary Newfoundland Poetry Awards (1944-55); and the IODE Annual Book Contest (1946-57), sponsored by the Alberta branch.

The 1950s saw the establishment of the University of Alberta National Awards in Letters, Music, and Painting and the Related Arts (1951- ); the University of British Columbia Medal for Popular Biography (1952- ); the University of Western Ontario President's Medals (1952- ), which are awarded in recognition of periodical publications and are meant to complement the Governor General's Literary Awards; the Chauveau Medal (1952- ) of the Royal Society (annual until 1966, when a \$1000 prize was added and it became biennial); the Government of Newfoundland and Labrador Arts and Letters Competition (1952- ); and the Little-Brown Canadian Children's Book Award (1957- ). Several others, such as the Maclean's Magazine Novel Award (1953-57), and the Beta Sigma Phi Award (1956-67), awarded for a first novel, lasted only a few years.

The most prestigious awards to come out of the 1960s were the MOLSON PRIZES, made possible by a grant from the Molson Foundation to the Canada Council. Three prizes of \$15 000 each are awarded annually for distinguished achievement in any area of culture. Among other prizes established in the 1960s and still being awarded are the Vicky Metcalf Award (1963- ) for children's literature; the Beaver Trophy (1965- ) awarded by the HBC in Edmonton; the CAA, Vancouver Branch, Award (1966- ); the Alberta Playwriting Competition (1967- ); and the Dr William Henry Drummond National Poetry Contest (1969- ). The Doubleday Canadian Prize Novel Award (1961-67), worth \$10 000, was another first-novel award that did not survive.

More than 50 new prizes have been established since 1970. The growth in the number, value and prestige of literary awards is undoubtedly a correlative of both our increasing awareness of our national literature in English and of the increasing quality and quantity of that literature. Although most of these new awards are single, several associations have established series of awards that are intended to compete with the Governor General's Literary Awards. In 1973 the CAA began to award a series of medals to replace the Governor General's Awards which they had administered before 1971. In 1975 Harlequin Books added a \$1000 prize to the medals, and the prize money now stands at \$5000. In 1975 the Canada Council established the Children's Literature Prizes (\$5000 annually) for 2 writers in English and in

French; in 1980 the award was extended to include illustrators of children's literature. The Canada Council also awards prizes for TRANSLATIONS. In 1980 CBC Radio made its first series of annual CBC Radio Literary Awards. In 1982 the Writers Development Trust and the National Book Festival sponsored the first Writers' Awards, an annual series which includes the Gerald Lampert Memorial Award, the Pat Lowther Memorial Award and the John Glassco Translation Prize. In Alberta in the late 1970s the Edmonton Journal set up the Edmonton Journal Awards, and in the early 1980s the Writers Guild of Alberta Awards were established.

Several other single, general awards came into being after 1970: the City of Toronto Book Award (1973-); the Rothmans Merit Award for Literature (1974-); the IOE Book Award (1974-); the Canada-Australia Literary Prize (1976-), given to a Canadian every second year; the Gibson Merit Award for Literature (1977-); the Evelyn Richardson Memorial Award (1978-) for residents of Nova Scotia; the Periodical Distributors of Canada Book of the Year (1977-) and Author of the Year (1981-); and in 1984 the Philips Prize, \$5000 plus a new word processor, was awarded for the first time.

First-novel prizes continue to be popular, and several new ones have been set up: the Search for a New Alberta Novelist Competition (1972-); the Books in Canada First Novel Award (1977-); the Gibson First Novel Award (1977-); and the much publicized \$50000 Seal Books First Novel Award (1978-). There are several other new awards for fiction, including the Canadian Booksellers' Association Literary Award (1972-); the Chatelaine Magazine Annual Fiction Competition (1979-); and the Young Canadian Writers Award (1982-). Perhaps the most interesting new fiction award is the Pulp Press International 3-Day Novel Writing Contest (1978-), which has grown quickly and has gained considerable interest in the US.

Most new awards for poetry have been incorporated into the general awards series, with the exception of the Poetry Award of the Federation of Women Teachers Associations of Ontario and the Canadian Author & Bookman Poetry Award. On the other hand, several distinct awards have been established for drama, juvenile literature and nonfiction writing. Among the drama awards are the Alberta Television Playwriting Competition (1970-); the University of Saskatchewan Playwriting Competition (1971-); the Chalmers Award (1972-); and the Clifford E. Lee Award (1973-). The juvenile literature awards include the Amelia Frances Howard-Gibbon Medal (1971-); the Collier-MacMillan Award (1974-); the Ruth Schwartz Memorial Award (1976-); the Vicky Metcalf Short Story Award (1978-); and the Claude Aubry Award (1981-). New nonfiction prizes include the Sainte-Marie Prize in History (1971-); the Alberta Non-Fiction Award (1973-); the Alberta Regional History Award (1973-); and the Saskatchewan Native Writers' Contest (1976-).

A sign of the vitality of literary awards in Canada is the recent creation of a new category of award: in 1982 the first Malahat Review Awards for Book Design were presented.

ALAN R. KNIGHT

**Literary Prizes in French** date from the beginning of the 19th century. In 1809 the Société historique de Québec, as its founding activity, launched the first literary competition to celebrate the anniversary of British sovereign George III. A number of other competitions, which publicized their sponsoring organizations, usually dealt with historical or political issues. At the beginning of the 20th century greater organizational stability allowed awards to be made annually: one was the prize offered

by Action intellectuelle de l'Association de la jeunesse canadienne-française, which was open to persons less than 35 years old. In 1922 the Québec government established literary and scientific competitions, which were known as the Concours littéraires du Québec and quickly became the most important in Québec in both prestige and financial value. Other major prizes followed, such as the Prix Duvernay (1944) and the Prix du Cercle du livre de France (1949), and there was an explosion of new awards in the 1960s. Most still exist.

The Prix David (named for Athanase David, provincial secretary 1919-36) dates from 1968, and in 1970 it virtually replaced the prizes given in the Concours littéraires, for which the last awards were presented that year. The Prix David, which is open to all genres and is worth \$15 000, is awarded for an author's entire body of work, and it consists of a series of literary and scientific awards, each given for a specific work. Prix David winners have included Mgr Félix-Antoine SAVARD, Alain GRANDBOIS, Gabrielle ROY, Paul-Marie LAPOINTE, Hubert AQUIN, Marcel DUBÉ, Rina LASNIER, Fernand Dumond, Pierre VADEBONCOEUR, Jacques FERRON, Anne HÉBERT, Yves THÉRIAULT, Gérard BESSETTE and Gilles Archambault.

The Prix France-Québec Jean Hamelin was established by the Association des écrivains de langue française (ADELF) with the co-operation of the General Delegation of Québec in Paris and the Ministry of Cultural Affairs of Québec. It is open to any writer who has been published in France or Québec. The Prix France-Canada, fd 1961, is sponsored by the Association France-Canada, the General Delegation of Québec and the Ministry of Cultural Affairs of Québec. This prize may be awarded to any French Canadian writer who has been published either in Canada or in France.

In 1959 the GOVERNOR GENERAL'S LITERARY AWARDS, given by the CANADA COUNCIL, began honouring writers in French as well as in English. The awards, instituted in 1936 by the Canadian Authors' Association, have gone to a large number of authors representing all literary fields. The prize is accompanied by \$5000.

The Grand Prix littéraire de la ville de Montréal is awarded only to authors resident, or works published, in Montréal. The \$3000 award, open to all literary genres, was created in 1964 at the initiative of the Greater Montreal Arts Council.

One of the oldest Québec prizes, originally the Prix du Cercle du livre de France, is now financed by Imperial Oil and is called the Prix Esso du Cercle du livre de France. The prize of \$5000 is for a fictional work: novel, short story collection or fictionalized biography. Bertrand Vac and André LANGEVIN have each won this award more than once. In 1968 that prize was joined by the Prix Jean-Béraud-Molson, which gives \$3000 for the best avant-garde work of the year. The Prix de la revue *Études françaises* was created in 1967 by printer J.A. Thérien and is open to all francophone writers working in any genre, living in a country other than France. Gaston MIRON won this prize in 1970 for *L'Homme rapaillé*.

In 1979, the centenary of Émile NELLIGAN's birth, the Émile Nelligan Foundation inaugurated a \$3000 award which is open to poets under 35. Winners have included François Charon for *Blessures* (1979), Claude Beausoleil for *Au milieu du corps l'attraction s'insinue* (1980) and Jean-Yves Collette for *La Mort d'André Breton* (1981). The Prix Robert-Cliche, instituted 1978 by the Salon international du livre de Québec, was awarded for the first time in 1979. Its purpose is to encourage the creation of Québec novels, and it is open only to unpublished writers. The prize is subdivided into 3 awards of \$1000, \$500 and \$300, all given by the newspaper *Le Soleil*. The winning manuscripts are published

in Quebec by Éditions Quinze and, since 1981, in France by Juliard, in English Canada by General Publishing of Toronto, and in the US by Beaufort Books of New York.

SILVIE BERNIER

**Literature and Politics** This subject is usually examined in 3 categories: the political content in works of literature; the political activities of writers and their organizations to secure respect, recognition and economic independence; and relations between writers and the state respecting the rights of the author and of literature (see AUTHORS AND THEIR MILIEU).

From the beginning, Canadian history has presented highly political subjects for our literature. European nations struggled for territorial possession and for favourable boundary decisions. Christian missionaries and settlers struggled with the aborigines for souls and space for settlement. Settlement groups disputed among themselves and with outsiders the nature of the society that was forming. Later, history and literature were shaped by tension between the individual and the community, between "authority" and "personal freedom," between imperial powers and the national will for self-determination. Finally the continuing global tension between socialist and liberal-capitalist ideologies is mirrored in Canadian literature.

Since early times, relations between literature and politics have been manifested in the organization of many literary interest groups, formed to make members' work better known, to encourage production, to pressure governments and other patrons for support, and to secure an atmosphere in which writers can produce well and profitably. Such organizations have been born and have died according to the energy of their members and the liveliness of the political and social issues with which they have been engaged. The first in what is now Canada may have been the ORDRE DE BON TEMPS (Order of Good Cheer), founded by Samuel de CHAMPLAIN in ACADIA in 1606 to entertain the colonists through the long winter with literary creations and scientific studies. Usually claimed as the oldest, however, is the LITERARY AND HISTORICAL SOCIETY OF QUEBEC, fd 1824, a largely English organization despite its location. The later francophone INSTITUT CANADIEN, fd 1844, had over 700 members, a large library and connections with France. It was liberal, and for a short time some members favoured annexation of Canada East (Québec) to the US. The Institut was attacked by Mgr Ignace BOURGET for its willingness to spread secular ideas. It diminished in the 1860s and 1870s largely because of church opposition to its progressive policies, and it faded away at the turn of the century. The École littéraire de Montréal (1895) concerned itself principally with aesthetic matters and is renowned for having among its members Émile NELLIGAN, Albert Lozeau and Albert Ferland.

In English Canada the claims of literature were often expressed in Mechanics' Institutes, which appeared as early as the 1820s in many cities "to afford instruction in the principles of the arts and in the wonders of science and useful knowledge." Literary and historical societies also developed in Montréal, Toronto, Halifax, Saint John and Winnipeg as the century progressed. One of the most publicly volatile organizations in the 19th century was the CANADA FIRST movement. Formed in Ottawa in 1868, with a platform that united political nationalism and the encouragement of literature and culture, it eventually became a political party. Unsuccessful in politics, it nevertheless had a significant effect on the production of literature and the establishment of a Canadian tradition in the arts.

In 1921 the Canadian Authors' Association was founded "to foster and develop a climate favourable to the creative arts, to promote recog-

dition of Canadian writers and their work." Support for the CAA was strong, and in its first 3 years it lobbied hard for COPYRIGHT legislation to safeguard the interests of Canadian authors. A francophone section was created in 1922 and became, in 1936, the Société des écrivains canadiens. The CAA involved itself with the production of periodicals and poetry anthologies. It helped to create the Governor General's Literary Awards (1937) and was the precursor of more recently created literary organizations devoted to the rights and well-being of writers, such as the League of Canadian Poets (1968), the Newfoundland Writers Guild (1968), Playwrights Canada (1972), the WRITERS' UNION OF CANADA (1973) and the Union nationale des écrivains québécois (1977).

The claims of writers, and indeed all artists, to organized support by government was considered sympathetically in the 1951 report of the Massey Royal Commission on NATIONAL DEVELOPMENT IN THE ARTS, LETTERS AND SCIENCES. This report led in 1957 to the creation of the CANADA COUNCIL, which has transformed the relation of writers and other artists to government. Today, provincial councils parallel and supplement the Canada Council's work, providing financial and other support for people in the arts. The grants, LITERARY AWARDS and support structures that have developed since 1957 have been criticized, however: some claim that public money is spent badly upon people who have little talent, and for the production of inferior works; others feel that public support of artists introduces political bias in the production of literary work and invites writers to censor themselves in order to please the governments of the day. Nevertheless, Canadian governments follow the pattern of governments elsewhere, actively supporting the production of literature through various agencies.

Naturally, writers espousing political ideas or policies that are distinctly opposed to the governments of the day have found themselves in tense situations, despite the widespread belief that Canadians have full freedom of expression. For example, in 1933 a mock trial drama, *Eight Men Speak*, played to an audience of 1500 in Toronto. The play alleged that Canadian Communist Party leader Tim BUCK, recently arrested with others under an eccentric and unpopular section (98) of the Criminal Code, had an attempt made upon his life by a prison guard who acted with approval of people in the government. Police moved in on the play, effectively suspending its life until it was published in book form in 1976. The effect upon the general sense of literary freedom caused by such individual acts of government intervention cannot be measured. But at various times actions initiated or sanctioned by governments and their agencies have made it clear that the state has disapproved of some kinds of literature.

Novels and other literary forms dealing with political events or beliefs are numerous. A few representative works that show Canadian authors' wide range of political interest are Irene Baird's novel *Waste Heritage* (1939), concerned with unemployment in the GREAT DEPRESSION; George RYGA's play *The Ecstasy of Rita Joe* (1967), dealing with the plight of native people; Richard Rohmer's novel *Ultimatum* (1973), about conflict between Canada and the US; Hubert AQUIN's novel *PROCHAIN ÉPISODE* (1965), dealing with the psychology of Québec separatism; and Ivan Shaffer's novel *The Medicine Man* (1975), exploring conflict arising between large corporate interests and reformist members of the Canadian House of Commons. In a less confrontational way writers have treated the political nature of life in Canada from the earliest times. John RICHARDSON's *Wacousta* (1832), William KIRBY's *The Golden Dog* (1877) and Philippe AUBERT DEGASPÉ, Sr.'s, *Les Anciens Canadiens* (1863) all deal,

each in its own way, with the character of the Canadian community and the nature of the political order. That theme has continued unflaggingly as a subject of literature to our day.

Because modern Canada continues to debate REGIONALISM and centralism, ANARCHISM and communitarianism, national independence and association with US power, socialism and capitalism, and independence or federal association for Québec, the country's literature exhibits a continuing political dimension. Literary associations occupy themselves with many of these questions, and theories of literary creation in Canada tend to be closely associated with the political views of those who construct the theories. Indeed, the character of Canada's internal and external relations ensures that the literature of the country, which began in the midst of strong political tensions, will continue in a similar milieu. Our nation provides an especially clear argument that a country's literature and its politics are inseparable and affect each other on many visible and invisible levels.

ROBIN MATHEWS

**Literature in English**, written in what is now territorially Canada or written by Canadians abroad, is currently termed "Canadian literature in English." "English-Canadian Literature," though still in use, has been rejected by many who consider it to refer only to the literature of Canadians of English descent. The terms "Colonial Literature," "Commonwealth Literature," "Littérature américaine" and "New Literature Written in English" have sometimes referred to Canadian literature in English. The term "Canadian writer" has been applied to long-term visitors such as Malcolm LOWRY, to short-term residents who still hold citizenship such as Brian MOORE, and to travellers and settlers who came before Canada existed as a nation.

Writers have described Canada in many ways, for example, as a French or English colony, a "fifty-first state," a Pacific Rim country, an arctic giant, a friendly territory or an uninhabitable wilderness. Canadian literature has often had to deal with such differences in attitude, not just because many Canadian authors were born elsewhere and brought outsiders' expectations with them, but also because popular attitudes often perpetuated stereotypes of Canada. Three pervasive stereotypes portray Canada as a physical desert, a cultural wasteland and the raw land of investment opportunity. These distortions have created an audience for stereotypes, which Canadian writers sometimes chose to serve by writing romantic adventures of the frozen North, in which everything local was savage and hostile and culture was imported; but in time they sought to record local experience and to use literature to shape their own culture rather than to imitate or defer to that of another society.

**Language and Literary Form** Canadian writers needed to be able to refer appropriately to local flora, fauna, place-names and events, and to use local vocabulary unapologetically (see ENGLISH LANGUAGE). Words such as "moose" and "Medicine Hat," which had been automatically comic because they transgressed English conventions of verbal propriety, became legitimate to use in literature. Native words ("igloo," "muskeg"), borrowings from French ("tuque," "gopher"), adaptations of English ("separate schools," "sky pilot"), regionalisms ("slough," "lakehead," "Bluenose") and vernacular cadences all became accepted during the 19th century. Still, the dominant vocabulary was "international English," neither so highly localized as to impede communication nor different enough to require readers outside the culture to recognize the need to adjust to it.

By the 20th century, irony had become a dom-

inant literary mode, and the documentary narrative and the sequence of short sketches became recurrent literary structures. There is more humour in Canadian literature than is commonly recognized — more often in asides and understatement than in broad farce — and HUMOROUS WRITING is often combined with serious subjects and more earnest stances.

Many writers became highly conscious that what distinguished them and their community was not the tale they told but the manner of telling it. By documenting local experience and using the local voice, they fostered regional and national culture. Newfoundland writers such as E.J. PRATT drew on a tall-tale tradition, Prairie writers such as Robert KROETSCH on an anecdotal tradition, and Ontario writers such as Margaret ATWOOD and Robertson DAVIES on a laconic interplay between irony and moral orderliness. Much of the force of their style derived from their control over regional cadence, which is as important as literal meaning because it reveals the inner motivations of the characters and also the social context. Narrative method is often indirect in Canadian writing (modes of parable and allegory are common); narrators usually hide their true feelings or have limited understanding of events around them, and the oblique or implied meanings are richer and more instructive than the obvious ones.

**Motifs and Patterns** Some commentators have interpreted literary indirectness politically and psychologically, finding in it a sign of national insecurity and a group feeling of inferiority. Others argue that indirectness is a healthy demonstration of the culture's ability to adapt an inherited tongue to its own purposes. Although the national character is not always the subject of literature, the culture's social attitudes and values can be seen in the language and forms it uses. Several specific narrative patterns recur in Canadian writing: 1) a community walls itself off from the wilderness (the "garrison mentality"); 2) a person leaves the homeland, adjusts to the new world, then finds the "homeland" to be "alien"; or a person born in Canada always feels a stranger in his own home; 3) a woman struggles to come to terms with her own creativity and the inhibitions of her cultural upbringing (often told as conflict between colony and empire); 4) an apparently passive observer, surrounded by articulate tricksters and raconteurs, turns out to be able to tell both their story and his own, often ironically; 5) an adventurer turns failure into a form of grace; 6) a child grows up to inherit a world of promise, or a world of loss, or usually both at once; 7) a subjective historian meditates on place and memory; 8) a character celebrates space and wilderness, usually after a struggle to learn to accept that the wilderness provides spiritual therapy only on its own terms. To epitomize the character of their society, many writers have portrayed particular historical figures, such as Samuel HEARNE, Louis RIEL, Susanna MOODIE, Sir John A. MACDONALD, Emily CARR and William Lyon MACKENZIE, each possessing a vision, but each still an ordinary, less than heroic, frail human being.

Settings often possess a symbolic dimension. Catholic Québec recurrently figures as a land of mystery, attractive but enthralling and morally dangerous; Ontario as an enigmatic blend of moral uprightness and moral evasiveness; Atlantic Canada as a repository of old values; the North as a land of vision; the Prairies as a land of isolation and acquisition; and the West Coast as a dream of the future in which people often mistakenly believe. Europe often appears as the home of refinement and discrimination, the US as a land of crass achievement and tangible success, and Africa as the embodiment of all that seems "other" to Protestant rationalism. Although most Canadians live in cities, until re-

"I AM SAM SLICK, SAYS A."

Philadelphia:

T. B. PETERSON, No. 306 CHESTNUT STREET.

Cover from Thomas Chandler Haliburton's satiric *Sam Slick; The Clockmaker*, published in Philadelphia c1858. Originally published in Nova Scotia, it was the first internationally successful book by a Canadian author (courtesy National Library of Canada/Rare Book Division).

cently writers used rural and small-town settings more frequently than urban ones, and they often ignored problems of class, race and poverty. From early on, however, writers such as Frances BROOKE, Susanna Moodie, Sara Jeannette DUNCAN and Nellie MCCLUNG have been important analysts of Canadian political life. Often they sharply pointed out social divisions within Canada that male adventure writers ignored or underplayed. "Regional" writing also conveyed political stances, for by rejecting a single definition of "Canada," it asserted the viability of a nation with a plural character (see REGIONALISM IN LITERATURE).

### History

The growth of Canadian literature in English has been affected by numerous factors, from population size to the diverse literary influences of foreign writers.

**1620-1867** In the first 2 centuries of Canadian writing in English, writers' techniques reflected changing literary fashions in England. There was Jacobean poetry in 17th-century Newfoundland; epistolary fiction in the English garrison community in late 18th-century Québec; political satire in the LOYALIST communities of the Maritimes and Upper Canada; folksong and folktale, and romantic poetry and fiction in the early 19th century. Fiction writers such as JOHN RICHARDSON and Rosanna LEPROHON demonstrate the European connection both stylistically and thematically; despite their enthusiasm for the wilderness, they continued with European social and literary conventions. The tales translated from Indian and Québec sources were intended for a readership that romanticized Indians. Early poets such as Oliver GOLDSMITH and Charles SANGSTER defined the Canadian landscape as "sublime," using a British literary convention. Early folk traditions in Atlantic Canada derived from Scottish and Irish sources, but they were influenced by a thriving Gaelic literature in the New World and were adapted to local experience and language. Writers continued to use forms from FOLK MUSIC and ORAL LITERATURE well into the 20th century, as in Johnny Burke's "The Killigrews' Soiree" (1904),

the tales of Pauline JOHNSON and the popular verses of Robert SERVICE.

Political and AUTOBIOGRAPHICAL WRITING has proved to be some of the most enduring early literary work. The social and moral critiques of Joseph HOWE, Thomas MCCULLOCH and Thomas Chandler HALIBURTON reveal contemporary rhetorical conventions and political stances, and Haliburton's humorous narratives of Sam Slick in *The Clockmaker* (1836) in addition coined many now-familiar phrases. Also important are the journals of explorers, travellers and settlers, primarily those of Samuel Hearne, Alexander MACKENZIE, David THOMPSON, Alexander HENRY, William "Tiger" DUNLOP, Catharine Parr TRAILL, Susanna Moodie and Anna JAMESON (see EXPLORATION AND TRAVEL LITERATURE). The travel and settlement narratives vary from romantic tales of captivity and adventure to exact accounts of things seen. Moodie, in *Roughing It in the Bush* (1852), told of her own ill-preparedness to cope with Canada and advised the English middle class not to emigrate, though subsequent editions of her work revealed that she gradually grew to accept her new country. Settlement narratives set in western Canada, eg. those of Susan Allison and Georgina Binnie-Clark, date from the later 19th and early 20th centuries.

As local publishing ventures took root in the Maritimes, Montréal and Upper Canada — often associated with NEWSPAPERS and LITERARY MAGAZINES, such as Howe's *Acadian Recorder* and John Lovell's *Literary Garland* — they encouraged writers to apply their imaginative talents to the local scene. The result was that, by 1867, fanciful tales set in Europe and the Orient flourished in periodicals side by side with realistic sketches of Canada and political and moral commentary.

**1867-1914** With Confederation came a quickened interest in the growth of a national culture. This was expressed both in celebrations of the romance of Canadian history and in explorations of the new nation's political destiny, by writers such as William KIRBY, James DE MILLE and Gilbert PARKER. Political life was recorded in new journals, such as *Rose-Belford's Canadian Monthly*, the *Canadian Magazine* and *QUEEN'S QUARTERLY*. Fredericton and Montréal became major creative centres; the ROYAL SOCIETY OF CANADA was founded in 1882; and in Toronto the *Globe* expanded its political and cultural influence. Yet Canadian writers published also with foreign presses and in British and American journals, and Canadian writing was affected by continental expansion, curtailed by economic pressure and restricted by changes in international COPYRIGHT LAW. Despite their patriotic sentiments, many writers were drawn elsewhere to live for financial or personal reasons; Charles G.D. ROBERTS and Bliss CARMAN went to the US, S.J. DUNCAN to India. Before turning her attention to the role of the British in India, Duncan, who was politically attracted to the cause of imperial federation, noted the increasing impact of American taste and ideas on Canadian culture. Poet Charles MAIR became active in the CANADA FIRST movement, and political causes also attracted Goldwin SMITH, William Dawson LESUEUR and John WATSON (see PHILOSOPHY).

By 1905 there was literary activity across the Prairies and a thriving cultural centre in Victoria, as the work of Martin Allerdale Grainger attests. Children's writers Margaret Marshall SAUNDERS and L.M. MONTGOMERY, both from the Maritimes, wrote the international best-sellers *Beautiful Joe* (1894) and *ANNE OF GREEN GABLES* (1908). Early in the century Stephen LEACOCK established an international reputation as a comic writer and lecturer in the Dickensian tradition. He satirized social pretensions and political and literary fads, among them the mannered comedies, melodramas, historical romances and muscular adventures made popular by writers

such as Parker, Ralph Connor (C.W. GORDON) and Robert Barr, and early dramatists Charles HEAVYSEGE and John Hunter-Duvar.

The dominant literary figures of the late 19th century were the poets and SHORT-FICTION writers Duncan Campbell SCOTT and Charles G.D. ROBERTS, and 2 poets with whom they were associated, Archibald LAMPMAN and Bliss CARMAN. Known as the "Confederation Group," these writers (along with W.W. CAMPBELL and I.V. CRAWFORD) together reshaped Canadian POETRY. Influenced by the later English Romantic poets and the American Transcendentalists, they shunned Sangster's verbal ornamentation, rejected the notion of "sublimity," sought plainer ways to record the beauty and reality of the Canadian landscape, and used natural imagery as a language of spiritual inquiry. Scott's work sympathetically sketched patterns of life in Québec and among the Indians, and it introduced psychological realism into narrative form. Roberts's anthropomorphic animal stories, as well as those of Ernest Thompson SETON, observed nature closely, imaginatively adapting Darwinian scientific method. Though Roberts and Scott continued to write long after WWI, their main work belongs to the 2 decades before it began.

**1914-41** WWI had a profound cultural and political impact. Many creative people were lost in the war, among them John MCCRAE, author of the villanelle "In Flanders Fields." Attitudes towards empire and nationhood altered as Canada moved towards equality within the COMMONWEALTH; tensions involving Québec's cultural presence in the country increased; immigration patterns changed following the war; and there was a shift in political influence among the country's regions. Pacific cultural contacts with Australia, China, Japan and India diminished, though immigration from Asia increased. The literature of RACISM increased as well. Germanic and E European immigration to the Prairies had a marked literary result in the family sagas of Martha Ostenso, Laura Goodman Salverson and, most notably, Frederick Philip GROVE. Grove was singled out as a writer of substance for his large-scale portraits of immigrant life and his analysis of the Canadian economic class structure. In Ontario, Mazo DE LA ROCHE's family chronicle, the *JALNA* series (1927-60), continued to celebrate the imperial connection.

In 1921 D.C. Scott reflected that the violence of the new age required poets to express the values of their time in a more discomfiting, rebellious, critical fashion. This judgement also applied to fiction. Early war fiction included the harshly realistic work of Charles Yale Harrison (*Generals Die in Bed*, 1930). WWI preoccupied writers for 50 years, from Philip CHILD, Robert Stead, Edward Meade and Colin McDougall to Douglas Le Pan, Alden NOWLAN, Timothy FINDLEY and John Gray. Class conflict in Vancouver during the GREAT DEPRESSION was the subject of Irene Baird's *Waste Heritage* (1939). The fiction of Morley CALLAGHAN portrayed crime and deprivation in Toronto and Montréal, but appealed also to the sustaining force of the Roman Catholic faith. Callaghan's plain style set a new standard for Canadian prose. Callaghan's and John GLASSCO's artful autobiographical accounts of life in Paris in the 1920s date from this time, though they were published much later. Painter Emily CARR wrote of West Coast Indian culture and character, of changes in artistic taste and practice and of her own engagement with the wilderness.

As with prose, the dominant tone of poetry and DRAMA in the postwar decades was critical. In drama, Merrill DENISON's satiric sketches challenged empty nationalism and the pageantry of earlier English-language theatre. In poetry, the "McGill Group" (F.R. SCOTT, A.J.M. SMITH, Abraham KLEIN) emerged in Montréal in the 1920s to

praise the GROUP OF SEVEN's revolution in painting, to respond to the international literary influence of T.S. Eliot, W.H. Auden and James Joyce, and to challenge the Confederation Poets' Victorian formalism. Newfoundland poet E.J. Pratt, fascinated by modern science, penned lyric and narrative verse celebrating heroic action and the power of personal and public decision. Raymond Knister and W.W.E. Ross were other significant figures. Still other writers to emerge at this time and to go on to greater formal experimentation were Dorothy LIVESAY and Earle BIRNEY; their work, by turns dramatic, narrative, lyrical, documentary, meditative, ironic and autobiographical, juxtaposes personal experience with social causes. Between 1950 and the 1980s they addressed McCarthyism, African independence, and feminism, poverty and cultural impoverishment within Canada.

**1941-59** Hugh MACLENNAN's 1941 novel *Barometer Rising* ushered in a period of liberal reassessment of Canadian culture, a period which declared Canada's freedom from constraint, a Canadian role in world affairs, and the viability of Canadian subjects in literature. It was a time that believed in progress. These themes, given impetus by the humanist and anticlerical stances of francophone writers Ringuet (Philippe PANNETON), Gabrielle ROY, Roger LEMELIN and Germaine GUÉVREMONT (see LITERATURE IN FRENCH), were also recorded by Pierre BERTON, Roderick HAIG-BROWN and Farley MOWAT. But MacLennan's 1959 novel *The Watch that Ends the Night* caps the period, placing faith in the land but by then acknowledging a sense of disillusionment in political causes. Prose stylists of the 1940s and 1950s nonetheless demonstrated that the period had a darker side, one that focused on the moral psychology of individualism. Malcolm Lowry in *Under the Volcano* (1947) and Ethel WILSON in *SWAMP ANGEL* (1954) explored the psychological pressures of alcoholism and women's limited options in society, respectively. Using prairie settings, Sinclair ROSS (*AS FOR ME AND MY HOUSE*, 1941) and W.O. MITCHELL (*WHO HAS SEEN THE WIND*, 1947) probed the psychological barriers that often prevent individuals from connecting productively with their community. Thomas RADDALE and Ernest BUCKLER examined similar problems in Maritime contexts, as did Henry KREISEL against a background of European war and cultural displacement. In 1959 the raw satire of Mordecai RICHLER's *The APPRENTICESHIP OF DUDDY KRAVITZ* and the elliptical modernism of Sheila WATSON's *The DOUBLE HOOK* augured a different, more sardonic era of literary attitude and technique. In Québec the QUIET REVOLUTION of the 1960s was to bring about a secular and politically rebellious, separatist literature.

New poetic movements also developed in the shadow of WWII. In Montréal the "cosmopolitan" *Preview* poets (Patrick Anderson, P.K. PAGE) joined briefly with the "proletarian" *First Statement* poets (Louis DUKE, Irving LAYTON) in John SUTHERLAND's magazine NORTHERN REVIEW. The continuation of old journals (primarily *Canadian Forum*) and the development of new ones (*Fiddlehead* in Fredericton; *CIV/n* and *Delta* in Montréal; *Tamarack Review* and *Here and Now* in Toronto; Allen Crawley's *Contemporary Verse* in Vancouver; and, after 1960, James REANEY's *Alphabet* in London) gave poets new opportunities for publication; among those to emerge were Anne WILKINSON, Wilfred WATSON, Robert FINCH, A.G. BAILEY, Elizabeth BREWSTER, Fred COGSWELL, Miriam WADDINGTON and Roy DANIELLS. Initially linked as poets of social protest, Duke, Layton and Raymond SOUSTER went on to explore separate avenues of poetic form and political engagement.

At this time drama was affected by the development of radio and by the growth of play societies and the LITTLE THEATRE MOVEMENT. Outstanding radio playwrights included Mavor

MOORE and Fletcher Markle; Gwen Pharis RINGWOOD, James Reaney and Robertson Davies furthered the art of the stage play. Radio dramatizations (W.O. Mitchell's *Jake and the Kid* series, John Drainie's readings, Robert Weaver's *CBC Wednesday Night*) helped foster the short-story form; and radio writers such as Mary Grannan gave a Canadian voice to CHILDREN'S LITERATURE (see RADIO DRAMA).

The period closed on the threshold of a new wave of nationalism and creative energy. Several anthologies and critical surveys became available; society was enjoying postwar prosperity; and the report of the Massey Royal Commission on NATIONAL DEVELOPMENT IN THE ARTS, LETTERS AND SCIENCES, which led to the creation of the CANADA COUNCIL in 1957, encouraged concentrated support for Canadian culture in ways that would allow it tangibly to develop.

**1959-80s** Periods of economic prosperity and adversity sharply affected literary activity during the next decades. The number of publications grew markedly during the 1960s, fostered in part by the Canada Council and the establishment of government support programs for the arts. In the wake of legislation curtailing foreign control over the production and distribution of Canadian writing, SMALL PRESSES developed (including House of Anansi and Oberon, and for several years asserted a pronounced cultural nationalism. New LITERARY PERIODICALS began, among them CANADIAN LITERATURE, *Prism*, *ECW*, *Journal of Canadian Studies*, CANADIAN FICTION MAGAZINE and *Canadian Children's Literature*. An increase in the number of available texts and paperback books (represented by McClelland and Stewart's New Canadian Library), the formation of professional societies (Association for Canadian and Québec Literatures, League of Canadian Poets, WRITERS' UNION OF CANADA), the establishment of several popular festivals and the increase in academic attention to Canadian writing also helped expand the audience for Canadian letters. Influential Québec and Acadian writers were translated.

Technological innovation affected both the manner and matter of publication — charting a change from mimeographed journals such as *Tish* in 1961 (edited by George BOWERING and Frank DAVEY) to the sophisticated design and computer printing systems of a press such as Coach House in the 1980s. Poets mixed media, wrote concrete poetry (bp NICHOL), sound poetry (bill BISSETT), found poetry (J.R. COLOMBO) and popular songs (Leonard COHEN), and tried out other experimental forms in linguistic and visual design (Joe ROSENBLATT). An important development involved the writing of long meditative poetry (Michael ONDAATJE, Kroetsch, John NEWLOVE, Christopher Dewdney). Technology thus became an artistic paradox: as a literary theme it often implied the enervating routine of mechanization, but as an aid to literary production it opened new freedom of technique.

South American writers Jorge Luis Borges and Gabriel García Márquez were particularly influential on Ondaatje and Kroetsch. Northrop FRYE's theories of myth influenced other writers (Jay MACPHERSON, James Reaney, Eli MANDEL); still others were affected by CHRISTIANITY and Black Mountain poetics (Margaret AVISON), by traditional format of various kinds, including bardic models, and by an awareness of social inequities (Patrick Lane; Milton ACORN, Tom Wayman, Daryl Hine, Ralph Gustafson, Francis Sparshott, George JOHNSTON, Richard Outram, Kristjana Gunnars), by vernacular cadences (Al PURDY, Phyllis WEBB, D.G. JONES, Alden Nowlan, Marilyn Bowering) and by the conservative Loyalist philosophy of George GRANT (Margaret Atwood, Dennis LEE). Rather more general influences included the views of historians and communications theorists H.A. INNIS, Donald CREIGHTON, W.L. MORTON and Marshall McLuhan,

Book jacket design for *A Time for Judas* by Morley Callaghan (courtesy Macmillan of Canada).

and of international social analysts O. Manonni, Frantz Fanon, Ruth Benedict, Robert Ornstein and Jean Piaget.

Dennis Lee (in poetry) and Mordecai Richler, Gordon Korman and Christie Harris (in fiction) became leading writers of children's literature. Margaret Atwood (in poetry, fiction and criticism) dominated the period, in both poetic craft and nationalist and feminist commentary. Other important prose writers also addressed feminist issues, including Margaret LAURENCE, Audrey THOMAS, Jane RULE, Marian ENGEL and Alice MUNRO. Each of these writers honed a highly individual style. Political justice was a major concern, as were the nature and source of violence, both in the work of these writers and in that of Timothy Findley, Dave GODFREY, Adele WISEMAN, Hugh HOOD, Richard Wright, Juan Butler, George WOODCOCK, Joy KOGAWA and David Adams Richards. Native writers such as George CLUTESI and Markoosie used English to tell of traditional experience and the possibility of moral continuity. Other writers, notably Jack HODGINS and Rudy WIEBE, took literature itself as their subject, exposing the imaginative artifice of storytelling and asserting the morality of art.

Major fictional achievements of the period include Wiebe's epic enquiries into the language of different cultures (Mennonite and Cree in particular), Findley's dramatizations of the loss of innocence in the 20th century, Laurence's social mythology of Western woman and Robertson Davies's Jungian rendering of ambition and aspiration in Loyalist Ontario (in his *Deptford Trilogy*). English-language immigration from the US (Leon Rooke, Thomas, Rule) and from the Commonwealth (Ondaatje, John METCALF, Moore, Robin Skelton, Daphne Marlatt, Austin CLARKE, Bharati Mukherjee, Sean Virgo) added other dimensions of ethnic sensitivity, stylistic versatility and comic insight to modern Canadian writing. The period, partly under the influence of Québec's politically active theatre, also saw the emergence of strong dramatic talents, including Sharon Pollock, George Walker, Rick Salutin, David Fennario, Cam Hubert (Anne Cameron), George RYGA and Michael Cook.

Critics have recorded the history of Canadian literature in English, observed its connections with other literature, probed its derivation, analysed techniques and charted patterns, and assessed its value as a cultural record. As international attention to Canadian literature in-

creased during the 1970s, Canadian studies organizations were established in Europe, the US, Japan, the S Pacific and elsewhere. By 1983 many critics in Canada were turning from thematic to technical subjects; others were writing literary BIOGRAPHY, theorizing about the procedures of criticism, and attempting to establish accurate, scholarly texts of the works of major writers. By the latter part of the 20th century, there were clear but diverse traditions in Canadian literature.

W.H. NEW  
Reading: Carl F. Klinck, ed, *Literary History of Canada*, 3 vols (2nd ed, 1976); William Toye, ed, *The Oxford Companion to Canadian Literature* (1983).

**Literature in English: Teaching** In colonies, the literary tradition of the mother country normally prevails. This was true in Canada, where it has taken English-speaking Canadians a long time to accept their own literature as a legitimate subject for study. Throughout the late 19th century, English language and literature, with some admixture of CLASSICS, held undisputed sway in the literary curricula of Canadian schools and universities. Outside the institutions, however, the groundwork of an indigenous literature was being laid. The first Canadian anthology was E.H. Dewar's *Selections from Canadian Poets* (1864). Although there is no evidence that this book was used in the schools, it was the first of many anthologies that would support the teaching of Canadian literature as the subject gained recognition. W.D. Lighthall's *Songs of the Great Dominion* (1889) was another landmark volume. Biography and literary history had their beginnings in H.J. Morgan's *Bibliotheca Canadensis: A Manual of Canadian Literature* (1867). By the end of the century, to such established names as Haliburton, Moodie and Richardson had been added Lampman, Carman, Roberts and Scott. The making of a teaching canon of early Canadian writers was in sight.

Records of pioneering attempts to bring Canadian literature into university curricula are often unreliable. In 1924 the *Canadian Bookman* published the results of a survey undertaken by the Canadian Authors' Association on the status of "Canadian Literature in Education." Most universities reported, rather defensively, that they keenly supported the subject. The public schools said they liked to use Canadian authors "to diffuse a sane view of patriotism." These were, however, apparently only token interventions. Desmond Pacey claims that the first undergraduate course was offered by J.B. Reynolds at Macdonald Inst (see UNIVERSITY OF GUELPH) in 1906-07. The McGill calendar for 1912-13 listed a course in "American and Canadian Literature." Its instructor, Susan E. Cameron, seems to have taught in this field as early as 1907-08. The "Am-Can" combination (satirized by Robertson Davies in *Leaven of Malice*, 1954) soon became a common expedient for allowing Canadian literature a place in the sun. In practice the balance usually favoured the American component. Although U of Toronto was late in giving its formal blessing to the study of Canadian literature (an Honours American-Canadian course was first offered in 1933-34), it had endorsed a series of "popular" lectures emphasizing Canadian subjects at the turn of the century. A full-fledged course in Canadian poetry, given by Alexander W. Crawford, was in place at U of Manitoba, 1919-20.

A more serious claim to the pioneering role comes from Acadia U, where in 1915 John Daniel Logan began lecturing on Canadian literature. Logan joined the army in 1916, but in 1919 he returned as "Special Lecturer in Canadian Literature without salary." The *Acadia Bulletin* had called the 1915 series "the first course of lectures on distinctively Canadian Literature which has ever been given in a Canadian University." The appointment of 1919 was hailed by the Toronto *Globe* as "an innovation of national

importance." The same year V.B. Rhodenizer taught "The History of Canadian Literature," a half course. Logan later attacked Archibald MacMechan and Dalhousie U in *Dalhousie University and Canadian Literature*. . . (1922), a broadside discounting their claim to lead the way in teaching Canadian literature by offering a half course in 1921-22.

Expediency and compromise governed the entry of Canadian literature into academe: non-credit courses; courses not acceptable for credit in majors or honours programs; half-credit courses; courses treating Canadian literature as a wayward extension of English literature or as a footnote to American literature were offered. Carlyle King's full-fledged, upper-level and fully accredited course at U of Sask in 1946-47 may have been the first of its kind.

In fact, a new, strengthening current reached critical force just before and after WWII. Although the 1920s and 1930s had produced few curricular developments, there had been an increasingly widespread awareness of writers and writing in Canada. The Canadian Authors' Association (fd 1921) had preached literary nationalism and had created the necessary tension to spark the coming of modern poetry to Canada by the decade's end. Moreover, 68 anthologies and collections were published 1920-40. A handful of texts, such as *Our Canadian Literature* (1922) by Watson and Pierce and *A Book of Canadian Prose and Verse* (1923) by Broadus and Broadus were designed specifically for school and university use. J.D. Logan and D.G. French published *Highways of Canadian Literature* (1924), one of 6 literary histories which appeared in the 1920s. It was also important, in the context of teaching, that the criticism of Canadian literature had begun to fall to a new breed of established scholars. W.E. Collin's *The White Savannas* (1936) brought an urbane manner and sophisticated techniques to bear on the work of selected Canadian poets. E.K. Brown and a roster of experienced scholars contributed, from 1936 on, incisive annual reviews of contemporary Canadian writing to the "Letters in Canada" supplement of UNIVERSITY OF TORONTO QUARTERLY. Symbolic of a general quickening of literary energies was the publication in 1943 of Brown's *On Canadian Poetry*, the first extensive and scholarly treatment of the tradition of poetry in Canada, and A.J.M. Smith's *The Book of Canadian Poetry*, the first such anthology compiled on scholarly principles. Publication of new poetry was on the upsurge. The return of the war veterans set the stage for the dramatic expansion of university enrolment over the next 20 years.

Until at least 1960 the introduction of Canadian courses continued to face opposition from defenders of the traditional curricula of English departments. American literature, moreover, which had been an expedient for getting Canadian literature into course work, became, especially 1960-70, a threat when a high incidence of American appointments to Canadian departments was reflected in a sometimes smothering expansion of American courses. The establishment of postgraduate studies in Canadian literature at U of T (1947-48) was an important development. C.T. Bissell and R.L. McDougall were early instructors. On the one hand this development marked a first step towards the legitimization of Canadian literature as a subject for advanced study, and on the other it charted the way for the first generation of scholars trained in this specialty. The next 20 years saw strong postgraduate centres established at Carleton, U of New Brunswick, McGill, Queen's, Western, U of Alberta and U of British Columbia. Among those who set the pace were C. Klinck, Malcolm Ross, D. Pacey, R.L. McDougall, L. Dudek, R. Watters, F. Cogswell, A. Lucas, G. Roper and J. Matthews. The expansion of course work was nourished by (and in turn nourished)

the publication of texts and supporting critical material. Landmark publications were Klinck and Watters's *Canadian Anthology* (1956); the New Canadian Library series of reprints (1957- ); the *Literary History of Canada* (1964); and the periodical *Canadian Literature* (1959- ). Finally, demographic, economic and cultural factors produced a dynamic development of Canadian courses and enrolments in the 1960s. The development was fed by the arrival at university age of the youth of the postwar BABY BOOM; it was accelerated by a prosperous economy and the wishes of a generation of students seeking "relevance" in education. It was at the same time fueled by a national movement towards "Canadianization," the term used by R. Mathews and J. Steele in their highly public efforts to increase Canadian content in the educational system.

By 1970 there seemed little reason to question the status of Canadian literature as an academic subject. In 1948, 10 universities had offered half courses in Canadian literature; 2 offered full courses. In 1972, 38 universities offered 90 full undergraduate courses, for a total enrolment of over 6000 students. At the graduate level, offerings had risen from virtually nothing in 1948 to 30 graduate offerings in 22 universities 1972-73, for a total enrolment of over 200 students. Nevertheless, T.H.B. Symons stated in *To Know Ourselves* (1975), the report of the Commission on Canadian Studies, that undergraduate courses in Canadian literature represented only 8% of the total offerings of departments of English. Perhaps more serious was the commission's finding that the atmosphere of denigration which had surrounded the teaching of Canadian literature for the better part of 50 years was far from dead. The 1970s closed with severe financial stringencies imposing new priorities on the universities. Nevertheless, Canadian literature as an academic subject is firmly enough established to hold its own.

R.L. McDougall

### Literature in English: Theory and Criticism

Samuel Taylor Coleridge, the father of modern literary theory in English, made little direct impression in 19th-century Canada, largely because literary life in Canada shared the anti-theoretical biases of Victorian England. Thomas Carlyle, John Ruskin and Matthew Arnold, the most powerful arbiters of Victorian taste, were essentially moral determinists. For them, good art was at root a matter of good morality, directing the sensuous imagination of artist and audience alike; if the artistic vision was true, then technical details of expression would take care of themselves. In taking "vision" in this sense, these authorities effectively denied access to the essence of art other than by uncritical, unsystematic procedures. Great or successful literature was the occasion for ostensive definition (comparison with similar points of excellence drawn from Homer, Dante, Shakespeare or Milton) or for the invocation of a moral standard; it was not the occasion for sustained reflection on particular literary arts, or for isolation and analysis of a text's distinctive features.

In Canada, LITERARY MAGAZINES provided the first forum for discussion of literary theory. Long before John George Bourinot's *The Intellectual Development of the Canadian People* (1881) there appeared essays and reviews in the literary press that identified and attempted to assess the vital issues in contemporary Britain and the US. This was not easy, given limited resources and circulation, and the fact that the migration of ideas is constant and complex. Most striking about the early efforts is the shrewdness and clarity with which they established the topics that have remained at the centre of Canadian theoretical debate: the possibility and desirability of a distinctive Canadian literature, and the nature of literature's contribution to the national life. Although interest in these questions was largely a

legacy of the European romantics, Canadians claimed them as their own — not in the first instance through the usual channels of theoretical innovation (new analytical tools and terminology, a new conceptual matrix), but rather through recognition that to address these questions was to deal with the condition of all Canadians, whose great matrix was the historical and geographical reality of Canada itself. There was no lack of derivative and pedestrian commentary on literary genres, literature as the interplay of fact and precept, and similar topics. And it was easy for Goldwin SMITH to assure the readers of *The Week* in 1894 that “no such thing as a literature Canadian in the local sense exists or is ever likely to exist.” There was little prospect of original theorizing while Canada’s cultural autonomy remained in question. Meanwhile, Canadians could draw on the values and expectations nourished by the Scottish intellectual tradition in immigrants such as Daniel Chisholme, David Wilson and Graeme Mercer Adam, and take heart from the sensitivity shown by native-born Canadians of the calibre of journalist and novelist Sara Jeannette DUNCAN and social commentator John A. Cooper.

The early 20th century witnessed a steady growth in Canadian literary scholarship, but little innovative theory. Despite the stocktaking of J.D. LOGAN’s *Aesthetic Criticism in Canada* (1917) and A.J.M. SMITH’s sardonic demand of 1928, “Wanted — Canadian Criticism,” academic conservatism held firm. Canadian PHILOSOPHY and LANGUAGE study continued to be more historical than analytical, while orthodoxy was fortified by scholars such as Pelham Edgar, E.K. BROWN and A.S.P. Woodhouse. Even George Whalley’s *Poetic Process* (1953) was more of a tribute to Coleridge than an advance beyond him. However, with the work of Marshall McLuhan and Northrop FRYE this situation changed dramatically.

Literary essays written by McLuhan between 1943 and 1962 (collected in *The Interior Landscape*, 1969) revealed an erudite but profoundly restive mind moving away from “mere literature” and traditional scholarship towards a new vision of cultural history, human cognition and the challenges facing academe. In *The Gutenberg Galaxy* (1962) McLuhan anticipates the concerns of European theorists with the impact of technology on man’s responses to the world around him, and reflects on the changes wrought on speech and writing by advances in COMMUNICATIONS TECHNOLOGY. He draws on the spiritual and intellectual resources of scholasticism to elucidate the implications of *The Gutenberg Galaxy*, enriching in the process the vocabulary of literary theory, recognizing the advantage of interdisciplinary studies, and dramatizing the idea that criticism enlivened by radical theory and unafraid of analogy can claim to be not parasitism or prostitution, but creative predation.

Frye, like McLuhan, has written one major work of theory and many subsequent validations of it. Since the appearance of *Anatomy of Criticism* (1957), Frye has become a highly influential theorist. Lucid, learned and witty, polemical and yet plausible, *Anatomy* is a series of interlocking theoretical essays built upon definitions of symbol (“any unit of any literary structure that can be isolated for critical attention”), criticism (which “begin[s] with, and largely consist[s] of, the systematizing of literary symbolism”) and related terms — the whole synoptic scheme being held together by the proposition that “in myth we see the structural principle of literature isolated.” In collections such as the *The Bush Garden* (1971) Frye refers not to Canadian isolation itself, but to the autonomy-through-isolation enjoyed by “great” literature and literary study. His works have inspired some of the finest contemporary Canadian writers, but have too often occasioned mere

condemnation or rapture within the university community, or led his more careful readers into a no-man’s-land between autonomous and socially determined performance, as in Francis Sparshott’s *The Concept of Criticism* (1967). More recently, however, literary theorists have freed themselves from Frye’s bias against structuralism and ideologically motivated criticism. Debate is carried on in the LEARNED SOCIETIES and in publications such as the *Journal of Literary Theory* (1980- ) and Tillottama Rajan’s *Dark Interpreter* (1980).

A strong interest in avant-garde and theoretical approaches to literature was nurtured in *Open Letter* (1965- ), a literary magazine edited by Frank DAVEY. The influence of recent European trends (post structuralism, deconstruction, narratology, reception theory, etc) can be seen in E.D. Blodgett’s *Configuration* (1982) and in *Labyrinths of Voice* (1981), a series of interviews with Robert KROETSCH by Shirley Neuman and Robert Wilson. Perhaps the most important evidence of the new interest in theory is in the works of feminist critics, including Lorraine Weir and the editorial collective TESSERA (Barbara Godard, Kathy Mezei, Daphne Marlatt and Gail Scott), whose work also links criticism in English Canada with that of critics and writers in Québec, such as Nicole Brossard, Louky Bersianik and Louise Coiroir.

#### Criticism

The work of critics is generally to define, classify, interpret and judge literature, but which of these activities achieves prominence varies from period to period and place to place. In countries such as France and England, where the classics are widely agreed upon, little need exists to define the national literature (it is simply understood to be these classics) or to promote it (since all agree that the classics should be widely read and taught). When such a consensus exists, critics can devote their time to editing famous texts or to interpreting famous authors. Many English Canadian critics, including Barker FAIRLEY, Douglas Bush, Leon Edel, Hugh Kenner, Kathleen Coburn, Marshall McLuhan, George Woodcock and Northrop Frye, have achieved international recognition for this kind of work on world writers or for their literary theory. If such critics turn their attention to Canadian literature, a new literature with few classics, they often change their approach. In Canada much critical energy has been consumed in attempts to define Canadian literature. Furthermore, critics who feel that Canadian literature deserves an audience must promote its publication, study and popular reception.

The history of English Canadian literary criticism has also involved a struggle to promote Canadian literature by providing it with a literary institution: publishers, readers, reviewers, booksellers, literary associations, journals, reference works, textbooks and university courses (see AUTHORS AND THEIR MILIEU; BOOK PUBLISHING). Even before Confederation, Edward Hartley Dewart concerned himself with the economic difficulties of Canadian authors and publishers. Three important later institution builders were Pelham Edgar, head of English at Victoria College, University of Toronto, 1903-18; Lorne PIERCE, literary editor of the RYERSON PRESS, 1920-60; and William Arthur Deacon, book reviewer for the GLOBE AND MAIL and other important Toronto publications, 1922-60. Although these men wrote much about Canadian literature, they also strove to set in place permanent institutional structures to support the growth of that literature. Their projects were precursors to such later ones as the establishment of the NATIONAL LIBRARY (1953) and the CANADA COUNCIL (1957), and the publication of *Literary History of Canada* (1965; rev 1976).

In their attempts to define Canadian literature, critics have been dominated by romantic

nationalism. This still-common view sees the nation-state as an ideal association because it is based primarily on linguistic, cultural, social and geophysical unity, rather than on political expediency or the accidents of imperialism. Non-European countries rarely possess the unity required by this theory, and Canada is no exception. For example, Canada has officially recognized BILINGUALISM and MULTICULTURALISM. Critics, therefore, have had the difficult task of identifying national characteristics not shared by Canada and the US or Britain yet common to English and French Canada. Thus Canada’s cold climate, northern wilderness and colonial mentality have been seen as crucial in the formation of the nation’s literature; more recently, native peoples and myths, French-English relations, and early history have become popular “Canadian” topics. Several general books based on the ideas of romantic nationalism were published; the most representative is perhaps Archibald MacMechan’s *Headwaters of Canadian Literature* (1924). E.K. Brown’s writings, especially *On Canadian Poetry* (1943), best exemplify the continuing tradition. Lionel Stevenson’s *Appraisals of Canadian Literature* (1926) made some interesting revisions to the main tenets of romantic nationalism in order to approach the older generation of Canadian poets more flexibly. Despite its title, W.E. Collin’s *The White Savannahs* (1936) falls outside the tradition.

With the 1920s and the introduction of modernist poetics to Canada (documented in Louis Dudek and Michael Gnarowski, *The Making of Modern Poetry in Canada*, 1967) came resistance to romantic taste and to romantic nationalist literary theories. CANADIAN FORUM (1920- ) provided the most public medium for the new poetry and its supportive criticism, which was influenced by T.S. Eliot, the Imagists and the French Symbolists. A.J.M. Smith, a central figure in the attack on Canadian romantic poetry and criticism, argued that the focus on writing “distinctively Canadian” poetry led to low standards and a parochial ignorance of foreign innovations. In his introduction to *The Book of Canadian Poetry* (1943), he made an influential distinction between “native” writers, who concentrated on “what is unique and individual in Canadian life,” and “cosmopolitan” writers, who make a “heroic effort to transcend colonialism by entering into the universal, civilizing culture of ideas.” Although Smith himself recanted in later editions of his book, the “native-cosmopolitan” split has been revived in the debate between Frank Davey, a postmodernist who supports McLuhan’s concept of the “global village,” and Robin Mathews, a left-wing nationalist.

The greatest contemporary influence on Canadian criticism has been the work of Northrop Frye. Although he approved of Smith’s modernist taste, Frye has rehabilitated many of the important themes of romantic nationalist criticism. For example, his view that nature is a major determinant of the “Canadian” quality in our literature is similar to that of Dewart, who wrote in 1864 that Canadian “nature unveils her most majestic forms to exalt and inspire the truly poetic soul.” For Frye, Canadian nature inspires the “deep terror” that leads to a “garrison mentality.” Because of the threat of a “huge, unthinking, menacing, and formidable physical setting,” this mentality promotes the human and moral values of the group over those of the individual.

Frye’s ideas influenced D.G. JONES’s *Butterfly on Rock* (1970), which argues a change from garrison mentality to communication between man and his formerly frightening surroundings, and Margaret Atwood’s *Survival* (1972). Atwood sees the Canadian literary fixation on survival as arising less from the threat of the real wilderness than from the threat of American cultural

domination. Detractors from these and other "thematic" discussions of Canadian literature argue that the emphasis on man's relation to the wilderness is not unique to Canadian literature, and that this approach risks equating Canadian content with quality, oversimplifies Canadian-American relations and overemphasizes Canadian landscape at the expense of more time-bound and problematic intellectual, social, economic and political influences.

Frye's ideas have been turned inside out by several writers and critics who, instead of claiming that the land determines the literature, argue that writers invent the land. Eli MANDEL suggests that an environment is "a mental construct, a region of the mind, a myth." Because no one can grasp the variety of the real Canada, we continually evolve, in art, popular culture, journalism, literary criticism and especially literature, an imaginative version of Canada to stand for the real Canada.

The surge of Canadian self-awareness that accompanied the Centennial of Confederation in 1967 encouraged the expansion of Canadian literature courses (see LITERATURE IN ENGLISH: TEACHING) and of Canadian criticism. New journals sprang up to join *Canadian Literature*, which had stood alone since its establishment in 1959: *Journal of Canadian Fiction* (1972-), *Essays on Canadian Writing* (1974-), *Studies in Canadian Literature* (1976-) and many others. Many articles in these journals followed thematic lines of criticism. Frank Davey was prominent among those who called for a more formalist and theoretical approach. At the same time, much criticism was being written by novelists and poets, such as Davey, Atwood, Blodgett, Jones, Kroetsch, Mandel, Douglas Barbour, George Bowering, Dennis LEE, Tom Marshall, Stephen Scobie and Fred Wah, so that the traditional distinction between writer and critic was breaking down.

By the early 1980s the gains of the previous decade were evident in critical articles and were being consolidated in a number of large-scale projects, including *The Oxford Companion to Canadian Literature* (1983, ed William Toye) and ECW Press's proposed 20-volume series, *Canadian Writers and Their Works*. That the bare survival of Canadian literature perhaps need no longer be the central concern of Canadian critics is indicated also by the recent publication of several major works about individual writers: biographies, volumes of letters and monographs. Although definition and promotion will not vanish completely from the Canadian critical repertoire, it seems that Canadian literary culture has achieved the maturity, both institutional and economic, necessary to support the more specific and analytical critical writing typical of an established literary culture.

Smith, *Towards a View of Canadian Letters* (1973); David Staines, ed, *The Canadian Imagination* (1977).

**Literature in French** During the 1960s, "Québec literature" became the established term used in Québec to refer to all francophone literature in Canada. Outside Québec the older expression — French Canadian literature — has not disappeared, and Québécois historians themselves continue to use it for other Canadian French-language literatures: Acadian, Franco-Ontarian and western Canadian. The history of this francophone literature of Canada may be divided into 7 periods.

**French Origins (1534-1760)** This period began with the travel accounts of Jacques CARTIER and ended with the French regime itself. The metropolis had never allowed printing presses to be installed in the colony: works were published in France and sometimes elsewhere in Europe. Though most of the writers were born

in France, a good many may be called Canadians, for they came to Canada while very young and lived here for their most active years. The works of this period consisted primarily of the reports of discoverers (Cartier) and explorers; missionaries' letters (*Les Relations des Jésuites*; selections in *The Jesuit Relations and Allied Documents*, 1963); EXPLORATION AND TRAVEL LITERATURE (Gabriel Sagard, Baron de LAHONTAN); histories (François-Xavier CHARLEVOIX); studies of customs and mores (Joseph-François Lafitau); spiritual writings (MARIE DE L'INCARNATION); annals (Marie Morin); and personal correspondence (Élisabeth Bégon; see AUTOBIOGRAPHICAL WRITING IN FRENCH). Few were purely literary works, excepting the writings of Marc LESCARBOT.

Narratives were primarily eyewitness accounts and descriptions. The author was more concerned with educating than amusing his reader, but since he also wanted to be interesting and was often well educated, he frequently wrote in colourful style. His pleasure in writing is contagious: today's reader gains a fresh vision of the country by rediscovering it through eyes that literally looked upon a "New World." It is this aspect that has been most beneficial to many modern writers (Félix-Antoine Savard, Pierre Perrault, Jacques Ferron, Gilles Vigneault). These humanistic works also influenced the literature of France and inspired great writers (Rabelais, Montaigne, the Encyclopedists, Rousseau, Chateaubriand), and contributed to the development of a literature spurning socialized man and lauding the "noble savage."

**Canadian Origins (1760-1836)** After the CONQUEST of 1760, France yielded Canada to Britain in the TREATY OF PARIS (1763). French Canada was in ruins: it was economically and politically shattered; its administration and commerce had passed into the hands of the conquerors; its educational system had lost its teachers and its resources. The remaining 65 000 Canadiens clustered about their natural leaders: some 125 impoverished seigneurs, 100 or so priests, a couple of dozen men of the law and an equal number of doctors. Isolated from France, loyal to England, involuntarily thrown upon their own resources, they forged their will to live through fidelity to their French origins.

In 1764 the first Québec NEWSPAPER was born, the bilingual *Quebec Gazette* / *La Gazette de Québec*. Its French translations were appallingly bad and the original Canadian articles either precious in tone or obsequious. A French newspaper, *La Gazette du commerce et littéraire, pour la ville et district de Montréal*, appeared in 1778. It was of good quality but lasted only a year. The first truly Canadian paper, *Le Canadien*, started in 1806. It was devoted to the defence of the rights and liberties of the conquered. With this paper the French Canadian people found their voice and their literature took on a nationalist tone that has been nurtured ever since.

The best writer of the time was journalist Étienne PARENT, editor of *Le Canadien*. He clearly analysed the political battles of the 1830s, and his compatriots, although they did not always listen, respected his independence and lucidity. When he retired from journalism and abandoned politics, he was sought after as an adviser and lecturer; today he is regarded as the first Québec sociologist. Two orators marked the same era: Joseph-Octave PLESSIS, bishop of Québec, whose traditionalist sermons supported the authorities of the day, and Louis-Joseph PAPI-NEAU, political leader and charismatic populist member of the legislative assembly. There were no indigenous novels and no theatre. In 1830 an inferior imitator of Boileau, Michel Bibaud, published the first collection of Canadian poetry. That was the sum of Canadian literary production for this period.

**The Literary Homeland (1837-65)** The political struggles which stimulated the birth of

Canadian literature led first to the REBELLIONS OF 1837 and then to the union of Upper and Lower Canada. French Canadians once again lost their homeland but were intellectually better equipped than in 1760. In 1824 and again in 1829, they had created a respectable network of primary schools. This system was reorganized after the union of the Canadas in 1841. At the secondary level, 7 collèges were founded after the turn of the century. The students, molded by their studies of Greco-Latin humanities and the French classics, willingly believed that the glory of a people came from its literature.

Two novels appeared in 1837: *Les Révélations du crime*, by François-Réal Angers, an account of a real incident, and *L'Influence d'un livre*, by Philippe AUBERT DE GASPÉ, Jr, who drew his inspiration from anecdotes and FOLKLORE. The adventure novel made its appearance with *Les Fiancés de 1812* (1844) by Joseph DOUTRE and *Une de perdu, deux de trouvés* (1849) by Georges Boucher de Boucherville. The rural novel was born in 1846 with *La Terre paternelle* by Patrice Lacombe and *Charles Guérin* by P.J.O. CHAUVÉAU, a great admirer of Balzac. Antoine GÉRIN-LAJOIE gave substance to Chauveau's dream and that of the majority of his compatriots by creating a whole new parish, a kind of homeland in miniature, for the hero of *Jean Rivard* (1862-64). The glory of the nation had its history, which Philippe AUBERT DE GASPÉ, Sr, evoked in *Les Anciens Canadiens* (1863). Napoléon BOURASSA retold the tragic story of the ACADIAN deportation of 1755 in his touching history of an engaged couple, *Jacques et Marie*, 1865-66. The historical novel, like the rural novel, was to be fashionable for a full century. It owed part of its inspiration and success to the best writer of the age, François-Xavier GARNEAU, author of *HISTOIRE DU CANADA*, which came out in 3 editions between 1845 and 1859. Garneau had the tone of his romantic French masters but added an entirely Canadian fervour (which did not, however, cloud his objectivity). The most highly acclaimed poet of the age, Octave CRÉMAZIE, enchanted his contemporaries with poems that borrowed heavily from history. Today's reader prefers his death-haunted poems and his letters, which attain the status of literary criticism.

**Messianic Survival (1866-95)** The preceding era had been ideologically turbulent. The INSTITUT CANADIEN, a kind of popular university founded in 1844, had drawn the ire of Mgr Ignace BOURGET, bishop of Montréal, because of the "liberal" contents of its library. The debate between ULTRAMONTANISTS and liberals such as L.A. Dessaulles stimulated thought and produced some interesting texts. Conservatism triumphed after the 1860s; the nation gained homogeneity but lost originality of thought.

In 1866, Fr Henri-Raymond CASGRAIN established literary doctrine for the coming years. Literature was to be the faithful mirror of a Catholic, religious and moral people. He himself showed the way by theologizing history. His footsteps were duly followed: Joseph Marmette and Laure Conan (Félicité ANGERS) wrote "good" historical novels, while poets imitated the French romantics (particularly Hugo and Lamartine) and sang the praises either of NEW FRANCE (Louis-Honoré FRÉCHETTE) or of the small homeland Québec had become once again after CONFEDERATION (Pamphile Lemay, Nérée Beauchemin). Catholic journalism (Jules-Paul TARDIVEL) was dominant; literary criticism (Adolphe-Basile Routhier) was preoccupied with morality. Tedium threatened on all fronts, though it was escaped by Fréchette, a liberal, and Arthur BUIES, the only real Canadian romantic and the only great writer of the age. Also a liberal, Buiès had style and showmanship; a chronicler, he observed well; a philosopher, he had independent ideas.

**Exile and the Establishment of Roots (1896-**

1938) The Liberals who took power in Ottawa in 1896, and then in Québec in 1897 for almost 40 years, were primarily politicians; the ideologues were either dead or silent. The first decades of the 20th century continued the established ideology of the 3 preceding ones: the dominant voice was that of nationalist historian and essayist Fr Lionel Groulx. However, literature grew in importance, thanks to an educational system whose primary and secondary levels, well developed in the 19th century, now prepared students for 2 francophone universities, LAVAL and U de MONTREAL.

There was an abundance of poets. The École littéraire de Montréal sought to modernize both form and themes, though with little success except in the case of one poet of genius, Emile Nelligan. Between the ages of 17 and 20 (1896-99), Nelligan produced some 170 poems whose quality lifted him well above his colleagues and elders. Like them, he imitated the poets of France, but with more originality and modernity. A few others, the "exotists" (Paul Morin, René Chopin) and Robert Choquette, thematically exploited themselves from the homeland. But most poets still devoted themselves to "poetry of the soil," with more success than in the 19th century. This trend reached its ultimate expression in *A l'ombre de l'Orford* (1930) by Alfred Desrosiers.

Rural novels appeared in large numbers. A Frenchman, Louis Hémon, gave the style an international audience with his *Maria Chapdelaine* (1914); *Un Homme et son pèché* (1935) by Claude-Henri Grignon brought it back to Québec; and the genre produced its best example in *Trente Arpents* (1938) by Ringuet (Philippe Panneton). Historical fiction peaked in 1938 as well, with *Les Engagés du Grand Portage* by Léo-Paul Desrosiers, and then fell off. Nationalism found poetic expression in *Ménard, maître-drameur* (1937) by Félix-Antoine Savard, and was then silent. Criticism, like the novel and poetry, knew a certain strength in this period (Louis Dantin, Marcel Dugas), but it was led by an academic, Mgr Camille Roy, whose literature textbook sustained H.R. Casgrain's influence in the colléges.

**The Age of Introspection (1939-57)** The economic crisis of the 1930s caused French Canadians to rethink their traditional values; WWII forced them to open themselves to the world and to new ideas. Urbanization was underway; prosperity returned, and education was available to more people. People freed their minds from collective thought; the drama of society as a whole no longer overshadowed individual destiny. Writers became more introspective, in the manner of European writers (Mauriac, Bernanos, Julien Green, Graham Greene, Ibsen). Canadian publishing began to develop. Traditional nationalism was transformed. It was now at the humanistic level that one sought to be a better French Canadian.

The great poets of the era (Saint-Denis Garneau, Anne Hébert, Alain Grandbois, Rina Lasnier) rejected versifying and the cult of the soil for new forms and new rhythms; they travelled through interior landscapes instead. It was a revelation: unsuspected shadows were found swarming there, but light eventually broke through to show a universe of colour and open space where a new awareness was taking shape. What was once felt to be the collective duty, to survive in the face of the English, was now replaced by an appetite for life as individual men and women among other men and women.

Novelists were developing in the same way. Old stereotypes yielded to more earthy characters, as authors of the psychological novel (Robert Charbonneau, André Giroux, Robert Elie, Jean Simard, André Langevin) created individuals searching for themselves, not for collective salvation. French Canadian society was

being transformed: it was being observed with care and a certain wariness, especially in the cities, by the first novelists of sociological analysis (Roger Lemelin, Gabrielle Roy, Yves Thériault).

THEATRE (see also DRAMA IN FRENCH) abandoned melodrama and comedic variety shows for social satire (Gratien Gélinas) and intimate dramas of bourgeois family life (Marcel Dubé). The historians, except for Guy Frégault, were no longer purely writers; they sought cold scientific objectivity. Literary criticism marked time, but did so gracefully (Roger Duhamel, René Garneau, Guy Sylvestre).

**Québec Literature since 1958** The political and social climate in Québec began to change at the end of the 1950s, the beginning of the QUIET REVOLUTION. Teaching institutions became more democratic; ideologies continued to diversify, and a new nationalism emerged that called for greater sovereignty, even for the independence of Québec. With a few surrealistic flourishes (Gilles Hénault, Roland Giguère, P.M. Lapointe) and much lyricism (Gaston Miron, Jacques Braut, Fernand Ouellette, Gatién Lapointe, Paul Chamberland), the poets named their country: no longer Canada, but Québec. The magazine PARTI PRIS (1963-68) added a socialist, populist dimension to the nationalist option. A formalist trend also appeared, however (LA BARRE DU JOUR, *Les Herbes rouges*), whose stylistic exercises and linguistic experimentation led to intellectualization of literature, despite some Marxist, feminist and rock-inspired contributions (see LITERARY PERIODICALS IN FRENCH).

Novelists took the lead in the 1960s. They were preoccupied with the form and structure of their works (Jean Basile, Hubert Aquin, Réjean Ducharme, Gérard Bessette), and managed to borrow some techniques of the French nouveau roman (new novel) without losing their own originality. Female authors led the way in the creation of the poem-novel (Anne Hébert, Marie-Claire Blais, Louise Maheux-Forcière). The traditional novel (Roch Carrier, André Major) still existed, side by side with a novel that wove its form around its words (Victor-Lévy Beaulieu). Feminist ideology appeared at the end of the 1970s (Nicole Brossard).

Theatre expanded considerably, but moved away from literature in that it became preoccupied with showmanship (Michel Tremblay). Even so, it was a platform for new ideologies, such as linguistic populism and feminism. There were a great many ESSAY writers, a few of them literary (Fernand Dumont, Pierre Vaudeboncoeur).

A new criticism was born when Québec literature entered the universities. This criticism attempts to be scientific but as yet lacks originality, since it follows in the wake of its French and American masters. However, it has enormous influence on Québec writers, who are, often simultaneously, both its creators and its followers. Although good writers do produce work for a general audience (Michel Tremblay), the ordinary reader is as likely to turn to American best-sellers. Québec's preoccupation with itself has compelled Francophones in the rest of Canada to look to their own literature. Similarly, the all-powerful nature of the Montréal literary establishment has provoked (with the help of the Québec government) regional movements of self-awareness in other parts of Québec. Montréal has largely replaced Paris as the literary metropolis of the Canadian francophone world. See also SHORT FICTION; LITERARY BIBLIOGRAPHY; LITERARY PRIZES; ORAL LITERATURE; POPULAR LITERATURE IN FRENCH. RENÉ DIONNE

Reading: Pierre de Grandpré, *Histoire de la littérature française du Québec*, 4 vols (1967-69); Réginald Hamel et al, *Dictionnaire pratique des auteurs québécois* (1976); Maurice Lemire, ed, *Dictionnaire des oeuvres littéraires du Québec*, 4 vols to date (1978-84).

**Literature in French: Criticism and Theory** No French-language literary critic in Canada seems to have stature among writers equal to that of Bayle, Sainte-Beuve or Barthes in France. Nevertheless, several writers have won a degree of prominence as much (if not more) for their works of criticism as for their other writings. Their ranks include members of the interwar generation: Marcel Dugas, whose critical prose has poetic overtones; Berthelot Brunet, whose breezy histories of French and French Canadian literature have much more life than his vapid novels; Victor Barbeau, sole editor and jack-of-all-trades of *Les Cahiers de Turc*, which appeared Oct 1921-Mar 1922 and Oct 1926-July 1927; Val-dombre (pseudonym of Claude-Henri Grignon), whose virulent pamphlets (see ESSAY IN FRENCH) are as much polemic as criticism. This period also saw the critical publications of Albert Pelletier, novelist and journalist Harry Bernard and poet Alfred Desrosiers. The list is short, not because criticism has been insignificant, but because it has always been considered a marginal literary activity. And that is the paradox. Criticism, because it has usually favoured the established order, bears responsibility for the fact that Quebecers have generally viewed their literature as a reflection of society.

The earliest French Canadian critics were journalists and a few amateurs, who set themselves the task of judging the few publications that appeared according to the norms of the French language and the rules of classical verse. The first literary critic was Valentin Jautard, a Frenchman, editor of the *Gazette littéraire de Montréal*, fd 1778 by his compatriot, Fleury Mesplet. The versatile Michel Bibaud practised the genre in the many publications which he himself founded in rapid succession, such as *L'Aurore* (1816-19), *Le Courrier du Bas-Canada* (1819-20) and *La Bibliothèque canadienne* (1825-30).

Fr Henri-Raymond Casgrain was the first to judge works systematically, according to an explicit theory of literature. His goal was to dictate the guiding principles for all literary production: literature had to be "essentially religious and devout" and was to reflect the "genius" of the nation. He made literature his apostolic mission, thus founding a tradition of clerical and moralizing criticism that was to last almost a century. Nobody had as much prestige and influence in this field as Camille Roy. A professor and later rector at UNIVERSITÉ LAVAL, he transposed to Québec the principles of 19th-century French criticism, with emphasis on the methodology and assumptions of Gustave Lanson and, to an even greater degree, the thought of Ferdinand Brunetière. Roy, however, also believed that allowances had to be made for the infant state of the literature to which these principles were being applied. He therefore lavished praise on many mediocre works and saved his wrath for the defence of Catholic morality and the French classical ideal of clarity. Despite occasional opposition, like that of journalist Jules Fournier, who took him to task for applying to nonentities critical methodologies developed for the study of masterpieces, Roy dominated and guided the perception of French Canadian literature for almost half a century. He had many disciples, including Maurice Hébert and priest-critics Albert Dandurand, Emile Chartier, Henri d'Arles, Marc-Antoine Lamarche and Samuel Baillargeon, who produced pedagogic works imbued with the ideals of French classicism and strict moral tone. In contrast, Louis Dantin, who wrote a remarkable introduction to the poetry of Emile Nelligan, was a sensitive aesthete and a man of subtlety, eclectic tastes and freedom from doctrinal limitations.

The pre-establishment narrowness of this literature and literary criticism explains the violence of the clash, which lasted 1918-48 under

a variety of forms and pretexts, between the literary schools of the "men of the soil" and the "exotists" — the former seeking a "national" literature expressed in a "Canadien" language, the latter, partisans of French linguistic norms, preaching emancipation from any form of regionalism. The basic argument resurfaced in the 1960s and 70s, this time in the form of a debate about the choice of language and centering on the publications and critiques of PARTI PRIS and the early plays of Michel TREMBLAY.

After WWII, several critics of considerable stature emerged, among them Guy Sylvestre, Pierre de Grandpré, Roger Duhamel and Gilles Marcotte; the last 3 were, at different times, in charge of the literary page of *Le Devoir*. From the start of the 1960s, the tradition of journalistic criticism was maintained in the departments or weekly supplements of newspapers such as *La Presse*, *Le Devoir* and *Le Droit* and in magazines such as *Lettres québécoises* devoted to current literature. National radio had a few programs of literary criticism, but television (whether Radio-Québec or Radio-Canada) virtually ignored the whole field. The greatest growth of criticism in the last 20 years has been in university literature departments. Though it keeps close watch on French literature, this criticism is primarily concerned with Québec writings. Inspired by the transformations of criticism in France, it has multiplied and diversified its methodologies to thematic analysis, psychocriticism, sociocriticism and, more recently, structuralism and semiotics.

The 3 principal university magazines in Québec are *Études françaises* (U de Montréal), *Études littéraires* (U Laval) and *Voix et images* (U du Québec). The universities have also produced a wide range of monographs and surveys, most of them published in university-press collections: "Lignes québécoises" (Presses de l'Université de Montréal), "Vie des lettres québécoises" (Presses de l'Université Laval), "Cahiers du CRCCF" (Éditions de l'Université d'Ottawa), and "Constantes" and "Littérature" in the "Cahiers du Québec" series (Éditions HMH).

Despite the explosive growth of criticism since 1960 and a tradition that is more than a century old, no history of criticism has yet been written which pays as much attention to its specifically literary evolution as to its ideological evolution. Moreover, critics are now questioning the degree of their dependence on outside — especially French — methodologies and arguing the need to develop their own, along with appropriate literary theories. This may be the trend of the future. See LITERATURE IN FRENCH; BOOK PUBLISHING, FRENCH-LANGUAGE.

JEAN-LOUIS MAJOR

*Reading:* F. Dumont and J.C. Falardeau, eds, *Littérature et société canadienne-française* (1964); G. Laflèche, ed, *Dix ans de recherche québécoise sur la littérature française (1970-1979)* (1980); G. Marcotte, ed, *Présence de la critique* (1966); G. Tougas, *History of French-Canadian Literature* (1966).

**Literature in French: Scholarship and Teaching** The first substantial publication devoted to French Canadian literature was James Huston's *Répertoire national* (1848-50; repr 1982), a 4-volume annotated anthology of writings called from early Québec newspapers. During the period of increased literary activity known as the Mouvement littéraire de 1860, Laurent-Olivier David, Henri-Raymond CASGRAIN and Hector Fabre all published inspirational essays on the national literature, and Henry James Morgan's *Bibliotheca canadensis* (1867) included about 100 French-speaking authors. Early anthologies of poems and songs were compiled by Joseph Lenoir (1858), Antonin Nantel (1869) and Louis-Hippolyte Taché (1881). During the 1870s Casgrain, David, Adolphe-Basile Routhier and Louis-Michel Darveau composed bibliographical or satirical portraits of prominent contemporaries, many of whom were authors,

and Edmond Lareau issued the first history, or catalogue, of Canadian literature in both English and French (1874). The death of Octave CRÉMAZIE in France in Jan 1879 prompted several articles on his work, and during the following decade Benjamin Sulte and Pierre-Joseph-Olivier CHAUVEAU published short historical accounts of the beginnings of French Canadian poetry. In general, however, 19th-century writing on Québec literature consisted of either anecdotal chronicles or moralizing comment, the latter typified by Casgrain's eulogistic essay on the novel *Angéline de Montbrun* (1884) by Laura Conan (Félicité ANGERS).

In the early 20th century the study of Québec literature became more scholarly. Bibliophiles Philéas Gagnon and Narcisse-Eutrope Dionne compiled extensive bibliographies of Québec publications. Charles abder Halden, a French academic, wrote articles and gave lectures in Paris on French Canadian authors; these he published as *Études de littérature canadienne-française* (1904) and *Nouvelles Études...* (1907). Mgr Camille ROY, Québec's first literary historian to have studied the new discipline in Paris, began in 1904 to publish remarkably well-informed articles on contemporary Québec writers and on the early history of the literature. These were later incorporated into his numerous collections of essays, his classic study *Nos origines littéraires* (1909) and the successive editions of his influential *Manuel d'histoire de la littérature canadienne-française*, which appeared from 1907 until his death in 1943. Another literary historian, Mgr Emile Chartier, attempted to synthesize the INTELLECTUAL HISTORY of his province in articles collected in *La Vie de l'esprit au Canada français, 1760-1825* (1941). Genuine aesthetic criticism was rare except in the writings of Louis Dantin and Marcel Dugas. Up-to-date anthologies were compiled by Jules Fournier and Olivar Asselin (1920), Camille Roy (1934) and Guy Sylvestre (1942), and secondary-school manuals for the study of French Canadian literature were published by the Sisters of St Anne (1928) and the Brothers of the Christian Schools (1928).

Between the world wars several theses on French Canadian literature were submitted to French universities: those of Antoine Roy "Les Lettres, les sciences et les arts au Canada sous le régime français," Paris, 1930) and Laurence A. Bisson "Le Romantisme littéraire au Canada français," Bordeaux, 1932) are still consulted, as is Louis Le Jeune's *Dictionnaire général...* (1931). Most studies of Québec literature published in the 1930s were impressionistic, but the group gathered around the magazine *La Relève* took an intellectual and universalist position. Serious histories of POETRY (1933) and the NOVEL (1937) were written by Albert Dandurand; an American, Ian Forbes Fraser, compiled the first systematic bibliography of French Canadian poetry (1935), and Jane Mason Turnbull published the best study in English, *Essential Traits of French-Canadian Poetry* (1938). Annual surveys of Québec writing began to appear: the *Bulletin bibliographique* of the Société des écrivains canadiens (1937-59) and the "Letters in Canada" issue of UNIVERSITY OF TORONTO QUARTERLY (1937-).

During WWII publication declined, but Séraphin Marion's *Les Lettres canadiennes d'autrefois* (9 vols, 1939-58) continued to appear. The Archives de folklore de l'Université Laval (1944), the Institut d'histoire de l'Amérique française (1945) and the Bibliographical Society of Canada (1946) were founded. As the war ended Marcel Trudel's thesis *L'Influence de Voltaire au Canada* (1945) and Jeanne Paul-Crouzet's *Poésie au Canada* opened a new period of more rigorous study. The 1950s saw the publication of numerous bibliographical guides by Gustave Lancrôt (1951), Marie Tremaine (1952), Gérard Martin (1954), Antonio Drolet (1955), Philippe Garigue (1956) and Gérard Tougas (1958). The outstanding pub-

lications of the decade were Luc Lacourcière's critical edition of the poems of Émile NELLIGAN and Auguste Viaute's *Histoire littéraire...* (1954), a pioneering comparative study.

The tremendous upsurge in Québec literary production since 1960 has been accompanied by an unprecedented growth of bibliographical, literary-historical and critical activity. The founding of the Centre de recherche en civilisation canadienne-française at U of Ottawa in 1958 was followed by the creation of similar research centres in the Québec universities. Major undertakings such as the DICTIONARY OF CANADIAN BIOGRAPHY (est 1959), Adrien Thériot's annual panorama *Livres et auteurs québécois* (1961-), and the scholarly series "Archives des lettres canadiennes" (1961-) directed by Paul Wyczynski mark the beginnings of contemporary Québec literary scholarship. The Bibliothèque nationale du Québec (est 1968) implemented a wide-ranging program of bibliographical research and publication. Scholarly journals like *Incidences* (1962-69; *Co-Incidence* since 1969), PARTI PRIS, (1963-68), *Études françaises* (1965-), *Études littéraires* (1968-), *Voix et images* (1975-), *Jeu* and *Lettres québécoises* (1976-) published articles, interviews and documents.

Since 1960 all forms of literary study have been actively pursued in Québec. Dozens of anthologies have appeared for individual authors (Arthur BUIES, Albert LABERGE), for particular genres (Laurent Mailhot and Pierre Nepveu, *La Poésie québécoise des origines à nos jours*, 1980), or for the whole literature (Gilles MARCOTTE, *Anthologie de la littérature québécoise*, 4 vols, 1978-80). Numerous bibliographies have been compiled by John Hare (in several volumes of "Archives des lettres canadiennes"), by André Beaulieu and Jean Hamelin (*La Presse québécoise...*, 6 vols to 1984), by Pierre Pagé and Renée Legris for radio and television scripts, and by the staff of the Bibliothèque nationale du Québec in various fields. Each volume of the *Dictionnaire des oeuvres littéraires du Québec* (1978-) contains extensive bibliographies of authors and literary periods. Modern histories of Québec literature have been published by Gérard Tougas (1960), Pierre de Grandpré et al (1967-69) and Laurent Mailhot (1974), and biographical or critical studies of more than 50 Québec writers are now available. Réjean Robidoux and André Renaud (1966), Maurice Lemire (1970), Gérard Bessette (1973), Gilles Marcotte (1976) and Jacques Michon (1979) have written important studies of the Québec novel; Paul Wyczynski (1965), Marcotte (1969) and Pierre Nepveu (1979) have published major works on Québec poetry; and Jean-Cléo Godin and Mailhot (1970, 1980) have produced 2 collections of studies of contemporary Québec theatre. Sociologist Jean-Charles Falardeau has investigated (1967-74) relations between Québec society and its literature. Franco-Ontarian literature has been studied (1978-81) by René Dionne and Acadian literature by Marguerite Maillet et al (1979). Critical editions are still few in number (Nelligan, 1952; Saint-Denis Garneau, 1971; Crémazie, 1972-76; Nérée Beauchemin, 1973), but a major collective research project directed by Roméo Arbour, Jean-Louis Major and Laurent Mailhot has numerous editions in preparation. Other large collaborative projects under way are a critical edition of the works of François-Xavier GARNEAU (Paul Wyczynski and Pierre Savard), further volumes of the *Dictionnaire des oeuvres littéraires du Québec* (Maurice Lemire et al) and an augmented edition of the *Dictionnaire pratique des auteurs québécois* (Réginald Hamel, John Hare and Paul Wyczynski).

Despite the early efforts of Mgr Roy, French Canadian literature had been a marginal element of French literary studies in Québec university courses until the 1950s. During the following decade programs of specialization in French Canadian studies were established at

Laval, Montréal, McGill and Sherbrooke universities, and at the new Université du Québec from its founding in 1967. Québec literature is now the subject of as many university theses in Québec as is French literature. Elsewhere in Canada undergraduate courses in French Canadian literature began in the 1930s or 1940s and graduate study in the 1950s, but on a more limited scale than in Québec. In recent years Canadian COMPARATIVE LITERATURE (English and French) has become a popular field of study, particularly at the universities of Sherbrooke and Alberta.

DAVID M. HAYNE

**Lithuanians** Lithuania is a small country on the southeastern coast of the Baltic Sea. The first recorded Lithuanian immigrants to Canada were soldiers serving in the British Army in the early 19th century. At the end of the 19th century and in the early 20th century many Lithuanians (for the most part unskilled workers), fleeing Tsarist police or in an attempt to improve their livelihoods, immigrated to Canada and settled in Nova Scotia, western Canada and Ontario. The 1921 census recorded 1970 people of Lithuanian origin in Canada; another 5000 emigrated in the 1920s and 1930s. Most of these early Lithuanian immigrants found work on farms and the railways and in coal mines and factories in Toronto and Montréal. The largest number arrived after WWII, when thousands of Lithuanians, fleeing Soviet occupation, fled westward and found themselves in displaced persons' camps. Calling themselves *Dievo Paukštai* ("God's birds"), almost 20 000 of these refugee Lithuanians, many of whom were well-educated professionals, craftsmen and artists, made their way to Canada. In the 1981 census, 18 240 persons in Canada claimed Lithuanian ancestry, of which half also claimed to be able to speak Lithuanian. Most Lithuanian Canadians reside in Ontario, but substantial numbers are settled in Québec, Alberta and BC.

**Social and Cultural Life** Lithuanians have integrated easily into Canadian society but have maintained a strong sense of their former identity through a variety of clubs and of singing and dancing groups. Mutual aid societies were founded in the 1900s. All Lithuanian Canadians are considered members of the Lithuanian Canadian Community (1952), which has 20 chapters; its National Council in Toronto maintains links with the Lithuanian World Federation. The community holds Saturday classes across Canada in Lithuanian language, history, religion and folklore. Lithuanians are predominantly Roman Catholic.

Reading: Adam and Filomena Kantautas, *A Lithuanian Bibliography* (1975; Supplement, 1980).

**Littérature qui se fait, Une**, (1962), Gilles MARCOTTE's innovative study of the evolution of LITERATURE IN FRENCH, is an anthology of his early essays about major writers. Analysing the problems confronting authors who have outgrown the old values of church, family and the land without fully articulating new values, Marcotte identifies the experience of vertigo as a constant in urban fiction. The 19th-century poet was isolated from European cultural centres; the modern poet is a double or inner exile, searching for a language with which to inhabit the landscape. Marcotte suggests that Québec writers, successfully voicing the poetics of solitude, express alienation, despair and silence (Hébert, Blais, Jasmin) or escape into the worlds of death, dream and the past (Nelligan, Saint-Denis Garneau, Lozeau). With the appearance from 1949 onward of Roland GIGUÈRE's writings, the Québec poets' apocalyptic vision began to confront the physical realities of life. Larry Shouldice's anthology *Contemporary Quebec Criticism* (1979) offers a translation of the chapter "The Poetry of Exile."

MICHELLE LACOMBE

**Little, Jean**, writer, lecturer (b in Taiwan [Tai-chung], Formosa [Taiwan] 2 Jan 1932 to Canadian medical doctors). A successful contemporary writer of children's fiction, Little has won the Canada Council Children's Literature Award as well as foreign acclaim. She was educated at U of T and was a special education teacher before her royalties made her self-supporting. Almost blind since birth, she has nevertheless travelled to 27 foreign countries, and her books are widely translated abroad. Her 11 novels for young readers, and one book of poetry, treat with insight such universal themes as loneliness, alienation, intolerance, family stress, and the difficulties in interpersonal and intercultural relationships. Her best-known book is *From Anna* (1972), which has sold more than 130 000 copies.

MARY RUBY

**Little, Philip Francis**, lawyer, judge, politician (b in PEI c1822; d at Monkstown, Ire 22 Oct 1897). Arriving in Newfoundland in 1843, Little found himself in the midst of the Reform struggle for the right of local Roman Catholics to practise law. The constitution of the Law Society at the time excluded that denomination, which particularly grieved a Reform Party supported almost exclusively by Irish Catholic voters. Little's PEI bar membership enabled him to become Newfoundland's first practising RC lawyer, and Reformers greeted his arrival as a victory and championed his election to the Assembly in 1850. He soon unified various anti-government forces in demanding self-government. By 1855 he had become premier and attorney general in Newfoundland's first responsible administration. In a short-lived tenure as premier, Little helped stabilize political affairs and led a successful resistance against France's efforts to extend her traditional fishing privileges. Ill health forced his retirement to the bench in 1858, from which he soon retired to Ireland.

JOHN GREENE

**Little Theatre Movement** Canada's community theatres can be traced back to the beginning of settlement. All THEATRE during the French colonial period was amateur, whether produced by high society, the Jesuit and Ursuline schools, or the military garrisons. These 3 traditions extended into the 18th and 19th centuries, and paralleled the coming of the professional touring companies. Essentially, they were Canada's indigenous theatre until Confederation and beyond. Garrison productions in particular attained high standards while bolstering morale and raising funds for charity. Other highlights were the theatricals inaugurated in 1873 at Rideau Hall by Lord and Lady Dufferin, and maintained by various governors general thereafter. With Confederation, 1867, the British troops were gradually replaced by North-West Mounted Police. While the "Mounties" played the cultural role for some years, it was the gentry who assumed the theatrical mantle and the "Little Theatre Movement" as we know it took form. Perhaps the oldest surviving civic, amateur group was the Garrick Club in Hamilton, which began in 1875 and metamorphosed into Hamilton's Players' Guild in 1929. The French-speaking equivalents were literary and theatrical circles; one of the earliest, the Cercle Saint-Henri, dates from 1878. Paul Cazenueve, a Montréal professional, organized the first French amateur festival in 1908, the Concours de l'île. This was in response to Gov Gen Earl Grey's Musical and Dramatic Competition initiated in 1907, and held in Ottawa, Montréal, Toronto and Winnipeg until 1911. This contest would be the precedent for the famed Dominion Drama Festival (DDF), launched in 1933 by yet another governor general and one to be, Lord Bessborough and Vincent MASSEY.

The Little Theatre's golden era occurred between the 2 world wars. Inspired by European

troupes, such as André Antoine's Théâtre Libre in Paris and W.B. Yeats's and Lady Gregory's Abbey Theatre in Dublin, the movement began as an idealistic reaction to the crass professional fare on tour around the turn of the century. With the rise of films and radio after WWI, the commercial theatre declined and literally hundreds of community theatres blossomed across Canada to fill the vacuum. Hart House Theatre (1919-) became the model; some of the finest were the Vancouver Little Theatre (1921-) and Carroll Aikins's short-lived Home Theatre at Naramata, BC (1920-24); Toronto's University Alumnae (1918-); the Cercle Molière in St-Boniface (1925-); the Ottawa Little Theatre (1913-); the Montréal Repertory Theatre (1930-61) and Father Legault's Compagnons de Saint-Laurent (1937-52); and the Halifax Theatre Arts Guild (1931-). Perhaps only with director-playwright Herman Voaden's "symphonic expressionism" during the 1930s and the left-wing Theatre of Action (1935-40), both in Toronto, did the Little Theatre achieve some new directions. "Agit-prop" theatre was vital across the country throughout the Depression, but the idealism had evaporated and the early experimentation gave way to comic and sentimental plays reflecting the waning colonial ties of Empire, whether French, British or American.

In 1932 the DDF was created, and for a time it was Canada's national theatre, a network of community companies that assembled each spring in a different city for a final week-long competition that distributed coveted awards for acting, directing, design and best production. These finalists had been chosen by a system of regional runoffs. Both the preliminary and final festivals were adjudicated by bilingual professionals usually imported from Britain or France. Until 1951 it was a one-act play festival and did much to foster the writing of original short plays in Canada, as well as developing Canadian actors and directors for the profession. During WWII the DDF was shelved, and many felt it was this break in continuity that triggered the eventual downfall of the organization. The postwar DDF evolved into a full-length play festival, but the rise of professionalism reduced its importance. Increasingly, Canadian adjudicators were hired and colonial ties were broken. In 1967 the DDF distinguished itself by convening an all-Canadian contest at a time when Canadian plays were not seen regularly. The organization was renamed Theatre Canada in 1970 and lovingly documented in Betty Lee's history *Love and Whisky* in 1973. But these were vain attempts to capture former glory. Money and interest dried up, and the Ottawa office of DDF Theatre Canada closed in 1978.

Amateur theatres today continue to flourish in great numbers, usually in small communities or suburban areas and often still evincing a noticeable London or Parisian accent. They also function as focal points for multicultural expression (see THEATRE, MULTICULTURAL). Little theatres still serve an important training role and fill an avocational need. Without the Little Theatres and the DDF, the indigenous theatre would not have bridged the 2 wars. Being avocational, they were able to exist unsubsidized through a decade of economic depression. The roots of a national theatre in Canada were amateur, even though only a few groups, such as the Winnipeg Little Theatre, Workshop 14 in Calgary and the London Little Theatre, made the actual transition to professional status. See also DRAMA; STAGE AND COSTUME DESIGN.

DAVID GARDNER

**Liverpool**, NS, Town, pop 3304 (1981c), inc 1897, is situated near the mouth of the Mersey R., at the head of Liverpool Bay, 115 km SW of Halifax. It occupies the site of a Miqmaq village called *Ogomkegea* ("place of departure") and was

called Port Rossignol by De Monts. Named after the English city, Liverpool was a fishing centre for New England from at least 1670 but was not settled until 1759, by New Englanders of Pilgrim stock. During the American Revolution, when privateers ran rampant along the coast damaging shipping, the townspeople fitted out the famed Liverpool privateers. As it became a major seaport in the 18th century, its SHIPBUILDING industry flourished and with it the timber trade that sent products to Great Britain, the US and the Caribbean. The fall of the Bank of Liverpool, est 1871, ruined the county's fortunes and precipitated a long decline in the shipbuilding and timber industries. This prosperity was partially recovered with the establishment of the Mersey pulp and paper mill in 1929, and (reminiscent of the days of the privateers) with rum-running during the Depression. Fish and timber remain the town's main resources.

JEAN PETERSON

**Liverwort**, small terrestrial PLANT belonging, with mosses and hornworts, to division Bryophyta. Bryophytes show alternation of generations, ie, have 2 stages in the life cycle: a free-living, perennial gametophyte (sexual generation) and a short-lived sporophyte (asexual generation) that remains attached to and dependent on the gametophyte. The liverwort gametophyte is either a leafy stem or a thallus, ie, a flat, leafless expanse of cells (resembling the lobes of the liver, hence name). The horizontally growing gametophytes have rhizoids (structures analogous to roots), which serve to attach them to the surface on which they grow. Most leafy liverworts have stems with 2 lateral rows of leaves; many species have a third row of reduced leaves on the underside of the stem. Liverwort sporophytes have a foot, embedded into the gametophyte tissues, and a spore capsule, normally raised above the gametophyte by a fragile stalk and persisting for only a day or so. Spores are released when the capsule wall ruptures, generally into 4 sections. Inside the capsules are hygroscopic cells (elaters), which help to disperse the spores. Many liverworts reproduce asexually by gemmae, small groups of cells produced on the thallus or leafy stem. Since they lack any conducting tissues (xylem, phloem), liverworts mainly absorb water directly through leaves, stems or thallus. The 2 theories of liverwort evolution state that they developed from a primitive group of vascular plants (ie, those having true conducting tissues) or from some green algal ancestor. They belong to a group that lost much evolutionary potential by having the gametophyte generation dominant and by lacking conducting tissues, so that their

Liverwort *Blepharostoma trichophyllum*. Liverworts are rarely abundant in Canada, except in the temperate rain forests of coastal BC, where they can dominate ground cover and clothe the branches and tree trunks (courtesy National Museums of Canada/National Museum of Natural Sciences).

size is greatly limited (most range from a few millimetres to 20 cm). Liverworts grow mostly in moist, shady places on rocks, trees, rotten wood, humus or soil. In Canada, they are rarely abundant in ground vegetation except in the temperate rain forests of coastal BC, where they can dominate ground cover and densely clothe branches and tree trunks. Over 7000 species occur worldwide, about 85% having leafy gametophytes.

GUY R. BRASSARD

**Livesay, Dorothy**, poet (b at Winnipeg 12 Oct 1909). A writer of journalism, short fiction, autobiography and literary criticism, Livesay is best known as a strong, sensitive poet dealing as capably with public and political issues as with personal and intimate emotion and reflection. She was senior woman writer in Canada during active and productive years in the 1970s and 1980s, and 1983 marked her 55th year as a published poet. Her mother, Florence Randal Livesay, journalist, poet and translator, and her father, J.F.B. Livesay, general manager of Canadian Press, encouraged her literary efforts from her first publication, *Green Pitcher* (1928). Educated at U of T and the Sorbonne, she worked in left politics during the 1930s, and subsequently won Gov Gen's Awards for *Day and Night* (1944) and *Poems for People* (1947). She trained as a teacher, taught in Zambia 1959-63 and has served as university writer-in-residence. Her prolific publication continues undiminished, and her lifelong concern for women's rights and the identity of the woman artist has ripened with time. A major collection of her poetry, *Collected Poems: The Two Seasons*, was published in 1972.

R.D. MATHEWS

**Liveyer** (also liveyere, livyer, livier, liver), a Newfoundland term applied historically to a permanent resident of Newfoundland or Labrador, one who was not a migratory resident of the coast during the summer fishing season as was the BYE-BOAT keeper or Labrador stationer. Compared with the island's summer population, the liveyers were small in number throughout the 1600s, fewer than 1 in 6 summer residents remaining year-round. This component expanded during the 18th century so that by 1800 about 90% of the summer population of Newfoundland remained through the winter (see FISHERIES HISTORY).

ROBERT D. PITT

**Lizard**, common name for members of the most diverse of the 5 groups of living REPTILES. Most lizards occur in warm, sunny, dry climates. Some 3307 species have been recorded. Six types, ranging from 8-21 cm long, occur in Canada: northern alligator lizard (*Gerrhonotus coeruleus principis*) in southern BC, including southern Vancouver I; western skink (*Eumeces skiltonianus*) in south-central BC; pigmy horned lizard (*Phrynosoma douglassii douglassii*) in the extreme S of the Okanagan Valley; eastern short-horned lizard (*P. d. brevirostre*) in SE Alberta and SW Saskatchewan; northern prairie skink (*E. septentrionalis septentrionalis*) in SW Manitoba; and 5-lined skink (*E. fasciatus*) in SE Ontario. Lizards are included with SNAKES in order Squamata of subclass Lepidosauria. Both have dry skin covered with epidermal scales. Most lizards have legs, a long tail, movable eyelids and well-developed ears. Some have adopted snakelike habits and may be very long and slender, with tiny or not externally visible legs. Some burrowing lizards have lost the eyes and ears. Snakes are thought to have evolved from lizard ancestors which underwent reduction of limbs, eyes and ears while adapting to a burrowing life-style.

Most lizards produce eggs which must be fertilized inside the female. Mating is preceded by complex courtship behaviour and by display and combat among males to defend territories and among females against each other. Most liz-

ards form a leathery shell around eggs, which are laid in a protected site and abandoned by the female. In some species (eg, northern alligator lizard, horned lizards), females retain eggs inside their bodies until fully developed young are born. Some whiptail lizards and lacertas occur only as females which lay fertile eggs without mating, one of the few cases of parthenogenesis (a form of asexual reproduction) found among VERTEBRATES. The adaptation may have developed to allow small numbers of lizards to use small, isolated patches of suitable habitat.

Most lizards are predatory, feeding on small invertebrates. The S American tegus and Old World monitor lizards will eat other reptiles and even mammals. The Komodo dragon (a 3.5 m monitor), the world's largest lizard, can kill deer and wild pigs. Tropical New World iguanas and some Old World agamas are the only herbivorous lizards.

Despite their small size, most lizards are capable of fast movement and usually will easily outdistance a predator or human pursuer to cover. The limbs are held in a sprawling position directed outward from the sides, but when lizards run, the body is raised clear of the ground. A few, eg, Australian frilled lizard and basilisks of Central America, have large hind legs and can run with forebody and forelegs off the ground and the tail elevated as a counterweight. Two species, the gila monster of southwestern US and the Mexican beaded lizard, are poisonous. Their alertness, complex behaviour and often bizarre shapes, colours and colour patterns make lizards a rewarding and fascinating subject for study.

K.W. STEWART

**Ljungh, Esse Willem**, radio-drama producer, actor, director, teacher (b at Malmö, Sweden 1904). Educated in Sweden in arts and law, he emigrated to Canada in 1927, worked as a farmhand for 2 years and acquired his own farm near Radville, Sask. After losing his farm during the Depression he moved to Winnipeg, to edit a small Swedish-language farm paper. He acted in the Winnipeg Little Theatre and during the late 1930s became interested in radio, first as an actor, then as audio technician, producer and director. He became famous for his imaginative use of sound, artistic integration of music and inspiring direction of actors. He joined the CBC in Winnipeg in 1942 and was transferred to Toronto in 1946. With Andrew ALLAN and J. Frank Willis he became one of Canadian radio's leading producers. His work ranged from the prestigious Wednesday Night series to the popular "Jake and The Kid" programs written by W.O. MITCHELL, the long-running soap opera "Brave Voyage" and the musical "G.E. Hour." He tried TV in the late 1950s but returned to radio and was national supervisor of radio drama

when he retired in 1969. He was awarded the *Diplôme d'honneur* by the Canadian Conference of the Arts, the John Drainie Award for distinguished contribution to Canadian broadcasting, and the Order of Canada.

JOHN L. KENNEDY

**Lloyd, Gweneth**, ballet director, choreographer, teacher (b at Eccles, Eng 15 Sept 1901). As founding director and choreographer of what became the ROYAL WINNIPEG BALLET, Lloyd exemplifies the spirit of initiative and imagination that helped build Canada's cultural institutions. Trained first as a physical education instructor in England, she later studied Greek dance and BALLET. In 1927 she opened her own dance school in Leeds. In 1938, with former student Betty FARRALLY, Lloyd immigrated to Canada, settling in Winnipeg. There she quickly opened a school and Winnipeg Ballet Club — from which a full-fledged professional company developed. Apart from a National Film Board production of Lloyd's *Shadow on the Prairie* (1952), little record remains of the more than 30 ballets she choreographed for her company, 1939-52. The records of her ballets were destroyed in a 1954 fire at the Royal Winnipeg's studios. Lloyd left Winnipeg in 1950 to found a school in Toronto. In 1946 she helped establish, and began a long association with, the BANFF CENTRE'S summer dance program, becoming director of the program in 1950. With Farrally, Lloyd resettled in Kelowna, BC, in 1957, opening a new school. Lloyd's many honours include the Order of Canada (1977).

MICHAEL CRABB

**Lloyd, Woodrow Stanley**, educator, politician, premier of Saskatchewan (b near Webb, Sask 16 July 1913; d at Seoul, South Korea 7 Apr 1972). Lloyd was best known for his fight for free universal medical care in Saskatchewan and for his contributions in the field of education. From 1939 to 1944, as vice-president and then president of the Saskatchewan Teachers' Federation and on the executive of the Canadian Teachers' Federation, Lloyd worked for better teaching conditions and higher standards. As minister of education in the CCF government 1944-60, he introduced larger school units to improve financing and facilities and articulated the "lighted school house" concept of continuing education for all.

He became premier 7 Nov 1961, inheriting a bitter dispute over medical care which culminated in the withdrawal of doctors' services on 1 July 1962. He refused to abandon the principle of a universal government health plan, and his calmness, restraint and dignity in an explosive situation led to a settlement on July 23. Lloyd resigned as leader of the Saskatchewan NDP on 6 July 1970 and left politics in 1971. He became representative of the UN Development Program in South Korea.

JEAN LARMOUR

**Lloydminster**, Alta-Sask, City, pop 15 031 (1981c), is located on the Saskatchewan-Alberta border, 300 km W of Prince Albert and 235 km E of Edmonton. It came into being with the arrival of the BARR COLONISTS in 1903. "Britannia Settlement" was the name in common usage before it was changed to Lloydminster in 1903 to honour Rev George Exton Lloyd, an Anglican minister who guided the destiny of the colonists after the departure of Rev Isaac Barr. When Saskatchewan and Alberta were created in 1905, the townsites found itself divided between the

Lobster boats, Skippers Pond, PEI. Several Atlantic coast communities are dependent on the lobster fishery (photo by Richard Vroom).

2 provinces. The problem was solved in 1930 when the Saskatchewan town of Lloydminster and the Alberta village of the same name were amalgamated as the town of Lloydminster by order-in-council in both provinces. The town became the tenth city of both provinces in 1958 when it was raised to city status. Natural resources in the area include oil, natural gas, salt, gravel and coal.

DON HERPERGER

**Lobster**, term applied to 4 groups of decapod ("ten-footed") CRUSTACEANS: the coral, slipper, spiny and clawed lobsters. They comprise 163 species. The American lobster (*Homarus americanus*), found along the Atlantic coastline and Continental Shelf from Labrador to N Carolina, is the only species occurring in Canadian waters. It attains the greatest weight of any living arthropod: the largest male *H. americanus* on record weighed over 19 kg. Lobsters are not native to the Pacific coast of Canada, but from 1896 to 1966 there were at least 11 separate introductions of American lobsters into BC waters, and even more along the US West Coast. In Canada, introductions probably totalled no more than 5000 adults. Although American lobsters seem able to survive in the Pacific, there is no evidence that any of the introductions has resulted in a reproducing population. The clawed *Homarus* genus is the *homard* of French cuisine. The clawless spiny lobster [*Fr langouste*] is also known as CRAYFISH. See CRUSTACEAN RESOURCES.

DE AIKEN

**Lobstick** (or lopstick) is a tall, conspicuously situated spruce or pine tree with all but its top-most branches stripped or lopped off. This was done by northern Indians, and later by voyageurs, to turn trees into talismans, landmarks or memorials.

JOHN ROBERT COLOMBO

**Local Elections** are the procedures by which citizens in a community choose the MUNICIPAL GOVERNMENT. Federal and provincial election systems are generally designed by a nonpartisan independent agency, and since the 1960s responsibility for redesigning constituency boundaries for local elections has sometimes been delegated to independent boundary commissions (see REDISTRIBUTION), reducing the possibilities for gerrymandering or for the drawing of election rules to the advantage of incumbents.

Constituency boundaries, known as "wards" in municipal elections, may conform to one of 3 types. In smaller urban centres, election at-large is common; the municipality as a whole is the constituency. Vancouver is the largest city using this system, which works to the advantage of corporate, professional and blue-ribbon civic groups. To reduce the costs of city-wide campaigning, other large cities such as Edmonton, or Winnipeg prior to 1971, have adopted division into a few multi-member "strip" wards that

do not respect natural geographic or community boundaries. Wards may also be drawn in a "block" design to encompass neighbourhoods, a system favoured by left-of-centre politicians and spokesmen for community associations and some minority groups. Montréal, Toronto and now Winnipeg elect on this basis.

Canadian local elections are nominally non-partisan. City elections, unlike provincial and federal elections, are held at a fixed time (designated by the Municipal Government Act). Parties are not identified on the ballot (names are listed alphabetically), and most candidates are elected as independents or are loosely attached to a local party. Voter turnout is low (30% is considered good), and incumbents enjoy a considerable advantage because voters recognize their names. At-large elections magnify these problems because the voter must make so many ballot choices. To become a candidate usually requires only a nominal cash deposit and the filing of a petition on the candidate's behalf by a small number of electors.

Historically the right to vote was tied to property holdings, and the property had to be of a certain value (although this restriction became unimportant in the 20th century because the required values were not adjusted for inflation). The tenant of a house is a property holder; a lodger is not. An apartment dweller may or may not be considered a property holder, depending on the relevant legislation. The practice of plural voting, ie, being entitled to vote in each municipality or ward (sometimes in each polling division) where property is owned, was widespread until the last 2 decades. Nonresident property owners still possess a local vote in several provinces (eg, Ontario). Since the mid-1960s, the provinces have widely extended the FRANCHISE so that it is virtually universal and a right of citizenship. There is frequently a municipal enumeration before an election. Votes are normally tabulated on a plurality basis, and the person (or persons, where there is a multi-member ward or at-large election) receiving the most votes is declared elected; in the past, various provinces, eg, Manitoba, have permitted their municipalities to employ a form of proportional representation using a transferable ballot. Finally, unlike federal and provincial politicians, municipal councillors are elected for an established term of 2 or 3 years, which may have policy implications: eg, unpopular or controversial decisions would not normally be expected of a council in the months immediately prior to the fixed voting date. See CITY POLITICS.

JAMES LIGHTBODY

Reading: D.J.H. Higgins, *Urban Canada: Its Government and Politics* (1977).

**Local Government**, the level of government below the provinces. The most important local governments are the MUNICIPAL GOVERNMENTS. Under the constitution, the provinces have exclusive jurisdiction over municipal affairs (see

MUNICIPAL-PROVINCIAL RELATIONS). Each province has established a slightly different system of municipal institutions (see MUNICIPAL ADMINISTRATION), but there is a strong family resemblance among these systems, because they are all derived from British or American models. Canada's first uniform municipal system was established in 1849 in what was then Canada West [Ontario]. The other provinces followed the Ontario example, and most of the populated area of Canada is now organized into municipalities, although there are great tracts of sparsely populated land that remain unincorporated for municipal purposes. In the latter areas, local administration falls to the PROVINCIAL GOVERNMENT or the territorial government, although in some places quasi-municipal institutions, such as improvement districts, have been formed.

A local government is distinguished from a local administrative office of the province in that it is chosen by and held accountable to the local community, conventionally by means of LOCAL ELECTION. Other local administrative bodies may also be elected. This is generally true not only for SCHOOL BOARDS, but may also be true for public utilities commissions, parks boards and other special-purpose agencies. The municipal council is therefore not the only elective local government in most Canadian communities. There is a further complication in that many other more or less autonomous local agencies — harbour commissions, library boards and police commissions — have been established by the provincial or federal governments or by the municipalities themselves. However they are constituted, these agencies often operate like independent local governments. In no Canadian community is the situation quite similar to that in metropolitan Chicago, where more than 1000 special-purpose and general-purpose local governments are at work, but the system of local government is everywhere complex and is unique to the community concerned. The bigger the community, the more complex the system: in metropolitan Toronto, researchers have identified more than 100 authorities that could be classified as "local governments."

Despite these complexities, the municipalities remain the most important elements in systems of local government. In most places, the municipalities are the only general-purpose governments at the local level and the municipal council is therefore usually the focus of attention in local politics. The council is expected to concern itself with matters of general interest to the community and to represent the community in its relations with the outside world. The powers granted to the municipalities under the Municipal Acts of the various provinces reflect this, for municipal councils are the repositories for local government functions not assigned to other agencies. The multiplication of special-purpose bodies at the local level itself is testimony to the role of the municipalities, since these bodies have been formed to relieve the general-purpose governments of the ostensibly specialized functions that they are ill equipped, as general governments, to perform.

In each province, there are different classes of municipalities. The most important distinction is between urban and rural authorities. The latter — called TOWNSHIPS, parishes, districts, rural municipalities, etc. — have the most limited functions. Generally, their most important duty is to maintain roads. People in rural areas have rarely been willing to pay for very active local government. On the other hand, in urban areas where there is a need and demand for more government activity, the situation is different. Urban municipalities are classified by size as villages, towns and cities; to be reclassified upwards means an increase in prestige and in the powers of the municipal council. City councils are the most active municipal governments

and have played a major role historically in developing new public services and the regulations necessary to modern life.

The relative increase in the activities of the provincial governments since 1945 is partly the result of an effort to make city-quality services available elsewhere. In the course of this effort, functions once performed at the municipal level (if they were performed at all) have been taken over by the provincial governments. This applies particularly to social services. What remains at the core of municipal activity is a set of economic functions. Municipal councils have always been expected to serve as agencies for local economic development. Most of them regard it as their first responsibility to provide the infrastructure for the local economy, eg, physical facilities such as roads and sewers, and basic services such as POLICE and fire protection. Since 1945, the urban municipalities in particular have attempted to play a more positive role by using physical planning controls to set the pace and determine the form of economic development. Planning issues have thus become central to municipal politics.

Municipal councils and other elective local authorities in Canada are generally quite small. Most comprise from 5 to 15 members; only the largest municipalities are liable to have bigger councils. It is usually feasible for the council (or school board) to act as its own Cabinet, with the mayor (or chairman) taking the leading role. Because most councillors are theoretically non-partisan, collegial decision making is possible. Most councils divide themselves into committees for the different municipal functions, and this eases the burden on the central body. The traditional tendency to delegate duties to semi-autonomous agencies (whose boards are largely appointed by the municipal councils) further reduces the scope of responsibility at the centre. Since the beginning of this century, critics have been pointing to the problems arising from this dispersal of municipal responsibilities and from the connected emphasis on lay participation in administration. As a result, there have been constant efforts to make local government more professional and to centralize managerial control. In some municipalities, full administrative responsibility is given to a single manager or administrative board, acting under the political direction of the council. Elsewhere — especially in large communities — the function of executive control has been taken over by a committee of the council. In either case, ordinary councillors have become more removed from day-to-day business and stronger managerial control has been established over diverse activities.

Municipal governments must generally depend on real property taxes for most of their own revenues. This limits their financial capacity, and forces them to rely on provincial grants, which limit municipal discretion. Indeed, the municipalities and other local governments have been used increasingly as mere administrative agencies of the province and have been subjected as such to tight controls. Even when local governments are acting independently, using their own revenues for their own purposes, they are subject to the laws and regulations of the province. These may severely restrict local freedom of action, and force the governments concerned to seek provincial approval for capital spending, land-use regulations and other items of local concern. The provincial department of municipal affairs is normally the most prominent agency of control, but other departments and administrative tribunals (eg, the Ontario Municipal Board) are also involved. Local governments simply do not have the autonomy in relation to the provinces that the latter enjoy in relation to Ottawa.

Many critics have claimed that local government could be strengthened by consolidating

existing authorities into larger units with wider responsibilities. This would mean eliminating most, if not all, of the special-purpose local governments and redrawing municipal boundaries to bring suburbs and satellite towns under the control of city councils. In rural areas, whole regions or counties might be unified. However, the provinces have little incentive to create local governments that would rival them in power and prestige. Thus, the trend throughout Canada has been to make comparatively minor adjustments in boundaries and functions, and to preserve local government arrangements in the face of socioeconomic change.

The most obvious recent development has been the double-tiering of municipal government. The COUNTY councils of central Canada have traditionally provided a second-level of municipal government outside the cities. These councils are composed of representatives of neighbouring rural and small urban municipalities and exist to provide common facilities and services. This model for joint action was not adopted in major urban areas until 1953, when the municipality of Metropolitan Toronto was established. The new authority was in effect a metropolitan county council for Toronto and its suburbs. To deal with problems of metropolitan development and planning, it was given greater powers than any ordinary county, and it was successful enough to inspire many imitators in Canada and elsewhere. Most of the major cities in Canada now have metropolitan or regional governments of this sort. The model has also been applied outside the metropolitan areas to strengthen or replace existing county government (as in Ontario) or to create a new level of regional municipal government (as in BC).

The creation of new units of regional municipal government reflects a more general tendency in the past few decades to enlarge the scale of local administration. Health, education and welfare administration — traditionally entrusted to special-purpose local authorities — has generally been regionalized, if not provincialized. Thus the independent local authorities that remain in these fields tend to be on a larger scale. The municipalities have been less affected by consolidation than have the school boards, in that generally they have maintained their existence even when over-arching REGIONAL GOVERNMENTS have been established. Some consolidation has occurred, especially of very small municipalities, but there are still 4000 to 5000 municipal governments in Canada, and new ones continue to be formed. It is difficult for provincial governments to persuade local communities to take responsibility for their own affairs without organizing municipal councils. Once created, these councils become symbols of local autonomy which are not easily eliminated.

To those concerned about comprehensive planning and administrative co-ordination, the fragmentation of authority at the local level among thousands of municipalities and even more numerous special-purpose bodies is the source of much anxiety. However, it is not clear that consolidation would increase the efficiency or effectiveness of local government, because bureaucratic centralization creates its own problems. Whatever advantage there is in the present system arises from the opportunities it affords for local initiative and citizen participation. To simplify present arrangements and consolidate authority in the hands of strong regional councils would be to close off many of these opportunities. This may occur regardless, but so long as the demand remains for effective local control over local public activities, the system of government at this level will remain as complex as it is now.

WARREN MAGNUSSON

Reading: D.J.H. Higgins, *Urban Canada and its Government* (1977); Warren Magnusson and Andrew Sancton, eds, *City Politics in Canada* (1983).

**Lochhead, Kenneth Campbell**, painter (b at Ottawa 22 May 1926). He attended the Pennsylvania Academy of Fine Arts, 1945-49, and in 1950 was appointed director of the School of Art, Regina. He was one of the REGINA FIVE and was instrumental in the establishment of the Emma Lake Workshop for Artists. His non-referential works of the 1960s reflected the New York aesthetic imparted via workshop leaders, such as American artists Barnett Newman and Kenneth Noland, and he was included in Clement Greenberg's 1964 "Post-Painterly Abstraction" exhibition. Lochhead taught at U of Man 1964-73, York U 1973-74 and U of Ottawa from 1975. In the 1970s he reintroduced recognizable subject matter into paintings which nevertheless remain largely intuitive, colourist exercises.

NORMAN ZEPP

**Lock, Édouard**, choreographer (b at Casablanca, Morocco 3 Mar 1954). He first attracted attention with *Rémus* in 1978, choreographed for Nouvelle aire. He founded Édouard Lock and Dancers 1981 (later Lock/Danseurs; currently LA LA LA). His major works include *Lily Marlene in the Jungle* (1981), *Oranges* (1982) and *Businessman in the Process of Becoming an Angel* (1983), a musical. Lock aspires not to aesthetics in style but to maximum risk, emphasizing high energy, contradictory physical impulses and gestural detail. A predilection for on-stage litter indicates that he may be veering towards performance art. He received the Jean A. Chalmers Award for choreography in 1982.

KATI VITA

**Locke, John Lambourne**, astronomer (b at Brantford, Ont 1 May 1921). After service in the Royal Canadian Navy in WWII, Locke graduated from U of T in 1946. He received his doctorate in 1949 and was appointed astrophysicist at the Dominion Observatory, Ottawa, that year and chief of its stellar physics division in 1959. From 1959 until 1962 he was officer in charge of the new Dominion Radio Astrophysical Observatory near Penticton, BC. In 1966 he was appointed radio astronomer in the radio and electrical engineering division of the NATIONAL RESEARCH COUNCIL. He became director of the division in 1970 and first director of the council's Herzberg Inst of Astrophysics in 1975. He was a member of the Canadian team that in 1967 successfully combined simultaneous observations from radio telescopes thousands of kilometres apart. The team received a Rumford Premium from the American Academy of Arts and Sciences.

A.H. BATTEN

**Lockhart, Grace Annie**, pioneer of women's university education (b at Saint John 22 Feb 1855; d at Charlottetown 18 May 1916). On 25 May 1875, Lockhart received a bachelor of science and English literature from Mt Allison Coll, Sackville, NB, and thus became the first woman in the British Empire to receive a bachelor's degree. Although her later life was spent in a more conventional role, as the wife of the Methodist minister J.L. Dawson, Lockhart's academic achievement as a student provided clear evidence of the justice of women's claim to full rights in the field of higher education.

JOHN G. REID

**Locomotives and Rolling Stock** A locomotive is a self-propelled vehicle which hauls non-powered vehicles on railway track. The first locomotive used in Canada was the *Dorchester*, built by Robert Stephenson and Co in England (1835). It ran between La Prairie and St-Jean, Qué, on Canada's first railway, the CHAMPLAIN AND SAINT LAWRENCE (1836). It had a 0-4-0 wheel arrangement (no front truck, no rear truck, 4 main wheels) with 1.2 m diameter driving wheels. In working order it weighed 5½ t and ran at an average speed of 23 km/h. The first locomotive to be constructed in Canada was built by the James Good family (1853) of To-

ronto. Named *Toronto*, the locomotive had a set of 4 driving wheels and 4 small front wheels for better travel through curves. This wheel configuration, 4-4-0, was referred to as the American type and was the predominant style of locomotive during the 1850-90 period. By 1887 the CANADIAN PACIFIC RAILWAY owned nearly 400 of these locomotives.

The Pacific locomotive was developed (1901) to provide faster service for passenger trains. This locomotive had larger cylinders than the American, greater boiler capacity and tremendous hauling power. During the first part of the 20th century locomotives continued to grow in size and power output. In 1927 CANADIAN NATIONAL RAILWAYS introduced the Northern locomotive. It had wheels in 4-8-4 configuration and was the largest freight and passenger locomotive east of the Rockies. At about the same time, CPR brought into service 2 types of locomotives, the Hudson and the Selkirk. The Hudson locomotive was used for high-speed passenger service. The Selkirks were the largest locomotives to operate in Canada and were used in the Rockies between Calgary and Kamloops.

The diesel engine, invented by Rudolf Diesel in the late 1890s, was first used in a diesel-electric locomotive in the US (1924). CN Railways operated the first diesel-electric locomotive in Canada. Built in 1929, it was actually 2 locomotives coupled, developing 950 kW of power each. Until the end of WWII diesel locomotives in use in Canada were low-horsepower switching engines. After the war railways began to use diesel-electric locomotives for mainline freight and passenger service. By 1960 both CN and CP railways had stopped using steam locomotives in regularly scheduled trains.

The diesel-electric locomotive uses a diesel engine to power an electric generator. The generator provides electrical energy to drive the motors on each locomotive axle. Diesel-electric locomotives are more economical to operate than steam locomotives. They have higher fuel efficiency, lower maintenance requirements and fewer breakdowns. Several units can be coupled for long trains, requiring only one engineer to operate all of them. Today most freight trains are hauled by units of approximately 220 kW (3000 hp) with 4 or 6 axles. Locomotives for passenger trains have higher gearing that gives them a higher normal operating speed.

The first electric locomotives in Canada went into service in 1906, when the St Clair tunnel at Sarnia was electrified to overcome problems with steam locomotive smoke. The Mount Royal tunnel in Montréal was electrified in 1915. Electric locomotives are clean and have low maintenance. They are not dependent on a single energy source; they can use electricity generated by coal, oil, nuclear or hydro power. Electric locomotives have the ability to withstand overload power levels for short periods, making them well suited to mountainous regions where steep grades and heavy trains predominate. Their fast acceleration makes them preferable for passenger service. They have 2 major disadvantages: they can run only where overhead wire (catenary) for electric power has been installed; and they and their necessary power supply equipment are expensive and thus economical only in regions of heavy traffic.

**Rolling stock** consists of nonpowered railway cars for the transport of freight and passengers. On the earliest railways, passenger cars were merely modified stagecoaches. Freight cars were of 2 basic types: open-deck flatcars and enclosed boxcars. Until 1910 most rolling stock was constructed of wood on iron or steel frames. Today, freight and passenger cars are constructed of steel and aluminum. Modern freight cars are capable of carrying up to 100 t of freight. Freight cars are of a wide variety: boxcars for

general merchandise; tank cars for liquids; refrigerator cars for perishable goods; hoppers and covered hoppers for bulk commodities; flatcars for large machinery, containers and highway trailers; tri-level automobile carriers; plus various special-purpose freight cars. The caboose, the last car in the freight train, provides office space for the train crew as well as a position from which to observe the train.

The passenger coach is the standard piece of railway passenger rolling stock, seating usually 75 to 90 people. Commuter cars used in short runs have higher-density seating. Club cars are the premium of passenger rolling stock, providing more room per passenger as well as an attendant for service. For long-distance rail travel, sleeping cars provide berths and small rooms for overnight accommodation. On-board meals are provided in a cafeteria car, and at the seat in club cars.

Locomotives are constructed in Canada by 2 companies: Bombardier and General Motors Diesel. Bombardier of Montréal is the descendant of Montréal Locomotive Works, a builder during the era of steam locomotives. General Motors Diesel of London, Ont, builds locomotives from the designs of the Electro-Motive Division of General Motors in the US. Freight cars are constructed in Canada by the following companies: Hawker Siddeley (with plants at Thunder Bay, Ont, and Trenton, NS); National Steel Car Corporation of Hamilton, Ont; Procor, Ltd, of Oakville, Ont (builders of tank cars); and Marine Industries of Sorel, Qué. Passenger cars are constructed by Bombardier and Hawker Siddeley.

Future designs of locomotives will be influenced by fuel economics. Diesel-electric locomotives will probably be made more fuel-efficient. Electric locomotives may be placed in service as the price of diesel fuel increases. Research is being carried out on the design of a modern computer-controlled steam locomotive using coal as fuel. For passenger service, higher-speed trains will be placed in service, perhaps in advanced electric or magnetically levitated and propelled trains. Freight cars will become more lightweight in construction. Containerization of cargo will increase the ability to transfer freight between the various transportation modes. Highway tractor-trailers with railway wheels for train service will reduce the need for flatcars and hence reduce train weight. JEFFERY YOUNG, CANADIAN INSTITUTE OF GUIDED GROUND TRANSPORT

**Locoweed**, common name for plants of genera *Astragalus* and *Oxytropis* of pea family (Leguminosae), notorious for causing livestock poisoning. *Astragalus* is also known as milk vetch. Both genera have pealike flowers and featherlike leaves. *Oxytropis* flowers have lower "keel" petals prolonged to points; plants are usually stemless. *Astragalus* species have blunt keels; stems are evident. Both grow in clumps of spikes; height and colours vary. Over 1000 *Astragalus* and about 300 *Oxytropis* species are found worldwide, 40 and 15, respectively, in Canada. Arctic or alpine species are unimportant to domestic animals. The most important Canadian plains species are *Oxytropis lambertii*, southern Manitoba and Saskatchewan; *O. campestris*, BC to Manitoba; and *O. sericea*, Alberta. Poisonous *Astragalus* species include *A. bisulcatus*, *A. racemosus* and *A. pectinatus*, all found in Canada. *Astragalus* species accumulate selenium from soil, but the toxic principle is not clearly established. "Loco," Spanish for "crazy," refers to peculiar movements of poisoned horses. In Canada most poisonings occur among cattle. See POISONOUS PLANTS. J.M. GILLET

**Locust**, see GRASSHOPPER.

**Lodge, Rupert Clendon**, philosopher (b at Manchester, Eng 1886; d at St Petersburg, Fla 1 Mar 1961). He went to the US in 1914, then to U

of A and finally to U of Man, where he spent most of his career. Lodge was the most widely read of all philosophers in Canada and his books were popular in the US. *An Introduction to Logic* (1920) portrays his commitment to idealism, though his later philosophy of pluralism was his public trademark. Throughout a series of books he developed his tripartite theory: there will always be 3 kinds of responses to every philosophical question — that of a realist, a pragmatist and an idealist. His publications include several works on Plato. Lodge's theory of philosophical pluralism is applied rigorously in his books *The Questioning Mind* and *The Philosophy of Education* (1937), *The Philosophy of Business* (1945) and *Applying Philosophy* (1951). *The Great Thinkers* (1949, 1964) continues to be consulted.

ELIZABETH A. TROTT

**Log Houses** are associated with pioneer settlement, past and present, and Canada's forests provided ready building material. West Coast Indians used log frames for their large plank houses long before the arrival of European settlers. Most of the first farmhouses in NEW FRANCE were constructed of posts driven vertically into the ground, a technique used in NW France and by some local Indians. Later, the posts were placed on a sill or foundation above ground level. This method was displaced by the *pièce-sur-pièce* technique: roughly squared, relatively short logs were laid horizontally, to meet at rabbeted corners. Tapered ends of the logs fitted into slotted vertical posts at house corners and along the walls. Fur traders carried this technique into the Red River valley and the HBC adopted it as its standard building form ("Hudson's Bay Company frame") for its posts across the continent.

A wide variety of size and complexity in log houses characterized southern Ontario settlements. LOYALIST settlers introduced "Pennsylvanian" or "American" log houses, with horizontal logs interlocked at the house corners by a variety of techniques, a style originating with 17th-century Swedish-Finnish colonists on the Delaware R, refined by later German settlers and adopted by far-ranging Scots-Irish pioneers. Although most log houses were later replaced by houses constructed of other materials, many are still occupied as residences. Later immigrants to the PRAIRIE WEST often patterned their first log houses after customary forms of their homelands (eg, Ukraine). In the subarctic forests, log houses still provide comfortable shelter for trappers and woodsmen. Their attractive appearance and thermal efficiency make them popular not only with summer cottagers across Canada, but among many people with a renewed interest in traditional housing.

**Logan, John Daniel**, writer, teacher (b at Antigonish, NS 2 May 1869; d at Milwaukee, Ill 24 Jan 1929). Though engaging in many occupations during his life and publishing poetry, literary and music criticism, literary history and composition texts, Logan is probably most renowned for his claim to have taught the first university course on Canadian literature (at Acadia in 1915) and for a ferocious battle he conducted with Archibald MacMechan of Dalhousie about the teaching of Canadian literature there. A brilliant student, completing BA, MA and PhD degrees, he worked in advertising, archives and journalism as well as teaching many years in American colleges and universities.

R D MATHEWS

**Logan, Mount**, elev 6050 m, is Canada's highest mountain and the second highest in N America after Mt McKinley. Situated in the Yukon's St Elias Range near the Alaska border, it has

Mt Logan, named for Sir William Logan, is the highest mountain in Canada (photo by Richard Harrington).

3 summits. One of the most massive mountains in the world, it rises above surrounding glaciers to an immense snow-and-ice plateau at 5200 m, stretching 16 km E to W, and at 3050 m the mountain measures 38 km E to W. The Arctic Institute of N America conducts high-altitude research from a high camp on the mountain each summer. Well hidden from early explorers, it was first sighted by I.C. Russell in 1890. It was named for W.E. LOGAN, founder and long-time director of the Geological Survey of Canada. The largest logistical MOUNTAINEERING expedition in N America succeeded in climbing it for the first time in 1925. The climbing team of A.H. McCarthy, W.W. Foster, F. Lambart, A. Carpe, H. Hall, R.M. Morgan, N.H. Reid and A. Taylor left McCarthy, Alaska, May 12. All except Morgan and Hall made the summit on June 23.

GLEN BOLES

**Logan, Sir William Edmond**, geologist, first director of the GEOLOGICAL SURVEY OF CANADA (b at Montréal 20 Apr 1798; d at Castle Malgwyn, Cilgerran, S Wales 22 June 1875). Logan identified and mapped the major geological structures of the PROVINCE OF CANADA, in particular the Laurentian and Huronian series of the Precambrian SHIELD.

He attended Alexander Skakel's school in Montréal and the Edinburgh High School. In 1816 he took a year of medical studies at the U of Edinburgh before entering an uncle's business. From 1831 Logan managed the Forest Copper Works near Swansea. A systematic thinker by nature and anxious to find a reliable source of coal, he mapped the nearby coal seams topographically and cross-sectionally. These highly accurate maps were adopted by the Geological Survey of Great Britain. In 1840 Logan read to the Geological Soc of London his theory of the *in situ* formation of coal, which enabled geologists to determine the location of workable deposits of carboniferous strata. Logan's reputation as a geologist, his Canadian birth, and his social and family connections in Montréal secured him the position of geologist of the Province of Canada in Apr 1842.

By 1844 Logan and one assistant, Alexander Murray, had divided the geological formations of the province into 3 main divisions; he concluded reluctantly that none could be expected to yield coal. But Logan justified continued public funding of the Survey in other ways.

He founded a geological museum; mapped the often uncharted lands he surveyed; analysed the copper-bearing N shore of Lk Superior. As a result of his outstanding collection of Canadian minerals and his geological map of Canada, exhibited at London's Crystal Palace in 1851, Logan became the first native Canadian inducted into the Royal Society of London for achievements in Canada. Similarly, at the Paris Exposition in 1855, he was awarded the Cross of the Legion of Honour. A knighthood followed in 1856. While the Survey continued investigations in both laboratory and field, Logan in 1863 published *Geology of Canada*, followed in 1865 by an atlas and in 1869 by a larger geological map. This masterly analysis of Canada's geological structures and economic minerals earned Logan the Royal Soc's Gold Medal in 1867.

The enormous expansion of the Geological Survey after Confederation had been anticipated by Logan as a natural development. He retired to South Wales in 1869 and was succeeded by A.R.C. SELWYN. Undaunted by the "Herculean task," Logan had forged Canada's first public scientific endeavour from its initial precarious decades into a permanent institution.

SUZANNE E. ZELLER

Reading: B.J. Harrington, *Life of Sir William E. Logan* (1883); Morris Zaslow, *Reading the Rocks* (1974).

Sir William Edmond Logan, brilliant geologist who, as the first director of the Geological Survey of Canada, forged Canada's first public scientific endeavour; portrait by W.D. Bentley (courtesy Public Archives of Canada/C-119978).

**Logo**, a symbol, mark or word used by a corporation or other organization to distinguish its products, services or identity from those of anyone else. First used in 1937, the term was originally an abbreviation for "logogram" or "logotype" (both derived in part from Gk *logos*, "word"). It came into general use in Canada among marketers and designers in the 1960s, and by the mid-1970s it had become, to the layman, a synonym for "trademark."

One of the first details a new company must consider is its corporate image, reflected in the design of a symbol to be used in advertising and on packaging, vehicles and stationery. A long-established company may redesign an old trademark or adopt a new one, as CANADIAN NATIONAL RAILWAYS did in 1960. For many years CNR had used a realistic maple leaf as a frame for a dark square within which appeared "Canadian National Railways" in white, each word under the next. The designing of a new mark was entrusted to James Valkus of New York, who asked Toronto designer Allan R. Fleming to take on the assignment. After months of work, Fleming joined the letters C and N into one continuous flowing line, to symbolize the movement of people, materials and messages across the country. The design, accepted by CN, created a national controversy. There were complaints that it looked like a "tapeworm rampant" or the numeral 3 on its back; but around the world the idea of having a simple, bold logo had come into vogue.

VIA Rail logo (courtesy Canapress).

Many Canadian firms adopted new corporate symbols such as the M for the BANK OF MONTREAL, designed by Hans Kleefeld of Stewart & Morrison Ltd, who also designed the AIR CANADA symbol of a maple leaf within an open circle. Burton Kramer and Allan Fleming created the animated C design for the CANADIAN BROADCASTING CORPORATION-Société Radio-Canada. The Canadian Confederation Centennial symbol, a maple leaf composed of 11 equilateral triangles to represent the 10 provinces and the territories, was the work of Stuart Ash of Gottschalk & Ash Ltd, and Georges Beaupré designed the NATIONAL FILM BOARD symbol representing the eyes of mankind seeing the world. See also GRAPHIC DESIGN.

FRANCES E.M. JOHNSTON

**Lombardo, Guy** (Gaetano Alberto), band-leader, violinist (b at London, Ont 19 June 1902; d at Houston, Tex 5 Nov 1977). His dance band, the Royal Canadians, was the most popular in N America, selling some 300 million records in over 50 years, despite critical disdain for its bland style. In 1923 Lombardo went to Cleveland, Ohio, together with other London musicians, including his brothers: Carmen (1903-71), a saxophonist, singer and later successful songwriter ("Coquette," "Boo Hoo," etc), and Lebert (b 1904), a trumpeter. In 1924 they took the name Royal Canadians. Their New Year's Eve broadcasts (later telecasts) from New York's Roosevelt Grill — the band's base 1929-62 — were a traditional part of N American celebrations, known especially for their "Auld Lang Syne" theme.

MARK MILLER

**London, Ont**, the seat of Middlesex County, is centrally located in the SW peninsula of the province, on the Québec-Windsor corridor midway between Toronto and Windsor. Due S lies Lk Erie, with Lk Huron to the NW. London's market and service area to the N and NE includes much highly productive farmland. To the SW and SE lie intensive cash-crop areas, especially Canada's main tobacco-growing area. Noted as a financial, educational and medical centre, London is also a regional base for business and government.

**Settlement** Originally within the territory of the Attiwardaronk nation (NEUTRALS), London began as a 405 ha site reserved by John Graves SIMCOE 1793 as the future provincial capital. There were then few European settlers W of Lk Ontario, but after Thomas TALBOT's colonization scheme expanded N from Lk Erie, it became expedient to relocate the seat of the London Dist at the reserved townsite. Construction of the masonry courthouse — a fortresslike structure with crenellated towers — followed the beginning of formal settlement in 1826.

**Development** SW Ontario saw a large influx of settlers during the 1830s and the new town grew apace. The Rebellion of 1837-38 led to the stationing in London of the largest body of troops W of Toronto; from this time dates London's reputation as a "garrison town." During the 1840s improved road links stimulated commercial growth, and the many hotels, merchants, banks and newspapers reflected the town's regional primacy. The opening of the GREAT WESTERN RAILWAY (Niagara-Hamilton-Windsor) in 1854 ensured London's growth as a regional centre. In 1855 it was incorporated as a city (pop 12 000). It thereafter became the seat of a Roman Catholic and an Anglican diocese (Huron). With further railway construction and settlement, and an oil boom to its W, the city's economy grew and London began to develop a financial role with the formation of companies, now nationwide, such as London Life Insurance, Canada Trust Co and Avco Finance. Manufacturing, especially brewing, developed as well. Both John LABATT and John CARLING were associated with London; the headquarters of JOHN LABATT CORPORATION is still here.

In 1863 the Anglican Huron College, precursor of UNIVERSITY OF WESTERN ONTARIO (1878), was founded. In the following decades, schools and

London, Ont, a regional base for business and government, with the Thames R in the lower right. The site was chosen by Governor Simcoe as the future capital of Upper Canada. The arrival of the Great Western Ry in 1854 ensured its growth as the regional centre of the rich agricultural land of SW Ontario. The city today is a financial, commercial and educational centre as well as an active regional centre of the arts (photo by Ron Nelson Photography Ltd).

#### Distribution of Industrial Activity\* by Industry Grouping within Census Metropolitan Areas, 1980

1. Food and beverages and tobacco products industries
2. Leather, textile, knitting mills and clothing industries
3. Wood, furniture and fixtures, paper and allied printing, publishing and allied industries
4. Machinery, transportation equipment and electrical products industries
5. Primary metal and metal fabricating industries
6. Rubber and plastic products, petroleum and coal products and chemical products industries
7. Non-metallic mineral products and miscellaneous manufacturing industries.

\* Industry activity based on the average of percentage shares of the value shipments of goods of own manufacture, total value added and total number of employees for each of the selected metropolitan areas.

Source: Figure 11, Catalogue 31-209, Statistics Canada.

colleges of other denominations were added. A Provincial Asylum (1870) was the first regional hospital. University Hospital, famous for neurosurgery, is one of 3 current general and teaching hospitals.

**Cityscape** London's older central portion is a grid of wide streets laid out on level ground between N and S branches of the Thames R. The city's suburban expansion post-1945 has moved N, W and S, on somewhat higher land. Distinct neighbourhoods centered on shopping plazas now extend in a nearly complete circle around the older core, which is still a lively office and shopping precinct. London's 19th-century houses are commonly built of a pale yellow ("white") brick, frequently with a distinctive keyhole- or horseshoe-shaped side window.

Known as the "Forest City," its many 19th-century street-side plantings are chiefly of large silver maples. The total city area includes one-sixth in open space; Springbank, the largest park (113 ha), contains Storybook Gardens, a children's zoo. Planning activity occurred sporadically until 1946, when a planning board was formed, leading to the first official plan and zoning bylaw in 1949. A massive annexation doubled the city's area in 1961.

**Population** For most of its history, London's population has grown more by in-migration

than by natural increase. Of the city's population in 1981, 21% had come from outside Canada. In 1981, 63% of the population was of British stock, and 3% French.

**Economy and Labour Force** London's hinterland contains some of the best agricultural land in Canada, and the city's regional centrality is constantly being strengthened by improved communications. Of a total 1981 labour force of 137 075, 36% were in service industries, 21% in manufacturing, 18% in trade, 7% in financial work, 5% in public administration, 5% in construction and 6% in transportation and communications. Manufacturing in 1978 had a value-added of about \$1 billion — about one-fifth of the SW Ontario region.

**Transportation** From the mid-1850s, London has been a major railway junction and division point. The London and Port Stanley Railway provided connections with Lk Erie until 1976. As many as 11 trains a day run between London and Toronto. A regional highway node in the 1930s and 1940s, London is connected by freeways to Windsor, Sarnia and Hamilton-Toronto (Hwy 401). These connections have encouraged a considerable tourist industry. The local airport supports feeder services to Toronto, Ontario, Sarnia and Cleveland, Ohio, with a daily flight to and from western Canada. Internally, a horsecar system gave way to streetcars in 1895 and since 1940 the city has used buses only.

**Government and Politics** During its history London has for the most part been governed by a mayor and aldermen representing 4 wards. After the 1961 annexation, the city added 3 wards and adopted a board of control (mayor plus 4 directly elected controllers) in addition to the 14 council aldermen. City politics are not strongly polarized, and issues tend to concentrate on control over peripheral expansion, attraction of business, viability of the city core, etc.

The public and separate (Catholic) school boards and the Public Utilities Commission are also elected bodies.

**Cultural Life** An active community of artists, both creative and interpretive, gives the region's cultural life great vitality. London has been home to several nationally and internationally known artists — notably Paul Peel, Greg Curnoe and Philip Aziz. The Regional Art Gallery (1980) supports the visual arts. Western's Faculty of Music has contributed greatly to vigorous musical activity; there are orchestras, including the Orchestra London, choirs and outstanding organists. Museums include a pioneer village and Indian site.

One TV and 3 radio stations operate from London; there is one daily newspaper, the *Free Press*. London competes in Junior A hockey (the Knights) and various amateur sports; the many university teams also attract city spectators.

Reading: F.H. Armstrong and D.J. Brock, *The Rise of London*.

**London and Bristol Company**, est 1610, the first formal attempt to colonize NEWFOUNDLAND. A group of merchant "adventurers" from London and Bristol, Eng, obtained a royal charter giving them title to Newfoundland's E coast. The first governor of the colony at CUPIDS, in Conception Bay, was John GUY, a respected Bristol resident. After brief success, disillusionment brought about by climatic severity, hostility from English West Country merchants who sent out ships seasonally to fish in Newfoundland waters, PIRACY and the realization that non-fishery activities were unprofitable, led to the company's demise in the 1620s. F.W. ROWE

**London Conference**, beginning 4 Dec 1866, in which Canadian, Nova Scotian and New Bruns-

wick delegates met with the British government in London, Eng, was the important transitional stage between the 1864 QUEBEC CONFERENCE and the 1867 BRITISH NORTH AMERICA ACT. The major issue was the educational clauses of the Québec Resolutions. There was strong lobbying in London by bishops from the Maritimes, notably Archbishop Connolly of Halifax, to get guarantees for Roman CATHOLIC separate schools — schools that existed by custom, though not by law — in all 3 provinces. Maritime delegates resisted, and what emerged was Section 93 of the BNA Act, which protected whatever separate schools existed by law at the time of CONFEDERATION. This guaranteed the separate school systems in Québec and Ontario, but not in Nova Scotia or New Brunswick. Early in 1867 the London Resolutions were redrafted into the BNA Act.

P.B. WAITE

**Loneragan, Bernard Joseph Francis**, Jesuit priest, philosopher-theologian (b at Buckingham, Qué 17 Dec 1904 d at Pickering, Ont 26 Nov 1984). Loneragan, a brilliant, original thinker, was of the highest rank. For many years his ideas have been studied by scholars in various fields. In addition to the original Loneragan Research Centre, founded in 1971 at Regis Coll, Toronto, where Loneragan had his academic and spiritual home, there were, in 1984, 9 similar centres around the world. The originality of his work lies principally in the area of method where through a penetrating study of the mind in action he demonstrated the methodical interrelation of the natural and social sciences, philosophy and theology. Loneragan was a professor at the Gregorian U, Rome (1953-65), at Harvard (1971-72) and at Boston Coll (1975-83). His honours include companion of the Order of Canada and fellow of the British Academy. Loneragan's work is too rigorously intellectual and specialized to be widely known, though popular journals have taken note of congresses held to study his ideas. His works include *Insight: A Study of Human Understanding* (1957) and *Method in Theology* (1972).

WILLIAM O. FENNELL

**Long-Distance Running** refers to the running, generally off-track, of distances longer than 3000 m. During the 1970s the upsurge of interest in long-distance running in Canada and elsewhere gained much of its impetus from the growing popularity of running as a form of exercise to improve FITNESS. Increased numbers of entries in clubs and organized races forced improvements in race categorization. The simple 4-division arrangement of men's and women's novice and men's and women's open was enlarged to include men's and women's masters, with 10-year age stages and under-18 age divisions. However, the 26-mile, 385-yard (42 km) marathon, for most, remained the golden challenge. The marathon dates from ancient Greece; its official distance was set in the 1908 Olympics, being the 26-mile distance from Windsor to London, England, with an additional 385 yards to finish opposite the Royal Box at the stadium.

The burgeoning interest in running has revived some defunct Canadian races. The Old Home Summer 10-Miler resurrected the Halifax Herald Modified Marathon, which was first run in 1907. It drew crowds until 1942, when WWII halted its continuation. In 1926, responding to his father's bribe of a trip to compete in the Boston Marathon, a 21-year-old miner from Sydney, NS, John C. Miles, ran the Modified and finished first. In Boston, Miles battled reigning Olympic champion Albin Stenroos and the race favourite, Bostonian Clarence DeMar, to win the 1926 Marathon in a time of 2:25:40, 4 minutes faster than the previous course record. In 1982 N

America's oldest race, the Hamilton "Around-the-Bay" race, had been run 74 times since its inception in 1894. The route, just over 30 km, launched the career of another great runner, Tom LONGBOAT. In 1906 Longboat defied gamblers' odds of 60-1 in winning the Hamilton race. He won the Boston Marathon in 1907 and, despite a US protest about his amateur status, competed for Canada in the marathon of the 1908 London Olympics, but did not finish. Other Canadians who have won the Boston Marathon are Jack Caffery (1900, 1901), Fred Cameron (1910), James Duffy (1914), Edouard Fabre (1915), Dave Komonen (1934), Walter Young (1937), Gérard Coté (1940, 1943, 1944, 1948), Jerome Drayton (1977) and Jacqueline Gareau (women's open, 1980). Another noteworthy victory was William Sherring's first-place finish at the mid-Olympiad festival in Athens, Greece, in 1906.

Newer races offer unique challenges to racers. The Nanisivik Midnight Sun Marathon is run on a 32 km trail of rubble, virtually the only road in the area, some 725 km above the Arctic Circle. It takes place in June, when the sun never sets in the Arctic. Where Nanisivik, like many other races, is a test of individual endurance, the Banff-Jasper Relay is a test of team endurance. The race is a dream realized for Edmonton runner and architect Jan Tereszczenko. Beginning in Jasper, Alta, it follows the 287.25 km Icefields Parkway to Banff and runs continuously for up to 24 hours, until the 17 stages are covered by no less than 5 and no more than 17 members of each relay team. In 1982 the Toronto Olympic Club set a new course record of 16:47:45.

Marathons are staged in most major Canadian cities. These and shorter races are run by notable men's open racers such as Jerome Drayton (Canadian marathon record, 2:10:09, Fukuoka, Japan, 1975) and Paul Bannon, 1978 Commonwealth Games medalists for the marathon; Mike Dyon, 1981 runner of the year, men's open division, who has a personal-best marathon time of 2:14:28; and Peter Butler, Canadian record holder for 10 km with a time of 28:19:07. Women's open notables include Cynthia Hamilton, Canadian marathon champion with a 1982 New York finishing time of 2:38:12; Linda Staudt, 1981 Canadian runner of the year, women's open division, who finished the Montréal Marathon in 2:33:33; and Jacqueline Gareau. As well, there is a wide field of master's competitors in every race. Men's master Bob Moore was 7th in the Vancouver International Marathon with a time of 2:24:10 and 10th in the Bermuda Marathon at 2:30:50. Women's master Diane Palmason became master Canadian and N American female champion when she was 3rd overall woman finisher in the 1981 Oakland marathon. World record holder Art Taylor had times in the 1982 N American and Canadian championships, 50+ age division, of 35:08 for 10 000 m and 17:04:08 for 5000 m. Some athletes are enticed to run even greater distances. Al Howie holds the Canadian records for several ultra marathon distances — 50 km in 3:12:46, 50 miles in 5:35:12, 100 km in 7:30:31, 100 miles in 14:06:18 as well as the Canadian 24-hour race record with a distance of 150 miles, 352 yards. Before attempting unsuccessfully to break his own 24-hour race record in the 1983 Sri Chinmoy 24 Hour Race, Howie ran from Winnipeg to Ottawa, a distance of 1500 miles. However, this distance is overshadowed by Kanchan Stott's achievement. On 29 Nov, 1983, 37-year-old Stott reached Halifax, NS, 207 days after leaving Victoria, BC, completing the first cross-Canada run by a woman and the longest recorded run (6688 km) by a woman.

CAROLYN HLUS

**Long Range Mountains** are the highest and

most extensive mountain range of insular Newfoundland, extending more than 500 km along the island's W coast, up the Great Northern Pen from Cape Ray in the south. A part of the Canadian Appalachians, the Long Range Mts are an average 610 m high; the Lewis Hills, elev 814 m, the S-central portion of the range, are the highest on the island. The range, generally steep on the coastal side and scarred by deep glaciation and faulting, reaches highland plateaus and flat-topped peaks before sloping away more gently to the E. In places deep fjords and bays cut into its base, and rivers, such as the HUMBER R, flow through its valleys. GROS MORNE NATIONAL PARK, N of CORNER BROOK, contains some of the mountain range's most spectacular vistas.

ROBERT D. PITT

**Long Sault, Ont, UP**, pop 1227 (1981c). It is about 16 km NW of Cornwall and was founded after flooding during the construction of the ST LAWRENCE SEAWAY obliterated the sites of the communities of Mille Roches and Moulinette. The 2 were merged to form Long Sault on drier ground.

JAMES MARSH

**Longboat, Thomas Charles**, distance runner (b at Ohsweken, Ont [Six Nations] IR 4 July 1887; d there 9 Jan 1949). Largely because of his ability to dominate any race and his spectacular finishing sprints, Longboat was one of the most celebrated pre-WWI athletes. He won the Hamilton Around-the-Bay (1906), the Boston Marathon (1907), the Toronto Ward's Marathon (1906-08), the "World's Professional Marathon Championship" (1909), and broke numerous records. He was one of the most sought-after performers in the brief (1908-12) revival of professional racing that followed the controversial 1908 London Olympics marathon, in which Longboat and Dorando Pietri collapsed, likely from drug overdoses. Longboat's desire to train

Tom Longboat, celebrated long-distance runner who won the Boston Marathon in 1907 (courtesy Canada's Sports Hall of Fame).

himself led to several well-publicized conflicts with managers. Despite constant and sometimes racist criticism, he stuck to his own methods. He bought up his contract in 1911 and ran better than ever. In 1912, he set a professional record of 1:18:10 for 15 miles, 7 mins faster than his amateur record. Longboat raced successfully during WWI while serving as a dispatch runner in France. After the war he lived and worked in Toronto until 1944, when he retired to the Six Nations Reserve.

BRUCE KIDD

**Longden, Johnny**, jockey (b at Pontefract, Eng 14 Feb 1907). He enjoyed a distinguished career that many regard as one of the finest in THOROUGHBRED RACING history. Longden's family settled near Taber, Alta, when he was 2 years old. While still a teenager, he went to work in the coal mines and spent his weekends racing quarter horses. In 1927 he visited Salt Lake City and managed to ride a horse named Hugo K. Asher in a race, which he won, beginning a career that lasted until his retirement in 1966. During those years, he rode 6032 horses to victory, a record for that time. He was the first N American jockey to ride 4000 winners.

One of Longden's greatest achievements was training and riding Count Fleet, winner of the N American Triple Crown in 1943. In 1950 he rode the Irish-bred Noor to 4 victories over Citation, one of N America's finest thoroughbreds. Longden retired to train horses and has been successful there as well. In 1969 he trained Majestic Prince, the Kentucky Derby winner.

J. THOMAS WEST

**Longhouse**, the basic house type of northern Iroquoian peoples such as the HURON and IROQUOIS, sheltered a number of families related through the female line. It was established throughout the Iroquoian area by the 12th century. They were 8 m wide but of variable length (one 94 m long was uncovered at the Moyer site in southern Ontario). Longhouses described by the early French explorers and by the Jesuit missionaries in the 17th century were somewhat shorter. In the 18th century, longhouses were replaced by single-family dwellings for residences, but continued as political and ceremonial structures. Followers of the HANDSOME LAKE RELIGION continue to refer to the buildings that house their ceremonies as longhouses.

The 17th-century dwelling was constructed by driving flexible poles into the ground at fixed intervals. These were then bent over and lashed together. Horizontal poles strengthened the frame, and cedar-bark (Huron) or elm-bark (Iroquois) sheathing covered the structure. Sleeping platforms ran the length of the house. Each of the 3 to 5 hearths, 6 m apart down the middle of the longhouse, was shared by 2 nuclear families of 5 or 6 persons. Firewood was stacked in vestibules near the entrances at either end of the structure. The Iroquois characterized their confederacy as a longhouse of 5 fires.

Red-throated loon (artwork by John Crosby).

**Longpré, Ephrem**, historian, philosopher (b at Woonsocket, RI 24 Aug 1890; d at Paris, France 19 Oct 1965). His defence of the philosophy of Joannes Duns Scotus played a role in the background of Vatican II and in the opening of Catholic thought to traditions other than that of St Thomas. Longpré's French Canadian parents returned to farm at Upton, Qué, when he was 4. He was educated at Montréal, where he joined the Franciscan order. He was cured of a serious illness at age 18 after an intervention by Brother ANDRÉ Longpré studied in Rome and then worked in Florence and Paris. His study of Scotus, whose philosophy combines a subtle metaphysics of community with a strong sense of the importance of individuality, strengthened his convictions about human freedom, and he was hunted by the Gestapo throughout much of the war. His resistance work was acknowledged by the French and British governments. His most important work is *La Philosophie du B. Duns Scot* (1924).

LESLIE ARMOUR

**Longueuil, Charles Le Moyne de Longueuil, Baron de**, soldier, colonizer (bap at Montréal 10 Dec 1656; d there 7 June 1729). The eldest son of Charles Le Moyne, he was the only native Canadian made a baron in New France. He was granted the honour 26 Jan 1700 by Louis XIV in recognition of his distinguished military career, his astute diplomacy among the Iroquois and his remarkable development of the seigneurie of Longueuil. He became governor of Trois-Rivières (1720), of Montréal (1724), and interim administrator of New France after the death of Philippe de Rigaud de Vaudreuil in 1725.

JAMES MARSH

**Loon** (family Gaviidae), common name for a distinctive group of 4 large, swimming BIRDS, all confined to the Northern Hemisphere and all occurring in Canada. Loons nest on inland lakes and rivers, migrating to the sea for winter. Summer plumages are black or grey, streaked and spotted in bold patterns with white. Underparts are all white. For winter, dense plumage molts to an unspotted grey. During molting, loons are flightless: common, yellow-billed and arctic loons (*Gavia immer*, *G. adamsi*, *G. arctica*, respectively) molt in late winter and red-throated loons (*G. stellata*) in autumn. Sexes are similar. Bills are strong, straight and pointed, necks, long and stout; tails, very short. The legs, set far back on the body and with flattened sides and

fully webbed toes, are well adapted to swimming. Walking is accomplished only with difficulty. As wings are comparatively small, loons must run along the water surface to become airborne. They come to shore only to nest, usually laying 2 olive brown eggs with darker spots, on a heap of vegetation near the water's edge. Both parents incubate for about 4 weeks and assist in rearing young. The uniformly greyish young leave the nest soon after hatching and often ride on their parents' backs. Loons eat mainly fish, diving to depths of 75 m, usually for less than one minute. Loons are known for their various cries, particularly a weird, mirthless laugh and an eerie, wolflike howl. These unique sounds are symbolic of Canada's North.

R.D. JAMES

**Loon Lake**, Sask, Village, pop 369 (1981c), located in W-central Saskatchewan, takes its name from nearby Makwa Lk (the Cree word *makwa* meaning "loon"). Ten km W of the village is Steele Narrows Historic Park, which commemorates the clash between BIG BEAR's Plains Cree and Major Sam STEELE's forces on 3 June 1885 — the last military engagement fought on Canadian soil.

DAVID EVANS

**Loranger, Françoise**, dramatist, novelist (b at St-Hilaire, Qué 18 June 1913). Her novel, *Mathieu* (1949), a gloomy portrayal of Québec society in the DUPLESSIS era, received critical acclaim, but it is chiefly on her dramatic texts, many televised nationally, that her reputation rests. Hers is a constantly evolving theatre, reflecting changing social realities in her province. She began writing radio scripts in 1939, but her first published stage plays date from the 1960s. *Une Maison... un jour* (1965) is a psychological study of the intense pressures destroying a middle-class family; *Encore cinq minutes* (1967) is one of the earliest texts to treat feminist concerns in French Canada. Contemporary political events are the focus of plays such as *Le Chemin du Roy* (1969) written in collaboration with Claude Levac, a savage satire depicting, in the guise of a penalty-filled hockey game, the confrontations between Québec City and Ottawa provoked by French President de Gaulle's visit in 1967, and *Médium saignant* (1970), dealing with conflict over language rights in the atmosphere of Québec's controversial BILL 63. Most of Loranger's plays have

been successfully transposed to television, and works such as *Une Maison... un jour* have been well received abroad. **LE DOUCETTE**

**Loranger, Jean-Aubert** poet, storyteller, journalist (b at Montreal 26 Oct 1896; d there 28 Oct 1942). Loranger belonged to a family known for its lawyers (the Lorangers), writers (AUBERT DE GASPÉ) and military officers (Charles de SALABERRY). He excelled at journalism, working for *La Patrie* 1923-27 and 1939-42, *La Presse* 1927-30, *Le Jour* 1938-39 and *Montréal-Matin* for 6 weeks in 1942. During WWI he associated with young intellectuals and artists who had lived in Paris (including his cousin, Robert de Roquebrune) and met regularly in the Westmount drawing room of architect Fernand Préfontaine. In 1918 this group started the first arts magazine in Québec, *Le Nigog*, to which Loranger contributed. Admitted to the École littéraire de Montréal on 17 Nov 1920, he broke definitively with this group, unwilling to participate in activities that fell far short of his own creative ambitions. His 2 collections, *Les Atmosphères* (1920) and *Poèmes* (1922), introduced blank verse to Québec and showed his obsession with modernity and escapism. But peasant life fascinated him and inspired his realistic, yet ironic and amusing short stories. In 1979 he was posthumously awarded the Prix France-Québec for his 2 volumes of short stories. **BERNADETTE GUILMETTE**

**Lord, John Keast**, naturalist, veterinarian (b in Cornwall, Eng 1818; d at Brighton, Eng 9 Dec 1872). After receiving his veterinarian diploma in 1844, he practised briefly, then disappeared and wandered through several only partially recorded endeavours, including a whaling voyage, trapping in Minnesota and parts of Canada, and artillery service in the Crimea. When British Columbia was established as a colony, he worked as naturalist to the boundary commission surveying the FORTY-NINTH PARALLEL from 1858 to 1862, wintering on Vancouver I. During this period he sent numerous faunal collections to the British Museum, named 2 new mammals and reported his observations in 2 vols, *The Naturalist in Vancouver Island and British Columbia* (1866). **MARTIN K. McNICHOLL**

**Lord's Day Alliance of Canada** (renamed People for Sunday Assn of Canada in 1982), a lay organization fd 1888 under the aegis of the PRESBYTERIAN Church and supported by the other Protestant churches to combat increasing Sabbath secularization. In the early phases of Canada's INDUSTRIALIZATION and URBANIZATION, Sunday was usually the only day of rest: the issue was whether that day should be a holy day or a holiday. The churches faced growing competition for the loyalty of potential churchgoers: industrial concerns, such as railways, demanded Sunday labour from their employees; more important, new leisure pursuits beckoned. Technological advances, particularly electric urban transit systems, increased people's mobility, allowing them to escape the cities. Commercial recreation activities such as sporting events, ice cream parlours and theatres were equally tempting. Many Canadians seemed inclined to make Sunday a day both of religion and recreation.

The Alliance became one of the most effective lobbies of the early 20th century. It gained the crucial support of the French Canadian Catholic hierarchy and, with its promise of a legislated weekly rest day, of organized labour. In 1906, this combination of forces and the Alliance's sophisticated lobbying techniques persuaded PM Sir Wilfrid LAURIER to introduce a Lord's Day Act. Although strong opposition existed among transportation and manufacturing concerns and among French Canadians, the Act became law in Mar 1907. It aimed to restrict Sunday trade, labour and recreation. The struggle to secure enforcement has occupied the Alliance

since then. Because the Act required provincial authorization for each prosecution, the Alliance battled in many arenas, with varying success. The Sunday shopping issue still provokes intense debate, uniting labour, retail merchants, churches and the People for Sunday Assn in opposition. Canadians' pursuit of Sunday pleasure has doubtless defeated the association's main aim — Sunday is primarily a holiday and only partly a holy day. **SHARON P. MEEN**

Reading: R. Allen, *The Social Passion* (1973); C. Armstrong and H.V. Nelles, *The Revenge of the Methodist Bicycle Company* (1977).

**L'Original**, Ont, Village, pop 1819 (1981c), inc 1873, seat of counties Prescott and Russell, located on the Ottawa R, 88 km E of Ottawa. Named after nearby Pointe à l'Original (Fr, *original*, "moose"), it was granted as a seigneurie by the Co of New France to Françoise Prevost in 1674. With La Salle's Cataracoui (Kingston) it was the only seigneurie granted by the government of New France in Ontario. After the Conquest it was acquired by Nathaniel Tredwell, then developed by his son, Charles. In 1816 it was made capital of the new Ottawa district. St Andrew's church (1832) was a pioneering Presbyterian congregation. The District Court House and Jail (1825) is the oldest remaining courthouse in Ontario. **K.L. MORRISON**

**Loring, Frances Norma**, sculptor (b at Wardner, Idaho 14 Oct 1887; d at Newmarket, Ont 5 Feb 1968). From the time she settled in Canada in 1913 she worked tirelessly, both in the development of her own work and in fostering a climate that made sculpture possible for others. She had first studied sculpture in Geneva, Munich and Paris 1901-06. A fascinating, compelling personality of keen intelligence and warm understanding, she assailed public and official indifference to SCULPTURE as a founding member of the Sculptors' Soc of Canada and a chief organizer of the Federation of Canadian Artists and the National Arts Council. For over 50 years she shared studio quarters with fellow sculptor Florence WYLE in a converted Toronto church

Frances Loring, *Luna* (1950-51) (courtesy MacDonald Stewart Art Centre/University of Guelph).

that was widely considered the salon of Canada's art world. Her own work was architectural in nature, and among her best-known public monuments were the lion formerly situated at the Toronto entrance to Queen Elizabeth Hwy, and war memorials at St Stephen, NB, and Galt, Ont. **REBECCA SISLER**

Reading: Rebecca Sisler, *The Girls* (1972).

**Lorne, John Douglas Sutherland Campbell, Marquess of**, later 9th duke of Argyll, governor general of Canada 1878-83 (b at London, Eng 6 Aug 1845; d on the Isle of Wight 2 May 1914). Private secretary to his father, the secretary of state for India 1868-71, Lorne represented Argyllshire as a Liberal in the House of Commons 1868-78. His appointment to Canada in 1878, at age 33, had much to do with his marriage 7 years previously to Princess Louise, Queen Victoria's fourth daughter, and the British government's attempt to enhance the prestige of the queen's representative in Ottawa. In Canada Lorne helped to reconcile BC to CONFEDERATION and supported the Canadian government's efforts to establish a Canadian high commissioner to the UK, though it reduced his own vice-regal authority. A devoted patron of the arts and letters, Lorne founded the ROYAL SOCIETY OF CANADA in 1882 and the Royal Canadian Academy of Arts in 1880, a precursor to the National Gallery. An author of prose and poetry his writings include *Memories of Canada and Scotland* (1884), *Imperial Federation* (1885), *Canadian Pictures* (1885), *Passages from the Past* (2 vols, 1907) and *Yesterday and To-day in Canada* (1910). **CARMAN MILLER**

**Lost Lemon Mine**, a legendary gold deposit reputedly somewhere between the CROWNEST PASS and the Highwood R in SW Alberta, discovered about 1870 by prospectors Frank Lemon and "Blackjack." Lemon allegedly murdered Blackjack at the mine and went mad. Two Stoney Indian witnesses were sworn to secrecy by Chief Bears paw. Later, Lemon was unable to direct other prospectors to the mine. Thousands have since searched for the fabulous lode; many have died mysteriously. King Bears paw, descendant of the chief, claimed to know the secret location and led many expeditions into the mountains — all in vain. **FRANK W. ANDERSON**

Reading: D. Riley, T. Primrose and H. Dempsey, *The Lost Lemon Mine* (1968).

**Loto-Canada Inc.**, established May 1976 to be responsible for continued operation of the Olympic lottery. It was to turn over 82.5% of net revenues to help with the expected deficits of the OLYMPIC GAMES and to help with the COMMONWEALTH GAMES; other portions of the revenues would go to the provinces and to the federal government's national sports, fitness and recreation programs. A last draw was held in late 1979 and Loto-Canada continued to maintain a minimum staff to administer undistributed prize money and the annual provincial payment of \$24 million. See LOTTERY.

**Lottery** (a centuries-old concept) is an arrangement for distributing prizes by lot or chance. Strictly, sports pools are not lotteries because of the element of skill supposedly involved, but the Supreme Court of Canada has before it (in 1984) a case that may decide whether the Sports Pool operated by Loto Québec in 1982 and 1983 is a lottery scheme under the Criminal Code of Canada. Under the Criminal Code (s189) it is an indictable offence to conduct any of a number of activities related to "any proposal, scheme or plan for advancing, lending, giving, selling or in any way disposing of any property, by lots, cards, tickets, or any mode of chance whatever." A 1969 amendment provided for a number of exceptions. Section 190(1) of the code now permits the federal government and the provincial governments to conduct and manage lottery schemes; and permits provinces to license char-

itable or religious organizations, agricultural fairs and exhibitions, and persons at public places of amusement to conduct and manage lottery schemes.

Sections 189 and 190 of the code apply whether the tickets are sold or not. However, it is the practice of governments in Canada to seek to exercise control only where tickets are sold, and the lottery scheme is really a form of GAMBLING.

**Federal Government** Under section 10 of the Olympic Act (1973) the Organizing Committee of the 1976 Olympic Games, a Québec corporation, was authorized to run a lottery scheme to raise money for the 1976 OLYMPIC GAMES in Montréal and was allowed to sell tickets in any province where the government of that province agreed, provided that the proceeds were used to provide financial assistance for the Olympic and for the development of amateur sport in the participating provinces. In the 9 draws between 1973 and 1976, \$230 million was raised for the Olympic, \$25 million for the provinces and \$190 million was awarded in prizes.

LOTO-CANADA INC, a federal crown corporation, was established in 1976 to raise money through lotteries to help Québec pay for its deficit of the 1976 Olympic. This lottery was strongly opposed by the provinces which regarded lotteries as their exclusive field of operation. Under a 1979 agreement, Loto-Canada Inc was wound up by the federal government in return for the payment by the 10 provincial governments quarterly to the federal government of \$6 million, adjusted according to the Consumer Price Index; 82.5% of the profit of Loto-Canada had gone to the Olympic debt, 12.5% to the provinces and 5% to the federal government in support of programs in FITNESS and amateur sport, recreation, the arts and culture.

In 1983 the federal government passed the Athletic Contests and Events Pool Act and established the Canadian Sports Pool Corporation, which has the power to conduct and manage virtually every type of lottery scheme in addition to sports pools. Charging that this constitutes a breach of the 1979 agreement with the provinces, in March 1984 the provinces started legal proceedings in the federal court.

**Provincial Governments** All the provinces and the 2 territories are now involved in conducting and managing lotteries. BC, Alberta, Saskatchewan and Manitoba incorporated the Western Canada Lottery Foundation under the Canada Business Corporations Act in 1974. The Yukon and the NWT participate as associate members. Each province and territory operates its separate ticket-distribution system and makes separate provision for its share of the profits. Programs in recreation, amateur sport, culture, community service and health research are the principal beneficiaries. In the fiscal year 1982-83, the foundation distributed to its member provinces and territories \$69.7 million, some of which covered local expenses.

The Ontario Lottery Corporation is a crown corporation established in 1975. The profits (about \$163 million in 1983) accrued to the provincial treasurer of Ontario but are earmarked for a number of grant programs, which would not normally qualify for government assistance, for sports, fitness, recreation, culture, research in health and environment, hospital capital projects and social-service programs run by volunteers in the private sector.

In Québec the lottery authority is the Québec crown corporation Société des loteries et courses du Québec. It made a profit in 1982-83 of \$163.4 million for the government of Québec, none of which has been designated for any specific programs.

New Brunswick, Newfoundland, Nova Scotia and PEI jointly incorporated the Atlantic Lottery Corporation Inc under the Canada Business

Corporations Act. In 1982-83 the net profit was \$20.6 million which was distributed to the 4 provincial governments as general revenue, none of which was earmarked for specific programs.

In the 1982-83 fiscal year, despite the recession, lottery sales in Canada climbed by 12% from 1981-82 to \$1.3 billion. All lottery games are based on the same principle; it is details such as the price and prize structures, the frequency of the draw and the technology for choosing winners that change. Games are usually "passive," ie, players match a preprinted number on a ticket against a winning number; "active," ie, players choose their own numbers; or "instant," ie, prizes are awarded based on the match of hidden numbers or symbols. J.F.C. WRIGHT

**Lou Marsh Trophy**, named after a former sports editor of the Toronto *Star*, is awarded annually to Canada's best athlete, as decided by a committee of Toronto sports writers. Louis Edwin Marsh died on 5 March 1936 after 43 years as a journalist, and was regarded as the dean of Canadian sports journalism. In his youth he was an excellent all-round athlete. He played on the Toronto Senior Argonaut football team and was a good sprinter and strong swimmer, being credited with some 15 rescues in the water. He raced ice boats and small speedboats, for which he coined the term "sea fleas," and was a highly regarded referee in boxing and ice hockey. His daily sports column in the Toronto *Star* from 1925-36 was entitled "With Pick and Shovel," describing his tenacious ability to obtain an in-depth analysis of the sporting scene. Made of black marble, the trophy stands about 75 cm high. The words "With Pick and Shovel" appear above the engraved names of the winners. Among the latter are Dr Philip Edwards (first winner, 1937), Marilyn BELL, Petra BURKA, Wayne GRETZKY and Russ JACKSON. The trophy is kept on exhibition at Canada's Sports Hall of Fame in Toronto, Ont. J. THOMAS WEST

**Loudon, James**, educator, physicist (b at Toronto 24 May 1841; d there 29 Dec 1916). President of U of T from 1892 to 1906, Loudon devoted his life to the university. Gold medalist in MATHEMATICS in 1862, he became tutor in mathematics at University College in 1863 and the first Canadian professor of the university in 1875, succeeding his teacher John Bradford Cherriman. In 1873 he was elected to the university senate. In 1878, at Loudon's recommendations, the School of Technology (renamed the School of Practical Science) was affiliated with the university. Loudon also encouraged the federation of the principal colleges of the university, and his construction program included the Chemistry Building (1895), Convocation Hall (1907) and the Physics Building (1907). Loudon continuously promoted research and established a PhD program in 1897 although, not surprisingly, he had little time for research himself. Loudon also organized the Alumni Assn and used it to persuade the government to finance its university adequately. YVES GINGRAS

Reading: H.H. Langton, *James Loudon* (1927).

**Lougheed, Edgar Peter**, lawyer, premier of Alberta (b at Calgary 26 July 1928), grandson of Sir James LOUGHEED. He was educated in Alberta, received a BA (1951) and LLB (1952) from University of Alberta and briefly played football for the Edmonton Eskimos (1949 and 1950). He earned an MBA from Harvard (1954) and practised law in Calgary before joining the Mannix Corporation as secretary, rising to VP (1959) and director (1960). In 1965 he was elected leader of the small Alberta Progressive Conservative Party and began building a grass-roots organization. Although SOCIAL CREDIT had maintained an iron grip in Alberta since 1935, and the Conservatives had not been a provincial political force

Peter Lougheed, premier of Alberta, whose overwhelming support in Alberta gave him a strong voice in national politics (courtesy Office of the Premier/Government of Alberta).

for 40 years, Lougheed was elected to the legislature in 1967 by the largest majority of any candidate. He and the 5 other elected PCs became the official Opposition. When Prem Ernest C. MANNING retired in 1968 and was replaced by Harry STROM, Lougheed effectively characterized the Social Credit government as burned out. In Aug 1971 he was swept into office with 49 of the 75 seats. His first major action was to increase royalties paid to the province by oil companies. Lougheed proved to be a tenacious negotiator and an adept manager of relations with the media. His government's major initiatives were increasing Albertans' return on their natural resources, promoting industrial development and urban decentralization, and improving health care and recreation (new hospitals and medical research, urban parks and the large "Kananaskis Country" park W of Calgary).

Lougheed's industrial-development policies encouraged an expanding petrochemical industry backed by the province's huge stocks of natural gas. By 1983, many large plants were producing ethylene, methanol, benzene and other chemicals. Recognizing that Alberta's conventional oil reserves were finite, Lougheed encouraged development of the huge reserves of heavy oil and oil sands through tax policy and direct investment. In 1978 the Syncrude Canada oil-sands project — the world's largest single synthetic-fuels complex — was completed with provincial participation. The government created the ALBERTA OIL SANDS TECHNOLOGY AND RESEARCH AUTHORITY (AOSTRA) to develop improved technology for nonconventional oil production. Lougheed was also interested in agricultural diversification — an expanded food-processing industry, increased irrigation and a wider diversity of crops — and the Alberta Heritage Foundation for Medical Research. He conceded that his ultimate goal — to diversify the province's economy and ensure its prosperity beyond the oil and gas era — was constrained by Alberta's small population, its distance from foreign markets, and federal control of tariffs and other factors; he said it would not be accomplished in his lifetime. The centrepiece of the premier's determination to maximize provincial revenues and ensure a healthy long-range future for the provincial economy was the creation in 1976 of the ALBERTA HERITAGE SAVINGS TRUST FUND, which put aside a portion of oil and gas revenues in long-term investments.

In the 1970s Lougheed pushed for a stronger role for Alberta in national decision making — a role commensurate with the province's then-growing economic strength. He sharply resisted what he saw as federal incursions into provincial rights. In the negotiations that led to the CONSTITUTION ACT, 1982, he was a driving force behind the amending formula that gave no province a veto but allowed dissenting provinces to opt out of amendments that would reduce their powers. He personally championed the clause that ensures the supremacy of the legislatures over the courts. His major confrontation with Ottawa over oil revenues ultimately led to the 1981 Energy Pricing Agreement and subsequent accords, which had the effect of ensuring federal negotiation of oil and gas prices and revenues, rather than unilateral federal action.

Albertans thought highly of Lougheed's managerial competence, integrity and commitment to the province's welfare, as shown in his overwhelming electoral victories in 1975, 1979 and 1982. By the mid-1970s, Canadians at large had come to take him seriously as a major western spokesman. He dominated the province's politics as Manning had a generation earlier and gave voice to Albertans' frustrated pride and determination to be taken seriously on the national stage.

JOHN J. BARR

**Lougheed, Sir James Alexander**, lawyer, senator (b at Brampton, Canada W, Sept 1854; d at Ottawa, 2 Nov 1925). He practised law in Toronto and Calgary where he was in partnership with R.B. BENNETT. In 1889 he was appointed to the Senate and was its Conservative leader 1906-21. Created Privy Councillor in 1911, for 7 years he was minister without portfolio in the administration of Sir Robert BORDEN. He then held several portfolios until Mackenzie KING took office in 1921. In 1928 a mountain W of Calgary was named after him. ERIC J. HOLMGREN

**Louis-Marie**, Trappist priest, botanist, teacher (b Louis-Paul Lalonde at Montréal 17 Oct 1896; d there 3 Nov 1978). Trained at U de M by Frère MARIE-VICTORIN (LSc, 1924) and at Harvard (PhD, 1928), Father Louis-Marie taught botany and genetics at the Institut agricole in OKA, near Montréal, 1923-62. Under his direction the institute's herbarium grew until it contained nearly 100 000 specimens. Known as the Herbarium Louis-Marie, it is now at Laval. Author of many scientific articles, Father Louis-Marie is known especially for his *Flore manuel* (1931), reissued various times, through which several generations of amateur botanists have been introduced to the study of Canadian flora.

RAYMOND DUCHESNE

**Louisbourg**, 18th-century fortified town, capital and major settlement of the French colony of Ile Royale (Cape Breton I), 1713-58. In the 17th and 18th centuries, France and Britain competed both for territorial control of Atlantic Canada and for domination of the valuable cod FISHERIES off its coasts. In the TREATY OF UTRECHT (1713), France ceded Newfoundland and ACADIA to Britain. That year the French founded Louisbourg, which quickly became a substantial town and seaport. Unlike the other communities of NEW FRANCE, Louisbourg and its outposts carried on little agriculture; instead, the export of cod paid for almost all the colony's supplies. From its base in the fishing industry, Louisbourg developed diversified shipping links. The port annually welcomed trading vessels from

Fortress Louisbourg (photo by Malak, Ottawa).

France, the Caribbean, the British American colonies, Acadia and Québec. BASQUE, Breton and Norman fishermen joined the fishing industry each summer, and the town's settled population, drawn partly from France, partly from other parts of New France, grew to roughly 2000 by 1740 and double that in the 1750s.

Though its governor was subservient to the governor general of New France at Québec, Ile Royale functioned as a separate colony. The centre of French power in the region, Louisbourg was an important military base. It had a permanent garrison and was extensively fortified, with cannon-bearing, stone-and-mortar ramparts encircling the town. Military engineers under Jean-François VERVILLE shaped the town in accordance with the fortification theories of Le Prestre de Vauban (1633-1707) and the urban design theories of early 18th-century France.

Louisbourg was besieged in 1745, during the WAR OF THE AUSTRIAN SUCCESSION by troops from New England supported by the Royal Navy, and in 1758 by the British army and navy. Each time, the town was obliged to capitulate after suffering serious damage from artillery fire and naval blockade, and the population was exiled to France. After the first siege, France recovered the colony by treaty, but soon after the second the FORTIFICATIONS were demolished and the town permanently abandoned. The fall of Louisbourg, with the capture of Québec in 1759 and Montréal in 1760, ended France's military

Plan of Louisbourg by Bellin. The fortification was begun in 1713 and is now a major historic site (courtesy Public Archives of Canada/NMC-27651).

and colonial power in N America, although SAINT-PIERRE AND MIQUELON, acquired by France in 1763 after the SEVEN YEARS' WAR, partly replaced Ile Royale as a base for the fishing industry.

The modern town of Louisbourg, a small fishing port, grew up at the other end of Louisbourg harbour. The fortress of Louisbourg became a National Historic Site in 1928, and in 1961 Parks Canada began reconstruction based on comprehensive archaeological investigation and the colony's well-preserved historical records. Part of the fortifications, the citadel buildings, the town quay and several streets with their homes, shops and taverns are now rebuilt in intricate detail. Open to the public from spring to fall and interpreted for visitors by guides, costumed animators and museum displays, the reconstruction of 1744-era Louisbourg is today a major visitor attraction, an important contributor to Cape Breton's tourist economy and a world-class model of historic-site reconstruction.

CHRISTOPHER MOORE

Reading: Christopher Moore, *Louisbourg Portraits* (1982).

**Lount, Samuel**, blacksmith, politician, rebel (b at Cattawissa, Pa 24 Sept 1791; d at Toronto 12 Apr 1838). Various employed after settling south of Lk Simcoe, Upper Canada in 1815, Lount was best known as a blacksmith. A generous, concerned man he became a Reformer in the 1830s, serving in the Assembly from 1834 until defeated by corrupt practices in 1836. He led a large party to join the REBELLION OF 1837. Captured, he was tried and executed. RONALD STAGG

**Loup-Garou**, the werewolf, known but less widespread in French Canadian tradition than in Europe, is not always a wolf or dog, but may also take the form of a calf or small ox, a pig, a cat or even an owl. A person could fall under suspicion of being a werewolf if one had not made one's Easter duty for 7 years in a row.

NANCY SCHMITZ

**Louse**, common term broadly used for certain INSECT PESTS of mammals, birds, plants (aphids), books (book lice), etc, and for CRUSTACEANS (sea lice), living commensally with aquatic mammals and fish. More commonly, the term refers to biting and bloodsucking INSECTS adapted as wingless, dorsoventrally flattened external parasites of birds and mammals. Lice have short legs with large claws. Eyes are reduced or absent. Under the most favourable conditions, lice cannot survive off the host for more than a few days. Sucking lice, of which over 200 species have been described, are blood-feeding parasites

of mammals, including humans. They have piercing and sucking mouthparts and subsist entirely on nutrients derived from host's blood. Biting lice, estimated to comprise even more species, are parasites mainly of birds but also of mammals. They have chewing mouthparts, and feed on epidermal debris and exudates. Each species is confined to one host or a few closely related ones, and at least one species is known for almost every terrestrial, warm-blooded animal. Lice harbour and transmit disease organisms to and among animals (eg, those causing relapsing fever and typhus in humans). Lice spread rapidly to cause epidemics in crowded, unsanitary conditions.

W.O. HAUFFE

**Lousewort** (genus *Pedicularis*), herbaceous PLANT of figwort family (Scrophulariaceae). Five hundred species occur in Northern Hemisphere; 22 throughout Canada. Most Canadian species are perennial; heights vary (10-100 cm). Louseworts are often found in damp, marshy ground in association with GRASSES. They are semiparasitic: green leaves produce some food and suckers connect to, and absorb food from, grass roots. Parrot-beaked, often brightly coloured flowers usually occur in showy, terminal spikes. *P. arctica*, with pink flowers on stout stems (up to 15 cm), are often abundant in alpine situations. *P. groenlandica*, common in boggy areas, grows to 50 cm and has reddish purple flowers. Common lousewort or wood betony (*P. canadensis*), now considered poisonous, was eaten and used as animal feed by settlers. N American Indians used it for food, to cure rattlesnake bite, to reduce swellings, and as an aphrodisiac.

PATRICK SEYMOUR

Large flowered lousewort, found in damp, marshy ground across Canada (photo by Julie O. Hrapko).

**Loverboy**, a Vancouver-based rock group, is a top international concert draw. The band — Paul Dean (guitar), Mike Reno (vocals), Matt Frenette (drums), Doug Johnson (keyboards) and Scott Smith (bass) — won 6 Juno Awards in 1982. The worldwide success of the 1980 debut album "Loverboy" was followed by "Get Lucky," which sold over 3 million copies in the US.

JOHN GEIGER

**Lovitt, William Dodge**, vessel owner, entrepreneur (b 21 July 1834; d 1 Jan 1894). He purchased new sailing vessels at YARMOUTH, NS, Port of Registry during the 19th century. As an entrepreneur, he was at the centre of a family connection, including the Burrills and the Canns, that succeeded the Killams as the dominant family group in Yarmouth. Beginning as a vessel owner in the late 1850s, Lovitt was a director of the Exchange Bank 1874-86 and of insurance companies by the 1870s. As the Canadian sailing-ship industry settled into an irreversible decline, he invested in railway and textile companies during the 1880s. He was president of the Yarmouth Duck and Yarn Co, a local textile mill that was profitable into the 20th century.

GERRY PANTING

**Low, Albert Peter**, geologist, explorer (b at Montréal 24 May 1861; d at Ottawa 9 Oct 1942). Low joined the Geological Survey of Canada on graduation from McGill. The Québec-Labrador border was eventually defined on the basis of his 1893-95 explorations. He resigned in 1901 to prospect for iron on Hudson Bay, but returned to government service to command the 2 expeditions of the steamer *Neptune* (1903, 1904) sent to establish Canadian sovereignty of the eastern Arctic islands. Low became director of the Geological Survey in 1906 and deputy minister of mines in 1907; illness led to his retirement in 1913.

DONALD J.C. PHILLIPSON

**Lowden, John Alexander**, "Sandy," pediatrician (b at Toronto 21 Feb 1933). After graduating in medicine from U of T in 1957, Lowden studied for his doctorate at the Montreal Neurological Inst. Appointed to the medical staff of the Hospital for Sick Children, Toronto, in 1964, he is currently professor of pediatrics and clinical biochemistry, associate director of the HSC Research Inst and president of the Research Development Corp. The author of over 80 scientific and medical publications, Lowden is a recognized authority on genetic-metabolic diseases, particularly those involving lysosomes and hydrolases.

JOHN W. CALLAHAN

**Lower, Arthur Reginald Marsden**, historian (b at Barrie, Ont 12 Aug 1889). Professor at Wesley College, Winnipeg (1929-47) and Douglas Professor of Canadian History at Queen's U, Kingston (1947-59), Lower, the son of English immigrants, was the first of his family to attend university (U of T, Harvard). His first books, *The Trade in Square Timber* (1932), *Settlement and the Forest Frontier in Eastern Canada* (1936) and *The North American Assault on the Canadian Forest* (1938), detailed the role of the forest in Canadian development, following the STAPLE THESIS elaborated by Harold INNIS. In *Colony to Nation* (1946), written during WWII, Lower sought a basis for a sense of national community which might unite French and English Canadians. Recipient of the Gov Gen's Award (1946, 1954), the Tyrrell Medal of the Royal Soc of Canada (1947), and a companion of the Order of Canada (1968), Lower is also an honorary chief of the Ojibwa; his native name, Kikugaygawbigenedon, means "The Recorder of His People's Tradition."

MARGARET E. MCCALLUM

Reading: A.R.M. Lower, *My First Seventy-Five Years* (1967).

**Lower Canada**, the southern portion of present-day Québec, existing as a separate British province from 1791 to 1840. In 1791 Britain took the decision to divide the PROVINCE OF QUÉBEC INTO UPPER CANADA and Lower Canada. The decision could have been foreseen, since Britain had followed a policy of territorial division in the 17th and 18th centuries when the American colonies were being founded; in 1768 when Prince Edward Island was detached from Nova Scotia; and in 1784 after the wave of LOYALIST immigration (which occurred in Québec as well) when the provinces of Cape Breton and New Brunswick were created. After the Conquest of NEW FRANCE Great Britain wanted to redraw the boundaries of its new colony so as to make room in the fisheries and the fur trade for the rival merchants of Québec and Montréal. The QUÉBEC ACT of 1774 was a formal recognition of the failure of the project, as the borders were adjusted in closer conformity to the needs of a transcontinental economy.

In 1791 the fur trade still played a determining role for the merchants and seasonal workers drawn from the rural population. These and their dependants still felt that their territory included both the St Lawrence Valley and the huge western expanse from the Great Lakes to the Pacific. In the early 19th century, however,

the economic bases for this perception grew blurry and, for most francophone Lower Canadians, took on the dimensions of the St Lawrence Lowlands from Montréal to the Gulf of St Lawrence. When in 1822 Louis-Joseph PAPINEAU attacked the proposed union of the 2 Canadas, he described Lower Canada as a distinct geographic, economic and cultural space, forever destined to serve the HABITANT as a Catholic and French nation.

This Québécois vision found little support among the anglophone merchants, who continued to challenge the 1791 decision and who, from Montréal, largely controlled the economic development of Upper Canada. These businessmen, who owned the banks and means of transportation and who fervently advocated the building of canals on the St Lawrence R, were involved primarily in the grain trade to England and in transporting Upper Canadian forest products to the port of Québec; they occupied an economic space that overflowed the borders of the St Lawrence Valley. After the unsuccessful attempt to unite the 2 Canadas in 1822, they began clamouring for the annexation of Montréal to Upper Canada and continued until after the failure of the REBELLIONS of 1837, when a single province was formed.

**An Economy in Crisis** Around 1760 the colonial economy was still dominated by the FUR TRADE and a commercial AGRICULTURE based on wheat. The FISHERIES, the timber trade, shipbuilding and the FORGES SAINT-MAURICE were all secondary. The fur trade was still expanding northwards and towards the Pacific: towards the end of the century, 600 000 beaver skins and other furs worth over £400 000 were being exported annually to England. All this activity, transcontinental and international by its very nature, was largely concentrated in the hands of the bourgeoisie of the NORTH WEST COMPANY — the Montréal-based company that had triumphed over its American rivals and the HUDSON'S BAY COMPANY. However, after 1804, growing pressure from these rivals reduced profits to such an extent that in 1821 the NWC had to merge with the HBC.

The wheat trade underwent equally important transformations. After about 1730 wheat farming, the basis for a subsistence agriculture, started to become a commercial activity, thanks to the development of an external market. This market was mainly the West Indies until 1760, and then it expanded until, by the beginning of the 19th century, it included southern Europe and Britain. Thereafter, production fell off so sharply that around 1832 Lower Canada had to import over 500 000 minots (about 19.5 million L) of wheat annually from Upper Canada. The deficit became chronic. Oats, potatoes and animal husbandry occasionally brought profits to some farmers, but most grew these crops for subsistence. The increasing difficulties in agriculture and in the fur trade adversely affected the population's standard of living.

This was the context for the rapid growth of the TIMBER TRADE after 1806. Increased production and export of forest products occurred during Napoleon's Continental Blockade when England, to guarantee wood supplies for her warships, introduced preferential tariffs that were maintained at about the same level until 1840, despite successive price drops. Again there was abundant seasonal help in Lower Canada. The forest industry, with Québec City as its nerve centre, was especially active in the Ottawa Valley, the EASTERN TOWNSHIPS and the Québec and Trois-Rivières areas. Squared pine and oak, construction wood, staves, potash and shipbuilding were the industry's mainstays.

Lower Canada's economy, transformed in the climate of crisis of declining fur and local wheat shipments, was increasingly Québec-centered and yet more dependent for its exports

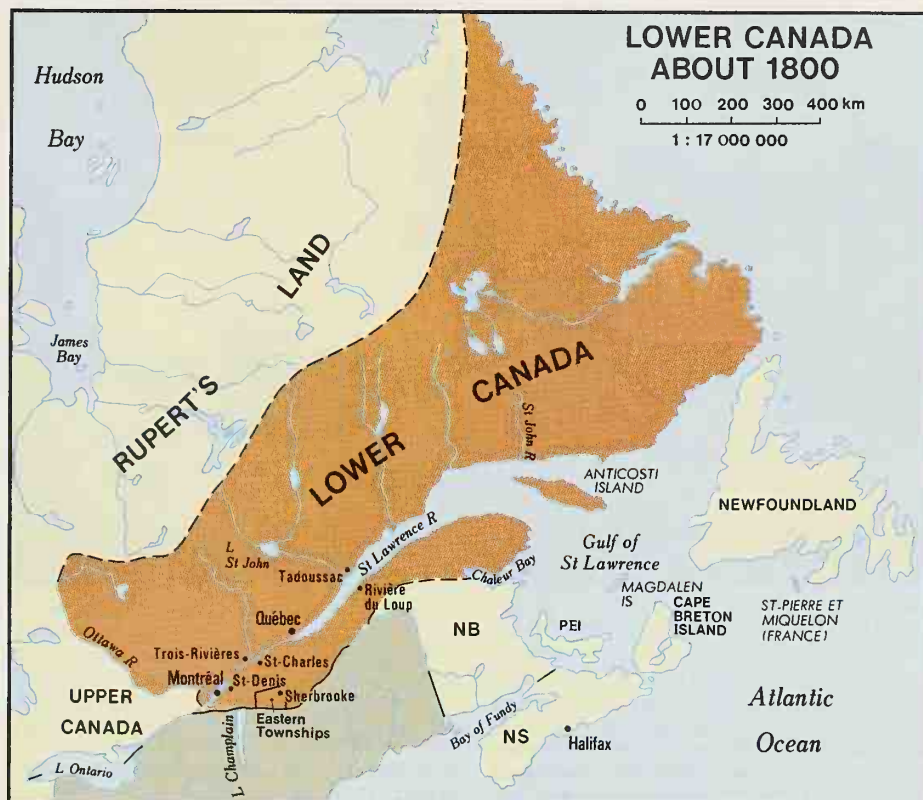

on surplus production in Upper Canada. This produced an urgent need for credit institutions and for massive investments in road and canal construction.

**Overpopulation** From the early 18th century, French Canadian population had grown without significant help from immigration. With a birthrate of about 50 births per thousand population and mortality of about 25 per thousand, the population doubled every 25-28 years. Post-Conquest British immigration hardly affected this demographic trend except for a limited time during the Loyalist wave, whereas land was so abundant and people so scarce that French Canada's vigorous increase continued until the end of the century. It was in the seigneur's interests to grant lands upon request in order to have the largest possible number of rent payers, but early in the 19th century this policy, combined with the high birthrate, led to decreasing accessibility of good lands; as well the seigneurs, prompted by the rising value of their forest products, began to limit the peasants' access to real estate. As the scarcity of land, real or artificial, became more widespread, a rural proletariat began to develop, which by 1830 made up about one-third of the rural population. French Canadian immigrants to the US (see FRANCO-AMERICANS) came largely from this group and from the impoverished peasantry.

After 1815, population pressure was intensified in the rural communities along the St Lawrence and Richelieu rivers by a massive wave of British immigrants looking for land and jobs. Peasants and the proletariat in rural Québec felt threatened by the strangers, who sought land in the Townships, where French Canadians had long thought their own excess population could settle. The rapidly rising urban anglophone population was even more alarming to them: in Québec City in 1831, Anglophones formed 45% of the population and topped 50% among the day labourers; in Montréal in 1842 the percentages were 61% and 63%, respectively. These factors helped sharpen the Francophones' feeling that their culture was in danger and helped strengthen the nationalist movement, tormented by class struggle (see FRENCH CANADIAN NATIONALISM).

**Class Struggles and Political Conflicts** The society that had developed in New France was one in which the military, nobility and clergy were dominant and the bourgeoisie was dependent on them. After 1760 the British military personnel, aristocrats and merchants replaced their francophone equivalents. But the development of class consciousness within the 2 bourgeoisies, the English and the French, helped set off a conflict between the middle class and the aristocrats over the introduction of parliamentary institutions. The outcome of this confrontation in 1791 showed both the progress of the middle class and the economic and social decline of the nobility. Towards the end of the century the power of the nobility was entirely dependent on the privileges and protection guaranteed by the heads of the colonial state.

Economic and demographic changes after 1800 produced a deterioration of social relationships, the emergence of new ideologies and a re-orientation of the old ones. This was the context for a struggle among 3 classes for the leadership of society: the anglophone bourgeoisie, the French Canadian middle class and the clergy. The anglophone merchant bourgeoisie, the main beneficiary of the 1791 reform and of recent economic expansion, felt that its status and power were threatened by the widespread changes. The efforts of these merchants to have the St Lawrence R canalized and their desire to stimulate the construction of access roads into the Townships were parts of a larger program seeking to increase immigration, create banks, revise the state's fiscal policies and abolish or re-

form the SEIGNEURIAL SYSTEM and customary law. But these measures required political support from the francophone nationalists, who were on the rise and held a majority in the legislative assembly. Income from continued TIMBER DUTIES was uncertain since it depended, after the 1815 peace, on both the goodwill of this nationalist element and the failure of England to introduce free trade. Anglophone merchants dominated business circles in the cities (in 1831 they constituted 57% and 63% of the merchant class in Québec City and Montréal, respectively) and played a disproportionately large role in the countryside. Nevertheless, they felt vulnerable in a colony numerically dominated by Francophones. Not surprisingly, Anglophones tended to seek the political support of governors, colonial bureaucrats and even the government in London. Their attitude is explained by their inability to form a party capable of dominating the majority, slight though it was, in the Legislative Assembly. Their successive political defeats over 30 years forced them to defend the imperial connection and the constitutional status quo and to support conservative political ideas.

After the turn of the century, this bourgeoisie began to clash with the French Canadian middle class, in particular with the professionals who were then developing a national consciousness. These professionals, whose numbers were rapidly growing and who aspired to form a national elite, became sharply aware that major economic activities were increasingly controlled by Anglophones. Regarding this as the result of a serious injustice done their fellow Francophones, they tended to view the anglophone merchants and bureaucrats as the most dangerous enemies of the French Canadian nation. Their ideology, warmly welcomed among small-scale merchants in French Canada, became steadily more hostile to the activities on which anglophone power was based. The francophone petite bourgeoisie glorified agriculture, defended the COUTUME DE PARIS and the seigneurial system (which it wanted to see extended throughout the province) and opposed the BRITISH AMERICAN LAND COMPANY, loudly insisting that Lower

Canadian territory was the exclusive property of the French Canadian nation.

To promote its interests, the French Canadian bourgeoisie fashioned the PARTI CANADIEN (which in 1826 became the Parti PATRIOTE). Party leaders explained economic disparities by the British control of the political machine and the distribution of patronage. They therefore developed a theory that, though it provided for political evolution along traditional British lines, also justified rule by the majority party in the legislative assembly. Party leader Pierre BÉDARD was the main architect of this strategy, which was inspired by a desire to apply the principle of ministerial responsibility. (Its obvious consequence was to transfer the bases of power to the francophone majority and to reduce the governor's powers.) In 1810, in the context of revolutionary and imperial wars, perpetual tension with the US and current ideas about colonial autonomy, these reformist plans seemed so radical that the suspicious GOV CRAIG arrested the editors of *Le Canadien*, suppressed this nationalist party organ and dissolved the legislative assembly.

After the WAR OF 1812 Papineau, the new leader of the decapitated party, realized that it was necessary to seek more limited results. He focused on the struggle over control of revenues and on complaints, with the immediate objective of sharing power with his party's opponents. Papineau hoped in this way to control the clergy and win over the Irish Catholics, thus warding off accusations of nationalist extremism; it is from this perspective that the leadership roles in the party of John Neilson and, later, E.B. O'Callaghan can be explained. Only after 1827 did the pressure of events and from the militants cause Papineau to become more radical, and the idea of an independent Lower Canada then began to take root. The desire initially to win power by ordinary political means was at the heart of this adjustment of political ideology. But the British model was replaced by the American model, which justified the elective principle for all posts that exercised power, from justices of the peace and militia officers to legislative councillors and even the governor.

Place d'Armes, Montréal (1830), line engraving and etching by R. A. Sproule (courtesy Royal Ontario Museum).

As the political struggle intensified, the Parti patriote gained strength in French Canadian circles, stirred up by nationalism, but lost popularity among Anglophones, who tended to align themselves with the anglophone merchants. Though they agreed on the main objective – national independence – Patriote militants disagreed about the kind of society that should follow their victory: the majority, which backed Papineau, wanted to continue the social *ancien régime*, whereas a minority hoped to build a new society inspired by authentic liberalism. These opposing views were to play a major role in the failure of the rebellions.

The clergy, a class solidly enthroned on a complex institutional network that generated great revenues, naturally became engaged in the struggle for power. Having seen the effects of the French Revolution and the intervention of the Protestant colonial state in Québec education at the turn of the century, Québécois clerics were already aware of the threat to their social influence. They became even more aware when conflict flared between the Parti canadien and the merchants' party, which was supported by the

governor. The ecclesiastical leaders became convinced that a local group was using parliamentary institutions to achieve its revolutionary intentions. Consequently, during the crisis of 1810, Mgr PLESSIS asked his priests to support (with little success) the government's candidates. When the War of 1812 began, it is not surprising that the episcopacy strongly denounced the Americans and demanded, on pain of religious sanction, that the population actively defend its territory.

After 1815, reassured by peace and the more conciliatory attitude of the Parti canadien leaders, who opposed the Sulpician fathers (still French in origin) and supported the clergy's efforts to create a diocese in Montréal, clerical leaders began fighting for the restoration and extension of the privileges of their class. They sought control of primary education, perceiving that school was one of the main instruments of socialization. With Papineau's support the clergy won a dramatic but brief victory over the Protestant and state threat when the Parish Schools Act was passed in 1824.

The clergy gained new strength when Mgr Lartigue became bishop of Montréal and devoted himself to reorienting clerical ideology and strategy to fight the lay and Protestant threat. He was well suited to the role: he was one of the first priests to break with GALLICAN ideology and to be won over by ULTRAMONTANE and theocratic doctrine. He followed the new form

of nationalism, now detached from its liberal roots and justifying the dominant role of the clergy in a Catholic society. He hoped to restore to the church full control over educational institutions and to bring the clergy closer to the people so as to deepen church influence. But after 1829 the Parti patriote decided to establish assembly schools (nurseries for future patriotes), sought to democratize the management of the parishes and adopted a liberal and republican rhetoric. A break between the clergy and the French Canadian middle class became inevitable.

**Rebellions of 1837-38** The 3-way power struggle became more violent in Mar 1837, when the British government, to break the political and financial deadlock, adopted the Russell Resolutions, which effectively rejected the Patriotes' demands. The Patriotes were not well enough organized to jump immediately into a revolutionary venture, so they developed a strategy that provided for the possibility that the state would refuse to yield to the pressure of a mass movement while it gave them time to prepare an armed insurrection to begin after winter set in.

The great parish and county assemblies began in May 1837 and spread agitation from parish to parish. For the present, action was supposed to stay within legal limits, but these assemblies, pushed by radicals, soon went beyond. Government leaders saw the uproar as a huge blackmail operation, but the better-informed clergy immediately understood the Patriotes' real objectives. By July 1837 Bishop Lartigue had given precise instructions for his priests in case of armed uprising. Agitation increased until the end of Oct, when the Patriotes held the "Assembly of the Six Counties" in St-Charles-sur-Richelieu. It was marked by a declaration of rights and by the adoption of resolutions suggesting a desire to overthrow the government.

Meanwhile, militant Patriotes had been extremely active in Montréal, where they set up the FILS DE LA LIBERTÉ, an association that publicly advocated revolution, held military drills and paraded through the streets amid great commotion. A Nov 6 battle between the Fils de la liberté and anglophone members of the DORIC CLUB led to government intervention, something long and anxiously sought by country dwellers who were being harassed by the Patriotes. A few days later the government issued warrants for the arrest of the Patriote leaders, who hastily left Montréal and took refuge in the countryside.

Armed confrontation came well ahead of the Patriotes' intended timetable. Following an incident in Longueuil on Nov 16, the governor sent troops into the Richelieu Valley. On 23 Nov 1837 the Patriotes, led by Wolfred Nelson, took St-Denis, but 2 days later were defeated at St-Charles. Having scattered the last insurgent ranks S of Montréal, Gen Colborne attacked St-Eustache on Dec 14 and ended Patriote resistance.

Papineau, supreme commander, had hidden in St-Hyacinthe before taking refuge in the US under an assumed name. Many refugees gathered in the US and, until Lord DURHAM tried to calm tempers, attempted to plan an invasion of Lower Canada. Their efforts were complicated by a rift within Patriote ranks between the radicals, such as Côté and Nelson, and the more conservative elements led by Papineau. When Durham left Canada in early Nov 1838, a second rebellion broke out, led by the radicals. Even though the revolutionary organization, through the efforts of the Société des frères chasseurs (HUNTERS' LODGES), spread throughout the territory, the Patriotes had no more luck than the year before. By about mid-Nov 1838 order had been re-established in the Richelieu Valley.

In 1837 Durham had exiled a few of the most seriously compromised political prisoners, but

The St-Charles R from above St John's Gate, Québec, Lower Canada (c1835), by an unknown artist (courtesy Public Archives of Canada/GC-40305).

was rebuked by London. In 1838, 850 suspects were arrested; 108 were brought before a court-martial and 99 were sentenced to death; only a dozen were hanged and 58 were deported to Australia. The main winners in the revolution were the clergy, with its special vision of a French, Catholic nation, and the anglophone bourgeoisie, with its plans for development through economic measures. In 1840 the ACT OF UNION was passed in Britain, providing for the 1841 unification of Upper and Lower Canada into the single PROVINCE OF CANADA.

FERNAND OUELLET

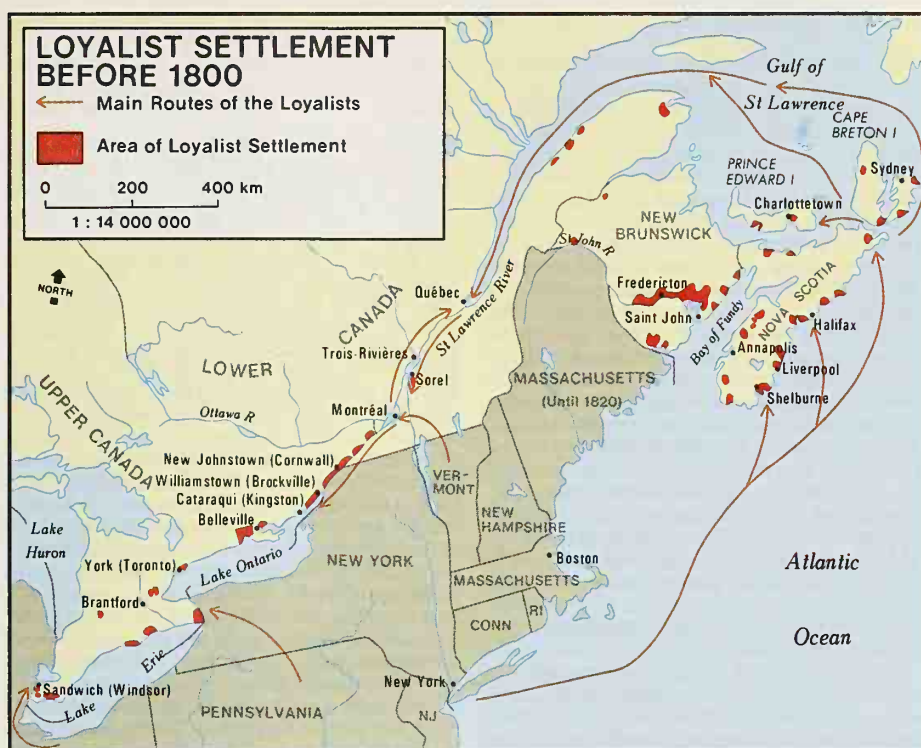

Reading: Fernand Ouellet, *Lower Canada 1791-1840* (1980).

**Lower Fort Garry**, built 30 km down the Red R from Ft Garry [Winnipeg] during the 1830s as the HUDSON'S BAY COMPANY'S administrative centre for RUPERT'S LAND. It was hoped that the lower fort would be free from the spring flooding that beset the older community, and would house a more respectable class of citizen. But the original settlement was well located at the forks of the Assiniboine and Red rivers and even in the 1830s was developing as the natural centre of the RED RIVER COLONY. Although it never achieved the status originally intended, Lower Fort Garry served in a number of minor roles. During the Oregon crisis (see OREGON TREATY) in the 1840s a British army contingent was stationed at the fort; in 1871 some opponents of Louis RIEL rallied around Stoughton Dennis there; and during the winter of 1873-74 the NORTH-WEST MOUNTED POLICE trained its first recruits at the fort. It later served as the first provincial penitentiary and as an insane asylum. In the early 20th century it was a residence for HBC officials, and thereafter was leased to a country club. In 1951 the HBC gave the property to the Government of Canada. It was designated a National Historic Park and, after restoration carried out in the 1960s and 1970s, the fort is now one of the major HISTORIC SITES OF Parks Canada.

C.J. TAYLOR

At every major fur-trade post there was a "Big House" which provided a commodious residence for the chief factor and his family. The "Big House" of Lower Fort Garry was a grand stone structure begun in the 1830s (courtesy Hudson's Bay Company).

**Lowry, Clarence Malcolm**, novelist (b at New Brighton, Eng 28 July 1909; d at Ripe, Eng 27 June 1957). Although he was not born in Canada, the years he spent in Dollarton, BC, (1940-54) were the happiest and most productive years of his chaotic life. Much of his later fiction is set in BC. All of Lowry's work is to a degree autobiographical. *Under the Volcano*, one of the great books of modern literature, was inspired by his months of alcoholic depression in Mexico (1936-38). From 1941 to 1944 he worked with his wife Margerie in the Dollarton shack tirelessly revising the manuscript, and in 1946 it was accepted for publication. In the character of the consul, a drunken diplomat without official duties, and in the infernal Mexican setting, Lowry found his perfect symbols. His supple and allusive style lends tragic dignity to the consul's sufferings, and gives the novel its unique combination of humour and horror. Much of Lowry's fiction (*Ultramarine*, 1933; *Lunar Caustic*, 1968; *Hear Us O Lord from Heaven Thy Dwelling*

*Place*, 1961) is memorable, but it is *Under the Volcano* that has established Lowry as one of this century's great writers.

TRACY WARE

Reading: Douglas Day, *Malcolm Lowry* (1973).

**Lowther, Patricia Louise**, poet (b at Vancouver 29 July 1935; d there 24 Sept 1975). Lowther devoted herself to the promotion of poetry, lecturing in creative writing at UBC, and to the advancement of the NEW DEMOCRATIC PARTY, for which she was constituency secretary. She was elected cochairman of the League of Canadian Poets in 1974 and subsequently to the BC Arts Council. Widely anthologized, Lowther published 4 collections of poetry (*This Difficult Flowering* 1968, *The Age of the Bird* 1972, *Milk Stone* 1974, and *A Stone Diary* 1977) in which the 2 pivotal aspects of her work, socialist politics and the politics of sex, are mirrored. She is survived by 4 children and her husband Roy, who was sentenced to life imprisonment in 1977 for his wife's murder. The Pat Lowther Award is given annually by the League of Canadian Poets.

CATHERINE AHEARN

**Loyalists**, American colonists of varied ethnic backgrounds who supported the British cause during the AMERICAN REVOLUTION (1775-83). In 1789 Lord Dorchester (see CARLETON), governor-in-chief of BRITISH NORTH AMERICA, proclaimed that the Loyalists and their children should be allowed to append "UE" to their names, "alluding to their great principle, the Unity of Empire"; hence the phrase "United Empire Loyalist," or UEL. (The term applied initially in the Canadian colonies alone; it was officially recognized in the Maritimes only in the 20th century.) In determining who was eligible for compensation for war losses, Britain used a fairly precise definition: Loyalists were those born or living in the American colonies at the outbreak of the Revolution who rendered substantial service to the royal cause during the war, and who left the US by the end of the war or soon after. Those who left substantially later, mainly to gain land and to escape growing intolerance of minorities, are often called "late" Loyalists.

The Loyalists supported Britain for highly diverse reasons. Many evinced a personal loyalty to the Crown or a fear that revolution could bring chaos to America. Many agreed with the

rebels that America had suffered wrongs at the hands of Britain, but believed the solution could be worked out within the empire. Others, seeing themselves as weak or threatened within American society and in need of an outside defender, included linguistic and religious minorities, recent immigrants not fully integrated into American society, blacks and Indians. Sympathy for the Crown was a dangerous sentiment: those who defied the revolutionary forces could find themselves without civil rights, subject to mob violence or flung into prison. All the states finally taxed or confiscated Loyalist property.

During the Revolution over 19 000 Loyalists served Britain in specially created provincial corps accompanied by several thousand Indians. Others spent the war in such strongholds as New York City or in refugee camps such as those at Sorel and Machiche, Qué. Between 80 000 and 100 000 eventually fled, about half of them to Canada. The vast majority were neither well-to-do nor particularly high in social rank; most were farmers. Ethnically they were quite mixed, and many were recent immigrants. White Loyalists brought sizable contingents of slaves with them. Free blacks and escaped slaves who had fought in the Loyalist corps and as many as 2000 Indian allies, mainly Six Nations Iroquois from NY, settled in Canada.

The main waves of Loyalists came to what is now Canada in 1783 and 1784. The MARITIME PROVINCES became home for upwards of 30 000; most of coastal NS received Loyalist settlers, as did Cape Breton and St John's I [PEI]. The 2 chief settlements were in the Saint John R valley and temporarily SHELburne, NS. The Loyalists swamped the previous population of 20 000 Americans and French, and in 1784 New Brunswick and Cape Breton were created to deal with the influx.

Of about 2000 who moved to present-day Québec, some settled in the Gaspé on Chaleur Bay and others in the seigneurie of Sorel at the mouth of the Richelieu R. About 7500 moved into what would become Ontario, most settling along the St Lawrence R to the Bay of Quinte. There were also substantial settlements in the Niagara Peninsula and on the Detroit R, with subsidiary and later settlements along the Thames R and at Long Point. The Grand R was the main focus of Loyalist Iroquois settlement. The Loyalist influx gave the region its first substantial population and led to the creation of a separate province, UPPER CANADA, in 1791. Loyalists were instrumental in establishing educational, religious, social and governmental institutions. Though greatly outnumbered by later immigrants, Loyalists and their descendants, such as Egerton RYERSON, exerted a strong and lasting influence. Modern Canada has inherited much from the Loyalists, including a certain conservatism, a preference for "evolution" rather than "revolution" in matters of government, and tendencies towards a pluralistic and heterogeneous society.

**Loyola College**, see CONCORDIA UNIVERSITY.

**Luad, Richard George Amherst**, army officer (b in Eng 29 July 1827; d at Eastbourne, Eng 24 July 1891). A British military officer, he was general officer commanding the Canadian Militia 1880-84, following active service in India, the Crimea and China. Scornful of the Militia's fancy dress and lack of expertise, he advocated expansion of Canada's tiny permanent force at the expense of the part-time soldiers in rural regiments. With displays of his fearsome temper at military gatherings, this policy led him into conflict with politically influential officers. Adolphe CARON, minister of militia and defence,

perceived his attempts at departmental reform as interference with political patronage. Although new permanent-force units were raised in 1883, Luad resigned under pressure soon after.

O.A. COOKE

**Luc, Frère**, Recollet, painter, architect (b Claude François at Amiens, France May 1614; d at Paris 1685). He studied in Paris and Rome, received the title "king's painter" for his work in decorating the Louvre (1640-42), joined the Recollets (1644) as Frère Luc, and worked in NEW FRANCE from Aug 1670 to Oct 1671. He designed the chapel for the rebuilt Recollet monastery in Québec, now the oldest chapel in Canada and part of Hôpital-Général, and a wing of the SÉMINAIRE DE QUÉBEC (1677-78). Since works of art were generally imported from France at this time, he was most influential through his paintings for local churches, both during his sojourn in the colony and after his return to France. The *Assomption de la Vierge*, which he painted in 1671 for the retable of the Recollet chapel, is his best-known work. He has been credited with a few portraits, including ones of Jean TALON and Bishop LAVAL, and the churches of Ste-Anne-de-Beaupré and of St-Philippe (Trois-Rivières) possess his colourful if sentimental VOTIVE PAINTINGS. Most accomplished paintings of the period have variously been attributed to him and, though recent research discredits many of these claims, the extent of his influence cannot be denied.

ROSEMARY SHIPTON

**Lucan**, Ont, Village, pop 1616 (1981c), inc 1872, is located in southwestern Ontario, 90 km NE of SARNIA and 22 km NW of LONDON. It was first settled 1829-30 by refugee BLACKS from the US and was known as the Wilberforce Colony. In 1832 settlers from southern Ireland arrived and the community was renamed Marystown. When the main line of the GRAND TRUNK RY was built through the village in 1860 it received its present name after a suggestion by a resident who had been coachman on the estate of Lord Lucan in Ireland. In recent years, because of its proximity to London, Lucan has prospered as a dormitory community for that city. The village has received much unwelcome notoriety because of its connection with the savage massacre of the DONNELLYS in 1880 on a nearby farm.

ORLO MILLER

**Lucania, Mount**, elev 5226 m, the third-highest mountain in Canada, is located 29 km E of the Alaska border and 50 km N of Mt LOGAN in the Yukon's St Elias Range. It was named by the duke of Abruzzi, who viewed it from Mt St Elias in 1897. Draped in snow and ice, Mt Lucania is joined to its neighbour to the NE, Mt STEELE, by a high saddle. Bradford Washburn and Bob Bates were flown to Walsh Glacier and made the first ascent 9 July 1937, then proceeded over Mt Steele — that mountain's second ascent.

GLEN BOLES

**Lucy Qinnuayyak**, artist (b near Sugluk, Qué 1915?; d at Cape Dorset, NWT 10 Sept 1982). One of the most popular Inuit graphic artists, noted primarily for fanciful arctic birds, Lucy began to draw in the late 1950s at the time James HOUSTON started PRINTMAKING experiments at Cape Dorset. "We would draw our art in camp and then when a dog-team went to Cape Dorset to get supplies we would take our drawings and give them to Saumik" (ie, to Houston). Well over 100 of her drawings have appeared as prints; the stone for her early *Large Bear* (1961) was donated to the Tate Gallery, London, by admiral Sir Charles Gimpel and is displayed at the Scott Polar Research Institute, Cambridge. Widely collected, her work has appeared on an Olympic banner and in many exhibitions. See INUIT ART.

DOROTHY HARLEY EBER

**Luge**, see BOBSLEDDING.

**Lumber and Wood Industries** Canada's lumber and wood industries include manufacturers that convert logs (by mechanical processes of sawing, peeling, slicing or chipping) into lumber, veneer, plywood, particle board and wafer board, and that produce, as residual by-products, wood chips, sawdust and shavings. Lumber and plywood are the most significant products in volumes manufactured. Over 65 000 people are employed directly in MANUFACTURING lumber, plywood, veneer and wood-based panels. The market value of primary wood products in 1982 was \$6.2 billion, of which 84% was attributed to lumber sales. Since nearly 70% of softwood lumber production is exported, this industry makes a significant contribution to Canada's BALANCE OF PAYMENTS.

The primary wood-products industry consumes about half the roundwood cut in Canada; the PULP AND PAPER INDUSTRY uses the remainder. Over 95% of logs used to manufacture lumber, plywood and other wood-based panels are softwoods (primarily CONIFERS); the rest are hardwoods (deciduous TREES). In Canada the principal softwood lumber species are DOUGLAS FIR, SPRUCE, PINE, HEMLOCK and western red CEDAR; BIRCH and MAPLE are the predominant hardwood species. Between 1970 and 1983, Canadian softwood lumber and plywood production rose dramatically (88% and 40%, respectively). In 1983, 98% of the 48 million m<sup>3</sup> of lumber manufactured in Canada was softwood (of which BC produced 65%). In that year, 2.1 million m<sup>3</sup> of plywood was manufactured from softwoods, with BC responsible for 85%. Hardwood lumber and plywood are produced mainly in Ontario and Québec.

About 30% of Canadian lumber production is consumed in the domestic market; 70-75% of exported lumber is purchased by the US. The European Economic Community and Japan are also important markets, with lesser volumes going to Australia, Africa and Latin America. More than 80% of the softwood plywood produced is used domestically; about 98% of exported plywood goes to Britain and other EEC countries. The US imports insignificant volumes because it has a strong domestic industry and imposes high tariffs on softwood plywood imports. About 60% of Canadian particle board and wafer board are consumed in Canada; the majority of exports goes to the US. This export volume is expected to increase in future.

During the period 1970 to 1983, the number of sawmills decreased from an estimated 1800 to 1250 because of the trend towards larger, more technically efficient manufacturing complexes. A significant innovation in this period was the development of high-volume, small-log processing systems.

**Lumber and Plywood Manufacturing** Merchantable timber is felled and cut into logs for transport to sawmills. Mechanical or hydraulic debarking is the first step in converting a sawlog into lumber. In conventional sawmills, large logs are placed on a moving log carriage and passed repeatedly through a band or circular saw, each pass producing boards that normally require further processing on edgers, resaws and trimsaws. In sawmills processing small logs, the primary unit may be a chipper-canter with integrated sawing units, or a system of multiple-band or circular saws, designed to operate at speeds up to 100 m per minute. About three-quarters of the lumber produced in Canada is further processed in planer mills that smooth the rough surfaces and dimension the pieces. Over half the lumber produced is dried to remove excess moisture, either in dry kilns for several days at temperatures sometimes exceeding 80°C, or by air for several months.

Plywood is wood reduced to thin sheets of veneer, glued together with the grain direction of adjacent sheets at right angles. This cross lami-

nation makes the panel stable and redistributes the inherent directional-strength properties. Plywood is an engineered product. Veneers are produced by holding a log firmly at each end in a lathe and rotating it against a knife that moves towards the axis of rotation. The veneer exits from the lathe knife in a continuous ribbon of wood that is clipped to desired widths or to eliminate defects. After drying the veneers are sorted into sets, each of which will form a plywood panel of the desired thickness and size. Alternate sheets are coated with glue, which forms a waterproof bond when subjected to high temperature and pressure in a hot press. The rough plywood panels are then trimmed and may be sanded.

To ensure uniform quality, lumber and plywood are graded into categories by standardized procedures. Most of the lumber produced in Canada is used in construction, mainly for house building; it is classified as dimension lumber and is graded into width and use categories. Other classes of lumber include clears, factory lumber and shop lumber, used to manufacture high-quality moldings, panelling and flooring, or to obtain clear cuttings for components in such items as doors and windows. Softwood plywood is produced in 3 grades: sanded (for high-quality finishing), unsanded (for construction use), and unsanded and overlaid (for special uses). For general construction and other structural purposes, the most common type of panel is sheathing, the unsanded grade. About half the plywood used in Canada is for house building and agricultural construction; industrial uses take up another third; the balance is consumed in a multitude of miscellaneous uses.

**Particle Board and Wafer Board** Wood particle board is a panel product manufactured by bonding particles of wood together with an adhesive in a press. Since the product is manufactured from small pieces of wood, properties of the finished board, such as density, hardness and elasticity, can be engineered into the panel. The furnish for particle board is sawdust or planer shavings or solid wood flaked or chipped specifically for that purpose. The various wood elements are screened and separated by size and shape so that their integration in the finished product can be controlled. The particles are then dried by heat and circulation and mixed with thermosetting bonding agents. The mixture is then meshed together in a layup for final pressing under heat.

The most common type of particle board manufactured in Canada is the 3-layered, graduated mat-formed variety. By preparing the core and surface material separately, segregating the coarser materials into the centre and the finest particles on the surface, the manufacturer can create a board that can be sanded to an even, smooth surface, and that has the desired mechanical properties in each layer. The fibre lengths of the particles are distributed in a random pattern, so that internal stresses average to zero, resulting in an extremely stable finished product. Major uses of particle board are furniture and cabinet panels and cores, and floor underlay; minor uses include interior wall sheathing and mobile-home decking.

Wafer board is an engineered, structural panelboard made from large, thin wafers cut from roundwood. These wafers are mixed with waterproof phenolic resin and interleaved together in thick mats, which are then bonded together under heat and pressure. The result is a solid, uniform building panel with high strength and water resistance, properties that make wafer board suitable for most construction applications. Some examples of uses are wall and roof sheathing, subflooring and underlay, cladding and soffits. The panels are also widely used for farm structures, industrial packaging, crating and warehouse pallets.

DAVID MILTON

**Lumonics Inc.**, see ELECTRONICS INDUSTRY.

**Lumsdon, Cliff**, long distance swimmer (b at Toronto, Ont 1 Apr 1931). At age 6 Lumsdon joined the Lakeshore Swim Club in Toronto, coached by the famous Gus Ryder. In 1949 he claimed the first of 5 men's world marathon swimming championships by beating a field of 70 in the CNE 15-mile (24 km) swim with a time of 7 hrs 55 mins. He received the LOU MARSH TROPHY as Canada's athlete of the year in 1949. He continued to do well after 1954, when the shorter waterfront marathon was replaced by a 30-mile (48 km) swim across the lake. In 1956 he won the Atlantic City 26-mile (42 km) event and became the first to conquer the Juan de Fuca Strait. Later, he coached his daughter Kim and assisted Cindy Nicholas and other marathon swimmers.

GERALD REDMOND

**Lund, Alan**, choreographer (b at Toronto 23 May 1925). A specialist in musical theatre, he trained in Toronto and first established a performance reputation as a dance team with his wife Blanche, appearing during WWII in the revue *Meet the Navy*. Turning to choreography in the 1950s, Lund contributed to various productions including *Spring Thaw*, the CANADIAN NATIONAL EXHIBITION Grandstand Show and at the STRATFORD FESTIVAL. In 1968 he became artistic director of the Charlottetown Festival, where he has directed Canada's most successful musical, *Anne of Green Gables*, and several others. His own *The Legend of the Dumbells* premiered there in 1977. Lund was given an honorary degree by UPEI and is a member of the Order of Canada.

JILLIAN M. OFFICER

**Lundy's Lane**, site of a battle fought between American troops and British regulars assisted by Canadian fenibles and militia on the sultry evening of 25 July 1814, almost within sight of NIAGARA FALLS. The action swayed to and fro, as the troops attacked each other with reckless abandon in pitch darkness. The British regulars, mainly the Royal Scots and the 8th, 41st and 89th regiments of foot, were steadfast in defence and bold adversaries in attack. Sir Gordon DRUMMOND, the Canadian-born British field commander, was wounded; his second-in-command was captured. Nonetheless, by midnight the British and Canadians held the field as the Americans retired toward Ft Erie. Casualties were high on both sides, the Americans suffering more killed. The battle was the toughest and most bitterly contested of the WAR OF 1812.

ROBERT S. ALLEN

**Lunenburg, NS**, Town, pop 3014 (1981c), inc 1888, shire town of Lunenburg County, is located on Lunenburg Bay, 90 km SW of Halifax. The centre of NS's fishing industry, it was known first as Merliguesche, and was home

to some 50 ACADIANS as late as 1749. In 1753 the British government settled 1453 "Foreign Protestants" here; recruited from southwestern Germany and the Montbéliard district of France and Switzerland, these mostly German-speaking people were intended to help counter the French and Catholic presence in NS. (The settlement was named for the royal house of Brunswick-Lüneburg, whence came King George I of England.) Each settler was granted a free town-and-garden lot and farm acreage in the county. The town's gridlike plan mirrored that of Halifax.

Despite initial hardships, by the late 18th century Lunenburg supplied Halifax with many agricultural products. Lunenburgers had also entered the offshore fishery, today the foundation of the local economy. They first fished off the Labrador coast, but with the introduction of new trawling techniques in the late 1860s, the town's schooner fleet turned to the GRAND BANKS of Newfoundland and the Western Bank, SW of Sable I. The "Lunenburg cure" of dried cod found steady markets in the West Indies, particularly Puerto Rico. "A boom of splendid proportions" (*Lunenburg Progress*, 1888) did not persist, however. The fish export trade became centralized in Halifax, where fast steamships left directly for the West Indies and US markets. Moreover, a preference appeared for fresh instead of dried fish. Local entrepreneurs, especially the Smith and Zwicker families, made adjustments to recapture lost trade. Beginning in the late 1920s, cold-storage equipment, processing plants and diesel-powered trawlers replaced cod-drying flakes and traditional schooners. Today, Lunenburg is the base for Atlantic Canada's largest fish-processing plant and fleet of deep-sea trawlers, owned by National Sea Products of Halifax, the successor to several Lunenburg-owned firms.

The fishery is celebrated annually in the NS Fisheries Exhibition and Fisherman's Reunion; and the Fisheries Museum of the Atlantic is found here. The famous racing schooner BLUENOSE was launched from a local shipyard. Several churches, including Canada's oldest Presbyterian (St Andrew's 1754) and Lutheran (Zion's 1772) and second-oldest Anglican (St John's 1753) congregation, as well as rich architectural

Lunenburg, NS, settled in the mid-18th century, is the base for Atlantic Canada's largest fish-processing plant and deep-sea trawler fleet (photo by Jim Merrihew).

tradition testify to Lunenburg's historical significance. L.D. McCANN

Reading: M.B. DesBrisay, *A History of Lunenburg County* (1895); Lunenburg Heritage Society, *A Walk Through Old Lunenburg* (1979).

**Lupine** [Lat *lupus*, "wolf," from belief that it robs the soil], annual or perennial herbaceous PLANT, genus *Lupinus* of family Leguminosae or Fabaceae. Worldwide, there are about 200 species with 2 principal areas of distribution: western mountains of N and S America, and the Mediterranean basin. In Canada, 28 species are recognized, most from southern Saskatchewan to BC; *L. arcticus* and *L. nootkatensis* reach western Arctic; *L. perennis* occurs in southern Ontario; the western species, *L. polyphyllus*, is naturalized in eastern Canada. Some cultivated lupines escape along roadsides. Palmately compound leaves (ie, leaflets radiate from central point) and showy flower spikes make lupines admirable ORNAMENTALS (eg, Russell hybrids). Some species are grown for fodder, green manure and food (eg, Balkan species, *L. albus*, in Europe and Africa). In Canada lupines are used as a cover crop in reforestation projects. Lupines grow on and enrich nitrogen-poor soils. Quinolizidine alkaloids make lupine seeds poisonous to livestock, although vegetative plants are not. When treated, seeds provide protein source for livestock. See POISONOUS PLANTS. J.M. GILLET

**Luscombe, George**, director, producer, playwright (b at Toronto 17 Nov 1926). As artistic director of Toronto Workshop Productions (founded 1959), he is considered the founder of the "alternative" theatre movement in English Canada. Working as an actor with Joan Littlewood in England 1952-56, he was influenced by her experimentation with new performance styles and belief in a socially committed theatre. His productions are characterized by ensemble acting rather than a written script orientation — what he calls "group" theatre. At TWP he pioneered original Canadian scripts, adaptations of classics and collective creations. His most noteworthy productions, combining a lively theatricality with significant social commentary, include *Hey, Rubel!* (1961), *Mister Bones* (1969), *Chicago 70* (1970), *Ain't Lookin'* (1980) and, particularly, *Ten Lost Years* (1974). ANTON WAGNER

**Lutherans**, adherents to the Christian church founded by 16th-century Protestant reformer Martin Luther, whose central doctrine, justification by grace through faith alone, concentrates on God's favour to man and not on man's actions. Because the understanding of that favour depends upon proclamation and interpretation of the Word, preaching is the Lutheran church's hallmark. Lutheranism also reduced the number of sacraments from 7 to 2: baptism and the Lord's Supper (see CATHOLICISM). An emphasis upon pure doctrine derived from Lutheran orthodoxy and the influence of pietism are post-Reformation shifts imported to Canada principally from the US. The doctrinal stance of the Lutheran Church is determined by the acceptance of the Scriptures as sovereign over church tradition and as normative for faith and life, and by subscription to the Lutheran Confessions, composed 1530-80. Century-long doctrinal disputes which have divided American Lutherans have also impeded inter-Lutheran merger in Canada.

With the exception of Baltic congregations in exile, Lutheran state church congregations abroad and a few Wisconsin Synod congregations, there are now 3 Lutheran jurisdictions in Canada: Lutheran Church of America (LCA), Evangelical Lutheran Church of Canada (ELCC) and Lutheran Church — Canada (LCC). LCA and ELCC are projecting merger in 1986. Matters of inter-Lutheran concern are handled through the Lutheran Council in Canada (fd 1967). Origin-

nally rural and small town in orientation, concentrated in NS, Ontario and the Prairies, the Lutheran churches were greatly affected by urbanization after WWII. Major strength now is around Kitchener-Waterloo, Winnipeg and Edmonton, with new missions in many cities. The slowness of Lutheran ethnic minorities to adjust to the dominant culture has to some degree inhibited Lutheran involvement in Canadian society.

Lutheran history in Canada has been determined by US affiliations. Congregations were established 1752 in Halifax, NS, and 1784 in Dundas County, Ont. From the beginning the mission suffered from lack of personnel and fiscal support from the parent US body; conflict with Anglicans; rivalry among the Lutheran denominations; and imposters posing as evangelical ministers. Confined principally to German settlements, churches associated with the New York Ministerium and the Pittsburgh Synod later found themselves competing with the Lutheran Church, Missouri Synod (LCMS). In the mid-19th century the Pittsburgh Synod created a Canada Conference, and in 1876 the Nova Scotia Conference. These and an English Conference became units of the General Council, then of the successor United Lutheran Church in America (ULCA) in 1918. In 1962 they combined into a single synod upon formation of LCA. Meanwhile, in 1879 LCMS had formed its Canada District (renamed Ontario District in 1922), and the nongeographic English District in 1911. The Canadian congregations of LCMS have been federated since 1958 as LCC.

In western Canada work began among Icelanders near Gimli, Man, in the 1870s. Germans in Winnipeg in 1888, Swedes in New Stockholm, Assiniboia (now Sask), in 1889, Norwegians in Vancouver in 1890 and Danes at Dickson, Alta, in 1903. By 1910 there were 3 German, 1 Swedish, 1 Danish, 1 Icelandic and 4 Norwegian Lutheran church bodies in the West, using at least as many languages. Except among Norwegians, the mergers of US parents did not follow ethnic lines. As a result, the German Manitoba Synod of the GC became a synod of ULCA in 1918; the Icelandic Synod joined this body in 1943 as a nongeographic synod; and these and the Canada Conference of the Swedish Augustana Synod became 2 synods (Man-Sask and Alta-BC) in LCA in 1962.

The Norwegian Lutheran Church and the Haugean Synod, the constituent units of the United Norwegian Lutheran Church, became in 1917 a district of the successor Evangelical Lutheran Church. This district, plus the Canadian District of the German Ohio Synod (later American Lutheran Church, 1930) and the Danish United Evangelical Lutheran church district, became a single district in the 1960 merger forming the American Lutheran Church. In 1967 this district became autonomous as ELCC.

Lutheran Church polity is nonepiscopal, LCA's recent introduction of "bishops" notwithstanding (the title reflects American administrative influence). The pastorate is the fundamental office of the church and the prerequisite for official functions. Ministerial recruitment is the responsibility of the church body; LCA and ELCC ordain women, but women's rights remain restricted in LCC.

Youth work is carried out through the Luther League (Walter League in LCC) and university-campus ministry through inter-Lutheran Student Centres. The best-known men's organization is the Lutheran Laymen's League of LCMS, which in N America sponsors such programs as radio's Lutheran Hour. Women's auxiliaries have been major supporters of foreign mission and service projects. Education has received high priority among Lutherans, not only through the SUNDAY-SCHOOL system and the earlier Saturday and Monday schools, but also through paro-

chial schools, particularly in LCC; Bible schools such as those at Outlook, Sask, and Camrose, Alta, in ELCC; and high schools and junior colleges such as Luther College, Regina, and Concordia College, Edmonton. WILFRID LAURIER UNIVERSITY in Waterloo was formerly Waterloo Lutheran U. Theological education has been pursued for some 75 years at seminaries in Waterloo and Saskatoon. An LCC seminary opened in 1976 in St Catharines, Ont. Lutheran Life, a fraternal insurance society, provides scholarship support to Lutheran students and institutions. In the mid-20th century, health care mushroomed with the establishment of auxiliary hospitals and senior-citizens' homes.

WALTER FREITAG

Evenson, *Advertising for Christ* (1974); Walter H.P. Freitag, *Prospect and Promise of Lutheran Unity in Canada* (1974); N. Threinen, *A Sower Went Out* (1982).

**Lutin**, elf or imp in French Canadian tradition who rides horses throughout the night, leaving them with plaits or knots in their hair, which are very difficult to remove. In some cases, it is believed that only a woman wearing a wedding ring can loosen the knots. NANCY SCHMITZ

**Lyall, William**, philosopher (b at Paisley, Scot 11 June 1811; d at Halifax 17 Jan 1890). He arrived in Halifax in 1850 as a minister trained in the classics. Most of his teaching (about 32 hours a week) was done at Dalhousie in Halifax. His major work, *Intellect, The Emotions and The Moral Nature* (1855), attempted to bring together the emotions and intellect in man. Lyall relied on commonsense realism and Augustinian Neoplatonism to achieve his goal. He argued that the emotions, of which love was most important, were a source of knowledge. This position influenced his ethical theory, which in turn was reflected in the moral tone of Maritime literary works of his day. ELIZABETH A. TROTT

**Lyle, John MacIntosh**, architect, urban planner, teacher, designer (b at Connor, Ire 13 Nov 1872; d at Toronto 19 Dec 1945). He attended the Hamilton School of Art and trained as an architect at the Yale School of the Arts before enrolling (1894) in the École des beaux-arts, Paris. Lyle's training was reinforced by 12 years' work

John Lyle integrated elaborate sculptured motifs in stone and other material into his buildings to express a unique Canadian style. Shown is a detail of a window splay, Bank of Nova Scotia, Calgary (courtesy Geoffrey Hunt).

in New York for several large firms. Upon return to Canada in 1906 he was instrumental in disseminating the beaux-arts ideals to the architectural profession through Atelier Lyle's lectures at University of Toronto. His early works reflect the beaux-arts style — Royal Alexander Theatre (1906) and UNION STATION (1911-27) in Toronto — as do his later works — Memorial Arch, RMC, in Kingston (1923) and Bank of Nova Scotia in Ottawa (1923). Later in the 1920s, through an examination of Canada's architectural heritage, Lyle went on to develop a distinctively Canadian style. His integration of Canadian floral and faunal motifs into the design of his buildings parallels the artistic developments of the GROUP OF SEVEN. For example, in 1929 he designed 3 bank branches that codified his nationalistic feelings: Dominion Bank (Yonge and Gerrard, Toronto), Bank of Nova Scotia (8th Avenue SW, Calgary) and Bank of Nova Scotia (head office, Halifax). In these buildings he integrated elaborate sculptural motifs in stone, metal, plaster, fresco, glass and mosaic to express the Canadian heartland. In 1930 he built the Runnymede Library, Toronto, which combined colonial Georgian and early Québec styles.

Lyle's work in URBAN AND REGIONAL PLANNING made him a leader in the City Beautiful movement, and he developed visionary designs for Toronto's Civic Improvement League. His designs submitted to the Dominion Coin Competition (1936) influenced the adoption of animal and leaf motifs used in contemporary Canadian coinage.

GEOFFREY HUNT

Reading: Geoffrey Hunt, *John M. Lyle: Toward a Canadian Architecture* (1982).

**Lyman, John Goodwin**, painter, author, teacher (b at Biddeford, Maine 29 Sept 1886; d in Barbados, West Indies 26 May 1967). Apart from trips to Canada in 1913 and 1927, he spent the years 1907-31 in Europe. He attended several art schools there but, while these provided him with basic technical competence, the Académie Matisse (1910) exercised a deep influence on his art and thinking. Upon his return to Canada, his "gentlemanly" life-style gave way to a commitment to improve artistic conditions. As a critic (the *Montrealer*, 1936-42) he showed an awareness of art's elusive quality and rather than dictate to people tried to help them respond to art. He saw the GROUP OF SEVEN as a reactionary institution standing in the way of progress, and was a key figure emphasizing internationalism in Québec. Though he often seemed to express formalist views about art, he never insisted on values of the medium alone, admitting the interplay of raw material and subjective states. Like Matisse, he emphasized the role of instinct and the expression of feelings. As an organizer (Eastern Group of Painters, Contemporary Arts Soc) Lyman sought to improve exhibiting conditions for artists. Here, however, as in his teaching (Atelier, McGill), he was careful not to become dogmatic. Lyman the artist is a controversial figure. Though many dismiss his role as a painter, his works reflect advanced formal concerns and a personal vision. Neither anecdotal nor picturesque, and simplified in form, they state the everlasting quality of things.

LOUISE DOMPIERRE

**Lynch, John Joseph**, Vincentian, first Roman Catholic archbishop of Toronto (b in County Fermanagh, Ire 6 Feb 1816; d at Toronto 12 May 1888). He was ordained in 1841 and served in Texas, Missouri and New York before going to Toronto in 1859. He was consecrated archbishop in 1870. Known for his strong defence of infallibility, he was a controversial figure. Many of his pastoral letters were published as was his

John Goodwin Lyman, *The Card Game*, oil on canvas. As a critic, Lyman considered the Group of Seven reactionary. His own work reflects more advanced formal concerns (courtesy National Gallery of Canada).

book, *Questions and Objectives Concerning Catholic Doctrine and Practice* (1877). From 1873 to 1888, Lynch and Ontario Premier Oliver MOWAT had a strong and public political alliance known as the Lynch-Mowat concordat. In federal politics, he was less successful and wavered between the Liberals and Conservatives. An Irish nationalist, Lynch tried unsuccessfully throughout his life to persuade the British to grant Dominion status to Ireland.

GERALD STORTZ

**Lynx**, medium-sized, carnivorous MAMMAL of family Felidae. Canada lynx (*Lynx canadensis*) is distinguished from N American BOBCAT by its tufted ears, large feet, long legs and lack of a white patch below the tail tip. The buff grey, indistinctly spotted fur is long behind the jaws, on the sides of the body and back of the hind legs. Males are larger than females and size ranges widely (5-13 kg). Lynx inhabit northern mainland N America and Newfoundland, and occur accidentally on Baffin I. Once found throughout Canada, they have now been eliminated from settled areas in the south. Their chief food is snowshoe hares, although other small mammals and birds are taken. Individuals become mature at one year. Females bear 1-4 (rarely 5) kittens about 63 days after breeding in Mar-Apr. Kittens are born in a den under a windfall or some natural shelter, and are brownish with blotched upper parts. They become independent in autumn of their second year, when fully grown. Lynx fur is prized by furriers, and overtrapping coupled with elimination from settled areas has seriously reduced the population. Eurasian lynx (*L. lynx*) occupies forested parts of northern and central Europe and northern Asia.

C.S. CHURCHER

**Lyon, George Seymour**, golfer (b at Richmond, Canada W 27 July 1858; d at Toronto, Ont May 1938). Lyon was undoubtedly one of Canada's most amazing athletes. At 18 he set a Canadian record in the pole vault. He played baseball, rugby and soccer successfully, was an excellent curler and lawn bowler, and he represented

Canada at cricket (scoring 238 not out for his club, a Canadian record). At age 38 he took up golf and between 1898 and 1914 won the Canadian Amateur title 8 times. At age 46 he won the only Olympic gold medal awarded in golf, defeating US champion H. Chandler Egan 3-and-2 at St Louis, Mo (1904). One of his drives in the semifinal match was estimated at 299 m. In 15 tournaments for the Canadian senior championship, he won 10 times and came second on 4 occasions.

GERALD REDMOND

**Lyon, Sterling Rufus**, lawyer, politician, premier of Manitoba (b at Windsor, Ont 30 Jan 1927). Lyon, elected to the Manitoba Legislature in 1958, spent the next 11 years as a minister in the Roblin-Weir PC administrations. Defeated by Walter WEIR in a bid to succeed Duff ROBILIN in 1967, he left politics 1969, but returned in an unsuccessful attempt at a federal seat in 1974. He became leader of the Manitoba Tories in 1975 and premier in 1977. His administration, despite its policy of restraint in government spending, did pass some progressive social legislation but was defeated in 1981. In Opposition, Lyon strenuously opposed the PAWLEY government's proposal to entrench Franco-Manitoban rights in the constitution. He resigned from the leadership in 1983.

GEOFFREY LAMBERT

**Lytton**, BC, Village, pop 428 (1983e), inc 1945, is located on the Trans-Canada Hwy, 260 km NE of Vancouver, at the junction of the THOMPSON and FRASER rivers, in one of the driest and warmest spots in Canada. The village is on the former site of a Thompson R Indian village called Camchin, or Thilkumcheen, meaning "great forks," and later of the HBC post Fort Dallas. In 1858 the settlement was named after Sir Edward Bulwer-Lytton, British colonial secretary. The area was important during the GOLD RUSH on the Fraser in the late 1850s and was a stopping point on the CARIBOO ROAD from the 1860s. A bridge over the Thompson built there in 1866 was nearly swept away in the great flood of 1894. Lytton today is supported by sawmilling, tourism and the CN and CP railways. Tourism has greatly increased the popular raft trips down the rapids of the Thompson R.

JOHN R STEWART

**Maass, Otto**, educator, scientist (b at New York C, NY 8 July 1890; d at Montréal 3 July 1961). Maass was educated at McGill and Harvard (PhD 1919). In 1920 he joined McGill's staff and in 1923 became Macdonald Professor of Chemistry there, a position he retained until 1955. He was also chairman of the McGill Department of Chemistry (1937-55). Other positions he held were as director general of the Pulp and Paper Research Inst of Canada (1940-55); assistant to the president, NATIONAL RESEARCH COUNCIL (1940-46); director of the Directorate of Chemical Warfare and Smoke (1940-46); and chairman of various governmental committees during WWII.

Maass was instrumental in the establishment of the Defence Research Board and contributed to the eminence of the NRC. He established the first graduate school in science at McGill and there directed the work of 137 graduate students. He published more than 200 papers in such areas as calorimetry, critical-state phenomena, preparation and properties of pure hydrogen peroxide (first prepared by him and used today as a rocket fuel), basic study of cellulose and cellulose systems, and chemical pulping of wood. Awarded many honorary degrees and other awards, Maass was a member of the RSC (1940). A brilliant teacher, experimentalist and organizer, Maass was one of the great scientists in Canadian history.

LEO YAFFE

**Macallum, Archibald Byron**, biochemist, physiologist, educator (b at Belmont, Canada W 7 Apr 1858; d at London, Ont 5 Apr 1934). Macallum was a pioneer of medical and biological research and teaching in Canada, best remembered for his contributions to the Faculty of Medicine of U of T and to the early years of the NATIONAL RESEARCH COUNCIL. Born on a farm, he taught school before going to U of T to graduate in natural sciences in 1880. With Professor Robert Ramsay WRIGHT, he carried out research while teaching high school, returning to U of T in 1883 to lecture in biology and work toward both a doctorate (Johns Hopkins, 1888), and a medical degree (U of T, 1889). As professor of physiology (1890-1908) and of the new science of biochemistry (1908-16), he included among his students Maud L. Menten and James Bertram COLLIP. In 1917 he became the first chairman of the wartime Advisory Council on Scientific and Industrial Research (later the NRC), and in 1920 went to McGill as professor of bio-

Archibald Macallum, a pioneer of medical and biological research and teaching (courtesy Public Archives of Canada/C-50659).

chemistry, retiring in 1928 after a distinguished scientific career. Macallum's early research was on the microchemical distribution of inorganic ions (especially iron and potassium) within cells. Later, as an active member of the Biological Board of Canada (Fisheries Research Board), he carried out fieldwork at its marine stations, and developed his theory that the body fluids of animals represent living "fossil" evidence of the ancient ocean environments in which they had evolved.

SANDRA F. McRAE

**McAskill, Angus**, the Cape Breton giant (b in Harris, Scot 1825; d at Englishtown, NS 8 Aug 1863). The tallest nonpathological giant on record, at maturity he was 236 cm (7'9") tall, weighed 193 kg (425 lbs) and had a shoulder width of 112 cm and palms measuring 20 cm by 30 cm. He was born a normal baby in the Scottish Hebrides and moved with his family to St Anns, NS. Though many stories about him are apocryphal, he is known to have possessed prodigious strength and reputedly could lift 635 litre barrels and beams as long as 18 m. Having joined a travelling show he toured Lower Canada, the US, the West Indies and Cuba 1849-53. He then returned to Cape Breton and engaged in business until his death, which was attributed to "brain fever."

EDWARD BUTTS

**Macaulay, John**, merchant, journalist, office holder, politician (b at Kingston, UC 17 Oct 1792; d there 10 Aug 1857). A prosperous merchant and an immensely capable, perceptive man, Macaulay came to attention as coeditor and owner of the *Kingston Chronicle* 1818-22. The paper gave, as his friend John Beverley ROBINSON put it, the "highest satisfaction to every well-wisher of Church & State." Supported by John STRACHAN, Macaulay soon became an influential adviser of Lt-Gov MAITLAND's administration. He served on a host of committees and commissions, the most important of which concerned internal navigation. His reports together with Robert NICHOL's report on internal resources provided the framework for a provincial strategy for economic development. In his columns he popularized the idea of development, especially canals. In 1836 he moved to Toronto upon his appointments as legislative councillor and surveyor general, serving until he became civil and private secretary to Lt-Gov Sir George ARTHUR in 1838. That year he took up the inspector generalship and held it until 8 June 1842. He remained a councillor until his death. Intensely private, fervently pious and somewhat diffident, he suffered almost unremitting affliction in his family life.

ROBERT L. FRASER

**McBride, Richard**, lawyer, politician, premier of BC (b at New Westminster, BC 15 Dec 1870; d London, Eng 6 Aug 1917). He was educated in New Westminster and at Dalhousie U (LLB,

1890) and was first elected MLA in 1898. The personable McBride briefly (1900-01) served in the Cabinet of James DUNSMUIR and, after the government of E.G. PRIOR resigned, he formed the first BC administration based on party lines 1 June 1903. In the subsequent election, McBride and the Conservatives won a narrow majority. To restore financial stability his government cut expenditures and introduced new taxes; to secure socialist support, it made many minor reforms, especially of labour laws. By 1909 a booming provincial economy allowed McBride and his government to plan for a provincial university and to promise continued prosperity through such means as the construction of railways. In the 1909 and 1912 elections, the Conservatives almost completely eliminated the Opposition from the legislature.

McBride also won popular approval for his persistent agitation for "better terms" from the federal government. He campaigned for the Conservative Party in the federal elections of 1908 and 1911 and successfully delivered the BC vote. An ardent imperialist (KCMG, 1912) and friend of Winston Churchill, McBride enthusiastically supported the idea of a Canadian contribution to the imperial navy. When WWI began, BC was virtually undefended. On his own initiative, McBride had the province purchase 2 submarines, later sold to the federal government. By 1914, however, the province was economically depressed and in danger of having to meet heavy railway debts. Moreover, McBride paid scant attention to such popular reform movements as WOMEN'S SUFFRAGE and PROHIBITION. On 15 Dec 1915, McBride resigned as premier and accepted the position of BC's agent-general in his beloved London, where he also hoped to get treatment for Bright's disease, which ultimately took his life.

PATRICIA E. ROY

**MacBrien, James Howden**, soldier, policeman (b at Port Perry, Ont 30 June 1878; d at Toronto 5 Mar 1938). MacBrien served in the militia, the NWMP and then the S African Constabulary 1901-06. A staff officer at the outbreak of WWI, he took command of the 12th Infantry Brigade in 1916. Chief of the general staff, Overseas Forces, 1919-20, he presided over the formation of the Dept of NATIONAL DEFENCE, retiring in 1927. He was a founder of the Canadian Aviation League and commissioner of the RCMP from 1931 until his death.

W.J. McANDREW

Angus McAskill, the Cape Breton giant, standing with a man of ordinary size. At maturity he was 236 cm (7'9") tall (courtesy Public Archives of Nova Scotia).

**McCain, H. Harrison**, executive (b at Florenceville, NB 3 Nov 1927). The son of an exporter of seed potatoes, McCain graduated from Acadia U and worked as a sales executive for Irving Oil Co. In 1957 he established a family-owned potato-processing company at Florenceville, NB, one of N America's major potato-growing regions. He is chairman of the board of McCain Foods Ltd, one of the largest firms of its kind in the world and the parent company of the McCain Group, whose holdings include a shipping wharf at Bayside, NB, 3 trucking companies and Thomas Equipment Ltd (which manufactures harvesting and industrial equipment). McCain's efforts at promotion have made his hometown the centre of a food empire with manufacturing facilities in 7 countries.

MARY HALLORAN

**McCalla, Arthur Gilbert**, cereal chemist (b at St Catharines, Ont 22 Mar 1906). At U of A, McCalla was one of the elite students of Robert NEWTON; like the others, after taking a 2-year MSc degree under Newton, he was awarded a PhD (U of Calif, Berkeley, 1933) extraordinarily quickly, in only 2 years. He returned to Edmonton to join the university staff, where he remained throughout his career. He took his family to Sweden for advanced study 1939-40 and was trapped there by the German invasion of Norway. They had to return via Russia, on the Trans-Siberia Ry. McCalla was U of A's dean of agriculture 1951-59 and dean of graduate studies 1957-71. He sat on the National Research Council 1950-56 and was a member of its influential Prairie Regional Committee.

DONALD J.C. PHILLIPSON

**MacCallum, Elizabeth Pauline**, diplomat, scholar (b at Murash, Turkey 20 June 1895). The daughter of missionaries, MacCallum graduated from Queen's and Columbia and taught in the Yukon. After working for the Foreign Policy Assn in New York city and the League of Nations Soc in Ottawa, she joined the Department of External Affairs in 1942, serving as adviser to the delegation to the 1945 San Francisco Conference, which established the UN, and as Middle Eastern specialist at many general assemblies. Chargé d'affaires in Beirut in 1954, she was the first woman head of mission. After retiring, she spent 4 years in Turkey before returning to Ottawa. She has written extensively on Middle East and Balkan subjects.

JOHN W. HOLMES

**McCarthy, D'Alton**, lawyer, politician (b near Dublin, Ire 10 Oct 1836; d at Toronto 11 May 1898). He came to Canada with his parents in 1847, and was educated in Barrie, Canada W. He was called to the Bar of Upper Canada in 1858, and was elected to Parliament as a Conservative 1876. He was re-elected in 1878 to the constituency of N Simcoe, which he represented continuously until his death. McCarthy was at the centre of the most heated political issues of his day. He was president of Canada's Imperial Federation League for 7 years, although he was forced to resign because of his support for unilingualism. He relentlessly opposed the use of the French language outside Québec, and voted against his leader over the JESUITS' ESTATES ACT. After the 1891 election he began to advocate reform of the protective tariff, a divergence from Tory policy that led in 1893 to a break with the party. During the 1890s he continued his vehement opposition to French-language schools and his support of Manitoba's eradication of denominational schools as a way of suppressing French instruction. Consequently, he and his McCarthyite League worked to defeat the federal Conservatives in the election of 1896. He was rumoured to be about to enter LAURIER's Cabinet at the time of his death.

J.R. MILLER

Reading: J.R. Miller, "As a Politician He Is a Great Enigma," *Canadian Historical Review* LVII, 4 (1977).

**McClelland, John Gordon**, Jack, publisher (b at Toronto 30 July 1922). Educated at U of T, he joined the navy in 1941 and volunteered for duty on a motor torpedo boat; promoted captain of MTB 747 in 1944, he saw action in the English Channel. He joined MCCLELLAND AND STEWART (founded by his father John McClelland, Sr, in 1906), became executive VP in 1952 and president in 1961. He transformed the company into English Canada's best-known publishing house by encouraging, supporting and publishing Canadian writers such as Farley MOWAT, Irving LAYTON, Margaret LAURENCE, Leonard COHEN, Peter NEWMAN, Mordecai RICHLER, Pierre BERTON, Margaret ATWOOD, Brian MOORE and others. He published many Canadian BEST-SELLERS, such as Berton's *The National Dream* (1970) and Newman's *The Canadian Establishment* (1975). McClelland stepped down as president in 1982, but remained active as owner and chairman of the board.

**McClelland and Stewart Limited**, publishing company founded in 1906 by John McClelland and Frederick Goodchild as McClelland and Goodchild Limited. When George Stewart joined the firm in 1914, his name was added to the title, but the present form was adopted after Goodchild's departure in 1918. The company began as a library supply house, representing British and American firms, and went on to publish Canadian authors such as C.W. GORDON (Ralph Connor), Bliss CARMAN, D.C. SCOTT, Stephen LEACOCK, L.M. MONTGOMERY and F.P. GROVE. Jack MCCLELLAND, the founder's son, became executive vice-president in 1952 and president in 1961, and continued to develop a vigorous Canadian BOOK-PUBLISHING program that made a most notable contribution to the publishing and marketing of Canadian literature. Widespread publicity and concern was aroused by the announcement in 1971 that M & S was for sale. The Ontario government decided to provide a \$1-million loan to prevent its sale to American interests. In 1984 the government again stepped in, freeing M & S from its debt obligation (some \$4 million). This action depended on McClelland being able to raise over \$1 million from the private sector; his success at this endeavour is an indication of the importance of M & S's contribution to Canadian culture. Through the New Canadian Library Series (est 1958) and Carleton Library Series (est 1963) the company made accessible classic works in Canadian literature, history and social sciences, and greatly aided the growth of Canadian studies. The company published the first 2 volumes in its Canadian Centenary Series — an 18-volume history of Canada — in 1963.

**McClintock, Sir Francis Leopold**, explorer (b at Dundalk, Ire 8 July 1819; d at London, Eng 17 Nov 1907). One of the British Navy's most experienced Arctic explorers, he participated in several expeditions to search for Sir John FRANKLIN. On the first of these (1848-49), he learned the techniques of northern sled travel which he later used to great effect. After 3 unsuccessful attempts, McClintock discovered the fate of Franklin and his men on his last voyage to the Arctic in 1857-59. McClintock rose to senior rank in the navy and retired from active service in 1882.

DANIEL FRANCIS

**McClung, Nellie Letitia**, née Mooney, suffragist, reformer, legislator, author (b at Chatsworth, Ont 20 Oct 1873; d at Victoria 1 Sept 1951). From 1880 she was raised on a homestead in the Souris Valley, Man, and did not attend school until she was 10. She received a teaching certificate at 16 and then taught school until she married Robert Wesley McClung in 1896. In Manitou, where her husband was a druggist, she became prominent in the WOMAN'S CHRISTIAN TEMPERANCE UNION, of which her mother-in-law was provincial president. In 1908 McClung pub-

Nellie McClung, writer, reformer and women's advocate (courtesy Public Archives of Canada/PA-30212).

lished her first novel, *Sowing Seeds in Danny*, a witty portrayal of a small western town. It was a national best seller and was followed by numerous short stories and articles in Canadian and American magazines. In 1911 the McClungs and their 4 children moved to Winnipeg, where their fifth child was born. The Winnipeg women's rights and reform movement welcomed Nellie as an effective speaker who won audiences with humorous arguments. She played a leading role in the 1914 Liberal campaign against Sir Rodmond ROBLIN's Conservative government, which had refused women suffrage, but moved to Edmonton before the Liberals won in Manitoba in 1915. In Alberta she continued the fight for female suffrage and for PROHIBITION, dower rights for women, factory safety legislation and many other reforms. She gained wide prominence from addresses in Britain at the Methodist Ecumenical Conference and elsewhere (1921) and from extensive speaking tours throughout Canada and the US, and was a Liberal MLA for Edmonton, 1921-26.

In 1933 the McClungs moved to Vancouver I, where Nellie completed the first volume of her autobiography, *Clearing in the West: My Own Story* (1935, repr 1976), and wrote short stories and a syndicated column. In all, she published 16 books, including *In Times Like These* (1915, repr 1975). Her active life continued: in the Canadian Authors Assn, on the CBC's first board of governors, as a delegate to the League of Nations in 1938 and as a public lecturer. Forgotten for a decade, she was rediscovered by feminists in the 1960s. Although some criticized her maternalistic support of the traditional family structure, most credited her with advancing the feminist cause in her day and recognizing the need for further progress, such as the economic independence of women (see WOMEN'S MOVEMENT).

M.E. HALLETT

Reading: Candace Savage, *Our Nell* (1979).

**McClure, Robert Baird**, medical missionary (b at Portland, Oreg 23 Nov 1900). The son of Canadian medical missionaries in China, Dr McClure went to Honan, China, in 1923, serving as surgeon and medical educator and helping to establish the Hwaiking rural medical system. When war broke out between Japan and China in 1937, he became field director for the International Red Cross in central China. From 1941 to 1946, he led the Friends Ambulance Unit in China, providing supplies, medical treatment, public-health services and mobile surgery to the war-ravaged country. With the end of foreign

missions in China, McClure provided medical service to the Palestinian refugees in Gaza 1950-54, and superintended the Ratlam hospital in India 1954-67. As always, he combined his surgery with public health and training for local medical personnel. After serving as the first nonordained moderator of the UNITED CHURCH OF CANADA 1968-71, he has spent his retirement in hospital work in Borneo and rural Peru and, in his eighties, has continued his fight for the welfare of the Third World. His strong will, independence and quick temper have exasperated generations of friends as well as critics; yet his heroic self-sacrifice on behalf of the distressed around the world makes him one of the true humanitarians of the 20th century. NEIL SEMPLE

**McClure, Sir Robert John Le Mesurier**, explorer, adventurer (b at Wexford, Ire 28 Jan 1807; d at London, Eng 17 Oct 1873). McClure obtained a lieutenancy for his 1836-37 service on *Terror* under George BACK in the ice of Hudson Bay. He served on Sir James Clark Ross's abortive Franklin rescue mission in 1848-49, and in 1850 was appointed commander of *Investigator* in the expedition led by Capt Richard Collinson, who was taking 2 ships to the Arctic via Bering Str. This commission brought McClure fame and success. He proved brave, lucky and inordinately ambitious. Arriving ahead of Collinson at Bering Str, he decided to continue on alone. From Aug to Oct 1850 he coasted E hundreds of kilometres to Cape Parry, wheeled N to Banks I and reached and wintered in Prince of Wales Str, the last link in the fabled NORTH-WEST PASSAGE, which he undoubtedly discovered. Sir John FRANKLIN's earlier claim, for which all witnesses were dead, was only discovered by Sir Francis MCCLINTOCK in 1859.

McClure encountered great danger in Prince of Wales Str and in rounding Banks I in 1851. He was forced to winter in Mercy Bay and was frozen in. His crew was saved from starvation in 1853 by Capt Henry Kellett of the *Resolute* and finally returned to England in 1854. McClure ungenerously informed a parliamentary committee that he could have kept his men alive without Kellett's aid, thereby denying his rescuers a share in the £10 000 voted to the discoverers of the passage. McClure served on the China Station 1856-61 and died a vice-admiral. L.H. NEATBY

**McConachie, George William Grant**, airline executive (b at Hamilton, Ont 24 Apr 1909; d at Long Beach, Calif 29 June 1965). McConachie's family moved to Edmonton in 1910 and he was educated there. In 1931 he acquired an aircraft and flew fish from northern lakes and barnstormed prairie communities. He cofounded, then became president of, Independent Airways, and founded United Air Transport (later called Yukon Southern Air Transport) in 1933. He pioneered airmail and passenger service between Edmonton and Whitehorse (1939) and performed aerial exploration for the Alaska Hwy and Canol projects. Canadian Pacific Railways bought out his firm and 11 others in 1941 and appointed him general manager of the western lines (1942) and president of CP Air (1947). He inaugurated CP Air passenger services to Australia, Japan and Hong Kong and by 1957 had added a further 25 000 km of flight paths. He was awarded the MCKEE TROPHY in 1945 for his pioneering efforts in forging air service to the North. ROBERT BOTHWELL

**McConnell, John Wilson**, publisher, businessman (b in Muskoka, Ont 1 July 1877; d there 6 Nov 1963). McConnell was the owner of the *Montreal Star*, the largest English-language newspaper in Québec, and as such was a force in the land. He went into business in Toronto as a young man. In 1900 he moved to Montréal as manager of Standard Wood Chemical Ltd, but

in 1906 he went into finance as an investment broker. By 1914 he had control of the St Lawrence Sugar Refineries. He bought the *Montreal Star* in 1925 from Hugh GRAHAM, Baron Atholstan, and took control in 1938 on the latter's death. In 1939 he threw his paper's support to the Liberals and against Premier Maurice DUPLESSIS in the Québec general election; he thereafter remained close to Mackenzie KING. King offered him a Cabinet post during WWII, but McConnell refused. He was also a philanthropist of note, helping such artists as Maureen FORRESTER. J.L. GRANATSTEIN

**McConnell, Richard George**, geologist, explorer (b at Chatham, Canada E 26 Mar 1857; d at Ottawa, Ont 1 Apr 1942). In 1879 he graduated from McGill and began working for the GEOLOGICAL SURVEY OF CANADA in Québec. For some 30 years he studied geological phenomena in Canada, particularly in the W and NW. In 1882 he assisted G.M. DAWSON in exploring the southern Alberta Rockies as well as the Waterton Lks region, St Mary R and Cypress Hills. Five years later he explored a large portion of northern BC, the Mackenzie Valley and the Yukon Territory. In 1889-90 he conducted an extensive study of the Athabasca tar sands of northeastern Alberta and explored the Peace-Athabasca region. In 1914 he became federal deputy minister of mines, retiring in 1921. He was elected a fellow of the Royal Society of Canada in 1913. ERIC J. HOLMGREN

**McConnell, Robert Murray Gordon**, jazz musician (b at London, Ont 14 Feb 1935). McConnell studied with Gordon Delamont in Toronto and then played valve trombone in the bands of Maynard Ferguson (New York, 1964) and Phil Nimmons (Toronto, 1965-69). As a prominent Toronto studio musician, McConnell formed the Boss Brass in 1968 to record pop song arrangements for radio programs by the Canadian Talent Library. By 1976 the band of 22 musicians had evolved into an uncompromising jazz ensemble, and McConnell was praised widely for his arranging ability. The Boss Brass, now considered one of the major big bands in jazz, although it performs only sporadically, has received Grammy nominations for several of its dozen recordings. MARK MILLER

**McCowan, Daniel**, naturalist, lecturer, writer (b at Crieff, Scot 20 Jan 1882; d at Cloverdale, BC 19 Feb 1956). After an early education in Scotland, he moved to Banff, Alta, where he soon acquired expertise on the local flora and fauna. His thousands of photographs of scenery, flowers, birds and mammals enabled him to travel widely, lecturing on nature in the Rockies, and he wrote extensively for several newspapers and popular magazines. His lectures on CBC Radio were among the first by naturalists. In addition to these early important contributions to the popularization of nature and thus conservation concepts in Canada, he published 6 nature and photography books, all illustrated with his own photographs: *Animals of the Canadian Rockies* (1936), *A Naturalist in Canada* (1941), *Outdoors with a Camera in Canada* (1945), *Hill-top Tales* (1948), *Tidewater to Timberline* (1951) and *Upland Trails* (1955). MARTIN K. McNICHOLL

**McCrae, John**, physician, poet (b at Guelph, Ont 30 Nov 1872; d at Boulogne, France 28 Jan 1918). Educated at U of T, he was appointed fellow in pathology at McGill in 1900. He served in the SOUTH AFRICAN WAR as an artillery subaltern 1899-1900. The author of a number of medical texts, he also contributed poetry to various magazines. In 1914 McCrae enlisted in the CANADIAN EXPEDITIONARY FORCE as a medical officer. He died of pneumonia at the hospital of which he was in charge in 1918. "In Flanders Fields," his most enduring poem, was published in *Punch* in 1915. DAVID EVANS

**McCreight, John Foster**, lawyer, first premier of BC (b at Caledon, Ire 1827; d at Hastings, Eng 18 Nov 1913). Educated in England and Ireland, McCreight emigrated to practise law in Melbourne, Australia, but moved to Vancouver I in 1860, being admitted to the BC Bar in 1862. In Aug 1871 he entered the first provincial legislative assembly as a member for Victoria. Designated premier in Nov, he was defeated on a speech from the throne in Dec 1872. He continued as a private member, retiring in 1875. In 1873 he was made a QC and in 1880 a Supreme Court justice. After serving in the Cariboo, he moved to New Westminster, BC, in 1883, living there until his retirement in 1897. Soon after, he returned to England. SYDNEY W. JACKMAN

Reading: Sydney W. Jackman, *Portraits of the Premiers* (1969).

**McCulloch, Thomas**, educator, theologian, author (b at Ferenze, Scot 1776; d at Halifax 9 Sept 1843). One of the most prominent educators and theologians in the Maritimes, McCulloch was a prolific letter writer, as well as the author of books on theology and *Letters of Mephibosheth Stepsure*. Educated at Glasgow U and at Divinity Hall, Whitburn, McCulloch was a member of the secession branch of the Presbyterian Church. He set out for PEI in 1803 as an ordained minister but landed, because of bad weather, at Pictou, NS. Here he accepted a call to the church and soon became involved in many other public activities. He founded Pictou Academy (incorporated 1816) but was unable to obtain government financial assistance or the privilege to confer degrees. The question of public support for all educational endeavours, not just the Anglican schools and colleges, became a lively political issue. McCulloch and his supporters founded a reform newspaper in Pictou, the *Colonial Patriot* (1827), in which they set forth their views. He expanded his educational interests by founding a theological college at West River, Pictou County. Some of McCulloch's theological students were granted degrees by Glasgow, an institution with which he maintained close connections throughout his life. McCulloch was an inspired and versatile teacher and was named first president of Dalhousie in 1838, a position he held until his death. During his busy life he devoted much time to his scientific interests and collected a large number of bird specimens, which came to the attention of John James Audubon who visited him in Pictou in 1833.

McCulloch's best-known fictional work, "Letters of Mephibosheth Stepsure" first appeared in serial form (22 Dec 1821-Mar 1823) in the *Acadian Recorder*. The letters were reprinted in 1862 and then in 1960 as *The Stepsure Letters*. In an effort to arouse his fellow Pictonians to improve their farming practices and style of life in general, he chided them in a humorous, satirical fashion. His writings influenced Thomas HALBURTON's Sam Slick. He also wrote 2 highly moral tales, called *William and Melville* (1826),

John McCrae, poet and physician known for his poem "In Flanders Fields," shown with his dog Bonneau, c 1914 (courtesy Public Archives of Canada/C-46284).

about the fortunes and misfortunes of immigrants to the New World.

On the subjects of education and religion, McCulloch's works included *Papery Condemned by Scripture and the Fathers* (1808), *Papery Condemned Again* (1810), *The Nature and Uses of a Liberal Education* (1819) and *Calvinism: The Doctrine of the Scriptures* (1849). The titles of these substantial works provide some indication of McCulloch's dedication to his role as an educator and theologian in 19th-century NS. DOUGLAS LOCHHEAD

**McCurdy, James Frederick**, "father of biblical studies in Canada" (b at Chatham, NB 18 Feb 1847; d at Toronto 30 Mar 1935). A graduate of UNB he taught grammar school, then entered Princeton Seminary in 1868 to study biblical languages. He taught there 1871-82, but resigned when his "modernist" views on the Bible were attacked. After studying in Germany he was hired by U of T in 1885, and taught there until retirement in 1914. As head of the oriental languages department he made biblical studies an important and popular discipline in a secular university, and trained a generation of outstanding scholars who later taught in Canadian and other universities. His 3-volume *History, Prophecy and the Monuments* (1894-1901) won him international critical acclaim. JOHN S. MOIR

**McCurdy, John Alexander Douglas**, aviation pioneer (b at Baddeck, NS 2 Aug 1886; d at Montréal 25 June 1961). With F.W. BALDWIN and A.G. BELL he formed the Aerial Experiment Assn to test the feasibility of powered flight. He made more than 200 short flights in experimental aircraft in the US before flying the SILVER DART at Baddeck 23 Feb 1909 — the first controlled flight in the British Empire. McCurdy is also credited with making the first ocean flight, from Florida to Cuba, and with sending and receiving the first messages while aloft. He was assistant director of aircraft production for the Canadian government in WWII and was lieutenant-governor of NS 1947-52. He was awarded the MCKEE TROPHY (1959) on the 50th anniversary of the flight of the Silver Dart. JAMES MARSH

**McDermott, Dennis**, trade unionist (b at Portsmouth, Eng 3 Nov 1922). McDermott came to Canada after WWII and in 1948 worked in Toronto as an assembler and a welder. In 1954 he became an organizer for the United Automobile Workers (UAW). Known as a social activist, he supported the United Farm Workers' campaigns in Canada on behalf of the California grape workers, and has participated in the Canadian Civil Liberties Assn. In 1968 he was elected UAW director for Canada and in 1970 international VP. He also became a general VP of the CANADIAN LABOUR CONGRESS, and in 1978 succeeded Joe MORRIS as president. In that job, he opposed wage controls and any infringement on collective bargaining for public or private sector employees, and chided the government about the high level of unemployment and the state of the economy. He has also served on the executives of the NDP in Ontario and federally. LAUREL SEFTON MACDOWELL

**MacDonald, Angus Bernard**, educator, co-operative leader (b at Glassburn, NS 21 Nov 1893; d at Ottawa 13 Sept 1952). Following study at Saint Francis Xavier U and at NS Agricultural Coll, MacDonald worked in government agriculture positions in NS and Ontario and studied at Ontario Agricultural Coll and U of T. He returned to NS in 1925 as inspector of schools for Antigonish and Guysborough counties. In 1930 MacDonald joined Saint Francis Xavier's extension department as associate director. A good administrator and powerful personality, he became a vitally important leader in the ANTI-GONISH MOVEMENT, as the department's program came to be called. MacDonald also organized

several credit unions and became managing director of the NS Credit Union League when it was formed in 1934. During 1943 he became involved with a reorganization of the Co-operative Union of Canada and in 1944 was appointed its national organizer. In 1945 he joined the CUC as general secretary (subsequently national secretary), a post he held until his death. MacDonald's accomplishments with the CUC included the sponsoring in Canada of CARE, the international aid program. IAN MACPHERSON

**Macdonald, Angus Lewis**, lawyer, professor, politician and premier of NS (b at Dunvegan, NS 10 Aug 1890; d at Halifax 13 Apr 1954). An officer in the Canadian Expeditionary Force (WWI), educated at Saint Francis Xavier, Dalhousie and Harvard, Macdonald was assistant deputy attorney general of NS 1921-24 and professor of Dalhousie Law School 1924-30 before being elected leader of the NS Liberal Party in 1930. Victorious in the election of 1933 during the GREAT DEPRESSION, Macdonald implemented old-age pensions and relief for the unemployed, and launched an inquiry (Jones Commission) into the effects of the tariff on the NS economy. In 1940 PM KING recruited him to become minister of defence for naval services. Macdonald presided over the creation of a wartime Canadian Navy and convoy service for the Allies. A conscientious administrator, he was a poor politician, putting defence priorities before party considerations in the conscription crisis. King triumphed over the conscriptionists and Macdonald resigned from the Cabinet in Apr 1945. He returned to NS and resumed the premiership, resisting the centralizing policies of the King governments but, sapped by overwork and illness, he was unable to restore the spark that had characterized his prewar government. When he died in 1954, Macdonald left a party that had languished too long in his shadow and a personal reputation in the NS Liberal Party second only to that of Joseph HOWE. MARGARET CONRAD

Reading: J. Hawkins, *The Life and Times of Angus L.* (1969).

**Macdonald, Brian**, choreographer (b at Montréal 14 May 1928). Macdonald was a radio whiz kid, child actor, swimmer and skater before entering McGill at 16. Inspired by the visit of Ballet Theatre (later American Ballet Theatre) in 1944, he began dance training. Leaving university, he became music critic for the *Montreal Herald* while continuing his training, and in 1951 he became a founding member of the NATIONAL BALLET OF CANADA. Two years later a severe injury ended his performing career and he returned to

Brian Macdonald began his career as a choreographer and teacher after his dancing career was ended by a severe injury (courtesy Canapress).

teach and choreograph in Montréal during a period of intense artistic activity in the city. His first major success was the 1957 McGill student revue *My Fur Lady*, which ran for 18 months. The ROYAL WINNIPEG BALLET has been commissioning works from him since 1958, and on a number of these, including *Rose Latulipe* (1966) and *The Shining People of Leonard Cohen* (1970), he has collaborated with composer HARRY FREEDMAN. Macdonald has created many works for companies in Canada, Europe and the US. He was artistic director of the Royal Swedish Ballet 1964-67, the Harkness Ballet 1967-68, Batsheva Dance Theatre 1971-72 and LES GRANDS BALLETES CANADIENS 1974-77, where in 1984 he was resident choreographer. Of a driving and sometimes volatile personality, Macdonald has been associated with the BANFF CENTRE SCHOOL OF FINE ARTS since 1960 and has taught at the National Theatre School. He also directs or choreographs for TV, musicals, operas and operettas. Married to Annette AV PAUL, he won the Molson Prize 1983. See CHOREOGRAPHY.

JILLIAN M. OFFICER

**MacDonald, Donald**, trade unionist (b at Halifax 12 Sept 1909). At age 17 MacDonald became a coal heaver on the Sydney docks. He joined the United Mine Workers and at age 21 became president of Local 4560. When the local struck in 1940 for a guaranteed weekly minimum wage, MacDonald was fired and blacklisted. The CO-OPERATIVE MOVEMENT, which he helped to organize in NS, gave him a job, and in 1941 he was elected CCF MLA from Cape Breton S. He was party leader in the legislature until 1945. In 1942 he joined the organizing staff of the CANADIAN CONGRESS OF LABOUR and rose to become its secretary-treasurer 1951. He played a major role in the merger negotiations which created the Canadian Labour Congress (1956) and served as its president from 1967 to his retirement in 1974. In 1972 he was the first non-European to be elected president of the International Confederation of Free Trade Unions.

LAUREL SEFTON MACDOWELL

**Macdonald, Donald Stovel**, politician, lawyer (b at Ottawa 1 Mar 1932). Elected to the House of Commons as member for Toronto Rosedale in 1962, Macdonald entered the Liberal Cabinet in 1968 and, as minister of energy, mines and resources between 1972 and 1975, resisted economic and provincial pressures to move to world oil prices. In Sept 1975 he became minister of finance and introduced WAGE AND PRICE CONTROLS. He resigned from Cabinet in 1977 to enter private law practice in Toronto. In 1983 Pierre TRUDEAU appointed Macdonald chairman of a royal commission on the economic union and development prospects for Canada. JOHN ENGLISH

**MacDonald, Flora Isabel**, politician (b at N Sydney, NS 3 June 1926). Between 1956 and 1965 she worked at the Progressive CONSERVATIVE PARTY headquarters, where she was executive secretary for 5 years. She was then national secretary of the PC Assn 1966-69 while working at Queen's. In 1972 she was elected MP for Kingston and the Islands and immediately became Conservative critic on Indian affairs and northern development in Robert STANFIELD's "shadow cabinet." She made an unsuccessful bid for the Conservative leadership in 1976, her promised support failing to materialize at the leadership convention polling stations. As an MP MacDonald has been outspoken on constitutional issues, on national defence, external affairs and reform of the penitentiary system. In the brief CLARK government (1979-80) she was secretary of state for external affairs, the first woman to hold such an important federal Cabinet post. After the Sept 1984 election, she became minister of employment and immigration in the MULRONEY cabinet. HARRIET GORHAM

**Macdonald, Sir Hugh John**, lawyer, politician, magistrate, premier of Manitoba (b at Kingston, Canada W 13 Mar 1850; d at Winnipeg 29 Mar 1929), the only surviving son of Sir John A. MACDONALD. Educated at University of Toronto, he was called to the Ontario Bar in 1872. In 1882 he moved to Winnipeg where he entered partnership with J. Stewart Tupper, eldest son of Sir Charles TUPPER. He saw active military service on 3 occasions: the 1866 Fenian invasion, the 1870 Wolseley Expedition and the 1885 North-West Rebellion. Elected for Winnipeg in the 1891 general election, he resigned in 1893. In 1896 he joined the short-lived Tupper government as minister of the interior. After the courts overturned his election, he became leader of the Manitoba Conservatives and led them to victory in 1899. Touted as successor to Tupper, he resigned as premier to run in Brandon against Clifford Sifton in the 1900 federal election. He retired to private life after his defeat. Macdonald's shyness and nervousness in public made the path he chose even more difficult and it was his lot to be measured against his eminent father, and inevitably he was found wanting. HAL GUEST

**MacDonald, James Edward Hervey**, painter (b at Durham, Eng 12 May 1873; d at Toronto 26 Nov 1932). Among the GROUP OF SEVEN, of which he was a founder, J.E.H. MacDonald was one of the best trained, first at the Hamilton Art School from about 1887 and, after 1889, in Toronto lithography houses and at the Central Ontario School of Art and Design, where he studied with William CRUIKSHANK. In 1895 he joined Grip Ltd, and important commercial art firm, where he encouraged the staff (which included Tom THOMSON from about 1908) to develop as painters. MacDonald was a key member of the later Group. Lawren HARRIS recalled that a show of MacDonald's in 1912 at the Ontario Soc of Artists gave him his first recognition of the Group's "ethos."

MacDonald was Harris's greatest early friend among the Toronto painting community. To-

J.E.H. MacDonald's *Mist Fantasy* (1922), oil on canvas, with its long ribbons of mist, has been called the height of the artist's way of stylizing form (courtesy Art Gallery of Ontario/gift of Mrs S.J. Williams in memory of J. Elinor Williams, 1927).

gether in 1913 they went to the Albright Art Gallery in Buffalo, NY, to see the survey of Scandinavian landscape painting which was to influence their work. Around this time MacDonald introduced more colour into his dark panels. Algoma, N of Lk Superior, which he visited several times with Harris's help from 1919, became the country of his heart. His best paintings were done there, often of great vistas in a turbulent, patterned style. The sketch *Mist Fantasy, Sand River, Algoma* (1920, National Gallery of Canada) shows how he used the sketches he made in Algoma: the finished canvas (now in the Art Gallery of Ontario), with its long ribbons of mist, was noted by a later critic as the height of MacDonald's way of stylizing form. In 1924 he made the first of 7 trips to the Rockies, another favourite painting place.

MacDonald's palette was dark, tough and rich, like A.Y. JACKSON's, but his colouring was more fiery and his style more elegant. His sense of composition was oriented towards his meditation on design, a subject in which he was a master (MacDonald was the greatest calligrapher of the period and a designer of consequence). Like other members of the Group, he loved Chinese and Japanese art.

Among other tasks he performed was the decoration of St Anne's Church, Toronto (1923), and teaching at the ONTARIO COLLEGE OF ART. He also wrote poetry after a nervous breakdown in 1917. He was an eccentric gardener and enjoyed playing on a set of chimes made of old plough points and other bits of iron. One of his favourite authors was Henry David Thoreau, for whom he named his son, illustrator Thoreau MACDONALD. JOAN MURRAY

Reading: Paul Duval, *The Tangled Garden* (1978).

**Macdonald, James Williamson Galloway**, "Jock," artist, educator (b at Thurso, Scot 31 May 1897; d at Toronto 3 Dec 1960). Educated in Scotland, he enlisted in 1915, and was wounded in France in 1918. He entered the Edinburgh Coll of Art, graduating with a diploma in design and an art specialist's teaching certificate in 1922. He was employed as a designer and educator in England, and was appointed head of design at the Vancouver School of Decorative and Applied Arts in 1926. He began to paint in oils under the tutelage of Fred VARLEY in a style

strongly influenced by the GROUP OF SEVEN. Although he painted landscapes throughout his life and drew inspiration from nature, his best paintings show his struggle to find an abstract form of expression. Among the first abstract artists in Canada, he immersed himself in painting the experience of his environment at NOOTKA SOUND on NW Vancouver I in 1935-36. One of the most important teachers in modern Canadian art history, he and Varley founded the innovative BC Coll of Arts (1933-35). He taught at the Provincial Institute of Technology at Calgary (1946-47) and, from 1947 until his death, at the Ontario Coll of Art, Toronto. Numerous Canadian artists acknowledge the impact he had on their development. Instrumental in founding the Calgary Group in 1947, he was a key figure in the influential Ontario abstract group PAINTERS ELEVEN, and was active in most Canadian art societies. He is best remembered for his free-flowing abstract watercolours and the often majestic paintings of his last years — without question his masterpieces. J. ZEMANS

**Macdonald, Sir John Alexander**, lawyer, businessman, politician, first prime minister of Canada (b at Glasgow, Scot 10 or 11 Jan 1815; d at Ottawa, Ont 6 June 1891). He was the dominant creative mind which produced the BRITISH NORTH AMERICA ACT and the union of provinces which became Canada. As the first prime minister of Canada, he oversaw the expansion of the Dominion from sea to sea. His government dominated politics for a half century and set policy goals for future generations of political leaders.

Macdonald was brought to Kingston, UC, by his parents when he was 5 years old and he grew up and attended school there and in rural Lennox and Addington and Prince Edward counties. At age 15 he began to articulate with a prominent Kingston lawyer. Both at school and as an articling student he showed promise. At 17 he managed a branch legal office in Napanee by himself, and at 19 opened his own office in Kingston, 2 years before being called to the Bar of UC. Macdonald's early professional career coincided with the rebellion in UC and subsequent border raids from the US. He was in Toronto in Dec 1837 where, as a militia private, he took part in the attack on the rebels at Montgomery's Tavern. In 1838 he attracted public notice by defending accused rebels, including Nils von Schoultz, leader of an attack on Prescott.

He remained in the practice of law for the rest of his life with a series of partners, in Kingston until 1874 and then in Toronto. His firm engaged primarily in commercial law; his most valued clients were established businessmen or corporations. He was also personally involved in a variety of business concerns. He began to deal in real estate in the 1840s, acquired land in many parts of the province, including commercial rental property in downtown Toronto, and was appointed director of many companies, mainly in Kingston. For 25 years (mostly while he was PM) he was president of a Québec City firm, the St Lawrence Warehouse, Dock and Wharfage Co, and in 1887 became the first president of the Manufacturers Life Insurance Co of Toronto. Macdonald's personal life was marked by a number of misfortunes. His first wife, his cousin Isabella Clark, was an invalid during most of their married life. His first son died at the age of 13 months. His second marriage, to Susan Agnes Bernard, was saddened by the chronic illness of his only daughter Mary.

Macdonald entered politics at the municipal level, serving as an alderman in Kingston 1843-46. He took an increasingly active part in Conservative politics and in 1844 (at age 29) was elected for Kingston to the Legislative Assembly of the PROVINCE OF CANADA. Parties and government were in a state of transition, a mod-

Sir John A. Macdonald, 1st prime minister of Canada, 1867-73 and 1878-91. Macdonald was a shrewd and ingenious politician who had great faith in the future of Canada (courtesy Public Archives of Canada/C-10144).

ern departmental structure had begun to evolve but RESPONSIBLE GOVERNMENT had not yet been conceded, and the role of the governor was still prominent. In this context Macdonald's political views proved cautious; he defended the imperial prerogative and state support of denominational education, and opposed the abolition of primogeniture. Above all, he emerged as a shrewd political tactician who believed in the pursuit of practical goals by practical means. His obvious intelligence and ability brought him his first Cabinet post as receiver general in 1847 in the administration of W.H. DRAPER.

Macdonald remained in Opposition until the election of 1854, after which he was involved in the creation of a new political alliance — the Liberal-Conservative Party — in which the Conservatives were attached to the existing alliance of Upper Canadian Reformers and the French Canadian majority political bloc. Once returned to office, he assumed the prestigious post of attorney general of UC. On the retirement, which he helped to engineer in 1856, of Conservative leader Sir Allan MACNAB, Macdonald succeeded him as joint-premier of the Province of Canada, along with Etienne-Paschal TACHÉ.

During the years 1854-64 Macdonald faced growing opposition in his own section of the province to the political union of Upper and Lower Canada. The Reform view, voiced by George BROWN of the *Toronto Globe*, complained that the legitimate needs and aspirations of UC were frustrated by the "domination" of French Canadian influence in the government of Macdonald and George-Etienne CARTIER. By 1864 the political and sectional forces in the province were deadlocked and Macdonald reluctantly accepted Brown's proposal for a new coalition, to include the Upper Canadian Reformers, designed to solve the constitutional difficulties through the adoption of a federal system, applied if possible to all the colonies of British North America. While conceding the necessity of a federal arrangement to accommodate strong racial, religious and regional differences, Macdonald's preference was for a strong, highly centralized, unitary form of government. Macdonald took the leading part in the drafting of a federal system in which the central government held unmistakable dominance over the provincial governments. His great constitutional expertise, ability and knowledge received immediate recognition from the Imperial government. Created Sir John A. Macdonald, KCB, he was chosen to take office as first prime minister of Canada on 1 July 1867.

During his first administration, 1867-73, he

became a "nation builder." To the original 4 provinces were added Manitoba, the North-West Territories (present-day Sask and Alta), BC and PEI. The INTERCOLONIAL RY between Québec City and Halifax was begun and plans were made for a transcontinental railroad to the Pacific coast. These undertakings involved unprecedented expenditures of public funds and did not proceed without incident. Manitoba entered the union following an insurrection led by Louis RIEL against the takeover of the area by the Dominion government, thereby forcing Macdonald's government to grant provincial status much sooner than had been intended and to accept a system of separate schools and the equality of the French and English languages. Macdonald's involvement in the negotiations for a contract to build the CANADIAN PACIFIC RAILWAY to BC involved him eventually in the PACIFIC SCANDAL; during the 1872 election large campaign contributions had been made to him and his colleagues by Sir Hugh ALLAN, who was to have headed the railway syndicate. Macdonald claimed that his "hands were clean" because he had not profited personally from his association with Allan, but his government was forced to resign and in the election of 1874 was defeated. Some of these political problems stemmed from the fact that he, like many of his contemporaries, was at times a heavy drinker. At the time of the election of 1872 and of the negotiations with Allan it is clear that there were periods of time of which he later had no recollection. His drinking subsequently became more moderate.

Fortunately for Macdonald his defeat coincided with the onset of a business depression in Canada which gave the Liberal administration of Alexander MACKENZIE a reputation for being ineffectual. In 1876, at the instigation of a group of Montréal manufacturers, Macdonald began to advocate a policy of "readjustment" of the tariff — a policy which helped him to return triumphantly to power in 1878. He remained prime minister for the rest of his life. The promised changes in tariff policy, introduced in 1879 and afterwards frequently revised, in close collaboration with leading manufacturers, became Macdonald's NATIONAL POLICY, a system of protection of Canadian manufacturing through the imposition of high tariffs on foreign imports, especially from the US. Appealing to Canadian nationalist and anti-American sentiment, it became a permanent feature of Canadian economic and political life. However, the economy as a whole continued to suffer slow growth, and the effects of the policy were uneven.

The great national project of Macdonald's second administration was the successful completion of the transcontinental CPR, which proved an extremely difficult and expensive undertaking requiring extensive government subsidization. Macdonald played a central role in making the railroad a reality. He was involved in awarding the contract to a new syndicate headed by George STEPHEN, which called for a government subsidy of \$25 million and 25 million acres (10 million ha) of land, and on 2 occasions, in 1884 and 1885, he agreed to introduce legislation for the further financial support of the railroad. Its completion in Nov 1885 made feasible the future settlement of the West.

The physical linking of the Canadian community was accompanied by the first steps towards eventual autonomy in world affairs. Macdonald did not foresee Canadian independence from Britain but rather a partnership with the mother country. He himself represented Canada on the British commission which negotiated the TREATY OF WASHINGTON of 1871; in 1880 the post of Canadian high commissioner to Britain was created; and Finance Minister Charles TUPPER represented Canada at the Joint High Commission in Washington in 1887.

The last stage of Macdonald's public career was plagued by difficulties. The NORTH-WEST REBELLION, at a time when he himself was superintending general of Indian affairs, and the subsequent execution of Riel in 1885 greatly increased animosity between French-speaking and English-speaking Canadians and cost Macdonald political support in Québec, where Riel was regarded as a martyr to the forces of Anglo-Saxon imperialism. A series of successful legal challenges to the powers of the central government, mainly emanating from Ontario Premier Oliver MOWAT, resulted in a federal system much less centralized than Macdonald had intended. The federal power of DISALLOWANCE, freely used at first, was virtually abandoned in the face of provincial opposition.

Macdonald's contribution to the development of the Canadian nation far exceeded that of any of his contemporaries, yet he was not by nature an innovator. Confederation, the CPR, the protective tariff were not his ideas, but he was brilliant and tenacious in achieving his goals once convinced of their necessity. As a politician he early developed shrewdness and ingenuity. He kept a remarkable degree of personal control over the functioning of the party and was adept in using patronage for political advantage. He was a highly partisan politician, partly because he genuinely believed it essential to maintain certain political courses — especially the British connection and legal-parliamentary tradition in Canada against the threat of American political and economic influences. Macdonald was an Anglophile but he also became a Canadian nationalist who had great faith in the future of Canada. His nationalism was primarily central Canadian and English Canadian; his concern with Québec was largely political. He accepted the existence of a unique French Canadian community and especially a French Canadian claim to a due share of government patronage, but after Cartier's death in 1873 he did not share equal political power with a strong "Québec lieutenant" nor did he give senior Cabinet positions to French Canadian politicians. His overriding national preoccupations were unity and prosperity. An 1860 speech summed up his lifelong political creed and political goals: "one people, great in territory, great in resources, great in enterprize, great in credit, great in capital."

J.K. JOHNSON

Reading: D.G. Creighton, *John A. Macdonald*, 2 vols (1952-55); J.K. Johnson, ed, *Affectionately Yours, the Letters of Sir John A. Macdonald and his Family* (1969); P.B. Waite, *Macdonald* (1975).

**Macdonald, John Sandfield**, lawyer, politician, premier of Ontario (b at St Raphael, UC 12 Dec 1812; d at Cornwall, Ont 1 June 1872). "Sandfield" served as a subsurname for Macdonald's Highland Scottish family. After brief schooling, he articulated in the offices of A. McLean and W.A. Draper, prominent Conservatives. He was called to the bar in 1840 and opened practice in Cornwall. The following year he was drafted by local Conservatives and successfully contested the Glengarry seat for the first Assembly of the United PROVINCE OF CANADA. He was unique in that he served in all 8 parliaments of the United Province. Annoyed by the intransigent position of old-line Tories, he identified increasingly with Governors SYDENHAM and BAGOT. He supported Bagot's Council of Reformers in 1842 and followed his new associates into opposition when they clashed with Governor METCALFE in 1843. Thenceforth, he would remain a Reformer. From 1849 to 1851 he served as Robert BALDWIN's solicitor general for Canada W. When Francis HINCKES became Reform premier, he passed over Sandfield, who, though bitter, accepted election in 1842 as Speaker of the Assembly — a post he filled with great distinction. During political maneuvers of 1854, which led to the formation of a Liberal-

Conservative ministry under Sir A.N. MACNAB, he severely criticized Lord ELGIN for alleged improprieties and thus became a leading figure in the disrupted Reform opposition, a role he shared with George BROWN. The 2 Reformers became bitter antagonists, however, with Brown championing REP BY POP and a centralized federation and Sandfield advocating the "double majority," a requirement that the Cabinet hold the confidence of majorities from both Upper and Lower Canada, which would have ensured that the duality of the province would be more fully represented.

When the government of G.-É. CARTIER fell in 1862, Lord MONCK called on Sandfield to form a Reform administration. Associating himself with the moderate L.V. SCOTTE, Sandfield, who served also as attorney general west, attempted to govern the increasingly divided province on the basis of his constitutional formula, but was thwarted by the Upper Canadian separate-school crisis. Reorganized with A.A. DORION as his associate and with more Rouge and Grit involvement, his ministry struggled on until it fell in Mar 1864. It was Sandfield who then introduced the idea of a coalition. Yet the GREAT COALITION of June 1864, which brought together John A. MACDONALD, Cartier and Brown, isolated Sandfield, who opposed both the concept of FEDERALISM and the notion of union with the Maritimes. He particularly feared Toronto domination of his St Lawrence Valley region. He denounced the federal plan as being too conservative and its process of implementation as arbitrary and even unconstitutional. Nevertheless, being basically a Reform-minded pragmatist, by early 1867 he gently bowed to the inevitable.

John A. Macdonald became prime minister and helped engineer the selection of Sandfield as the first premier of Ontario. "Hunting in pairs," the 2 Macdonalds won the concurrent federal and provincial elections. Sandfield's ministry was of considerable distinction, frugal yet creative, and despite opposition assertions to the contrary he was no puppet of the prime minister. By 1871, however, he was gravely ill and, after an inconclusive election that was followed by the desertion of a few coalition Reformers, he resigned that Dec. In his place, Edward BLAKE inaugurated 34 years of Liberal rule.

BRUCE W. HODGINS

Reading: Bruce W. Hodgins, *John Sandfield Macdonald* (1971).

**MacDonald, Thoreau**, illustrator, designer, painter (b at Toronto 21 Apr 1901). Thoreau MacDonald was self-taught but worked with his father, J.E.H. MACDONALD. Colour blindness forced him to work mainly in black and white. His illustrations, particularly for the Ryerson Press and the magazine *THE CANADIAN FORUM*, typify a whole period of Canadian illustration in the 1920s and 1930s. Certain technical mannerisms characterize his work: skies are always a series of parallel horizontal lines; clouds are simplified amoeboid shapes; trees look like the skeletons of conch shells; and his animals recall the art of the ancient Near East, appearing full face or, more usually, in profile. In general his subjects recall his father's, but he favoured Ontario farmland. He was one of the first artists in Canada to study factories and construction, but his work is most memorable for his delight in nature.

JOAN MURRAY

**Macdonald, Sir William Christopher**, manufacturer, philanthropist (b at Glenaladale, PEI 1831; d at Montréal 9 June 1917), son of Donald Macdonald, president of the Legislative Council of PEI. Educated at Central Academy, Charlottetown, Macdonald began his career as a Montréal commission merchant. Within a few years he became a tobacco manufacturer, founding the Macdonald Tobacco Co and amassing a large fortune. A man with neither family nor friv-

olous tastes, Macdonald became the greatest educational philanthropist of his generation. He was a generous benefactor of McGill and Ontario Agricultural Coll (now U of Guelph) and founded and endowed Macdonald College at Ste-Anne-de-Bellevue, Qué., and Macdonald Hall at Guelph, Ont. With James ROBERTSON, he financed a number of elementary-school innovations: the Macdonald Manual Training Movement, the Macdonald Rural Schools Fund and the Macdonald Consolidated School Project. Knighted in 1898, he was for many years chancellor of McGill.

ROBERT M. STAMP

**MacDonald, Wilson Pugsley**, poet, poetaster, performer (b at Cheapside, Ont 5 May 1880; d at Toronto 8 Apr 1967). MacDonald was a barnstorming versifier with unbending faith in his own greatness. He graduated in 1902 from McMaster, and his first collection of poems, *Song of the Prairie Land*, appeared in 1916. Many others, which he himself hawked at his "recitals," followed at intervals. Best known are *The Miracle Songs of Jesus* (1921) and *A Flagon of Beauty* (1931). It is surprising the extent to which MacDonald was often taken seriously as an artist, and equally surprising that genuine poems or hints of them can sometimes be discovered in his collections by those willing to wade through his vapid romanticism and pre-modernist conventions. Some satirical light verse may also stand re-examination. *Wilson MacDonald's Western Tour*, edited by Stan Dragland (1976), includes some of the poet's correspondence with his long-suffering publishers. There were once Wilson MacDonald Poetry Societies in several cities, sustained no doubt by the bombast of MacDonald himself, and at least one such group still survives.

DOUG FETHERLING

**Macdonald College**, see AGRICULTURAL EDUCATION.

**MacDonald Commission**, see INQUIRY INTO CERTAIN ACTIVITIES OF THE ROYAL CANADIAN MOUNTED POLICE, ROYAL COMMISSION OF.

**Macdonell, Alexander**, Roman Catholic bishop (b at Fort Augustus, Glengarry, Scot 17 July 1762; d at Dumfries, Scot 14 Jan 1840). Ordained in 1787, Macdonell spent the next few years in the Scottish Highlands. In 1793 he persuaded the British government to establish a Catholic corps, the Glengarry regiment, of which he was chaplain. In 1802 the regiment was disbanded. Two years later, with a government promise of 200 acres to every soldier who emigrated, Macdonell and a large group of settlers left for Glengarry County, Upper Canada.

Central in the religious and political life of the colony, Macdonell was appointed vicar general in 1807 and vicar apostolic in 1820, and was consecrated bishop of Kingston or Regiopolis in 1826. During his tenure thousands of IRISH immigrants arrived, and by 1840 there were 34 priests and 48 parishes in Upper Canada for which Macdonell had secured financial assistance from the local and British governments. A firm conservative, Macdonell was a legislative councillor from 1831 and soon came under fire from the Reform movement. Macdonell died while in Britain to solicit funds for Regiopolis College and recruit more Catholic emigrants. Buried in St Margaret's Convent, Edinburgh, his remains were brought to St Mary's, Kingston, in 1861.

CURTIS FAHEY

Reading: J.E. Rea, *Bishop Alexander Macdonell and the Politics of Upper Canada* (1974).

**MacDonell, Miles**, soldier, governor of Assiniboia (b in Scot c1767; d at Pt Fortune, LC 28 June 1828). Emigrating with his family to New York in 1773, Miles eventually followed them to Upper Canada, where he began farming. He was appointed a captain in the Royal Canadian Volunteers in 1796, but after the corps' disbandment in 1802, he came to Lord SELKIRK's atten-

tion in 1804. Selkirk supported his unsuccessful efforts in 1806-07 to raise a force of Glengarry Fencibles, and backed his ultimate appointment as sheriff of the Home District in 1807. Called to England by Selkirk in 1810, he was appointed first governor of ASSINIBOIA in 1811, and led the initial party of settlers to the RED RIVER COLONY in 1812. His belligerent attitude exacerbated conflict between the colony and the NORTH WEST CO, and he suffered severe emotional instability. Arrested and sent to Montréal in 1815 by the Nor'Westers, he was back in Assiniboia as governor in 1817, but soon returned to Montréal. His last years were spent in semiretirement on his farm near Osnaburgh, UC. J.M. BUMSTED

**Macdonnell, Daniel James**, Presbyterian minister (b at Bathurst, NB 15 Jan 1843; d at Fergus, Ont 19 Feb 1896). After graduating from Queen's U in 1858, Macdonnell taught school before studying theology in Scotland and Germany. Called to a church in Peterborough in 1866 and to St Andrew's, Toronto, in 1870, he became renowned as one of the most influential preachers in late Victorian Canada. An original theological thinker and friend of philosopher G.P. YOUNG, Macdonnell publicly voiced his doubts about certain Calvinistic doctrines. He was tried for heresy in 1876 and acquitted 2 years later. JOHN S. MOIR

**McDougald, John Angus**, "Bud," financier (b at Toronto 14 Mar 1908; d at Palm Beach, Fla 15 Mar 1978). An intensely private man fascinated by power, Bud McDougald developed ARGUS CORPORATION into one of Canada's dominant corporate entities. The son of a wealthy Toronto financier, McDougald began his career as a clerk for Dominion Securities at age 18. He quickly worked his way up through the corporate structure while at the same time developing outside financial activities. He left DS in 1945 to form a partnership with E.P. TAYLOR in a promotional company, Taylor, McDougald and Company Ltd. Ten years later he was made a director of Argus Corp, a holding company set up by Taylor to control his industrial interests. In 1969 McDougald became chairman of Argus which by then controlled 6 of Canada's leading industrial concerns, a position which saw him safely ensconced as a dominant member of Canada's BUSINESS ELITE. CHRISTOPHER G. CURTIS

**McDougall, Elizabeth**, née Boyd, frontier woman (b in Grey County, Canada W 1853; d at Calgary 31 Mar 1941). McDougall is less known for her own activities than for aiding her Methodist missionary husband John McDougall. She was the first white woman in the Alberta foothills, arriving at Morley in 1873 after a particularly hazardous journey during which she often drove the wagon across the plains. The couple lived among and worked to convert the STONEY on their reserve for 25 years. When her husband travelled as a church superintendent, McDougall went with him by canoe and dogsled, despite having 6 children. In 1898 she moved to Calgary where she became president of the Southern Alberta Pioneer Women and Old Timer's Assn. Speaking to the group, she voiced her conviction that frontier women had made possible their husbands' activities, citing the large number of bachelors who had found it necessary to leave the prairies when unsupported by the labour and sympathy of women. ELIANE LESLAU SILVERMAN

**McDougall, John Chantler**, Methodist minister, missionary (b at Owen Sound, Canada W 27 Dec 1842; d at Calgary 15 Jan 1917). Educated at Victoria Coll, Cobourg, 1857-60, and ordained in 1874, McDougall served for many years as missionary to the Indians of western Canada, continuing the work he began under his father's tutelage before his ordination. He served the fed-

eral government in both the 1869-70 and 1885 rebellions and drew government attention to the plight of the Indians after the disappearance of the buffalo. He retired in 1906 and lived in Calgary for the remainder of his life. He wrote several books including *George Millward McDougall* (1888) and *Forest, Lake and Prairie* (1895).

ERIC J. HOLMGREN

**McDougall, Pamela Ann**, diplomat, public servant (b at Ottawa 9 May 1925). After studying chemistry at Mt Allison and U de Paris, McDougall joined the Department of EXTERNAL AFFAIRS in 1949. She served at the embassy in Bonn, W Germany, as political adviser to the Canadian commissioners in Vietnam; in the high commission in New Delhi, India, as deputy head of the Far Eastern Division in Ottawa; and as ambassador to Poland (1968-71). From 1971 to 1974 she was in the Privy Council Office as assistant secretary to the Cabinet, and in 1976 she became chairman of the Tariff Board. Her report as royal commissioner on conditions of foreign service was presented in 1981. JOHN W. HOLMES

**MacDougall, Sir Patrick Leonard**, military officer, author (b at Boulogne-sur-Mer, France 10 Aug 1819; d at Kingston Hill, Eng 28 Nov 1894). Adjutant general, Canadian militia 1865-68, MacDougall had served in Canada from 1844 to 1854 and had written *Emigration* (1848), proposing a railway from Halifax to Québec. In *Fort versus Ships* (1862), he underlined the importance of British control of the Great Lakes. During the difficulties with the FENIANS, he organized isolated volunteer companies into battalions and formed mobile brigades. From 1878 to 1883 MacDougall commanded the British troops remaining in N America. O.A. COOKE

**McDougall, William**, lawyer, politician, first lieutenant-governor of the North-West Territories (b near York (Toronto) 25 Jan 1822; d at Ottawa 29 May 1905). A member of the Assembly of the Province of Canada (1858-67), he was commissioner of crown lands, 1862-64, and provincial secretary, 1864. He attended all 3 CONFEDERATION conferences and as minister of public works in John A. MACDONALD's government (1867) introduced the resolution that led to the purchase of RUPERT'S LAND. He was appointed lieutenant-governor of the area in 1869, and was repulsed by Louis RIEL's men, who prevented him entering the territory he had come to govern. This failure, and the fact that he had been a Clear Grit in his early political life but had switched to the Conservatives in 1867 (which had earned him the tag "Wandering Willie"), destroyed his political credibility. Although continuing in politics (Ontario MPP, 1875-78; MP, 1878-82), he was given few political plums. FRITS PANNEKOEK

**McDowall, Robert**, pioneer Presbyterian minister (b at Balston Spa, near Albany, NY 25 July 1768; d at Fredericksburgh, Canada W 3 Aug 1841). In 1790 the Dutch Reformed Church sent McDowall as a missionary to what is now southern Ontario. Invited to be a permanent minister in the Bay of Quinte area, he settled near Bath, in 1798 after completing his theological education at Schenectady, NY. McDowall formed several congregations between Belleville and Brockville, performed some 2500 baptisms and 1300 marriages in the next 40 years, and also made missionary trips. He was elected first moderator of the Presbytery of the Canadas in 1819. JOHN S. MOIR

**McDowell, Charles Alexander**, physical chemist (b at Belfast, Ire 29 Aug 1918). McDowell came to Canada in 1955 as head of the chemistry department of UBC. In his 26-year tenure, he built up this department to a point at which it could sometimes be counted the largest in N America, with great breadth in its activities. His sensitivities to physicochemical sophis-

tication and fashionable trends in science led to a concentration in his department of big-machine methods for studying molecular structure. This field includes his own substantial research in mass spectrometry, magnetic resonance and photoelectron SPECTROSCOPY. Unlike many scientists, he seems able to pursue science itself and the politics of science as an essential unity. He was president of the Chemical Inst of Canada, 1978-79. In 1981 UBC promoted him to the rarely awarded rank of university professor. LIONEL G. HARRISON

**MacEachen, Allan Joseph**, professor, politician (b at Inverness, NS 6 July 1921). After serving as head of the dept of economics and social sciences at Saint Francis Xavier U he entered federal politics; since 1953, except for 1958-62, he has represented Inverness-Richmond (later Cape Breton Highlands-Canso) in the Commons, gaining wide recognition for looking after his constituency. After 1963 his prestige grew steadily; for 2 decades he has been recognized as the federal Liberal leader in Nova Scotia. He has headed a succession of departments including finance and external affairs. During 2 stints as government leader in the Commons (1967-68 and 1970-74) he proved an able tactician, though his Nov 1981 budget was highly controversial and evoked considerable criticism. For most of the time from 1977 to 1984 he was deputy PM and always a leading party strategist. A close confidant of Pierre TRUDEAU, he helped devise the strategy that brought down the CLARK government in 1979 and he helped plan the 1980 Liberal victory. He did not run in the 1984 federal election and was appointed to the Senate in that year. J. MURRAY BECK

**MacEachern, Angus Bernard**, Roman Catholic bishop of Charlottetown (b at Kinlochmoldart, Scot 8 Feb 1759; d at Canavoy, PEI 22 Apr 1835). In a missionary career spanning 5 decades, MacEachern firmly rooted Catholicism in pioneer PEI and NB. He came to the Island a young missionary in 1790 to join his emigrant family, but his duties compelled him to criss-cross the priest-poor Maritime region endlessly. Fluency in English, French and Gaelic enabled him to minister effectively to his scattered Scots, Irish and Acadian flock. Charm and tact won the respect of civil authorities. As titular bishop of Rosen, MacEachern became vicar general for much of the Maritimes in 1819, but by the mid-1820s was convinced that the only cure for the region's spiritual ills was independence from the sprawling, neglectful archdiocese of Québec. In 1829 the diocese of Charlottetown, comprising PEI, NB and the Magdalen Is, was created, with MacEachern its first bishop. The next year he saw Catholic Emancipation, a cherished dream, promulgated. In 1831 he founded St Andrew's College at his home in St Andrew's, PEI, to provide preliminary training for prospective seminarians. Much beloved by his people, MacEachern acquired near-mythic stature in his lifetime. G. EDWARD MACDONALD

Reading: F.W.P. Bolger, "The First Bishop," in *The Catholic Church in Prince Edward Island* (1979).

**McEachran, Duncan**, teacher, administrator (b at Campbelltown, Scot 27 Oct 1841; d at Orms-town, Qué 24 Oct 1924). He graduated from Edinburgh Veterinary Coll in 1861 and came to Canada in 1862 to practise in Woodstock, Canada W. He lectured at the Upper Canada Veterinary Coll at McGill in 1866, the name being changed to Faculty of Comparative Medicine and Veterinary Science in 1889. He served as professor and dean until it closed in 1903. McEachran established contagious-disease-control programs for Canada in 1875 and was chief veterinary inspector 1884-1902. He was succeeded by J.G. RUTHERFORD, who took over disease control and founded the Health of Animals Branch of the federal Dept of Agriculture. McEachran estab-

lished the first animal-disease quarantine station at Lévis, Qué.

R.G. THOMSON

**MacEwan, John Walter Grant**, author, historian, lieutenant governor of Alberta (b at Brandon, Man 12 Aug 1902). Educated at schools in Brandon and Melfort, Sask, MacEwan graduated from Ontario Agriculture Coll in 1926 and from Iowa State Coll in 1928. He was professor of animal husbandry at U Sask and department head from 1928 to 1946, and dean of agriculture, U Man, from 1946 to 1951. He was the Liberal candidate in the federal by-election in Brandon in 1951 but was defeated. He moved to Calgary and was elected alderman in 1953, 1955, 1957 and 1959; he was mayor from 1963 to 1966. Elected MLA in 1955, he became Alberta Liberal leader in 1958, but was defeated in the election of 1959; he resigned the leadership in 1960. Between 1936 and 1984 he published 4 agricultural texts (2 collaborations) and 28 books on historical subjects, averaging latterly a book a year. He was lieutenant-governor of Alberta from 1966 to 1974.

R.H. MACDONALD

**McEwen, Clifford MacKay**, "Black Mike," fighter pilot, air vice-marshal (b at Griswold, Man 2 July 1896; d at Toronto, Ont 6 Aug 1967). He was credited with 22 victims while flying with 28 Squadron RAF in Italy in 1918. He joined the Canadian Air Force and reached the rank of air commodore in 1941, commanding training formations and 1 (Maritime) Group, RCAF in St John's, Nfld. In 1944 he took command of 6 (Bomber) Group in Yorkshire, Eng, and flew missions over Germany. His forceful leadership made his formation one of the most successful in Bomber Command. He retired 27 Apr 1946, becoming a consultant to aircraft manufacturers and a director of Trans-Canada Airlines.

BRERETON GREENHOUS

**MacEwen, Gwendolyn**, writer (b at Toronto 1 Sept 1941). A sophisticated, wide-ranging and thoughtful writer, she began her career with the poetry collection *The Drunken Clock* (1961). Through many other, larger poetry collections — especially *The Rising Fire* (1963), *A Breakfast for Barbarians* (1966) and *The Shadow-Maker* (1969, Gov Gen's Award) — she displays a commanding interest in magic and history as well as an elaborate and penetrating dexterity in her verse-craft. Her fiction includes 2 novels, *Julian the Magician* (1963) and *King of Egypt, King of Dreams* (1971), and a collection of stories, *Norman* (1972). In addition, she has published plays, a translation, a children's book and a travel narrative, *Mermals and Icons: A Greek Summer* (1978), which reminds us of the international outlook and gift for languages obvious in her novels and sometimes in her poems.

**McEwen, Jean**, painter (b at Montréal 14 Dec 1923). Essentially self-taught, he worked in Paris in the early 1950s. Returning to Montréal, he was committed to nonfiguration, influenced by French impressionism and American abstract expressionism. Though McEwen has always employed a hieratic symmetrical composition, his works are experiments in sensual colour, light and gesture. Recipient of several Canadian awards and international honours, he was president of the Non-Figurative Artists' Assn of Montréal in the early 1960s, and has received several Canadian awards and international honours. A "lyrical abstractionist," he celebrates the potential of colour through a knowledgeable and skillful use of paint.

SANDRA PAIKOWSKY

**McGee, Thomas D'Arcy**, politician, journalist, poet, historian (b at Carlingford, Ire 13 Apr 1825; d at Ottawa 7 Apr 1868). Probably the most eloquent FATHER OF CONFEDERATION, D'Arcy McGee was one of the few Canadian politicians to be assassinated.

Most of D'Arcy McGee's short life was spent

The Irish radical D'Arcy McGee was an eloquent spokesman for Canadian Confederation. He was assassinated, likely by a Fenian extremist. Photo c1868 (courtesy Public Archives of Canada/C-21543).

outside Canada. He emigrated from Ireland to the US at age 17 and took over the editorship of the *Boston Pilot* 2 years later. He returned to Ireland in 1845 and helped edit the nationalist newspaper *Nation*. After he participated in the rebellion of 1848, he fled to the US. McGee spent the next 10 years editing newspapers in the US. Preoccupied with the welfare of hundreds of thousands of IRISH immigrants, he became discouraged by lack of support for his many projects. McGee moved to Montréal in the spring of 1857 at the request of the Irish community and began another newspaper, *New Era*, advocating a "new nationality." He called for the federation of British N America, a transcontinental railway, the settlement of the West, a protective tariff and the development of a distinctive Canadian literature.

McGee was elected to the Legislative Assembly of the Province of Canada from Montréal in 1858. He worked at first with George BROWN and the Reform Party but broke with them, and in 1863 joined the government of John A. MACDONALD and George-Etienne CARTIER as minister of agriculture, immigration and statistics. He was in the "Great Coalition" leading up to Confederation and attended the Charlottetown and Québec conferences. By 1866, however, he had alienated many Irish voters and was dropped from the Cabinet. In addition to editing newspapers and working actively in politics, McGee was an excellent public speaker, published over 300 poems and wrote many works on Irish history. He was bitterly opposed to the FENIANS and their plans to obtain Irish independence by revolution and the conquest of Canada. When he was assassinated a week before his forty-third birthday, it was generally believed that a Fenian conspiracy was involved.

ROBIN BURNS

Reading: E.J. Phelan, *Ardent Exile* (1951); T.P. Slattery, *The Assassination of D'Arcy McGee* (1968) and *They Got to Find Me Guilty Yet* (1972).

**McGibbon, Pauline Emily**, née Mills (b at Sarnia, Ont 20 Oct 1910). After years of volunteer positions, including national president of the IMPERIAL ORDER OF THE DAUGHTERS OF THE EMPIRE (1963-65), president of the Alumni Assn (1953-54) and chancellor (1971-74) of U of T,

McGibbon held her first salaried position as Ontario's lieutenant-governor (1974-80). She was the first woman lieutenant-governor in Canada. Although she attributed her success to a sense of humour and love of people, she acknowledged that her appointment would have been impossible but for the WOMEN'S MOVEMENT. At the end of her term, she was appointed chairperson of the National Arts Centre and a director of Massey Hall. McGibbon served as a director of several films.

MARGARET E. MCCALLUM

**MacGill, Helen Gregory**, née Helen Emma Gregory, feminist, reformer, judge (b at Hamilton, Canada W 7 Jan 1864; d at Chicago, Ill 27 Feb 1947). She was the first woman graduate of Trinity Coll, Toronto (BA, MA), and, although never a career woman, she wrote and published all her life. As a reporter, she travelled alone across the Canadian West to Japan, marrying her first husband en route. Widowed young, she married James MacGill in 1903 and spent the remainder of her life in Vancouver. MacGill served for 23 years as judge of the Juvenile Court there; she was the first woman appointed judge in the region (1917) and the third in Canada. The Court itself had been created because of the pressures for reform exerted by women's groups in which MacGill was active, such as the Women's University Club of Vancouver. Elsie Gregory MacGill's biography *My Mother the Judge* (1981) — also in part an autobiography — is a valuable document of the WOMEN'S MOVEMENT.

NAOMI BLACK

**McGill University**, Montréal, was founded in 1821. To meet demands for public education, the Royal Institution for the Advancement of Learning was established in 1801. In 1813 merchant James McGill died, leaving his estate outside Montréal and an endowment of £10 000 for a college, naming the Royal Institution as trustee. It acquired a charter for "the University of McGill College" in 1821. McGill's heirs contested his will; the trustees, on gaining the estate, adopted in 1829 the Montreal Medical Institution, a teaching arm of the Montreal General Hospital (also chartered in 1821), as the new university's Faculty of Medicine. The litigation regarding the endowment was finally settled in the trustees' favour, and the nondenominational McGill College was built on the founder's farm. A faculty of arts was established in 1843.

Pauline McGibbon, lieutenant-governor of Ontario 1974-80 and later chairperson of the National Arts Centre (courtesy National Film Board/Photothèque).

\* Includes medical interns and residents

In 1852 the Royal Institution merged with McGill University. The governors appointed as principal John William DAWSON, a young Nova Scotia geologist, and his driving genius began to build McGill into an internationally renowned institution. His interest in public education led to the establishment of McGill Normal School. He also formulated a scheme for affiliated schools and colleges across Canada, which taught the McGill curriculum. Further, he established the tradition of enlisting the sympathies of wealthy benefactors, notably the MOLSON family, Lord Strathcona (see SMITH) and Sir William MACDONALD. McGill received minimal public funding until the early 1960s.

Dawson's successor, William Peterson, supported McGill's inclination towards the medical, biological and physical sciences. In 1898 he brought Ernest RUTHERFORD from Cambridge U to a full professorship of physics. Peterson encouraged H.M. TORY to found McGill College in Vancouver (now UNIVERSITY OF BRITISH COLUMBIA). He persuaded Macdonald to found Macdonald College in Ste-Anne-de-Bellevue as a constituent of McGill, to further agriculture, food science and teacher training.

During the principalship of Sir Arthur CURRIE, Canada's brilliant WWI corps commander, the McGill graduate school began to share with Toronto the development of postgraduate studies in Canada. Medicine remained pre-eminent, with such names in the interwar years as J.B. COLLIP and Wilder PENFIELD; chemistry was tremendously encouraged by Otto MAASS and physics by J.S. Foster. The McGill Social Science Project, begun 1930 by Leonard MARSH, strongly influenced Canada in the development of the welfare state.

Cyril James, principal 1940-62, led the fight for federal funding of universities. During his tenure an immense flood of returning veterans swelled enrolment, which increased from about 3400 in 1939 to over 8000 in 1948. After the war humanistic studies increased, and now every aspect of human culture is actively studied on campus. In the 1960s and 1970s McGill survived the "student revolt" and came to terms with reviving FRENCH CANADIAN NATIONALISM. McGill is a constituent of the provincial university network, but has considerable freedom in maintaining its tradition of excellent education and research. The university comprises 12 faculties: medicine, arts, law, education, engineering, dentistry, agriculture, music, management, science, religious studies, and graduate studies and research.

STANLEY B. FROST

Reading: Stanley B. Frost, *For the Advancement of Learning*, 2 vols (1980-84).

**McGillivray, Duncan**, fur trader (b in Inverness-shire, Scot c1770; d at Montréal 9 Apr 1808), brother of William and Simon MCGILLIVRAY. One of a family of boys attracted into the Canadian FUR TRADE by their uncle Simon MCTAVISH, McGillivray joined the NORTH WEST CO sometime before 1793. He traded out of posts on the N Saskatchewan R for most of his career and may have made an early crossing of the Rocky Mts. In 1802 he returned to Montréal where he became an agent for the NWC, travelling to the summer rendezvous at FORT WILLIAM each year until his death.

DANIEL FRANCIS

**McGillivray, Simon**, merchant (b at Stratherrick, Scot 1783; d at London, Eng 9 June 1840), brother of William and Duncan MCGILLIVRAY.

William McGillivray, chief director of the North West Co. He led a company of voyageurs during the War of 1812 and assisted Gen Brock in the capture of Detroit (courtesy Public Archives of Canada/C-167).

Owing to physical disability, he did not enter the Canadian FUR TRADE actively like his brothers. Instead he turned to the financial end of the business, working in London, Eng, and Montréal for subsidiaries of the NORTH WEST CO. In 1821 he was instrumental in bringing about the union between the NWC and the HBC. His association with the fur trade and Canada ended in 1830.

DANIEL FRANCIS

**McGillivray, William**, fur-trade merchant (b Scot c1764; d at London, Eng 16 Oct 1825). Attracted to the fur trade by his uncle, Simon MCTAVISH, McGillivray was a wintering partner in the NORTH WEST CO for several seasons. From 1794 he represented the Montréal end of the business at the annual rendezvous at GRAND PORTAGE [Minn]. Eventually he became superintendent of the northwestern trade, and when his uncle died in 1804, McGillivray was made chief director of the NWC. During the War of 1812 he commanded a company of voyageurs, assisting Gen Brock at the capture of Detroit. As leader of the NWC, he presided over a period of intense competition with the HBC that ended when the companies united in 1821. Afterward, he was a director of the newly organized company. FORT WILLIAM, the NWC depot at the head of Lk Superior, was named after him. DANIEL FRANCIS Reading: M.W. Campbell, *Northwest to the Sea: A Biography of William McGillivray* (1975).

**McGillivray, Charles Duncan**, veterinarian, teacher, administrator (b at Glasgow, Scot 25 Oct 1872; d at Guelph, Ont 17 Apr 1949). After studying at the Ontario Veterinary Coll and in Chicago, Ill, he served as chief veterinary inspector for Manitoba with the federal Dept of Agriculture 1903-18. He was principal of OVC (Toronto and Guelph) 1918-45. With J.G. RUTHERFORD, McGillivray helped to improve veterinary education in Canada through a report to a national conference on the topic in 1918. He raised the standards of veterinary education and expanded the application of VETERINARY MEDICINE to species other than equine.

R.G. THOMSON

**McGregor, James**, Presbyterian minister (b in Comrie Parish, Scot 1759; d at Pictou, NS 1830). Ordained in 1780 by the General Associate Synod (Antiburgher) of Scotland, McGregor was sent as an unpaid missionary to PICTOU, where he remained as minister until his death. Under extremely difficult physical conditions, he made several missionary tours of NS, PEI and NB between 1791 and 1805. Founder of the first Canadian Auxiliary Bible Society, he revised

Gaelic publications for the British and Foreign Bible Society and was the author of 2 pamphlets and a volume of Gaelic poetry.

JOHN S. MOIR

**MacGregor, James Gordon**, physicist (b at Halifax 31 Mar 1852; d at Edinburgh, Scot 21 May 1913). Educated at Dalhousie U, MacGregor was awarded a Gilchrist scholarship in 1874 and studied under Peter Guthrie Tait at Edinburgh and Gustav Wiedeman at Leipzig. When he received a doctorate from London in 1876, he had already had 4 papers published in the *Proceedings of the Royal Society of Edinburgh*. In 1879 Dalhousie offered him its newly established chair of physics. During his 22 years there he published about 60 papers on several aspects of the electrical and thermal properties of solutions and was elected to both the Royal Soc of London and the Royal Soc of Edinburgh. He helped found the ROYAL SOCIETY OF CANADA and was a charter member. In 1888 he published *An Elementary Treatise on Kinematics and Dynamics*. He succeeded P.G. Tait at Edinburgh in 1901.

YVES GINGRAS

**MacGuigan, Mark Rudolph**, academic, politician (b at Charlottetown 17 Feb 1931). A graduate of St Dunstan's Coll and U of T, he taught law at U of T, Osgoode Hall and U of Windsor, where he was also dean. In 1968 he was elected to Parliament for Windsor, succeeding Paul MARTIN, and in 1980 PM TRUDEAU appointed him minister of external affairs. From 1982 to 1984 he was minister of justice. In 1976 he ran unsuccessfully for the leadership of the Ontario provincial Liberals and in 1984 was an unsuccessful candidate for the leadership of the national Liberal Party. He then retired from politics to become a judge of the federal Court of Appeal.

ROBERT BOTHWELL

**McHenry, Earle Willard**, "Mac," professor, scientist, author (b at Streetsville, Ont 25 Jan 1899; d at Toronto 20 Dec 1961). McHenry's initial discipline was chemistry; however, an interest in nutrition emerged when he was appointed lecturer in the dept of physiological hygiene at U of T. Ultimately a separate dept of public-health nutrition was established in 1946 with McHenry as professor and head (1946-61). His interest in nutrition encompassed both basic research and the nutritional health of the general public. He was the first president of the Nutrition Soc of Canada (est 1957), and was an outspoken, articulate contributor to several governmental committees on nutrition education and policy in N America. McHenry wrote 2 books, *Basic Nutrition* and *Foods without Fads*, which expressed his commonsense philosophy towards nutrition and his impatience with unscientific thinking. At his death he was coediting the 3-volume *Nutrition: A Comprehensive Treatise*.

M.J. BAIGENT

**Machinery and Equipment Industry** includes establishments that produce pumps and compressors, rolling-mill and metalworking equipment, FORESTRY equipment, MINING equipment, farm machinery, CONSTRUCTION equipment and SERVICE INDUSTRIES equipment. The largest resource INDUSTRY users of machinery in Canada are mining, forestry, petroleum and ELECTRIC-POWER generation. In mining, machinery is used for ore extraction, crushing, smelting and refining. In forestry, machines are involved in tree harvesting, PULP AND PAPER manufacturing and LUMBER production. The PETROLEUM INDUSTRY uses equipment to explore, drill, extract, transport and refine oil and natural-gas products. There is a large machinery element in all types of electrical power plants, including hydro, thermal and nuclear.

Among Canadian manufacturing industries, the largest purchasers of machinery and equipment are the metalworking industries, including steelmaking, the AUTOMOTIVE INDUSTRY

and the machinery industry itself. Other large user industries are food processing, packaging and air and water purification. Machinery and equipment are made in foundries, machine and welding shops and assembly plants. Support facilities include laboratories for INDUSTRIAL RESEARCH AND DEVELOPMENT and for testing and quality control, as well as design offices. It was not until the 1850s, when a RECIPROCITY treaty opened the booming US market to Canadian manufacturing industries, that machinery and equipment production moved from small forges and metalworking shops to the early versions of today's large plants. It is estimated that, at the time of Confederation (1867), about 30 to 40 firms were manufacturing machinery and equipment for other industries; by 1967 there were 15 Canadian machinery firms 100 years or older. Some, such as Dorr-Oliver Canada Ltd in Orillia, Black Clawson-Kennedy Ltd in Owen Sound and Babcock-Wilcox Canada Ltd in Cambridge, are now among the country's largest. The earliest companies manufactured primarily steam engines, hydraulic turbines, pumps, woodworking machinery, machine tools and flour-mill, cement-making and saw-mill machinery. The plants were initially powered by waterwheels, water turbines or steam engines.

At the end of the 19th century, the advent of large thermal and hydroelectric power plants, with their far-flung distribution systems, started a new phase in machinery manufacturing. Factories were located near markets and transportation networks. The availability of large, efficient electric motors permitted the design of more powerful machinery.

As its customer industries proliferated and expanded, machinery manufacturing grew. WWI accelerated the demand for more and newer types of machinery, giving the industry maturity and a permanent place in Canada's economy. It expanded until the GREAT DEPRESSION of the 1930s, when all sectors encountered nearly a decade of minimal growth. With WWII, enormous demands were again imposed on the industry. The boom was followed in 1945 by a period of conversion and expansion for production of peacetime materials and goods for the domestic market and for the immense rebuilding requirements in Europe. These events called for new machinery on an unprecedented scale. Annual plant shipments of Canadian machinery and equipment grew from \$60 million in 1938 to \$460 million in 1950. The industry enjoyed a continuous and above-average growth rate until 1982, when it followed the rest of the Canadian economy into a severe recession. Industry sales in 1981 were \$6.1 billion (8.8% of all Canadian nonfood manufactured products). In the recession of 1982, production fell to \$4.86 billion.

#### The Modern Industry

Between 1975 and 1981 Canadian machinery and equipment production grew steadily, from \$2.55 billion to \$6.1 billion. The growth (6.6% annually) was a consequence of increasing industrialization in the world generally and in the Canadian economy in particular. In addition, Canadian MEGAPROJECTS provided a large domestic market and served as a base of expertise for exports.

Between 1975 and 1981 exports accounted for 65% of the industry's real growth. Increasing exports were necessary to sustain growth because the indigenous Canadian market is too small, even for manufacturers who concentrate on producing machinery for larger Canadian industries. Conversely, a country with Canada's small population cannot manufacture the entire range of machinery and equipment needed by all its industries. In fact, in recent years Canadian machinery and equipment manufacturers have never managed to capture more than about

one-third of the domestic market. A 1977 study of the 17 largest Western industrial nations by the Organization for Economic Cooperation and Development showed that Canada had the lowest machinery self-sufficiency in the group (32%). By comparison, figures for some of the other countries were Italy 60%, West Germany 70%, France 74%, the US 91% and Japan 95%.

**Location of Plants** About 64% of the machinery and equipment industry (by dollar value of plant shipments) is found in Ontario; Québec has 20%; the Prairie provinces 9%; BC 6%; and the Maritimes 1%.

**Ownership** It is estimated that in the early 1980s, about 225 firms in the Canadian machinery sector, accounting for about 60% of its total output, were subsidiaries of American parent companies. Only about 25% came from Canadian-controlled companies. FOREIGN INVESTMENT has provided ready access to the technical, financial and marketing resources of parent corporations. It has also created an outflow of profit capital and, in some cases, restricted company activity.

**Work Force** Machinery and equipment manufacturing is a labour- and technology-intensive industry, employing large numbers of engineers and skilled tradesmen such as machinists, fitters, millwrights, welders, tool and die makers, instrument and electrical workers, and electronics technicians.

The industry work force has grown, but in less than direct proportion to the value of its shipments because of productivity improvements. Employment increased from 13 500 in 1949 to 24 000 in 1954. Tremendous growth in the late 1950s and the 1960s raised employment to 112 000 by 1967, and by 1981 the total had reached 132 000. During the 1982 recession 23% of the work force was laid off, almost twice the national average, and by 1983 the work force was down to 102 000. These figures are for those directly employed; the industry creates an approximately equal number of jobs among material and component suppliers and subcontractors. About 20 different unions are involved in the industry, although some plants are not unionized. The 3 major unions are the International Assn of Machinists and Aerospace Workers, the United Steelworkers of America and the United Auto Workers.

**Associations** The Machinery and Equipment Manufacturers Assn of Canada was established in 1955 in Ottawa to provide a forum for technical, economic, educational and other deliberations, and for representation to the government, the public and the media. J.R. ROMANOW

**Machray, Robert**, Church of England priest, bishop (b at Aberdeen, Scot 17 May 1831; d at Winnipeg 9 Mar 1904). Educated at King's College, Aberdeen, and Sidney Sussex College, Cambridge, he received prizes in mathematics, philosophy and divinity. He was ordained in 1855, served in English parishes and was dean of Sidney Sussex College 1859-62. He succeeded David ANDERSON as bishop of RUPERT'S LAND and was consecrated in June 1865. During his years there he helped extend and consolidate the church's work and built up St John's College, Winnipeg. He became first metropolitan of the new ecclesiastical province of Rupert's Land in 1875, with the title of archbishop, and first primate of Canada in 1893. He died in office.

F.A. PEAKE

**McIlwraith, Thomas**, businessman, ornithologist (b at Newton, Scot 25 Dec 1824; d at Hamilton, Ont 30/31 Jan 1903). He is best known for his 1886 treatise on Ontario birds, the first major annotated provincial bird book in Canada. McIlwraith came to Canada in 1853 and became a successful Hamilton businessman and alderman. He published several papers on birds in Canada West, and was credited with instructing

wildlife artist Allan BROOKS in the proper preparation of bird skins. He was one of 25 founders of the prestigious American Ornithologists' Union and served on its council. The name of the McIlwraith Field Naturalists of London, Ont, honours his memory.

MARTIN K. McNICOLL

**McIlwraith, Thomas Forsyth**, anthropologist (b at Hamilton, Ont 9 Apr 1899; d at Toronto 29 Mar 1964). McIlwraith graduated from McGill and Cambridge and, as field assistant at the National Museum of Canada, conducted research on the Northwest Coast, 1922-24. In 1925 he joined U of T and was a professor and head of the dept of anthropology from 1936 to 1952. At U of T, McIlwraith built a department in which archaeological, linguistic, physical and ethnological anthropology all found a place. His own research interests lay in ethnology and later in the effects of change on Canadian native peoples. In 1939 he edited (with C.T. Loram) *The North American Indian Today* and in 1948 published the *Bella Coola Indians*. Chairman of the Social Science Research Council, president of the Royal Canadian Institute and the RSC, fellow of the Royal Institute of Great Britain and Ireland, he remained a continuing research associate of the National Museum and the Royal Ontario Museum.

TOM McFEAT

**MacInnis, Grace Winona**, née Woodsworth, politician (b at Winnipeg 25 July 1905). Following in the footsteps of her father, J.S. WOODSWORTH, and husband Angus, Grace MacInnis became a key member of the CO-OPERATIVE COMMONWEALTH FEDERATION and later the NEW DEMOCRATIC PARTY, as well as a respected MLA in BC (1941-45) and an MP (1965-74). A backroom politician *par excellence*, she was influential within provincial and national party circles, leading one reporter to call her in 1949 the true leader of the CCF executive. In BC and Ottawa she worked hardest for low-income housing, consumer rights and women's equality. She also took great interest in international affairs, serving as Canada's representative during a number of international conferences. For her contributions MacInnis received several awards, including the Governor General's "Persons Award" (1979), marking the 50th anniversary of the PERSONS CASE. In 1953 MacInnis published *J.S. Woodsworth: A Man to Remember*. SUSAN WALSH

**MacInnis, Joseph Beverly**, physician, diver, poet (b at Barrie, Ont 2 Mar 1937). After completing his MD at U of T (1962) and interning at Toronto General Hospital (1963), he lectured at U of Penn (1964), but he has spent most of his career on underwater projects. He was the life-support physician for a man-in-sea project (1964), directed 75 dives at the Linde Research Lab (1965) and was a consultant to Sealab III (1967) and to the American Medical Assn *Journal* (1966).

In 1969 MacInnis developed an underwater contained environment in Georgian Bay and then designed a transparent non-corrosible undersea refuge. In 1972, at Resolute Bay, this became the first manned station under ice, as one of 10 arctic underwater expeditions (1970-74), including the first under the North Pole. MacInnis has participated in many diving expeditions, including a 700-foot dive (213 m) from the first lock-out submarine (1968), and an arctic dive in which BREADALBANE, a ship sunk in 1853, was discovered off Beechey I (1980). His interest in merging arts with science has found expression in *Underwater Images* (1971), in which his own photographs of underwater life are accompanied by his poems, and in several films and TV programs. A film, *Deep Androsia*, received a Gold Medal of Excellence at the International Film Festival, Santa Monica (1965). Many of his dives are documented in his book *Underwater Man* (1974).

MARTIN K. McNICOLL

**McIntosh, John**, farmer, apple breeder (b in Mohawk R Valley, NY 1777; d at Dundela, Canada W 1845). After a family disagreement, McIntosh immigrated to Iroquois, Upper Canada, in 1796. In 1811 he moved to the site of Dundela, where in clearing the forest he discovered about 20 apple trees in a previously cleared area. He transplanted several, one of which produced a superior fruit that he cultivated with mixed success. In 1835 his son Allan learned the art of grafting and the family began to produce the apples on a major scale. The vigorous, hardy and productive trees produced the popular dessert fruit of wide climatic and cultural tolerance, first known as "Granny" and later "McIntosh Red." The original tree lived until about 1910, bearing fruit for over 90 years until 1908.

MARTIN K. McNICHOLL

**McIntosh, William**, fur trader (b at Grand Rapids, US 1784; d 16 Feb 1842). By 1816 a wintering partner in the north west co, he had previously been positioned at Lesser Slave Lk (1803) in the Peace R country (1805) and at Ft Vermilion (1815). He was arrested at Grand Rapids in 1819 along with several other senior NOR'WESTERS by the governor in chief of the HUDSON'S BAY CO. McIntosh pretended illness, feigned suicide and escaped to Ft William. In the 2 preceding years he had completely disrupted HBC attempts to capture the Athabasca country, driving one of their officers to near starvation.

After the 1821 union of the NWC and HBC he served as chief trader and after 1823 as chief factor, variously at Nelson House (1825-1829), Cumberland House (1829-1832) and Dunvegan (1832-1834). He retired in 1837 after 2 furloughs. Although McIntosh served the HBC for 16 years, his prominence in the wars between the 2 fur-trade giants may have engendered the hatred of Sir George SIMPSON, the governor of the HBC. In his private "Character Book" Simpson described McIntosh as "A revengeful cold blooded black hearted Man whom I consider capable of anything that is bad: possessing no abilities beyond such as qualify him to cheat an unfortunate Indian and to be guilty of a mean dirty trick: Suspicious, Cruel & Tyrannical without honour or integrity."

FRITS PANNEKOEK

**McIvor, George Harold**, businessman, public servant (b at Portage la Prairie, Man 1894). Starting in the grain business at 15, McIvor rose from work at a country elevator to the Winnipeg Grain Exchange. In 1935 he joined John I. McFarland as assistant chief commissioner of the CANADIAN WHEAT BOARD. He became chief commissioner of the board in 1937, the post held until 1958 when he became chairman of Robin Hood Flour. He was closely linked to C.D. HOWE and was blamed by many for Howe's unpopular policies during the wheat glut of the mid-1950s.

ROBERT BOTHWELL

**Mackay, Angus**, prairie agriculturist (b near Pickering, UC 10 Jan 1841; d at Indian Head, Sask 10 June 1931). Mackay is reputedly the man who introduced "summer fallow," which some historians consider more important than any other discovery in allowing successful agriculture on the Canadian prairies. A farmer's son and a farmer, Mackay moved west at age 40 and took up virgin land at Indian Head. The prairie farmer's main problem is drought. Mackay appears to have discovered independently about 1885 that cultivating land and leaving it fallow for a year allows it to store moisture and yield a good crop the next year. In 1888 Mackay was appointed to create the first Dominion Experimental Farm in the Canadian West. He became the chief propagandist for summer fallow and a powerful influence in western agriculture.

DONALD J.C. PHILLIPSON

**McKay, Arthur Fortescue**, painter (b at Nipawin, Sask 11 Sept 1926). He studied at the

Provincial Institute of Technology and Art, Calgary, 1946-48; Académie de la grande chaumière, Paris, 1949-50; Columbia U, and Barnes Foundation, Merion, Pa, 1956-57. He first began to teach at the U Sask, Regina, in the early 1950s and served as director of its School of Art 1964-67. One of the REGINA FIVE, he was influenced in the 1960s by Barnett Newman at the Emma Lake Workshops and was included in Clement Greenberg's 1964 "Post-Painterly Abstraction" exhibition. McKay is most noted for his scraped enamel "mandalas" which utilize circular and rectangular formats to create highly contemplative images reflecting his interest in Zen Buddhism. In the 1970s he continued to paint abstractions but also reintroduced the landscape in his work.

NORMAN ZEPP

**McKay, Elmer MacIntosh**, politician (b at Hopewell, NS 5 Aug 1936). Educated at Acadia and Dalhousie, McKay was called to the NS Bar in 1961 and practiced law in Pictou County. Elected a Conservative MP for Central Nova in a 1971 by-election, he was a tenacious and vocal Commons critic of Liberal governments, taking particular aim at security questions. He was minister of regional economic expansion and the political minister for NS in the 1979-80 Joe CLARK government. An early and prominent supporter of Brian MULRONEY's successful campaign to become PC chief in 1983, he resigned his seat so that the new leader could run for Parliament. McKay was re-elected in Central Nova in 1984 and became solicitor general in the Mulroney government.

NORMAN HILLMER

**Mackay, George Leslie**, Presbyterian missionary (b at Zorra, Oxford County, Canada W 22 Mar 1844; d in Formosa (Taiwan) 2 June 1901). A graduate student in Edinburgh, Mackay decided to become a missionary after hearing Alexander Duff, the "apostle to India," call for foreign evangelism. He was sent to mainland China in 1871 by the Canadian Presbyterian Church but settled in Tamsui, Formosa. Although natives destroyed several of his churches, his knowledge of elementary medicine won him respect. Nicknamed "the black-bearded barbarian," Mackay built a hospital, a girls' school and Oxford College, and established 60 mission stations in 20 years.

JOHN S. MOIR

**McKay, James**, trader, guide, entrepreneur, politician (b at Edmonton House, NWT 1828; d at St James, Man 2 Dec 1879). Son of a Scottish boat-brigade guide and Métis mother, McKay spoke English, French, Ojibwa, Cree and Sioux. A massive, powerful man, he was Hudson's Bay Co postmaster and clerk 1853-60 before starting his own business, freighting, trading, carrying mails, running a stagecoach from Winnipeg to Edmonton, and outfitting and guiding hunters and travellers. On the Council of Assiniboia from 1868-69, McKay played a moderating part at the time of the first RIEL rising. He served Manitoba as president of the Executive Council, Speaker of the Legislative Council and minister of agriculture, and was on the Council of the North-West Territories 1873-75. As adviser for Treaties No 1, 2 and 3 and commissioner for Treaties No 5 and 6, he played a crucial role. McKay converted from Presbyterianism to Catholicism and his marriage to a daughter of John Rowand brought him wealth and social status. His home, Deer Lodge, became a meeting place for the Indian and Métis and elite newcomers from Ontario. His career linked the old fur-trading, buffalo-hunting West to the new order of business, settlement and organized government.

IRENE SPRY

**McKay, Robert Alexander**, political scientist, diplomat (b in Victoria County, Ont 2 Jan 1894; d at Ottawa 25 Nov 1979). McKay served overseas in WWI and studied at U of T and Princeton. Professor of government and politi-

cal science at Dalhousie 1927-47, he also served on the Rowell-Sirois Commission on Federal-Provincial Relations. Wartime assistant in the Dept of External Affairs, he rejoined External in 1947. In addition to his work as a negotiator of union with Newfoundland, he was deputy undersecretary, permanent representative to the UN (1955-58) and ambassador to Norway (1958-61). He taught political science at Carleton 1961-72. His publications include *The Unreformed Senate of Canada* (1926); with E.B. Rogers, *Canada Looks Abroad* (1939); and *Documents on Canadian Foreign Policy 1945-1954* (1971).

JOHN W. HOLMES

**Mackay Case** (1980) In *Mackay v the Queen*, Pte R.C. Mackay, accused of trafficking in drugs and of being found in possession of drugs, invoked in his defence the principle of equality before the law found in the CANADIAN BILL OF RIGHTS of 1960, because the prescribed penalty was higher for a service person than for a civilian. The Supreme Court of Canada enunciated the principle that, based on the Constitution Act, 1867 (s91.7), Parliament could, for a valid federal purpose, provide a more severe penalty for a serviceman than for a civilian and for the same reasons could provide that these cases should be conducted by a military attorney before a court martial.

GÉRALD-A. BEAUDOIN

**McKee Trophy**, award given annually for contribution to the advancement of Canadian aviation. It was donated by J. Dalzell McKee, an American sportsman pilot, who completed the first flight of a seaplane across Canada in 1926. The selection was made by a committee established by the Dept of National Defence. It was first awarded 1927, retired in 1968, and transferred to the custody of the Canadian Aeronautics and Space Institute in 1971 for representation. Among recipients are C.H. DICKINS (1928), W.R. MAY (1929), G.W.G. MCCONACHIE (1945) and C.C. AGAR (1950). T.M. Reid (1942, 1943) and P.C. GARRATT (1951, 1965) are the only 2-time winners.

JAMES MARSH

**McKellar, Andrew**, astrophysicist, molecular spectroscopist (b at Vancouver 2 Feb 1910; d at Victoria 6 May 1960). McKellar received the MBE in 1947 for his work in WWI as a research officer in the RCN. He was astronomer at the Dominion Astrophysical Observatory in Victoria 1935-39 and 1945-60, and was internationally regarded as one of Canada's greatest astronomers. His 73 scientific publications include evidence that the source of energy of cool carbon stars is a nuclear reaction involving carbon and nitrogen, and the deduction that the temperature of interstellar gas is 2.3° Kelvin. It was more than 20 years before his result was confirmed and used to support the theory of the explosive creation of the universe. His final paper, a biography and a list of his publications appear in the *Journal of the Royal Astronomical Society of Canada* 54 (1960).

E.H. RICHARDSON

**Mackenzie**, BC, District Municipality, pop 5890 (1981c), area 20 285 ha, inc 1966, is situated in northern BC on the shores of the man-made Williston Lk Reservoir in the ROCKY MT TRENCH. It was created by the flooding of the Peace, Finlay, Omenica and Parsnip rivers caused by damming the Peace R at the W.A.C. Bennett Dam. Governed by a mayor and 6 aldermen, Mackenzie (after Alexander MACKENZIE) was a preplanned, instant town designed to exploit the region's rich natural resources. The local economy features the reserves of the Mackenzie Forest Dist, which support 2 pulp mills and 5 sawmills, and the minerals of the Rocky Mt Trench. Mackenzie quickly gained all the services of typical Canadian towns and today has schools, churches, an arena, swimming pools, a ski hill, a library, an arts and craft centre, a hospital and numerous clubs and organizations.

ALAN F.J. ARTIBISE

**Mackenzie, Ada**, golfer (b at Toronto, Ont 30 Oct 1891; d at Richmond Hill, Ont 25 Jan 1973). Mackenzie paved the way for women to take GOLF seriously by founding the first club restricted to women, the Ladies' Golf and Tennis Club, in Thornhill, Ont, in May 1925. Mackenzie's own play set high standards. She won the Ont Ladies' Amateur title 9 times and the Canadian Ladies' Open Amateur 5 times. In 1933 she was chosen Canadian athlete of the year.

LORNE RUBENSTEIN

**Mackenzie, Sir Alexander**, fur trader, explorer (b at Stornoway, Scot 1764; d near Dunkeld, Scot 12 Mar 1820). Mackenzie's father took him to New York in 1774, and in 1778, because of the Revolutionary War, he was sent to school in Montréal. There in 1779 he entered the employ of the fur-trading firm of Finlay and Gregory, later Gregory, MacLeod and Co. In 1784 he became a partner and spent the years 1785-87 in charge of the post at ÎLE-À-LA-CROIX. In 1787 Gregory, MacLeod and Co coalesced with the NORTH WEST CO and Mackenzie became a partner in the larger concern.

He was assigned to the post on the Athabasca R as second-in-command to Peter POND, who had explored the region extensively and would be leaving it in the spring. Pond was convinced that Cook's R (Cook Inlet, Alaska) on Capt Cook's chart was the mouth of the large river that flowed westward out of Great Slave Lk, and that it would provide a travel route to the Pacific. This association with Pond was decisive; Mackenzie later declared that "the practicability of penetrating across the continent" was the "favourite project of my own ambition," and this resulted in the 2 remarkable expeditions upon which his fame rests. He and Pond had founded FT CHIPEWYAN on Lk Athabasca, and he set out from it in 1789 to test Pond's theory, but found that the river (the MACKENZIE R) led to the Arctic, not the Pacific. Undaunted, he planned a second expedition. Having wintered at Ft Fork,

on the upper waters of the Peace, he headed westward in May 1793. Crossing the divide from the watershed of the Peace to that of the Fraser, he was advised by Indians to complete his journey to the Pacific overland, instead of following the Fraser to its mouth. The last stage of this first crossing of the full width of N America was down the Bella Coola R. The speed and efficiency with which Mackenzie travelled were astonishing; he brought both his crews home safely and in spite of numerous contacts with Indians never fired a shot in anger.

Mackenzie left the West in 1795, and after serving as a partner in McTavish, Frobisher and Co, which managed the NWC, he went to England in 1799. His *Voyages* were published in 1801 and he was knighted in 1802. His ambition was to form a trading concern that would span the continent and involve a union of the NWC and the HBC, but his efforts to bring it about failed. He married in 1812 and retired to an estate in Scotland.

W. KAYE LAMB

Reading: W. Kaye Lamb, ed, *The Journals and Letters of Sir Alexander Mackenzie* (1970).

**Mackenzie, Alexander**, builder, newspaper editor, 2nd prime minister of Canada, 1873-78 (b near Dunkeld, Scot 28 Jan 1822; d at Toronto 17 Apr 1892). Immigrating to Canada in 1842, Mackenzie eventually settled in the Sarnia area, working in the building trade with his brother. In the early 1850s he became editor of a Reform newspaper, the *Lambton Shield*, and a supporter of George BROWN. He was first elected to the Legislative Assembly of the PROVINCE OF CANADA in 1861. He backed CONFEDERATION but refused the presidency of the Council when Brown left the coalition in 1865. Mackenzie was elected to the House of Commons, and subsequently to the Ontario legislature in 1867. He sat in the Ontario legislature until dual representation was abolished and sat in the Commons until his death.

In 1873 Mackenzie formed the first Liberal administration in Canada after Sir John A. MACDONALD's government was brought down by the PACIFIC SCANDAL. A hardworking man of exceptional integrity but little imagination, Mackenzie served as his own minister of public works, and his attempt to build a transcontinental railway on a self-financing basis met with some success but little public approbation. Many felt his diligence in his portfolio detracted from his leadership in the Commons. Macdonald's party defeated Mackenzie's in the 1878 elections, which were fought on the issue of the NATIONAL POLICY proposed by the Tories.

Mackenzie remained leader of his party for only 2 more years when failing health or a threatened party revolt led him to step down in favour of Edward BLAKE. He refused several offers of a knighthood, and wrote several books in his retirement, including *The Life and Speeches of George Brown* (1882).

J.M. BUMSTED

Reading: D.C. Thomson, *Alexander Mackenzie*, Clear Grit (1960).

**Mackenzie, Sir Alexander**, lawyer, businessman (b at Kincardine, Canada W 30 June 1860; d at Kincardine, Ont 12 July 1943). Son of a Scottish farmer, Mackenzie left school at 17 and articulated with a Toronto legal firm, being called to the bar in 1883. In 1899 Z.A. LASH, Canada's pre-eminent corporate lawyer, sent Mackenzie to oversee the legal arrangements of the São Paulo Tramway, Light and Power Co in Brazil. Fluent in Portuguese and conversant with the Brazilian legal and political systems, in 1904 he joined the Rio de Janeiro Tramway, Light and Power Co and served both companies as resident VP until their merger into Brazilian Traction in 1912. When F.S. Pearson, Brazilian Traction's founder, drowned on the *Lusitania* in 1915, Mackenzie assumed the presidency, and under his leadership Brazilian Traction became Canada's largest single overseas investment. He retired in

Alexander Mackenzie, 2nd prime minister of Canada, 1873-78. His attempt to build the transcontinental railway as a self-financing enterprise met with little public support (courtesy Public Archives of Canada/C-20052).

1928, remaining a company director. In 1919 he was knighted for his services in bringing Brazil into WWI.

DUNCAN McDOWALL

**Mackenzie, Chalmers Jack**, engineer, research manager (b at St Stephen, NB 10 July 1888; d at Ottawa 26 Feb 1984). He was the single most important figure in the postwar growth of Canadian science. He was trained in civil engineering at Dalhousie and Harvard and served in the Canadian army in WWI (MC 1918) before moving to Saskatchewan (where he had worked 1910-15). Part-time lecturing at the U of Sask led to his becoming dean of engineering 1921-39. During this period he organized important research in protecting concrete buildings from attack by "alkali salts" in the soil, supervised the design and construction by his students of a

C.J. Mackenzie, who was president of the NRC, 1944-52, and of the Atomic Energy Control Board, 1948-61 (courtesy National Research Council).

highway bridge in Saskatoon, and served as chairman of the Town Planning Council.

Mackenzie was appointed to the NATIONAL RESEARCH COUNCIL in 1935, and his abilities were recognized by NRC Pres A.G.L. MCNAUGHTON who personally chose him as acting president in 1939. Mackenzie was thus the government's chief scientist in WWII and became the right-hand man of C.D. HOWE in planning postwar SCIENCE POLICY. His war work included the ten-fold expansion of the NRC Laboratories, top-secret war gas, aviation, radar and atomic bomb research, membership on the US-British-Canadian Combined Policy Committee, allocating uranium supplies, and even the chore of telling Winston Churchill that "Habakkuk," the British PM's pet project of an iceberg-aircraft carrier, was impossible.

Mackenzie was NRC president in his own right 1944-52, president of ATOMIC ENERGY OF CANADA LTD 1953-54 and president of the Atomic Energy Control Board 1948-61. In the postwar years he and E.W.R. STEACIE laid the foundations of the Canadian scientific system as it is today. He had a hand in the GOUZENKO investigations, the NRC's entry into basic research through Gerhard HERZBERG and others, governmental responses to the Russian atomic bomb (1949) and Sputnik (1957), the foundation of the DEFENCE RESEARCH Board and MEDICAL RESEARCH COUNCIL, the expansion of NRC university grants to equal its internal budget, the Industrial Research Assistance Programme of 1962, the enlargement of CANADA COUNCIL grants 1963-69, and he served as chancellor of Carleton U 1954-68. Though nominally retired in 1961, Mackenzie remained a member of the Advisory Panel on Science Policy to 1963, acting as chairman during Steacie's terminal illness; in 1964 he provided a "second opinion" for the government about the science policy reforms proposed by the Glassco Royal Commission Report of 1963, which were implemented in 1964-70, and he maintained an office at the NRC until his 90th year. He received many honours and awards including the CMG (1943), US Medal of Merit (1947), Companion of the Order of Canada (1967) and fellowship in the Royal Soc of Canada and that of London.

DONALD J.C. PHILLIPSON

**Mackenzie, Ian Alistair**, politician (b at Asynt, Scot 27 July 1890; d at Banff, Alta 2 Sept 1949). After sitting in the BC Assembly 1920-30, the gregarious Mackenzie entered Parliament in Ottawa. He was minister of national defence, 1935-39, overseeing the rearmament of Canada's armed forces. Although a superb constituency politician, he was not (as the BREN GUN SCANDAL illustrated) an effective minister, and he was swept aside upon the outbreak of war. As minister of pensions and national health, 1939-44, Mackenzie pushed for the expansion of social benefits. He was not sufficiently influential, however, to seize leadership of the social reform movement. As BC's representative in the Cabinet, he was the key figure in the decision to intern JAPANESE Canadians. Minister of veterans affairs, 1944-Jan 1948, Mackenzie entered the Senate in 1948.

NORMAN HILLMER

**McKenzie, Kenneth George**, neurosurgeon (b at Toronto 13 June 1892; d there 11 Feb 1964). After graduating with an MB from U of T in 1914, he saw medical service overseas during WWI. Following a period of general practice, he studied for a year with Dr Harvey Cushing in Boston before joining the staff at the Toronto General Hospital. The first neurosurgical unit in Canada, which he founded there in 1923 and directed until 1952, became widely recognized for its excellent care and training. President of the Harvey Cushing Soc 1936-37 and the Soc of Neurological Surgeons 1948-49, he made many contributions to his field, including a scheme for training general surgeons to treat head inju-

ries; new methods of treating torticollis, chronic subdural hematoma and acoustic neuroma; the use of skull tongs for traction of patients with spinal fractures; a technique for dividing the vestibular nerve in Ménière's disease; and a long-term analysis of the results of frontal lobotomy. These contributions are recorded in his published papers, but his greatest influence was as a master surgeon and an exemplary teacher.

WILLIAM FEINDEL

**McKenzie, Robert Tait**, educator, sculptor, orthopedic surgeon, author (b at Almonte, Canada W 26 May 1867; d at Philadelphia, Pa 28 Apr 1938). He was a student at McGill 1885-92, and became well-known for rehabilitative methods he developed as a medical officer during WWI. He later joined McGill as a lecturer in anatomy and a gymnastics instructor. He became equally famous for his sculpture. His early models — *Violent Effort*, *Breathlessness*, *Fatigue and Exhaustion* — were praised by artistic and scientific authorities; his statuette *The Sprinter* graced US President Theodore Roosevelt's desk at the White House. Among McKenzie's later works were *The Joy of Effort*, *Brothers of the Wind*, numerous medallions and many statues and war memorials throughout Great Britain, Canada and the US. He restored the Mill of Kintail outside Almonte, and the mill's museum contains more than 70 of his works. He was director of physical education at the U of Pennsylvania 1904-30.

GERALD REDMOND

**MacKenzie, Roderick Andrew Francis**, priest, scholar (b at Liverpool, Eng 15 Nov 1911). He came to Peterborough, Ont, with his family in 1924, then entered the Society of Jesus at Guelph, Ont, in 1928. After several years' study and teaching, he was ordained in Montréal in 1941. He completed doctoral work in sacred scripture at the Pontifical Biblical Institute, Rome, 1946-49. From 1950 to 1963 he taught Old Testament studies at Regis College, Toronto. He was rector of the Pontifical Biblical Institute 1963-69, and continued as professor there until 1975. During that time he was *peritus* (consultant) at Vatican Council II and was a member of the council on the liturgy and of the commission for a new version of the Latin Bible. He returned to Regis College in 1975. Among his many activities he has been president of the International Organization for Old Testament Studies (1965-68), associate editor of the *Catholic Biblical Quarterly* (1952-63) and consultant for the *New Catholic Encyclopaedia* (1961-63). In addition to numerous articles, reviews and commentaries, he has written *Introduction to the New Testament* (1961), *Faith and History in the Old Testament* (1963), *The Psalms: A Selection* (1966) and *Sirach* (1983).

D.M. STANLEY, S.J.

**Mackenzie, Sir William**, railway entrepreneur (b in Eldon Twp, Peterborough County, Canada W 17 or 30 Oct 1849; d at Toronto 5 Dec 1923). Though he was both a leader and local politician, his chief interest was business. He was a gristmill and sawmill owner in his native Kirkfield, Ont, and then a railway contractor 1874-91 in Ontario, BC, Maine and the North-West Territories. In 1891 he became part owner of the Toronto Street Ry, the first of many such investments on 3 continents. In 1899 he helped found a company later called Brazilian Traction. With Donald MANN, in 1895 Mackenzie had begun to assemble prairie railway lines and charters that would form the nucleus of the CANADIAN NORTHERN RY. Completed in 1915 from Halifax to Victoria, it was one of 3 Canadian transcontinental railways. In 1911 both Mackenzie and Mann were knighted. National and personal economic difficulties resulted in the nationalization of the Canadian Northern in 1918. Eventually, with the Grand Trunk and In-

tercolonial railways, it became part of the CANADIAN NATIONAL RAILWAYS system. Mackenzie's career personifies the optimism and energy of the Canadian economic boom, 1896 to 1913.

**Mackenzie, William Lyon**, journalist, politician (b at Dundee, Scot 12 Mar 1795; d at Toronto 28 Aug 1861). Mackenzie, as journalist, MLA, first mayor of Toronto and a leader of the REBELLIONS OF 1837, was a central figure in pre-Confederation political life. He arrived in UPPER CANADA in 1820 and, after a few years in business at Dundas, moved to Queenston. In May 1824 he published the first issue of the *Colonial Advocate*, which immediately became a leading voice of the new Reform movement.

To be closer to the provincial Parliament, Mackenzie moved his operation to York [Toronto] in the fall of 1824. His forthright and forceful manner together with his ardent denunciation of the FAMILY COMPACT contributed much to his popularity, and in 1828 he was easily elected to the House of Assembly for York County. In 1832 he visited England to present his political supporters' grievances before the imperial government. The sympathetic hearing he received outraged Upper Canadian conservatives. Moreover, Mackenzie's venomous attacks on the local oligarchy brought reprisals in the form of libel suits, threats and physical assaults, as well as an attack on his printing office, which left his press wrecked and the type thrown into the lake.

The diminutive Scot's scathing attacks on his opponents also led to his repeated expulsion from the Assembly, although he was consistently re-elected by his rural constituents. In 1834, when the Reformers won a majority on the newly created Toronto City Council, he was elected its first mayor. At the end of 1834, he was elected to the provincial Parliament again. However, he was defeated at the polls in 1836, and in Dec 1837 an embittered Mackenzie led an abortive armed revolt. With the rebellion's collapse, he escaped to the US, where he continued to work for the "liberation of Upper Canadians" until he was jailed for breach of the neutrality laws. He spent the next 10 years in exile in the US, eventually finding employment as a correspondent for the *New York Daily Tribune*.

During exile he wrote several books, includ-

William Lyon Mackenzie, fiery journalist who in Dec 1837 led an abortive armed revolt against the Upper Canadian establishment (courtesy Public Archives of Canada/C-1993).

ing *The Sons of the Emerald Isle* (1844), *The Lives and Opinions of Benjamin Franklin Butler and Jesse Hoyt* (1845) and *The Life and Times of Martin Van Buren* (1846). Mackenzie returned to Canada in 1849 following a government pardon. Undaunted, he quickly resumed both his journalistic and his political careers, serving with characteristic energy as MLA for Haldimand until retirement in 1857 and occasionally publishing a political squib usually entitled *Mackenzie's Weekly Message*. The fiery and principled Scot died at his home on Bond St, now one of Toronto's historic sites and museums.

VICTOR L. RUSSELL

**Mackenzie-Grease Trail** extends approximately 320 km in the QUESNEL-Bella Coola region of central BC. In 1982, under an agreement between the BC and federal governments, it became a designated and protected historical-trail corridor. The trail is nationally significant because it formed a final link in the crossing of N America. Alexander MACKENZIE followed it in 1793 in his search for the Pacific. For several hundred years previously, the trail was a main trade route of several Indian tribes including the Bella Coola, the Chilcotin and the CARRIER. The name "grease" originated from the processed oil of the oolichan, a smelt-like fish, which was a principal trading item of the Bella Coola tribe. Much of the trail is in its original condition; it comprises back-country roads, horse trails and hiking routes. Under the government agreement, the trail will be upgraded so that its unique history can be shared by hikers of today.

BART DEEG

**Mackenzie Inuit** aboriginally occupied the western Canadian arctic coast from Barter I in the W to Cape Bathurst in the E, as well as the northern portion of the Mackenzie R Delta. Numbering about 2000 during the 19th century, they formed the densest Inuit population in arctic Canada. They were divided into 5 regional groups of 200-1000, each with a way of life adapted to the resources of its own area. The group W of the Mackenzie R spent the summer fishing and hunting caribou, and the winter sealing; those at Cape Bathurst in the E hunted the large bowhead whale during the summer and seals during the winter. The largest group lived in the Mackenzie Delta, centered at the village of Kittigazuit at the mouth of the main river channel. Here, people gathered during the summer to hunt beluga feeding in the shallow estuary. The area was a natural trap for beluga, which were driven upstream onto shoals by groups of up to 200 hunters in kayaks; a single hunt might kill several hundred small whales, providing food and fuel for winter use. The remainder of the year was spent in fishing, hunting caribou and sealing. During winter the people moved to smaller settlements of a few houses each. Winter houses were built of driftwood logs, heavily banked with turf insulation, heated and lighted by stone or pottery lamps burning whale oil, and each accommodated about 6 families. Social organization was family-based; most marriages were monogamous, although polygamy was practised by wealthy individuals. Families or individuals owned such items as houses, tents, KAYAKS and UMIACS. There is some evidence that the regional groups had hereditary chiefs, with the office passed through the male line. Little is known about the aboriginal religion, but it was based on shamanism, and important religious festivities occurred when the population gathered during the period of total darkness in December.

Archaeology indicates that the ancestors of the Mackenzie Inuit have lived in the area for approx 1000 years, having derived from a Thule population that moved eastward from Alaska about 1000 AD. Through the following centuries

they maintained trading and cultural ties with the Alaskan Inuit to the W, and were the most easterly group to share in the relatively rich Alaskan Inuit way of life. The Mackenzie Inuit became involved in the European FUR TRADE during the 19th century, at first by indirect trade with the Russian posts in Alaska and later with posts established in the Mackenzie Delta. During the late 19th century they became heavily involved with the American whalers who began to hunt and winter in the area. Because of a series of epidemic diseases, their population had been reduced to less than 10% of aboriginal levels by 1900, and their territory had been taken over by Alaskan Inuit and Europeans who moved into the area as trappers. The descendants of the Mackenzie Inuit now live in the communities of Inuvik, Tuktoyaktuk and Paulatuk, where they form a minority of the local Inuit populations. See also NATIVE PEOPLE: ARCTIC.

ROBERT MCGHEE

**Mackenzie King Island**, 5048 km<sup>2</sup>, is one of the central islands in the QUEEN ELIZABETH IS of the Arctic Archipelago. Low-lying, with only occasional points over 300 m, it consists of lowlands and plateaus developed on horizontal or gently folded sedimentary rocks. The general absence of resistant strata is responsible for the lack of salient features. Only on harder sandstone do more prominent landforms, like the Leffingwell Crag, develop. Material at the surface, being derived from the fine-grained underlying bedrock, is particularly susceptible to solifluction; and Mackenzie King I has some of the best examples of this process in the Arctic. In 1915, mistaking a strait for a bay, STEFANSSON mapped Borden and Mackenzie King islands as one — an error uncorrected until a 1947 RCAF aerial survey.

DOUG FINLAYSON

**Mackenzie Mountains** Named after PM Alexander MACKENZIE, they are a northern continuation, 800 km long, of the eastern system of the ROCKY MTS, composed almost entirely of folded sedimentary strata. They consist of several ranges trending in a NW-SE orientation, straddling the greater part of the NWT-Yukon boundary. The main core, the Backbone Ranges, is a mass of peaks and ridges reaching a maximum height, in Mt Sir James MacBrien, of 2764 m, the highest peak in the NWT. The Mackenzie Mts lie in the precipitation shadow of the SELWYN MTS farther W and are relatively dry. The timberline is low, leaving their slopes bare and rock covered.

DOUG FINLAYSON

**Mackenzie-Papineau Battalion**, collective designation for some 1300 Canadian volunteers who served in International Brigades recruited to assist the communist-supported Republican government against Franco's Fascists during the Spanish Civil War (July 1936-Mar 1939). There was also an actual battalion, named after the leaders of the REBELLIONS OF 1837, mustered into the XVth "English-Speaking" International Brigade on 1 July 1937, in Albacete, Spain. Other Canadians joined the Abraham Lincoln Battalion, the British Battalion, and other units, including medical and transportation detachments. Dr Norman BETHUNE, undoubtedly the most famous Canadian there, created and led a blood transfusion service.

The "Mac-Paps" fought in 5 major campaigns, including the assault on Fuentes de Ebro on 13 Oct 1937, the defence of Teruel in Dec-Jan, the "Retreats" in Mar-Apr 1938, and a counterattack across the Ebro R in the last summer of the war. The battalion was led by Edward Cecil-Smith, the military commander and a Toronto labour journalist, and Saul Wellman, a New York union organizer and the unit's political com-

missar. When the Mac-Paps withdrew from the conflict in Sept 1938, it is said, only 35 men were left on their feet. Although celebrated by well-wishers on their arrival home in early 1939, the survivors, half the original number, received no official welcome. In Apr 1937 the Canadian government had passed the Foreign Enlistment Act, outlawing participation by Canadians in foreign wars, and the Customs Act, which provided for government control over arms exports. The Mac-Paps were an official embarrassment, and so languished in obscurity until the 1970s when a number of books, films and plays appeared to document their history.

VICTOR HOWARD

Reading: V. Hoar, *The Mackenzie-Papineau Battalion* (1969).

**Mackenzie River**, 4241 km long (to head of the Finlay R), next to the Mississippi R the longest river in N America. Its total DRAINAGE BASIN of 1.7 million km<sup>2</sup> is the largest of any river in Canada and its mean discharge of 9910 m<sup>3</sup>/s is second only to that of the St Lawrence. The river's peak discharge occurs in June, but its flow is generally uniform because of the flat barren lands E of the river and the many large lakes in the system. The lakes and rivers of the Mackenzie and its tributaries are open from mid-June to Nov 1 in the northerly areas.

The river's sparsely populated basin is one of the few great unspoiled areas of the world. The main headwaters are the Peace R and the ATHABASCA R, while the main stream issues from the shallow swamps and mudbanks of the West Arm of GREAT SLAVE LK. It flows W to Ft Providence and Head-of-the-Line, where scows, canoes and YORK BOATS were hauled upstream. At FT SIMPSON the turbulent LIARD R pours its muddy waters into the S bank. Near the N Nahanni R the Mackenzie trends WNW through a rolling plain and deflects N past an escarpment of the Mackenzie Mt range, which lies parallel to the river. The Redstone and Keele rivers and other streams cut through the mountains and pour into the lowlands through deep canyons. At FT NORMAN the clear, cobalt waters of Great Bear R enter over a shallow gravel bar. Past NORMAN WELLS the Mackenzie continues through weedy channels and beneath ribbed cliffs, widening to 5 km, its path braided among countless islands. At Sans Sault Rapids a rocky promontory juts into midstream, and rough water endangers navigation. Past Ft Good Hope the river widens and constricts again, between limestone cliffs called The Ramparts, then resumes its meandering NW, its channels clogged with islands and shifting sandbars. The Arctic Red R enters 270 kms from the sea, and at Point Separation the delta begins.

**Delta** The Mackenzie Delta is a vast fan of low-lying alluvial islands, covered with willow and alder, thinning northward. It is a maze of channels, cutoff lakes and circular ponds,

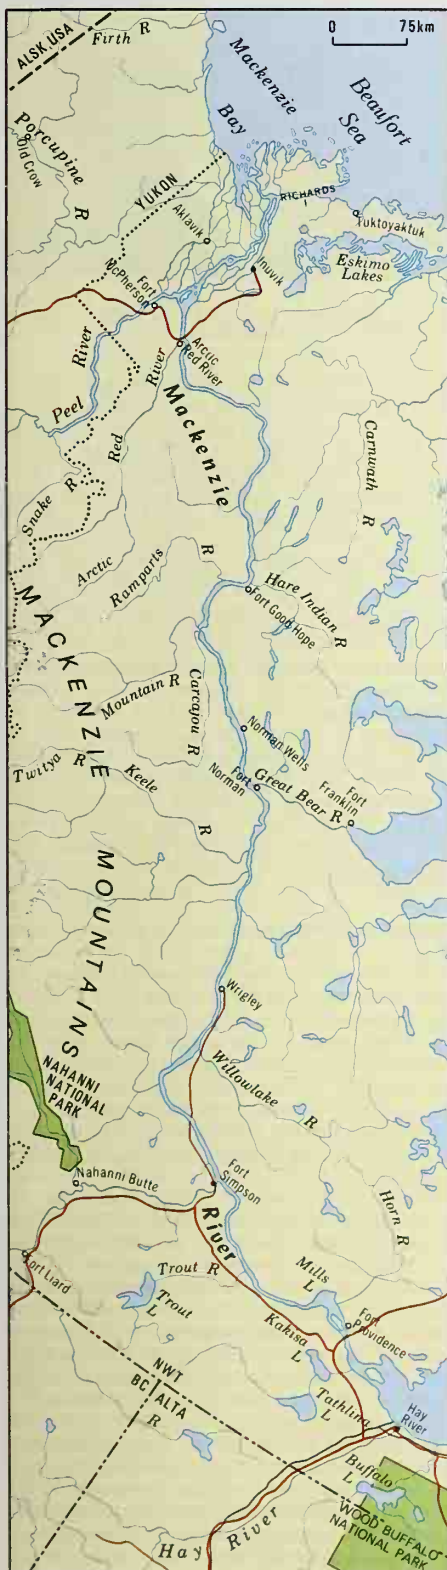

The Mackenzie Delta, a vast fan of low-lying alluvial islands, and a maze of channels, cutoff lakes and circular ponds (photo by John deVisser).

which are home to a large muskrat population. The delta is 160 km across, bordered by the Richardson Mts in the W and the Caribou Hills in the E. Below Point Separation the river splits into 3 main, navigable channels: East Channel, which flows past AKLAVIK; Peel Channel in the W; and Middle Channel, which carries the main outflow into the BEAUFORT SEA. TUKTOYAKTUK, NE of the delta, is the transfer point for river and ocean cargo, its harbour open from July to late Sept.

**Lowland** The Mackenzie R Lowland is a great northward extension of the central plains. On

the W side rise the Mackenzie Mts, and on the eastern edge lie the rocky outcrops of the Canadian Shield. The valley is underlain by sedimentary rock, but its surface is mostly glacial gravel, sand and clay. The plains of MUSKEG are broken by stunted spruce and fir, bog, swamp and lakes. Much of the terrain is underlain by PERMAFROST, which presents a challenge to construction of buildings and transportation.

**History** In 1778 Peter POND traversed Methye Portage [PORTAGE LA LOCHE], connecting the FUR-TRADEROUTES of Hudson Bay with the Mackenzie Basin. Alexander MACKENZIE came in 1789, following the full length of the river aptly named for him. Other traders followed, establishing posts along the way. From the 1820s supplies were carried by York boats. The first steamer plied the Athabasca R in 1884, and in 1886 operated N of Ft Smith. From 1920 to 1940 flat-bottomed stern-wheelers plied the river, but after 1945 they were replaced by tugs and barges. The tugs are now equipped with radar and depth sounders.

The lowland is still sparsely populated. The fur-trade economy dominated until the mining rushes of YELLOWKNIFE and GREAT BEAR LK and the Canol Project of WWII. Fur remains important to the local residents, but mining became dominant until the recession of the 1980s. Most mining was concentrated in the E, in the Shield. The key centres are Yellowknife (gold), Echo Bay — formerly Port Radium — (uranium), Uranium City, Flat R (tungsten), Pine Point (lead-zinc), Norman Wells (oil and gas) and Faro. Great potential for future development lies as the S end in the Athabasca tar sands and at the N in the Beaufort Sea. The fine clay soil would support agriculture, but climate prevents it. The only waterpower sites are on the Snare and Talston rivers, supplying local power, but controversial development is under way on the Slave

R. The river and the delicate environment of the north were brought to the national consciousness during the debate over the MACKENZIE VALLEY PIPELINE. JAMES MARSH

**Mackenzie Valley Pipeline**, proposed PIPELINE for the transport of natural gas and later oil from the Arctic Ocean to Alberta. The proposal of a pipeline corridor from the north was put forward by the federal government in the 1970 Pipeline Guidelines and provoked a spate of engineering and environmental studies, public-policy reviews and economic analyses unequalled in Canadian history.

Detailed proposals were promulgated by 2 consortiums. Canadian Arctic Gas Pipeline Ltd, composed of 27 Canadian and American producers (including Exxon, Gulf, Shell and TRANS-CANADA PIPELINES), proposed a route from the Prudhoe fields in Alaska, across the northern Yukon to the Mackenzie Delta and then S to Alberta. Foothills Pipe Line Ltd, formed by Alberta Gas Trunk Line and West Coast Transmissions, proposed a shorter route from the Mackenzie Delta to Alberta. The Arctic Gas pipeline would have been the longest in the world (3860 km) and the greatest construction enterprise ever undertaken. In either case, the engineering problems of building a pipeline over PERMAFROST were monumental (both proposals entailed refrigerating the gas) and the impact on the North would have been significant.

A federal ROYAL COMMISSION, led by Judge Thomas BERGER, was appointed in 1974 to consider the proposals and their social and economic impact on the North. The commissioners held community hearings across the North, dealing with the concerns of native people and environmentalists. The commission concluded that a pipeline from the Mackenzie Delta to Alberta was feasible, but should proceed only after fur-

ther study and planning and after settlement of native LAND CLAIMS. However, the commission was adamantly opposed to the building of a line across the delicate environment of the northern Yukon. Amid controversy and uncertain economic conditions, both plans were shelved. The commission itself became a *cause célèbre* because of its broad interpretation of its mandate and its illumination of the complex problems facing northern development.

JAMES MARSH

*Reading:* Minister of Supply and Services, *Northern Frontier, Northern Homeland*, Report of the Mackenzie Valley Pipeline Inquiry 1 (1977); P.H. Pearse, *The Mackenzie Pipeline* (1974).

**Mackerel** (Scombridae), family of pelagic (open-sea) FISHES of class Osteichthyes. The family also includes TUNAS, albacores, skipjacks, bonitos and ceras. The name mackerel, more commonly used for members of genus *Scomber*, is also applied to fishes of genus *Auxis* (bullet and frigate mackerels), genus *Scomberomorus* (Spanish mackerels) and family Gempylidae (snake mackerels). Three species of true mackerels, genus *Scomber*, occur in the temperate waters of the Atlantic and Pacific oceans. Two of these occur in Canada's coastal waters: in the Atlantic, the chub and Atlantic mackerels; in the Pacific, the chub mackerel. The Atlantic mackerel is an elongate, streamlined fish, resembling a miniature tuna. Few exceed 52 cm in length. Located behind the widely spaced dorsal fins and the anal fin are 5 small finlets on the dorsal and ventral surfaces. The chub mackerel (*S. japonicus*) resembles the Atlantic mackerel but is smaller. Swiftly swimming mackerel form huge schools in surface waters off coasts facing the open sea. They are highly migratory: those in Canadian Atlantic waters move inshore and northward along the coast as far as Labrador in summer; southward and offshore in late fall. This population is thought to overwinter in deep waters between Sable I and Cape Cod. In Canadian waters, spawning occurs from late May to July. An average-sized female may produce up to 500 thousand buoyant eggs. Mackerel feed primarily on PLANKTON, eating a wide variety of small organisms. The chub mackerel supports a fishery in California waters but not in Canadian. Atlantic mackerel is an important food fish on both sides of the Atlantic and is used fresh, frozen, smoked and salted. In Canadian waters, it is fished commercially from the Bay of Fundy to Labrador, primarily by purse seines, but also by weirs and trap nets. Mackerel are also prized by anglers, particularly in US waters.

W.B. SCOTT

The Atlantic mackerel (*Scomber scombrus*) is fished commercially from the Bay of Fundy to Labrador (courtesy National Museums of Canada/National Museum of Natural Sciences).

**Mackieson, John**, physician, office-holder (b at Campsie, Scot 16 Oct 1795; d at Charlottetown 27 Aug 1885). A pioneer of the PEI medical profession, Mackieson was most distinguished by his work with the insane. A physician when he arrived in PEI in 1821, he served in a number of public-health posts before being appointed medical superintendent of the PEI lunatic asylum in 1848. His treatment of patients exhibited humanity and an understanding of new techniques, but persistent underfunding caused conditions to deteriorate at the hospital and ultimately his administration was denounced. Forced to resign

in 1874, Mackieson was nevertheless cleared of charges of neglect. Subsequently the improved facilities he had sought were built. P.E. RIDER

**Mackinaw Boat**, a strong flat-bottomed boat, pointed at each end and with a hold in the middle, was used by fur traders during the French regime for running downstream. It was later adapted for open water by the addition of 2 sails and a steering oar. By the 1870s a distinctive type, 6.7 m to 8.7 m long and schooner rigged, had evolved in the Strait of Mackinaw, and gave its name to the vessel. A further development called the Collingwood skiff was widely used throughout GEORGIAN BAY for gill-netting and pleasure sailing until the advent of the outboard motor.

JAMES MARSH

**McKinney, Louise**, née Crummy, women's rights activist, legislator (b at Frankville, Ont 22 Sept 1868; d at Claresholm, Alta 10 July 1931). McKinney achieved national renown as one of the 5 appellants, the "Famous Five," in the PERSONS CASE. Her ambition was to become a doctor. She became a teacher instead, leaving that work to organize for the WOMAN'S CHRISTIAN TEMPERANCE UNION. In 1903 she helped organize its North-West Territories branch, remaining president of its successor, the Alberta and Saskatchewan Union, for 20 years. A Methodist Sunday school teacher, she urged that TEMPERANCE education be introduced into schools, and she was a strong proponent of women's rights. McKinney brought her convictions to the Alberta legislature in 1917, where she also urged social-welfare measures for immigrants and widows.

ELIANE LESLAU SILVERMAN

**McLachlan, Alexander**, farmer, poet (b at Johnstone, Scot 12 Aug 1818; d at Orangeville, Ont 20 Mar 1896). He immigrated to Upper Canada in 1840 and spent most of his life farming in western Ontario. It was his poetry, however, that brought him fame; he was known as the "Robert Burns of Canada." He published 5 volumes of poetry, much of which focused on such Canadian themes as the courage of the settlers, their way of life, and the beauty of the Canadian landscape. He was part of the first wave of self-conscious nationalism that swept Canadian literature after Confederation. THOMAS B VINCENT

**McLachlan, James Bryson**, labour leader (b at Ecclefechan, Scot 9 Feb 1869; d at Glace Bay, NS 3 Nov 1937). Born into a family of cotton weavers and farm labourers, McLachlan graduated from the Lanarkshire coalfields to become the fiery leader of the Nova Scotia coal miners and a popular spokesman for labour radicalism in Canada. Influenced by social critics such as Thomas Carlyle and labour leaders such as Keir Hardie, McLachlan believed it was the mission of the working class to "redeem the world from the chaos of capitalism." Immigrating to Cape Breton in 1902, McLachlan challenged the conservative policies of the Provincial Workmen's Association, and was elected secretary-treasurer of District 26, United Mine Workers of America, on its formation in 1909. Blacklisted from the mines, McLachlan was instrumental in the achievement of collective bargaining in the Nova Scotia coal industry during WWI. In the strikes of the 1920s he was known for his imaginative tactics, including the "strike on the job" and the "100 per cent strike." Never defeated in a union election, McLachlan remained an officer of the miners' union until July 1923, when he was removed by UMW president John L. Lewis for promoting a sympathetic strike in support of Sydney steelworkers. Convicted of seditious libel in Oct 1923, he was sentenced to 2 years in Dorchester penitentiary but was released in Mar 1924. He returned home to become editor of the *Maritime Labor Herald*, which he had helped establish in 1921, and later edited the *Nova Scotia Miner* (1929-35). He belonged in turn to the So-

J.B. McLachlan, fiery leader of the Nova Scotia coal miners and popular spokesman for Canadian labour radicalism (courtesy David Frank).

cialist Party of Canada, the Independent Labour Party of Nova Scotia and the Communist Party of Canada, running 6 times for the provincial and federal parliaments and polling almost 9000 votes at the peak of his influence in 1921. Nationally he was prominent as president of the Workers' Unity League, 1930-36. McLachlan was known for his fierce dedication to the workers' cause, and his "economic gospel," borrowed from Isaiah, is inscribed at his grave: "Open thy mouth, judge righteously, and plead the cause of the poor and needy." DAVID FRANK

**MacLaren, Donald Roderick**, fighter pilot, businessman (b at Ottawa 28 May 1893). MacLaren joined the RFC in 1917, served in 46 Squadron in France, and was credited with 54 "kills" (48 aircraft and 6 balloons) in less than 8 months, an unparalleled record. He was briefly director of air services for the CAF, but left in 1919 to enter commercial aviation. From 1945 until his retirement in 1958, he was executive assistant to the president of Trans-Canada Airlines.

BRERETON GREENHOUSE

**McLaren, Norman**, director of animated films (b at Stirling, Scot 11 Apr 1914). He followed John GRIERSON to the NATIONAL FILM BOARD in 1941 and remained there, except for 2 UNESCO missions (to China in 1949 and to India in 1952). He participated in the series *Chants populaires* (1944-46) and produced *Begone Dull Care*, set to the music of Oscar PETERSON (1949). Constantly innovative, McLaren tried techniques such as drawings scratched directly on film, cutout animation, painting directly on film, etc. During the COLD WAR in 1952, using a technique of stop-motion cinematography called pixilation, he made *Neighbours*, a political fable on the futility of using violence to resolve conflict. After this — his ultimate ideological statement — his films concentrated more on aesthetics and technique than on content. His work earned him increasing international recognition, and for over 30 years he produced roughly one film per year. Some of the more interesting examples are *Blinkity Blank* (1954), the didactic *Rythmetic* (1956), the absurd humour of *Il était une chaise* (1957) and the fantasy of *Le Merle* (1958). Many of his films were co-directed by Evelyn Lambart. In *Lines Vertical* (1960), *Lines Horizontal* (1962) and *Mosaic* (1965), he opted for an austere, abstract style and exercises in which technology took precedence. He began a series of films about ballet and the beauty and harmony of movement with *Pas de*

*deux* (1967); it was followed by *Ballet Adagio* (1972) and *Narcissus* (1983). He also produced more didactic films on the art of animation, such as *L'Ecran d'épingles* (1973) and *Animated Motion* (1977). McLaren's creative genius has made him Canada's leading director of animated film.

PIERRE VÉRONNEAU

**McLarnin, Jimmy**, boxer (b at Belfast, Ire 19 Dec 1907). McLarnin moved at age 3 to Vancouver and started boxing at 12. As a 16-year-old pro in 1923-24 he went undefeated in 19 bouts. He started boxing regularly in Los Angeles, then moved to New York where he was called the "Irish Hero." He won the world welterweight championship in 1933 by knocking out "Young" Corbett III at 2:37 of the first round. His most famous fights were with world-renowned Barney Ross. He lost his title to Ross in 1934, won it back the same year, then lost again in 1935. He retired in 1936. In 77 fights he won 63 (knocking out 20), lost 11 and drew 3.

A.J. "SANDY" YOUNG

**McLauchlan, Murray**, singer, songwriter, guitarist (b at Paisley, Scot 30 June 1948). McLauchlan came to Canada at age 5. At 17 he was making the rounds of Toronto's Yorkville coffee houses and in 1966 first appeared at the Mariposa Folk Festival. American singer Tom Rush recorded 2 of his songs in 1968, "Child's Song" and "Old Man's Song." In 1971 he started recording for True North Records and in 1972 his "Farmer's Song" established him across Canada as a popular singer with both folk and country audiences. With the formation of his band, The Silver Tractors (1975), he attempted to shift his music more towards rock, but the move did not pay off as international success continued to elude him and his popularity in Canada waned. In 1983 he returned to his folk and country roots, and to commercial success, with the album *Timberline*, and also produced a critically acclaimed series for CBC Radio. McLauchlan won Juno awards in 1973, 1976, 1977 and 1979.

RICHARD GREEN

**McLaughlin, Isabel**, painter (b at Oshawa, Ont 10 Oct 1903). An important early modernist in Canada, she is preoccupied with design, bright colour and the study of tangible space, and her paintings are highly subjective. Her friends and mentors have included Arthur Lismer; painter Yvonne McKague Housser, with whom she studied at the Ontario College of Art; Lawren Harris; and A.Y. Jackson. She studied in Paris in 1929 and Vienna in 1930, with Emil Bistram in 1938, and twice with Hans Hofmann in the period 1947-52. Her development has been characterized by constant self-renewal and by an awareness of her own roots. Her *Tree* (1935) received notoriety in the press and the respect of peers such as Pegi Nicol MacLeod. In 1939 McLaughlin was elected president of the Canadian Group of Painters, the first woman to head an important Canadian art society.

JOAN MURRAY

**McLaughlin, Robert Samuel**, industrialist (b at Enniskillen, Ont 8 Sept 1871; d at Oshawa 6 Jan 1972). After a 3-year apprenticeship in the carriage business owned by his father, Robert McLaughlin, and work in similar establishments in New York, McLaughlin entered into partnership with his father and brother George in the McLaughlin Carriage Works, Oshawa (1892). When fire destroyed the company's Oshawa factory (1899), 15 municipalities offered financial assistance for relocation near them, but the company stayed in Oshawa, in return for a \$50 000 loan repayable "as convenient." In 1908 McLaughlin began producing Buick car bodies for William Durant, owner of the Buick Motor Car Co in Flint, Michigan. When Durant moved on to Chevrolets, McLaughlin began producing

them too (1915). The business was purchased by General Motors in 1918, and incorporated as GENERAL MOTORS OF CANADA, with McLaughlin as president. He also served as VP of the American parent. By the mid-1920s, the Oshawa plant had 3000 employees and produced more cars for the Canadian and Commonwealth market than the rest of the country combined. McLaughlin retired from active management of the company in 1942, becoming chairman of the board, a position he held until 1967. In recognition of his support for Canadian educational and medical facilities, including the McLaughlin Planetarium in Toronto, and his work in the Boy Scout movement, McLaughlin received honorary degrees from several Ontario universities. He was named a companion of the Order of Canada in 1967.

MARGARET E. MCCALLUM

**McLaughlin, Samuel**, photographer, publisher, watchmaker (b in Ire 28 Jan 1826; d at Los Angeles, Calif 26 Aug 1914). McLaughlin issued Canada's first publication of photographs — *The Photographic Portfolio* (1858-60), a series of his views in and around Québec City. He also published Québec City directories 1854-57 and had been a watch and chronometer maker in that city. In 1861 he became the first official photographer for the PROVINCE OF CANADA. He provided impressive documentation of many Canadian public-works projects, including the initial construction and development of the Parliament Buildings, Ottawa.

RICHARD J. HUYDA

**McLean, James Stanley**, meat packer, philanthropist (b in Clark Twp, Durham County, Ont 1 May 1876; d at Toronto 1 Sept 1954). A graduate of U of Toronto (1896), McLean became a clerk at the Harris Abattoir Co, Toronto, in 1901. The president, Joseph Flavell, taught him the importance of careful accounting and, as president himself in the 1920s, McLean, through cost cutting and weekly budgeting, made profits for his company when other Canadian meat packers lost money. In 1927 he merged Harris and 3 other firms into CANADA PACKERS LTD, and was president until 1954. Under his autocratic leadership, Canada Packers dominated the industry and developed numerous by-products. A member of the United Church and a patron of Canadian art, McLean endowed the J.S. McLean Junior Farmer Scholarship and made generous donations to hospitals.

JOSEPH LINDSEY

**McLean, John**, fur trader, explorer (b at Der-vaig, Scot 24 July 1798; d at Victoria, 8 Mar 1890). In charge of HBC trade at Ft Chimo [Qué] 1837-43, he searched relentlessly for an overland route to Ft Smith [NORTH WEST RIVER], on Hamilton Inlet. In 1839, he ascended the George R, travelled overland to Petisikapau Lk, moved SE to the CHURCHILL R, and was the first European to see CHURCHILL FALLS. In 1841, he found a route into the interior, circumventing the falls. McLean did not receive the promotion he thought he deserved, and resigned after a stint at FT SIMPSON (1846). He managed a bank in Guelph, Canada W, for 9 years, but his career ended when he took responsibility for the loss of £1300 from his branch. By 1857 he was in Elora, where he was clerk of division court for 25 years. McLean published *Notes of a Twenty-Five Years' Service in the Hudson's Bay Territory* (1849), a valuable account of the FUR TRADE.

JAMES MARSH

**MacLean, John Angus**, farmer, politician, premier of PEI (b at Lewes, PEI 15 May 1914). After serving in WWII, MacLean returned to PEI and contested unsuccessfully the federal elections of 1945 and 1948. First elected in 1951, he served for more than 2 decades as MP for Queens County, then left federal politics to lead the provincial Conservatives to victory in 1979. Stressing the virtues of rural community life, his government banned new shopping malls and

cancelled participation in New Brunswick's Point Lepreau nuclear reactor project. MacLean resigned as premier on 17 Nov 1981 but continued to sit in the Assembly.

DAVID A. MILNE

**Maclean, John Bayne**, publishing executive (b at Crieff, Canada W 26 Sept 1862; d at Toronto 25 Sept 1950). Maclean (who also spelled his name McLean and MacLean) was a journalist on various conservative Toronto newspapers before founding *Canadian Grocer* (1887) — the first of an array of trade magazines under the corporate name Maclean Hunter. (Horace Talmage Hunter was his partner and successor as company president.) Such magazines allowed him to found more general publications such as the *FINANCIAL POST* (1907) and *CHATELAINE* (1928). Best known is *MACLEAN'S* (1911-), successor to *Busy Man's Magazine* bought by Maclean in 1905; it was a fortnightly until 1969 and a monthly until 1977, when it became a weekly newsmagazine.

DOUG FETHERLING

Reading: F.S. Chalmers, *A Gentleman of the Press* (1969).

**MacLean, John Duncan**, politician, premier of BC (b at Culloden, PEI 8 Dec 1873; d at Ottawa 28 Mar 1948). He taught in prairie schools and in BC and became a principal in Rossland, BC, before going to McGill. He graduated with a medical degree in 1905 and was practising in Greenwood, BC, when elected a Liberal MLA in 1916. Appointed provincial secretary and minister of education, he became minister of finance in 1924. When John Oliver's failing health became known to his party in 1927, MacLean was made leader designate and, on Oliver's death, became premier, serving for one year. Though a competent Cabinet minister, he was an unimaginative, colourless premier who took office when his party's fortunes were on the wane. The Liberals were defeated by the Conservatives in the 1928 election. After an unsuccessful bid for a federal seat, MacLean was appointed chairman of the Canadian Farm Loan Board in Ottawa and held the post until his death.

ROBIN FISHER

**McLean Gang**, BC outlaws (fl 1879). Consisting of Allan, Charlie and Archie McLean and Alex Hare (all 4 of mixed blood), the gang lived by banditry and violence. On 8 Dec 1879 they killed John Tannatt Ussher, a Kamloops policeman who was arresting them for horse theft, and James Kelly, a shepherd. A posse trapped them in a cabin near Douglas Lk and after a short siege the gang surrendered. At the time Allan was 24, Charlie and Alex 17, and Archie 15. Tried in New Westminster, they were executed in a group hanging on 31 Jan 1881.

EDWARD BUTTS

**Maclean Hunter Limited** is a diversified communications company, with assets in 1983 totalling \$712 million and revenues of \$634 million. As the largest publisher of national MAGAZINES and periodicals in Canada, its list includes the *FINANCIAL POST* (newspaper and magazine), *Flare* and English/French editions of *CHATELAINE* and *MACLEAN'S*, and in French, *CHATELAINE* and *L'ACTUALITÉ*. The company publishes over 80 Canadian special-interest, consumer and business magazines, directories and manuals, as well as business periodicals in the US and Europe. It has a controlling interest in Toronto Sun Publishing Corporation, publishers of the *Toronto Sun*, *Edmonton Sun*, *Calgary Sun* and *Houston Post*.

Maclean Hunter's broadcasting holdings include the CTV affiliate CFCN-TV in Calgary and Lethbridge and 11 radio stations located in Calgary, Edmonton, Toronto, Kitchener-Waterloo, Chatham-Wallaceburg (Ont), Ottawa and Halifax. As Canada's second-largest CABLE-TELEVISION operator, Maclean Hunter in 1983 provided service to 362 000 subscribers in 20 Ontario

municipalities through its 16 cable systems, and to 232 000 subscribers in the US. Other interests include book distribution, commercial printing, business forms, trade shows and specialized information services.

PETER S. ANDERSON

**Maclean's** was acquired by John Bayne MacLEAN in 1905 and was the first consumer magazine to be published by him. It had existed for several years under various titles and continued to have name changes until 1911, when it officially became *Maclean's*. Initially, the new magazine was a general-interest digest for businessmen, ordinarily devoting most of its space to reprints of articles from the world's periodicals. By 1914, however, Maclean and his editor, T.B. COSTAIN, saw that Canadian NATIONALISM might be a profitable line, and by the boom years of the 1920s *Maclean's* had its formula. There were always articles on Canadian men and women, Canadian politics and problems, Canadian fiction, and regular features at the "back of the book." Occasionally, as when George DREW denounced the arms manufacturers, there was a crusading air, but ordinarily the magazine was firmly middlebrow.

The high point was the early 1950s. Blair FRASER was the Ottawa correspondent, and his regular column presented the best grade of political gossip while his longer pieces were the decade's best political reporting. In Toronto, editor Ralph ALLEN tried for a liberal mix of thoughtful and light pieces, good illustration and occasional fiction. The magazine was successful in circulation and revenue.

In the 1960s *Maclean's* experienced difficulties. ADVERTISING revenues fell as television cut into the periodical market, and even able writers such as Peter GZOWSKI, Peter NEWMAN and Christina McCall could not arrest the decline. What saved *Maclean's* was the conversion to a weekly newsmagazine format. Under Newman as editor, the magazine took advantage of the opening that resulted from *Time* leaving Canada to create Canada's first newsmagazine. The result has been a success in advertising sales and in reader response. Although the new *Maclean's* still relies on stringers for most of its foreign news, its Canadian coverage is good and provides a welcome supplement to the pallid fare in most newspapers. Circulation in June 1984 was 644 024 per month. See also MAGAZINES. J.L. GRANATSTEIN

**McLearn, Frank Harris**, paleontologist (b at Halifax 27 Feb 1885; d at Ottawa 7 Oct 1964). Educated at Dalhousie and Yale, he served on the GEOLOGICAL SURVEY OF CANADA from 1913 to 1952. His thesis on the Silurian fossils of Nova Scotia is accepted as definitive, but he is best known for his studies on the Mesozoic faunas of western Canada. Fieldwork in the Crownsnest Pass and along the Athabasca and Peace rivers enabled him to establish the stratigraphy and correlation of the Cretaceous and Triassic formations of those areas. He also contributed greatly to the paleontological knowledge of the Queen Charlotte Is, the plains of southern Saskatchewan and the Manitoba Escarpment. His correlations were fundamental to the development of petroleum geology in western Canada. L.S. RUSSELL

**McLennan, Sir John Cunningham**, physicist (b at Ingersoll, Ont 14 Apr 1867; d at Paris, France 9 Oct 1935). After graduating in physics from U of T in 1892, McLennan worked as a demonstrator and in 1898 went to the Cavendish Laboratory in Cambridge, Eng. In 1900 he received the first doctorate in physics from U of T. He spent his career at that university, bringing his physics laboratory to the forefront of research in radioactivity, spectroscopy and low-temperature physics. During WWI McLennan was scientific adviser to the British Admiralty. In 1915 he was elected to the Royal Soc of London (receiving its gold medal in 1928) and in

1917 received the OBE. After the war he returned to U of T but spent each summer in Britain, becoming president of the scientific section of the British Association for the Advancement of Science in 1923. President of the Royal Canadian Institute in 1916, he helped found the NATIONAL RESEARCH COUNCIL and was a member of the Ontario Research Foundation (est 1928). He resigned from U of T in 1932 and moved to England where he continued his pioneering research in the use of radium to treat cancer. He was knighted in 1935.

YVES GINGRAS

**MacLennan, John Hugh**, novelist, essayist, professor (b at Glace Bay, NS 20 Mar 1907). MacLennan is best known as the first major English-speaking writer to attempt a portrayal of Canada's national character. His education consisted of an ever-widening circle of experience that began in Nova Scotia, took him as a Rhodes scholar from Dalhousie to Oxford, from where he travelled on the continent, and culminated in a PhD in classics at Princeton, NJ. Returning to Canada in the mid-1930s to take a teaching job at Lower Canada College near Montréal, MacLennan continued work on a novel, begun at Princeton, in which he hoped to convey his personal interpretation of all he had witnessed during his travels abroad.

The failure to publish this novel — and an earlier one on a similar theme — induced him to take another tack. The events that preceded WWII sparked him to recall what he had witnessed of the Halifax naval base during WWI. By way of experiment, he wrote *Barometer Rising* (1941), focusing on the HALIFAX EXPLOSION he had survived as a 10-year-old. The success of this shift from international to national subject matter (brought to the fore by the favourable criticism of Edmund Wilson) induced him to theorize that writers in Canada must now both set the stage and recite the country's dramas to the world at large. *Barometer Rising* and his essay collection *Cross-Country* (1949) ushered in a new phase in Canadian literature.

Though he would now focus directly on aspects of contemporary Canadian life, MacLennan eschewed regionalism. "I have always seen Canada as a part of the history of the world," he maintains. Although *TWO SOLITUDES* (1945) deals with English-French tensions in Québec, *The Precipice* (1948) with puritanism in small-town Ontario and *Each Man's Son* (1951) with the Cape Breton mining community, each novel expands

from its specific situation to consider, respectively, the rapid transition instigated by WWI, the contrast between American and Canadian societies, and the effect of Calvinism, wherever it is found. With his last 3 novels — *The Watch that Ends the Night* (1959), *Return of the Sphinx* (1967) and *Voices in Time* (1980) — he has increasingly moved outwards from the specific base of Montréal (where he taught in McGill's English dept 1951-81) to encompass those universal themes that arise from local political, social and human interests. Because his works transcend their particular settings, he is the most widely and most successfully translated Canadian novelist to date.

MacLennan now holds a position of exceptional respect in Canada. He has won the GOVERNOR GENERAL'S LITERARY AWARD 3 times for fiction (*Two Solitudes*, *The Precipice*, *The Watch that Ends the Night*) and twice for nonfiction (*Cross-Country* and *Thirty and Three*) and has garnered many other awards and honorary degrees. Despite this success, critics have long debated the merit of his work. Many have endorsed Wilson's early praise; others have argued that the didactic aspect of MacLennan's fiction forces the stereotyping of characters, the predominance of the authorial voice, and reliance on outdated Victorian techniques of narrative and structure. Still others see MacLennan as overly ambitious in subject matter; especially in his treatment of French Canada is his lack of firsthand experience an artistic drawback. However, almost all critics have singled out MacLennan's skill in descriptive writing, whether of episode, action or natural landscape. Although MacLennan is primarily a novelist, his essays (the best of which are collected in *The Other Side of Hugh MacLennan*, 1978) have elicited more consistent critical admiration. In these, MacLennan ranges over a variety of subjects with a civilized mind, impish humour, warm humanity and sharp intuition. He and Robertson DAVIES are Canada's finest essayists.

Ironically, MacLennan's own international aspirations are generally overlooked. As time passes, he has taken on mythic proportions as the Canadian nationalist who pioneered the use of Canadian scenarios in fiction. To him, writers such as Robertson Davies, Margaret LAURENCE, Robert KROETSCH, Leonard COHEN and Marian ENGEL owe the sense that Canada is a place worth writing about.

ELSPETH CAMERON

Reading: Elspeth Cameron, *Hugh MacLennan* (1981).

**McLeod, Alan Arnett**, aviator (b at Stone-wall, Man 20 Apr 1899; d at Winnipeg 6 Nov 1918). He received the VICTORIA CROSS for heroic action, in which he received 5 wounds, against 8 enemy aircraft. He was injured again rescuing his observer, A.W. Hammond, after their aircraft crashed. The youngest of 3 Canadian fliers to win the VC in WWI, he died of influenza while recuperating in Winnipeg. JAMES MARSH

**MacLeod, James Farquharson**, police officer, judge (b on Isle of Skye, Scot 25 Sept 1836; d at Calgary 5 Sept 1894). Commissioner of the NWMP, member of the NWT Council and judge, MacLeod was a respected and popular figure in the southwestern prairies. Educated in Ontario, he practised law near Bowmanville, Ont, in the 1860s. He served as brigade major with the WOLSELEY expedition in 1870. Joining the police as a superintendent, he was assistant commissioner 1874-75. He resigned to become a stipendiary magistrate, but returned as commissioner in 1876. He founded Ft MacLeod, suppressed the whisky traffic and, having won the confidence of the Blackfoot chiefs, negotiated Treaty No 7. Nevertheless, he lost the confidence of the government and resigned in 1880. He continued to act as a magistrate and in 1887 was appointed a judge of the Supreme Court of the NWT.

A.B. MCCULLOUGH

Hugh MacLennan, novelist and essayist who has been widely praised for his descriptive writing. He was the first major English-speaking writer to portray Canada's national character (photo by Nakash/Cameron).

**Macleod, John James Rickard**, physiologist, codiscoverer of INSULIN (b at Cluny, Scot 6 Sept 1876; d at Aberdeen, Scot 16 Mar 1935). Trained at the universities of Aberdeen and Leipzig and the London Hospital Medical Coll, J.J.R. Macleod emigrated to America in 1903 to teach at Western Reserve U, Cleveland. He gradually developed an international reputation as an expert in carbohydrate metabolism and general physiology, and in 1918 was appointed professor of physiology at U of T. In the spring of 1921 Macleod gave F.G. BANTING laboratory space, equipment, advice and one of his student assistants (C.H. BEST) to investigate the hypothetical internal secretion of the pancreas. Contrary to Banting's and Best's later distorted accounts, Macleod was an active, essential supervisor of a research effort that, by the spring of 1922, had resulted in the discovery of insulin. His elaboration of the early crude results, handling of the clinical trials, and highly professional presentations of the research particularly impressed the Swedish investigators who rightly recommended that he share the 1923 Nobel Prize for medicine or physiology with Banting.

Macleod's contribution to physiology and Canadian science was not properly recognized in Toronto or Canada for many decades. He left Canada in 1928 to become regius professor of physiology at U of Aberdeen, where he died in 1935, honoured in his native country but not in his adopted one.

MICHAEL BLISS

Reading: Michael Bliss, *The Discovery of Insulin* (1982).

**Macleod, Mary Isabella**, née Drever (b at Red R 11 Oct 1852; d at Calgary 15 Apr 1933). At age 17, during the RED RIVER REBELLION (1869-70), Drever showed the steady nerve for which she became famous in western Canada when she evaded detection by Métis guards and safely delivered an important dispatch addressed to Col WOLSELEY. Accompanying Wolseley's troops was James MACLEOD, soon commissioner of the newly formed NWMP; they were married in 1876 and settled in Ft Macleod. She was one of several women to sign Treaty No 7 at Blackfoot Crossing Sept 1877, frequently accompanied her husband on his inspections and tours of duty, and she was universally admired by NWMP officers and their wives.

SUSAN JACKEL

**McLeod, Neil**, lawyer, politician, premier of PEI, judge (b at Uigg, PEI 15 Dec 1842; d at Summerside, PEI 19 Oct 1915). Called to the PEI Bar in 1872, McLeod was elected to the Legislative Assembly in 1879. Re-elected in 1882 and 1886, McLeod, a Conservative, was premier 1889-91. In 1892 he was appointed county court judge for Prince County.

NICOLAS J. DE JONG

**McLeod, Norman**, Presbyterian minister (b at Point of Storer, Scot 29 Sept 1780; d at Waipu, NZ 14 Mar 1866). McLeod, a teacher and lay preacher, moved to Pictou, NS, in 1817. His forceful preaching attracted a large congregation that joined him on "The Ark" in 1820 to sail to Ohio but landed instead at St Ann's Harbour, Cape Breton. McLeod made himself a moral dictator over his followers, imposing severe punishments for trivial "sins." Despite his fanaticism they obeyed his command to migrate to Australia in 1851, but McLeod was unhappy and moved them to Waipu, NZ. In the 1850s, almost 900 persons left NS to join him in his search for "righteous" surroundings.

JOHN S. MOIR

**MacLeod, Pegi Nicol** née Margaret Kathleen Nicol, painter (b at Listowel, Ont 4 Jan 1904; d at NY 12 Feb 1949). MacLeod's images of the contemporary world helped form the first wave of Canadian modernism. Her gift lay in her ability to present life's spontaneity and energy. After studies with Franklin BROWNELL at the Ottawa Art Assn, she attended Montréal's Ecole

Pegi Nicol MacLeod, *Saint John, New Brunswick* (1947), oil on canvas (courtesy Art Gallery of Hamilton/Mrs Jane MacLeod Pappidas).

des beaux-arts with fellow students Goodridge ROBERTS and Marian SCOTT. The breakthrough in her style is revealed in her 1933 watercolours of school children in a garden. In 1936, with Douglas DUNCAN, she helped found the Picture Loan Soc. In 1937 she moved to New York but frequently visited Fredericton where she helped found (and taught at) the Observatory Art Centre. She painted numerous works of the women's division of the Armed Forces (1944-45) and her oeuvre is composed of almost 1000 works in many media including designs of hooked rugs.

JOAN MURRAY

Reading: Joan Murray, *Daffodils in Winter: The Life and Letters of Pegi Nicol MacLeod* (1984).

**McLoughlin, John**, fur trader, physician, merchant (b near Rivière-du-Loup, Qué 19 Oct 1784; d at Oregon City, Ore 3 Sept 1857). He studied medicine but in 1803 joined the NORTH WEST CO, becoming a partner in 1814. Greatly worried by the rivalry between the NWC and the HUDSON'S BAY CO, he attempted to bring about a settlement. When a coalition between the 2 took place, under other auspices, in 1821 he became a chief factor in the HBC. Governor George SIMPSON, concerned about the Columbia District, put McLoughlin in charge when he visited it in 1824-25, and McLoughlin was its superintendent for 2 decades. In later years differences arose between McLoughlin and Simpson over how to defeat American trading ships on the coast and how to deal with American immigrants to Oregon. McLoughlin favoured a chain of forts along the coast; Simpson favoured the use of ships. Simpson wanted the immigrants treated ruthlessly; McLoughlin, the man on the spot and a humanitarian, dealt with them kindly, realizing that an eventual American takeover of the area was inevitable. The 2 finally parted company over the murder of McLoughlin's son at Ft Stikine in 1842. After a prolonged dispute, McLoughlin retired in 1846 and lived the rest of his life at Oregon C. His holdings included flour and saw mills and he engaged in an export trade in lumber and other commodities. He has long been known as "the Father of Oregon."

W. KAYE LAMB

**McLuhan, Herbert Marshall**, communication theorist (b at Edmonton 21 July 1911; d at Toronto 31 Dec 1980). Professor of English at U

of T, McLuhan became internationally famous during the 1960s for his studies of the effects of mass media on thought and behaviour. Trained in literature (PhD, Cambridge, 1943), he laid the basis of his later work in his erudite dissertation, "The Place of Thomas Nash in the Learning of his Time." McLuhan thought of himself as a grammarian studying the linguistic and perceptual biases of mass media. A deeply literate man of astonishingly wide reading, he gravitated intellectually to the cutting edge of modern culture where the "irritation," he said, was greatest. His contribution to COMMUNICATIONS has been compared to the work of Darwin and Freud for its universal significance. Still, he was misunderstood by many because of his revolutionary ideas and their expression in an aphoristic prose style. He emphasized the connectedness of things and built what he called "mosaic patterns" of meaning, rather than offering mere argument using one-dimensional specialist logic.

McLuhan studied changes in perception created by electric media competing with print and machine process, the old strategy of fragmenting reality into informational categories. With the integrating, interdisciplinary force of electric process, information shifts its focus from specialist emphasis on detail towards a need to interpret the contexts created by media forms. The environment, overloaded with detailed information, can be ordered meaningfully, McLuhan said, through enhanced pattern-recognition skills, the ability to deal with open systems undergoing continual change at electric speed. He stressed how electric processes decentralized information, bringing simultaneous awareness to every point in a network. The perception of reality then becomes dependent upon the structure of information.

His famous distinction between "hot" and "cool" media referred to the different sensory effects associated with media of higher or lower definition. High-definition ("hot") media, such as print or radio, are full of information and allow for less sensory completion or involvement on the part of the reader or listener than low-definition ("cool") media, such as telephone or television, which are relatively lacking in information and require a higher sensory involvement of the user. The form of each medium is associated with a different arrangement, or ratio, in the order among the senses and thus creates new forms of awareness. These transformations of perceptions are the bases of the

Marshall McLuhan, world-famous communications innovator (© Karsh, Ottawa/Miller Services Ltd).

way in which the message *means*. In this sense, "the medium is the message."

Controversy always raged around McLuhan's work, for he was initiating a new paradigm which required that we recognize the form our information takes as basic to the way that knowledge is perceived and interpreted. *The Mechanical Bride* (1951) documents the power of advertising to manage public consciousness. *The Gutenberg Galaxy* (1962) presents a pattern of insights into the cultural transformation created by print technology, and with the publication of *Understanding Media* (1964) McLuhan's reputation became worldwide. Of the several books that followed, *Through the Vanishing Point* (1968, coauthored with Harley Parker), *The Interior Landscape: The Literary Criticism of Marshall McLuhan* (1969), *From Cliché to Archetype* (1970, with Wilfred Watson) and *Take Today: The Executive as Dropout* (1972, with Barrington Nevitt) are the most important.

McLuhan received numerous N American and European honours and awards, including the Schweitzer Chair (1967), which he spent at New York's Fordham U. The Centre for Culture and Technology that he founded is still functioning under the guidance of his disciples at U of T.

FRANK D. ZINGRONE

**Maclure, Samuel**, architect, artist (b at Sapperton [New Westminster], BC 11 Apr 1860; d at Victoria 8 Aug 1929). The foremost BC domestic architect from 1900 to 1929, Maclure established a building style and form that gave Victoria and parts of Vancouver a distinctive Canadian West Coast flavour. Noted mainly for his large Tudor-revival house designs with 2-storey central halls and lavishly finished interiors, he also pioneered the shingle style, worked in traditional board-and-batten, and later turned to a severe Edwardian classicism. Much of his work survives, as do the watercolour landscape sketches for which he was noted during his lifetime.

MARTIN SEGGER

Reading: Martin Segger and D. Franklin, *Victoria* (1979).

**McMahon, Francis Murray Patrick**, industrialist (b at Moyie, BC 2 Oct 1902). He began as a driller working for mining companies in BC, and in 1927 established a small business as a diamond-drilling contractor. In 1930-31 he participated in drilling in the Fraser R Delta in search of natural gas for nearby Vancouver, and when that failed he proposed a 1000 km pipeline to transport gas from the Peace R district of northeastern BC. In 1936 he acquired for \$100 an option on 32 ha of oil and gas rights near an oil discovery at Turner Valley, Alta. A successful oil well on this property led to the establishment of Pacific Petroleum Ltd, which became one of the most successful oil- and gas-producing companies in western Canada. In 1957, 25 years after he had first promoted the plan, McMahon completed construction of the Westcoast Transmission pipeline from the Peace R, Canada's first large natural-gas pipeline. In 1979 Petro-Canada acquired ownership of Pacific Petroleum for \$1.5 billion. EARLE GRAY

Reading: Earle Gray, *Wildcatters* (1982).

**McMaster, Ross Huntington**, industrialist (b at Montréal 11 Oct 1880; d there 3 Jan 1962). For over 50 years, McMaster was a senior executive of the Steel Company of Canada (STELCO). He began his career with the Sherwin-Williams Paint Co. In 1903 he became general manager of Montréal Rolling Mills, where his father had worked. When the company was merged into Stelco in 1910, McMaster became Montréal manager of the new steel company, Canada's largest. He became Stelco president in 1926 and chairman in 1945, a post he held until 1960. Refusing to burden the company with undue debts, especially in the stagnant 1920s, McMaster insisted throughout his presidency on a strong profit margin. He introduced a "gated"

(cost plus profit) sales policy, replacing the old "Pittsburgh plus" pricing schedule. He introduced modern accounting practices to Stelco. A lifelong Montréal resident, he also took a business interest in the *Montréal Gazette*.

DUNCAN McDOWALL

Reading: W. Kilbourn, *The Elements Combined: A History of the Steel Company of Canada* (1960).

**McMaster, William**, businessman, banker, philanthropist (b in County Tyrone, Ire 24 Dec 1811; d at Toronto 22 Sept 1887). After immigrating to America he came to York [Toronto] in 1833 and entered a dry-goods firm. He shrewdly concentrated on wholesaling and turned his enterprise into one of Toronto's most profitable. Eager to curtail Montréal's control of the western economy, he joined George BROWN's Reformers. Their opposition to the Church of England and its Conservative friends also appealed to McMaster who, as a Baptist, wished to advance the cause of his coreligionists.

At midcentury he ventured into banking, and in 1867 played a major role in establishing the Canadian Bank of Commerce, in large part as competition for the Bank of Montreal. During his presidency the bank surpassed all others in Ontario and was second only to its Montréal rival. After his death, his will revealed his desire to further Baptist education. Having supported the Canadian Literary Institute (Woodstock College) and Toronto Baptist College, he gave his estate of nearly \$1 million to establish a Baptist institution of higher learning in Toronto. MCMASTER UNIVERSITY opened its doors in 1890 as an independent institution, after refusing federation with U of T.

C.M. JOHNSTON

**McMaster University**, fd in 1887 as a BAPTIST institution, opened in Toronto in 1890 and moved to Hamilton in 1930. Chartered by the provincial legislature, the university was named for William MCMASTER, who bequeathed to it the bulk of his estate. It incorporated 2 older Baptist educational enterprises: Woodstock College (fd 1857) and Toronto Baptist College (1881). While in Toronto, McMaster had to overcome the opposition of theological conservatives to the instruction it presented. In 1930, under Chancellor Howard P. Whidden, a fresh start was made in nearby Hamilton, which offered an ample setting for McMaster's 500 students and considerable private support from its citizens. This arrangement honoured the traditional Baptist refusal to accept financial assistance from any public body.

Although WWII threatened enrolment, the demand for trained scientific personnel in industry and the armed forces prompted feverish activity in the university's laboratories. The war also led to the recruitment of the chemistry department's H.G. THODE for crucial wartime nuclear studies. Stimulated by scientific and technological demands, McMaster underwent a structural reorganization so that it might receive public aid; George P. Gilmour, Whidden's successor, directed the process. As a result, Hamilton College was established in 1948 as a non-denominational affiliate which would be eligible for governmental funding. By this time doctoral programs in the sciences had either been implemented or were being planned. Under Thode's leadership, engineering and nuclear studies expanded. A nuclear reactor was constructed on campus, the first such university facility in Canada.

In 1957, when it became evident that Baptist resources alone were insufficient, McMaster became a fully nondenominational private institution. The Baptist connection continued through the incorporation and affiliation of McMaster Divinity College. Rapid growth during the 1960s was highlighted by the establishment of doctoral programs in humanities and social sciences, the organization of a business school and the planning of a college of health sciences. In 1967 McMaster, with the exception of its Divinity College, was reorganized into divisions. These have since become 6 faculties: humanities, social sciences, science, engineering, business and health sciences. C.M. JOHNSTON

**MacMillan, Alexander Stirling**, businessman, politician, premier of NS (b at Upper South River, NS 31 Oct 1871?; d at Halifax 7 Aug 1955). After a successful career in lumbering and construction, he was appointed chairman of the Nova Scotia Highways Board in 1920 and served briefly as minister of highways in 1925. A member of the Legislative Council 1925-28, he held a seat in the NS Assembly 1928-45. In 1933 he again assumed the powerful highways portfolio and in 1940 also took on the posts of premier, provincial secretary and minister of public works. A tough debater and a shrewd politician, the aging MacMillan found wartime leadership burdensome. He willingly relinquished the premiership to Angus L. MACDONALD and retired from public life in 1945. MARGARET CONRAD

**MacMillan, Sir Ernest Alexander Campbell** (b at Mimico [Toronto] 18 Aug 1893; d at Toronto 6 May 1973). Internationally known as a conductor of symphonic and choral music, he was also an organist and pianist, an educator, a spokesman for music, and a leading figure in Canadian musical organizations. He left about 20 compositions and many arrangements; his extensive writings and talks cover many subjects, from folk song to musical pedagogy. By his cultivation, skill, energy, and travels, he became the most influential Canadian musician of his time.

A prodigy, he had composed several songs and played the organ publicly by age 10. During his teens, he audited music classes at Edinburgh U and attained both an organ diploma and an Oxford baccalaureate in music. He held a professional position as an organist in Toronto at age 15. Interned in Germany as an enemy alien, 1914-18, he developed his talents through

Sir Ernest MacMillan, known as the statesman of Canadian music, was the first person to be knighted outside the UK for contributions to music; photo taken in 1943 (© Karsh, Ottawa/Miller Services Ltd).

prison-camp shows and concerts. In the early 1920s in Toronto he performed as church organist and choir director, wrote for journals and taught music. Most of his original works belong to this phase of his career. In 1923 he directed the first of 30 annual presentations of Bach's *St Matthew Passion*. He was active in the annual CPR folk festivals (1927-31), and edited *A Book of Songs* (1929; reissued as *A Canadian Song Book*, 1937), widely used as a school text, and an anthology of essays, *Music in Canada* (1955). He was principal of the Toronto (later Royal) Conservatory of Music 1926-42; dean of the faculty of music, U of T, 1927-52, and toured all regions of the country as festival adjudicator and as Conservatory examiner. MacMillan's fame as a conductor grew rapidly after 1931, when he became conductor of the Toronto Symphony Orchestra. He led the TSO until 1956, and for the last 14 of those years was also conductor of the Toronto Mendelssohn Choir. He was guest conductor with major orchestras in the US, Australia and Brazil, and conducted the first commercial recordings of his home organizations. Bach was his specialty, but he exposed audiences to a gamut of music and championed numerous works by Canadian composers.

MacMillan was knighted in 1935 and received the Canada Council Medal (1964), the Order of Canada (Companion, 1970), the Canadian Music Council medal (1973, awarded posthumously), the Richard Strauss Medal (GEMA, West Germany), honorary diplomas from the 2 royal music schools (London, England), and honorary doctorates from 8 universities. Named after him were the MacMillan Theatre and the annual MacMillan/CAPAC Lectures (Toronto); and the Sir Ernest MacMillan Fine Arts Clubs (Vancouver). In 1982 CBC Radio presented the 6-part documentary "Sir Ernest MacMillan — the Music Builder." JOHN BECKWITH

**MacMillan, Harvey Reginald**, entrepreneur (b at Newmarket, Ont 9 Sept 1885; d at Vancouver 9 Feb 1976). After studying at the Ontario Agricultural Coll and the Yale Forestry School, MacMillan worked on the BC coast as a timber cruiser in 1907. Although he was hired as assistant inspector of forest reserves for western Canada in 1908, tuberculosis forced him to spend the next 2½ years in a sanatorium. In 1912 he became chief forester for BC, a post he kept until WWI, when he became timber-trade commissioner for the federal government, assistant manager of the Cheraimus plant of Victoria Lumber and Manufacturing Co and, by the end of the war, an employee of the IMPERIAL MUNITIONS BOARD.

In 1919 MacMillan, backed by British timber merchant Montague Meyer, launched the H.R. MacMillan Export Co. His manager and later partner was W.J. Van Dusen, and the 2 men developed the company into a major exporter of lumber. Competition was met with aggressive marketing, the purchase of sawmills and timber limits, and the building of a plywood plant in 1935. During WWII MacMillan was chairman of Wartime Shipping Ltd, a crown corporation. After the war he continued to expand his company, building the Harmac Pulp Mill in 1947. In 1951 the company merged with Bloedel, Stewart and Welch. In 1956 MacMillan resigned as chairman and in 1970 he and Van Dusen resigned as directors, but MacMillan maintained his interest in MACMILLAN BLOEDEL until his death.

CHRISTOPHER G CURTIS

Reading: Donald McKay, *Empire of Wood* (1982).

**MacMillan, William Joseph Parnell**, physician, premier of PEI, lieutenant-governor (b at Clermont, PEI 24 Mar 1881; d at Charlottetown 7 Dec 1957). After a brilliant career as a scholar and physician, MacMillan entered politics in 1923. Ten years later he became premier during the Island's worst economic depression. The

dynamic premier implemented many relief programs and greatly increased government expenditures to relieve the needy Islanders. Nevertheless, MacMillan and the Conservative Party were swept from office when the Liberal Party captured all 30 seats in the 1935 election. In 1957 MacMillan was appointed lieutenant-governor only days before his death. LEONARD CUSACK

**MacMillan Bloedel Limited**, with head offices in Vancouver, is Canada's largest forest-products company. It began in 1909 as the Powell River Paper Company Limited, and it was reorganized as the Powell River Company in 1911. Upon merging in 1960 with MacMillan and Bloedel Limited (est 1951), its name was changed to MacMillan, Bloedel and Powell River Limited. The present name was adopted in 1966. Between 1964 and 1980 the company made various acquisitions, mainly of corrugated case, lumber and paper companies. With integrated operations in Canada, the US and overseas, "MacBlo" produces newsprint, papers, lumber, panelboards and containers. It also owns timberland in BC. In 1983 it had sales or operating revenue of \$2 billion (ranking 41st in Canada), assets of \$2.1 billion (ranking 45th) and 15 472 employees. The Noranda Group holds 49% of the shares. See TIMBER TRADE HISTORY; FORESTRY.

DEBORAH C. SAWYER

Reading: Donald McKay, *Empire of Wood* (1982).

**McMurrich, James Playfair**, physiologist (b at Toronto 16 Oct 1859; d there 9 Feb 1939). McMurrich taught biology at Ontario Agriculture College for 5 years before seeking a PhD (1885) at Johns Hopkins U. Though an early enthusiast for a national scientific program for Canada (see his letter in *The Week*, 6 Nov 1884) he worked in the US for 20 years before becoming professor of anatomy at U of T in 1907; the university had lately been reorganized and endowed by the Ontario government in order to promote science in Canada. McMurrich was dean of the graduate school (1922-30) and active in the Biological Board of Canada (Fisheries Research Board), the Canadian Inst of Toronto and the RSC (president, 1922). DONALD J.C. PHILLIPSON

**MacNab, Sir Allan Napier**, soldier, lawyer, businessman, politician (b at Newark, UC 19 Feb 1798; d at Hamilton, Canada W 8 Aug 1862). A forceful though enigmatic personality, MacNab had a deep influence on many aspects of pre-Confederation Canada. As a youth he served with conspicuous gallantry in the war of 1812. Moving in 1826 from York [Toronto] to Hamilton, he set up a thriving law practice, but he owed his fortune to speculation in real estate. An entrepreneur as well, he was, with Glasgow merchant Peter Buchanan, chiefly responsible for the construction of the GREAT WESTERN RY.

In the first phase of his political career (1830-35), MacNab vigorously promoted economic development and moderate Tory policies. In the second (1836-49) he became an extreme Tory. Knighted for his zeal in suppressing the REBELLION OF 1837-38, he vainly stressed loyalty as an issue in public policy. In the third (1850-56) he declared that "all his politics were Railroad," but as leader of the Conservatives he was also concerned to move his party back from extremism. In 1854 he played an important role in the formation of the Liberal-Conservative alliance and became premier of the Canadas (1854-56). Dundurn, his stately 72-room mansion, still stands today in Hamilton. D.R. BEER

Reading: D.R. Beer, *Sir Allan MacNab* (1984).

**McNab, Archibald**, 17th chief of Clan Macnab (b in Perthshire, Scot c 1781; d at Lannion, France 12 Aug 1860). McNab came to Upper Canada in 1822 to flee his creditors in Scotland. He was given land on the Madawaska R, the future McNab Township, and brought about 15 families from Scotland who with others recruited in

Canada settled the township on terms laid down by McNab. For the next 15 years he plundered these people and pursued them in the courts. He was supported at first by his politically well-placed friends in Toronto and at Perth, but his position, unassailable in the 1830s, was wholly undermined in the 1840s by his excessive greed. Ultimately he was driven from the township by the determination of the settlers to work together and petition the councils of Upper Canada and Canada W. He lived in Hamilton until at least 1851 before leaving Canada and dying in exile in France. With 4 children and a wife abandoned in Scotland, he fathered at least one illegitimate child in McNab Township, and another upon his return to England in the 1850s.

JULIAN GWYN

**McNair, John Babbitt**, lawyer, politician, judge, premier of NB (b at Andover, NB 20 Nov 1889; d at Fredericton 14 June 1968). First elected MLA for York in 1935, he was attorney general in the DYSART government and president of the provincial Liberal Party. Defeated in 1939, he was re-elected in 1940 for Victoria and in 1944 for York. In 1940 he succeeded Dysart as party leader and premier, and in 1943 passed the Civil Service Act providing security of tenure for public servants. Following the defeat of his government in 1952, McNair left politics and returned to legal practice. In 1955 he was named chief justice of New Brunswick and in 1957 he headed the royal commission examining the fiscal status of Newfoundland. He was appointed lieutenant-governor of New Brunswick in 1965.

DELLA M.M. STANLEY

**McNaughton, Andrew George Latta**, army officer, scientist, diplomat (b at Moosomin [Sask] 25 Feb 1887; d at Montebello, Qué 11 July 1966). He was trained as an engineer at McGill, enlisted in the nonpermanent militia in 1909 and took the 4th Battery of the CANADIAN EXPEDITIONARY FORCE overseas in 1914. His scientific approach to gunnery brought him rapid advancement; he was twice wounded and ended the war commanding the Canadian Corps artillery. He joined the permanent force in 1920 and became deputy chief of the general staff in 1922. As chief of the general staff, 1929-35, he began the mechanization of the permanent force and the modernization of the nonpermanent militia.

General A.G.L. McNaughton with Mackenzie King (Central Press Photo/Miller Services Ltd).

From 1935 to 1939 he was president of the NATIONAL RESEARCH COUNCIL OF CANADA.

McNaughton returned to soldiering in WWII as commander of the 1st Canadian Infantry Division in 1939. Senior Canadian officer in the UK while the force there grew to a corps (1940) and then an army (1942), he endeavoured to hold the Canadians together in one formation and deeply involved himself in the scientific aspects of soldiering. He initiated an improved method of airburst ranging and the development of "sabot" antitank ammunition. But his tactical judgement was weak — he endorsed the ill-fated DIEPPE plan — and he never properly mastered the relationship between politics and high command in war. By late 1943 the crusty Canadian's uncompromising opposition to fragmentation of the Canadian Army Overseas was causing resentment in Ottawa; he was out of favour with his own minister of national defence, J.L. RALSTON, and British criticism of his generalship was mounting. Under pressure and in declining health, he resigned his command in Dec 1943.

McNaughton remained a favourite of PM Mackenzie KING (he had earlier been a confidante of PM R.B. BENNETT) and was slated to become the first Canadian-born governor general. Instead he was lured briefly and unsuccessfully into politics; he served as minister of national defence 1944-45 but was unable to stave off CONSCRIPTION for overseas service or win a seat in Parliament. A compelling public figure for almost 2 decades after 1945, McNaughton was Canadian representative on the UN Atomic Energy Commission, and president of the Atomic Energy Control Board of Canada, 1946-48; permanent delegate to the UN, 1948-49; chairman of the Canadian Section of the INTERNATIONAL JOINT COMMISSION, 1950-62, and of the PERMANENT JOINT BOARD ON DEFENCE, 1950-59. He was a determined, independent-minded proponent of his view of the national interest in all these capacities, and in his last great campaign he bitterly opposed the COLUMBIA RIVER TREATY.

NORMAN HILLMER AND BRERETON GREENHOUSE

**McNaughton, Duncan Anderson**, track and field athlete (b at Cornwall, Ont 7 Dec 1910). Raised at Kelowna and Vancouver, BC, he attended U of Southern Calif, joining its track team as a high jumper. His "diving" western-roll technique disqualified him at the 1930 British Empire Games and nearly excluded him from the 1932 Los Angeles Olympics. Ultimately, he was allowed to compete and, in a dramatic jump-off to break a tie, he cleared the bar at 6 ft 6 in (2 m), beating Americans Bob Van Osdel and Cornelius Johnson and the Philippines' Simeon Toribio for the gold. A year later McNaughton retired; he distinguished himself in the RCAF and later as a petroleum geologist.

TED BARRIS

**McNaughton, Violet Clara**, née Jackson, journalist, feminist leader (b at Borden, Ont 11 Nov 1879; d at Saskatoon 3 Feb 1968). In 1912 the McNaughtons joined the Saskatchewan Grain Growers Assn and jointly became secretary-treasurer of the Hillview local. Violet's insistence on being recognized as a delegate to the 1913 SGGA convention led to a special "Women's Congress," and an organizing committee for a women's section, with Violet as secretary, was created. When the section was organized in 1914, McNaughton was elected president (1914-17). She sparked in 1915 the formation of the Saskatchewan Equal Franchise League, which was primarily responsible for gaining the franchise for women a year later. In 1919 she became president of the Interprovincial Council of Farm Women and, in that post, became a prominent national feminist leader. She was elected to the board of the SGGA in the early 1920s and was important in the Saskatchewan

and national Progressive movements, helping to formulate the platform for the PROGRESSIVE PARTY in 1921. From 1925 to 1950 she edited the "Mainly for Women" page in *The Western Producer*.

IAN MACPHERSON

**McNeil Case G. McNeil**, a journalist who wanted to see a film (*Last Tango in Paris*) banned in his province (NS) by a provincial regulatory body, challenged the constitutionality of the provincial Theatres and Amusement Act. The Supreme Court of Canada, in a divided decision, ruled that the provincial measure was valid. In its opinion, this local control over the film was justified by the Constitution Act, 1867 (s92.13 and s92.16). The court distinguished between criminality and provincial interest in morality. A provincial Act that establishes standards of decency is not necessarily an infringement on criminal law. According to Mr Justice Ritchie, tastes and mores may vary from region to region and the decision about what is morally acceptable to the public may be considered a matter of local and private nature in the province, within the sense of section 92. GÉRALD-A. BEAUDOIN

**Macoun, John**, explorer, naturalist (b at Maralin, Ire 17 Apr 1831; d at Sidney, BC 18 July 1920). Champion of the agricultural capabilities of the western interior, Macoun was also Canada's foremost field naturalist and amassed a collection of Canadian flora and fauna which became the foundation for the National Museum of Natural Sciences. Macoun developed his expertise as a plant geographer himself. In 1872 he took part in the first of 5 government surveys of western Canada. Over the next decade, he declared in various reports and public lectures that western lands were ideally suited for agriculture. Though the route for the CPR main line was located through the grasslands essentially for strategic reasons, Macoun provided the agricultural justification for that route.

In 1882 Macoun was appointed to the GEOLOGICAL SURVEY OF CANADA as Dominion botanist and began a study of the range and distribution of Canada's flora, adding fauna when he became survey naturalist and assistant director in 1887. Macoun established a Dominion Herbarium of over 100 000 specimen sheets and discovered approximately 1000 new species, many of which were named after him. By the time he re-

John Macoun, Canada's foremost field naturalist, whose large collection of flora and fauna became the foundation for the National Museum of Natural Sciences (courtesy National Museums of Canada/National Museum of Man/31874).

In her time Agnes Macphail was recognized as a feminist, though she was primarily concerned with issues such as the tariff. (© Karsh, Ottawa / Miller Services Ltd.).

tired to Vancouver I in 1912, the Geological Survey boasted the finest collection of Canadian flora and fauna in the country. W.A. WAEISER

**Macphail, Agnes Campbell**, politician, reformer (b at Proton Township, Grey County, Ont 24 Mar 1890; d at Toronto 13 Feb 1954). Macphail was the only woman elected to Canada's Parliament in 1921, the first federal election in which women had the vote. She served until defeated in 1940. In 1943 she was elected to the Ontario legislature, one of the first 2 women there. She lost her seat in 1945 but was again in the legislature 1948-51. She was also the first woman appointed member of a Canadian delegation to the LEAGUE OF NATIONS, where she insisted on serving on the Disarmament Committee.

Agnes Macphail began as a country school-teacher and was active in the Ontario agricultural CO-OPERATIVE MOVEMENT and the UNITED FARMERS OF ONTARIO. She entered politics to represent the farmers of her region; in office she came also to see herself as representing other women. As MP she first sat as a member of the PROGRESSIVE PARTY, with which the UFO was then affiliated. She later sat as an independent and finally as a representative of the CO-OPERATIVE COMMONWEALTH FEDERATION; as MPP she represented the CCF. Although involved in founding the CCF, she distrusted partisanship and did not acknowledge party discipline.

Though modern accounts have tended to deny it, in her own time Macphail was recognized as a feminist. Rural issues such as a protective tariff were always primary for her, but she gave major attention to so-called "women's issues" such as prison reform. She was the founder of the Elizabeth Fry Society of Canada and was largely responsible for the establishment in 1935 of the Archambault Commission to investigate Canada's prisons. Her feminist antimilitarism included active participation in the WOMEN'S INTERNATIONAL LEAGUE FOR PEACE AND FREEDOM (but she reluctantly voted for Canada's entry into WWII). She supported women's acquisition of civil rights, although she was not an active suffragist. She was a friend of Nellie McClung and admired Thérèse CASGRAIN's suffragist efforts in Québec, and she welcomed the decision in the PERSONS CASE. She was responsible for Ontario's

first equal pay legislation (1951). After her electoral defeat, she supported herself by journalism, public speaking and organizing for the Ontario CCF, but she suffered from lack of money and poor health. She died just before a senate appointment was to be announced. NAOMI BLACK  
Reading: D. French, "Agnes Macphail," in *The Clear Spirit* ed by Mary Quayle Innis (1966); M. Stewart and D. French, *Ask No Quarter* (1959).

**McPhail, Alexander James**, farmer, farm leader, businessman (b near Paisley, Ont 23 Dec 1883; d at Regina 21 Oct 1931). In 1913 McPhail joined the Saskatchewan Dept of Agriculture, but resigned in 1918 out of loyalty to his superior, P.F. Brendt, who had been dismissed because of his German nationality. Returning to Elfros, Sask, McPhail became a livestock drover, selling mostly on the Winnipeg market. He became an active organizer for the PROGRESSIVE PARTY and joined the moderate wing of the Saskatchewan Grain Growers' Assn, becoming secretary later that year. McPhail was a leading proponent of the wheat pool movement and was elected first president of the SASKATCHEWAN WHEAT POOL board in 1924. As president, he faced several difficult issues. He reluctantly carried out the pool's purchase of the elevator system owned by the Saskatchewan Co-operative Elevator Co. He was the principal organizer of the Central Selling Agency, established by the 3 Prairie wheat pools to market grain internationally. A firm believer in voluntary marketing, McPhail campaigned against compulsory marketing, a controversial issue in Saskatchewan during the late 1920s. After the market crash in 1929, the Saskatchewan pool, like the others, avoided bankruptcy only because of government support.

IAN MACPHERSON

Reading: H.A. Innis, ed, *The Diary of A.J. McPhail* (1940).

**Macphail, Sir Andrew**, physician, man of letters, professor of medicine, soldier (b at Orwell, PEI 24 Nov 1864; d at Montréal 23 Sept 1938). Macphail studied at Prince of Wales College, Charlottetown, before proceeding to McGill, where he received degrees in arts and medicine. After practising medicine and teaching at Bishop's U medical faculty in Montréal 1893 to 1905, Macphail in 1907 was appointed McGill's first professor of the history of medicine, a chair he occupied for 30 years. In 1911 he became founding editor of the monthly *Canadian Medical Association Journal*, a position he held until enlisting as a medical officer in WWI. Beginning in 1905 he published more than 10 books and scores of shorter pieces, most on nonmedical themes. Many of his essays appeared in *The UNIVERSITY MAGAZINE*, an outstanding Canadian quarterly he edited 1907-20, with the exception of his 4 years overseas. Most of his writings in this period were political commentary or social criticism. His particular concerns were to define the imperial connection between Canada and the UK, and to expose fallacies in, for example, feminism or modern education. He was knighted for his literary and military work on 2 Jan 1918. The book to which he devoted most care, and which he considered his best, appeared posthumously: *The Master's Wife* (1939, repr 1977), a semiautobiographical reminiscence of PEI.

IAN ROSS ROBERTSON

**McPherson, Aimee Semple**, née Kennedy (b at Ingersoll, Ont 9 Oct 1890; d at Oakland, Calif 27 Sept 1944). At age 17 Aimee married Robert Semple, a Pentecostal missionary who died in China in 1912. She returned with her newly born daughter to the US, married H.S. McPherson and conducted tent revivals in the Atlantic seaboard states. Her evangelistic success took her to Los Angeles in 1918 where, 5 years later, she opened her debt-free, 5000-seat, \$1.25 million Angelus Temple of the Four Square Gospel. "Sister Aimee's" theatrical pulpit techniques made

Aimee Semple McPherson (courtesy Public Archives of Canada/C-52134).

her the most publicized revivalist in the world — she toured the US, Canada, Britain and Australia. In 1926, shortly after divorcing McPherson, by whom she had a son, Aimee disappeared and was presumed drowned; she reappeared weeks later claiming to have been kidnapped, apparently to cover her affair with her radio station manager. During the next decade she was connected with moral and financial scandals, including divorce from her third husband. Her public image never fully recovered and her health deteriorated. She died of an apparently accidental drug overdose.

JOHN S. MOIR

**Macpherson, Cluny**, doctor, inventor, businessman, justice of the peace (b at St John's Mar 1879; d there 16 Nov 1966). Educated at McGill and later in Edinburgh and Paris, he was commissioned a surgeon and magistrate in Battle Harbour, Lab, where he helped Wilfred GRENFELL contain a smallpox epidemic. He returned to private practice in St John's in 1904 and was appointed registrar of the Nfld Medical Board, a position he held with few interruptions until his death. He was decorated in May 1915 for his invention of the gas helmet to provide protection against poison gas. Active as the director of the Grenfell Assn of Newfoundland and a director of the International Grenfell Assn, president of the Medical Council of Canada, 1954-55, and president of a commission of the Newfoundland Supreme Court, Macpherson was also prominent in business.

STEPHEN O JACKSON

**Macpherson, Crawford Brough**, political theorist, professor (b at Toronto 18 Nov 1911). Educated at U of T and U of London, he returned to U of T in 1935 to begin 4 decades of teaching in the department of political economy, interrupted only by work for the Wartime Information Board (1943-44) and by visiting professorships in Britain, the US and Australia. His various writings on the development of liberal-democratic theory have brought him international acclaim. Turning first to the work of 17th-century English theorists such as Thomas Hobbes and John Locke, Macpherson identified what he called "possessive individualism" as the ideology of a rising bourgeois class. His uniquely humanist analysis drew on a Marxist critique of emergent capitalism, but also on the ethical promise of liberalism: the individual freedom to realize one's full human potential,

which he believed was overshadowed by capitalist market relations. In an early work he turned his analytical skills on a particular strand in Canadian liberal-democratic thought, the ideology of the early 20th-century Alberta farmers' movement. His major publications include *Democracy in Alberta* (1953), *The Political Theory of Possessive Individualism* (1962), *The Real World of Democracy* (1965), *Democratic Theory: Essays in Retrieval* (1973), *The Life and Times of Liberal Democracy* (1977) and *Burke* (1980).

CRAIG HERON

**McPherson, Donald**, figure skater (b at Windsor, Ont 20 Feb 1945). World figure-skating champion in 1963, McPherson was the first Canadian to win the Canadian, N American and world championships in the same year. He competed in the 1960 Squaw Valley, Calif, Olympics at age 15, and at 18 was the youngest man to win the world title. Not strong in compulsory figures, McPherson performed free-skating routines that were brilliant and near-perfect. After the 1963 competitions, he retired from amateur competition. He skated for 11 years with a professional ice show and won the 1975 world professional title.

BARBARA SCHRODT

**Macpherson, Duncan Ian**, political cartoonist (b at Toronto 20 Sept 1924). Macpherson is one of the most influential editorial cartoonists in N America, though the influence is a result of his much-copied visual style rather than of his political views. His association with the *Toronto Star* began in 1959, and his renderings of John DIEFENBAKER soon reached the same state of vitriolic perfection as BENGOUGH's of John A. MACDONALD some 80 years earlier. He has produced collections of his cartoons and has illustrated various other works. In 1971 the Canada Council awarded him the Molson Prize, and in 1973 he became a member elect of the Royal Canadian Academy of Arts.

**Macpherson, Jean Jay**, poet, teacher (b at London, Eng 13 June 1931). She was brought to Newfoundland in 1940 and, educated at Carleton, McGill and U of T, she has been teaching English at Victoria Coll, U of T since 1957. She began publishing poetry in CONTEMPORARY VERSE in 1949, had her first book published in 1952 and won the Governor General's Award for poetry in 1958 for *The Boatman*, a cycle of pellucid lyrics unified by symbols of fall and redemption. From 1954 to 1963 she published the works of Canadian poets in 8 Emblem Book pamphlets. Her subsequent work includes other poetry, a classical mythology for secondary schools and an authoritative study of patterns in the late romances of 2 continents.

JEAN O'GRADY

Reading: Jay Macpherson, *Poems Twice Told: The Boatman and Welcoming Disaster* (1981) and *The Spirit of Solitude* (1982).

**McTaggart-Cowan, Patrick Duncan**, meteorologist (b at Edinburgh, Scot 31 May 1912). McTaggart-Cowan's family immigrated to Canada in 1913; he graduated from UBC and was a Rhodes scholar at Oxford. As officer-in-charge of the meteorological service in Newfoundland from 1937 to 1942, he pioneered weather services for the first passenger transatlantic flights. During WWII he was chief meteorologist for the RAF FERRY COMMAND. In 1946 he became assistant director of the Canadian weather service, and when Andrew THOMSON retired in 1959, he became director. Named the founding president of SIMON FRASER U in 1964, he guided the university until his appointment as executive director of the SCIENCE COUNCIL OF CANADA in 1968. In 1970 he directed Operation Oil to clean up the Arrow oil spill in Chedabucto Bay, NS. The recipient of several medals and honours and 7 honorary doctorates, he was created member, OBE, in 1944 and officer of the Order of Canada in 1979.

DAVID PHILLIPS

**McTavish, Simon**, fur-trade merchant (b in Stratherrick, Scot c1750; d at Montréal 6 July 1804). He immigrated to N America at age 13, probably as an apprentice to a merchant. After engaging in the fur trade out of Albany, NY, he moved to Montréal in the mid-1770s. He is not known to have travelled west of Lk Superior but he financed trading expeditions to the Saskatchewan R and the Northwest generally. In 1779 he was a key figure in the creation of the first NORTH WEST CO and he may have been behind the reorganization of 1783. After joining Joseph FROBISHER in 1787 to form McTavish, Frobisher and Co, chief outfitter and sales agent for the NWC, his control of the latter firm tightened. His pre-eminent position in Montréal business circles and his personal style were reflected in his nickname, "The Marquis."

DANIEL FRANCIS

**Made Beaver** Soon after its founding in 1670, the HUDSON'S BAY COMPANY found it necessary to devise a unit of value that would articulate Indian bartering with European bookkeeping methods. A Standard of Trade was established, based on the made beaver (one prime beaver skin in good condition). Prices of all goods were set in MB. Later the HBC issued brass tokens in denominations of one MB and fractions thereof. See FUR TRADE.

JENNIFER S.H. BROWN

**Madeleine, Iles de la** (Magdalen Islands), Qué, pop 14 130 (1981c), 202 km<sup>2</sup>, is an archipelago located in the middle of the ST LAWRENCE, 288 km SE from the GASPÉ PEN, 112 km N from PEI and 88 km NW from CAPE BRETON I. The 100 km, hook-shaped archipelago consists of 16 islands, islets and outcroppings.

Preceded by BASQUE fishermen, Jacques CARTIER arrived at Île Brion in 1534, he named it in honour of the great French admiral. He christened the islands "Les araynes" because of the endless beaches of very fine white sand. Later CHAMPLAIN referred to them as the "Ramées." The definitive name was given in honour of Madeleine Fontaine, wife of the islands' first seigneur. They were the site of the first battle in N America between the English and the French (1597). Real colonization began in 1755, when the ACADIANS were deported, and several families landed on the islands. The TREATY OF PARIS (1763) gave all N American French possessions to England; in 1787 George III gave the islands to Capt Isaac Coffin, who subjected the inhabitants to seigneurial tenure. These hardships forced the islanders into exile and they founded several villages on Québec's North Shore. In 1895 Québec legislation enabled the islanders to buy back their land and the islands then began to develop and prosper.

The largest islands are inhabited: Havre Aubert, CAP AUX MEULES, Havre aux Maisons, Île de GRANDE ENTRÉE, Grosse Île and Île de L'Est, which are linked by long sandspits; Île Brion lies out to sea. The red and grey sandstone cliffs are spectacularly sculpted and the 300 km of beaches are dotted with harbours and picturesque bays. Fishing represents 45% of the island's economic base. Herring, cod, plaice, halibut, mackerel and scallops are shipped all over the world from plants where the fish are canned, frozen or smoked. Lobster is kept in ponds and shipped

live. Since 1972 the tourist industry has developed to such an extent that the population of the islands triples during the summer season. The future tapping of salt deposits at Grosse Île will become one of the mainstays of the islands' economy. The capital is Cap-aux-Meules.

JEAN-MARIE DUBOIS and PIERRE MAILHOT

**Magazines** are paper-covered publications issued at regular intervals, at least 4 times a year. Paid magazines are sold on the newsstands or delivered through the mails to subscribers; unpaid or controlled-circulation magazines are deposited free of charge at the homes or offices of specific groups of people defined as a target audience. These 2 groups incorporate consumer, literary, academic, trade and professional journals and are designed to entertain, inform, educate and provoke commentary. With rare exception, all of them carry ADVERTISING, usually in the proportion of 60% advertisements to 40% editorial. In the last decade, magazine supplements in newspapers have all but disappeared while regional (particularly city) and specialty magazines (eg, those dealing exclusively with fashion, travel or women's issues) have flourished.

The history of magazines in Canada is not a story of ideas or particular writers. Canadian innovations in form and content have been slight, contributions to belles lettres competent but not dazzling, and association with trends affirmative rather than provocative. The story of magazines in Canada is a political saga of small independent interests struggling to survive in an environment dominated by foreign interests. The struggle has always been between preserving cultural autonomy and permitting the free flow of ideas. The Canadian market is small, divided into 2 linguistic camps, and stretched through a narrow corridor that makes distribution awkward and expensive. More important is the impact of the US: in 1979, of the paid-circulation consumer magazines audited by the Audit Bureau of Circulations (ABC), 46% were imported foreign magazines and 54% were magazines produced in Canada. However, almost half of the circulation of Canadian-produced consumer magazines was accounted for by *Time*, *Reader's Digest* and *T.V. Guide*, all of which make extensive use of American editorial material.

For the last 6 months of 1983 the top American magazines coming into Canada were

*National Geographic* (746 068), *National Enquirer* (464 360) and *Woman's Day* (361 337). The top Canadian-produced paid-circulation magazines were *Reader's Digest* (1 658 638, French and English editions), *CHATELAINE* (1 411 182, French and English editions), *T.V. Guide* (804 199), *MACLEAN'S* (644 900) and *Time* (331 078). The largest circulation unpaid magazines were *Recipes Only* (2 million), *Homemaker's* (1 650 370, French and English editions) and *Quest* (712 225). Despite 3 royal commissions struck at least in part to recommend measures to protect the ailing magazine industry, Canadians quite simply prefer to read American magazines.

Canadian periodicals were first established in NS by transplanted New Englanders. The first Canadian magazine, edited by the Rev William Cochran and printed by John Howe, father of reformer Joseph HOWE, was *The Nova Scotia Magazine and Comprehensive Review of Literature, Politics, and News*. It commenced publication in 1789, lasted 3 years, and was concerned more with British than colonial affairs. The bilingual *Le Magasin de Québec* was established by Samuel

The process of photoengraving was pioneered in Canada and was first used in the highly successful *Canadian Illustrated News* (courtesy Public Archives of Canada/C-75551).

Neilson and Thomas Gilmore in Lower Canada's capital and published from 1792 to 1794. It marked the first attempt at drawing the 2 cultures together through a printed medium.

Until the late 19th century, high production costs, poor distribution and low circulation meant that most attempts at magazine publication in British North America were short-lived and derivative. Various efforts were made to launch literary magazines for select audiences, but they were largely overwhelmed by the newspaper boom of the 1820s. Some notable productions were J.S. Cunneen's *Acadian Magazine* and *Halifax Monthly Magazine*, John Gibson's *Literary Garland* from Montréal, and Michel Bibaud's various efforts: *La Bibliothèque canadienne*, *l'Observateur*, *Le Magasin du Bas-Canada* and the important *l'Encyclopédie canadienne*. Many eminent Canadians were published in these outlets, including Susanna MOODIE and John RICHARDSON in the *Literary Garland*.

By mid-century, Toronto had become an important centre for English-language production with magazines such as *The Canadian Journal*, *Anglo-American* and *British Colonial*. All were consciously literary and all soon failed. The introduction of regular train service, the electric telegraph, and the coming of Confederation gave great impetus to the Canadian magazine industry. American magazines such as *Harper's* were freely circulating in the country and many people felt Canadian counterparts were necessary to help give substance to the newly minted nationality. Montréal was also an influential centre, with magazines such as John Dougall's *New Dominion Monthly*, which pursued an aggressive national bias and achieved in only a few years a circulation of 8000.

The technique of photoengraving was pioneered in Canada and used first in the immensely successful *Canadian Illustrated News*, which began operations in 1869 and gained a large following principally because of its vivid portrayal of scenery and its stirring images of the NORTH-WEST REBELLION. Its French counterpart was the technically more accomplished, but generally less commercially successful, *L'Opinion publique illustrée*. Other significant magazines of the period were religious in orientation. Particularly important were the *Northern Messenger* and *Methodist Magazine and Review*, a magazine of opinion on Canadian affairs. Goldwin SMITH's *Canadian Monthly*, *National Review*, *Nation* and *Bystander* contributed to serious discussion, as did *La Revue canadienne* and 2 university-based journals, *QUEEN'S QUARTERLY* (1893-) and *University Magazine* (edited by Sir Andrew MACPAIL at McGill). Toronto's satirical *Grip* flourished from 1873 to 1894 and a number of national cultural magazines appeared, such as *Canadian Monthly* and *Week*. Interest in a definitive national cultural expression dimmed after the turn of the century, however, and was only revived in magazine format after WWI with the launching in 1920 of the CANADIAN FORUM.

National news and politics found an outlet in *Toronto Saturday Night* (1887), which dropped the city name in 1889 (see SATURDAY NIGHT). This consumer magazine, a feisty combination of social news and political crusades against issues such as divorce or the exploitation of labour, soon developed a highbrow following, and circulation reached 10 000. *The Canadian*, launched in Toronto in 1893, was another attempt at a national organ, although this time the object was to challenge quality American competition such as *Scribner's* and *The Atlantic*. *The Canadian* was a mouthpiece for "Wasp" Ontario; it did not often stretch its definition to include French Québec, the Maritimes or even the West, except as an Ontario fief.

The mid-1890s saw yet another attempt to stem the flood of American consumer magazines with the publication of what would be-

come *Maclean's Magazine*. Called the *Busy Man's Magazine*, 1896-1911, it was at first no more than a digest of previously published pieces. The magazine was successful in attracting advertisers, both from overseas markets and the US, especially after the adoption of American trim size. *Maclean's* expressed the Canadian national voice of the time — decidedly British and imperial — but it also frequently published such local writers as Lucy Maud MONTGOMERY and Robert SERVICE.

As the Canadian population stretched westward, magazines of regional and specialized interest began to appear. *The Manitoban* was launched in 1891 and the *British Columbian* followed 2 decades later. *Busy East* (eventually *Atlantic Advocate*) appeared in 1910, as did the *Canadian Home Journal*. The latter catered to the growing awareness of women as an important segment in society, although its content focused on recipes and housework. The market for trade and business magazines led J.B. MACLEAN to launch a series that included *Canadian Grocer* and *Dry Goods Review*. From the end of the 19th century also, farm weeklies increased in popularity, eg. Montréal's *Family Herald and Weekly Star*.

Circulation of Canada's top half dozen magazines never amounted to more than 300 000 during WWI, though American magazines flooded the country. In 1927 some foreign materials, mainly fiction, were denied free entry, but this had no appreciable effect on the home industry and talent continued to drain south. However, *Mayfair* and *Chatelaine*, both modeled on American formats, were launched in the late 1920s, with *Chatelaine* gaining 60 000 readers in its first year (1928). Government was finally beginning to listen to the woes of industry, which had greatly increased with the advent of commercially sponsored radio programs in 1928. "The world is listening, not reading" was the slogan that wooed many advertisers, at least temporarily, away from print and into broadcast. In 1931 R.B. BENNETT's Conservative government imposed a content tax on US magazines devoting more than 20% of their space to advertising, with the result that some 50 American magazines began printing in Canada. MacKenzie KING removed the tax when his Liberals regained power in 1935, arguing that it was a tax on thought and literary art. The American magazines immediately returned home and Canadians returned to importing them.

The coming of WWII caused magazine circulations, particularly of opinion and information magazines, to increase considerably. *Maclean's*, for example, reached a circulation of 275 000 in 1940. Canadian editions of American magazines were introduced as well — *Time Canada* appeared in 1943 — and the American *Liberty* magazine increasingly used Canadian content.

The influence and sheer presence of American magazines was felt even more after the war. B.K. Sandwell, editor of *Saturday Night*, complained that Canada was the only country in the world in which the largest percentage of reading matter was foreign controlled; 86 489 copies of US-owned magazines were bought by Canadians in 1948. A year before MacKenzie King had banned the importation of pulp magazines and comic books, but had exempted supplements distributed with newspapers. The *STAR WEEKLY* in Toronto became the exclusive carrier of the most popular comics from the US, thus playing havoc with the circulation of the *Montreal Star's* rotogravure supplement, the *MONTREAL STANDARD*. In retaliation, the *Montreal Star* launched *WEEKEND MAGAZINE* as a supplement in 1951, with an initial circulation of 900 000. In 1952 the combined circulation of *Weekend* and *Star Weekly* was almost 2 million — 300 000 more than the total circulation of the 4 leading Canadian magazines of the time.

Television advertising began in 1952 and within one year it accounted for \$1 335 000 in sales. The combined threat of weekend supplements, television and American magazines seemed unbreachable, until in 1956 the Liberal government imposed an advertising tax on Canadian editions of US magazines. The following year, however, the Conservatives repealed it.

In 1959 GRATTAN O'LEARY, editor of the OTTAWA JOURNAL, was appointed chairman of a 3-member Royal Commission on Publications to study the "position and prospects of Canadian magazines and other periodicals with special attention to foreign competition." The commission found that 75% of the general-interest magazines bought in Canada were American publications, that *Time* and *Reader's Digest* took 40 cents out of every dollar of magazine advertising, and that there were only 5 Canadian general-interest consumer magazines, of which *Maclean's* and *Liberty* were in poor financial shape (*Liberty* ceased publication in 1964). When the commission tabled its report in June 1961, its major recommendations were that expenditures made for advertisements in imported publications aimed at the Canadian market be disallowed as income tax deductions and that foreign periodicals containing Canadian domestic advertising be banned from entering Canada.

The Diefenbaker government accepted the recommendations but made special reservations for foreign periodicals already established in the country, specifically *Time* and *Reader's Digest*. Before these changes could be implemented, the Liberals under Lester PEARSON came into office and the magazine question was shelved until the Special Senate Committee on the Mass Media was struck (1969) under the chairmanship of Liberal Senator Keith DAVEY. The Davey Committee recommended in its report, "The Uncertain Mirror," in 1970 that the O'Leary Commission findings be implemented. Between the time of the O'Leary Commission and the Davey Report, *Reader's Digest* circulation had climbed from 1 million to nearly 1.5 million, *Time's* circulation had increased from 215 000 to 444 000 and its advertising revenue had nearly tripled from \$3.9 million to \$9.5 million. At the same time, television attracted an increasing proportion of brand-name advertising and destroyed the economic base of mass consumer magazines.

Matters continued to drift until yet another official investigation was launched. The Ontario Royal Commission on Book Publishing delivered its final report with some 70 recommendations on 22 Feb 1973. On 7 Oct 1974 *Saturday Night*, the country's oldest surviving magazine, suspended publication. That same year a group of Canadian magazine publishers, headed by Michael de Pencier, publisher of *Toronto Life* (founded in 1966 and premier publication of Key Publishers), banded together to form the Canadian Periodical Publishers' Assn to foster a Canadian-owned and -controlled magazine publishing industry. Incorporated in 1975 as Bartholomew Green 1751 Assn Inc — in memory of the man who brought the first printing press to Canada — the lobby group had 180 members in 1984.

On 18 Apr 1975 the Liberal government introduced Bill C-58 to eliminate, among other things, the tax concessions enjoyed by Canadian editions of foreign-owned publications such as *Time* and *Reader's Digest*. Four days later *Saturday Night* resumed publication. After the bill passed in Feb 1976, *Time* announced the end of its Canadian edition and the last issue appeared on 1 Mar 1976.

One of the greatest beneficiaries of Bill C-58 was MACLEAN HUNTER (with 160 magazines, the largest magazine publisher in Canada), which had long wanted to revamp *Maclean's* into a newsmagazine. The launch of such a publica-

tion, which Secretary of State Hugh Faulkner had informed the Commons was a major purpose behind the bill, occurred on 18 Sept 1978 under the editorship of Peter C. NEWMAN.

The most obvious contemporary trend in magazine publishing (other than the continuing and overwhelming presence of foreign publications) is the emergence of life-style and specialty magazines, some of which, such as *Toronto Life* or *Western Living*, are regional in nature. Sophisticated market research techniques have meant that target audiences — career women, homemakers, travellers, lawyers, or even smaller groupings such as lawyers who travel — can be identified readily and an editorial product designed to deliver appropriate advertising material to the designated consumer. The Kent Commission (1981), discovered that slightly over three-quarters of the population were magazine readers, and that readership was higher among the young and better educated.

The term "general-interest magazine" has little relevance in the contemporary market. Nowhere is that more apparent than in the increasing prominence of controlled-circulation magazines. The largest publisher of such magazines is COMAC, which was founded in 1966 and has 9 magazines including *Homemaker's/Madame à foyers*, *Quest* (which folded in late 1984) and *City Woman*. In late 1983 a rival company launched the largest circulation Canadian magazine, *Recipes Only*, which has a controlled circulation of 2 million readers and is a prime example of the current trend toward publishing for a narrow and specific market. All these magazines endorse doctrines of affluence and have a clear middle- and upper-middle-class consumer bias. They reflect a glistening internationalism rather than a parochial nationalism and, in that sense, are a mirror of contemporary Canadian middle-class aspirations. See also LITERARY MAGAZINES IN ENGLISH; LITERARY PERIODICALS IN ENGLISH; LITERARY PERIODICALS IN FRENCH. SANDRA MARTIN

Reading: H.F. Angus, ed, *Canada and her Great Neighbour* (1938); P. Audley, *Canada's Cultural Industries* (1983); Canada, Royal Commission on Publications, *Report* (1961); F.S. Chalmers, *A Gentlemen of the Press* (1969); I. Litvak and C. Maule, *Cultural Sovereignty: The Time and Reader's Digest Case in Canada* (1974).

**Magistrate**, historically, retired police officers, now lawyers appointed by the lieutenant-governor-in-council. Known in most provinces as provincial court judges, magistrates are judicial officers with summary jurisdiction in both criminal and civil actions, hearing minor indictable offences and those where the accused may elect mode of trial. They may preside over family court or small-claims court, and are ex officio COMMISSIONERS FOR OATHS. K.G. McSHANE

**Magnussen, Karen Diane**, figure skater (b at North Vancouver 4 Apr 1952). An accomplished free-skating performer, Magnussen won the women's title at the Canadian championships in 1968. In 1969 she withdrew from world competition because of stress fractures in both legs, but recovered in 1970 to recapture the Canadian title, which she held until 1973. She won silver medals in the 1972 Sapporo Olympics and world championships. In 1973, when free skating — Magnussen's strength — was given a larger percentage of the total marks, she won the world championship in Bratislava, Czechoslovakia, with a brilliant performance. She received the Velma Springstead Trophy as Canada's outstanding woman athlete 1971-73 and was awarded the Order of Canada in 1973.

BARBARA SCHRODT

**Magog**, Qué. City, pop 13 604 (1981c), inc 1950, is situated on the Magog R at the outlet of Lac Memphrémagog (Abenaki, "expanse of water") in the EASTERN TOWNSHIPS. Economic links have

been strong with both SHERBROOKE, 25 km E, and MONTRÉAL, 122 km NW. Formerly an Indian campsite and subsequently known as The Outlet, its first settlers were LOYALISTS and other Americans. Today's population is predominantly French Canadian. Built in 1884, A.H. Moore's Magog Cotton and Print Co, the first calico-printing plant in Canada, was amalgamated with Dominion Cotton Mills in the 1890s. Moore's Magog and Waterloo Railroad was sold to the CPR. Currently at the centre of the city's economy, the Dominion Textile Co employs one-fifth of Magog's population. Other important employers include the food-processing, clothing, printing and iron-products industries. Lac Memphrémagog and nearby Mont Orford have made Magog a traditionally popular resort area, which also hosts a summer theatre, swim meet and music festival. PAULA KESTELMAN

**Magpie**, common name for BIRDS of several genera in the crow family. Of the 17 species known worldwide, only the black-billed magpie (*Pica pica*) is found in Canada. This permanent resident breeds from southern YT to western Manitoba, wandering further E in winter. Magpies have extended their range eastward in historical times. Magpies possess heavy bills and short, rounded wings. Their tails often make up over half their total length of some 50 cm. Magpies are black with white scapulars (feathers at the base of the wing) and underparts. They are weak fliers, adapted to ground foraging in open habitats. Their elaborate nests, requiring about 6 weeks for construction, are composed of a domed mass of sticks with one or more entrances leading to a cup of mud. Magpies are believed to mate for life.

LORRAINE G. D'AGINCOURT

**Maguire, Thomas**, Roman Catholic priest (b at Philadelphia, Pa 9 May 1776; d at Québec C 17 July 1854). Educated at the Séminaire de Québec, he was ordained in 1799 and was parish priest at Berthier (Berthier-sur-Mer) 1805-06 and Saint-Michel, 1806-27. Dedicated to education as a means of raising clerical prestige, he was director of the Collège de Saint-Hyacinthe 1827-31. As chaplain at the Ursuline convent, Québec 1832-54, he updated the curriculum and teaching practices in its boarding school for girls. A remarkable administrator, he saved both the college and convent from impending financial ruin. He was emissary from the Canadian bishops to Rome (1828-29, 1833-35) during their struggle against the Sulpicians to establish the episcopal authority of Jean-Jacques Lartigue. Maguire was an impassioned polemicist against attacks on the church by British Protestants and Canadian liberal professional men. From 1835 until his death he was vicar general of the bishop of Québec.

JAMES H. LAMBERT

Reading: Lucien Lemieux, *L'Établissement de la première province ecclésiastique au Canada, 1783-1844* (1968).

**Maheux-Forcier, Louise**, writer (b at Montréal 9 June 1929). After extensive musical studies, she decided to devote herself exclusively to writing. Her first novel, *Amadou* (Prix du Cercle du livre de France, 1963), one of Québec's first poetic novels, developed the then taboo theme of lesbianism. While revealing her as a subtle, lucid and courageous writer, the novel aroused passionate controversy among critics. The author pursued her quest for primal beauty in her other novels (*L'Île joyeuse*, 1965; *Une Forêt pour Zoé*, 1969, Gov Gen's Award; *Paroles et musique*, 1973; *Appassionata*, 1978), as well as in her short stories (*En toutes lettres*, 1980) and films for television. The ever-present androgynous character exerts a strong attraction on the living sources of this dream world, finding expression in a visual and rhythmical perfection of writing.

GABRIELLE POULIN

**Mahone Bay**, NS, Town, pop 1228 (1981c), is located on the "Lighthouse Route" of NS's S shore, 10 km NW of LUNenburg. A quiet residential community and retirement haven, it is known for its beautiful bay, dotted with hundreds of islands. Its name is derived from the French *Mahonne*, "Venetian Boat," referring to the long, low boats used by pirates who frequented the area. In 1754 Capt Ephraim Cook brought English, French and Swiss settlers to the area. Farming and fishing were mainstays of life until the mid-1800s, when shipbuilding became an important industry. Today the building of pleasure craft has replaced construction of seagoing vessels. Mahone Bay has been able to adapt to the 20th century by concentrating on the manufacturing, service and tourism industries. Although many young people have left the town, it has shown a consistent growth rate over the last 50 years. HEATHER MACDONALD

**Mahone Bay** is an inlet of the Atlantic Ocean on the SE coast of Nova Scotia, 70 km W of Halifax. With many safe and sheltered anchorages, it is perhaps the finest cruising area in the province. Of its 365 islands, Tanook 1 in the mouth of the bay is the largest and best known. Apart from recreation and tourism, the primary industries are fishing and shipbuilding. The famous fishing schooner BLUENOSE was built and launched in 1921 at LUNenburg on the western shore of the bay. P.C. SMITH

**Mahovich, Francis William**, Frank, hockey player (b at Timmins, Ont 10 Jan 1936). He played junior hockey at St Michael's College, Toronto, and joined TORONTO MAPLE LEAFS 1957-58, winning the CALDER TROPHY. A powerful skater with an explosive slap shot, he led Toronto in scoring 1960-66, and played a large part in Toronto's 4 STANLEY CUP victories of the 1960s. His obvious capabilities led to great expectations and pressures from fans and management, and he left the team twice, distressed with his treatment. In 1962 Chicago owner James Norris offered \$1 million for him in a much-publicized incident. He was traded to Detroit 1967 and then Montréal 1970, where he set a new playoff scoring record in 1971. He finished his career with Toronto Toros, later Birmingham Bulls, of the WHA, retiring in 1978. In 17 NHL seasons he scored 533 goals and 570 assists, adding 51 goals and 67 assists in playoffs. JAMES MARSH

**Maillard, Pierre**, priest of the Séminaire des missions étrangères, missionary (b in the diocese of Chartres, France c1710; d at Halifax 12 Aug 1762). Missionary to the MICMAC, Maillard was a brilliant linguist who perfected a system of written symbols for the Micmac language. He was sent to Île Royale [Cape Breton I] in 1735, and during the winter of 1737-38 worked out his system of hieroglyphics. In subsequent years he compiled a Micmac grammar and dictionary. Although (unknown to Maillard) there had been 2 earlier attempts to put Micmac in written form, Maillard's system alone had lasting impact. During the WAR OF THE AUSTRIAN SUCCESSION, he urged the Micmac to support the French cause. He was captured in 1745 and sent to France, but returned in 1746. In 1759 Maillard made peace with the British and, from 1760 until his death, lived in Halifax. JOHN H. YOUNG

Reading: M.D. Johnson, *Apôtres ou agitateurs* (1970); H.J. Koren, *Knaves or Knights?* (1962).

**Maillet, Antonine**, novelist (b at Buctouche, NB 10 May 1929). After the success of *La Sagouine* (1974) and *Pélagie-la-Charrette* (1979), which won the Prix Goncourt, Maillet dominates contemporary Acadian literature. Her imaginary universe is rooted in the geography, history and people of ACADIA. Her novels, often reworked for the theatre, fuse adventure, desire, frustration, agony and joy to offer a new image of the origi-

Antonine Maillet, whose novel *La Sagouine*, as well as being a great literary success, gave voice to her Acadian people (courtesy Canapress).

nal Acadia, restructured to fit an epic vision. She presents a simple event (conflict between 2 characters, a collective struggle to conquer the land, the long trip back to the homeland of Acadia), rich in every kind of development. As the characters work through these developments, they become symbols. The language of these pieces, a fusion of "ancient and sonorous words" and literary language, is an original creation. The narrator is often presented not as an individual but as a collective being, the memory of the Acadian people. Maillet is a storyteller. In all her tales, the action is narrated by someone whose imagination moves through history to legitimize the soul of the people. Only *La Sagouine* is not a narration. Here the character is autonomous and has an authenticity and complexity that lifts her above the other characters in the piece.

Maillet's renown coincides with an Acadian cultural revival. *La Sagouine*, as well as being a genuine literary success, appeared at the right moment to give voice to the Acadians. We find in that voice wisdom and lucidity, verve and reserve, humour and anger. As the author herself says, to recognize her works is to recognize the people to whom she belongs. YVES BOLDUC

**Maillo, dit Desmoulins, Jean-Baptiste**, builder, architect (b at Québec City 21 Sept 1668; d there Sept 1753). The brothers Joseph and Jean Maillo were successors of Claude BAILLIF and, because of their knowledge of classical and French Renaissance design, were employed by merchants, clerics and government officials. Joseph's death in 1702 left Jean-Baptiste in control of a flourishing business constructing houses, churches, religious houses, public buildings and FORTIFICATIONS. The French Crown's military expenditures sustained the colony, and Maillo profited from the defences built at Québec and Crown Point (NY). He received the title "Architect to the King" in 1719. Having been a land surveyor and expert estimator, he was appointed deputy overseer of highways in 1728. Royal patronage was vital to social advancement in NEW FRANCE and, under the Crown's aegis, this former stonemason became a propertied and influential bourgeois of Québec.

PETER N. MOOGK

Reading: Peter N. Moogk, *Building a House in New France* (1977).

**Maillo House**, 17 rue St-Louis, Québec City (1736, 1766-67, 1805), built in 3 phases spanning the French and British periods, bears witness to

the enduring conservatism of Québec building traditions. Begun soon after 1736 and probably built by its owner, self-taught architect and master mason Jean-Baptiste MAILLOU, the house received a second storey in 1766-67 during the ownership of seigneur Antoine Juchereau Duchesnay. A 2-bay extension to the E was added in 1805 by John Hale, deputy paymaster general for the British army in N America. The irregular rubble masonry walls, cut-stone jambs, steep roof pitch, iron shutters, asymmetrically placed chimneys and double rows of dormers are all traditional features of 18th-century domestic architecture in Québec. CHRISTINA CAMERON

**Mainguy, Edmond Rollo**, naval officer (b at Chemainus, BC 11 May 1901; d at Nanaimo, BC 29 Apr 1979). After graduating from the Royal Naval College of Canada, he served in various posts until 1939, when he took command of the destroyer *Assiniboine*. Following a year as captain (Destroyers), Newfoundland, Mainguy became chief of naval personnel in 1942 and ended the war in command of the cruiser HMCS *Uganda*. A capable and well-liked officer, he chaired a commission in 1947 investigating several mutinies in the fleet. The resulting "Mainguy Report" recommended improvements in the handling of lower deck grievances. He was promoted rear admiral and appointed chief of the naval staff in 1951. Mainguy retired from the navy in 1956 and was president of Great Lakes Shipping until 1965. MARC MILNER

**Maintiens le Droit** (French, "Uphold the Right"), the official motto of the ROYAL CANADIAN MOUNTED POLICE. The use of the motto by the NORTH-WEST MOUNTED POLICE was first advocated in 1873 and adopted 2 years later. The expression "They always get their man," associated with the force since 1877, has no official standing. JOHN ROBERT COLOMBO

**Mainwaring, Sir Henry**, pirate (b near Ightfield, Eng 1587?; buried at Camberwell [London], Eng 15 May 1653). A skilled navigator who was commissioned by the Crown in 1610 to capture the pirate Peter EASTON, he failed and turned to piracy, basing himself in N Africa. In 1614 he sailed for Newfoundland to re-provision his ships and recruit men. He took over Easton's old base at HARBOUR GRACE and terrorized Spanish and Portuguese shipping in the region. His audacious attacks almost destroyed the peace between England, Spain and Portugal. Pardoned in 1616 by James I, he returned to England where he was knighted, elected to Parliament and made a vice-admiral. A Royalist, he was ruined during the English Civil War and died in poverty. EDWARD BUTTS

Reading: Edward Butts and H. Horwood, *Pirates and Outlaws of Canada* (1984). G.E. Mainwaring, ed, *The Life and Works of Sir Henry Mainwaring* (1920-22).

**Mair, Charles**, writer, civil servant (b at Lanark, UC 21 Sept 1838; d at Victoria 7 July 1927). Mair's memory rests on 3 bases: his inflammatory activities surrounding the RED RIVER REBELLION of 1870; his role in the formation of CANADA FIRST, an early nationalist movement; and his composition of the drama *Tecumseh* (1886). Mair represented to an extreme the contemptuous Upper Canadian dismissal of the Métis claims. Imprisoned by Louis RIEL at the outbreak of the rebellion, Mair escaped and on his return to Ontario agitated tirelessly for the suppression of the uprising. Canada First, of little immediate, practical influence, remains significant as the first of a series of Canadian nationalist groups. While not outstanding from a literary viewpoint, *Tecumseh* was important in the development of Canadian drama. It presents a vision of Canada as a co-operative enterprise in contrast with the self-seeking individualism of the US. DENNIS DUFFY

**Maisonnette, Paul de Chomedey de**, officer, founder of MONTRÉAL (bap at Neuville-sur-Vanne, France 15 Feb 1612; d at Paris, France 1676). He was chosen by the Société Notre-Dame de Montréal to found a missionary colony on Montréal I. The expedition, which included Jeanne MANCE, arrived at Québec late in 1641. Maisonnette began construction of VILLE-MARIE [Montréal] in 1642 and remained governor of Montréal I to 1665. His most urgent problem was to protect the settlement during the IROQUOIS WARS. In 1663, the year in which NEW FRANCE came under direct royal government, ownership of Montréal I passed from the Société Notre-Dame to the Sulpicians. The history of these early years is told in DOLLIER DE CASSON'S *Histoire du Montréal, 1640-1672* (1868; tr *A History of Montreal*, 1928).

MARY McDUGALL MAUDE

**Maitland**, Ont, UP, pop 667 (1981c), located on the St Lawrence R, 8 km E of Brockville. During the SEVEN YEARS' WAR (1756-63) it was the site of a fort and shipyard, Pointe au Baril, where the last French warships to sail on Lk Ontario were built. The father of Maitland was Ziba Phillips, a Loyalist who acquired property there in 1818 and built a house. A townsite was laid out in 1824 and named after Sir Peregrine MAITLAND, Lt-gov of Upper Canada at the time. St James's Church, begun in 1826, survives as a fine example of early Gothic revival architecture. Barbara Heck, founder of N American Methodism, settled here after the American Revolution. Never developing beyond a small settlement, Maitland has profited from the commercial traffic along the St Lawrence corridor and the popularity of the St Lawrence islands with vacationers.

DANIEL FRANCIS

**Maitland, Sir Peregrine**, soldier, civil administrator (b in Hampshire, Eng 6 July 1777; d at London, Eng 30 May 1854). At age 15 he joined the Grenadier Guards. He served with distinction at the Battle of Waterloo and was knighted in 1815. In 1818 he was appointed Lt-gov of Upper Canada, where he became identified ideologically with the conservative element later known as the FAMILY COMPACT. Continuously at the centre of political controversy, he believed that democratic and American tendencies in Upper Canadian society had to be resisted to maintain the imperial connection. By the end of his tenure, Reform elements were demanding that the Lt-gov choose his advisers from elected members of the Legislative Assembly, one of the issues that led to the REBELLIONS of 1837. As Lt-gov of NS 1828-34 he left little mark on the province's political history. Appointed commander in chief of the Madras army in 1836, he resigned 2 years later. In 1844 he became governor of Cape of Good Hope, but was replaced during the Kaffir War, being considered ineffective.

HARTWELL BOWSFIELD

**Major, André**, writer, literary critic, journalist (b at Montréal 22 Apr 1942). Since 1973 Major has been a producer of cultural programs for the Radio Canada network. He first became known in 1961, with the appearance of 2 collections of poetry: *Le Froid se meurt* and *Holocauste à deux voix*. By 1963 he was also publishing short stories. That same year he helped found PARTI PRIS, to which he contributed until 1965. In this same period Major was especially interested in the often tragic problems of young people struggling to contain personal rebellion. Since 1968, without ceasing to express himself politically, Major has published poems and several novels. One novel, *Les Rescapés* (1976), won the Gov Gen's Award. His newest story is "La Folle d'Elvis" (1981). Major is also interested in theatre and has written 2 radio plays and a stage play.

JACQUES COTNAM

**Makpaq, Vital** (Makpa, Arnasungnark), sculptor (b near the Kazan R, S of Baker Lk, NWT 1922; d at Baker Lk 1978). Makpaq was a stone carver of the Sarvaqtuungmiut group of inland CARIBOU INUIT. His sculptures, of extreme formal simplicity, describe the intimate life of his people: a mother giving birth in the old way over a skin-lined shallow pit, aided by a midwife and her husband; an Inuit family joined by the mass of the stone and the spirit of the carver. His work has been exhibited internationally, notably in the 1971-72 Masterworks of the Canadian Arctic exhibition. See INUIT ART.

K.J. BUTLER

**Malahat Pass**, elev about 280 m, is located 25 km NW of Victoria, BC, on Vancouver I. It is the height of land S of Malahat Ridge between Finlayson Arm — Squally Reach and Shawnigan Lk. The Esquimalt-Nanaimo Ry was completed from Victoria to Nanaimo in 1886 using the pass to bypass Malahat Ridge. A paved road now also crosses it. Malahat is an Indian word meaning "place where one gets bait." GLEN BOLES

**Malartic**, Qué, Town, pop 4833 (1981c), inc 1939, is located 70 km E of ROUYN-NORANDA in northwestern Québec. It was established by Québec's Ministry of Mines, which hoped to end the proliferation of squatter camps that had sprouted up around the gold mines in this part of the Abitibi region during the gold rush of the mid-1930s. The town was named after the first gold mine, which was possibly named after the comte de Malartic, Montcalm's aide-de-camp. It developed near 3 of the largest gold mines in Québec — the Canadian Malartic, E Malartic and Malartic goldfields — and the population reached its peak (5983) in the early 1950s. Malartic's economic and urban structure was deeply affected in the 1960s by the decline in the region's mining industry and the closure of the major mines. Despite these problems, the town lives on, its economy still based on its gold mines. The Malartic regional mining museum chronicles the history of the town and valley during the mining boom.

BERNOIT-BEAUDRY GOURD

**Malaspina Expedition**, 1789-92. The successful scientific expeditions of James Cook and the comte de Lapérouse to the Pacific Ocean caused the Spanish to desire similar international acclaim. Through scientific investigation they also hoped to consolidate their claims to sovereignty over territories in the Pacific. Alejandro Malaspina and José Bustamante y Guerra received command of 2 specially prepared corvettes, *Descubierta* and *Atrevida*, whose crews were supplemented by scientists and artists. The expedition sailed from Spain on 30 July 1789 and rounded Cape Horn. Malaspina planned to investigate the Sandwich Is [Hawaiian Is], but new orders from Spain redirected his ships to the NORTHWEST COAST. The 1789 NOOTKA SOUND CONTROVERSY with the British and persisting beliefs in the existence of a NORTHWEST PASSAGE led to the side trip.

In search of the fabled STRAIT OF ANIAN, Malaspina sailed to 59° N lat. On 27 June 1791 the corvettes entered Mulgrave Sound (Yacutat Bay, Alaska). Reconnaissance dashed hopes that a Northwest Passage was accessible by this route, but the scientists collected samples and studied Tlingit culture. Malaspina coasted farther west along the Alaskan shore before heading south to Nootka Sound. Arriving 12 Aug 1791, the scientists employed the Spanish post at Yuquot (Friendly Cove) as a base from which to explore, chart, collect minerals and plants and observe the Nootka.

Returning to Mexico, Malaspina made recommendations leading to the 1792 voyage of the SUTIL and MEXICANA. He visited the Marianas, the Philippines, New Zealand and Australia

before returning via S America to Spain. Although the expedition was highly successful, Malaspina's ensuing troubles with the Spanish court led to suppression of a 7-volume work designed to glorify the Spanish exploits; the account did not reach print until the late 19th century. See SPANISH EXPLORATION. CHRISTON I. ARCHER  
Reading: Iris H.W. Engstrand, *Spanish Scientists in the New World* (1981).

**Malaysians** Malaysia was constituted in 1963 out of the Federation of Malaya and the former British colonies of Singapore (until 1965), Sarawak and North Borneo (Sabah). The population of Malaysia includes the Malays (about 46%), Chinese (about 35%) and Indians (about 9%). The term "Canadian Malaysian" therefore does not indicate membership of a discrete ethnic, linguistic or religious community, but simply a shared experience of national origin.

**Migration and Settlement** Between 1973 and 1980, 4721 Malaysians immigrated to Canada. Of these, 1597 (or 33.5%) planned to reside in Ontario; 1539 (32.6%) in BC; 801 (17%) in Alberta; 368 (7.8%) in Québec; and 237 (5%) in Manitoba. The largest single occupational group was clerical, followed by fabricating, assembling and repairing; science, engineering and math; medicine and health; managerial or administrative; service; entrepreneurial; sales; and construction.

**Group Maintenance** Although Malaysians do not belong to a single ethnic community, there is a sense of cultural identity (shared to a considerable extent with Singaporeans), which results from the fusion in the Malay world, over many centuries, of influences from China and India. It is this sense of common background that distinguishes Canadian Malaysians from other Asian communities in Canada. Community organizations in Toronto and Vancouver and Malaysian student associations on several university campuses encourage an awareness of aspects of Malaysian cultural traditions.

Since English is one of the languages widely used in Malaysia, assimilation of immigrants appears most likely to occur in anglophone Canada. H.E. WILSON

**Maliseet** (Malecite) have long been associated with the SAINT JOHN R in NB and Maine, and early extended as far as the St Lawrence. These Algonkian (Algonquian) speakers referred to themselves as *Welustuk* ("of the beautiful river"). Their lands and resources are bounded on the E by MICMAC, on the W by Passamaquoddy and Penobscot. Local histories depict many encounters with IROQUOIS and MONTAGNAIS. Contact with European fisher-traders in the early 17th century and with specialized fur traders developed into a stable relationship which lasted for nearly 100 years. Despite devastating population losses to European diseases, these Atlantic hunters held on to coastal or river locations for hunting, fishing and gathering, and concentrated along river valleys for trapping.

With the general unrest as European hostilities concentrated between Québec and PORT ROYAL, and as increasing sporadic fighting and raiding took place on the lower Saint John (English against the French), the eastern fur trade faltered. Maliseet women took over a larger share of the economic burden and began to farm, raising native crops which previously had been grown only S of Maliseet territory. Men continued to hunt, though with limited success, but they proved useful to the French as support against the English, and for a short period during the late 17th and early 18th centuries Maliseet men became virtually a military organization. With the gradual cessation of hostilities in the first quarter of the 18th century, and with the beaver supply severely diminished, there was little possibility of a return to traditional lifeways. Native agriculture on the

river was curtailed by the coming of white settlers; all the farmland along the Saint John R, previously occupied by Maliseet family territories, was taken, leaving the native peoples virtually displaced persons. With evidence of widespread hunger and wandering, pressure came to bear on government officials who established the first INDIAN RESERVES during the 19th century, at Oromocto, Fredericton, Kingsclear, Woodstock and Tobique.

As late as the 19th century, the Maliseet practised some traditional crafts, especially building WIGWAMS and birchbark CANOES, but major shifts had taken place during the previous 2 centuries as Maliseet acquired European cutting tools and containers, muskets and alcohol, foods and clothing. In making wood, bark or basketry items, or in guiding, trapping and hunting, the Maliseet people have spoken of themselves as engaged in "Indian work." The growth of potato farming in Maine and NB created a market for Maliseet baskets and containers. Other Maliseet work in pulp mills, construction, nursing, teaching and business.

The Maliseet of NB experience problems of unemployment and poverty common to native people elsewhere in Canada, but they have evolved a sophisticated and intricate system of decision making and resource allocation, especially at Tobique where they support community enterprises in economic development, scouting and sports. Some are successful in middle and higher education and have important trade and professional standings; individuals and families are prominent in native and women's rights; and others serve in provincial and federal native organizations, in government and in community development. See also NATIVE PEOPLE: EASTERN WOODLANDS and general articles under NATIVE PEOPLE. TOM McFEAT

Reading: A.G. Bailey, *The Conflict of European and Eastern Algonkian Cultures, 1504-1700* (2nd ed, 1969); H.F. McGee, ed, *The Native Peoples of Atlantic Canada* (1984); W. Mechling, *Malecite Tales* (1914); W.D. and R.S. Wallace, *The Malecite Indians of New Brunswick* (1957).

**Malloch, Archibald Edward**, surgeon (b at Brockville, Canada W 14 June 1844; d at Hamilton, Ont 6 Aug 1919). Educated at Queen's and at U of Glasgow, where he graduated in 1867, he served as house surgeon for Joseph Lister when the latter was beginning to publish accounts of antiseptic surgery. He became a firm believer in the method and, after his return to Canada in 1869, was likely the first in the country to use it in its fully developed form. A skillful surgeon, he was not prominent outside medicine, nor was he active in medical circles outside his practice in Hamilton. His only formal relationship with a medical school — as professor of anatomy at Victoria College, Toronto — lasted less than 2 years. He was not as vociferous an advocate of antiseptic surgery as he might have been. By the 1890s, however, most Canadian surgeons were using antiseptics or its successor, asepsis. CHARLES G. ROLAND

**Malone, Maurice Joseph**, hockey player (b at Sillery, Qué 28 Feb 1890; d at Montréal 15 May 1969). He turned professional with Québec Bulldogs in 1909, playing 7 years with them, 4 with MONTREAL CANADIENS and 2 with Hamilton Tigers. Some of his scoring feats have never been matched. He once scored 9 goals in a game, but it was his 7 goals on 31 Jan 1920 that was still the NHL record in 1984. He scored 142 goals in 125 NHL games; a total of 338 goals in 271 professional games. JAMES MARSH

**Malpeque**, PEI, UP, pop 160 (1981c), is a compact, attractive village located on the northeastern shore of MALPEQUE BAY, 60 km NW of Charlottetown. First called *Makpaak* ("the big water") by the Micmac, the current name is an Acadian modification. When Samuel Holland surveyed the Island after the British CONQUEST of

New France, he believed that through the bay's excellent anchorage a major colonial seaport would develop in the area. Thus, he established the capital of Prince County in what is now the tiny coastal community of Princetown. With its crossroads development, Malpeque became the stronger of the 2 communities. However, the development of the Malpeque Bay area was cut short by sandbars at the bay's entrance that discouraged shipping. Because of the navigability of Bedeque Bay on the county's southern shore, both communities lost ground to SUMMERSIDE. Today, most of the residents of Malpeque are farmers and fishermen, and oysters are the area's most important product. W.S. KEIZER

**Malpeque Bay** is a picturesque bay so deeply indented into the NE coast of PEI that its southern edge lies within 7 km of the S coast of the Island. Aptly named from the Micmac word *makpaak*, ie, "the big water," it contains several islands and many small rivers and creeks flow into it. Its waters support a thriving shellfish industry, most notably its world-famous cultivated oysters. These are grown on "farms," where the young seed oysters are sown and later harvested from the mud on the bottom of the bay with long-handled, rake-ended tongs that are worked like scissors. P.C. SMITH

**Malpractice** is intentional or negligent failure by any professional, eg, doctor, lawyer, accountant, to meet the standards of reasonable competence in his field. These standards are set taking into account the circumstances in which the professional is acting. Specialists must meet the higher standards of a reasonably competent specialist; beginners must meet ordinary standards, inexperience being no excuse. Professionals are expected to keep up-to-date and to act only within the sphere of their own competence, and those acting otherwise will be judged according to the standards of practitioners by whom the task should have been undertaken. Québec's Civil Code contains a standard similar to that existing in the common law of TORT which, with the law of contract, governs malpractice in the other provinces. The damages awarded in malpractice suits vary enormously, depending on the loss to the plaintiff. Generally, they are much higher in the US than in Canada.

MARGARET SOMERVILLE

**Maltese** There are over 50 000 people of Maltese origin in Canada, most of whom emigrated after WWII from the islands of Malta (pop 315 000) and Gozo, which are situated in the Mediterranean, S of Sicily. Maltese trace their ethnic and linguistic origins to the Phoenicians. In 58 AD, when the Apostle Paul was shipwrecked on Malta, they were converted to Christianity. The Maltese, who speak a Semitic tongue, celebrate their national day on March 31. In Canada the Maltese settled first in Ontario; although significant immigration occurred in 1840, around 1907, and between 1918 and 1920, there were few Maltese in Canada until after WWII. Between 1946 and 1981 over 18 000 came to Canada. Toronto has the largest Maltese community (some 25 000) with a heavy concentration around Dundas St W, where the Maltese Franciscan fathers have built a church. Maltese clubs and societies are located in this area. Other Maltese communities are found in Ontario and in Montréal, Winnipeg and Vancouver.

GEORGE BONAVIA

**Mammals**, including humans, are generally regarded as the most advanced of VERTEBRATES (animals with a backbone and spinal chord or, at least, a notochord). Their large and complex brains allow for learning, quick reactions and flexible behaviour. The word is derived from the milk-producing mammary glands unique to the class Mammalia.

Major Groups of Mammals in Canada (excluding humans) Numbers refer to native species		
Order	Family	Examples
Marsupialia	Didelphidae (1)	opossum
Insectivora	Soricidae (16)	shrews
	Talpidae (6)	moles
Chiroptera	Molossidae (1)	free-tailed bat
	Vespertilionidae (c 18)	common bats
Carnivora	Canidae (6)	dog, wolf, fox
	Felidae (3)	cats
	Mustelidae (c 14)	weasel, skunk, otter, wolverine
	Odobenidae (1)	walrus
	Otariidae (3)	eared seals
	Phocidae (c 7)	hair seals
	Procyonidae (1)	raccoon
	Ursidae (3)	bears
Cetacea:		
Odontoceti	Delphinidae (c 11)	dolphins
	Monodontidae (2)	white whale, narwhal
	Phocoenidae (2)	porpoises
	Physeteridae (2)	sperm whales
	Ziphiidae (c 8)	beaked whales
Mysticeti	Balaenidae (2)	right or baleen whales
	Balaenopteridae (5)	fin whales
	Eschrichtiidae (1)	grey whale
Perissodactyla	Equidae*	horse
Artiodactyla	Antilocapridae (1)	pronghorn
	Bovidae (5)	bison, sheep, muskox, goat
	Cervidae (5)	moose, deer, caribou
	Suidae*	hog
Rodentia	Aplodontidae (1)	mountain beaver
	Arvicolidae (c 23)	muskrat, vole, lemming
	Capromyidae*	nutria or coypu
	Castoridae (1)	beaver
	Cricetidae (c 7)	native mice
	Dipodidae (4)	jumping mice
	Erethizontidae (1)	porcupine
	Geomysidae (2)	pocket gophers
	Heteromyidae (3)	pocket mice, kangaroo rats
	Muridae*	Old World mice and rats
	Sciuridae (c 22)	squirrel, marmot
Lagomorpha	Leporidae (2)	hare, rabbit
	Ochotonidae (5)	pika

\*Introduced or domesticated

Although Canada has a rich and diverse mammalian fauna, few species are uniquely Canadian. These include Vancouver I marmot (*M. vanancouverensis*), Gaspé shrew (*S. gaspensis*) and Ungava lemming (*Dicrostonyx hudsonicus*). Our known fauna is shared with Greenland, Alaska and the northern US. Of the N American terrestrial mammal fauna, many reach their northern limits of distribution somewhere in Canada. Our marine and arctic mammals tend to consist of northern circumpolar species. There has been an interchange of species with the Old World across the Bering Strait that includes caribou (reindeer), wapiti, moose, bears, weasels, walrus, various rodents, etc. Other species have made their way to Canada from the neotropics. These include the opossum, raccoon and porcupine. One of the truly endemic species of N America, the pronghorn, occurs in the plains regions of Canada and the US. Fur-bearing mammals figured prominently in the early years of exploration and settlement of Canada and have been an economically important resource throughout the years. The HUNTING of big-game species has also contributed significantly to the Canadian economy. Compared with most nations, Canada is particularly fortunate in still having substantial wilderness areas providing

suitable habitats for many mammals and therefore Canada has fewer rare or endangered species than most countries. As lands are being more and more exploited by ever-increasing human populations, the safeguarding of native mammalian fauna through wise conservation becomes increasingly important and critical.

R L. PETERSON

Reading: A.W.F. Banfield, *The Mammals of Canada* (1977).

**Mance, Jeanne**, founder of the HÔTEL-DIEU hospital at Montréal (bap at Langres, France 12 Nov 1606; d at Montréal 18 June 1673). When young and unusually interested in foreign missions, Jeanne Mance was introduced to Mme de Bullion (who dedicated a small fortune to establishing a hospital at Montréal) and to the Société Notre-Dame de Montréal and its associates. Mance joined the association, which planned a utopian settlement on Montréal I, and sailed in 1641 with Maisonneuve and the first settlers for VILLE-MARIE, spending her first winter at the Sillery reserve. The hospital was not completed until 1645 but there were patients from 1642. She returned to France in 1645 to make new financial arrangements and again in 1657 after fracturing her arm. She came back claiming to have been miraculously healed and bringing Sisters Hospitaliers from La Flèche to staff her hospital. CORNELIUS J. JAENEN

**Mandel, Eli**, author (b at Estevan, Sask 3 Dec 1922). The son of Russian Jewish immigrants, he was raised on the Prairies during the Depression, an experience that left its mark on his poetry. Mandel has taught English and creative writing at the universities of Alberta, Victoria, Toronto and York University. He is the author of 10 books of poetry (including *Dreaming Backwards*, 1981; *Life Sentence*, 1981) and several works of criticism (*Silent Speaking Words*, 1967; *Another Time*, 1977). Mandel's *An Idiot Joy* (1967) won the Gov Gen's Award for poetry. The title, which comes from Saul Bellow's *Herzog*, sums up Mandel's view of his role as an obsessive, omniscient wordsmith, capturing his own life experiences in language. SHARON DRACHE

**Manery, Jeanne Fisher**, biochemist (b at Chesley, Ont 6 July 1908). She was educated at U of T, did postdoctoral studies at the universities of Rochester and Harvard, was a demonstrator in the physiology department, U of T (1932-35) and then demonstrator and special lecturer in the biochemistry department (1940-48). In 1948 she was appointed part-time assistant professor and in 1953 full-time, a first for a woman in that department. A full professor in 1965, she retired in 1976 but remained active in teaching, research, publishing and administration. An expert in the physiology of transport into and out of cells of water and the ions essential for many cellular functions, especially the generation of energy, Manery has succeeded in isolating and characterizing the enzyme of the cellular membrane which catalyses cation transport, work described in numerous scientific papers in journals and monographs. Manery's honours in recognition of her scientific accomplishments include an honorary doctorate (1983) from Memorial U. She has had a long association with the Royal Canadian Institute, of which she was president in 1980. Her scientific work and her recent feminist endeavours brought women a new status in her field. ROSE SHEININ

**Manicouagan Réservoir**, 1942 km<sup>2</sup>, elev 360 m, located in southeastern Québec about 140 km from the Labrador border, is the second-largest lake in Québec and was created by a meteorite millions of years ago. The circular-shaped reservoir contains a centrally situated island, capped by 952 m Mont de Babel. Fed by the Rivières Hart Jaune and Mouchalagane, it drains S, via the 250 km Rivière MANICOUAGAN, and empties into the St Lawrence R near BAIE-COMEAU Hydro-

electric developments have resulted in the damming of the water flow at the 214 m high Daniel Johnson (Manicouagan 5) Dam, one of the world's largest, situated 40 km S of the reservoir (1968). The availability of power has attracted several industries over the years, yet the area still retains its attraction for canoeists, fishermen and wildlife enthusiasts. Its name is possibly of Cree origin and might mean "where there is bark" (for canoe making). It could also be a French form of *Manicouaganistiku*, meaning "drinking place." The lake appears on Jonathan Carver's map of Québec (1776) as Lk Asturagamicook, and is shown to be drained by the Manicouagan or Black R.

DAVID EVANS

**Manicouagan River**, 455 km long, rises in E-central Québec near the Labrador border and flows S to the ST LAWRENCE R. near BAIE-COMEAU. It drains a rugged, heavily forested watershed of 45 900 km<sup>2</sup>, and has been an important artery for moving logs S to supply pulp and paper mills at its mouth. Several hydroelectric power plants (Manic 1 completed 1967, 184 000 Kw; Manic 2 completed 1967, 1 015 000 Kw; Manic 3 completed 1976, 1 183 200 Kw; and Manic 5 completed 1971, 1 292 000 Kw) have harnessed the river's power, some of which is carried under the St Lawrence by a submarine cable to the Gaspé area. Iron ore is mined in the river's upper reaches. The name may come from an Indian word meaning "where there is bark" (ie, for making canoes).

DANIEL FRANCIS

**Manitoba** is the "keystone" province located in the heart of Canada. Created by the Manitoba Act of 1870, the province was at first a tiny rectangle comprising little more than the RED RIVER COLONY radiating from the juncture of the Red and Assiniboine rivers. After lengthy and often difficult provincial-federal negotiations the boundaries were extended in 1881 and 1884. In 1912 they were finally set at 49° to 60° N and 101°30'–102° W to 95° W, angling NE at about 53° N on the E boundary. For 200 years the FUR TRADE dominated the area known as RUPERT'S LAND. Settlement, particularly from eastern Canada and eastern Europe, eventually created a sound agricultural tradition. Postwar political and economic efforts have enabled the economy to diversify industry and develop primary resources, while maintaining agricultural strength.

#### Land and Resources

The regions of Manitoba are derived chiefly from its landforms. Since the retreat of the continental ice sheet some 8000 years ago, many physical forces have shaped its surface into 4 major physiographic regions: Hudson Bay Lowland, Precambrian Upland, Lake Agassiz Lowland and Western Upland. Manitoba provides a

**Manitoba**

*Capital:* Winnipeg  
*Motto:* None  
*Flower:* Prairie crocus  
*Largest Cities:* Winnipeg, Brandon, Thompson, Portage la Prairie, Flin Flon  
*Population:* 1 026 000 (1981c); rank fifth, 4.2% of Canada; 70.9% urban; 19.7% rural  
 nonfarm; 9.5% farm; 1.9 per km<sup>2</sup> density; 0.8% decrease from 1976-81; Jan 1984e pop, 1 051 500  
*Languages:* 86% English; 5.1% French; 10.9% Other  
*Entered Confederation:* 15 July 1870  
*Government:* Provincial — Lieutenant-Governor, Executive Council, Legislative Assembly of 57 members; federal — 6 senators, 14 members of the House of Commons  
*Area:* 650 087 km<sup>2</sup>; including 101 592 km<sup>2</sup> of inland water; 6.5% of Canada  
*Elevation:* Highest point — Baldy Mountain (832 m); lowest point — Hudson Bay shore  
*Gross Domestic Product:* \$13.9 billion (1982e)  
*Farm Cash Receipts:* \$1.7 billion (1982)  
*Electric Power Generated:* 22 084 154 MWh (1983)  
*Sales Tax:* 6% (1984)

corridor for the Red, Assiniboine, Saskatchewan, Nelson and Churchill rivers. Three large lakes, Winnipeg, Winnipegosis and Manitoba, cover much of the Lake Agassiz Lowland. They are the remnants of Lake AGASSIZ, which occupied S-central Manitoba during the last ice age. The prolonged duration of this immense lake accounts for the remarkable flatness of one-fifth of the province, as 18-30 m of sediments were laid on the flat, preglacial surface. Antecedent streams, such as the Assiniboine, Valley and Swan rivers, carved the SW part of the province (Western Upland) into low plateaus of variable relief, which with the Agassiz Lowland provide most of Manitoba's arable land. The Precambrian Upland is composed of hard granite and other crystalline rocks that were subject to severe glacial scouring during the Ice Age; its thin soil, rock outcrop and myriad lakes in rock basins are inhospitable to agriculture but are amenable to hydroelectric-power sites, freshwater fishing, metal mines and some forestry. Flat sedimentary rocks underlie the Hudson Bay Lowland, and the climate is extremely cold. Little development or settlement exists other than at CHURCHILL, Manitoba's only saltwater port. A line drawn from SE Manitoba to Flin Flon on the W boundary separates the arable and well-populated section to the S and W from the sparsely inhabited wilderness to the N and E. The latter comprises about two-thirds of the area of the province.

**Geology** The bedrock underlying the province varies from ancient Precambrian (Archean) to young sedimentary rocks of Tertiary age. The former has been identified as 2.7 billion years old, the oldest on Earth, and forms part of the Canadian SHIELD, a U-shaped band of Precambrian rocks tributary to Hudson Bay. It consists principally of granites and granite gneisses in contact with volcanic rocks and ancient, metamorphosed sedimentary rocks. Contact zones often contain valuable minerals, including nickel, lead, zinc, copper, gold and silver — all of which are mined in Manitoba. Along the flanks of and overlying the ancient Precambrian rocks are sedimentary rocks ranging from Paleozoic to Tertiary age. Lake Agassiz Lowland comprises a surface cover of lacustrine sediments superimposed on early Paleozoic rocks of Ordovician, Silurian and Devonian age, from which are

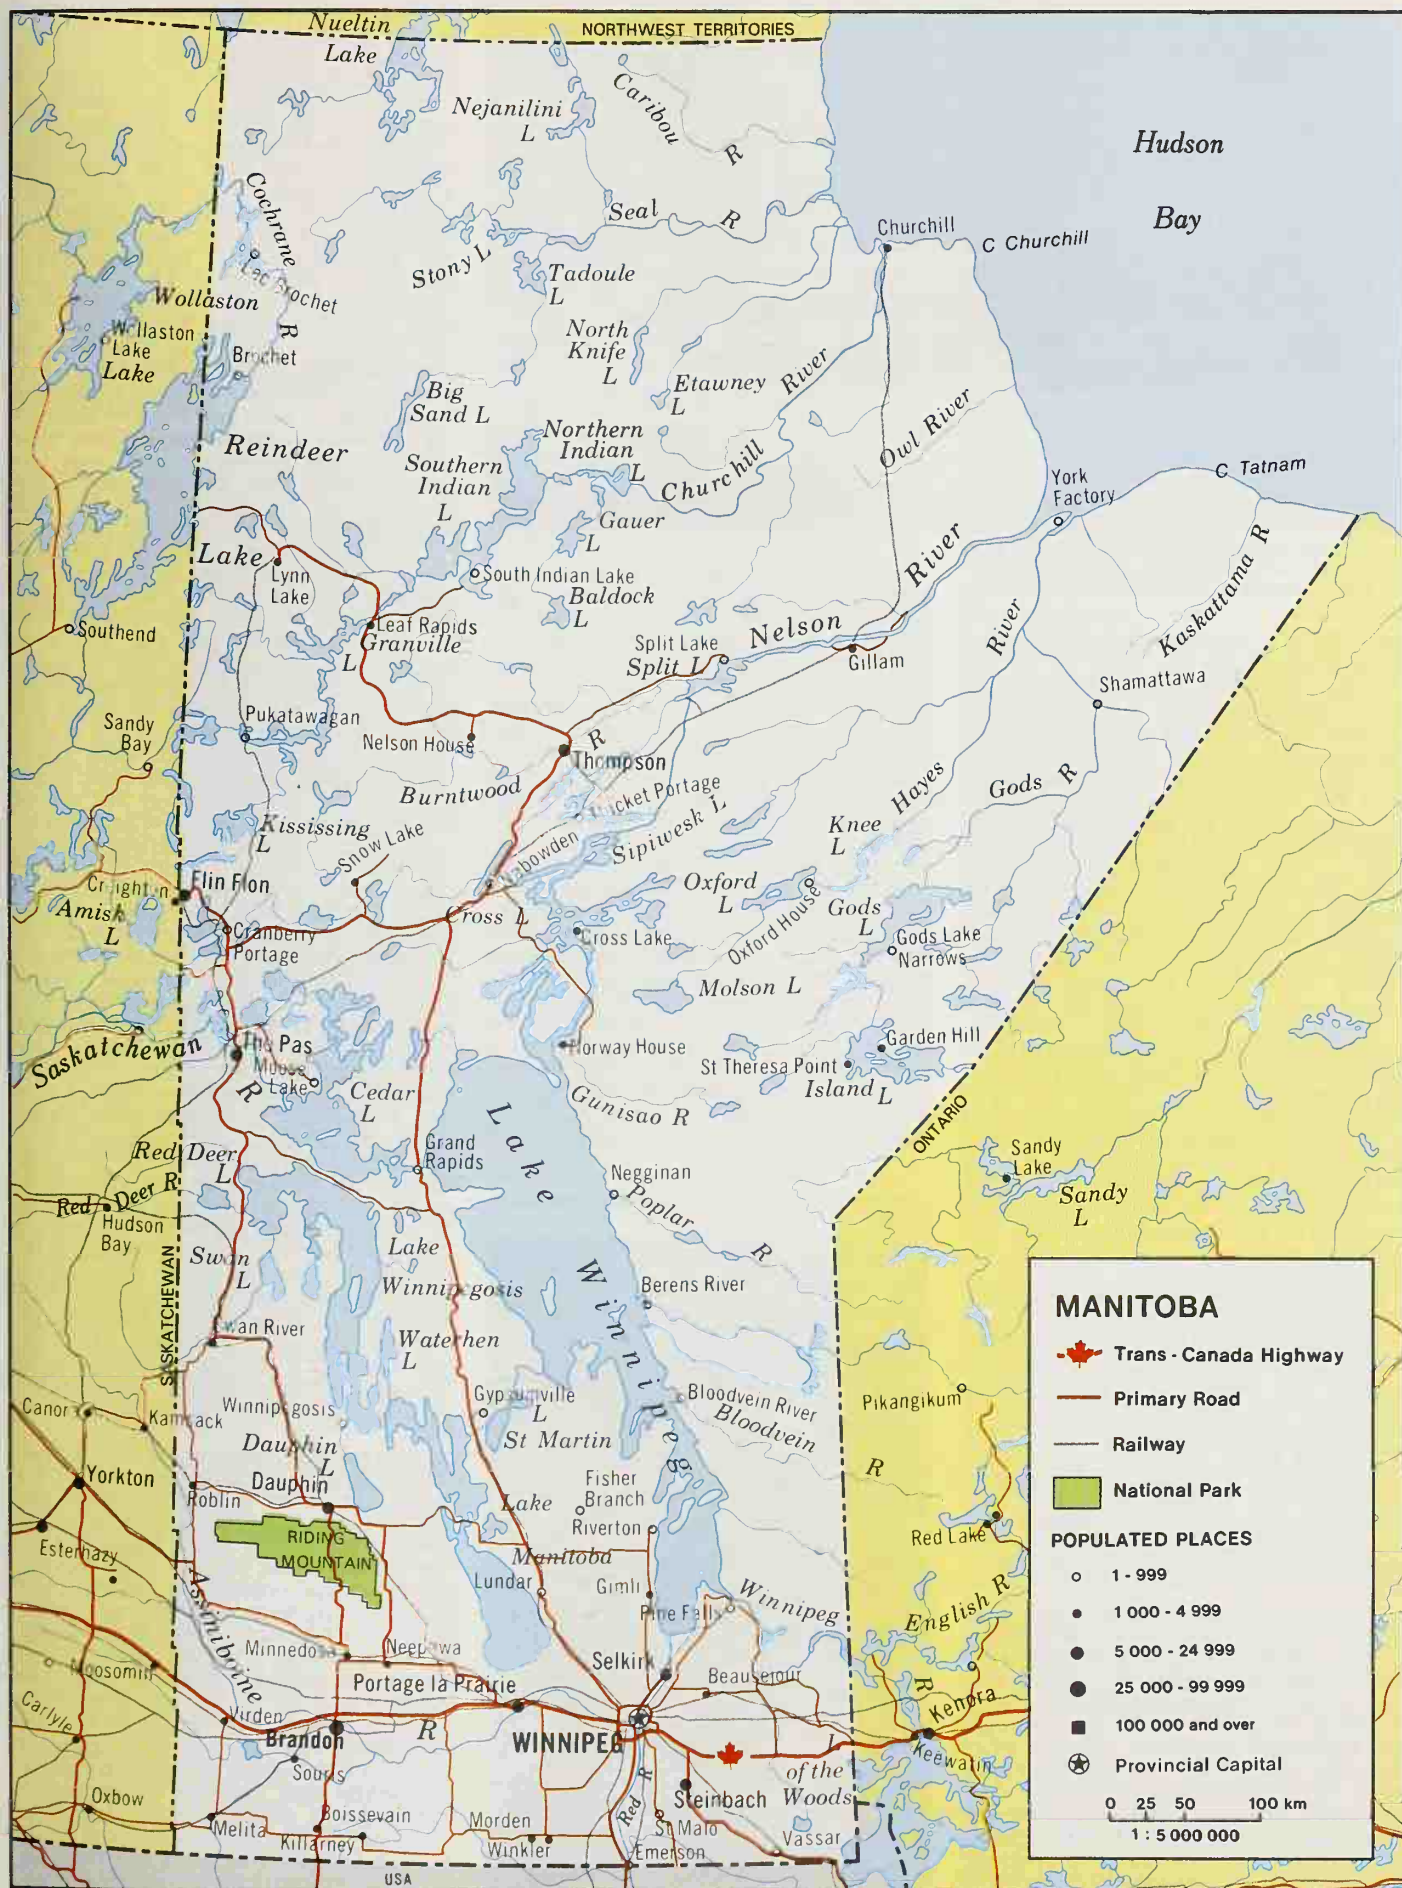

mined construction limestone, gypsum, clay, bentonite, sand and gravel. In favourable structures petroleum has also been recovered from rocks of Mississippian age.

West of Agassiz Lowland rises an escarpment of Cretaceous rocks, which comprise the surface formations of the Western Upland. For long periods the escarpment was the W bank of Glacial Lk Agassiz. East-flowing rivers such as the Assiniboine, the Valley and the Swan once carried the meltwaters of retreating glaciers, eroding deep valleys (spillways) that opened into this lake. The former lake bottom and the former valleys of tributary streams were veneered with silts and clays, which today constitute the most fertile land in western Canada. Both the Western Upland and the bed of Lk Agassiz comprise the finest farmlands of Manitoba. In the SW the geologic structures of the Williston Basin in N Dakota extend into Manitoba and yield small amounts of petroleum. A vast lowland resting on undisturbed Paleozoic sediments lies between the Precambrian rocks of northern Manitoba and Hudson Bay. Adverse climate, isolation and poorly drained peat bogs make this region unsuitable for agriculture.

**Terrain** Minor terrain features of Manitoba were formed during the retreat of the Wisconsin Glacier at the close of the last ice age. The rocks of the Shield were severely eroded, leaving a marshy, hummocky surface threaded with a myriad of lakes, streams and bogs. Relief is rolling to hilly. Much of Agassiz Lowland, the largest lacustrine plain in N America (286 000 km<sup>2</sup>), is suitable for irrigation. Much is so flat that it requires an extensive drainage system. Its margins are identified by beach ridges. The Western Upland is now covered by glacial drift. Rolling ground moraine broken in places by hilly end moraines has a relief generally favourable to highly productive cultivated land.

**Drainage** Since southern Manitoba is lower than the regions to the W, E and S, the major rivers of western Canada flow into it. Including their drainage basins, these are the SASKATCHEWAN RIVER (336 000 km<sup>2</sup>); the RED and ASSINIBOINE (285 000 km<sup>2</sup>) and WINNIPEG rivers (138 000 km<sup>2</sup>). Lakes Winnipeg, Manitoba and Winnipegosis receive the combined flow of these basins. In turn the water drains into Hudson Bay via the NELSON R. These streams together with the

CHURCHILL, HAYES and other rivers provide a hydroelectric potential of 9748 MW.

**Climate, Vegetation and Soil** Situated in the upper middle latitudes ( $49^{\circ}$  N to  $60^{\circ}$  N) and at the heart of a continental landmass, Manitoba experiences large annual temperature ranges: very cold winters and moderately warm summers. The southward sweep of cold, dry arctic and maritime polar air masses in winter is succeeded by mild, humid maritime tropical air in summer. Nearly two-thirds of the precipitation occurs during the 6 summer months, the remainder appearing mostly as snow. The frost-free period varies greatly according to local conditions, but as a general rule the average 100-day frost-free line extends from Flin Flon SE to the corner of the province. Spring comes first to the Red R Valley, which has a frost-free period of about 120 days, and spreads to the N and W. As a result, the mean number of growing degree days (above  $6^{\circ}\text{C}$ ) varies from 3000 to 2000 within the limits defined. Snowfall tends to be heaviest in the E and diminishes westward. Around Winnipeg the average snowfall is 131 mm per year. Fortunately, 60% of the annual precipitation accompanies the peak growing period for grains: May, June and July. Late Aug and early Sept are dry, favouring the harvest of cereal grains.

Subarctic conditions prevail over N Manitoba. Churchill occupies a position on Hudson Bay where abnormally cold summers are induced by sea temperatures. Manitoba's climate is best understood with reference to air masses. During the winter, low temperatures and humidities are associated with the dominance of cA and cP air. During spring abrupt seasonal changes introduce mT air from the S, which is unstable and very warm. The usual sequence of mid-latitude "lows" and "highs" brings frequent daily temperature changes. Some Pacific air moves E, moderating at intervals the extreme cold of winter.

Manitoba's natural vegetation ranges from open grassland and aspen in the S, to mixed forest in the centre, typical boreal forest in the N and bush-tundra by Hudson Bay. In the S high evaporation rates discourage the growth of trees, which are replaced by prairie. Both tall-grass and mixed-grass species were extensive before settlement. Elm, ash and Manitoba maple grow along stream courses, and oak grows on dry sites. With increase in latitude and reduced evaporation, mixed broadleaf forest replaces parkland. The northern half of the province is characteristically boreal forest, consisting of

white and black spruce, jack pine, tamarack, aspen and birch. This pattern continues with decreasing density nearly to the shores of Hudson Bay, where the cold summers and short growing period discourage all but stunted growth of mainly spruce and willow and tundra types of moss, lichens and sedges. Spruce, fir and pine are processed for lumber and large pulp mills are found at Pine Falls and The Pas.

In general the province's soil types correlate closely with the distribution of natural vegetation. The following soil descriptions are in order of decreasing agricultural value. The most productive are the black soils (chernozems), corresponding to the once dominant prairie grassland of the Red R Valley and SW Manitoba. They differ in texture from fine in the former to medium in the latter. Coarse black soils are found in the old Assiniboine delta and the Souris Valley, the former extending from Portage la Prairie to Brandon. Sand dunes are evident in places. In areas of transition to mixed forest, degraded black soils and grey-wooded soils are common, notably in the area from Minnedosa to Russell S of Riding Mountain. Large areas of the former Lk Agassiz, where

drainage is poor, are termed "degraded renzina" because of high lime accumulation. Soils derived from the hard granites and other rocks of the Shield, typically covered with coniferous forest, are described as grey wooded, podsol and peat; they are rated inferior for agriculture.

**Resources and Conservation** Manitoba's principal resource is fresh water. Of the 10 provinces it ranks third, with 101 592 km<sup>2</sup> in lakes and rivers, one-sixth its total area. The largest lakes are WINNIPEG (24 390 km<sup>2</sup>), WINNIPEGOSIS (5374 km<sup>2</sup>) and MANITOBA (4659 km<sup>2</sup>). Other freshwater lakes of more than 400 km<sup>2</sup> are SOUTHERN INDIAN, MOOSE, CEDAR, ISLAND, GODS, CROSS, PLAYGREEN, DAUPHIN, GRANVILLE, Sipiwek and Oxford. Principal rivers are the Nelson, which drains Lk Winnipeg, and the Red, Assiniboine, Winnipeg, Churchill and Hayes. Lk Winnipeg is the only body of water used today for commercial transportation, but the Hayes, Nelson, Winnipeg, Red and Assiniboine rivers were important during the fur-trade and early settlement eras. The network of streams and lakes today is a source of developed and potential hydroelectric power; its installed generating capacity is 3644 MW. Possessing 70% of the hydroelectric potential of the Prairie region, Manitoba promises to become the principal contributor to an electric grid that will serve Saskatchewan and Alberta as well as neighbouring states of the US. Flooding along the Red R and its principal tributaries, the Souris and Assiniboine, has affected towns as well as large expanses of agricultural land. Major flood-control programs have been undertaken, beginning with the Red R Floodway and control structures completed in 1968. A 46 km diversion ditch protects Winnipeg from periodic flooding. Upstream from Portage la Prairie a similar diversion was built between the Assiniboine R and Lk Manitoba. Associated control structures include the Shellmouth Dam and Fairford Dam. Towns along the Red R are protected by dikes.

Agricultural land is the province's second major resource, with over 4 million ha in field crops in addition to land used for grazing and wild-hay production. Based on "census value added," agriculture leads by far all other resource industries; mining follows in third place after hydroelectric power generation. Nickel, copper, zinc and gold account for about 75% by value of all minerals produced. The fuels, mainly crude petroleum, are next, followed by cement, construction stone, sand and gravel. Of the nonmetallics, peat and quartz are important.

Most of Manitoba's productive forestland belongs to the Crown. The volume of wood cut is approximately 1 784 000 m<sup>3</sup> annually, from which lumber, plywood, pulp and paper are produced. Manitoba's freshwater lakes yield large quantities of fish; the leading species by value are pickerel, whitefish, perch and sauger. Hunting and trapping support many native people.

Conservation of resources has been directed mainly to wildlife. Fur-bearing animals are protected by quotas, by licensing trappers and allotting trap lines. Hunting is restricted by a series of wildlife Acts, which began in 1870. Of 270 kinds of bird common to the province only 12 lack legal protection. In 1961 a system of wildlife management areas was established, consisting of 47 tracts of crown land encompassing 6.8 million ha to provide protection and management of game birds and animals. Since Manitoba is on the staging route of the North American Flyway, many migratory birds use the protected areas. Hunting of all species of game is totally restricted or closely managed in management areas, including the shoreline of Hudson Bay, a natural breeding ground for POLAR BEARS. Hunting and fishing are also closely controlled in provincial parks and forest reserves. Forest conservation is limited to fire pro-

Manitoba landscape west of Winnipeg (photo by J.A. Kraulis).

tection, insect control and controlled cutting. Surveillance of 233 000 km<sup>2</sup> of forestland by aircraft and from numerous widely dispersed fire towers reduces significantly the incidence and spread of forest fires. Insects and disease are controlled by aerial spraying, tree removal and regulated burning. Among the more virulent pests are jack pine budworm, spruce budworm, aspen tortrix, forest tent caterpillar and birch beetle. Winnipeg is fighting desperately to contain Dutch elm disease. In 1980, 2.4 million seedlings for reforestation, mainly jack pine, red pine and white spruce, were produced at Hadashville, and reforestation is actively pursued by producing nursery stock — annual plantings average 3000 ha. To ensure future supplies of commercial timber, operators must make annual cuttings by management units on a sustained yield basis.

#### People

Between 1682, when YORK FACTORY at the mouth of the Hayes R was established, and 1812, when the first Selkirk settlers came to Red R, settlement consisted of fur-trading posts established by the HUDSON'S BAY CO, the NORTH WEST CO and numerous independent traders. As agriculture spread along the banks of the Red and Assiniboine rivers, radiating from their junction, the RED RIVER COLONY was formed. In 1870 the British government paid the HBC \$1.5 million for control of the vast territory of Rupert's Land and opened the way for the newly formed Dominion of Canada to create the first of 3 Prairie provinces. Manitoba in 1870 was little larger than the Red R Valley, but by 1912 its current boundaries were set. Settlement of the new province followed the Dominion Lands Survey and the projected route of the national railway. Through the Dominion Lands Act of 1872 settlers could buy land, usually a half or quarter section, although most settled land in Manitoba was obtained under the Homestead Act and not by direct sale. By 1910 most of S Manitoba and the Interlake and Westlake areas were settled. Railway branch lines brought most settlers within 48 km (30 mi) of a loading point from which grain could be shipped to world markets. Rural population peaked in 1941, followed by a steady decline resulting from consolidation of small holdings into larger farm units, retreat from the submarginal lands of the frontier because of long, cold winters and poor soils, and the attraction of the larger cities, especially Winnipeg. Overpopulation of submarginal lands in the Interlake and the Westlake districts and along the contact zone with the Shield in the SE caused a substantial shift from the farm to the city. Hamlets and small towns have shrunk or disappeared; large supply centres are more easily reached with modern motor vehicles, and children are bused to schools in larger towns and cities. Elimination of uneconomic railway branch lines also has left many communities without services.

Manitoba's population is disproportionately distributed between the "North" and the "South." A line drawn from the lat 54° N (N of The Pas) to the SE corner of the province sharply divides the continuous settled area, containing 95% of the people, from the sparsely populated N. Settlement of the N is confined to isolated fishing stations and mining towns, scattered Indian reserves and Churchill, a far N transshipment centre on the shores of Hudson Bay.

**Urban Centres** Until 1941 the rural population component exceeded the urban. The rural population subsequently declined in absolute and relative terms until today it is 24.3% of the total. "Rural" includes farm residents and people living in towns and hamlets that have populations under 1000. Centres designated as "urban" (more than 1000) now comprise 75.7% of the total. More than half of the urban total live

in Winnipeg, which together with its satellite, Selkirk, accounts for 60% of the provincial total. WINNIPEG began in the shadow of Upper Fort Garry. In the 1860s free traders, in defiance of the HBC monopoly, located there and competed for furs. After 1870 the tiny village rapidly became a commercial centre for the Red R Colony. Located at "the forks" of the Red and Assiniboine rivers, it commanded water and land travel from the W, S and N and became the northern terminus of the railway from St Paul, Minn, in 1878. Following the decision to have the CANADIAN PACIFIC RAILWAY cross the Red R at Winnipeg (1881), the centre became the apex of a triangular network of rail lines that drew commerce from Alberta eastward, and it eventually became a crossroads for E-W air traffic. Since WWII Winnipeg has experienced modest growth and commercial consolidation in a reduced hinterland. It is the provincial centre of the arts, education, commerce, finance, transportation and government.

Although Winnipeg's pre-eminence is unchallenged, certain urban centres dominate local trading areas. BRANDON, Manitoba's second city, is a distribution and manufacturing centre for the SW, as is the smaller PORTAGE LA PRAIRIE, set in the Portage Plains, one of the richest agricultural tracts in the province. In the N, Thompson and Flin Flon service the mining industry. The major towns of Selkirk, Dauphin and The Pas were founded as fur-trading forts and today serve as distribution centres for their surrounding communities. Lynn Lake, Leaf Rapids and Bissett are small northern mining centres. A network of smaller towns in SW Manitoba fits the "central place theory" modified by the linear pattern of rail lines emanating from Winnipeg. Grain elevators approximately every 48 km (30 mi) became the nuclei of hamlets and towns. Eventually, with the advent of motor transport, branch lines were eliminated and with them many place-names that once stood for thriving communities. The present pattern is a hierarchy of central places, from hamlets to regional centres, competing to supply a dwindling farm population.

**Demographic Trends and Labour Force** Manitoba's population change was negative in 1978 and 1979. The natural increase remained nearly constant but was exceeded by outmigration for these years — the largest percentage moving to the 3 western provinces and Ontario. There was almost zero population growth in 1980, and total population for the years 1978 to 1981 remained nearly constant.

The labour participation rate is higher for men than women although the figure for women increased steadily in the years 1977 to 1981, as a reflection of an increase in the total participation rate. The unemployment rate is slightly higher for women than men. When Winnipeg is considered separately, its participation and unemployment rates are higher than those in rural areas. Compared with other provinces, Manitoba in 1981 had the third-lowest unemployment rate (6%) — following Alberta (3.8%) and Saskatchewan (4.6%).

Manitoba's employment of labour by industry exceeds the Canadian average in 7 industries: agriculture, transport, communication, utilities, trade and commerce, service industries and public administration. Agriculture has always been a large employer in the province, and the strong showing in transportation, trade and commerce accurately reflects Manitoba's "keystone" position at the heart of Canada.

**Language** The dominant "mother tongues" are English (71.7%), German (7.3%), Ukrainian (5.6%) and French (5.1%). The concentration of those reporting their "mother tongue" as English is higher in urban centres than in rural areas. The reverse is true for French, Ukrainian and German, the latter mainly because of the large

Mennonite farming population. In 1870 the Manitoba Act gave French and English equal status before the courts and in the legislature. In 1890 a provincial Act made English the only official language of Manitoba. This Act was declared *ultra vires* in 1980, and in 1984 the provincial government recognizes both English and French as equal in status. The Department of Cultural Affairs provides a program in MULTICULTURALISM, which produces foreign-language pamphlets for specific ethnic groups. In schools the *Français* program provides instruction entirely in French for Franco-Manitobians and the French-immersion program gives all instruction in French to students whose mother tongue is not French. Some schools offer instruction in the majority of subjects in a minority tongue, eg, Polish, Ukrainian, German. The mother tongues of native Indians are Saulteau, Cree, Chipewyan and Sioux. The native people of the N speak mainly Cree; Saulteau is the mother tongue of most bands in the S although English is most often spoken.

**Ethnic Composition** Of all Canadian provinces Manitoba contains the largest diversity of ethnic origins. The relative proportions are British (41.9%), GERMAN (12.4%), UKRAINIAN (11.5%), FRENCH (8.7%), native Indians (4.3%) and POLES (4.0%). British descendants have decreased proportionately since 1921 (57.5%); numerically they are strongest in urban areas, whereas the minorities are relatively more numerous in rural areas. The distribution of the larger ethnic groups, especially in rural areas, is related to the history of settlement. The Mennonites are concentrated in the southern Red River Valley around Steinbach and Winkler; the Ukrainians and Poles live in the Interlake district and along the frontier. Many French live south of Winnipeg close to the Red R. Those of ICELANDIC origin are found around the SW shore of Lk Winnipeg. Native Indians live mainly on scattered reserves, primarily in central and N Manitoba, although some have moved to a very different life-style in Winnipeg.

**Religion** To some extent religious denominations reflect the pattern of ethnicity. Three groups comprise more than half the population: UNITED CHURCH (23.7%), ROMAN CATHOLIC (26.5%), ANGLICAN (10.6%). Most Ukrainians are members of the Ukrainian Catholic (4.8%) and Greek Orthodox (2.6%) churches. Those of German and Scandinavian backgrounds support mainly the Lutheran faith (5.8%) and 6.6% are Mennonite.

#### Economy

Hunting and trapping constitute Manitoba's oldest and today's smallest industry. For 200 years the HBC dominated trade in furs across western Canada as far as the Rocky Mts. Alongside the fur trade, buffalo hunting developed into the first commercial return of the plains; Indians, Métis and voyageurs traded meat, hides and Pemmican, which became the staple food of the region. Until 1875 the fur trade was the main business of Winnipeg, which was by then an incorporated city of 5000 and the centre of western commerce. In the city the retail/wholesale and real-estate business grew in response to a new pattern of settlement and the development of agriculture. Red Fife wheat became the export staple that replaced the beaver pelt. After the westward extension of the main CPR line in the 1880s, farmers and grain traders could expand into world markets and an E-W flow of trade began, with Winnipeg the "gateway" city. Over the next 20 years this basically agricultural economy consolidated. Lumbering, necessary to early settlement, declined and flour mills multiplied. During the boom years, 1897 to 1910, there was great commercial and industrial expansion, particularly in Winnipeg, and agriculture began to diversify. The following decades of depression, drought, labour unrest

and 2 world wars sharpened the realization that the economy must diversify further to survive, and since WWII there has been modest growth and commercial consolidation. Today, manufacturing leads all industrial groups, followed by agriculture, mining and the production of hydroelectric power. The primary industries (including electric-power generation) represent 45% of the total revenue derived from all goods-producing industries. Manufacturing and construction account for the remainder (55%).

**Agriculture** The prominent role of agriculture in the provincial economy is evident from both numbers employed (43 000) and value added by goods-producing industries (20%). There are diverse sources of income from agriculture. In 1983 farm cash receipts for crops amounted to \$1 billion compared with livestock at \$575 million. Wheat cash receipts are 3 times those from barley and oats combined. Barley ranks second, followed by CANOLA, flaxseed and rye. Hay crops are important because of a secondary emphasis on livestock production. Cash receipts from livestock are highest by far from cattle (\$216 million in 1983), followed by hogs, dairy products, eggs and poultry. Wheat is grown throughout southern Manitoba, primarily where there are medium- to fine-textured black soils, especially in the SW. Barley used as prime cattle feed is tolerant of a range of climatic conditions, but is intensively grown S and N of Riding Mtn and in the Swan R Valley. Prime malting barley prefers the parkland soils and cooler summer temperatures. Cultivation of oats is general, concentrated in areas of livestock farming; it is frequently tolerant of less productive soil. Flax is grown mostly in the SW on black soil, and canola is significant on the cooler lands near the outer margin of cultivation. Specialized crops, including sugar beets, sunflowers, corn (for both grain and silage) and canning vegetables are concentrated in the southern Red R Valley, where heating degree days are at a maximum and soil texture is medium. Beef cattle are raised on most farms in western Manitoba but are less important in the Red R Valley. Dairy cattle are raised mainly in the cooler marginal lands, which extend in a broad arc from the SE to the Swan R Valley. Poultry is heavily concentrated in the Red R Valley, but hogs have a much wider distribution, influenced by a surplus of barley and fresh milk. Market gardening occupies good alluvial soil around Winnipeg and the Red R, from which water is obtained for irrigation during dry periods.

Neighbouring farmers set up co-operatives, which vary in scope and purpose from the common purchase of land and machinery to processing and marketing members' products. Two large co-operatives, Manitoba Pool Elevators and United Grain Growers, were founded to handle and market grain, and now deal in livestock and oilseeds and provide members with reasonably priced farm supplies. Manitoba's 8 marketing boards are producer bodies that control stages in the marketing of specific commodities. Wheat, oats and barley for export must be sold to the national CANADIAN WHEAT BOARD.

Agriculture is never likely to expand beyond the limits imposed by shortness of growing season (less than 90 days frost free) and the poor podsol soils associated with the Shield. Plans for irrigating the southwestern Red R Valley, known as the Pembina Triangle, are under study. Periodic flooding of the upper Red R (S of Winnipeg) has damaged capital structures and reduced income. Approximately 880 000 ha of farmland are under drainage, mostly in the Red R Valley and the Interlake and Westlake districts. The Prairie Farm Rehabilitation Act (PFRA) encourages conservation of water through check dams and dugouts.

**Mining** Mining contributed 12.5% of the

value added for goods-producing industries in 1981. Of Manitoba's income from all minerals, 74.5% is derived from metals, chiefly nickel, copper, zinc, tantalum and gold, with minor amounts of precious metals. All metals are found in the vast expanse of Precambrian Shield. Diminishing amounts of petroleum are recovered from sedimentary rocks of Mississippian age in the SW corner of the province near Viriden and Tilston accounting for 10%. Industrial minerals, principally quarried stone, gravel and sand, account for 12.9%. The famous Tyn-dall stone is a mottled dolomitic limestone quarried near Winnipeg and distributed across Canada. Gypsum is mined in the Interlake district near Gypsumville and in the Westlake area near Amaranth. Silica sand comes from Black I in L Winnipeg. Nonmetals account for 2.5%.

Manitoba's most productive metal mines are at Thompson. Reputed to be the largest integrated (mining, smelting and refining) operation in N America, Thompson accounts for most of Manitoba's nickel production. The province's oldest mine, dating from 1927, is at Flin Flon; along with its satellite property at Snow Lake, it is a major producer of copper and zinc and small amounts of gold and silver. A third major centre is Lynn Lk which with its sister mine at Leaf Rapids, produces nickel and copper. Ore from these mines is smelted at either Fort Saskatchewan, Alta, or Flin Flon. Local supplies of clay are obtained at Fort White for making cement in Winnipeg.

**Energy** Other than a small amount of petroleum, the province's resources in energy are derived from hydroelectric power. Thermal plants depend mostly on low-grade coal imported from Estevan, Sask, and on diesel fuel. Manitoba Hydro, a crown corporation, is the principal authority for the generation, development and distribution of electric power, except for Winnipeg's inner core, which is served by Winnipeg Hydro, a civic corporation. Hydraulic power plants were first built along the Winnipeg R and 6 of these plants still operate. The availability of cheap power within 100 km of Winnipeg has made the city attractive to industry for many years. Since 1955 hydroelectric development has been in the N. In 1960 a plant was commissioned at Kelsey on the Nelson R, and in 1968 the Grand Rapids plant was built near the mouth of the Saskatchewan R. In-

creased demand led to the construction of 3 additional plants on the Nelson: Jenpeg, Kettle Rapids and Long Spruce. Downstream another plant at Limestone will be the largest in Manitoba when completed (1.4 million kW capacity). In addition, 2 thermal plants powered by coal from Estevan are located at Brandon and Selkirk; they supplement hydro sources at peak load times. Installed generating capacity is 3644 MW with a further potential of 6104 MW. Manitoba sells surplus power, mostly during the summer period, to Ontario, Saskatchewan, Minnesota and N Dakota. Its transmission and distribution system exceeds 76 000 km. Manitoba Hydro serves over 400 000 customers, who consumed 9.6 billion kWh in 1980. Natural gas from Alberta, which is used mainly for industrial and commercial heating, supplies one-third of Manitoba's energy requirements.

**Forestry** FORESTRY in its primary stage (logging) accounts for 0.3% of the value added for goods-producing industries. The most productive forestlands extend N from the agricultural zone to lat 57° N; N and E of this line timber stands are sparse and the trees are stunted, gradually merging with tundra vegetation along the shores of Hudson Bay. The southern limit is determined by the northward advance of commercial agriculture. On the basis of productivity for forestry, 24.4% of the total provincial land area is classified as "productive," 33.9% as nonproductive and 36.7% as non-forested land. Of the total productive forestland, 95% is owned by the provincial government. From 1870 to 1930 lands and forests were controlled by the federal government; after the transfer of natural resources in 1930, the province assumed full responsibility. In 1930 there were 5 forest reserves, and 5 additional reserves totalling 14 000 km<sup>2</sup> have since been added. RIDING MOUNTAIN NATIONAL PARK, on the Manitoba escarpment, is the province's only national park. Whiteshell in the E and Duck Mountain in the W are the largest of 12 provincial parks. Many areas of provincial forests have been set aside as parks of various kinds. Timber cutting practices are restricted around roads, lakes and rivers. In order of decreasing volume, the most common commercial tree species are black spruce, jack pine, trembling aspen (poplar), white spruce, balsam poplar and white birch. Other species common to Manitoba include balsam fir, larch (tamarack), cedar, bur oak, white elm, green ash, Manitoba maple and red and white pine. The government proposes annual cuts for each management unit on a sustained

Kettle Rapids on the turbulent Nelson R, one of Manitoba's many sources of hydroelectric power (photo by Richard Vroom).

yield basis. In addition to its reforestation program, the government provides planting stock to private landowners for shelterbelts and Christmas trees.

**Fisheries** Inland fisheries contribute 0.2% of the value added among primary industries. Water covers 16% of Manitoba, of which an estimated 57 000 km<sup>2</sup> is commercially fished. Two-thirds of the total catch comes from the 3 major lakes — Winnipeg, Manitoba and Winnipegosis — and the balance is taken from the numerous smaller northern lakes. The total value of the 1979-80 catch was \$7 million and some 2000 fishermen were employed. Between 200 and 300 fish-receiving stations are located on the larger lakes as far N as Lac Brochet, and processing plants with quick-freezing facilities are also widely distributed. All the commercial catch is processed by the Freshwater Fish Marketing Corp, a crown agency based in Winnipeg, and 90% is exported to large northern cities in the US. Fourteen commercial species, dressed and filleted, include whitefish, pike, walleye and sauger. Pickerel, pike, walleye, trout and bass are principal sport fish. Manitoba Department of Natural Resources maintains hatcheries for walleye, whitefish and trout.

**Industry** Today, Manitoba has a firm base in its processing and manufacturing industries, as shown by the value of production: 1300 manufacturers employing 42 199 people produced goods exceeding \$4.97 billion (1981) and accounted for about 42% of the value added for goods-producing industries. About two-thirds of the value of industrial production comes from the following industries: food processing, distilling, machinery (especially agricultural); irrigation and pumps; primary metals, including smelting of nickel and copper ores, metal fabricating and foundries; airplane parts, motor buses, wheels and rolling-stock maintenance; electrical equipment; computers and fibre optics. There are also the traditional industries: meat packing, flour milling, petroleum refining, vegetable processing, lumber, pulp and paper, printing and clothing. Winnipeg accounts for 75% of the manufacturing shipments. Half of all manufactured goods are exported, one-third to foreign countries.

**Transportation** Winnipeg's strongest asset has always been its location. In the heart of Canada and at the apex of the western population-transportation triangle, this city historically has been a vital link in all forms of E-W transportation. The YORK BOATS of the fur trade and the Red River Carts of early settlers gave way first to steamboats on the Red R, then to the great railways of the 19th and early 20th centuries. Subsequently, Winnipeg provided facilities for servicing all land and air carriers connecting E and W. Today, rail and road join the principal mining centres of N Manitoba. During the long, cold winter the myriad of interconnected lakes create a network of winter roads. Major northern centres are linked to the S via trunk highways. Since 1926 BUSH FLYING has made remote communities accessible; Transair, the prairie regional carrier, serves larger northern centres. Transcontinental routes of Air Canada and CP Air pass through Winnipeg, and Air Canada operates daily flights S to Chicago, connecting with the American network. Pacific Western Airlines has links with northern Manitoba as well as with major cities to the W and E. Perimeter Airlines also serves northern points and Nordair has eastern connections as far as Montréal. CP Air, Air Canada and Wardair provide international flights direct from Winnipeg to Europe and Hawaii. Northwest Airlines connects with Minneapolis, and Frontier Airlines with Denver and Los Angeles.

Southern Manitoba has 6500 km of trunk highways and 13 000 km of provincial roads (mainly gravel).

Because Winnipeg is Canada's principal mid-continent rail centre, both CNR and CPR have extensive maintenance facilities and marshalling yards in and around the city. Wheat has the largest freight volume, but diverse products from petroleum and chemicals to motor cars and lumber are transported by rail. The CN owns Symington Yards, one of the largest and most modern marshalling yards in the world. At Transcona it maintains repair and servicing shops for rolling stock and locomotives and at GIMLI a national employee-training centre. In addition to repair shops and marshalling yards, the CPR has a large piggyback terminal; Weston shops, one of 3 in its trans-Canada system, employs about 1600 people. Via Rail operates Canada's passenger train service, which uses the lines of the 2 major railways and provides direct service between Vancouver and Halifax and Saint John. In 1929 the HUDSON BAY RY, now part of the CNR system, was completed to the port of Churchill, where today major transshipment facilities handle annually some 500 000 t of grain between 20 July and 31 Oct. Formerly an army base, Churchill is also a research centre and a supply base for eastern arctic communities.

#### Government and Politics

On 15 March 1871 the first legislature of Manitoba met for the first time; it consisted of an elected legislative assembly of 12 English and 12 French members, an appointed legislative council and an appointed executive council who advised the government head, Lieutenant-Governor Adams G. Archibald. When the assembly prorogued, systems of courts, education and statutory law had been established, based on British, Ontarian and Nova Scotian models. The Legislative Council was abolished 5 years later. Since 1871 the province has moved from communal representation to representation by population and from nonpartisan to party political government. Today the LIEUTENANT-GOVERNOR is still formal head of the provincial legislature and represents the Crown in Manitoba. The government is led by the PREMIER, who chooses a CABINET, whose members are sworn in as ministers of the Crown. Her Majesty's Loyal Opposition is customarily headed by the leader of the party winning the second-largest number of seats in a given election. Laws are passed by the unicameral Legislative Assembly, consisting of 57 elected members. The judiciary consists of the superior courts, where judges are federally appointed, and many lesser courts that are presided over by provincial judges. The RCMP is contracted to provide provincial police services and municipal services in some centres; provincial law requires cities and towns to employ enough police to maintain law

#### Lieutenant-Governors of Manitoba 1870-1984

	Term
Adams G. Archibald	1870-72
Alexander Morris	1872-77
Joseph E. Cauchon	1877-82
James C. Aikins	1882-88
John C. Schultz	1888-95
James C. Patterson	1895-1900
Daniel H. McMillan	1900-11
Douglas C. Cameron	1911-16
James A.M. Aikins	1916-26
Theodore A. Burrows	1926-29
James D. McGregor	1929-34
William J. Tupper	1934-40
Roland F. McWilliams	1940-53
John S. McDiarmid	1953-60
Errick F. Willis	1960-65
Richard S. Bowles	1965-70
John W. McKeag	1970-76
Francis L. Jobin	1976-81
Pearl B. McGonigle	1981-

and order. Manitoba is federally represented by 14 MPs and 6 senators.

**Local Government** Local government is provided by a system of municipalities. Manitoba has 5 incorporated cities (Winnipeg, Brandon, Selkirk, Portage la Prairie and Thompson), 35 incorporated towns and 40 incorporated villages. (An incorporated municipality has a greater degree of autonomy, especially in taxing and borrowing power.) There are 105 rural municipalities ranging in size from 4 to 22 townships, many of which contain unincorporated towns and villages. Locally elected councils are responsible for maintaining services and administering bylaws. In remote areas where population is sparse, the government has established 18 local government districts (LGDs) with an appointed administrator and an elected advisory council. The Department of Northern Affairs has jurisdiction over remote areas in northern Manitoba and uses the community council as an advisory body. Community councils are elected bodies, mostly in Métis settlements, through which the government makes grants. Each has a local government "co-ordinator" to represent the government.

**Public Finance** For the fiscal year ending 31 March 1982 the province had revenues of \$2.4 billion and expenditures of \$2.67 billion, with a deficit of \$270 million. Income taxes garnered \$568 million (1981-82) and other taxes, including 5% sales tax and gasoline and resources taxes, totaled \$412 million. Liquor revenues were \$83 million. Unconditional transfer payments and shared-cost receipts from federal sources covering education, health and economic development are estimated at \$904 million. More than 50% of government expenditures go toward education, health and social services.

**Health and Welfare** Manitoba Health Services Commission, with generous support from Ottawa, provides nonpremium medical care for all its citizens. A pharmacare program pays 80% of the cost of all prescription drugs above \$75 (\$50 for senior citizens). The province and Winnipeg each have a free dental-care program for all elementary-school children.

The Departments of Health and of Community Services and Corrections provide services in public and mental health, social services, probations and corrections. The government is responsible for provincial correction and detention facilities and through the Alcoholism Foundation administers drug and alcohol rehabilitation facilities. Manitoba has 87 provincially supported hospitals, including 10 in Winnipeg, and 113 personal care homes in addition to elderly persons' housing. Winnipeg is an important centre for medical research; its Health Sciences Centre includes Manitoba's chief referral hospitals and a number of specialist institutions, among them the Children's Centre and

#### Premiers of Manitoba 1870-1984

	Party	Term
Alfred Boyd	nonpartisan	1870-71
Marc-A. Girard	nonpartisan	1871-72
Henry J. Clarke	nonpartisan	1872-74
Marc A. Girard	nonpartisan	1874
Robert A. Davis	nonpartisan	1874-78
John Norquay	nonpartisan	1878-87
David H. Harrison	nonpartisan	1887-88
Thomas Greenway	Liberal	1888-1900
Hugh John Macdonald	Conservative	1900
Rodmond P. Roblin	Conservative	1900-15
Tobias C. Norris	Liberal	1915-22
John Bracken	United Farmers of Manitoba	1922-28
John Bracken	Coalition	1928-42
Stuart S. Garson	Coalition	1942-48
Douglas L. Campbell	Coalition	1948-58
Dufferin Roblin	Conservative	1958-67
Walter C. Weir	Conservative	1967-69
Edward R. Schreyer	NDP	1969-77
Sterling Lyon	Conservative	1977-81
Howard Pawley	NDP	1981-

the Manitoba Cancer Treatment and Research Foundation.

**Politics** While Manitoba's system of RESPONSIBLE GOVERNMENT was maturing during the 1870s, communal loyalties rather than party politics dominated public representation. As the 1880s advanced, however, a strong Liberal opposition to John NORQUAY's nonpartisan government developed under Thomas GREENWAY. After the election of 1888, Greenway's Liberals formed Manitoba's first declared partisan government until defeated in 1899 (on issues of extravagance and a weak railway policy) by an invigorated Conservative Party under Hugh John MACDONALD. When Macdonald resigned in 1900, hoping to return to federal politics, R.P. ROBLIN became premier, a position he held until 1915, when a scandal over the contracting of the new legislative buildings brought down the government in its fifth term. In 1920, against the incumbent Liberal government of T.C. NORRIS, the United Farmers of Manitoba first entered provincial politics and returned 12 members to the Legislative Assembly, heralding a new era of non-partisan politics. The promise was fulfilled in the election of 1922, when the UFM won a modest majority and formed the new government. Manitoba was returning to its roots, reaffirming rural virtues of thrift, sobriety and labour to counter rapid change, depression and the aftereffects of war. The farmers chose John BRACKEN as their leader, and he remained premier until 1942. In 1928 the UFM withdrew from politics and Bracken formed a coalition party, the Liberal-Progressives, which gained a plurality in the 1936 election but survived with Social Credit support. He continued as premier in 1940 over a wartime government of Conservative, Liberal-Progressive, CCF and Social Credit members. Bracken was replaced by S.S. GARSON in 1942, when he became leader of the federal Conservatives. In 1945 the CCF left the coalition, the Conservatives left it in 1950 and the Social Credit Party simply faded. From 1948 the coalition was led by Premier Douglas CAMPBELL, although after 1950 it was predominantly a Liberal government. From 1958 the Conservatives under Duff ROBLIN governed the province until Edward SCHREYER's NDP took over in 1969 with a bare majority. His government survived 2 terms; during its years in office many social reforms were introduced and government activity in the private sector was expanded. In 1977 Sterling LYON led the Conservative Party to victory on a platform of reducing the provincial debt and returning to free enterprise. His government lasted only one term; in 1981 the NDP returned to power under Howard PAWLEY. The Lyon government, in fact, has been the only one-term government in Manitoba's history. The political tradition of the province has been notable for its long-term stability, particularly during the era of the UFM and later coalition governments.

#### Education

The denominational school system was guaranteed by the Manitoba Act of 1870 and established by the provincial School Act of 1871: local schools, Protestant or Roman Catholic, might be set up on local initiative and administered by local trustees under the superintendence of the Protestant or Roman Catholic section of a provincial board of education. The board was independent of the government but received grants from it, which the sections divided among their schools. Until 1875 the grants were equal; disparity in the population and the ensuing Protestant attack on dualism in 1876 made it necessary to divide the grants on the basis of enrolment in each section. After 1876 the British (predominantly Protestant) and French (Roman Catholic) coexisted peaceably and separately, until agitation against the perceived growing political power of the Catholic clergy spread W

from Québec in 1889. A popular movement to abolish the dual system and the official use of French culminated in 1890 in the passage of 2 provincial bills. English became the only official language and the School Act was altered. Roman Catholics could have private schools supported by gifts and fees, but a new department of education, over local boards of trustees, was to administer nondenominational schools. French Catholic objections to violations of their constitutional rights were ignored by the Protestant Ontario majority, who saw a national school system as the crucible wherein an essentially British Manitoba would be formed. Intervention by the courts and the federal government eventually produced the compromise of 1897: when there were 40 (urban) or 10 (rural) Catholic pupils, Catholic teachers were to be hired; when at least 10 pupils spoke a language other than English, instruction was to be given in that language; school attendance was not compulsory, since Catholics were still outside the provincial system. After 20 years of decreasing standards and linguistic chaos, the School Act was amended in 1916; the bilingual clause was removed and the new School Attendance Act made schooling compulsory for Catholics and Protestants alike, whether publicly or privately educated.

Today, Franco-Manitobains can receive instruction entirely in French through the *Français* program; as well, non-French students in French immersion are taught all subjects in French. Instruction in a minority tongue in the majority of subjects is possible in some schools. Both English- and French-medium schools are organized in 47 school divisions, each administered by an elected school board, under the Department of Education. There are 14 school districts of which 6 are financed mainly from sources other than provincial grants and taxes; these include private schools sponsored by church organizations and by the federal government. School boards are responsible for maintaining and equipping schools, hiring teachers and support staff and negotiating salaries. The Manitoba Teachers Federation negotiates with the boards. Total expenditures for 1980 were \$215 million for foundation grants and \$2 million for administrative expenses.

**Institutions** In 1980 enrolment in the public schools of the province totalled 204 400, and 12 550 teachers were employed. Elementary schools consist of kindergarten through grades 1 to 9, and larger urban centres offer a junior-high-school program for grades 7-9. Senior high school, grades 10-12, has a varied curriculum with core subjects and several options. Special, practically oriented programs are available at 24 vocational-industrial schools, and vocational-business training is given in 106 schools. There are also schools for the disabled, the blind, the deaf and those with learning disabilities.

COMMUNITY COLLEGES provide a wide variety of career-oriented adult educational and vocational programs, and day, evening and extension programs — full-time and part-time — are offered in more than 120 communities. Assiniboine Community College (enrolment 5372) operates in and outside Brandon; it is responsible for all community college agricultural training in the province. Keewatin College offers 25 certificate courses of one year or less, mostly in northern Manitoba, as well as a mineral sciences course. Red River College, located in Winnipeg, provides twenty-five 2-year post-secondary courses leading to recognized diplomas, as well as over 50 certificate courses of one year or less, including courses in applied arts, business administration, health services, industrial arts and technology. During 1980 over 12 000 students enrolled in community colleges.

In 1877 St-Boniface (French, Roman Catholic), St John's (Anglican) and Manitoba (Presby-

terian) united as UNIVERSITY OF MANITOBA. Later, they were joined by other colleges, but in 1967 a realignment of the constituents resulted in 3 distinct universities. The U of Manitoba is one of the largest universities in Canada, with numerous faculties and with 4 affiliated colleges that provide instruction in French: St John's, St Paul's (Roman Catholic) and St Andrew's (Ukrainian Orthodox), and St-Boniface. In 1982, 13 250 full-time and 6100 part-time students were enrolled. BRANDON UNIVERSITY offers undergraduate programs in arts, science, education and music, with an enrolment of 975 full-time and 1325 part-time students. The UNIVERSITY OF WINNIPEG, located in central Winnipeg, provides primarily undergraduate instruction, teacher training and theological studies for 2350 full-time and 3300 part-time students. Teachers are trained at all 3 universities and at Red River College.

#### Cultural Life

To a large degree, Manitoba's cultural activities and historical institutions reflect the varied ethnic groups that comprise its fabric. The provincial government, through its Department of Cultural Affairs and Historical Resources, subsidizes a wide range of cultural activities. Many annual festivals celebrate ethnic customs and history: Icelandic Festival at Gimli; Winnipeg Folk Festival; National Ukrainian Festival at Dauphin; Opasquia Indian Days at The Pas; Pioneer Days at Steinbach; Fête Franco-Manitobaine at La Broquerie; the midwinter Festival du voyageur in St-Boniface, the N Manitoba Trappers' Festival at The Pas and Folklorama sponsored by the Community Folk Art Council in Winnipeg. Manitoba's historic past is preserved by the Museum of Man and Nature (Winnipeg), considered one of the finest interpretive museums in Canada; by the Living Prairie Museum, a 20 ha natural reserve; St-Boniface Museum, rich in artifacts from the Red River colony; and the Provincial Archives and Hudson's Bay Co Archives. The Planetarium is among the finest in N America. The Winnipeg Zoo in Assiniboine Pk has a major collection of more than 1000 animals.

**The Arts** The Manitoba Arts Council promotes the study, enjoyment, production and performance of works in the arts. It assists organizations involved in cultural development; offers grants, scholarships and loans to Manitobans for study and research; and makes awards to individuals. The Winnipeg

Lionel LeMoine FitzGerald spent almost his whole life in Winnipeg, drawing and painting contemplative scenes. The painting *The Jar* (1938), oil on canvas, displays his use of glistening daubs of paint (courtesy Mr and Mrs Earl Green/Collection of The Winnipeg Art Gallery. Ernest P. Mayer; donated by the Women's Committee).

Symphony Orchestra, ROYAL WINNIPEG BALLET, Manitoba Theatre Centre, Le Cercle Molière, Manitoba Opera Association, Manitoba Contemporary Dancers and Rainbow Stage all contribute to Winnipeg's position as a national centre of the performing arts. Among well-known and respected Manitoban writers are the novelists Margaret LAURENCE and Gabrielle ROY, essayist, historian and poet George WOODCOCK and popular historian Barry Broadfoot. The Winnipeg Art Gallery, in addition to traditional and contemporary works, houses the largest collection of Inuit art in the world.

**Historic Sites** Among the fine historic sites associated with the settlement of the West is the HBC's Lower Fort Garry. Situated on the Red R 32 km NE of Winnipeg, this oldest intact stone fort in western Canada was built in 1832 and preserves much of the atmosphere of the Red River Colony. Among a number of historic houses is Riel House, home of the Riel family; York Factory, located at the mouth of the Nelson R and dating from 1682, was a transshipment point for furs. The partially restored PRINCE OF WALES'S FORT (1731-1782) at the mouth of the Churchill R was built by the HBC and destroyed by the French. Other points of historical significance are St-Boniface Basilica, oldest cathedral in western Canada; Louis RIEL's grave; Macdonald House, home of Sir Hugh John Macdonald; Fort Douglas; Ross House; Seven Oaks House; and the Living Prairie Museum.

**Communications** Manitoba has 9 daily newspapers: *Winnipeg Free Press*, *Winnipeg Sun*, *Brandon Sun*, *Dauphin Daily Bulletin*, *Portage la Prairie Daily Graphic*, *Swan River Report*, *Thompson Citizen*, *Flin Flon Daily Reminder* and *Roblin News*. Forty weekly papers service suburban Winnipeg and rural areas, with emphasis on farming, and several trade and business journals are published. The French-language weekly, *La Liberté*, is published in St-Boniface, and Winnipeg produces more foreign-language newspapers than any other centre in Canada.

The province has 16 radio stations, including the French-language station CKSB, and the CBC has 24 English-language and 6 French-language rebroadcasters. Four television stations operate from Winnipeg and one from Brandon, and CABLE TELEVISION is available in 16 centres. The Manitoba Telephone System, a crown corporation, provides telecommunications facilities for all Manitoba. (In 1906, because of high rates and inefficiency, the provincial government appropriated Bell Telephone and established Manitoba Government Telephones, the first publicly owned system in N America). Three microwave radio networks join N and S Manitoba, bringing CBC television and radio to most communities of 500 or more. CNCP Telecommunications maintains its Prairie region offices in Winnipeg. Manitoba Data Services, providing data processing to government and private sectors, is one of the largest computer utility operations in Canada.

#### History

**Exploration** The history of exploration in Manitoba did not begin in the S but in the cold-est and most remote area — the shores of Hudson Bay. A succession of navigators, Henry HUDSON (1610), Thomas BUTTON (1612), Jens MUNK (1619), and Luke FOXE and Thomas JAMES (1631), searched the shoreline for the NORTHWEST PASSAGE. Two French Canadian explorers interested in the fur trade, DES GROSEILLIERS and RADISSON, persuaded Charles II of England to establish the Hudson's Bay Co in 1670, granting it a huge territory (part of which is modern Manitoba), to be called Rupert's Land. Trading posts were soon established along the shores: Fort Nelson (1682), Fort York (1612), Fort Churchill (1688), Prince of Wales's Fort (1731). Henry KELSEY, an HBC employee, penetrated SW across the prairies 1690-92. The LA VÉRENDRYE family travelled W

via the Great Lakes, building Fort Maurepas on the Red R (1734), then 4 other posts within the present area of Manitoba. The subsequent invasion by independent traders of lands granted to the HBC stimulated an intense rivalry for pelts, which ended only with amalgamation of the HBC and the North West Company in 1821. About 20 forts existed at various times S of lat 54° N, but the early explorers left little permanent impression on the landscape.

**Settlement** Agricultural settlement began in 1812 with the arrival of Lord SELKIRK's settlers at Point Douglas, now within the boundaries of Winnipeg. Over the next 45 years the Red R Colony at Assiniboia survived hail, frost, floods, grasshoppers, skirmishes with the Nor'Westers and an HBC monopoly. Expansionist sentiment from both Minnesota and Upper Canada challenged the HBC's control over the NW and the Red R colony. In 1857 the British government sponsored a joint expedition with the Canadians to assess the potential of Rupert's Land for agricultural settlement; the PALLISER EXPEDITION reported a fertile crescent of land suitable for agriculture extending NW from the Red R Valley. The conflict between agricultural expansion and the rights of the Métis broke out into 2 periods of unrest (see RED RIVER REBELLION; NORTH-WEST REBELLION). Eventually the HBC charter was terminated and the lands of the North-West were transferred to the new Dominion of Canada by the Manitoba Act of 1870, and half and quarter sections of land were then opened to settlement. It was soon evident that the diminutive province needed to expand; settlers were rapidly moving to the North-West and spilling over the established boundaries. In 1881, after years of political wrangling with the federal government, the boundaries were extended to their present western position, as well as being extended farther E, and to lat 53° N. Between 1876 and 1881, 40 000 immigrants, mainly Ontario British, were drawn W by the prospect of profitable wheat farming enhanced by new machinery and milling processes. Mennonites and Icelandic immigrants arrived in the 1870s, the former settling around Steinbach and Winkler, the latter near Gimli and Hecla. Immigration then slowed until the late 1890s and it was limited mostly to small groups of Europeans. Between 1897 and 1910, years of great prosperity and development, settlers from eastern Canada, the UK, the US and eastern Europe — especially Ukraine — inundated the province and the neighbouring lands. Subsequent immigration was never on this scale.

**Development** From 1897 to 1910 Manitoba enjoyed unprecedented prosperity. Transportation rates fell and wheat prices rose. Grain farming still predominated, but mixed farms prospered and breeders of quality livestock and plants become famous. Winnipeg swiftly rose to metropolitan stature, accounting for 50% of the increase in population. In the premier city of the West a vigorous business centre developed, radiating from Portage and Main streets: department stores, real-estate and insurance companies, legal firms and banks thrived. Abattoirs and flour mills directly serviced the agricultural economy; service industries, railway shops, foundries and food industries expanded. Both the CPR and the Canadian Northern Railway (later CNR) built marshalling yards in the city, which became the hub of a vast network of rail lines spreading E, W, N and S. In 1906 hydro-electricity was first generated at Pinawa on the Winnipeg R, and the establishment of Winnipeg Hydro 28 June 1906 guaranteed the availability of cheap power for domestic and industrial use.

The general prosperity ended with the depression of 1913; freight rates rose, land and wheat prices plummeted and the supply of foreign capital dried up. The opening of the

Panama Canal in 1914 ended Winnipeg's transportation supremacy, since goods could move more cheaply between E and W by sea than overland. During WWI, recruitment, war industry demands, and cessation of immigration sent wages and prices soaring; by 1918 inflation seemed unchecked and unemployment was prevalent. Real wages dropped, working conditions deteriorated and new radical movements grew among farmers and urban workers, culminating in the WINNIPEG GENERAL STRIKE of May 1919. Ensuing depression followed by an industrial boom in the late 1920s tilted the economic seesaw again. By 1928 the value of industrial production exceeded that of agricultural production; the long agricultural depression continued into the 1930s, aggravated by drought, pests and low world wheat prices, and the movement from farm to city and town accelerated. Cities were little better off: industry flagged and unemployment was high. To eliminate the traditional boom/bust pattern attempts have been made to diversify the economy. The continuing expansion of mining since 1911 has underlined the desirability of broadening the basis of the economy. The demands of WWII reinforced Manitoba's dependency on agriculture and primary production, but the postwar boom gave the province the opportunity to capitalize on its established primary and secondary industries, and to broaden the economic base. Agriculture diversified, mechanization increased, improved strains of wheat contributed to economic stability. New factories and small industries were built in Winnipeg and smaller centres. The Roblin government's aggressive policy of growth promotion based on free enterprise was succeeded by an increase in government involvement in the private sector under the NDP.

T R. WEIR

**Manitoba Act**, which received royal assent 12 May 1870 and went into effect 15 July, provided for the admission of Manitoba as Canada's fifth province. It marked, as well, the legislative resolution of the struggle between inhabitants of the RED RIVER COLONY and the federal government (see RED RIVER REBELLION). Local anxiety, especially over MÉTIS land rights, provoked inhabitants' determination to have a voice in the terms under which the community would be incorporated into Canada. A popularly elected convention, reflecting the settlement's cultural diversity, supported a provisional government dominated by Louis RIEL. Four successive lists of rights were drafted by the provisional government; the final version became the basis of federal legislation. Despite PM Macdonald's reluctance, Manitoba entered Canada as a province, not a territory. English- and French-language rights were safeguarded, as were Protestant and Roman Catholic educational rights; the right to education in either English or French was not protected. The Dominion retained control of natural resources, in particular unallocated land, which was to be sold to support the building of a Pacific railway and to be the magnet for a vast IMMIGRATION across the Prairies (see DOMINION LANDS POLICY). The new province of Manitoba, severely circumscribed in size, thus entered as a province unlike the original 4, and its creation revealed Ottawa's resolve to control western development. See ASSINIBOIA

J E. RAE

**Manitoba Agricultural College**, see AGRICULTURAL EDUCATION.

**Manitoba, Lake**, 4659 km<sup>2</sup>, elev 248 m, is one of 3 large lakes occupying the southern half of Manitoba. A narrow, irregular lake, about 200 km long with marshy shores, it is fed mainly from Lk WINNIPEGOSIS, which lies to the NW, and drains NE via the Dauphin R to Lk WINNIPEG. The marshes at its southern end, which lie just 24

km N of PORTAGE LA PRAIRIE, are an important waterfowl research area. When Pierre LA VÉRENDRYE arrived in the mid-1730s, he found the area populated by Assiniboine. For many years it formed part of an important trade route along which furs were transported via Lk Winnipeg and the northern rivers to Hudson Bay. Subsequently a commercial fishery was established. Early French traders called it Lac des Prairies; the modern name probably refers to the Indian spirit *Manitou*, whose voice allegedly can be heard in the rushing water of a narrows.

DANIEL FRANCIS

**Manitoba Research Council (MRC)** was established by an Act of the Manitoba legislature in 1963. In 1971, after a period of inactivity, MRC began to provide technical assistance to industry and small research grants to university and business scientists. Federal-provincial funding provided permanent facilities: in 1978 a laboratory for research on food, beverages and feeds; in 1979-80 a centre to encourage manufacturers to use existing knowledge effectively, especially in the areas of ELECTRONICS, materials research and building systems. Plans for the establishment in Winnipeg of a \$41-million Institute for Manufacturing Technology, in collaboration with the NATIONAL RESEARCH COUNCIL, were announced in late 1983. MRC operates essentially as a branch of the Manitoba Dept of Economic Development and Tourism, which provides most of the funding and salaries for the executive director and other staff (total of 40). MRC has 7 full members and 16 advisory members, representing industry, labour, university and government. Facilities include the Canadian Food Products Development Centre, Portage la Prairie, and the Industrial Technology Centre (including the Canadian Health Industry Development Centre), Winnipeg. MRC provides free to low-charge technical advice to small businesses, administers grants for research, and advises government ministers on the allocation of funds for scientific and technical research.

MARTIN K. McNICHOLL

**Manitoba Schools Question**, the most complex and far-reaching of Canada's several crises involving minority school rights. The 1870 MANITOBA ACT established a dual system of Protestant and Roman Catholic schools. Through Anglo-Protestant settlement largely from Ontario during the 1870s and 1880s, the proportion of Roman Catholic and French to the total Manitoba population fell dramatically. In Mar 1890 Manitoba's Liberal government under Thomas GREENWAY abolished public funding of Catholic schools. Two Privy Council decisions, 1892 and early 1895, upheld the validity of the Manitoba law, but affirmed the federal government's power to restore the lost school privileges.

After much delay and several federal cabinet crises the faltering Conservative government introduced remedial legislation in March 1896. Liberal leader Wilfrid LAURIER, energetically supported by explicitly anti-French and anti-Catholic voices such as D'Alton MCCARTHY's, forced the bill's withdrawal. The June 1896 federal election was fought primarily on this explosive issue. Laurier defeated the government largely by winning 49 of 65 seats in Québec. Laurier circumvented danger from pro-remedial Québec Catholic bishops by promising a less abrasive but presumably more effective "sunny ways" approach to the province. The Laurier-Greenway compromise of late 1896 did not restore separate schools, but did give some religious-instruction privileges within the public schools. Not until the late 1970s were more favourable arrangements made by Manitoba. In modern Québec, the Manitoba Schools Question is viewed as Canada's most significant loss of French and Catholic rights outside Québec.

PAUL E. CRUNICAN

**Manitoba Theatre Centre** was created in 1958 as the first of Canada's professional regional theatres when cofounders TOM HENDRY and JOHN HIRSCH merged the pre-existing amateur Winnipeg Little Theatre and the semi-professional Theatre 77. Named in 1962 by the CANADA COUNCIL as a model for others to follow, the centre's programming energy under its cofounders — particularly in the areas of education, touring and training — made it widely influential throughout N America. Under succeeding artistic directors Edward Gilbert, Kurt Reis, Len Cariou (who began as an actor with MTC), Arif Hasnain and Richard Ouzounian, the centre has narrowed the breadth of its responsibilities while consolidating its position as one of Canada's most securely based theatres. Its main stage attracts one of Canada's largest subscription audiences, and in The Warehouse, a second stage where new Canadian work is gradually regaining the importance it had during MTC's founding years, a new, younger audience is growing. Guided by artistic director James Roy, MTC is administered at present by a volunteer board of directors and supported by the Canada Council, Manitoba Arts Council, the City of Winnipeg and many private and corporate contributors. See also THEATRE, ENGLISH LANGUAGE.

TOM HENDRY

**Manitou**, an Algonquian word meaning "mysterious being," or simply "mystery," that represents the unknown power of life and the universe. The notion is connected to the veneration of the sun and is related to the concept of *mana*, a personal supernatural force, common among native peoples of N America. See also NATIVE PEOPLE, RELIGION.

RENÉ R. GADACZ

**Manitoulin Island**, the largest freshwater island in the world, is part of an archipelago at the top of Lk HURON that straddles the Ontario-Michigan border. Its northern shore encloses the North Channel, which leads to the St Marys R at Sault Ste Marie. It has an irregular, rocky shoreline and many interior lakes. In the 17th century it was part of the territory occupied by the OTTAWA. Jesuit missionaries arrived in 1648, but their mission was short-lived. The island was sporadically inhabited until the 1830s when it became the centre of Indian administration for northern Ontario. Indians from across the region were settled here and others visited to receive their annual presents from the British government. In 1862 the provincial government purchased most of the island from the Indians. By this time settlers were arriving to clear farms. The Indians now live on small reserves.

Though the island is fertile only in spots, farming has always been a major economic activity. Turkey production thrived after 1920 and by 1930 the island was one of the most important sheep-rearing areas in Ontario. Logging dates from the 1860s and commercial fishing for whitefish and trout was also an economic mainstay; however, both these industries have declined. Since the 1920s the island has become a popular outdoor recreation area, and tourism and agriculture are now the principal activities. Little Current is the main populated centre and is linked to the mainland by road and railway. The name refers to the Indian *Manitou* (spirit), believed to dwell on the island. DANIEL FRANCIS

**Manitowaning**, Ont, UP, pop 518 (1981c), is located on the NE shore of MANITOULIN I, about 100 km SW of SUDBURY. In 1835 T.G. Anderson, superintendent of Indian affairs for Upper Canada, selected it as administrative headquarters of the newly created Indian Reserve on Manitoulin I. Though OJIBWA and OTTAWA began to move onto the island in 1836, permanent settlement at Manitowaning dates only from 1838. Anderson's dream of making this Indian community a model of Anglican prosperity failed in

the 1840s and 1850s, partly because of the lack of sustained government support and partly because of the more effective Roman Catholic missionary activities at nearby WIKWEMIKONG. The opening of the island to non-Indian settlement in 1862 brought Manitowaning a brief economic boom; by 1880 it was the island's largest village, servicing local agricultural, lumbering and tourist operations. During the next 20 years, Gore Bay and Little Current surpassed Manitowaning in both size and function, and since 1900 it has been mainly a trade and tourist centre.

MATT BRAY

**Mankiewicz, Francis**, filmmaker (b at Shanghai, China 15 Mar 1944). Trained in film in London, Eng, he made industrial films after returning to Canada in 1968. With *Le Temps d'une chasse* (1972), the story of a hunting weekend as seen by a young boy, he made a stunning directorial debut in feature films. He then directed 2 dramas for the CBC in English and a feature film for TV in French. His next film, *Les Bons Débarras* (1980), in which a young girl manipulates the adult world around her, was a popular and critical success.

PIERS HANDLING

**Manly, Charles MacDonald**, painter (b at Englefield Green, Eng Sept 1855; d at Toronto 3 Apr 1924). He was a founding member of the Toronto Art Students' League and first gained repute for his superb watercolours and pen-and-ink drawings published annually in the League's calendar (1893-1904). The confident, illustrative quality of his pen-and-ink work is a marked contrast to the softer, atmospheric treatment of his paintings, as in *Evening on the Cone-stogo* (1909), a clear reflection of his British heritage and late 19th-century training. Manly painted primarily landscapes for some years, with F.H. Bridgen in Ontario, Québec and the Maritimes. He was elected to the Ontario Soc of Artists in 1876, became its president in 1903 and became an associate of the Royal Canadian Academy of Arts in 1890. He spent his last 20 years as a highly regarded instructor at the Central Ontario School of Art and Design (later Ontario College of Art).

ERIK J. PETERS

**Mann, Cedric Robert**, physical oceanographer (b at Auckland, NZ 14 Feb 1926). He came to Canada in 1949 to study physics at UBC and was involved in marine acoustics research 1953-61 at the Naval Research Establishment, Dartmouth, NS. He initiated, developed and led the deep-sea OCEANOGRAPHY program of the Atlantic Oceanographic Laboratory at the BEDFORD INSTITUTE OF OCEANOGRAPHY 1961-75 and was director of the laboratory 1975-78. Director general of the Bedford Inst 1978-79, he was appointed director general of the Institute of Ocean Sciences, Pat Bay, BC, in 1979. He is best known for his work on the Gulf Stream system, oceanic silicate distributions, the overflow of deep water in Denmark Str, and his leadership of the *Hudson* '70 expedition around the Americas. In 1974-75 he undertook a study of physical and chemical oceanography in Canada.

G.T. NEEDLER

**Mann, Sir Donald**, railway builder (b at Acton, Canada W 23 Mar 1853; d at Toronto 10 Nov 1934). Mann studied for the Methodist ministry but took up work in the lumber camps of Ontario and Michigan. In 1879 he was in charge of the barge that brought the first railway locomotive to Winnipeg. He completed a number of earth-moving and grading contracts on the CPR's prairie and mountain main line in the 1880s. With James ROSS, William MACKENZIE and Herbert HOLT, he built a number of branch lines in western Canada, Maine, and in S America and China. In 1895 he joined Mackenzie to purchase and complete the Lk Manitoba Ry and Canal Co, which later became the CANADIAN NORTHERN RY. Rapid expansion and numerous amalgamations transformed the Canadian

Northern Ry into a transcontinental system by 1915. Financial difficulties, however, led to nationalization in 1918, and the subsequent merger of the Canadian Northern with other government railways to form the Canadian National Railways. After 1918 Mann devoted himself to mining and other smaller business ventures. He was created a KB in 1911. T.D. REGEHR *Reading: T.D. Regehr, The Canadian Northern Railway (1976).*

**Mann, Kenneth Henry**, freshwater and marine biologist (b at Dovercourt, Eng 15 Aug 1923; naturalized Canadian). Mann is an aquatic biologist whose wide experience ranges from the taxonomy and biology of freshwater leeches to the production of inshore marine ecosystems. He is best known for his work in the analysis of the production of aquatic systems, and was influential in the International Biological Programme, in which production of many ecosystems was compared. Mann's production studies have included fish in the R Thames in England and the lobster/sea urchin/kelp complex off eastern Canada. He has written several books and more than 100 research papers in his field and lectured and worked widely overseas. Mann was chairman of the biology dept at Dalhousie 1972-78 and professor 1972-80, when he became director of the Marine Ecology Laboratory, BEDFORD INSTITUTE OF OCEANOGRAPHY, Dartmouth, NS.

**Mann v the Queen A.** Mann had been charged in 1966 with careless driving pursuant to a provincial highway traffic Act. He challenged the constitutional validity of the provincial offence, arguing that Parliament, by establishing an offence of dangerous driving, had made the matter a question of CRIMINAL LAW, which according to the Constitution Act, 1867, falls under the exclusive legislative jurisdiction of Parliament.

A majority of the Supreme Court of Canada upheld the constitutional validity of the careless driving provision, stating that the province could legitimately create driving offences that required proof of mere negligence. In their view, the charge of dangerous driving under the CRIMINAL CODE required proof of both negligent driving and MENS REA. In other words, they held that the offence of dangerous driving required proof of advertent negligence, while that of careless driving under the provincial legislation was concerned with inadvertent negligence. However, the court did not define what it meant by "advertent negligence." It is not clear whether the accused must have actual foresight that his or her driving could create a dangerous situation or whether it is sufficient that a reasonable person would have realized the situation was dangerous.

A. PRINGLE

**Manning, Ernest Charles**, politician, Christian layman, premier of Alberta 1943-68 (b at Carnduff, Sask 20 Sept 1908). From modest beginnings as a student at William ABERHART'S Prophetic Bible Institute in Calgary, Manning eventually became premier of Alberta and one of Canada's most effective provincial leaders. He was reelected 7 consecutive times and retired in 1968 at the peak of his power. Manning grew up in a conventional Saskatchewan farm family and as a teenager was drawn to Aberhart's religious radio broadcasts. He studied with Aberhart and later became the institute's executive secretary. He joined Aberhart's Cabinet as provincial secretary but his role in policy making was initially limited by a bout of tuberculosis. Nevertheless, he enjoyed Aberhart's confidence, and when Aberhart died from liver disease in 1943 Manning was chosen leader of the SOCIAL CREDIT Party and premier. His first challenge was the wartime popularity of the CO-OPERATIVE COMMONWEALTH FEDERATION; in the 1944 election

he opposed the CCF's demand for nationalization of private utilities and won handily.
